

National Severe Weather Warning Service

Chief Forecasters Assessment

An area of low pressure will move eastwards towards southern Ireland later on Wednesday, with strong winds around its leading flank. In addition, very unstable conditions are likely to generate strong, squally gusts in association with showers.

The winds will also combine with high tides and large waves, leading to some coastal over-topping.

The Met Office have issued a **Yellow Warning of Wind**

Valid from **18:00 on Wed, 08th Oct 2014** until **09:00 on Thu, 09th Oct 2014**

Southwesterly winds will strengthen through Wednesday evening with gales expected overnight. Gusts are likely to reach 50 mph quite widely, with 60 mph gusts possible across exposed coasts and headlands, and also in association with squally, thundery showers. Winds will then moderate through Thursday morning.

The public should be aware of the potential for some minor disruption.
