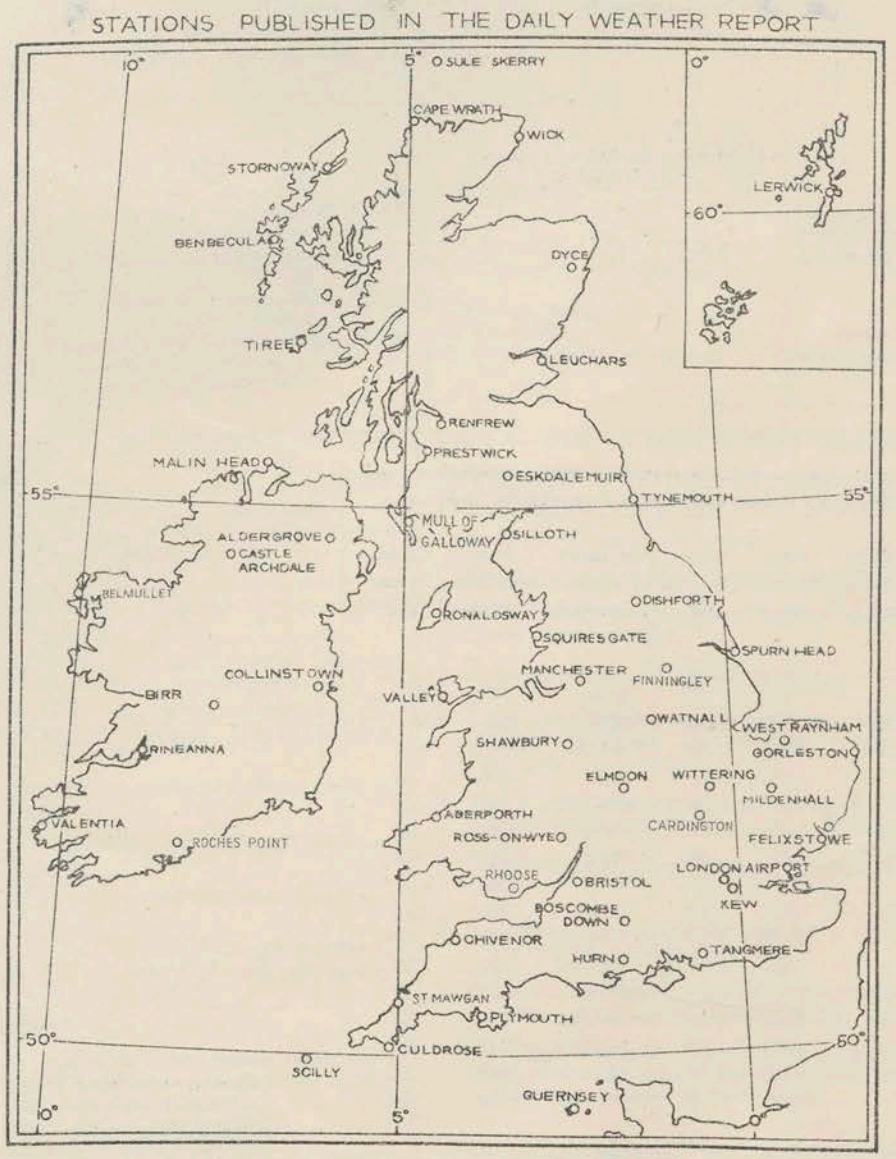
THE DAILY WEATHER REPORT

(INTRODUCTION)

1st January to 31st March

1958

STATIONS PUBLISHED IN THE DAILY WEATHER REPORT



METEOROLOGICAL OFFICE
LONDON, W.C.2

1. HISTORY

A brief history of changes in contents and format between 1st April, 1919, and December, 1949, will be found in the introduction to the British Section for 1st October to 31st December, 1949. On 1st January, 1950, the British and International Sections of the former Report, which had been issued in three sections since 1919, were combined in a single publication, the present Daily Weather Report. At the same time, the third section was published separately with the title of Daily Aerological Record. A number of changes in meteorological codes and specifications were introduced on 1st January, 1955, and incorporated in the Report. Changes in format introduced on 1st July, 1955, provided for the elements of station and ships' observations to be given in the order of the appropriate meteorological code and for some modification of the scales and projections of charts.

2. FORM OF PRESENTATION

(i) **Observations.**—Pages 1 and 4 of the Daily Weather Report contain reports for the four main hours of observation from a representative number of stations in Great Britain and Ireland which provide full reports together with a selection of ships' reports for the same hours. In addition, Beaufort letters, (Table 18), mainly describing precipitation, are given for each of the four six-hourly periods, together with reports of maximum and minimum temperature, sunshine, rainfall and state of ground (Table 13), in respect of the land stations listed. Explanations of the codes and specifications used are given below.

(ii) **Charts.**—Page 2 contains a chart of the weather in a large part of the northern hemisphere for mid-day of the previous day. Incorporated in this chart is a line joining the approximate locations of civil twilight (i.e., Sun 6° below horizon) at 1200 h. G.M.T. for the mid point of the month indicated. Page 3 contains charts of slightly larger scale, for the British Isles and Western Europe, for 1800 h. of the previous day and for 0000 h. and 0600 h. on the day of issue.

(iii) **General Synoptic Development, Forecast and Further Outlook.**—Below the weather charts on page 3 will be found a statement which describes the main features in the evolution of the synoptic situation over the British Isles during the preceding 24 hours together with an indication of the manner in which it is expected to develop during the succeeding 24 hours. On the right of this statement is a forecast of the weather expected during a period of 24 hours from noon on the day of issue, followed by an outlook for a further period, the duration of which is normally 24 hours but may be longer in certain weather situations.

3. NOTES

(i) **Standard of Time.**—Greenwich Mean Time is exclusively used throughout the Report.

(ii) **Rainfall.**—Tr : = There has been precipitation, but amount less than 0·05 mm.

(iii) **Temperature.**—Temperature is specified in degrees Fahrenheit and is shown on the charts by means of figures alongside the positions of the stations.

(iv) **Dew Point.**—The values of Dew Point are derived from the original readings of dry-bulb and wet-bulb temperature and are correct to 1° F. Prior to 1st January, 1949, values below 32° F. gave the "Hoar Frost Point" that is to say, the temperature for which the actual vapour pressure is equal to the saturation pressure over ice. Since January, 1949, the true Dew Point and not the Hoar Frost Point has been included in synoptic reports in circumstances where the actual vapour pressure is lower than the saturated water vapour pressure of 32° F.

(v) **Elevations of stations.**—The elevations of British stations are given below. These refer in each case to the cistern of the barometer.

	ft.		ft.		ft.		ft.

(vi) **Adjusted Readings.**—Where an instrumental reading is found to be in error and some adjustment is necessary, the adjusted reading is published in brackets thus (59).

4. EXPLANATION OF CODES AND SPECIFICATIONS

CODE F.M.11A—Land Stations					
N dd ff	VV ww W	PPP TT	$N_h C_L h C_M C_H$	T_dT_d a pp	N_s C h_sh_s
N = Total amount of cloud in eighths (Table 1). dd = Wind direction on scale 01–36 (see also Table 2). ff = Wind speed in knots.	VV = Visibility (Table 3). ww = Present weather (Table 5). W = Past weather (Table 4).	PPP = Last three figures of pressure (reduced to M.S.L.) in millibars and tenths. TT = Temperature in whole degrees Fahrenheit.	N_h = Amount of cloud the height of which is given by h (Table 1). C_L = Form of low cloud (Table 6). h = Height above ground of base of cloud (Table 9). C_M = Form of Medium Cloud (Table 7). C_H = Form of high cloud (Table 8).	T_dT_d = Dew point temperature in whole degrees Fahrenheit. a = Characteristic of barometric tendency (Table 10). pp = Barometric tendency (change of pressure in last three hours in tenths of millibars).	N_s = Amount in eighths of individual cloud layer or mass (Table 1). C = Type of cloud (Table 11). h_sh_s = Height of base of cloud (Table 12).
CODE F.M.21A—Ships					
$L_aL_aL_a$	$L_oL_oL_o$	Followed by first four groups as in F.M.11A above	D_s v_s a pp	T_sT_s T_dT_d	d_wd_w P_w H_w
$L_aL_aL_a$ = Latitude in degrees and tenths.	$L_oL_oL_o$ = Longitude in degrees and tenths (West unless otherwise stated).		D_s = Direction of movement of ship (Table 14). v_s = Speed of ship in knots (Table 15). a = Characteristic of barometric tendency (Table 10). pp = Barometric tendency (change of pressure in last three hours in tenths of millibars).	T_sT_s = Difference between air temperature and sea temperature in degrees Fahrenheit. (If the air temperature is less than the sea temperature, 50 is added). T_dT_d = Dew point temperature in whole degrees Fahrenheit.	d_wd_w = Direction of waves to tens of degrees (Table 2). P_w = Period of waves (Table 16). H_w = Mean maximum height of waves (Table 17).

Table 1—Code for Cloud Amount (N, N_h, N_s)

0 = None.

1 = 1 eighth of sky covered or less, but not zero.

2 = 2 eighths of sky covered.

3 = 3 eighths of sky covered.

4 = 4 eighths of sky covered.

5 = 5 eighths of sky covered.

6 = 6 eighths of sky covered.

7 = 7 eighths of sky covered or more, but not 8 eighths.

8 = 8 eighths (sky completely covered).

9 = Sky obscured or cloud amount cannot be estimated.

Note.—"Trace" would be included under Figure 1, which should be used for amounts up to 1/8th (i.e., not up to 3/16ths). "Overcast but with openings" would be included under Figure 7, which should be used for amounts down to 7/8ths (i.e., not down to 13/16ths).

Table 2.—Table of Conversion of Wind Direction read in Compass Points into Code Figures (dd and d_wd_w)

In the range 01–50 the figures give actual visibility in tenths of kilometres, or half furlongs. This table gives the meanings of higher code figures. The decade F.0—F.9 is used, in this publication only, to give visibilities of less than 110 yards.

† Values not given may be obtained by interpolation.

* Code figures not used.

‡ Decade 90–99 is used when visibility cannot be determined with sufficient accuracy to justify lower code figures.

Table 4.—Code for Past Weather (W)

0 = Cloud covering ½ or less of the sky throughout the appropriate period.

1 = Cloud covering more than ½ of the sky during part of the appropriate period and covering half or less during part of the period.

2 = Cloud covering more than ½ of the sky throughout the appropriate period.

3 = Sandstorm, duststorm or drifting snow.

4 = Fog or thick haze.

5 = Drizzle.

6 = Rain.

7 = Snow, or rain and snow mixed.

8 = Shower(s).

9 = Thunderstorm(s) with or without precipitation.

Table 5.—Code for Present Weather (ww)

00–19 No precipitation at time of observation.

00	Cloud development not observed	Characteristic change of the state of sky during the past hour.
01	Clouds generally dissolving or becoming less developed.	
02	State of sky on the whole unchanged.	
03	Clouds generally forming or developing.	
04	Visibility reduced by smoke, e.g. veldt or forest fire, industrial smoke or volcanic ashes.	
05	Haze.	
06	Widespread dust in suspension in the air, not raised by wind, at or near the station at the time of observation.	
07	Dust or sand raised by wind at or near the station at the time of observation, but no well-developed dust devil(s), and no dust-storm or sand-storm seen.	
08	Well developed dust devil(s) seen at or near the station within last hour, but no dust-storm or sand-storm.	
09	Dust-storm or sand-storm within sight of the station or at the station during the last hour.	
10	Mist.††	
11	Shallow fog in patches.	Fog not deeper than about 2 metres on land or 10 metres at sea.
12	Shallow fog, more or less continuous.	
13	Lightning visible, no thunder heard.	
14	Precipitation within sight, not reaching the ground or the surface of the sea.	
15	Precipitation within sight, reaching the ground or the surface of the sea but distant (estimated to be more than 5 km.) from the station.	
16	Precipitation within sight reaching the ground or the surface of the sea near to but not at the station.	
17	Thunder heard but no precipitation at the station.	
18	Squall(s).	during the past hour.
19	Funnel cloud(s).†	

20–29 Precipitation, fog or thunderstorm at station in past hour but not at time of observation.

20	Drizzle (not freezing).	Not falling as shower(s).
21	Rain (not freezing).	
22	Snow.	
23	Rain and snow.	
24	Freezing drizzle or freezing rain.	
25	Shower(s) of rain.	
26	Shower(s) of snow, or of rain and snow.	
27	Shower(s) of hail, or of hail and rain.	
28	Fog.	
29	Thunderstorm (with or without precipitation).	

30–39 Duststorms, sandstorms or drifting snow.

30	Slight or moderate dust-storm or sand-storm.	has decreased during preceding hour.
31		no appreciable change during preceding hour.
32		has increased during preceding hour.
33	Severe dust-storm or sand-storm.	has decreased during preceding hour.
34		no appreciable change during preceding hour.
35		has increased during preceding hour.
36	Slight or moderate drifting snow.	generally low.
37	Heavy drifting snow.	
38	Slight or moderate drifting snow.	generally high.
39	Heavy drifting snow.	

40–49 Fog at time of observation.

40	Fog at a distance at the time of observation, but not at the station during the last hour, the fog extending to a level above that of the observer.	
41	Fog in patches.	
42	Fog, sky discernible	has become thinner during the preceding hour.
43	Fog, sky not discernible.	
44	Fog, sky discernible.	no appreciable change during the preceding hour.
45	Fog, sky not discernible.	
46	Fog, sky discernible.	has begun, or has become thicker during the preceding hour.
47	Fog, sky not discernible.	
48	Fog, depositing hard rime, sky discernible.	
49	Fog, depositing hard rime, sky not discernible.	

50–59 Drizzle at time of observation.

50	Drizzle, not freezing, intermittent.	slight at time of observation.
51	Drizzle, not freezing, continuous.	
52	Drizzle, not freezing, intermittent.	moderate at time of observation.
53	Drizzle, not freezing, continuous.	
54	Drizzle, not freezing, intermittent.	thick at time of observation.
55	Drizzle, not freezing, continuous.	
56	Drizzle, freezing, slight.	
57	Drizzle, freezing, moderate or thick.	
58	Drizzle and rain, slight.	
59	Drizzle and rain, moderate or heavy.	

60–69 Rain at time of observation.

60	Rain, not freezing, intermittent.	slight at time of observation.
61	Rain, not freezing, continuous.	
62	Rain, not freezing, intermittent.	moderate at time of observation.
63	Rain, not freezing, continuous.	
64	Rain, not freezing, intermittent.	heavy at time of observation.
65	Rain, not freezing, continuous.	
66	Rain, freezing, slight.	
67	Rain, freezing, moderate or heavy.	
68	Rain or drizzle, and snow, slight.	
69	Rain or drizzle and snow, moderate or heavy.	

70–79 Solid precipitation not in showers.

70	Intermittent fall of snow flakes.	slight at time of observation.
71	Continuous fall of snow flakes.	
72	Intermittent fall of snow flakes.	moderate at time of observation.
73	Continuous fall of snow flakes.	
74	Intermittent fall of snow flakes.	heavy at time of observation.
75	Continuous fall of snow flakes.	
76	Ice needles (with or without fog).	
77	Granular snow (with or without fog).	
78	Isolated starlike snow crystals (with or without fog).	
79	Ice pellets.	

80–90 Showery precipitation.

80	Rain shower(s), slight.	
81	Rain shower(s), moderate or heavy.	
82	Rain shower(s), violent.	
83	Shower(s) of rain and snow, slight.	
84	Shower(s) of rain and snow, moderate or heavy.	
85	Snow shower(s), slight.	
86	Snow shower(s), moderate or heavy.	
87	Shower(s) of soft or small hail with or without rain or rain and snow-mixed.	slight.
88		moderate or heavy.
89	Shower(s) of hail, with or without rain or rain and snow mixed, not associated with thunder.	slight.
90		moderate or heavy.

91–99 Precipitation with current or recent thunderstorm.

91	Slight rain at time of observation.	thunderstorm during the preceding hour, but not at time of observation.
92	Moderate or heavy rain at time of observation.	
93	Slight snow, or rain and snow mixed at time of observation.	
94	Moderate or heavy snow, rain and snow mixed or hail at time of observation.	
95	Thunderstorm, slight or moderate, without hail but with rain and/or snow at time of observation.	thunderstorm at time of observation.
96	Thunderstorm, slight or moderate, with hail at time of observation.	
97	Thunderstorm, heavy, without hail, but with rain and/or snow at time of observation.	
98	Thunderstorm combined with duststorm or sandstorm at time of observation.	
99	Thunderstorm, heavy, with hail at time of observation.	

The expression " at the station " refers to a land station or a ship.

† Tornado cloud or water spout.

†† Will be used only when visibility is reported as 10 or more and obscuration is due to water particles.

Table 6.—Code for Form of Low Cloud* (C_L)

0 No low cloud.

1 Cumulus with little vertical development.

2 Cumulus of considerable development with or without other cumulus or stratocumulus.

3 Cumulonimbus, tops not cirriform or anvil-shaped ; with or without other forms of low cloud.

4 Stratocumulus formed by spreading out of cumulus : cumulus may also be present.

5 Stratocumulus not formed by the spreading out of cumulus.

6 Stratus and/or stratus fractus but not of bad weather.

7 Stratus fractus or cumulus fractus of bad weather (" scud ") usually under altostratus or nimbostratus. By " bad weather " is meant the conditions which generally exist before, during or after precipitation.

8 Cumulus together with stratocumulus not formed by the spreading out of cumulus.

9 Cumulonimbus, with cirriform top, often anvil-shaped. Other types of low cloud may be present.

/ or — Low clouds not visible owing to darkness, fog, sandstorm or other phenomena.

Table 7.—Code for Form of Medium Cloud* (C_M)

0 No medium cloud.

1 Mainly semi-transparent altostratus through part of which sun or moon are visible.

2 Altostratus, the greatest part of which is sufficiently dense to hide the sun (or moon), or nimbostratus.

3 Mainly semi-transparent altocumulus of unchanging elements ; at a single level.

4 Semi-transparent altocumulus in patches ; elements continually changing ; possibly at more than one level.

5 Semi-transparent altocumulus in bands or in an increasing layer.

6 Altocumulus formed by spreading out of cumulus.

7 Any of the following :—
- (a) Altocumulus in two or more layers not increasing.
- (b) Opaque layer of altocululus not increasing.
- (c) Altocumulus with altostratus or nimbostratus or with both.

8 Altocumulus tufted or turreted.

9 Altocumulus at different levels, giving chaotic appearance to the sky. (Dense cirrus usually present.)

/ or — Medium cloud not visible owing to darkness, fog, sandstorm, etc., or owing to existence of a complete layer of lower cloud.

Table 8.—Code for Form of High Cloud* (C_H)

0 No cirriform cloud.

1 Scattered cirrus not increasing.

2 Dense cirrus in patches ; usually not increasing.

3 Cirrus often anvil-shaped ; usually associated with cumulonimbus.

4 Tufted cirrus increasing and thickening.

5 Cirrus and/or cirrostratus increasing but the continuous layer not reaching above 45° altitude.

6 Cirrus and/or cirrostratus increasing with the continuous layer reaching above 45° altitude.

7 Complete layer of cirrostratus covering whole sky.

8 Cirrostratus not increasing and not a complete layer covering whole sky.

9 Cirrocumulus alone or with cirrus or cirrostratus where the cirrocumulus predominates.

/ or — High cloud not visible owing to darkness, fog, sandstorm, etc., or owing to the existence of a complete layer of lower cloud.

* *Abbreviated definitions. For full text see "Handbook of Weather Messages," Part II M.O.510(b).*

Table 9.—Code for Cloud Height (h)

Code figure	Height of base of cloud	
	metres	feet
0	0–50	0–150
1	50–100	150–300
2	100–200	300–600
3	200–300	600–1,000
4	300–600	1,000–2,000
5	600–1,000	2,000–3,000
6	1,000–1,500	3,000–5,000
7	1,500–2,000	5,000–6,500
8	2,000–2,500	6,500–8,000
9	Above 2,500	Above 8,000

Note 1.—If there is no cloud at all code figure 9 is reported. If the sky is not discernible owing to fog or other surface phenomena, figure 0 is reported.

Note 2.—If there is fog, and the sky is discernible through the fog, the cloud form, height and amount are reported as if no fog were present. If the sky is not discernible through the fog the height of the base of the cloud is reckoned as 0.

Note 3.—Height above ground of the base of cloud. If there is cloud of Form C_L reported, h refers to this cloud. If, however, there is no cloud of Form C_L and there is cloud of Form C_M h refers to this cloud.

When there is cloud at several levels below 8,000 ft., N_h and h refer to the lowest layer covering more than ½ of the sky. If, however, there is no layer of more than ½ then N_h and h refer to the lowest layer which is not exceeded by any other layer present. When the same form of cloud C_L is present at more than one level, N_h refers to the total amount of the cloud form reported for C_L at all levels, while h refers to the height of cloud form C_L at the lowest level.

Table 10.—Code for Characteristic of Barometric Tendency (a)

0 = Increasing, then decreasing ; atmospheric pressure the same as or higher than 3 hr. ago.

1 = Increasing, then steady ; or increasing, then increasing more slowly.
2 = Increasing (steadily or unsteadily).
3 = Decreasing or steady, then increasing ; or increasing, then increasing more rapidly.
(atmospheric pressure now higher than 3 hr. ago.)

4 = Steady, atmospheric pressure the same as 3 hr. ago.

5 = Decreasing, then increasing ; atmospheric pressure the same as or lower than 3 hr. ago.

6 = Decreasing, then steady ; or decreasing, then decreasing more slowly.
7 = Decreasing (steadily or unsteadily).
8 = Steady or increasing, then decreasing ; or decreasing, then decreasing more rapidly.
(atmospheric pressure now lower than 3 hr. ago.)

Table 11.—Code for Type of Cloud (C)

0 = Cirrus (Ci).
1 = Cirrocumulus (Cc).
2 = Cirrostratus (Cs).
3 = Altocumulus (Ac).
4 = Altostratus (As).
5 = Nimbostratus (Ns).
6 = Stratocumulus (Sc).
7 = Stratus (St).
8 = Cumulus (Cu).
9 = Cumulonimbus (Cb).
x = Cloud not visible owing to darkness, fog, sandstorm or other analogous phenomena.

Table 12.—Code for Height of Cloud (h_sh_s)

Code figures 01–50 = cloud height in 100s of feet. Code figures 56–80, subtract 50 for cloud height in 1,000s of feet.

CODE FIGURES 81–89

81 = 35,000 feet
82 = 40,000 ,,
83 = 45,000 ,,
84 = 50,000 ,,
85 = 55,000 ,,
86 = 60,000 ,,
87 = 65,000 ,,
88 = 70,000 ,,
89 = above 70,000 feet

CODE FIGURES 90–99*

90 = less than 150 feet
91 = 150–300 ,,
92 = 300–600 ,,
93 = 600–1,000 ,,
94 = 1,000–2,000 ,,
95 = 2,000–3,000 ,,
96 = 3,000–5,000 ,,
97 = 5,000–6,500 ,,
98 = 6,500–8,000 ,,
99 = 8,000 feet or higher or no low clouds.

* Only used when cloud height cannot be determined with greater accuracy.

Table 13.—Code for State of Ground (E)

0 ... Ground dry.
1 ... ,, moist.
2 ... ,, wet.
3 ... ,, frozen.
4 ... Glaze on ground but no snow or melting snow.
5 ... Ice, snow or melting snow covering less than one-half of ground.
6 ... Ice, snow or melting snow covering more than one-half of ground (but not completely).
7 ... Ice, snow or melting snow covering ground completely.
8 ... Loose dry snow covering more than one half of ground (but not completely).
9 ... Loose dry snow covering ground completely.

Table 14.—Code for Direction in which Ship has moved (D_s)

0 = Stationary.
1 = North-east.
2 = East.
3 = South-east.
4 = South.
5 = South-west.
6 = West
7 = North-west.
8 = North.
9 = No definite direction or unknown.

Table 15.—Code for Speed of Ship (v_s)

	kt.
0 =	0
1 =	1–3
2 =	4–6
3 =	7–9
4 =	10–12
5 =	13–15
6 =	16–18
7 =	19–21
8 =	22–24
9 =	>24

Table 16.—Code for Period of Waves (P_w)

	sec.
2 =	<5
3 =	5–7
4 =	7–9
5 =	9–11
6 =	11–13
7 =	13–15
8 =	15–17
9 =	17–19
0 =	19–21
1 =	>21
x =	Calm or period of waves not determinable.

Table 17.—Code for Mean Maximum Height of Waves (H_w)

	m.	ft.
0 =	<½	<1
1 =	½	1½
2 =	1	3
3 =	1½	5
4 =	2	6½
5 =	2½	8
6 =	3	9½
7 =	3½	11
8 =	4	13
9 =	4½	14
x =	Height not determined.	

50 added to d_wd_w

	m.	ft.
0 =	5	16
1 =	5½	17½
2 =	6	19
3 =	6½	21
4 =	7	22½
5 =	7½	24
6 =	8	25½
7 =	8½	27
8 =	9	29
9 =	9½	30½

Notes :—

(i) The range of heights covered by a number is half a metre, e.g., number 3 applies to waves whose heights are between 1¼ m. and 1¾ m. (4 ft. and 5¾ ft.).

(ii) Waves whose heights are greater than 9¾ m. (31 ft.) are reported by coding H_w as 9 and adding after the code group the word WAVE and the actual height in metres or feet ; e.g., Wave 40 ft.

(iii) If a wave height comes exactly midway between the heights corresponding to two code figures, the lower code figure is reported.

(iv) Code figures 49 or 99 for d_wd_w mean "waves confused, direction indeterminate."

TABLE 18.—Explanation of Beaufort letters used for hydrometeors (Col. 51–52 pages 1 and 4)

d = drizzle.
f = fog, visibility 220–1100 yards.
F = thick fog, visibility less than 220 yards.
f_g = low fog over land or sea.
h = hail.
ks = storm of drifting snow.
l = lightning.
p = shower(s).
r = rain.
s = snow.
rs = sleet.
t = thunder.

Intensity is shown by capital letters ("heavy" or "thick") or suffix "o" ("slight"). Continuous precipitation is shown by repeating the letter and intermittent precipitation by the prefix "i". The prefix "j" indicates weather near but not at the station.

5. EXPLANATION OF CHARTS

BAROMETER. Isobars are drawn for intervals of four millibars.

WIND. Arrows fly with wind. A full length feather represents 10 Kt. and a short feather 5 Kt. A solid pennant represents 50 Kt. Calm is indicated by circle outside weather symbol.

TEMPERATURE is given in degrees F.

CLOUD SYMBOLS

Clear sky. Sky ⅛ covered. Sky ¼ covered. Sky ⅜ covered. Sky ½ covered. Sky ⅝ covered. Sky ¾ covered. Sky ⅞ covered. Sky obscured.

WEATHER SYMBOLS

Rain. Drizzle. Snow. Sleet. Hail.
Shower. Thunderstorm. Thunder. Fog. Mist.

FRONTS or boundaries between masses of air of different origin are indicated, wherever their characteristics are well pronounced, in the following way—

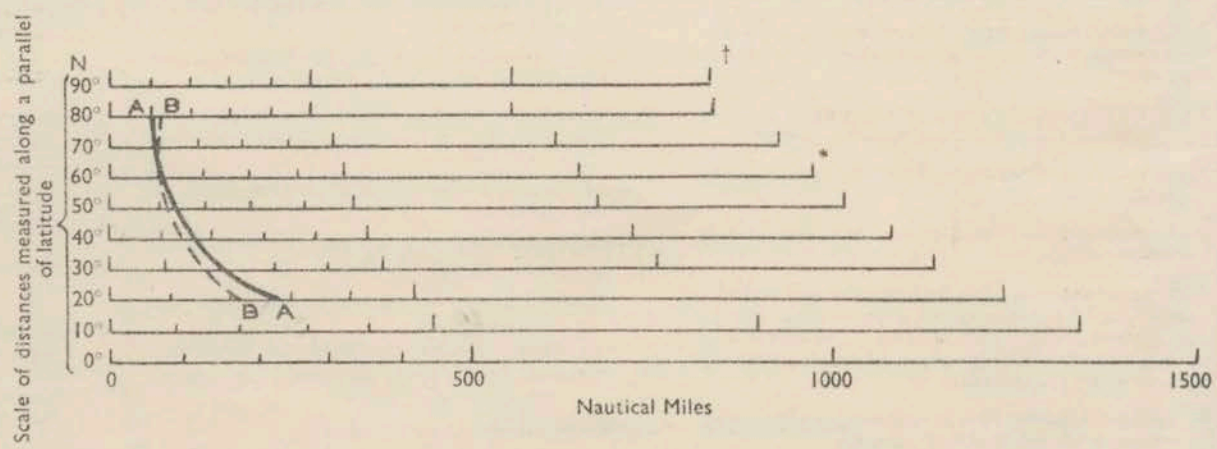
Warm Front on the surface.
Warm Front above the ground.
Cold Front on the surface.
Cold Front above the ground.
Occluded Front (or Occlusion).
Warm Occlusion.
Cold Occlusion.
Lines of Frontogenesis.
Short strokes across the frontal line indicate Frontolysis.

Note.—The symbols are placed on the side of the line towards which the front is moving. When the front is stationary the symbols are placed alternately on both sides of the line. Identification letters are inserted on fronts and in systems.

N.B.—Readers of the Report who are unacquainted with the method of construction and the use of weather charts are recommended to read "The Weather Map. An introduction to Weather Forecasting" (4th Edition 1956), which may be purchased from H.M. Stationery Office, York House, Kingsway, W.C.2, price 11s. 4d. post free.

6. COMBINED DISTANCE AND GEOSTROPHIC WIND SCALE

Equidistant azimuthal projection on the plane of 60°N. Scale 1 : 30,000,000



† Scale of distances measured along a meridian in latitude 80°–90° N.

* Scale of meridian in latitude 0°–80° N. (1 : 30,000,000).

For geostrophic wind speed of 20 knots, with surface pressure 1013·2 mb and temperature 59° F., the distance between consecutive 4 mb isobars is measured from the left hand extremity of the scale to AA for E–W motion and to BB for N–S motion.

MONTHLY SUMMARY OF

THE DAILY WEATHER REPORT

OF THE METEOROLOGICAL OFFICE, LONDON

FOR MARCH 1958

No. 27

Cold and mainly dry for over three weeks, then mostly rather warm and wet

Weather was anticyclonic for the first four days, but northerly winds broke through on 5th and persisted until 11th. On 12th and 13th a depression crossed the country but pressure soon built up behind it over the North Sea. High pressure persisted to northeast of the British Isles for the rest of the month. Fronts from the Atlantic made little headway against the cold southeasterly winds until 25th, but thereafter milder air spread slowly northwards to all parts of the country.

The opening days of March were rather mild and mostly dry, but with a good deal of fog. On 5th temperatures reached the upper fifties in southeastern districts of England but fresh northwesterly winds and snow showers were spreading south across Scotland and northern England. Temperatures fell progressively until on 9th daytime temperatures were at the level of the average night minima for March. This type of weather continued until 11th, with frequent snow showers but sunny periods every day in most districts. Dyce recorded low night temperatures from 10th, including a record one of 0° on 13th/14th, with -7° on the grass.

On 12th and 13th a depression which formed in the Denmark Strait moved across Northern Ireland and north England, giving some continuous rain and snow, though amounts were fairly small. There was a marked rise of pressure over the North Sea behind the depression, and this proved to be the beginning of a spell of southeasterly winds, with settled cold weather over most of the country. For the next 10 days a frontal belt lay northwest-southeast over or near southwest England, giving some prolonged periods of rain, but elsewhere it was cold, fairly sunny and dry apart from snow showers, most of them slight. In 24 hours ending on the morning of 17th Culdrose recorded 48 mm. of rain, yet nearby St. Mawgan had only 4 mm.

Without there being any major change in the pressure distribution, a gradual advance of milder air began on 24th and weak rainbelts moved north across the country. From 26th there was practically no further frost in any areas, and for the remainder of the month weather was cloudy generally with periods of rain. During 28th and 29th a depression moved north along the west coast of Great Britain. The slow-moving rain area accompanying it gave large falls in parts of northeast England and east Scotland and formed the main contribution to the record totals for March at Leuchars and Dyce. In contrast, the month's rainfall at Renfrew was within 3 mm. of the lowest for the month ever recorded there.

The month as a whole was cold everywhere, with no maximum temperature higher than the 60° at Ross-on-Wye on 30th. Sunshine amounts were about average but rainfall was very variable, though most areas had more dry days than usual.

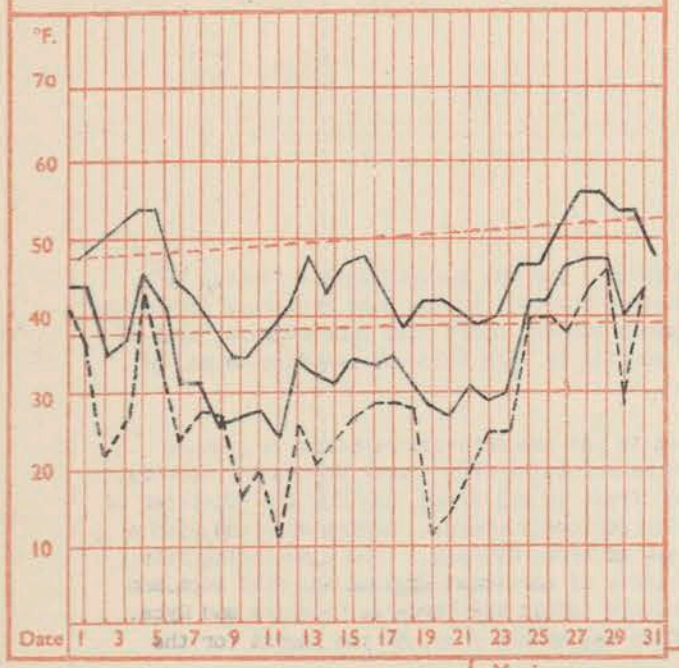
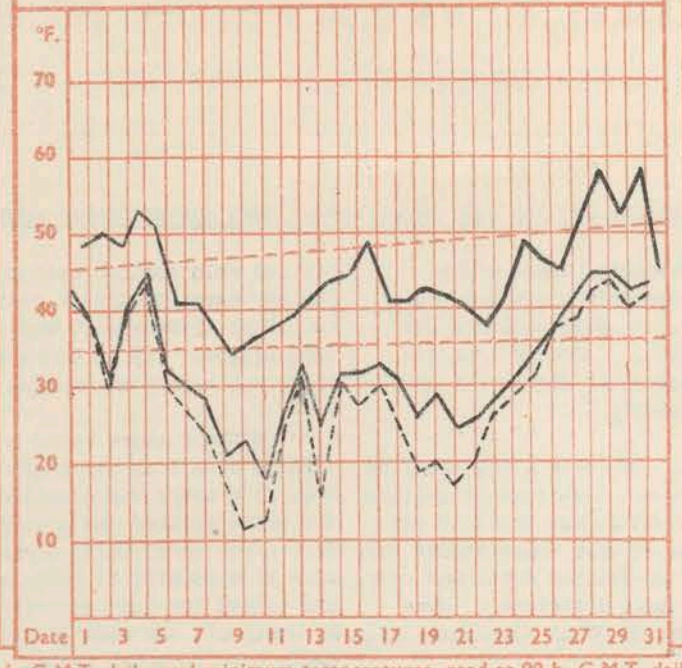
TEMPERATURE

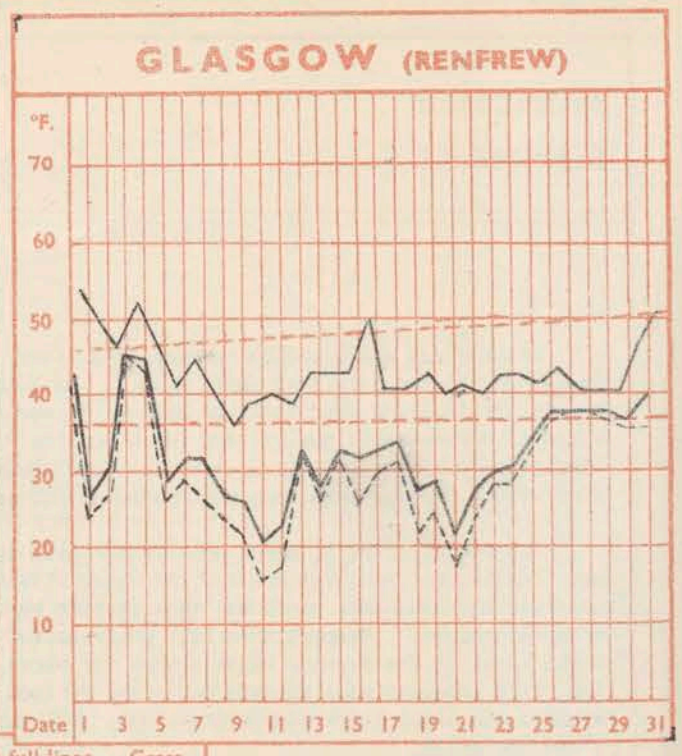
LONDON (KEW)



MANCHESTER (AIRPORT)

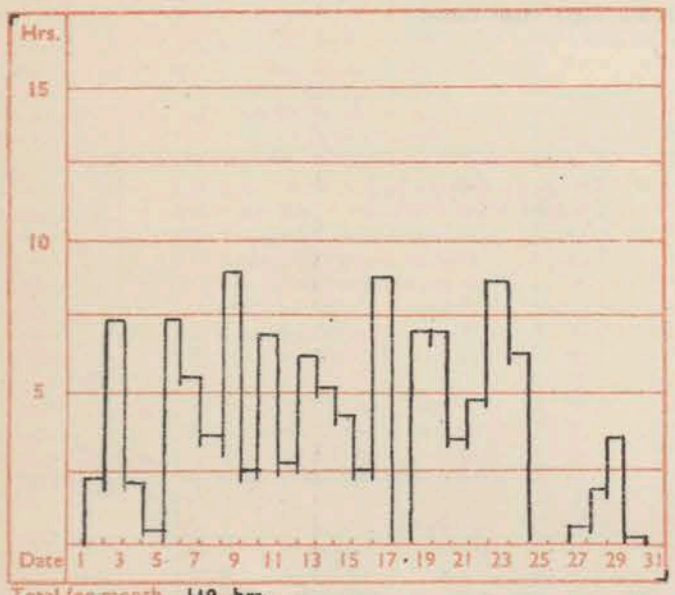


GLASGOW (RENFREW)

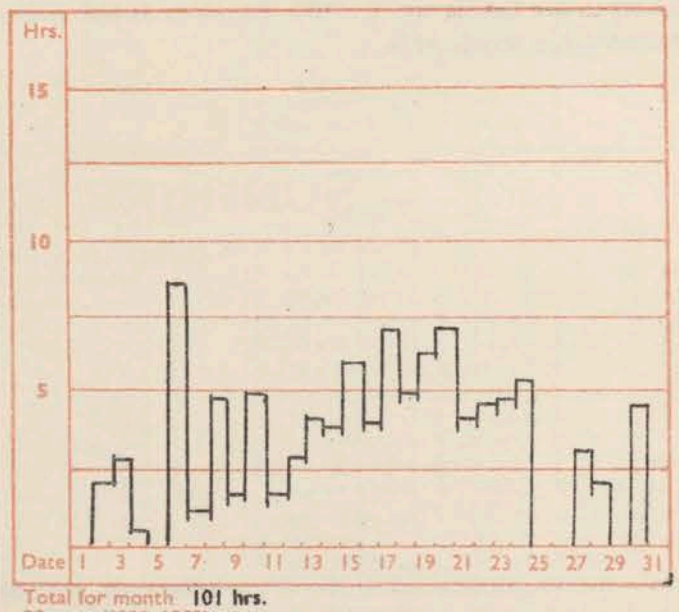


Maximum temperatures read at 21 h. G.M.T. daily, and minimum temperatures, read at 09 h. G.M.T. daily, are shown in full lines. Grass minimum temperatures, read at 09 h. G.M.T. daily, are shown by a dotted line. Pecked lines in red show normal values.

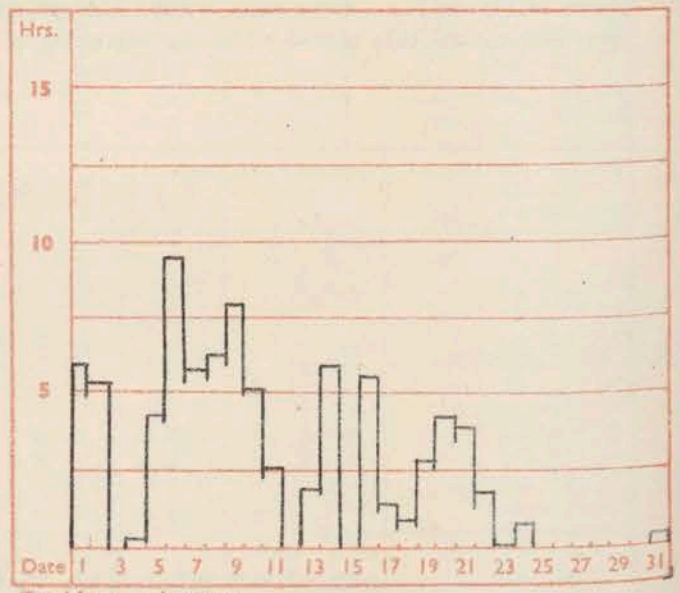
SUNSHINE



Total for month **119 hrs.**
30 year (1921–1950) average 112 hrs.



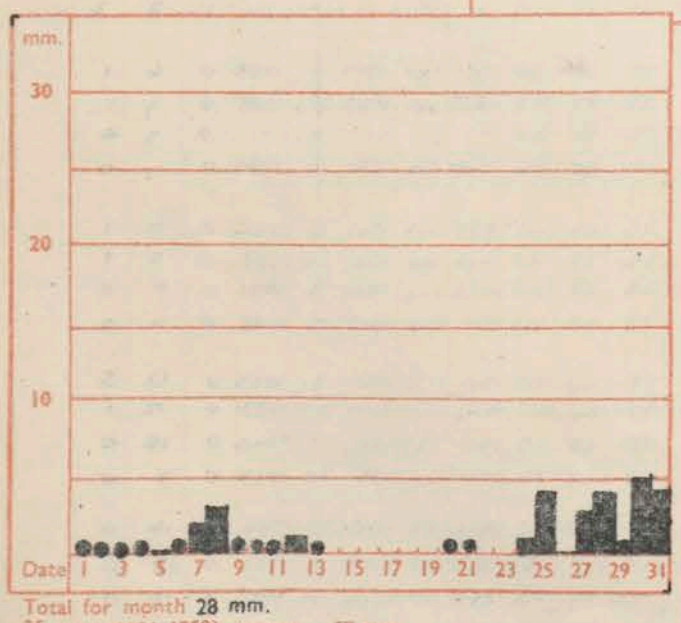
Total for month **101 hrs.**
30 year (1921–1950) average 93 hrs.



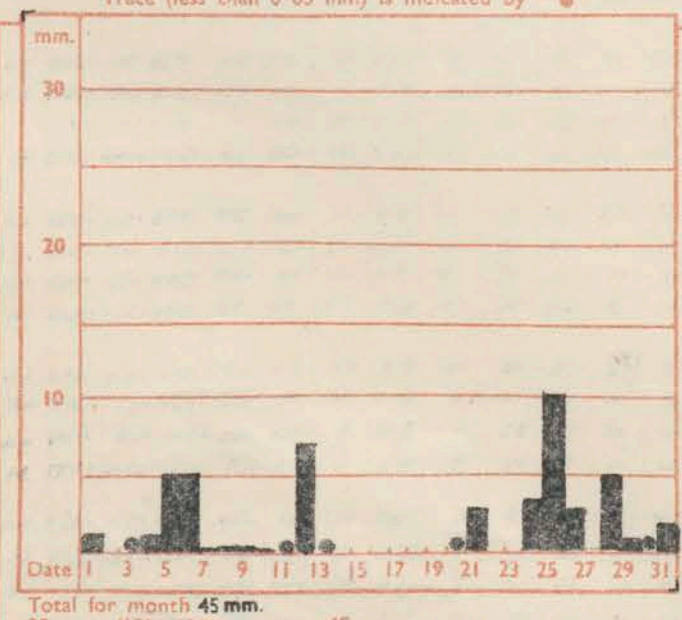
Total for month **83 hrs.**
30 year (1921–1950) average 93 hrs.

The rainfall entry made for each day represents the total fall for the 24-hour period beginning at 09 h. G.M.T. on that day.
Trace (less than 0·05 mm) is indicated by " ● "

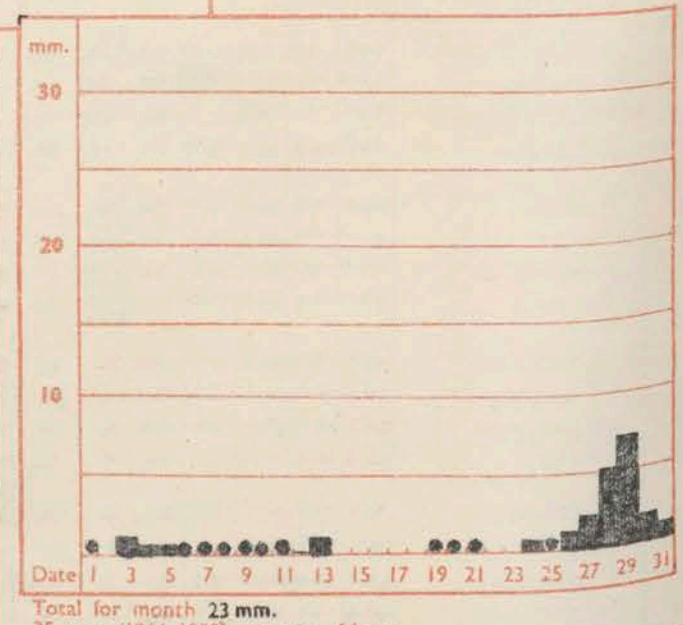
RAINFALL



Total for month **28 mm.**
35 year (1916-1950) average 37 mm.



Total for month **45 mm.**
35 year (1916 1950) average 45 mm.



Total for month **23 mm.**
35 year (1916 1950) average 64 mm.

Corrections to Monthly Summary for February. No 26 :– Cardington ;–Mean maximum temperature 46·5° : Dishforth :– Mean Minimum temperature 34·7°, Difference from average +0·1 : Stornoway :– Days with no rainfall 7.

CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

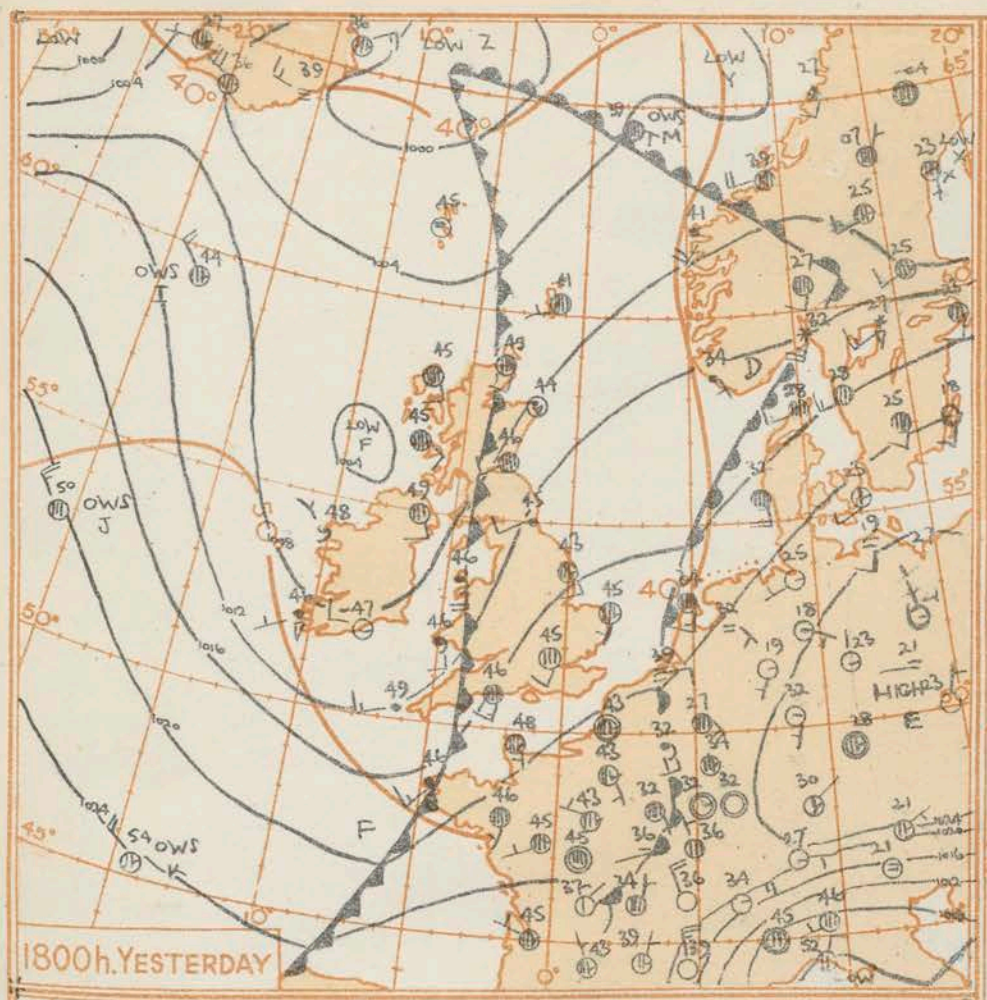
Mid-day (12h) of Friday 28th. February. 1958

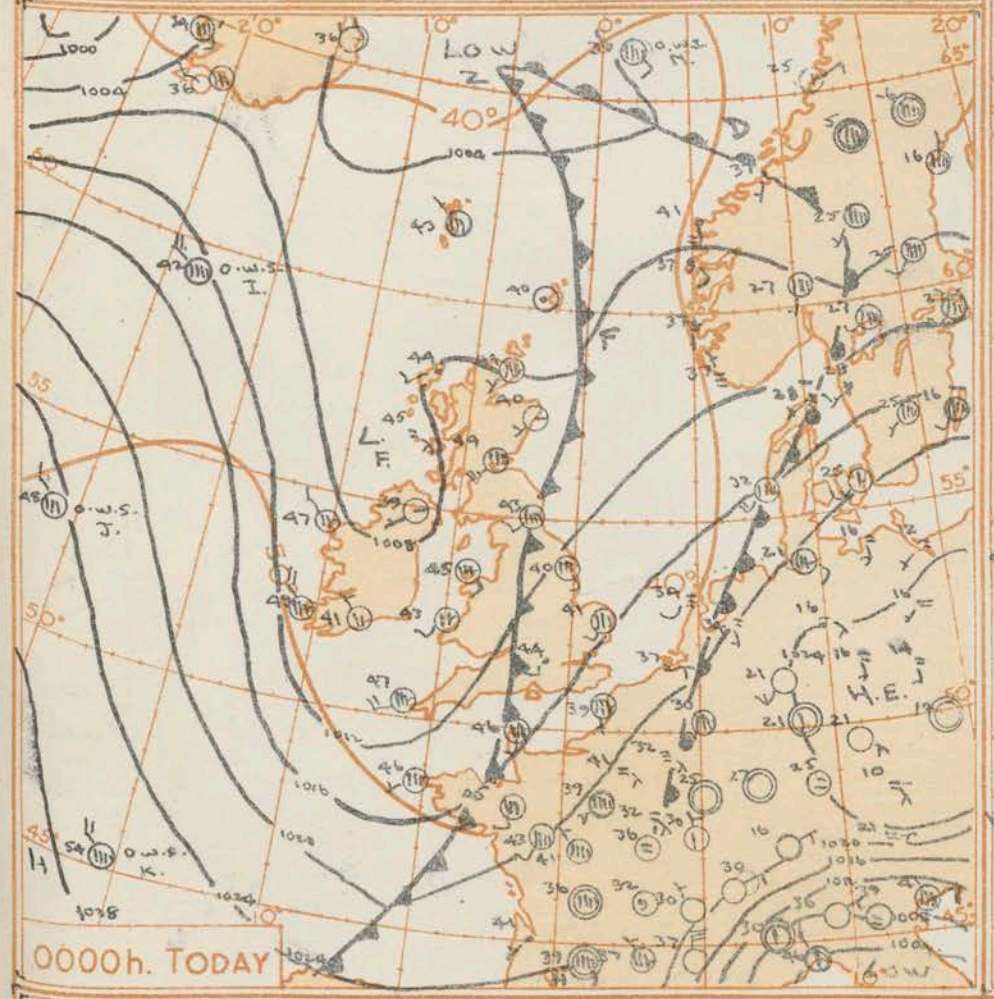
CIVIL TWILIGHT (sun 6° below horizon)

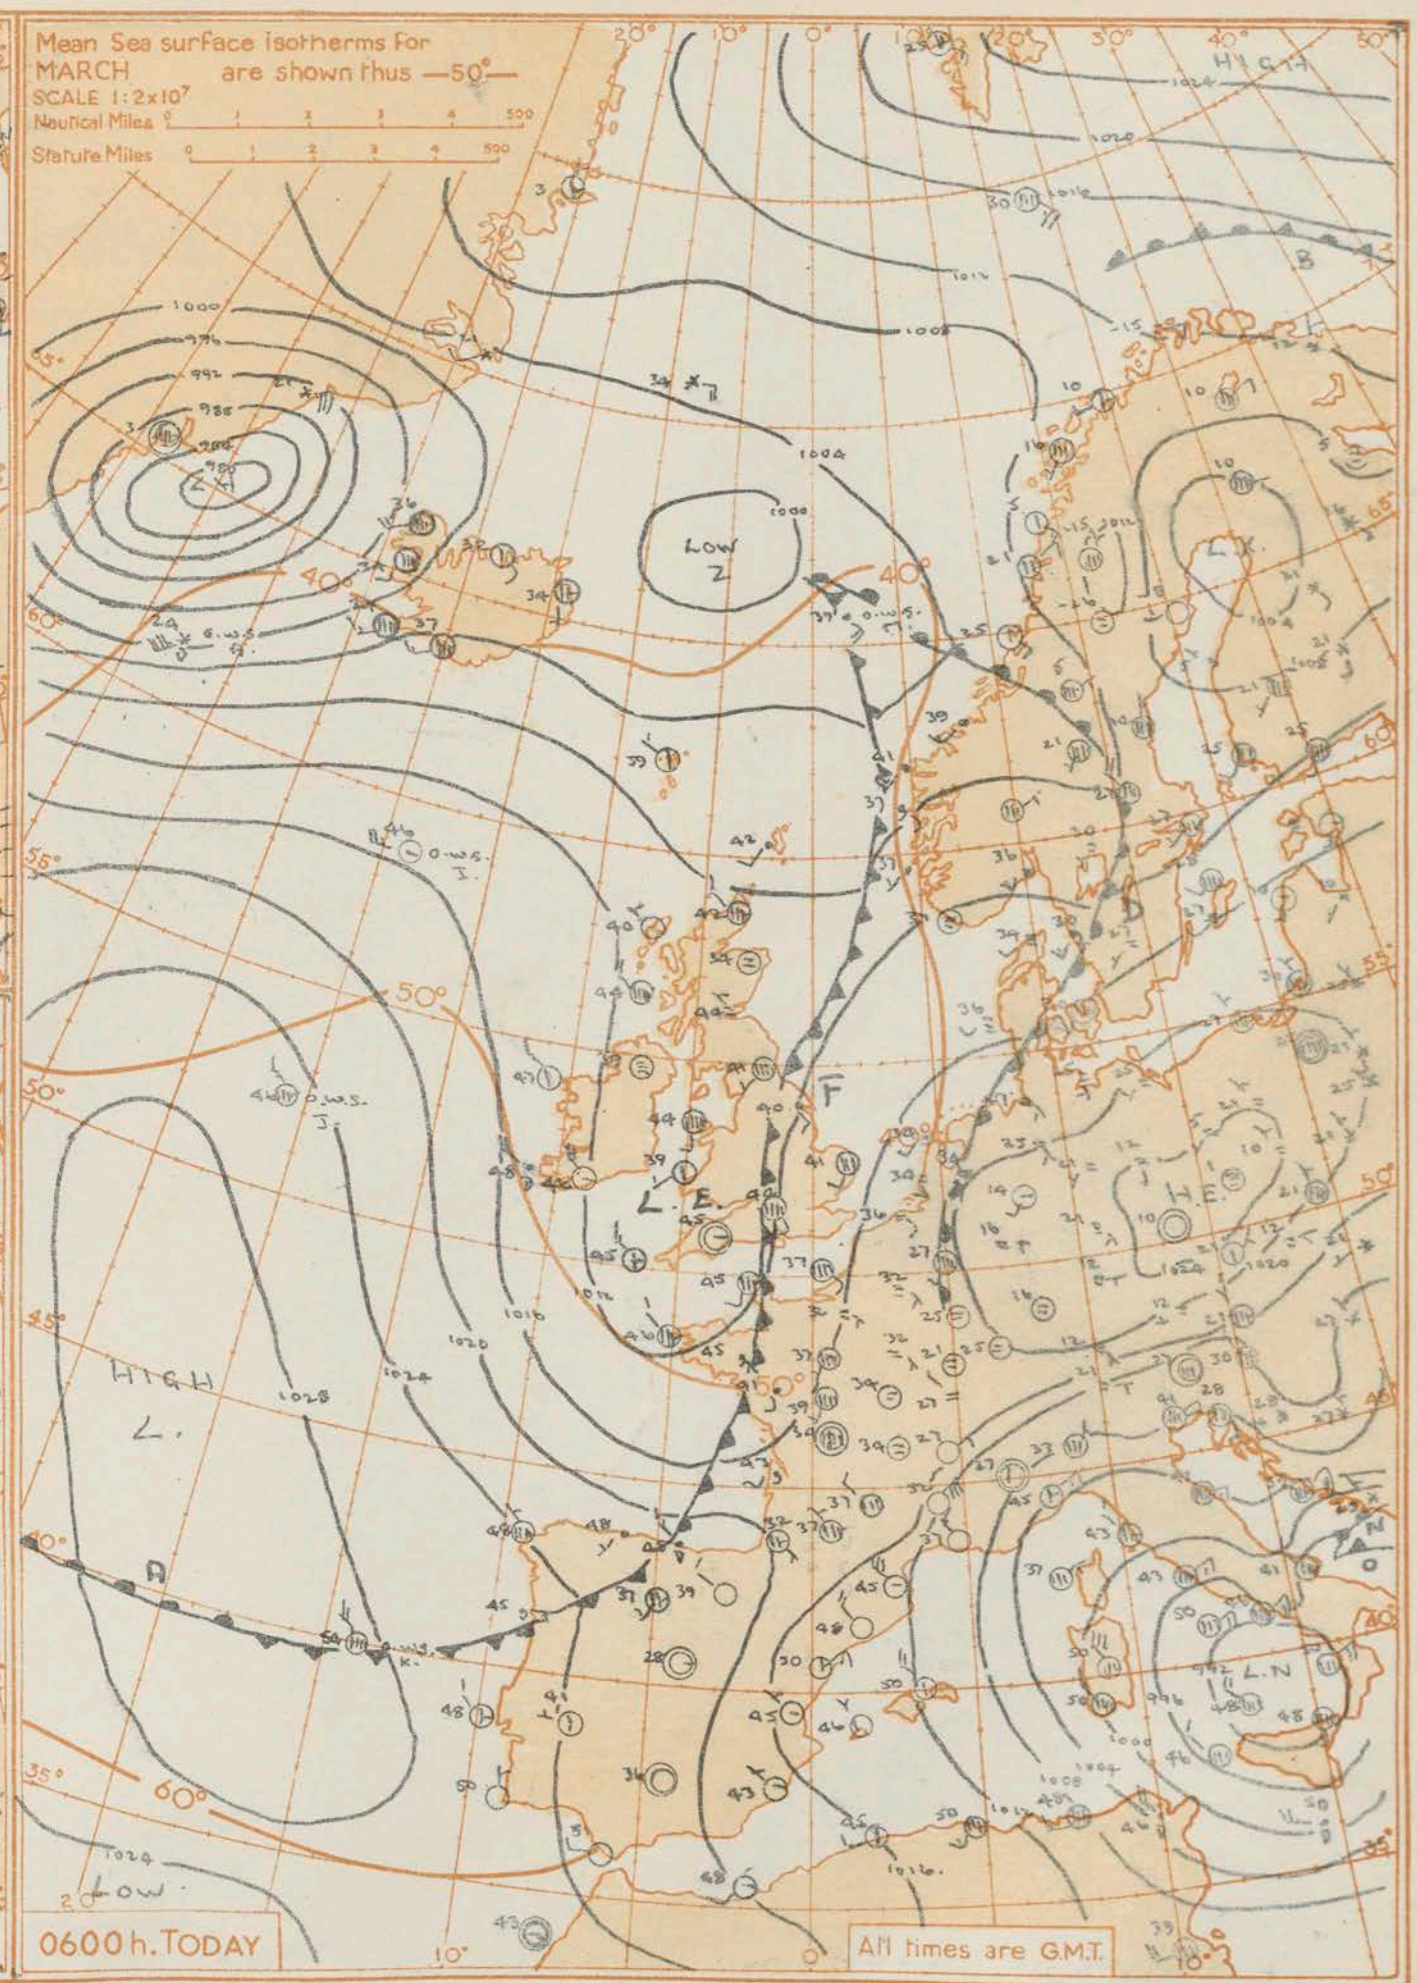
Equidistant azimuthal projection 1:3×10⁷ on the plane of 60°N.

NAUTICAL MILES.

0 500 1,000 1,500







GENERAL SYNOPTIC DEVELOPMENT

Issued at midday today Saturday 1st March 1958

Depressions continue to move eastwards in the Iceland area. A major depression yesterday over the Davis Strait has transferred to the Denmark Strait and is forecast to move to the north of Iceland by tomorrow. Troughs of low pressure have moved from the west to the British Isles and will continue slowly to the North Sea with minor lows within the trough moving south-east to the Continent. A deep low over the Mediterranean persists. A ridge of high pressure yesterday in mid-Atlantic is expected to reach the British Isles tomorrow.

FORECAST FOR BRITISH ISLES until noon tomorrow

Scotland and Northern Ireland will have variable cloud, scattered showers and a few bright intervals today, but some fog patches in the Clyde Forth valley and in East Scotland chiefly tonight and tomorrow morning. England and Wales will be mostly cloudy with occasional drizzle but a few places will have sunshine. Some fog is expected tonight.

OUTLOOK FOR following 24 hours. Mainly cloudy with fog patches at first. Some rain or drizzle over Northern Ireland and west Scotland but probably some bright intervals elsewhere.

SIR GRAHAM SUTTON, C.B.E., D.Sc., F.R.S., Director General. Meteorological Office, Air Ministry, Kingsway, London, W.C.2.

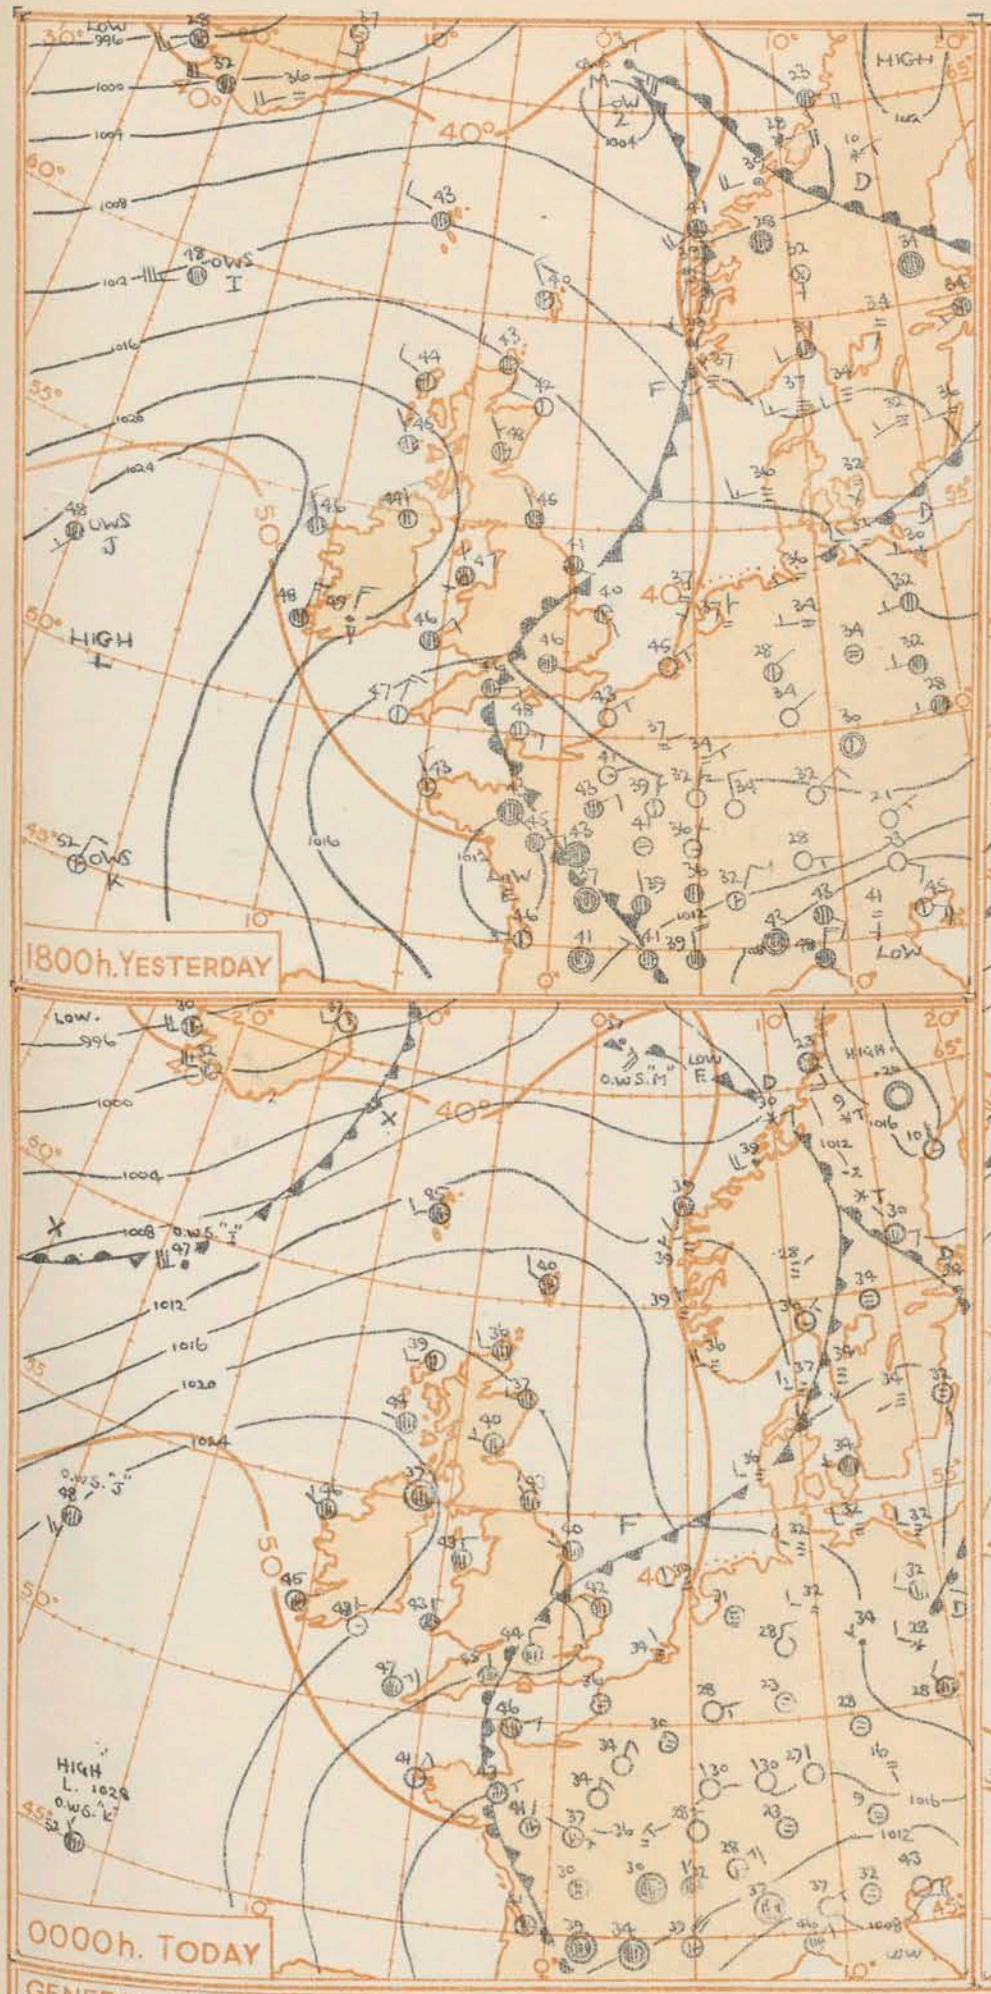
CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

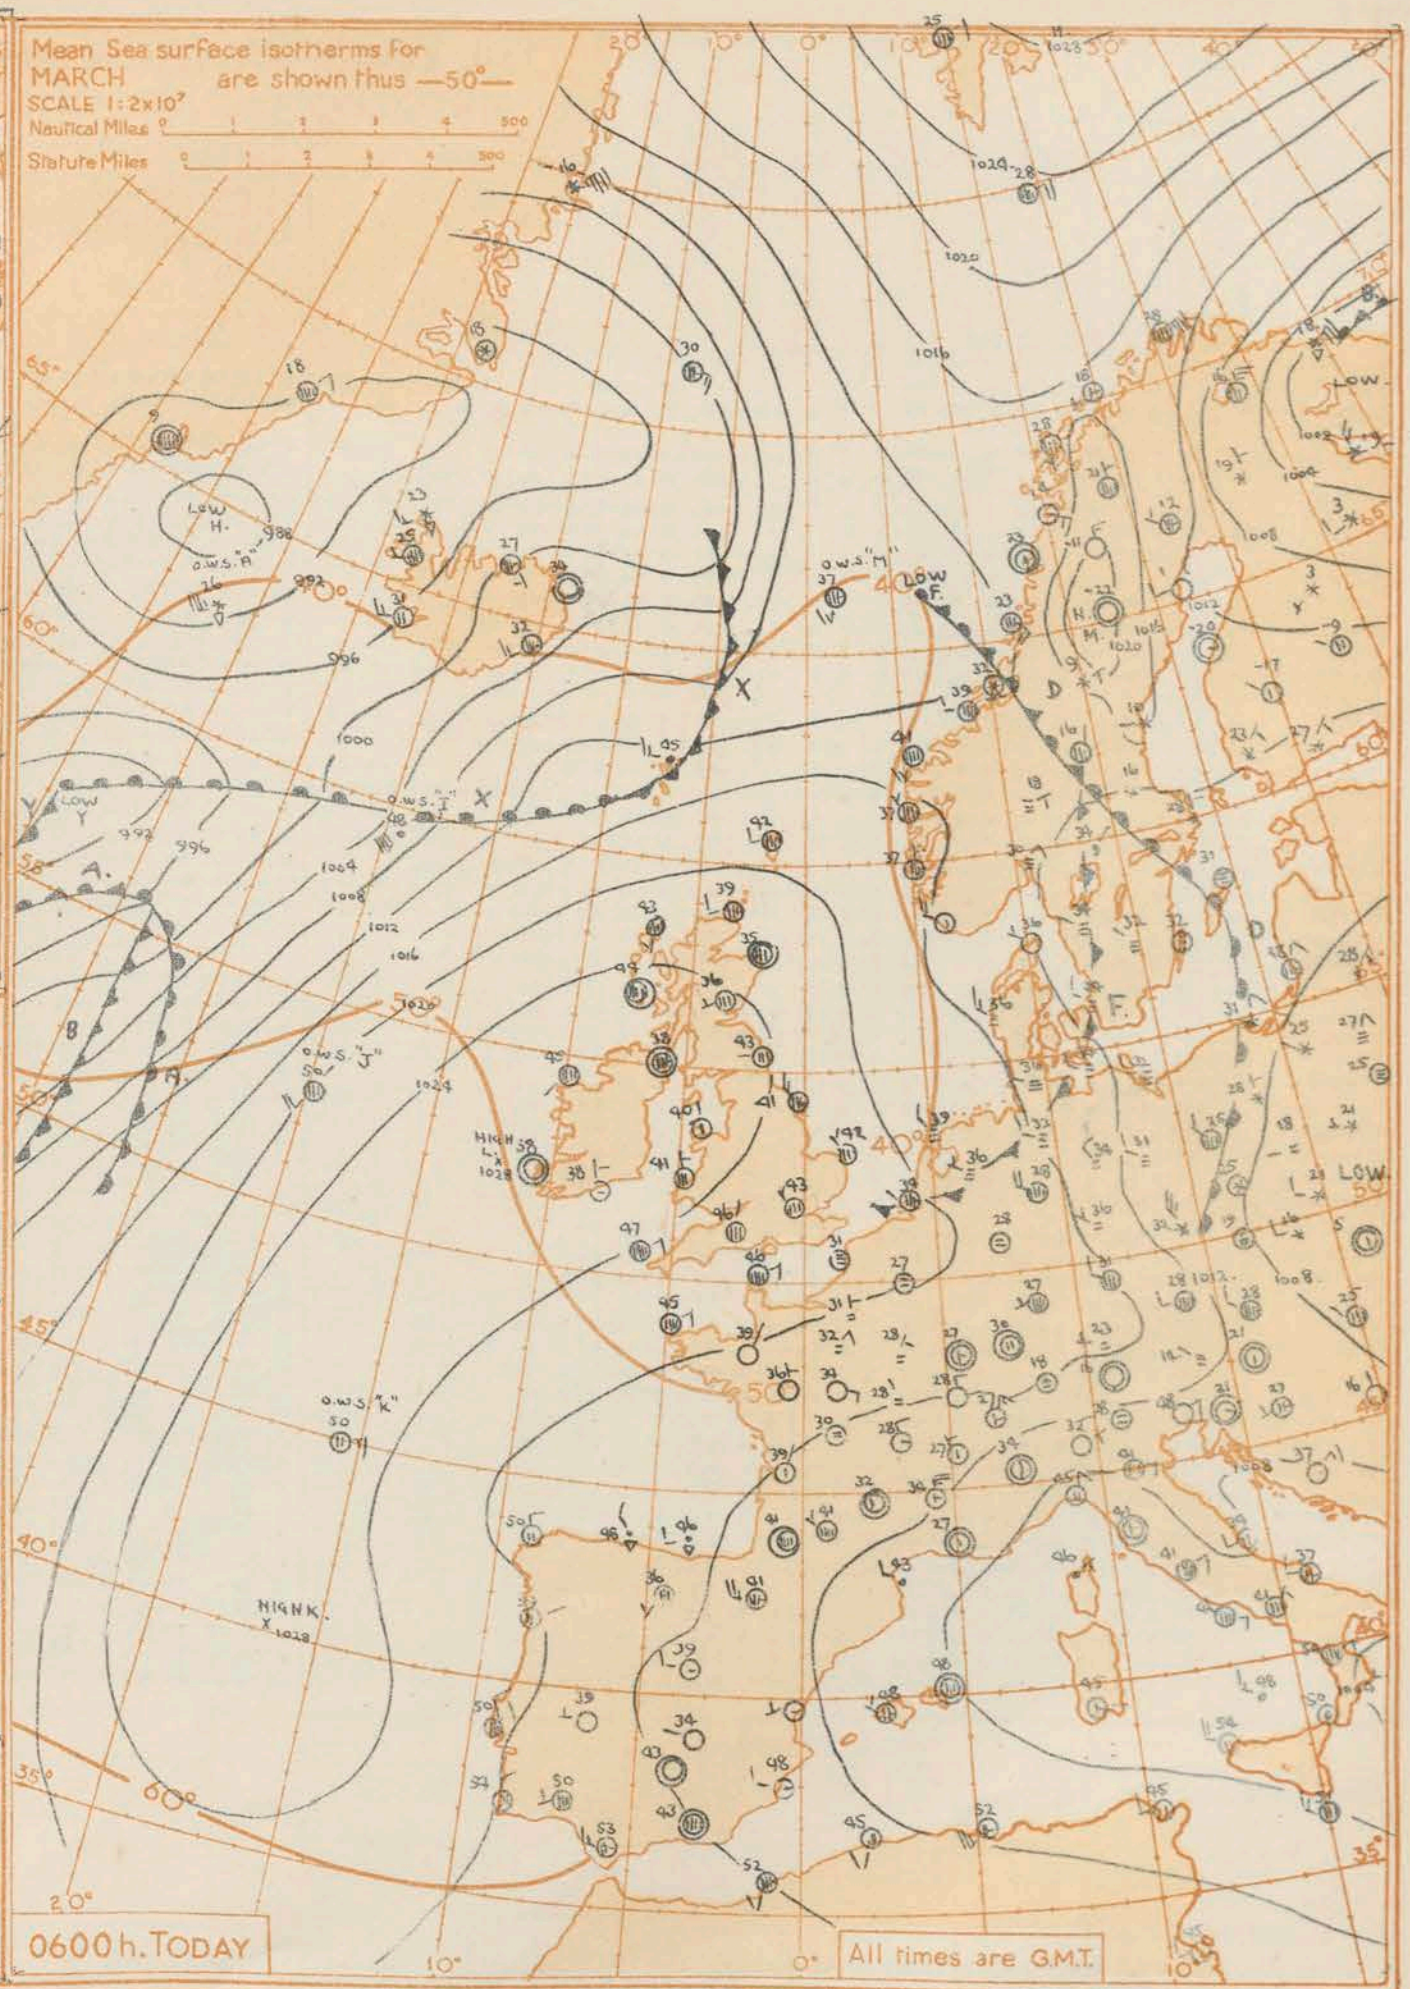
Mid-day (12h) of Saturday 1st March 1958

Equidistant azimuthal projection 1: 3×10^7 on the plane of 60°N.

NAUTICAL MILES.

0 500 1,000 1,500





GENERAL SYNOPTIC DEVELOPMENT

Issued at midday today Sunday 2nd March 1958

A trough of low pressure moved south over the North Sea and is expected to continue southwards over the Continent while a developing anticyclone over Ireland will probably move slowly into England. A depression southwest of Iceland will move northeast and amalgamate with another now northwest of Iceland to form an intense depression north of Iceland moving northeast or north but bringing mild air into the northwest of Britain.

FORECAST FOR BRITISH ISLES until noon tomorrow

Scotland and Northern Ireland will be mild and rather cloudy with rain or drizzle at times in the north and west. England and Wales will have bright periods but some frost and fog night and morning although day temperatures will be about the seasonal average.

OUTLOOK FOR the following 24 hours.

Mild with occasional rain in the north and west. Dry elsewhere with average temperatures.

SIR GRAHAM SUTTON, C.B.E., D.Sc., F.R.S., Director General. Meteorological Office, Air Ministry, Kingsway, London, W.C.2.

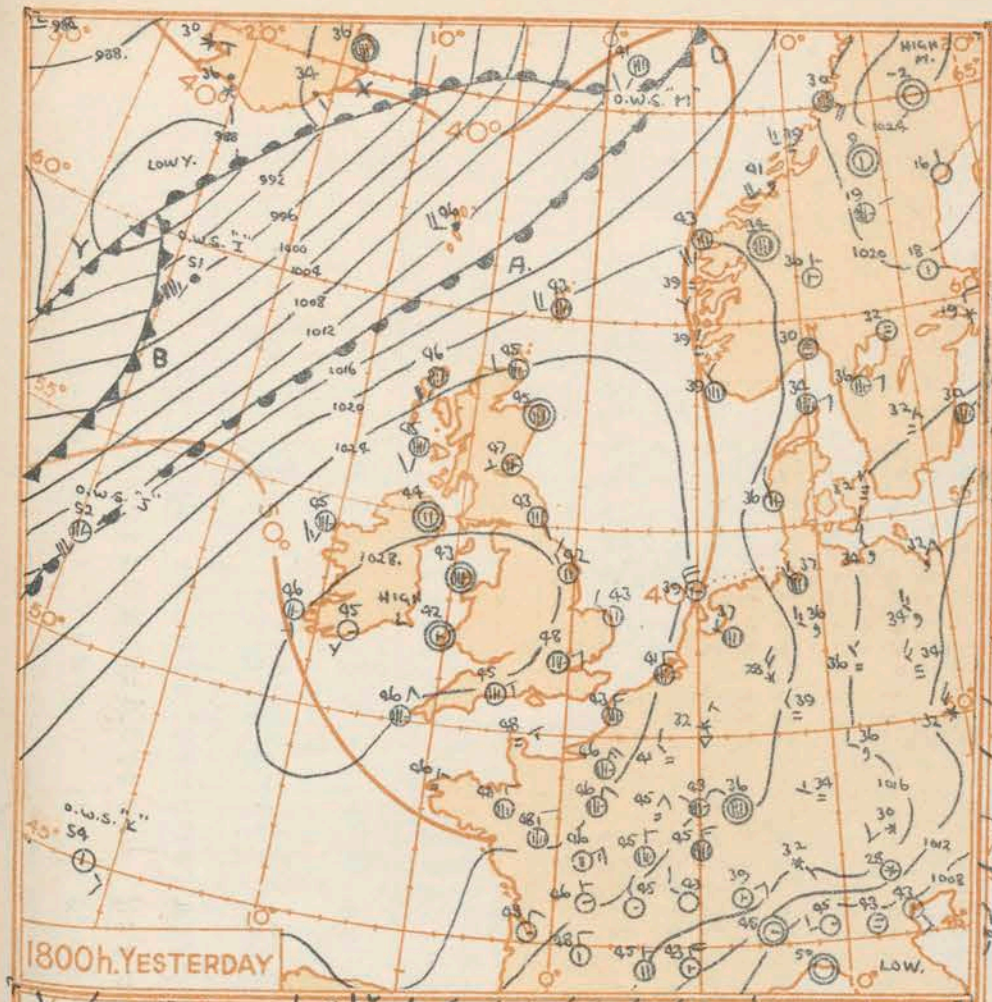
CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

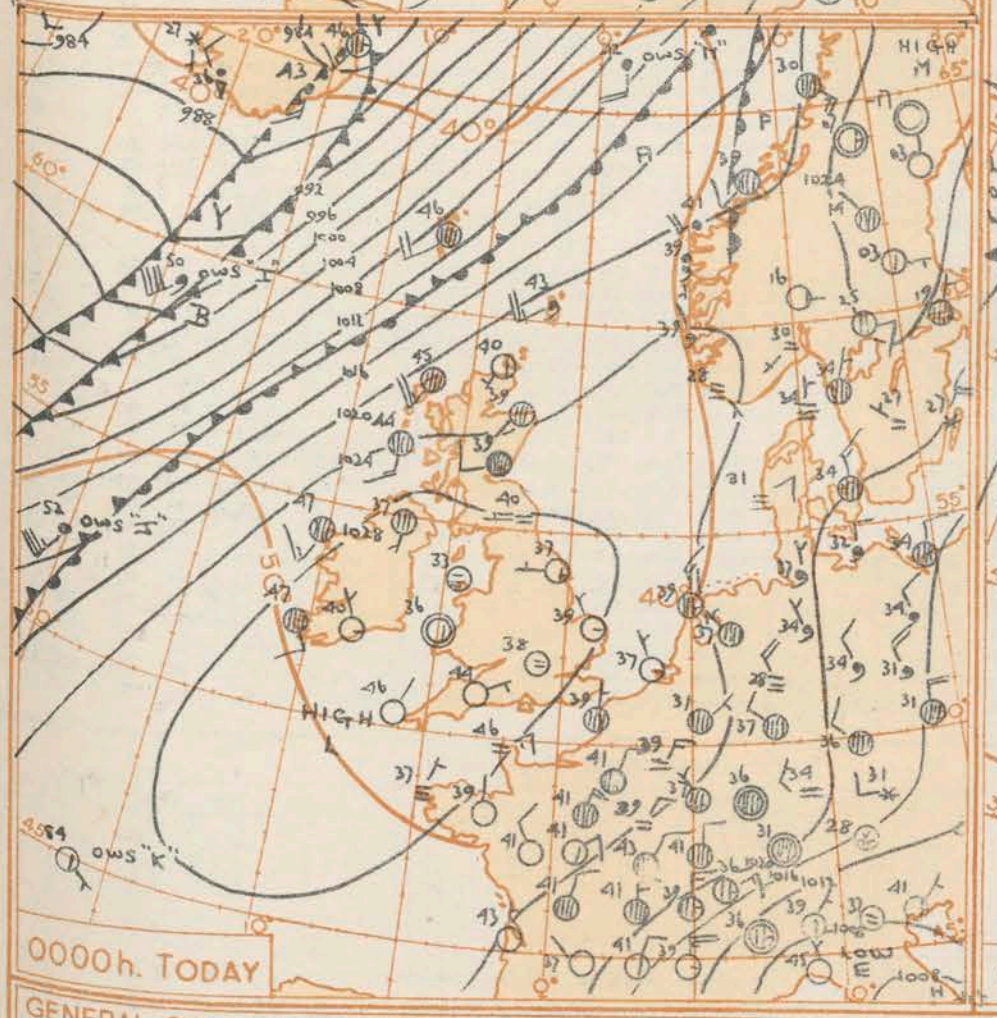
Mid-day (12h)
of
Sunday 2nd March
1958

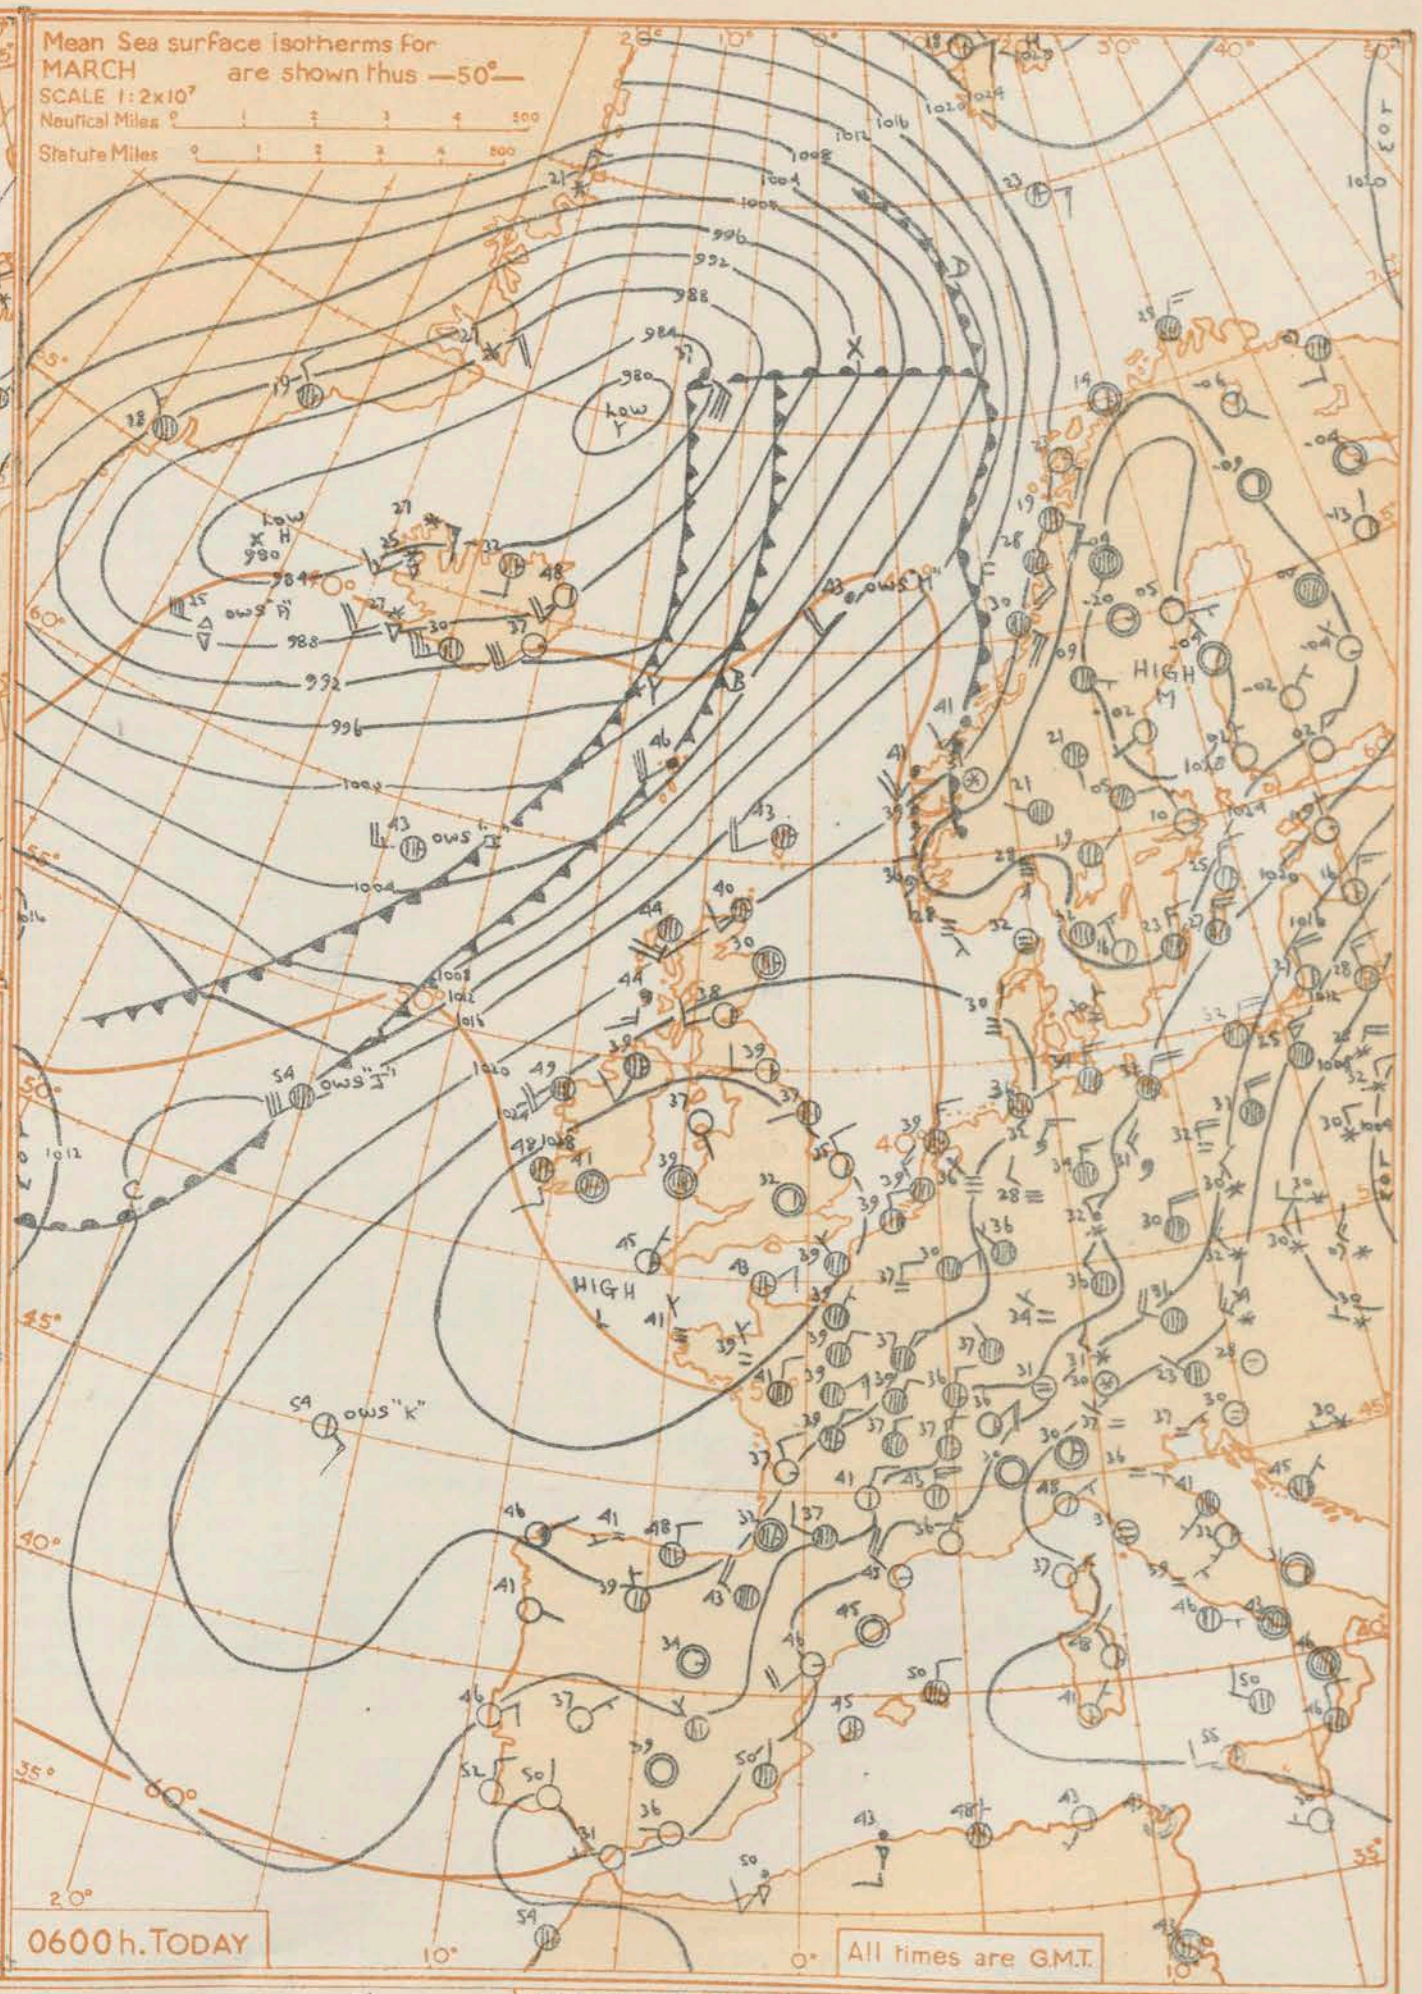
Equidistant azimuthal projection 1:3×10⁷ on the plane of 60°N.

NAUTICAL MILES.

0 500 1,000 1,500







GENERAL SYNOPTIC DEVELOPMENT

An anticyclone which has moved slowly east into England will probably drift southwards while a trough from the Atlantic moves into Scotland followed by a ridge. An anticyclone which developed in north Scandinavia will probably move quickly south and diminish while a new depression forms off west Norway as a secondary to the main depression which expected to become slow-moving off northeast Greenland.

Issued at midday today Monday 3rd March 1958

FORECAST FOR BRITISH ISLES until noon tomorrow

Over most of England and W[illegible] there will be sunny periods but with much mist and fog night and morning, and perhaps slight frost in places. Scotland and Northern Ireland will be mostly mild and cloudy with occasional rain or drizzle possibly spreading to north England also. Brighter colder weather will probably reach north Scotland, giving frost at night.

OUTLOOK FOR the following 24 hours:—

Mostly rather mild but becoming colder in Scotland, though dry. Morning fog in the south. Occasional rain in north England and Northern Ireland.

SIR GRAHAM SUTTON, C.B.E., D.Sc., F.R.S., Director General. Meteorological Office, Air Ministry, Kingsway, London, W.C.2.

CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

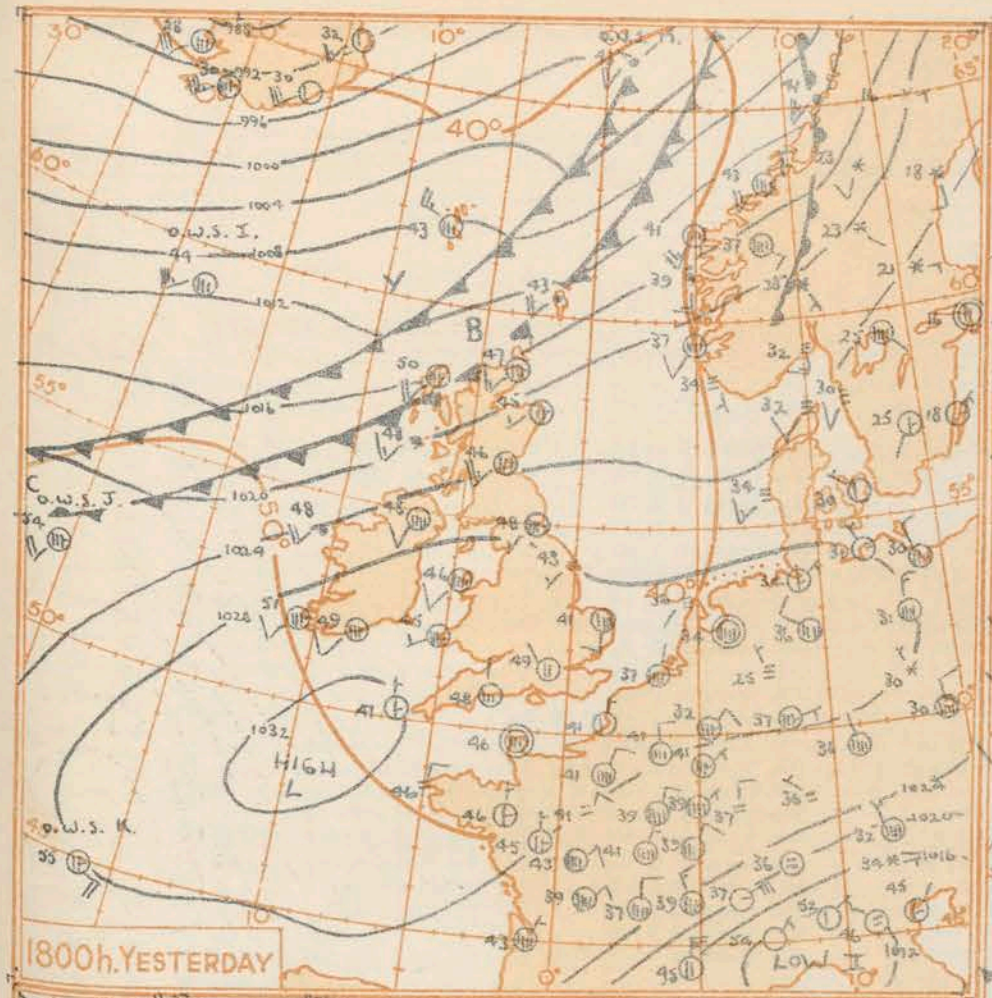
Mid-day (12h)
of
Monday 3rd March
1958

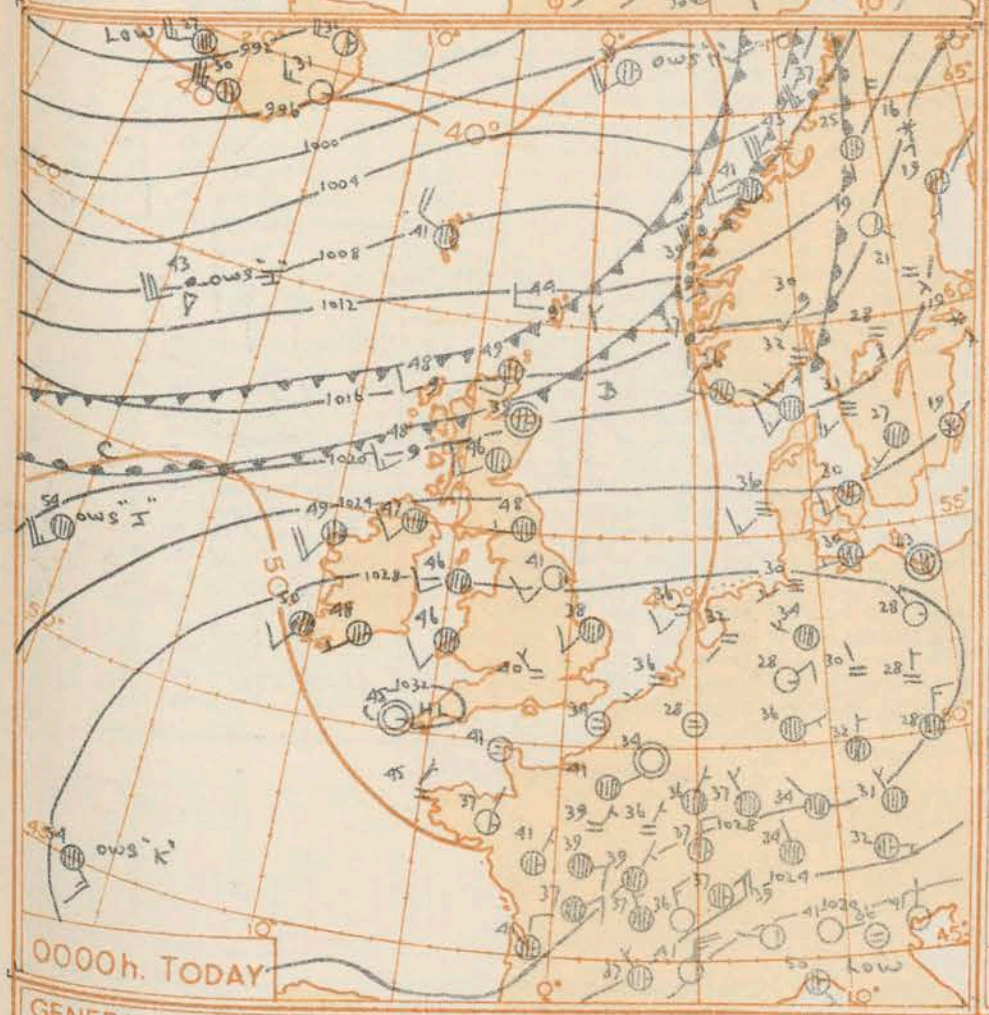
CIVIL TWILIGHT (6th March)

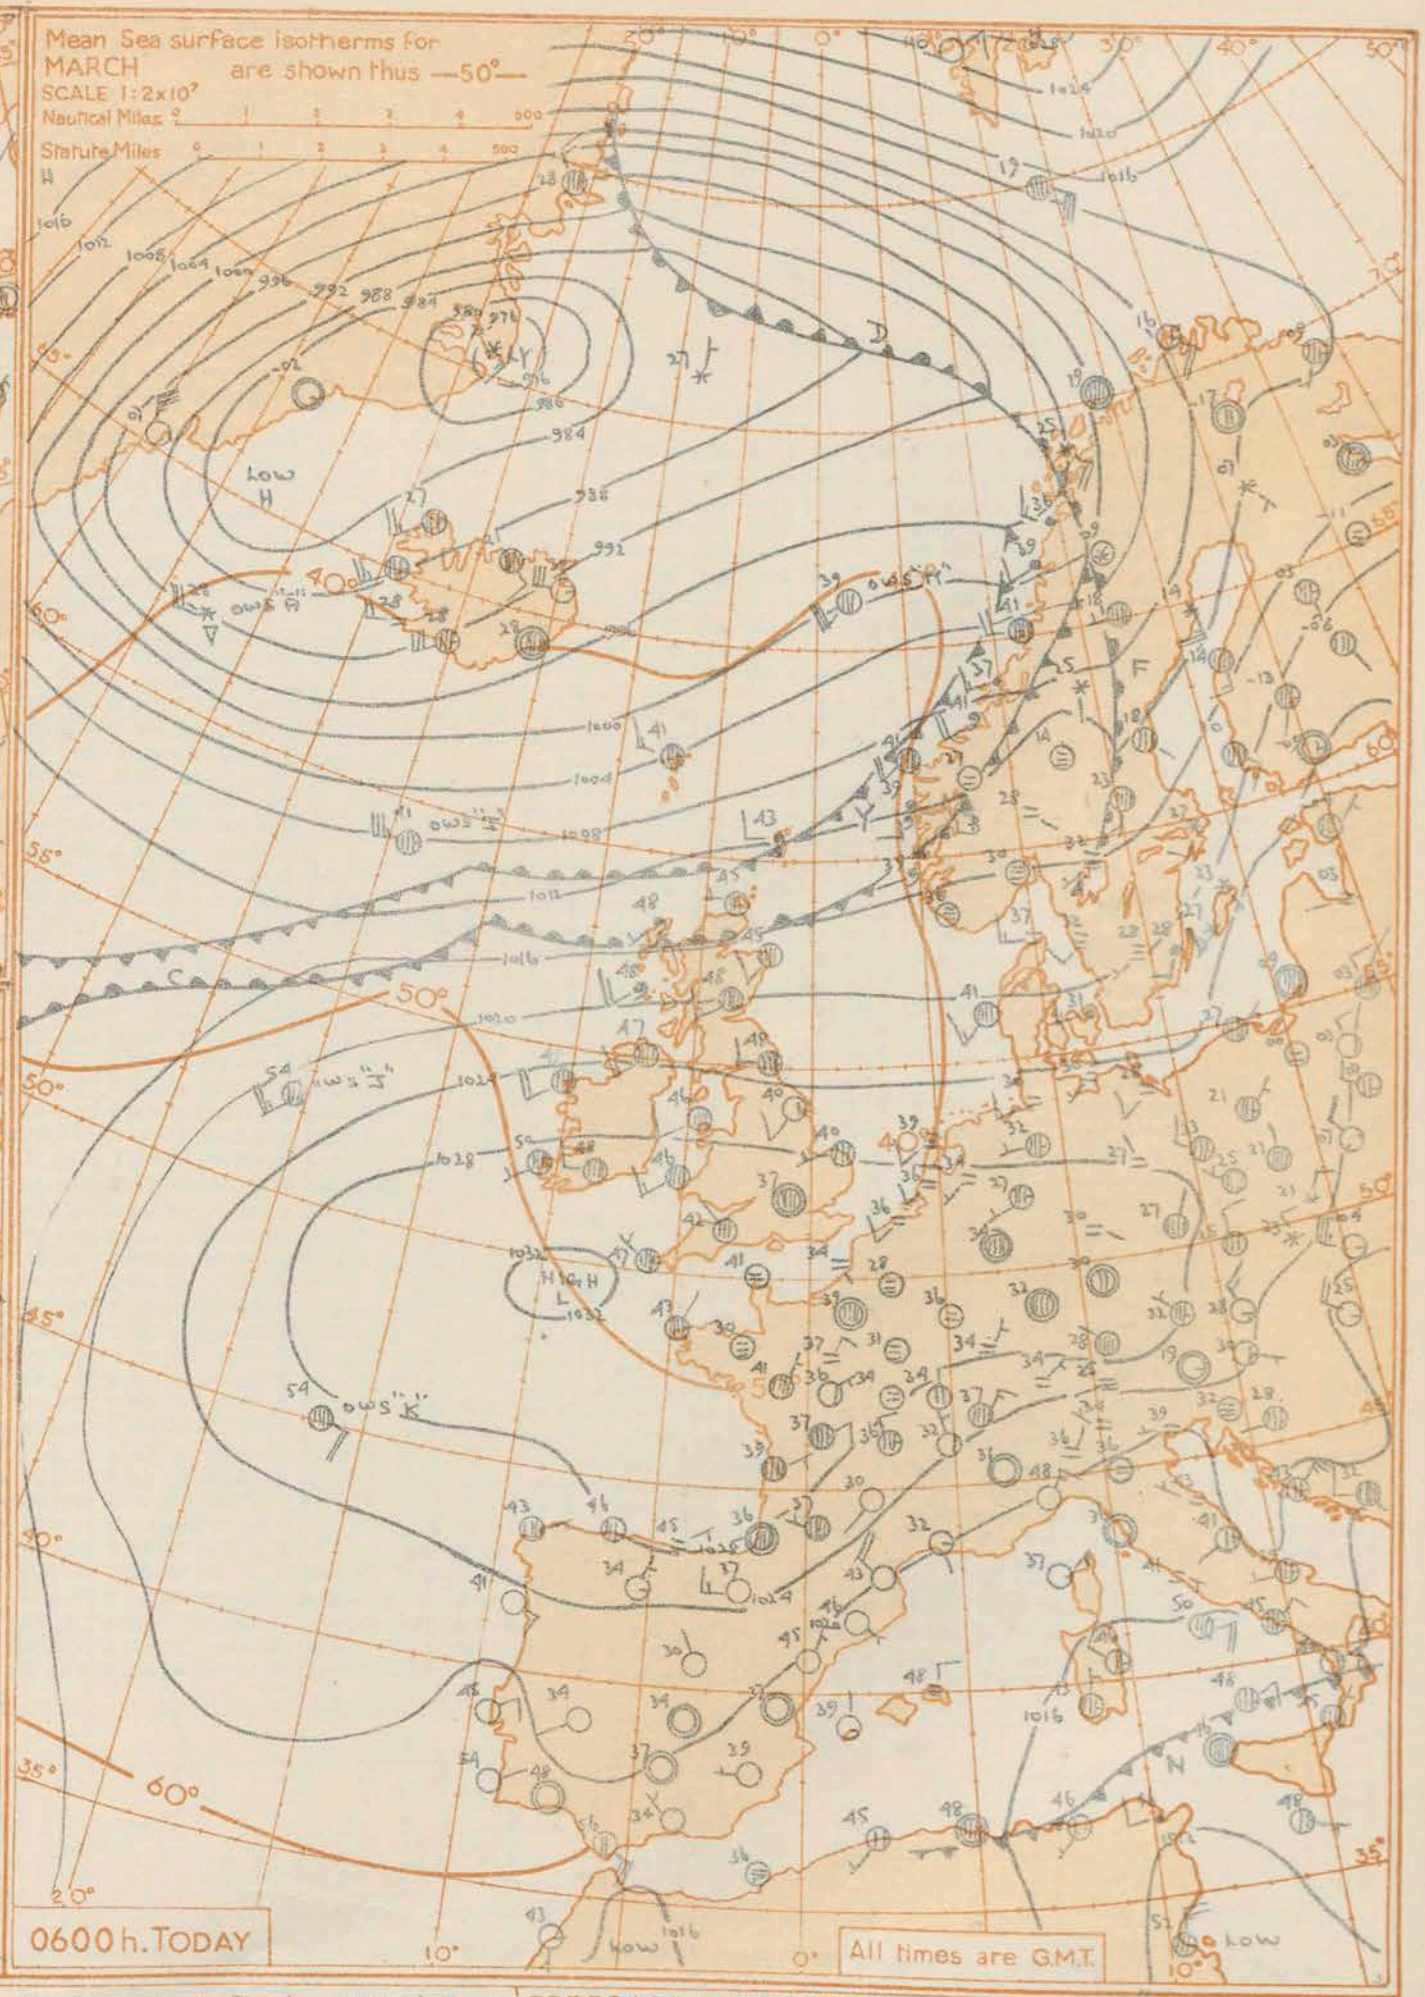
Equidistant azimuthal projection 1: 3×10^7 on the plane of 60°N.

NAUTICAL MILES.

0 500 1,000 1,500







GENERAL SYNOPTIC DEVELOPMENT

Issued at midday today Tuesday 4th March 1958

The anticyclone near southwest England has now become almost stationary and a rather mild westerly airstream covers the British Isles. A deep complex depression covers the Denmark Strait. The cold front of this depression is lying almost stationary at present near the north coast of Scotland and minor troughs of low pressure will cross northern coastal districts of the British Isles.

FORECAST FOR BRITISH ISLES until noon tomorrow

Fresh southwest to west winds will maintain cloudy weather with periods of rain, drizzle and some hill fog over Scotland and Northern Ireland. England and Wales will have mainly cloudy weather also, but apart from a little rain in northern England it will be mostly dry. Temperatures will be a little above the seasonal average.

OUTLOOK FOR the following 24 hours.

Little change.

THE DAILY WEATHER REPORT
OF THE METEOROLOGICAL OFFICE, LONDON

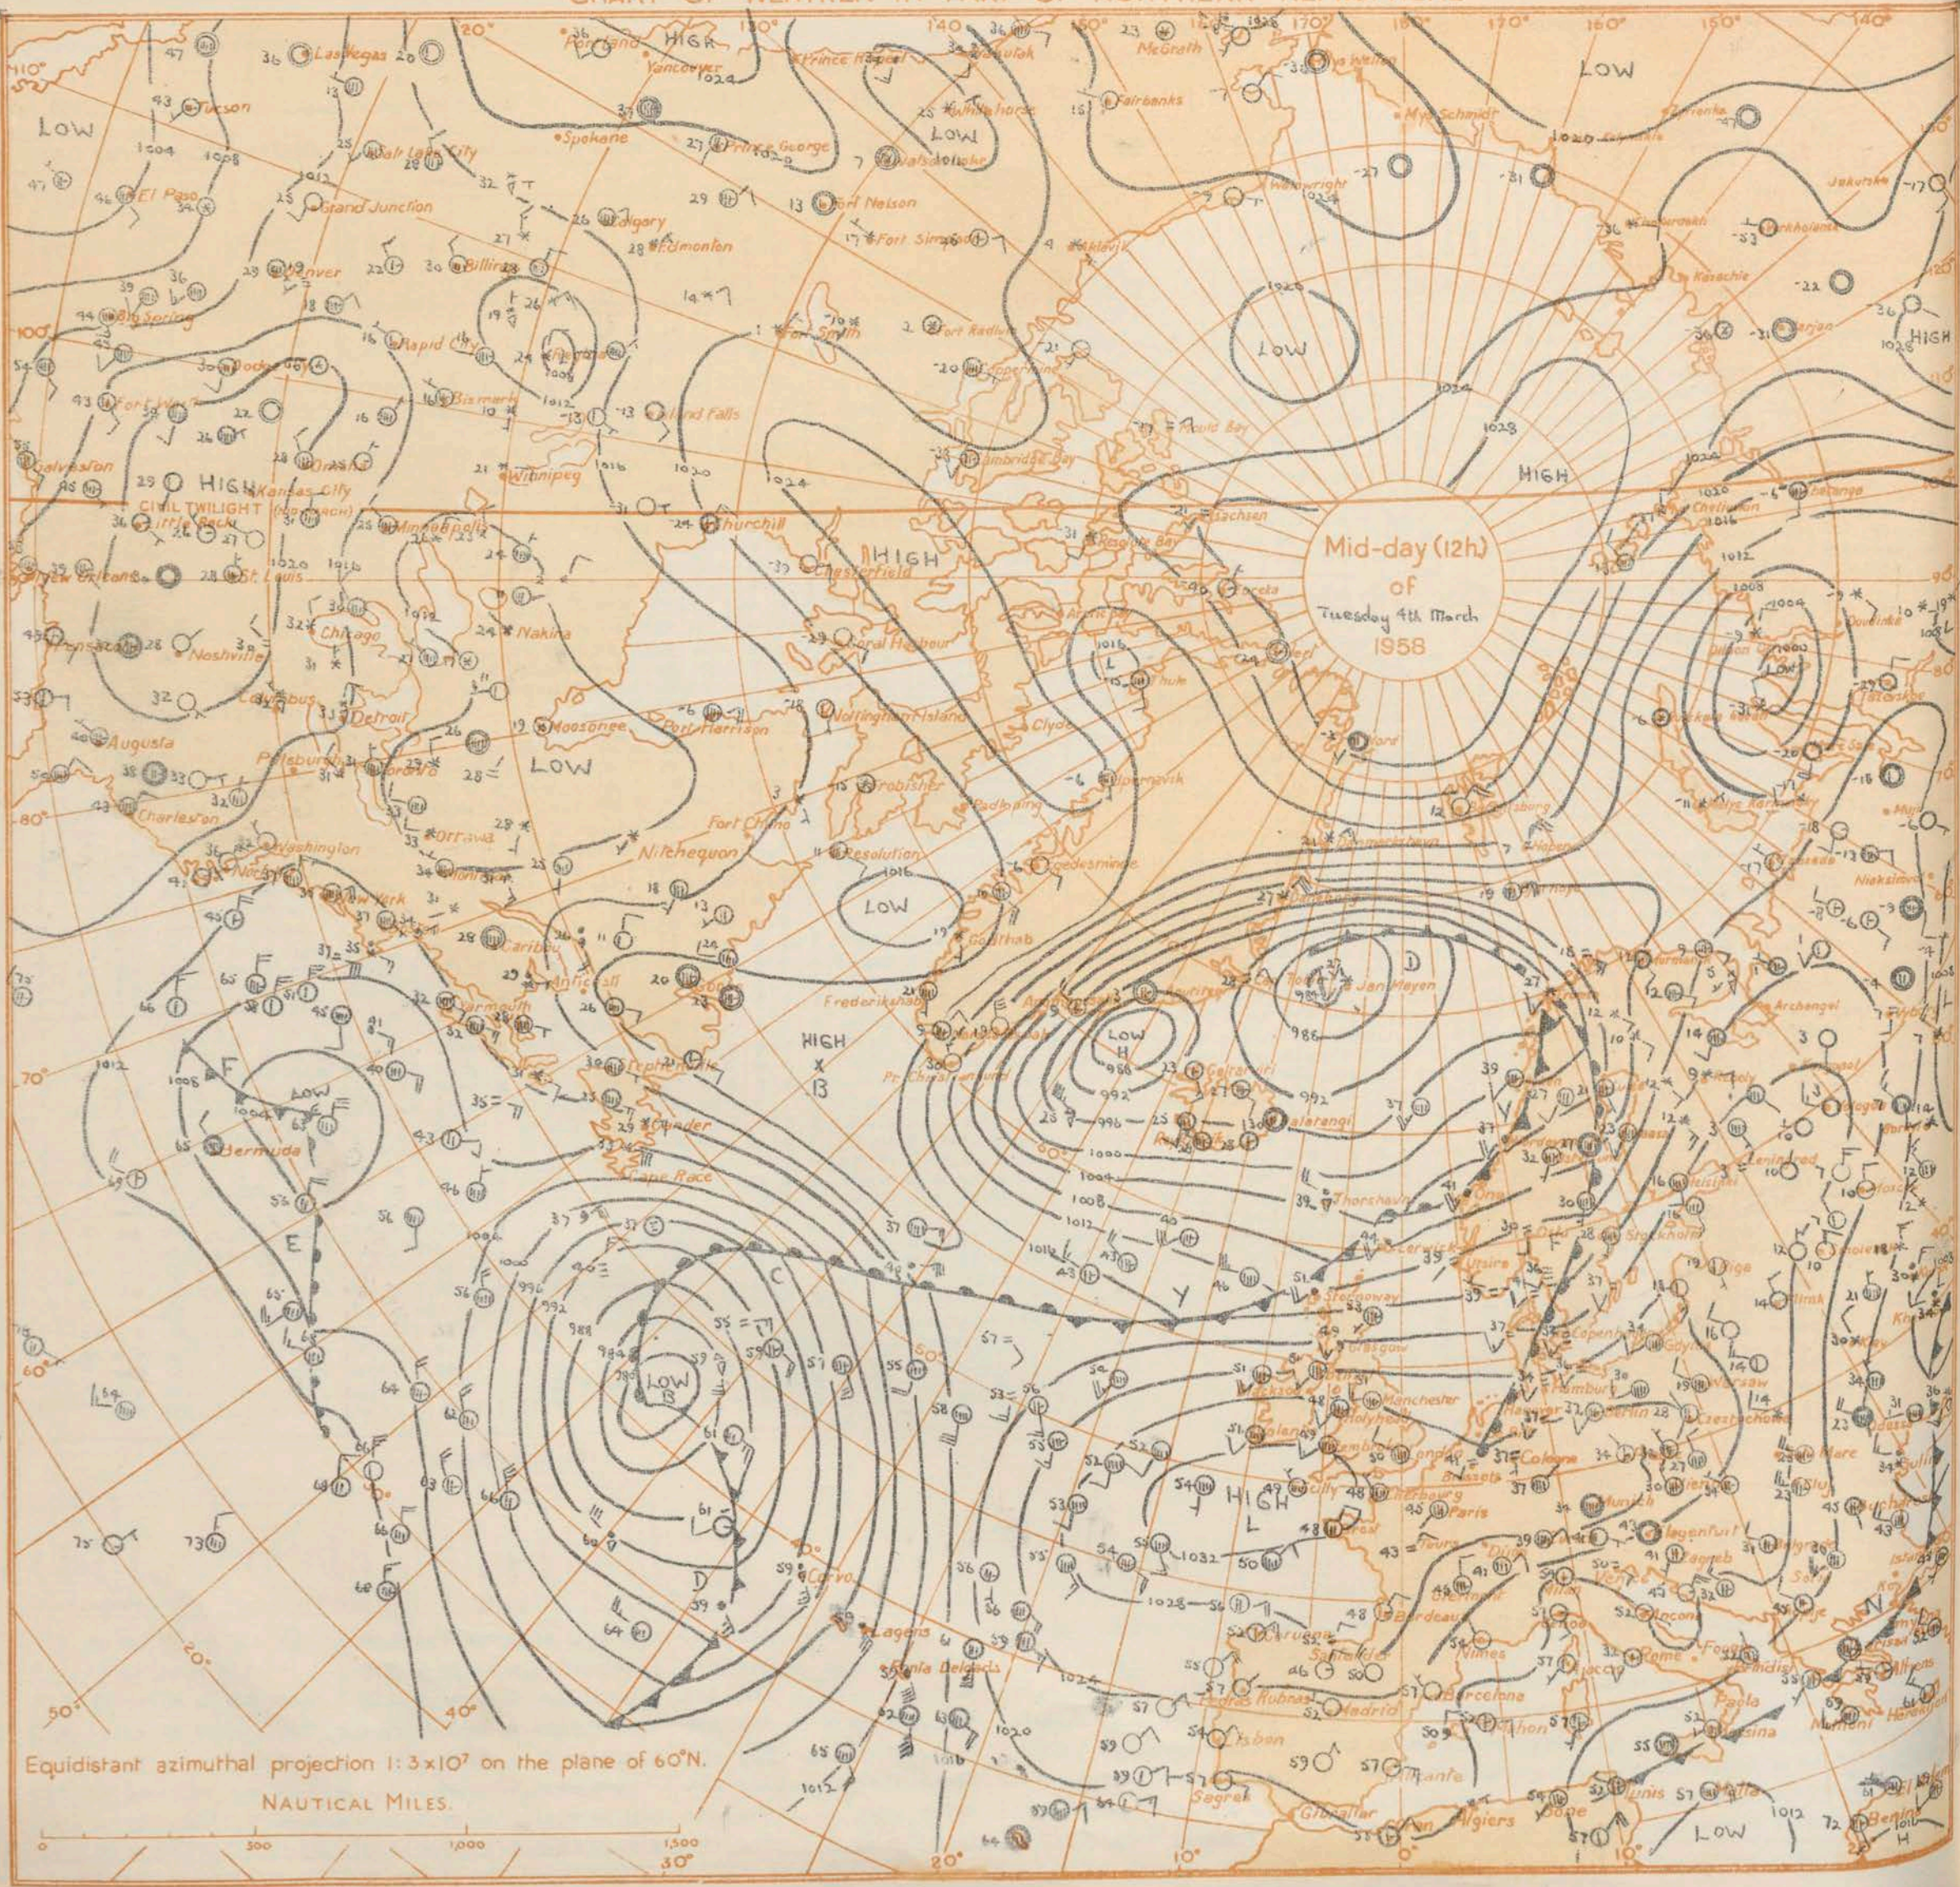
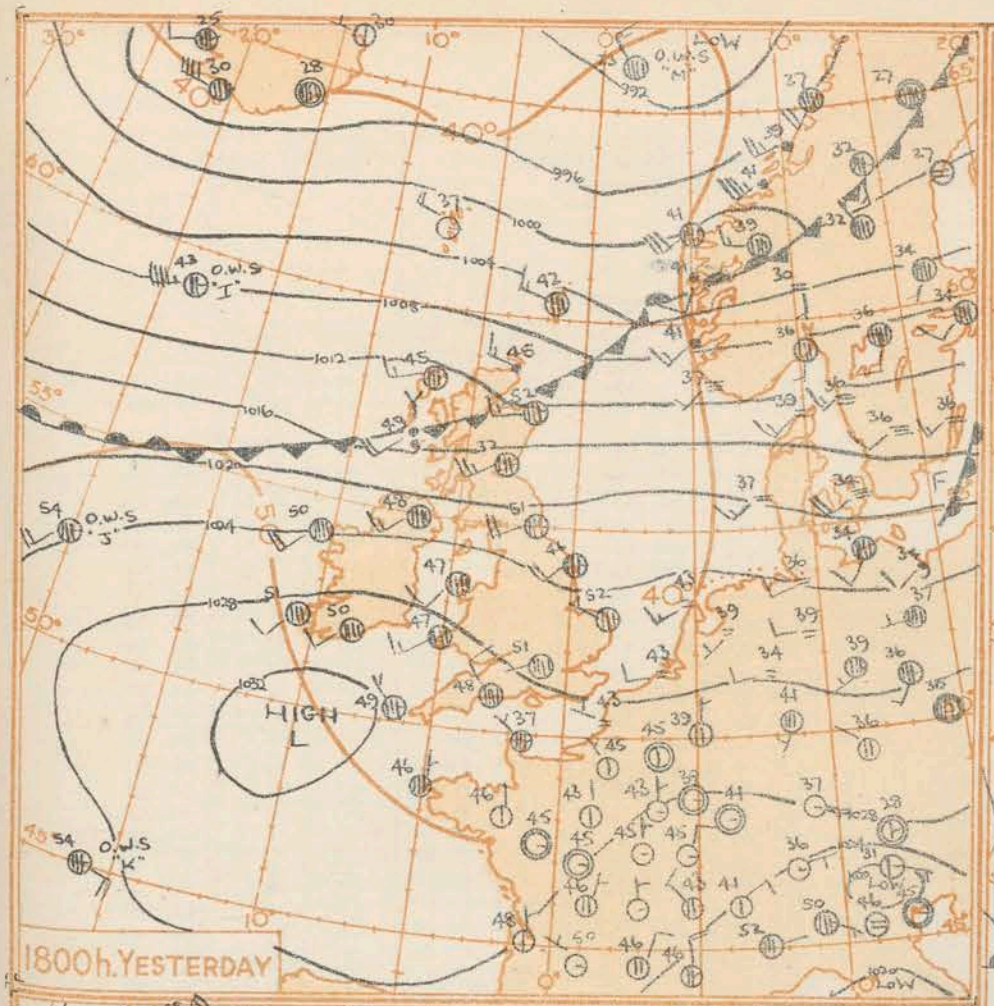
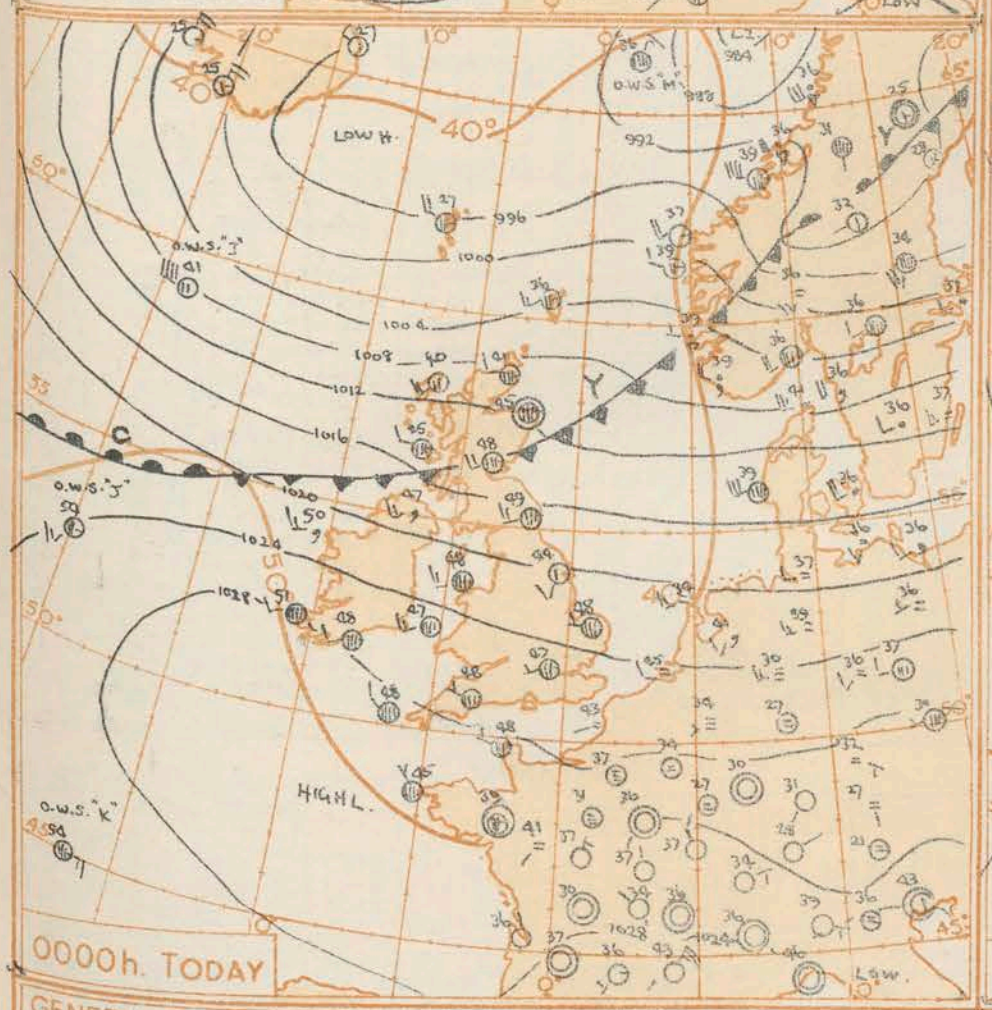
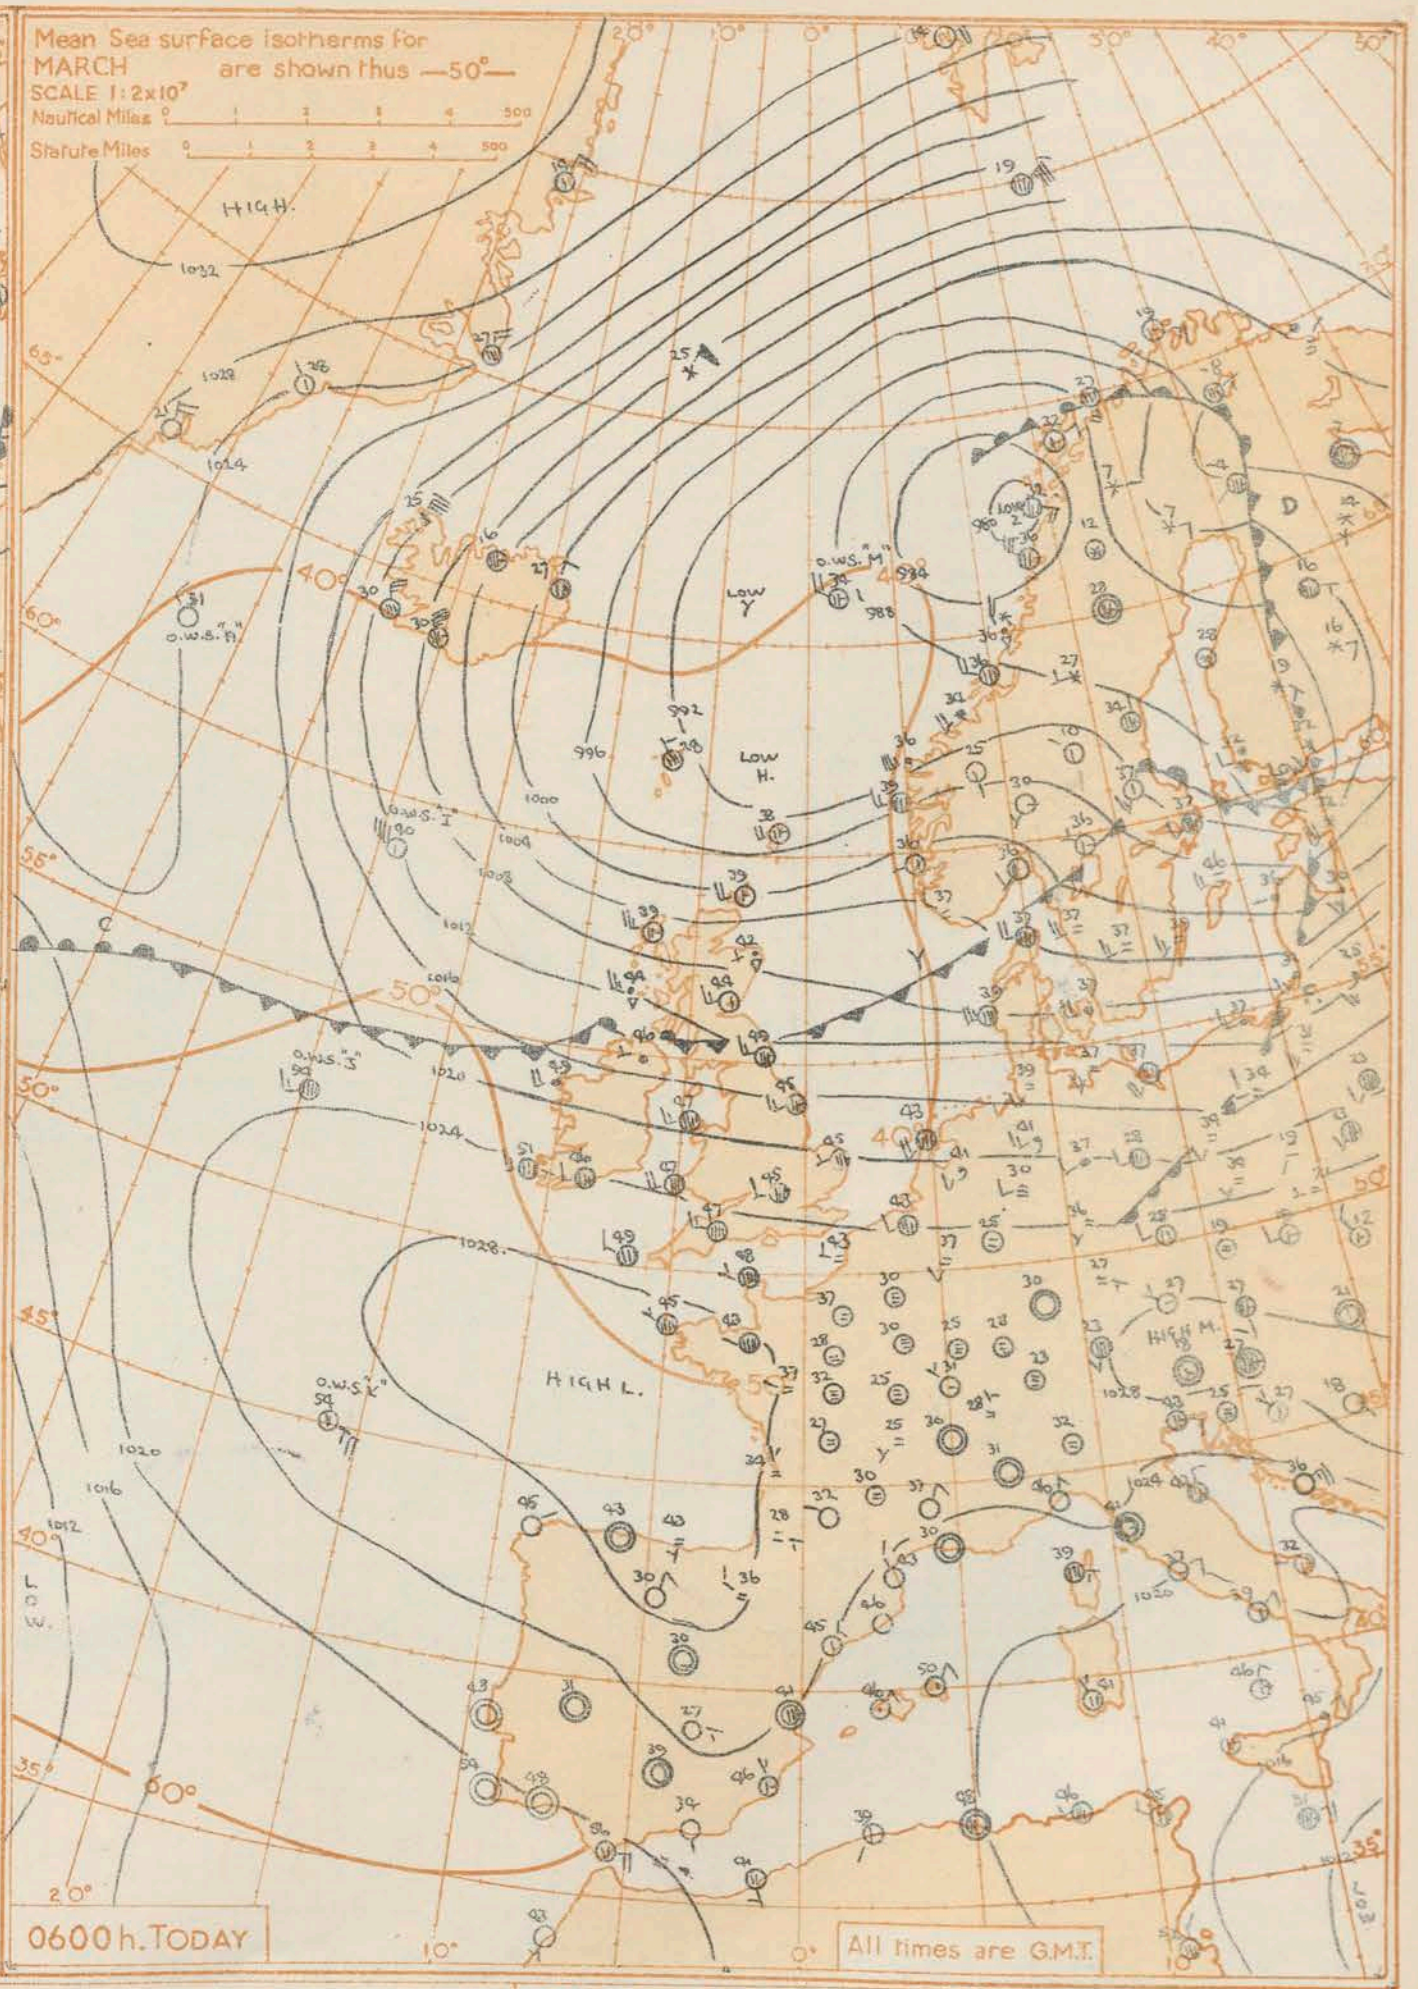
CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE









GENERAL SYNOPTIC DEVELOPMENT

Issued at midday today Wednesday 5th March 1958

The anticyclone has remained centred near southwest England but may decline later today and tonight. Troughs of low pressure are crossing the Norwegian Sea and will continue moving east to reinforce the deep depression which is forming over the Baltic and Baltic States. A cold front now over Northern Ireland and northern England will move south over most of the British Isles as an intensifying anticyclone spreads east over Denmark Strait and Iceland area.

FORECAST FOR BRITISH ISLES until noon tomorrow

Becoming steadily colder in all parts of the British Isles, except perhaps southwest England. Showers and bright periods expected over Scotland and Northern Ireland, with snow showers penetrating southwards, possibly to southern Scotland and Northern Ireland by tomorrow morning. Cloudy and mild over England and Wales at first with some rain or drizzle, gradually clearing from north as colder weather spreads southwards.

OUTLOOK FOR following 24 hours.

Colder than of late with bright periods and with scattered snow showers in Scotland, Northern Ireland and perhaps Northern England. Frost at night in most places.

0000h. TODAY

0600h. TODAY

All times are G.M.T.

GENERAL SYNOPTIC DEVELOPMENT

A complex low pressure area will be slow-moving over south Scandinavia and the Baltic while an anticyclone over Greenland and a ridge over the Atlantic will move eastward rather slowly. In the cold northwesterly airstream over the British Isles, troughs of low pressure may develop.

Issued at midday today Thursday 6th March 1958

FORECAST FOR BRITISH ISLES until noon tomorrow

Most areas will have bright periods and scattered showers which may be of snow except in the south of England. In areas exposed to the northwesterly winds, snow showers will be frequent and locally heavy with drifting. Hail and thundershowers are also possible. Tonight skies will clear inland and frost will occur widely while near exposed coasts showers will continue. It will become cold generally and in northern Scotland temperatures will remain near freezing.

OUTLOOK FOR the following 48 hours

Probably continuing cold with night frosts. Further snow showers in many parts and possibly more general snow in some areas but with bright periods too in most districts.

CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

Mid-day (12h) of Wednesday 5th March 1958

Equidistant azimuthal projection 1: 3×10^7 on the plane of 60°N.

SIR GRAHAM SUTTON, C.B.E., D.Sc., F.R.S., Director General. Meteorological Office, Air Ministry, Kingsway, London, W.C.2.

CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

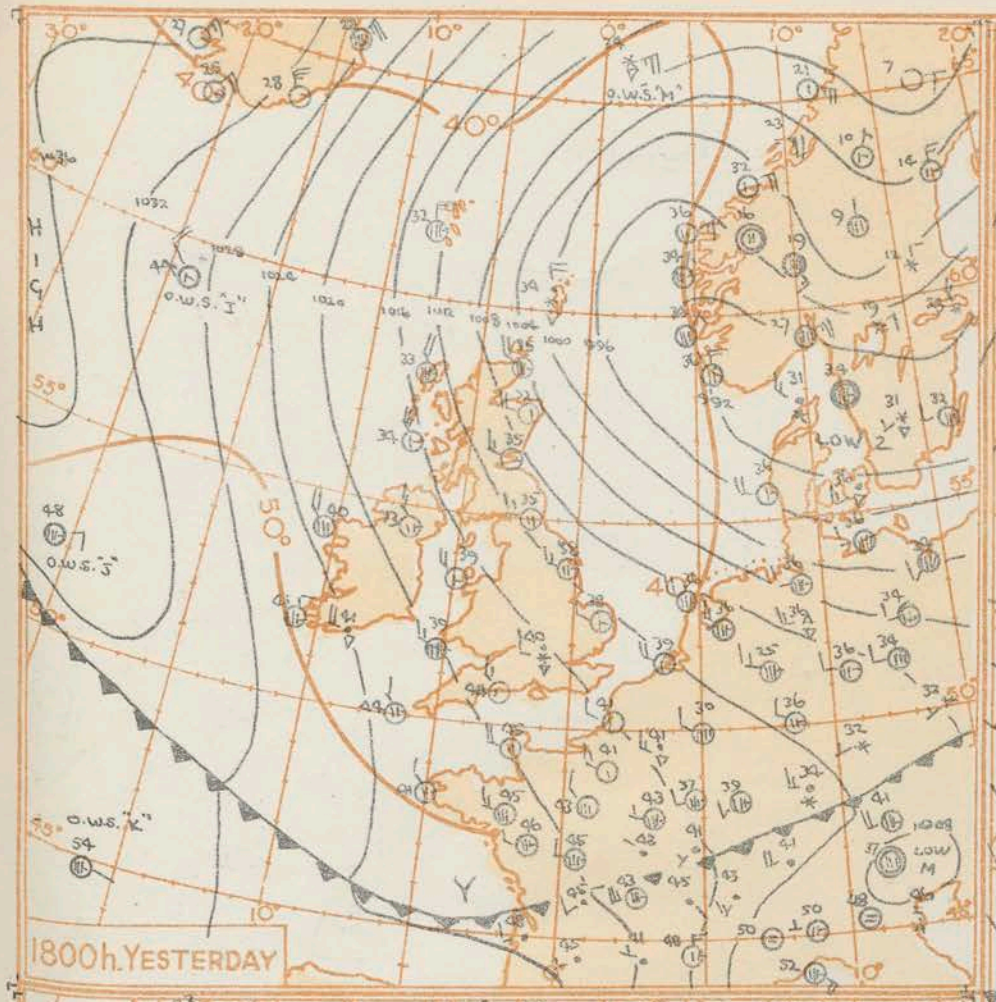
Mid-day (12h) of Thursday 6th March. 1958

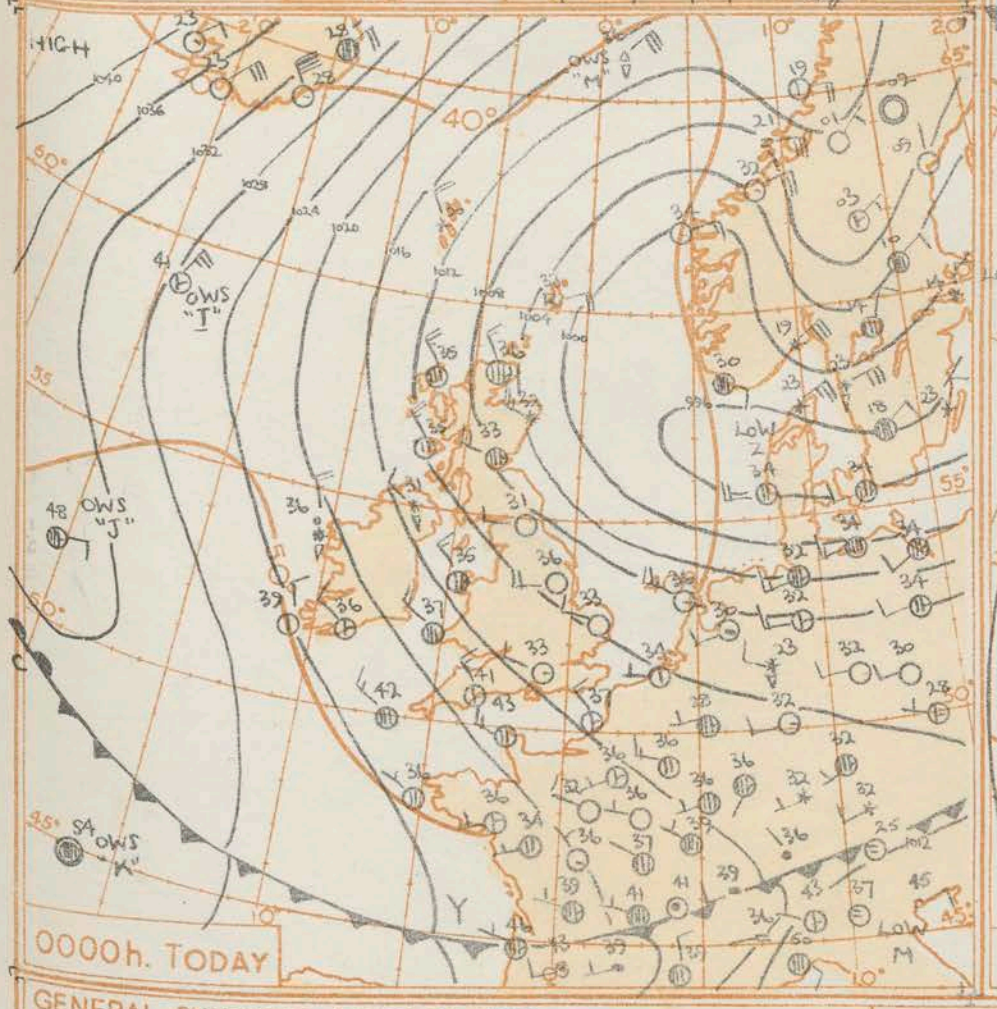
CIVIL TWILIGHT IN MARCH

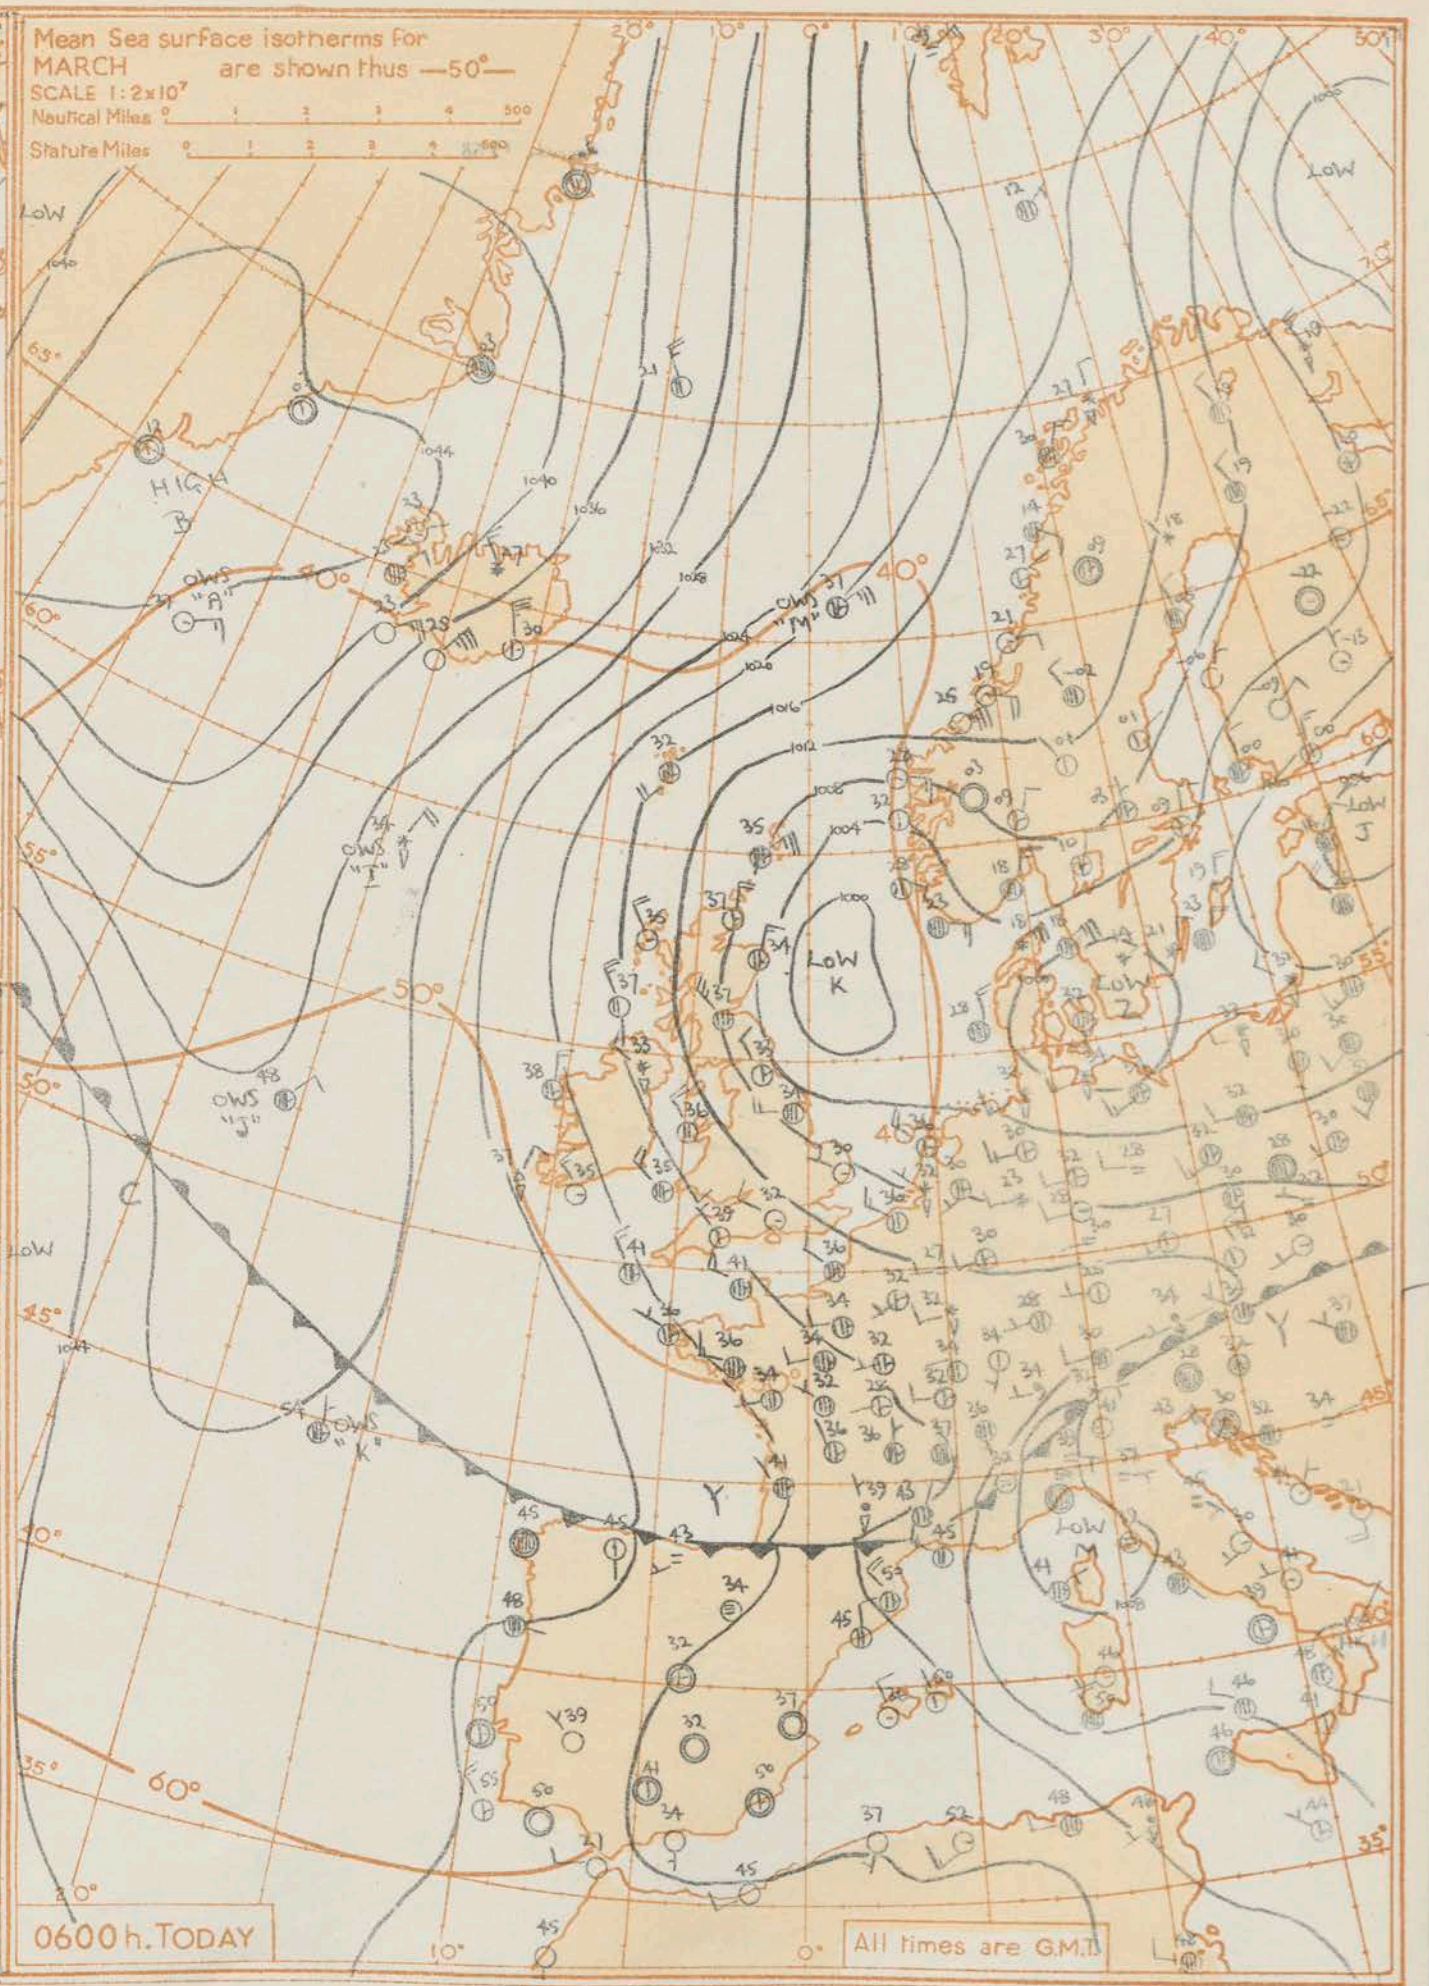
Equidistant azimuthal projection 1: 3×10^7 on the plane of 60°N.

NAUTICAL MILES.

0 500 1,000 1,500







GENERAL SYNOPTIC DEVELOPMENT

A depression which developed off western Norway is moving south over the North Sea with a trough moving south over the British Isles. An anticyclone centred west of Iceland will spread southeast behind this trough and a north to northeast airstream will become established over the British Isles.

Issued at midday today Friday 7th. March. 1958

FORECAST FOR BRITISH ISLES until noon tomorrow

All areas will be liable to showers, many of snow and these will be frequent in exposed areas. An area of more general snow will move south over eastern districts of England today. Later most western areas will become less showery with clearing skies. In eastern districts and over much of the Midlands and south of England, behind the southward moving trough, weather will become mainly cloudy with snow or sleet at times. It will remain generally cold and frost will occur widely tonight away from eastern coasts.

OUTLOOK FOR following 24 hours:-

Cold with further snow at times in many parts and night frost, but probably mainly fine in western districts of Britain.

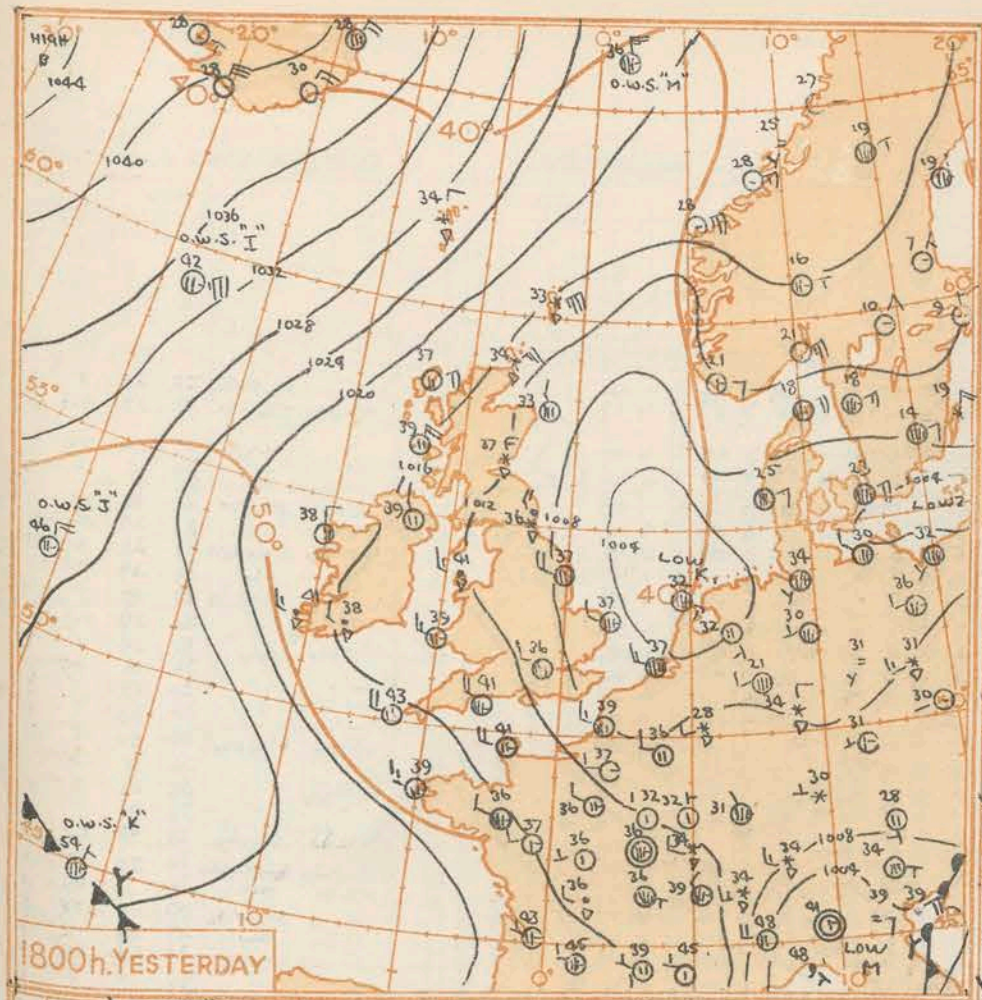
CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

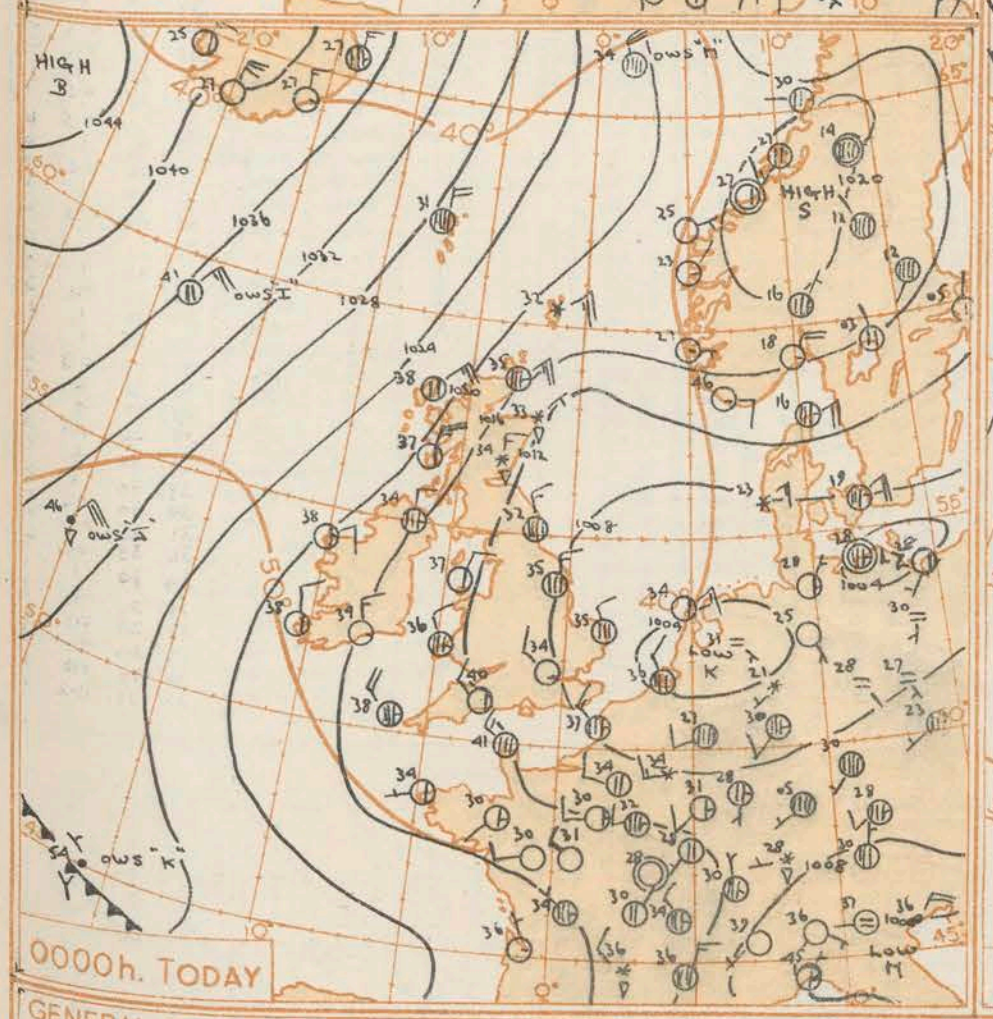
Mid-day (12h)
of
Friday 7th. March.
1958

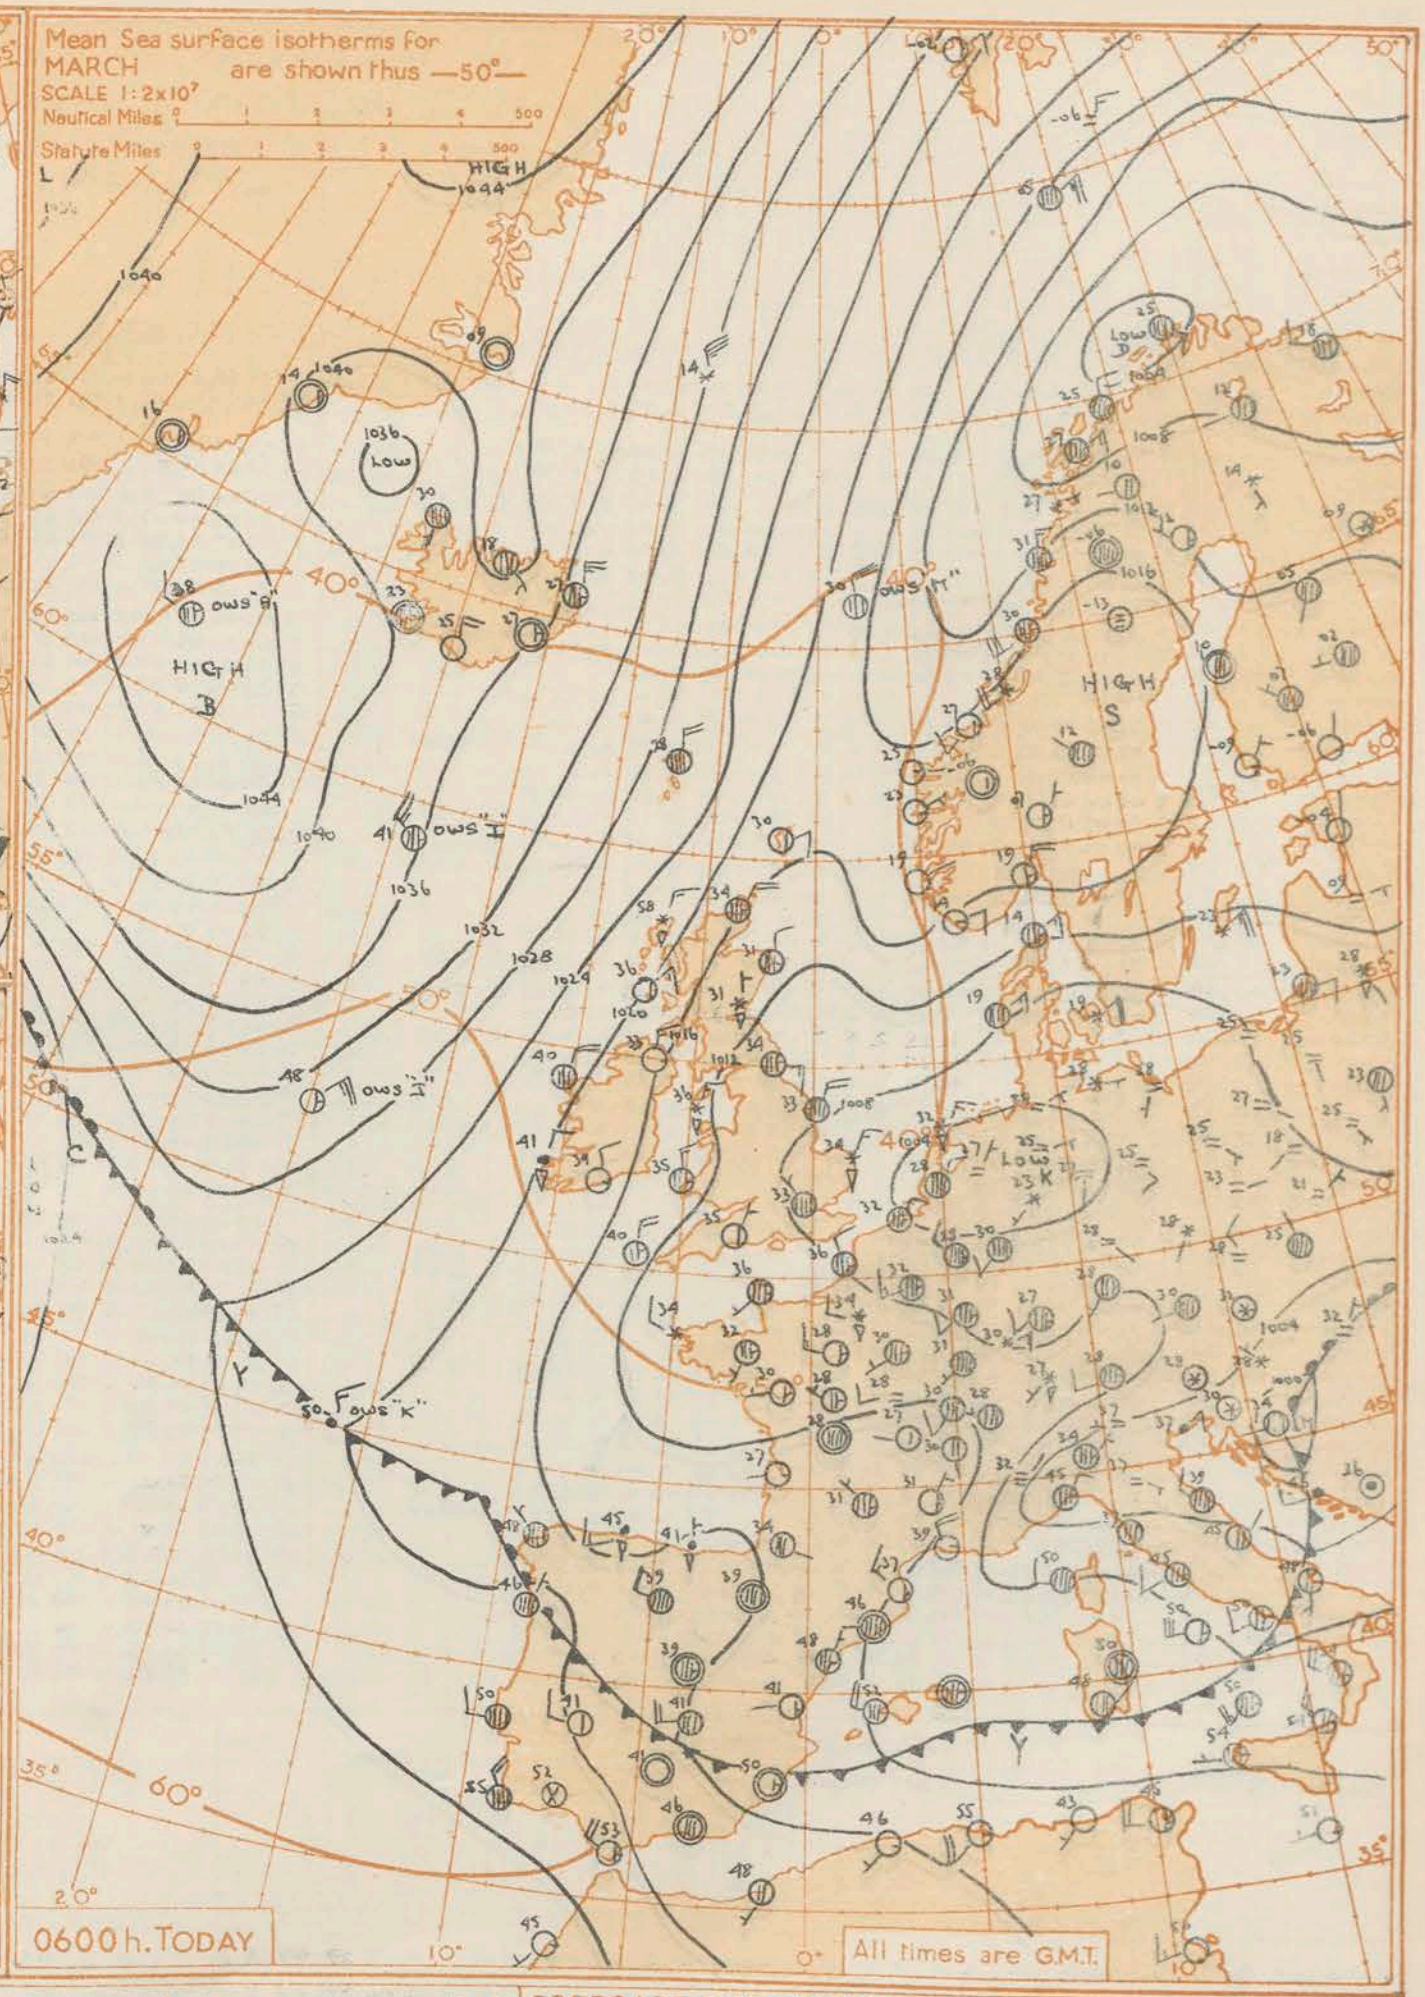
CIVIL TWILIGHT (Beginning)

Equidistant azimuthal projection 1: 3×10^7 on the plane of 60°N.

NAUTICAL MILES.







GENERAL SYNOPTIC DEVELOPMENT

Issued at midday Today Saturday 8th. March 1958

The depression over northwest Germany has moved from the North Sea and is now expected to fill and become part of the circulation of a developing low over the Brest Peninsula as it moves away south east. A weak ridge will move south across the British Isles followed by a strengthening northerly airstream as low pressure extends south from north Norway to the North Sea.

FORECAST FOR BRITISH ISLES until noon tomorrow

Snow showers giving moderate falls in most eastern and central districts of Britain will become more scattered as drier air spreads from the north but frequent showers will return to Scotland tonight and tomorrow. In western districts showers mainly scattered but moderate falls today are probable in places chiefly on high ground. Tonight will be mainly fine but frequent showers are likely to spread to Northern Ireland from the north. Cold with frost in most areas at night.

OUTLOOK FOR following 24 hours:-

Cold, mainly scattered showers in south but moderate snow fall likely in some northern and central districts. Frost recurring at night and locally throughout the day in the North.

THE DAILY WEATHER REPORT
OF THE METEOROLOGICAL OFFICE, LONDON

OBSERVATIONS at 00h. G.M.T. 8th March 1958

CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

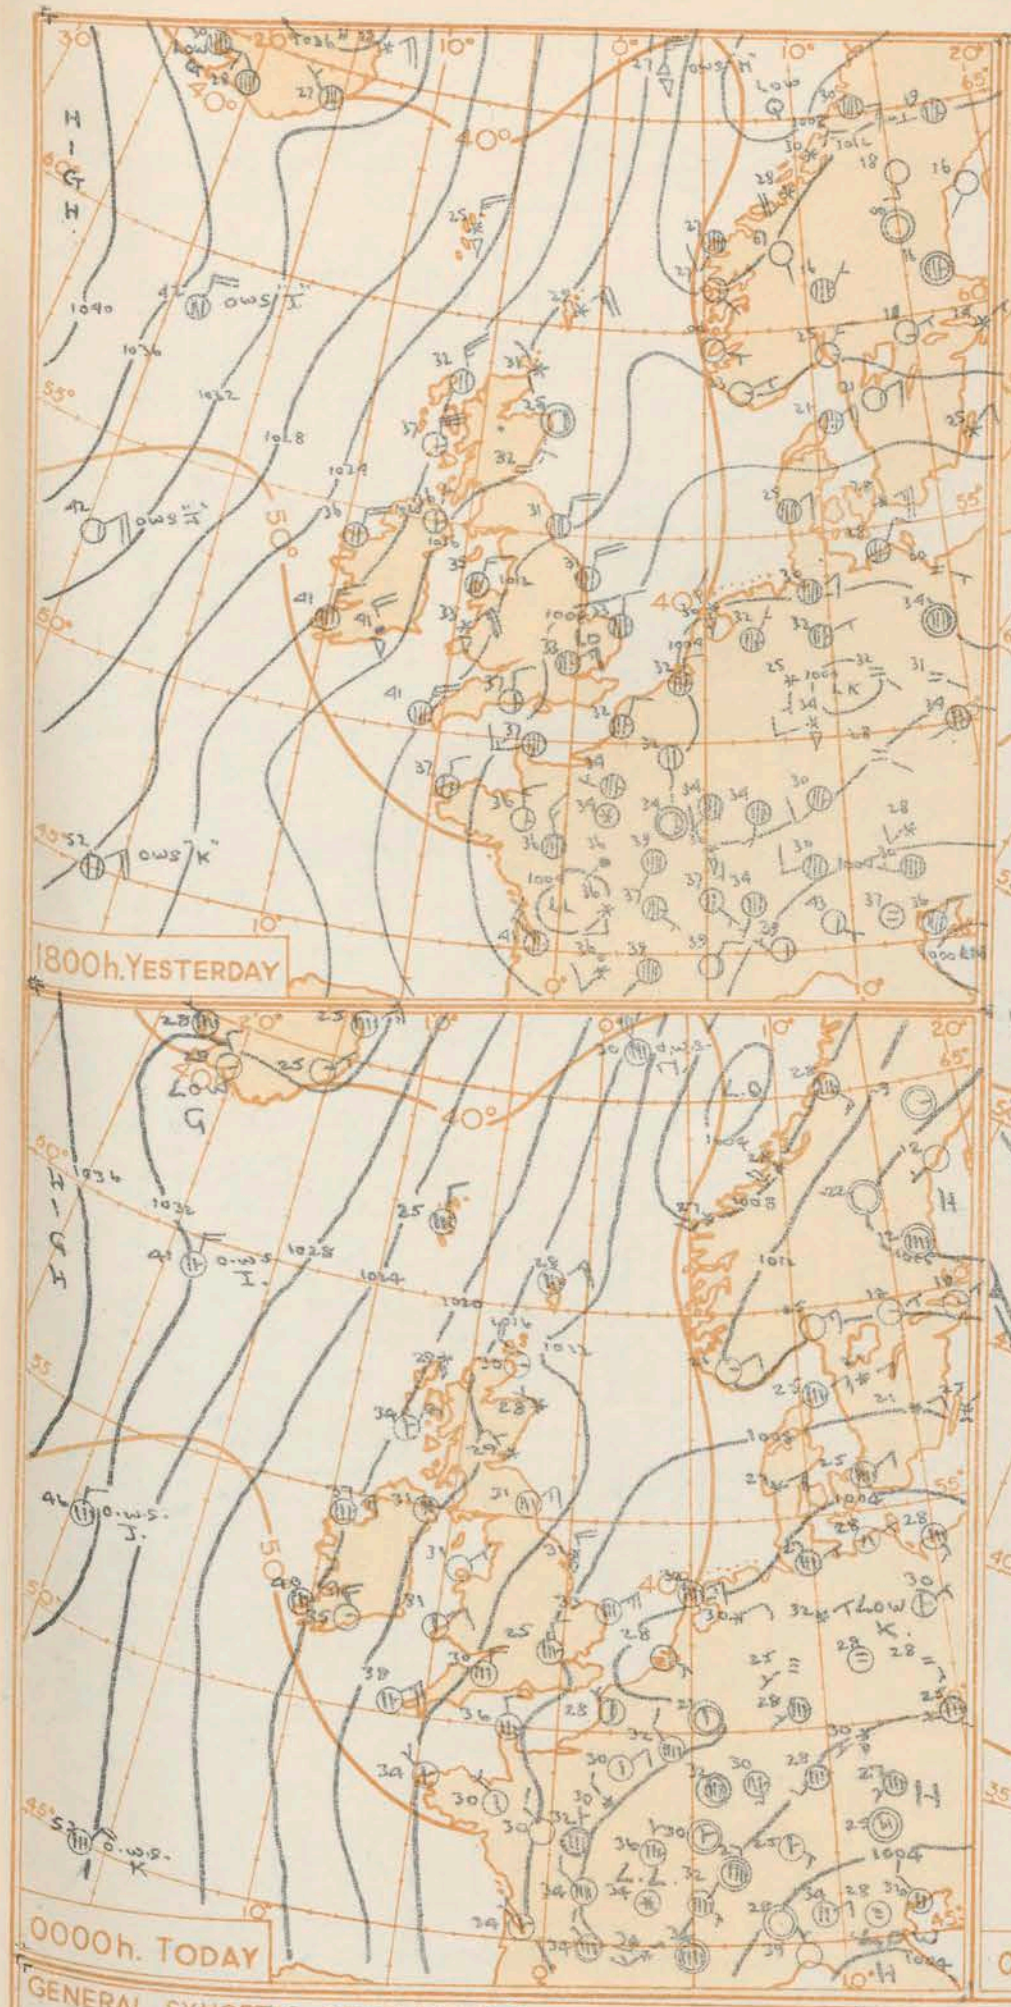
Mid-day (12h)
of
Saturday 8th. March.
1958

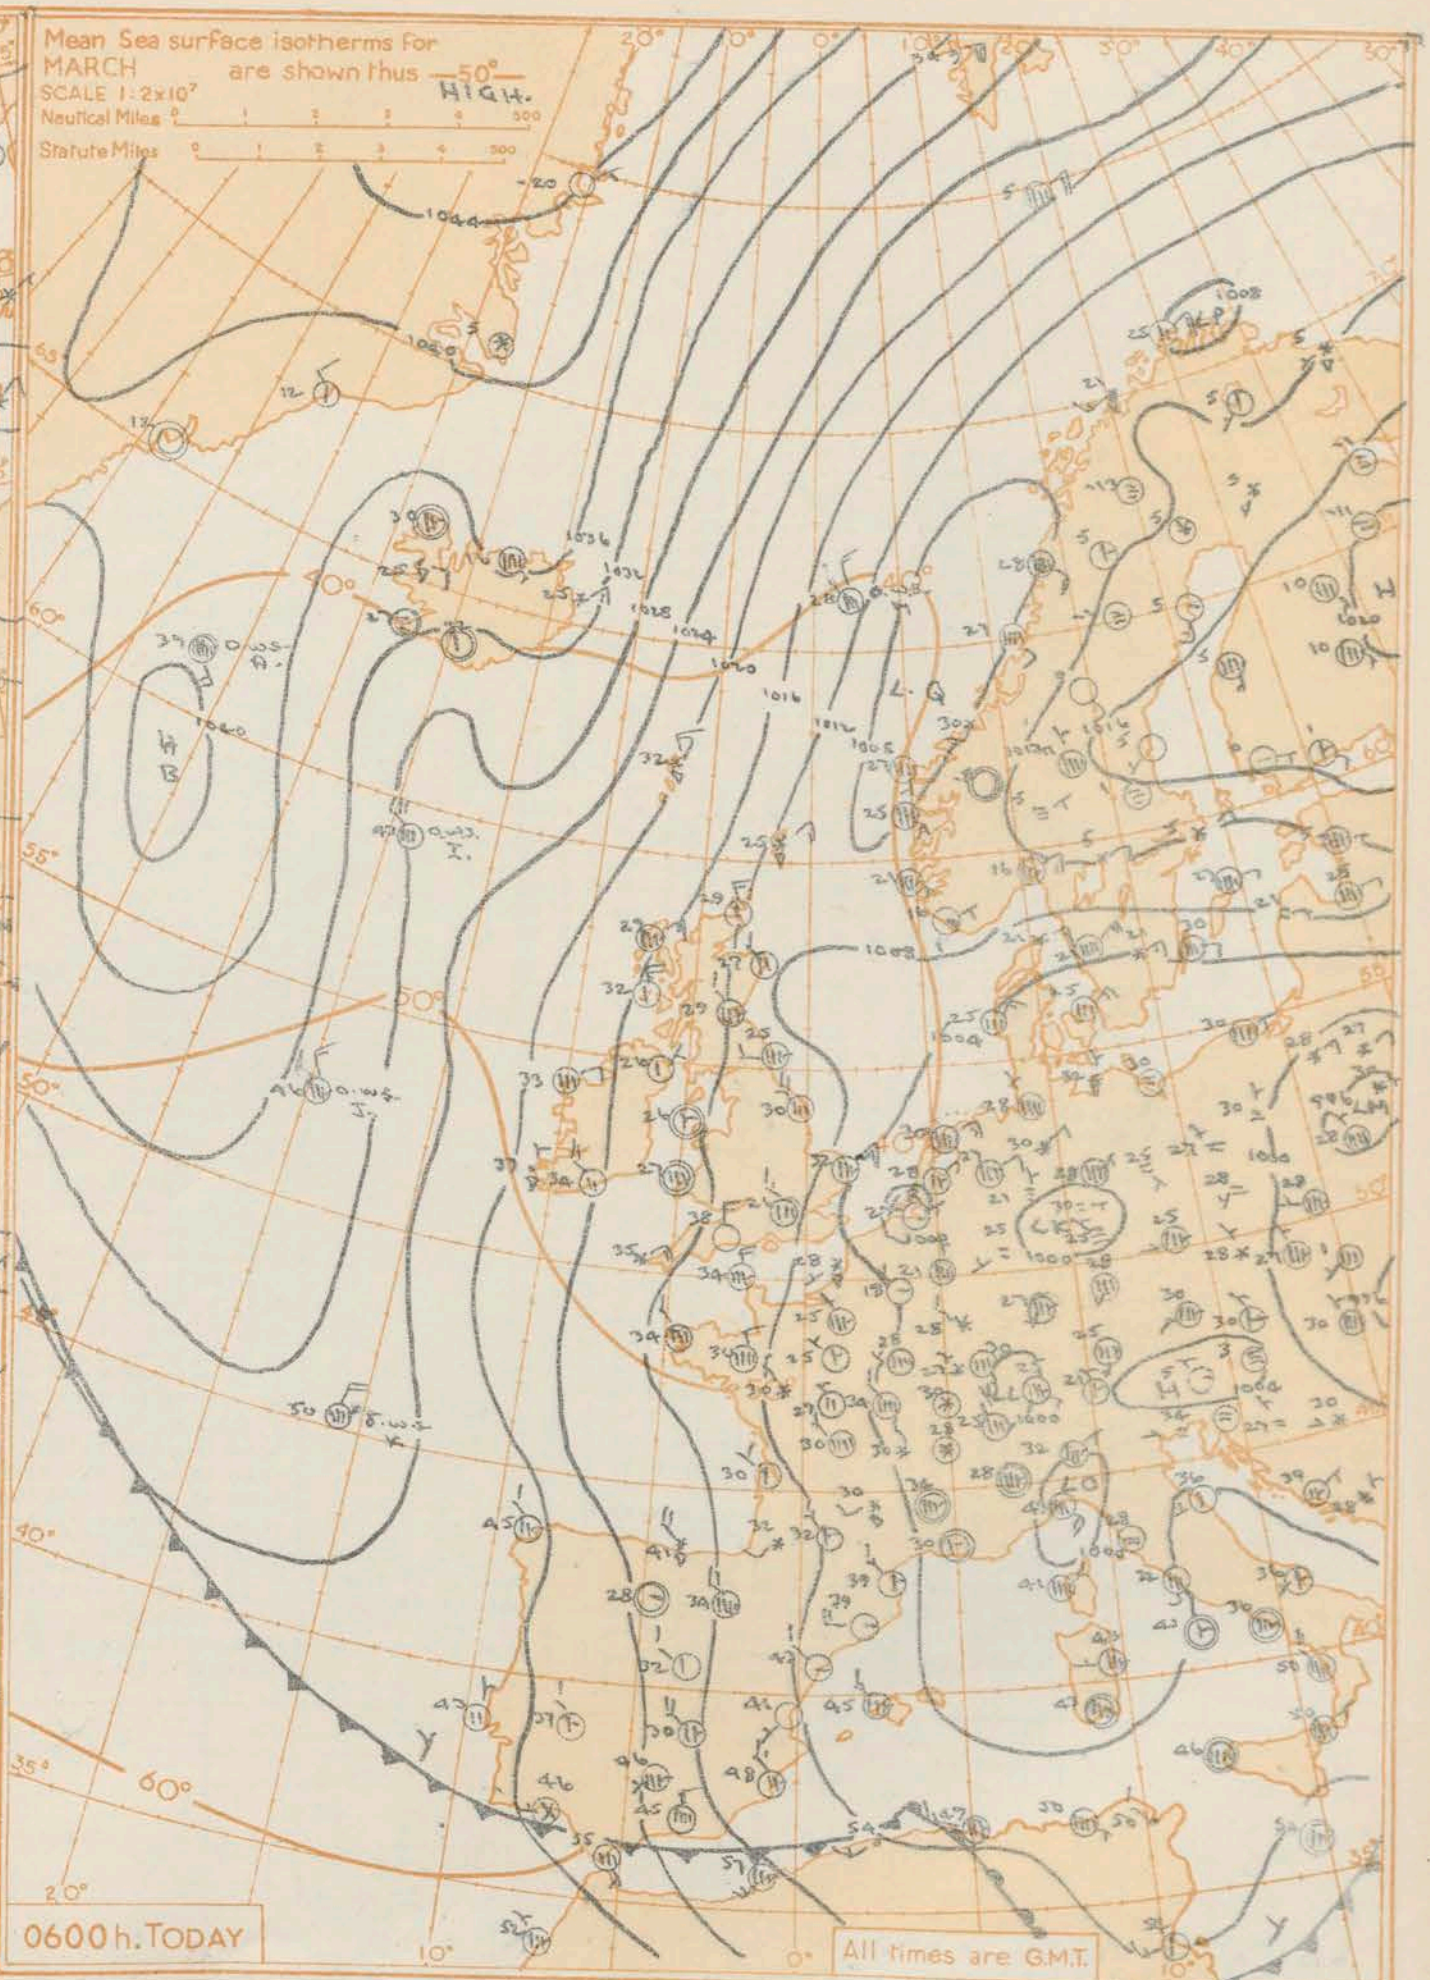
CIVIL TWILIGHT (mid-day)

Equidistant azimuthal projection 1: 3×10^7 on the plane of 60°N.

NAUTICAL MILES

0 500 1,000 1,500





GENERAL SYNOPTIC DEVELOPMENT

Troughs in the cold air have been moving south over the British Isles and further troughs are expected from a low system now off Norway moving south and from a strengthening circulation around a deepening depression moving north from eastern Europe to the south Baltic area.

Issued at midday Today Sunday 9th March 1958

FORECAST FOR BRITISH ISLES until noon tomorrow

Mainly very cold with a moderate to severe frost at night in most areas and temperatures probably sub-freezing for a good deal of the morning. Further snow showers are expected giving moderate falls especially in the north and east where heavy falls from more prolonged snow may occur.

OUTLOOK FOR the following 24 hours

Scattered snow showers in the west. Snow at times in most eastern and central districts. Cold.

SIR GRAHAM SUTTON, C.B.E., D.Sc., F.R.S., Director General. Meteorological Office, Air Ministry, Kingsway, London, W.C.2.

CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

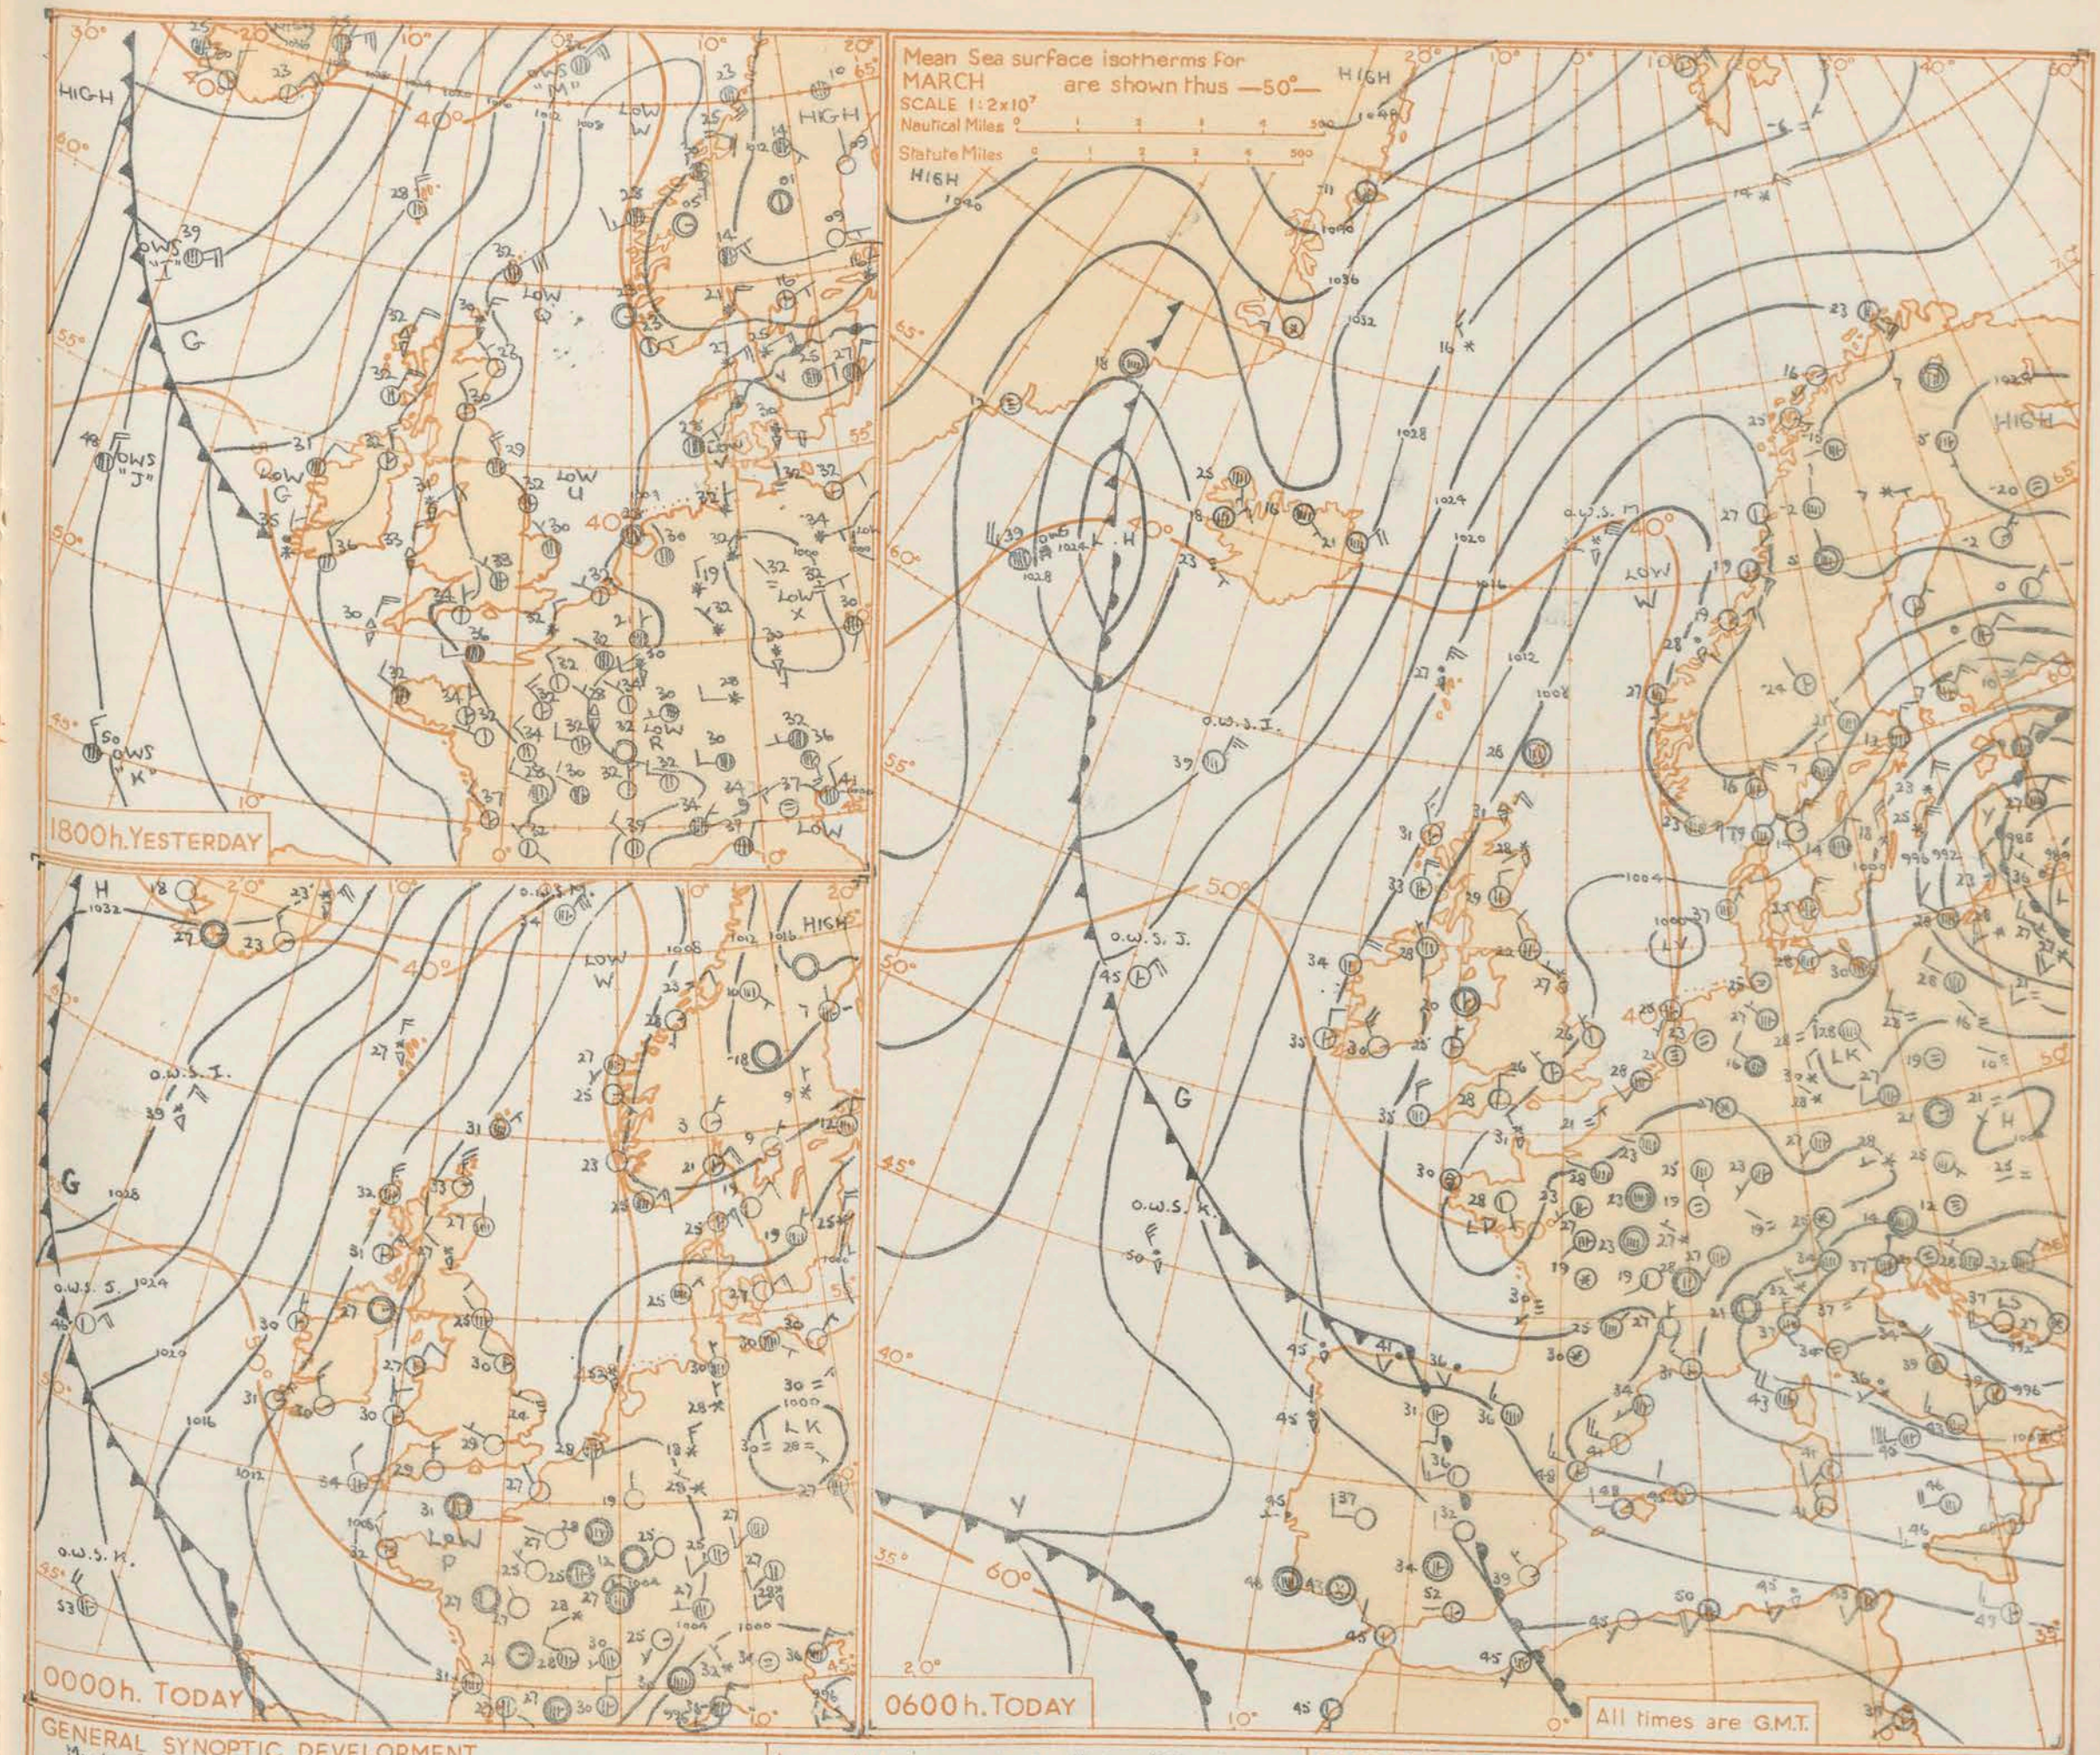
Mid-day (12h) of Sunday 9th March 1958

CIVIL TWILIGHT MARCH

Equidistant azimuthal projection 1: 3×10⁷ on the plane of 60°N.

NAUTICAL MILES.

0 500 1,000 1,500



GENERAL SYNOPTIC DEVELOPMENT

Much of Europe continues under the influence of a cyclonic complex, and a trough of low pressure is maintained west of Norway. Successive troughs moving in the form of low pressure move southwards in the general northerly airstream over the eastern Atlantic and British Isles area with some cyclonic development over the sea. The anticyclone yesterday south of the Denmark Strait has declined and the cyclonic development following is expected to move south fairly quickly. The area south and southeast of Newfoundland continues cyclonic

Issued at midday today Monday 10th March 1958

FORECAST FOR BRITISH ISLES until noon tomorrow

Very cold, with widespread frost at night. Snow, of showers, will affect all coastal areas exposed to northerly winds, but will be mainly only scattered inland, though parches of more continuous snow may affect a few areas. Most places will have some sunshine today and some clear periods tonight.

OUTLOOK FOR following 24 hours.

Probably little change.

THE DAILY WEATHER REPORT
OF THE METEOROLOGICAL OFFICE, LONDON

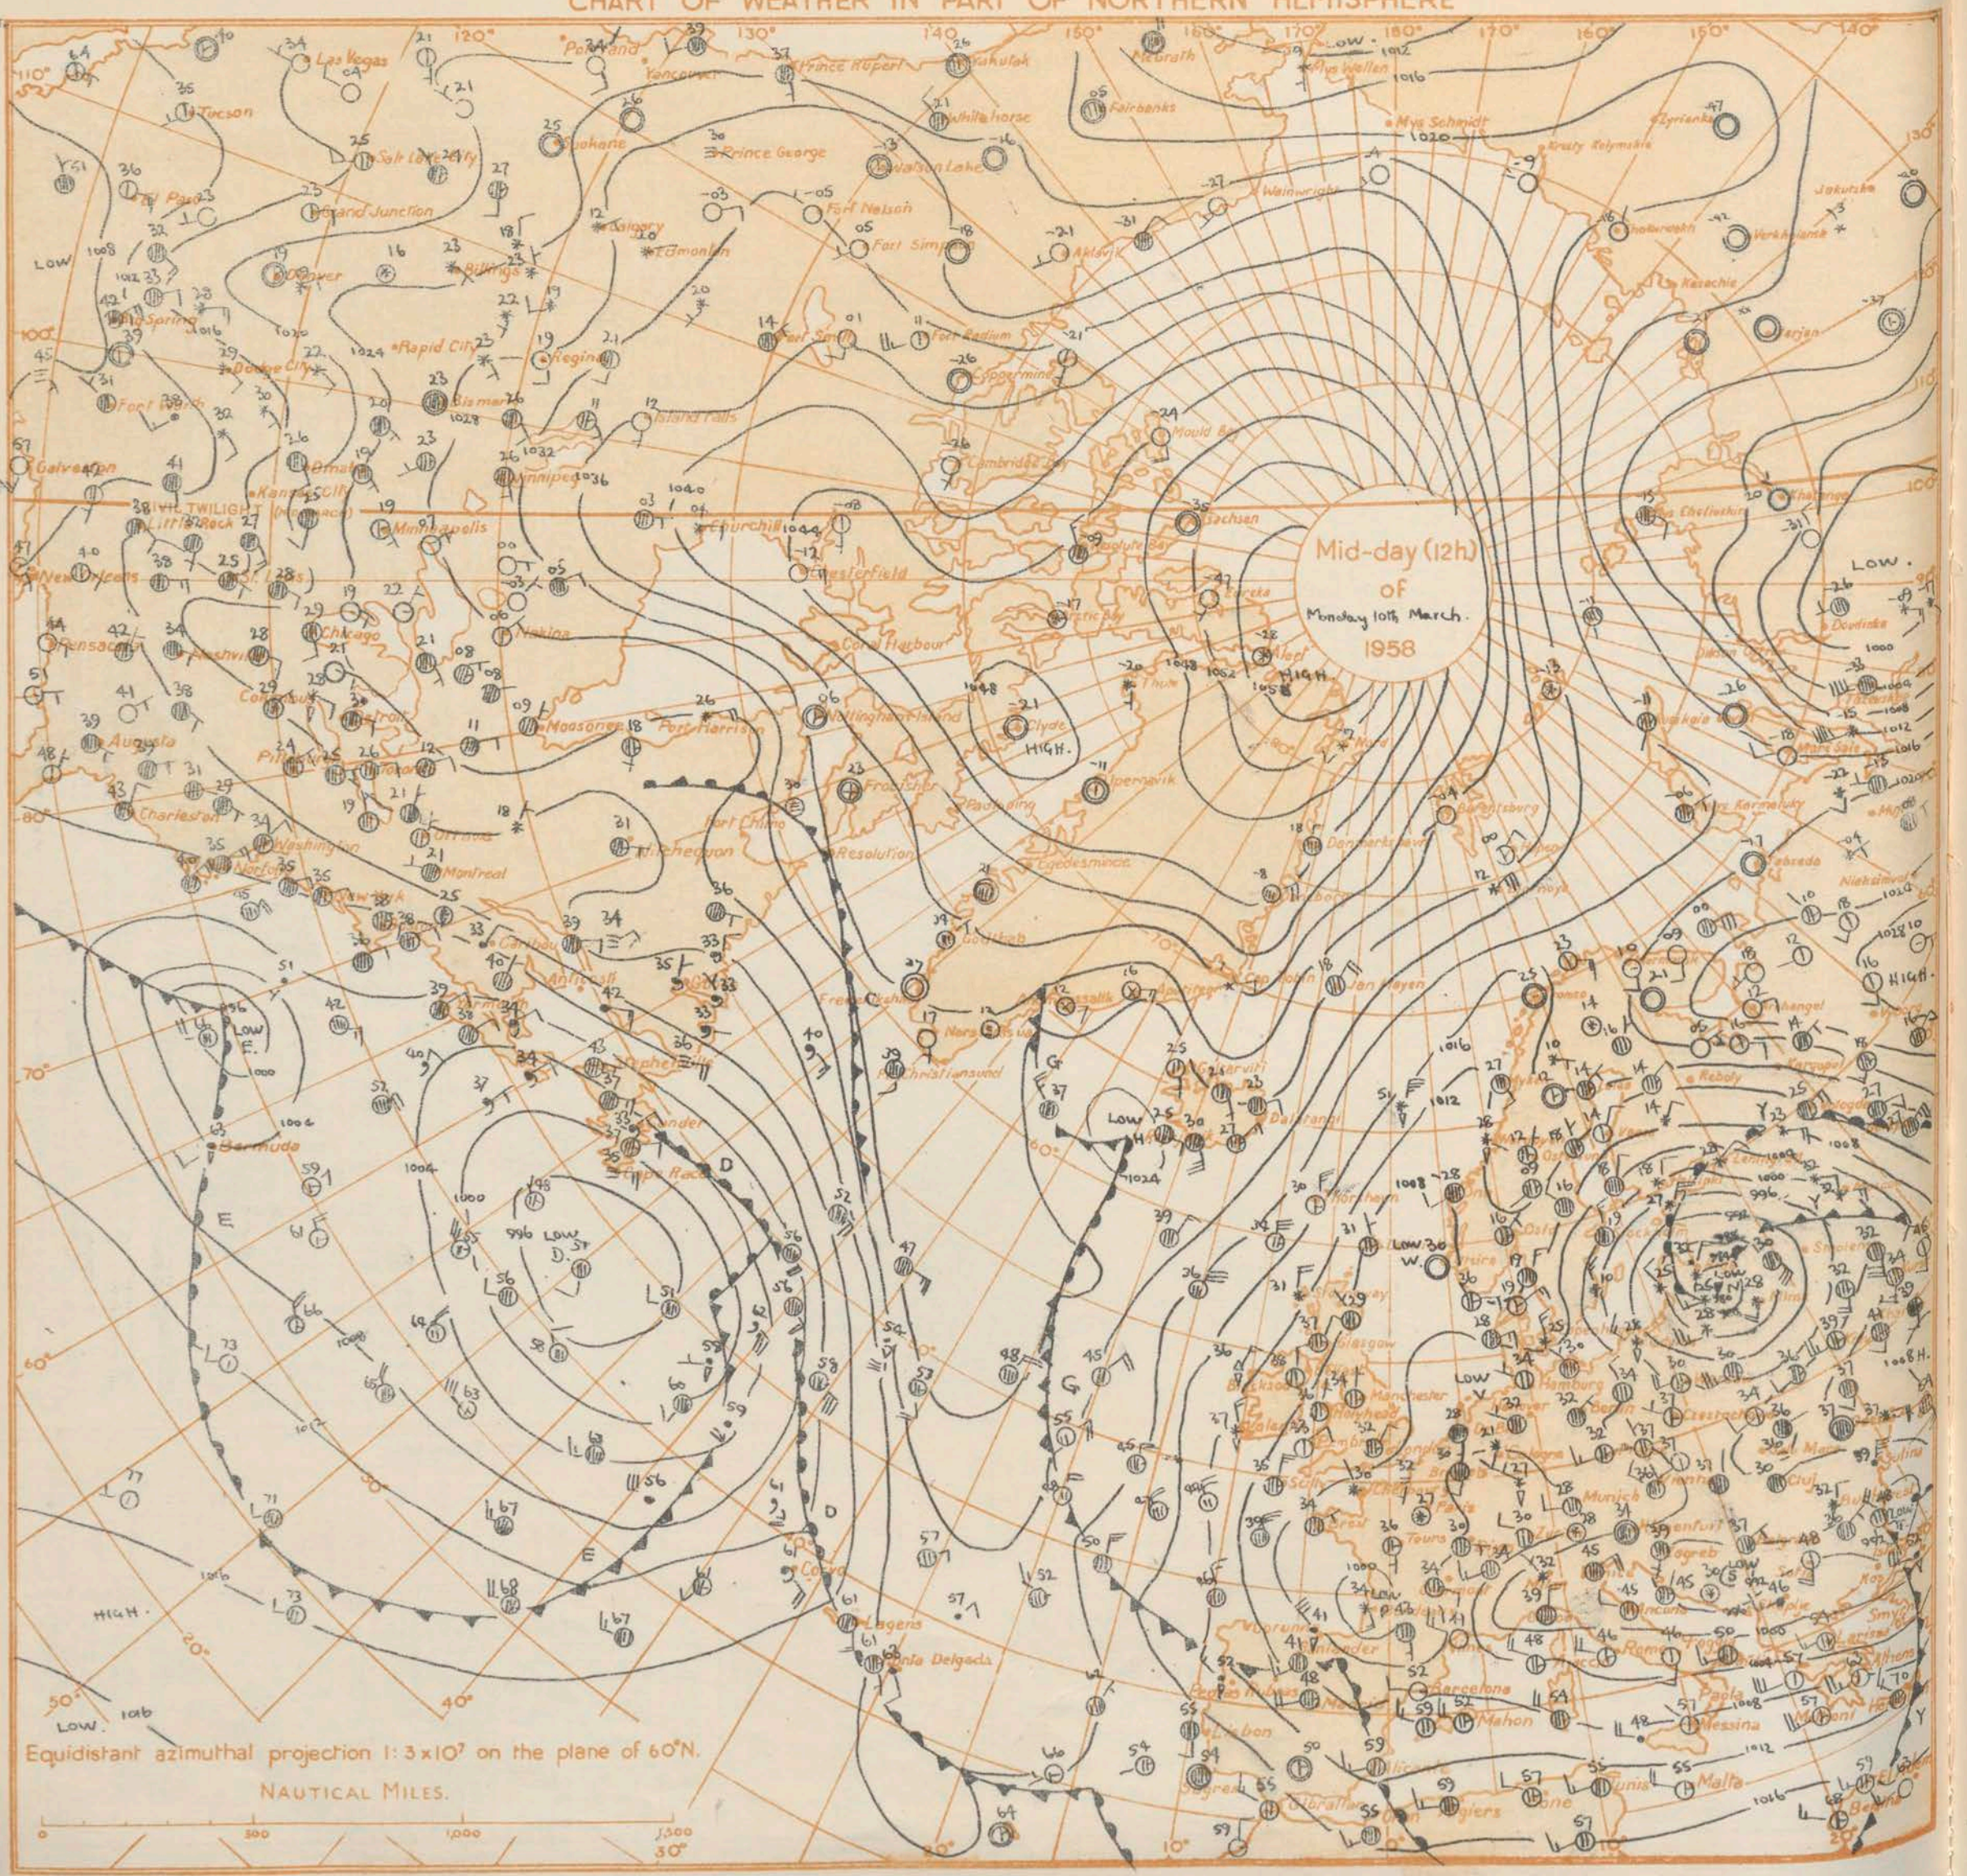
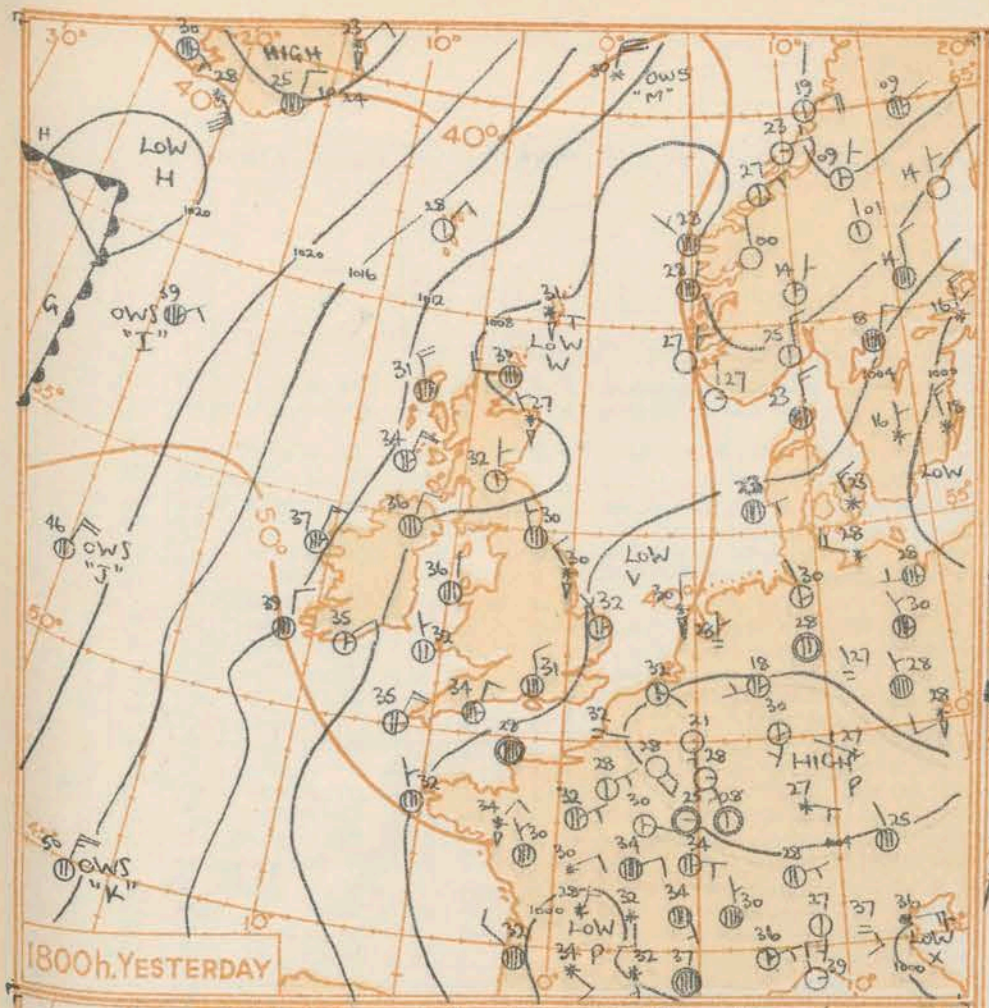
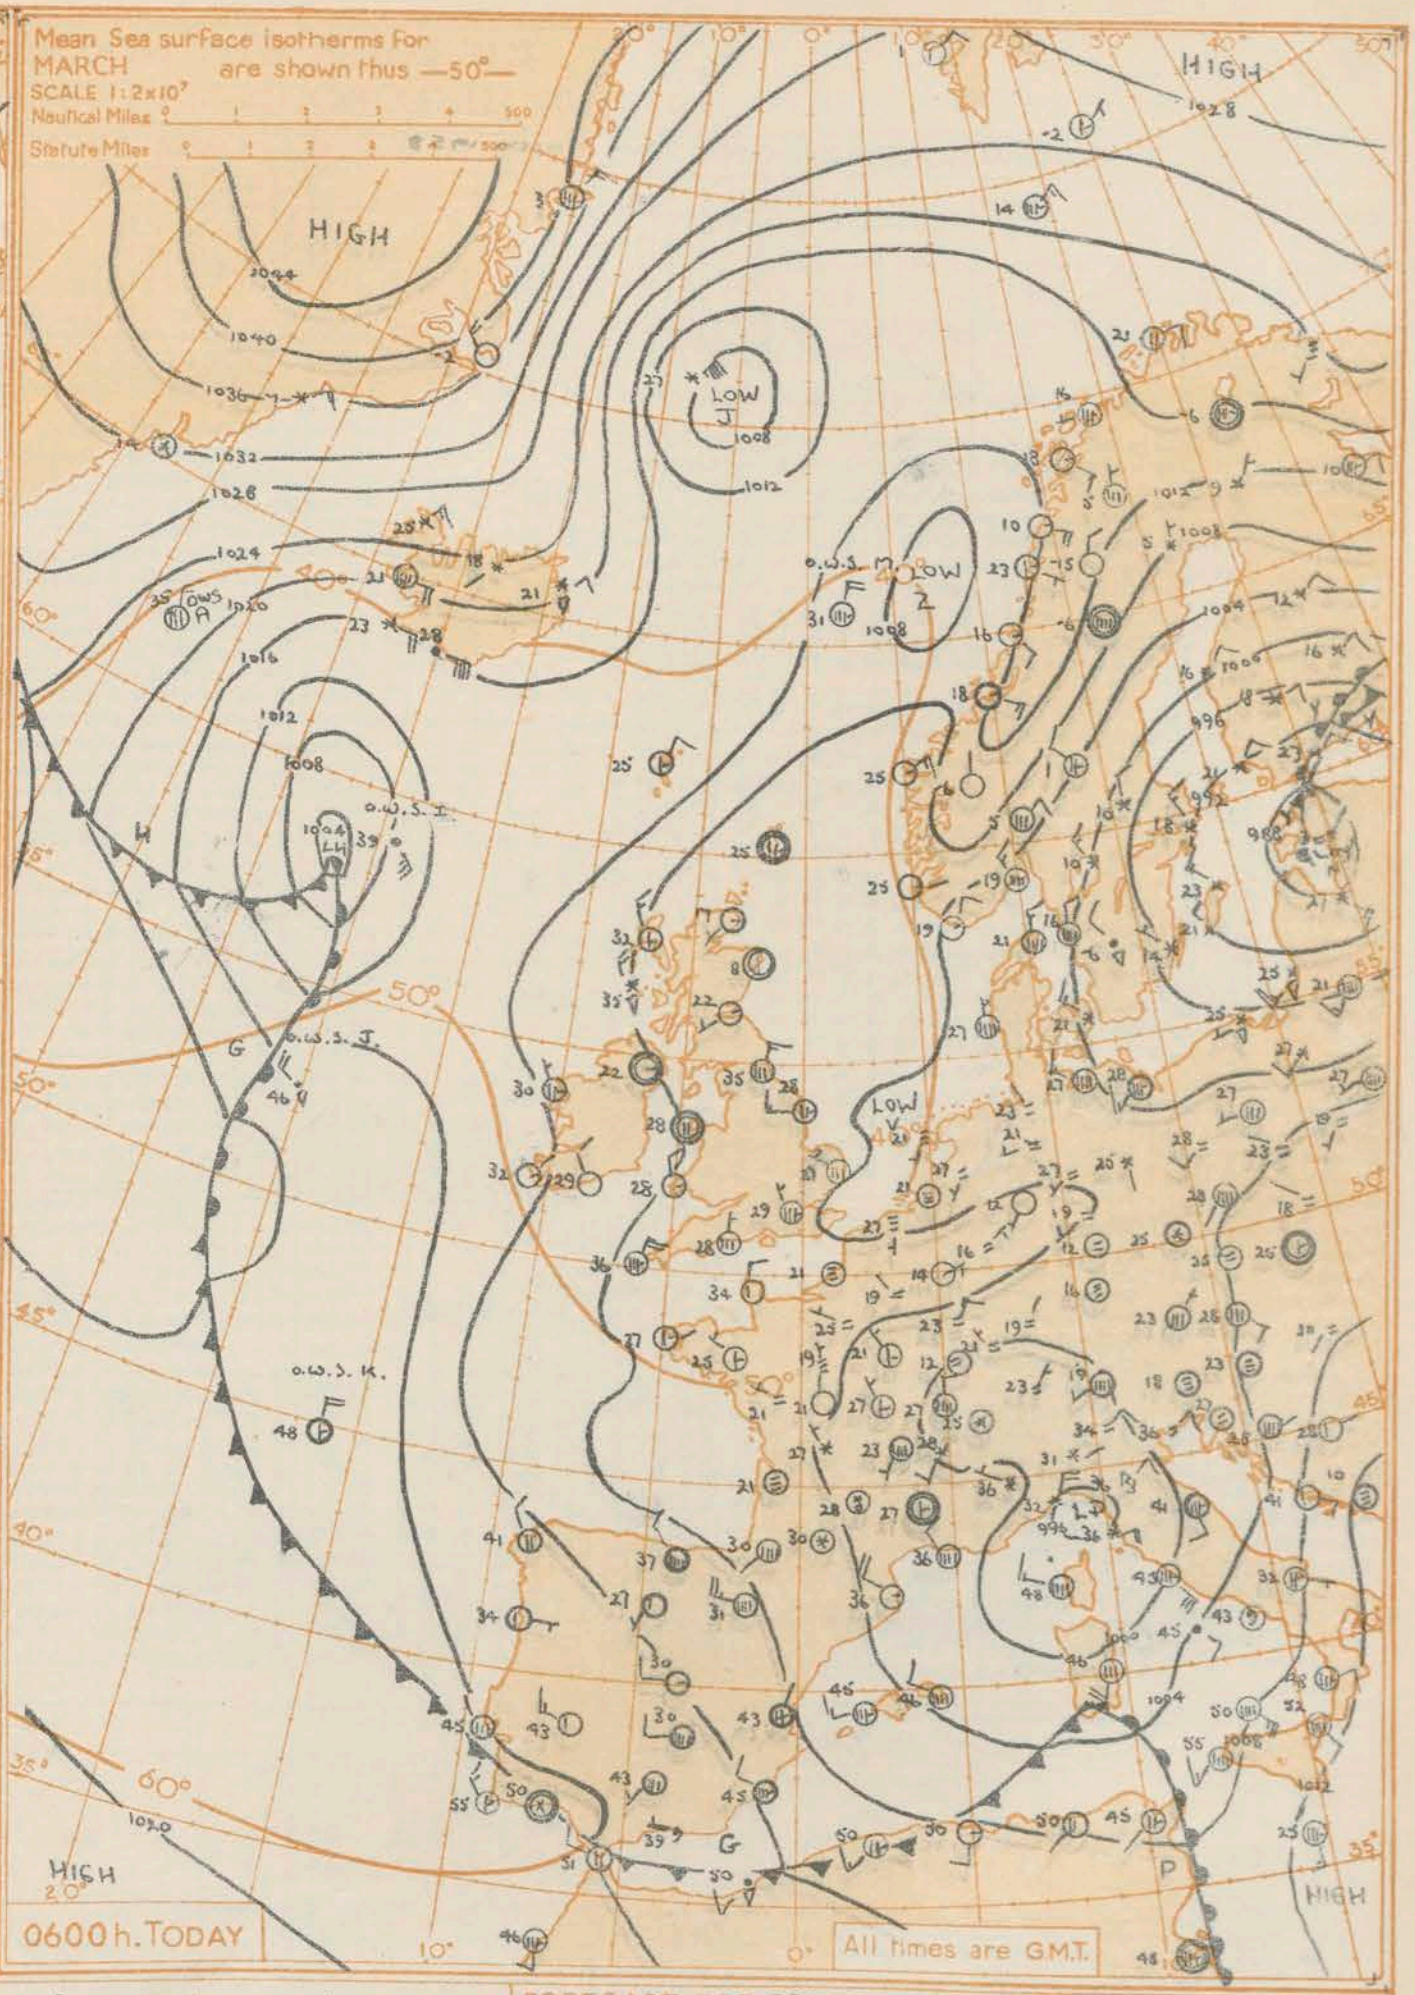
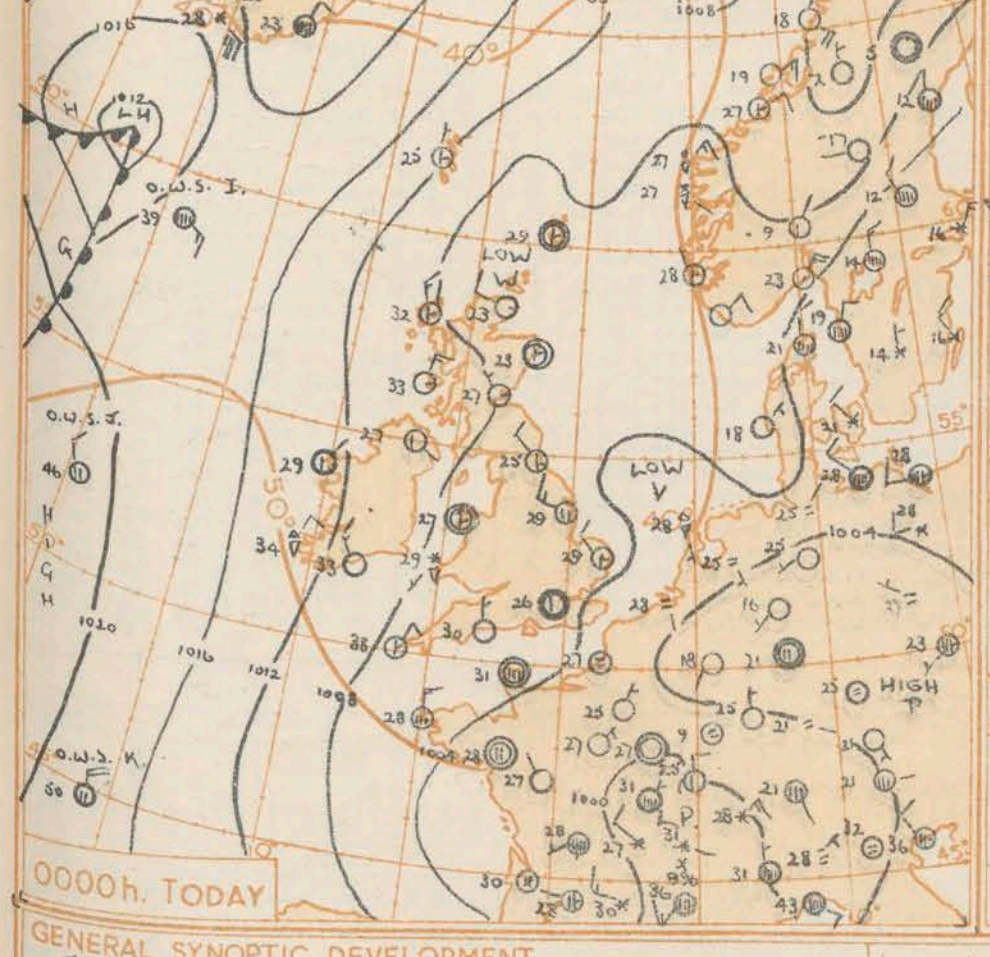
SIR GRAHAM SUTTON, C.B.E., D.Sc., F.R.S., Director General. Meteorological Office, Air Ministry, Kingsway, London, W.C.2.

CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE









GENERAL SYNOPTIC DEVELOPMENT

The low yesterday deepening over the Denmark Strait has moved southeast but is now expected to turn east-southeast. A small but intense low has developed in the Jan Mayen area and is expected to move south rather slowly. A deep low which has moved towards the Baltic is expected to drift north and fill. The northerly stream across the British Isles will gradually be replaced by a southerly stream strong in the west but weak in the east. The complex cyclonic vortex southeast of Newfoundland is expected to extend east. The Mediterranean complex will probably move east.

Issued at midday today Tuesday 11th March 1958

FORECAST FOR BRITISH ISLES until noon tomorrow.

Snow showers at first, chiefly in coastal districts, will mostly die out during the night and frost will again become general. More continuous snow is likely to spread across Northern Ireland and western districts of Britain during tonight changing to sleet or rain except over northwest Scotland. Tomorrow morning, after clearance of fog patches, eastern and central Britain will be bright but still very cold and further snow is likely to spread from the west.

OUTLOOK FOR following 24 hours.

Probably less cold generally, and not much below average temperatures in most western districts.

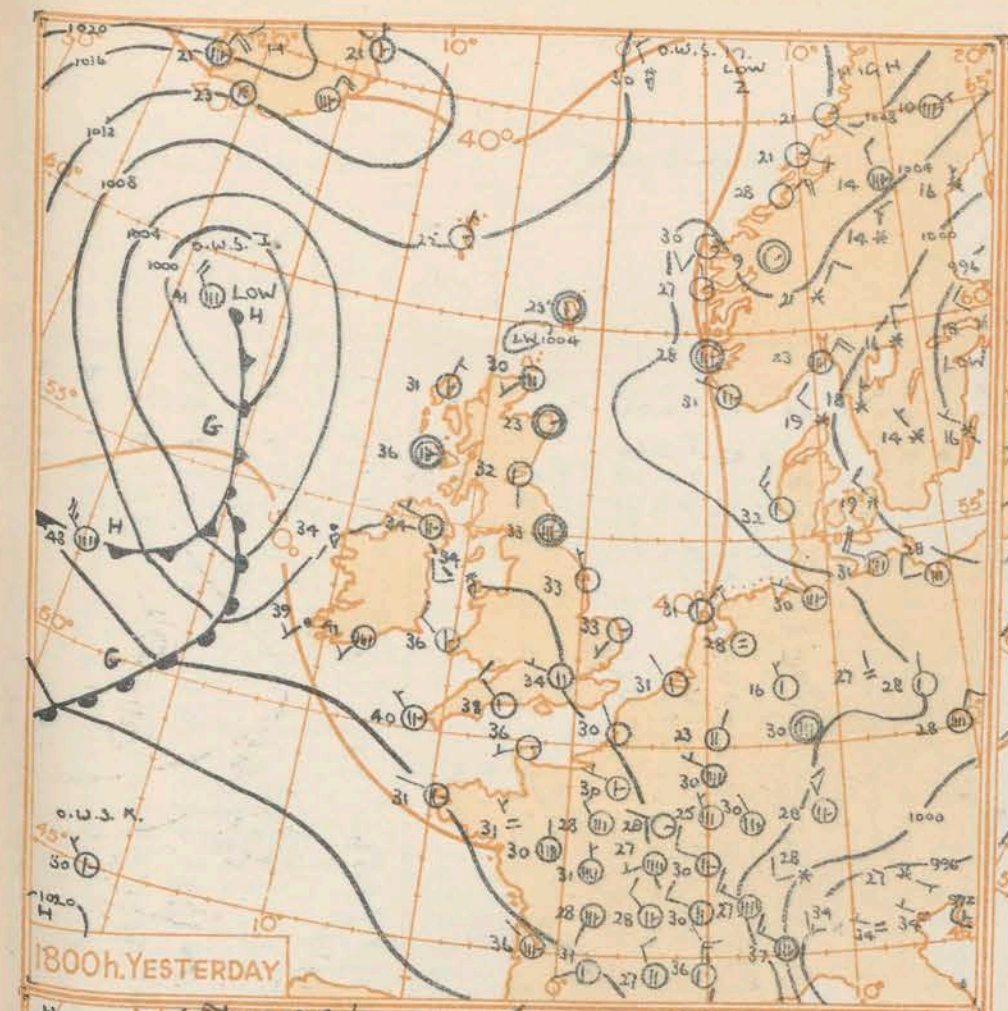
CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

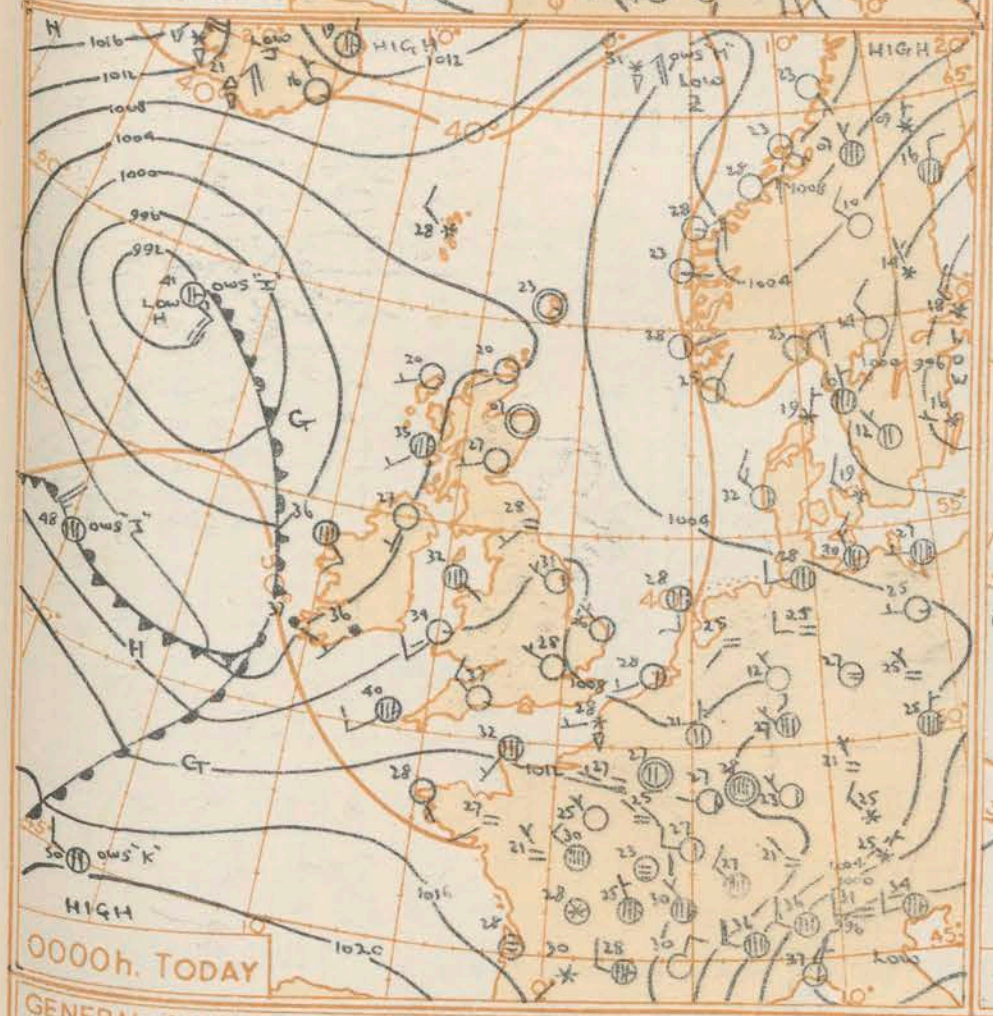
Mid-day (12h)
of
Tuesday 11th March.
1958

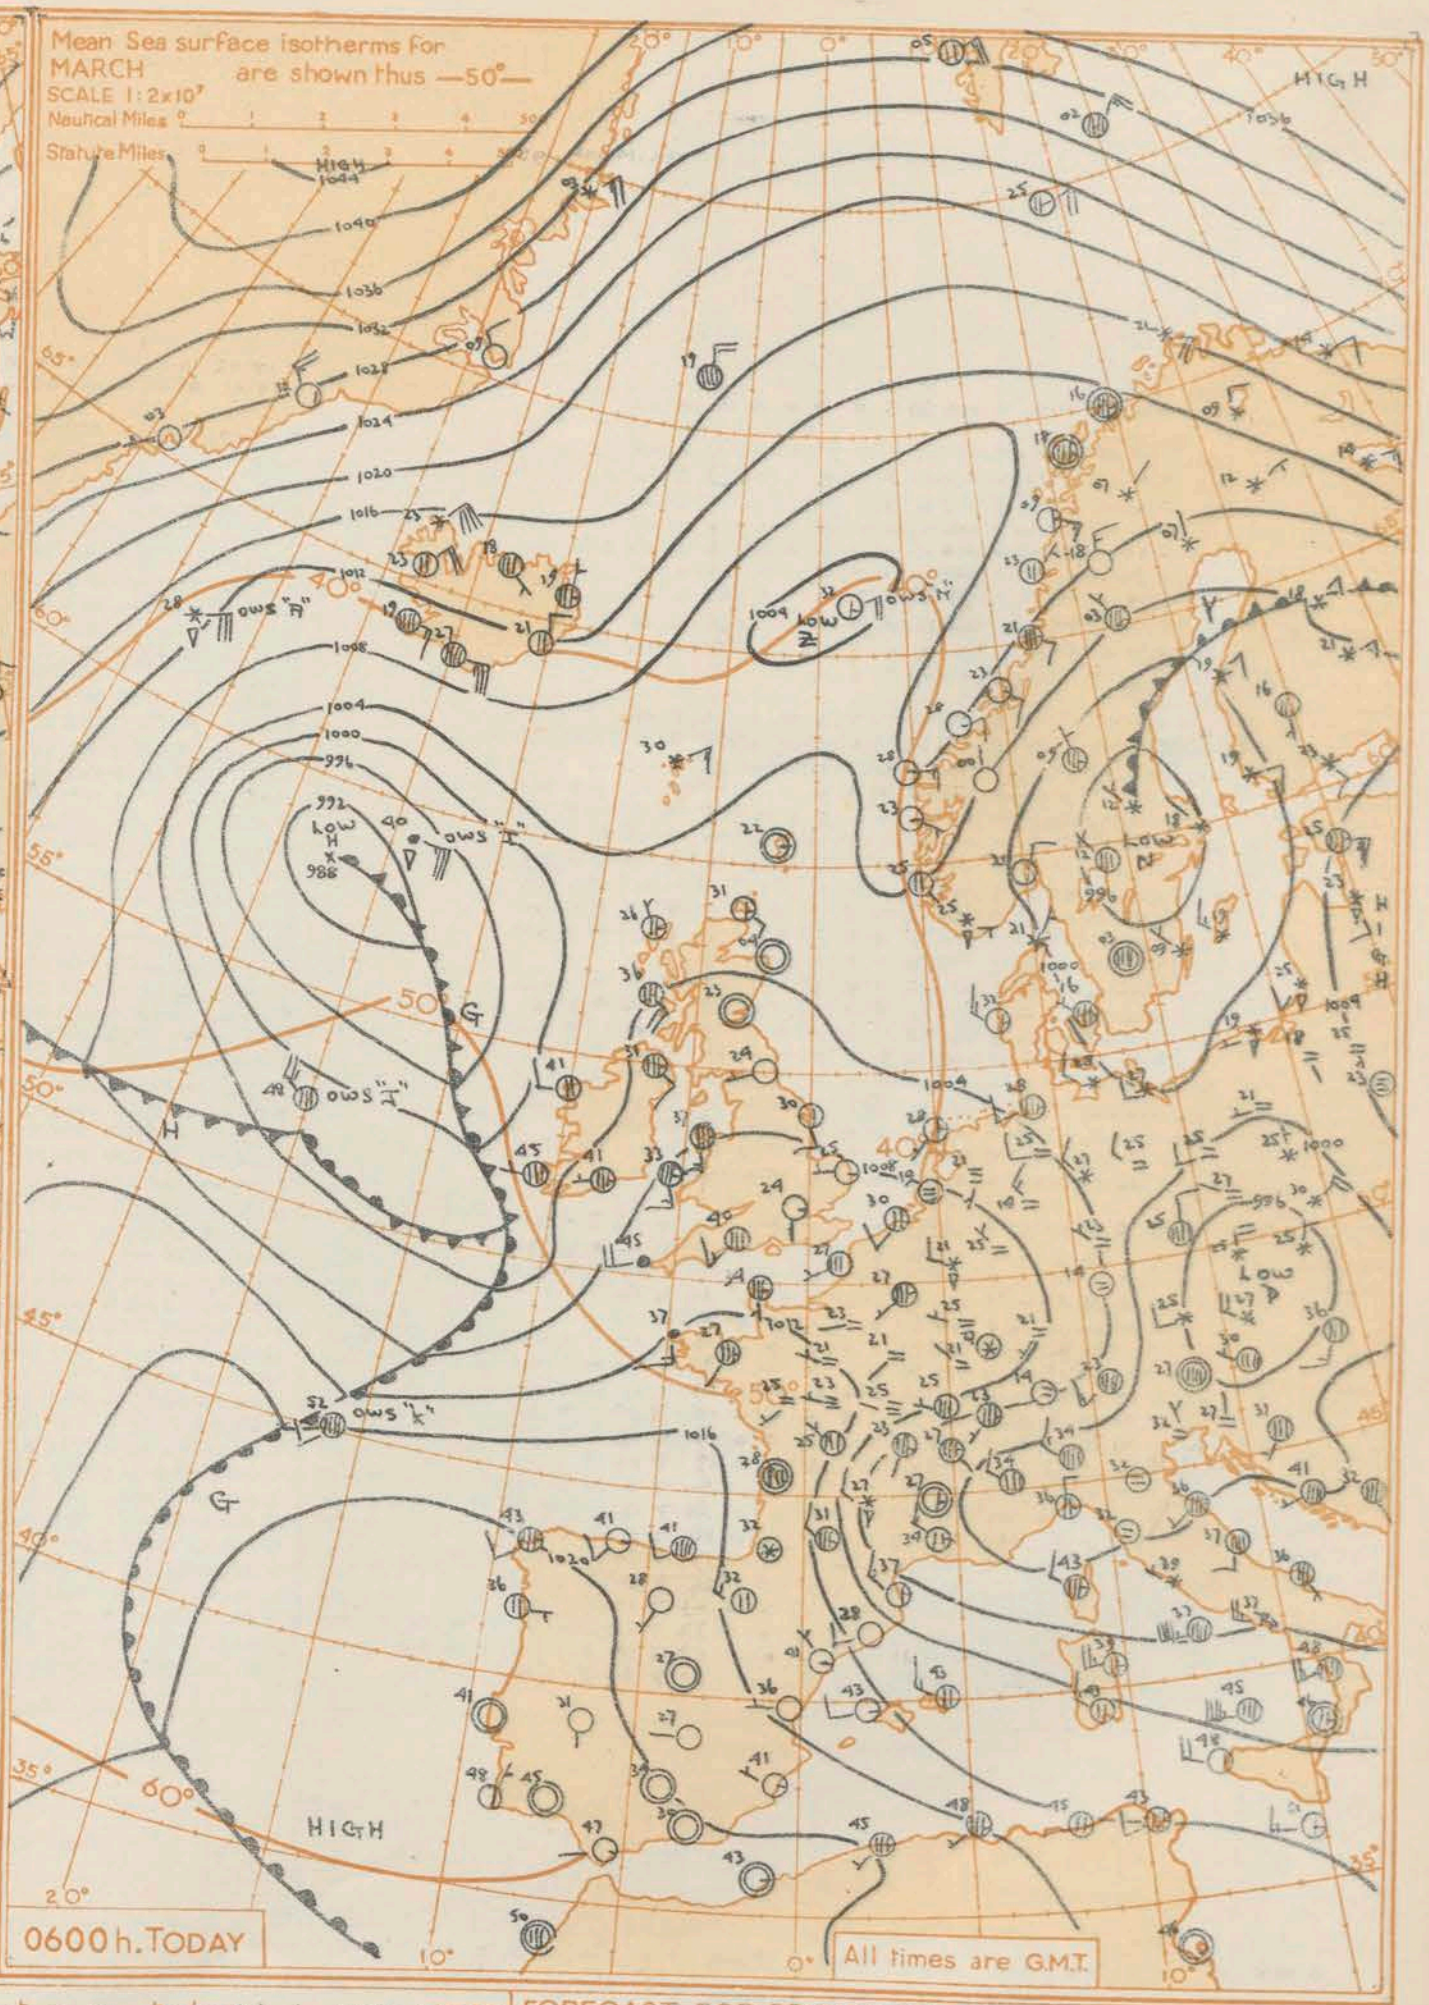
Equidistant azimuthal projection 1: 3×10^7 on the plane of 60°N.

NAUTICAL MILES.

0 500 1,000 1,500







GENERAL SYNOPTIC DEVELOPMENT

A depression to the northwest of Scotland gradually moved east with considerable troughing southeast towards southwest England and this trough is expected to move slowly east across England while the depression moves slowly into Scotland. Further depressions may form in mid-Atlantic and move towards France.

Issued at midday today Wednesday 12th March 1958

FORECAST FOR BRITISH ISLES until noon tomorrow

Rain or sleet at times in England and Wales possibly preceded by snow in places especially in the north and east. Periods of snow in south and west Scotland with snow showers in Northern Ireland after moderate snowfalls at first. Occasional snow in northeast Scotland. It will be cold in the north but a little milder in southwest England.

OUTLOOK FOR the following 24 hours

Probably cold in the north with snow but milder in England and Wales with occasional rain.

SIR GRAHAM SUTTON, C.B.E., D.Sc., F.R.S., Director General. Meteorological Office, Air Ministry, Kingsway, London, W.C.2.

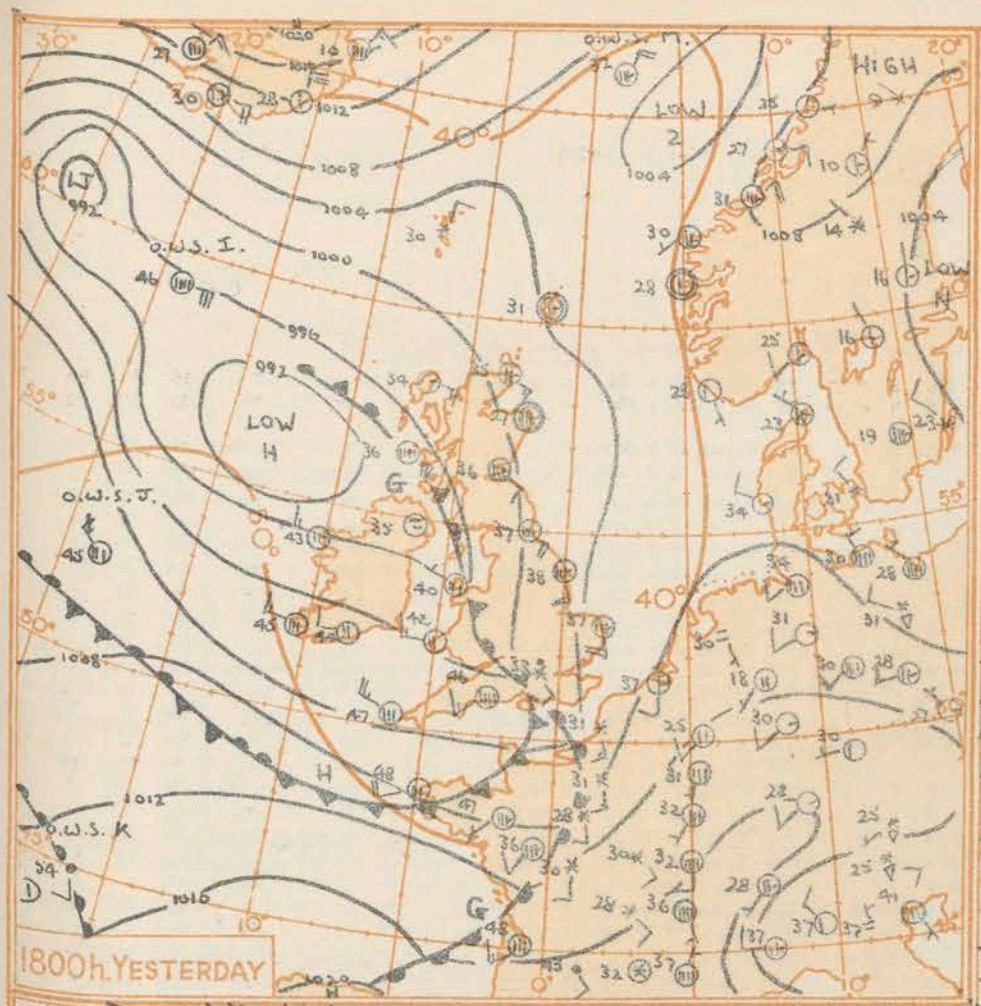
CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

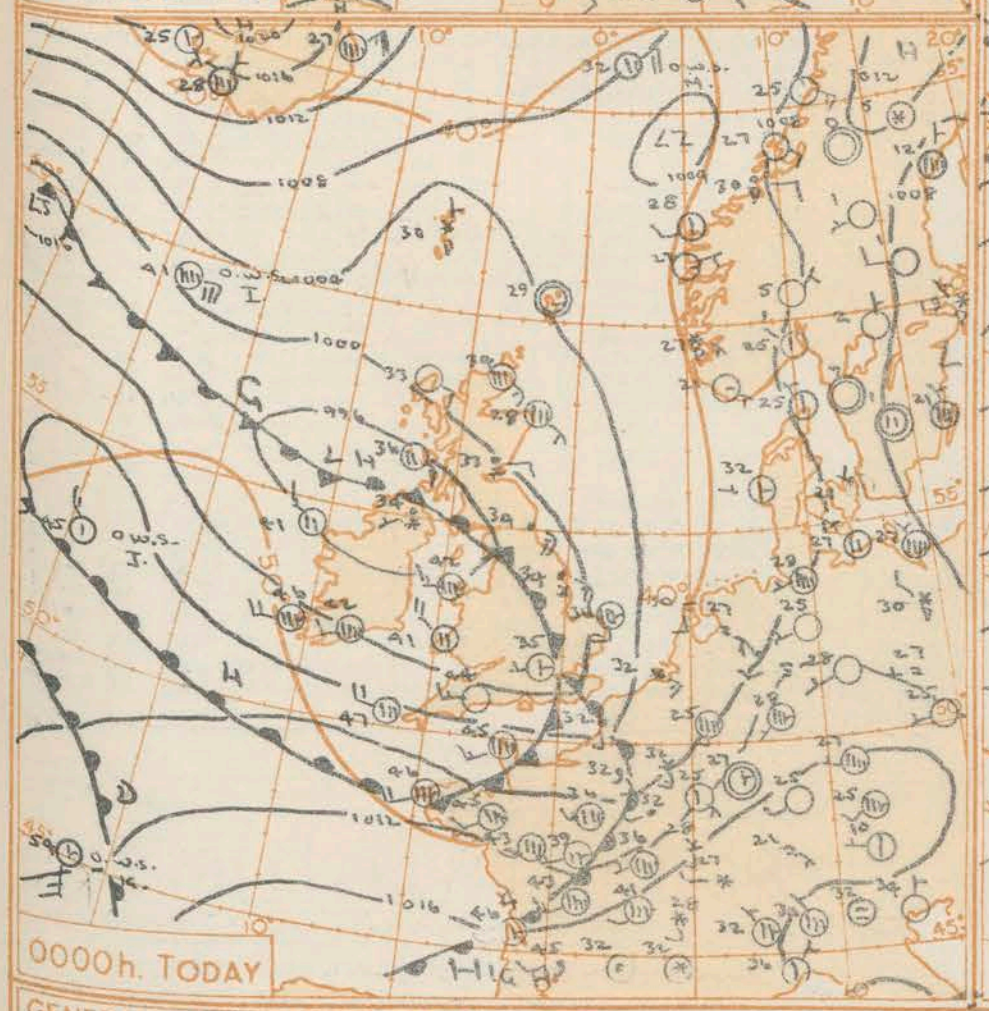
Mid-day (12h)
of
Wednesday 12th March
1958

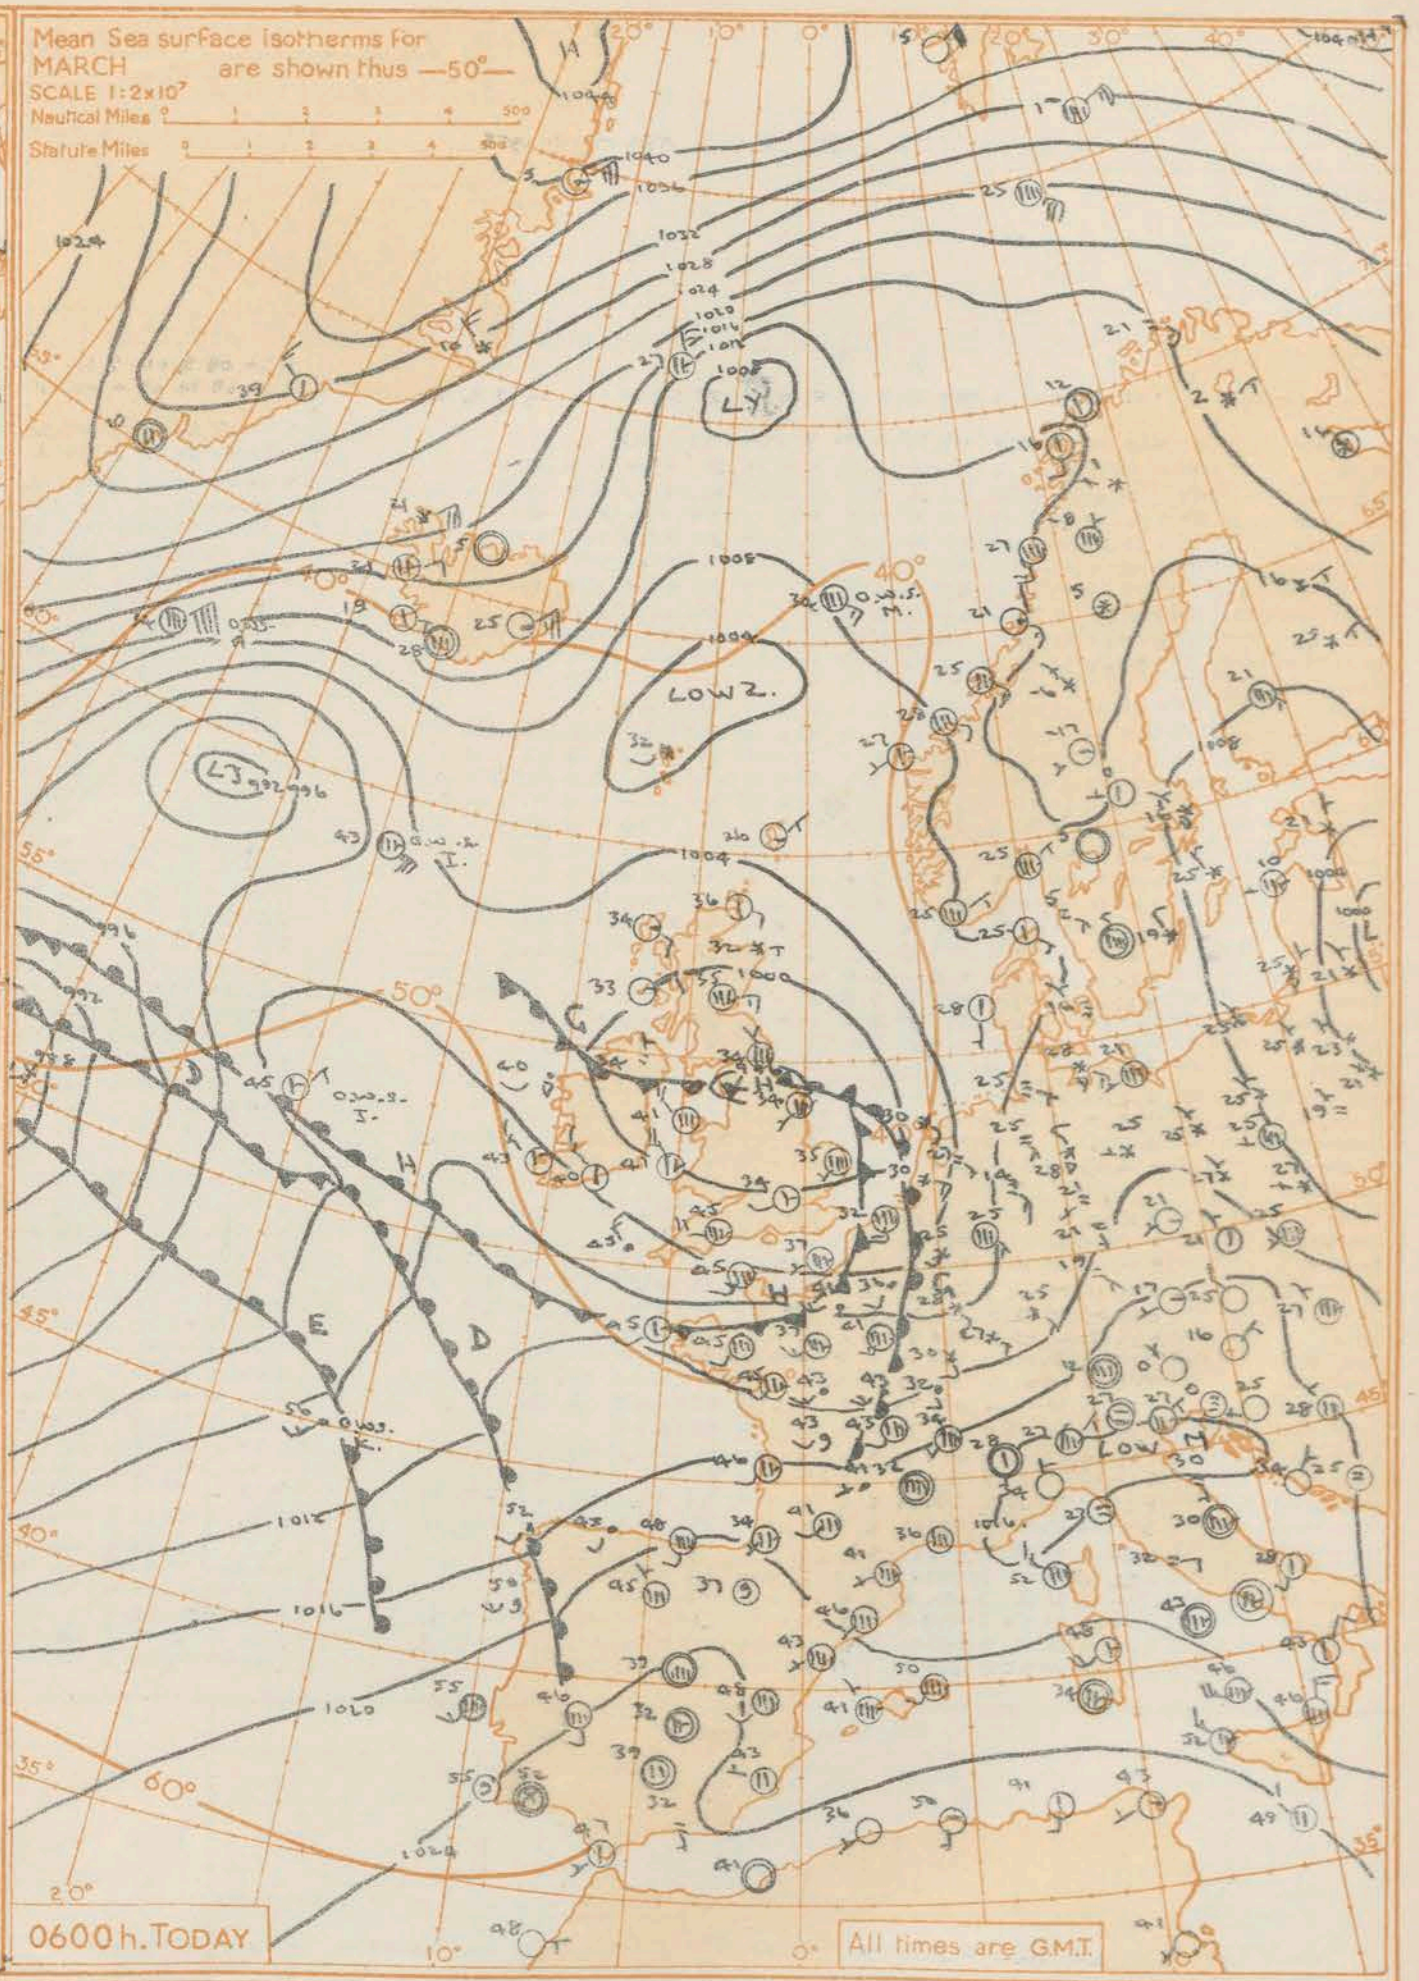
Equidistant azimuthal projection 1: 3×10^7 on the plane of 60°N.

NAUTICAL MILES.

0 500 1,000 1,500







GENERAL SYNOPTIC DEVELOPMENT

A depression moved southeast across Northern Ireland and north England and is expected to continue into Germany followed by a ridge over the British Isles and the North Sea. A complex depression in the Atlantic will persist and its frontal system will probably move into western districts tomorrow.

Issued at midday today Thursday 13th March 1958

FORECAST FOR BRITISH ISLES until noon tomorrow

It will be mainly cold with frost at night and snow at times chiefly near the eastern coasts and later in Northern Ireland. In Wales and southwest England however it will be rather cloudy with average temperatures and rain showers though sunny at times. There may be more general rain in the morning in these southwestern areas preceded by sleet or snow in some inland areas.

OUTLOOK FOR the following 24 hours.

Cold at night in the east and north but cloudy with rain or sleet in the west possibly preceeded by snow inland.

THE DAILY WEATHER REPORT
OF THE METEOROLOGICAL OFFICE, LONDON

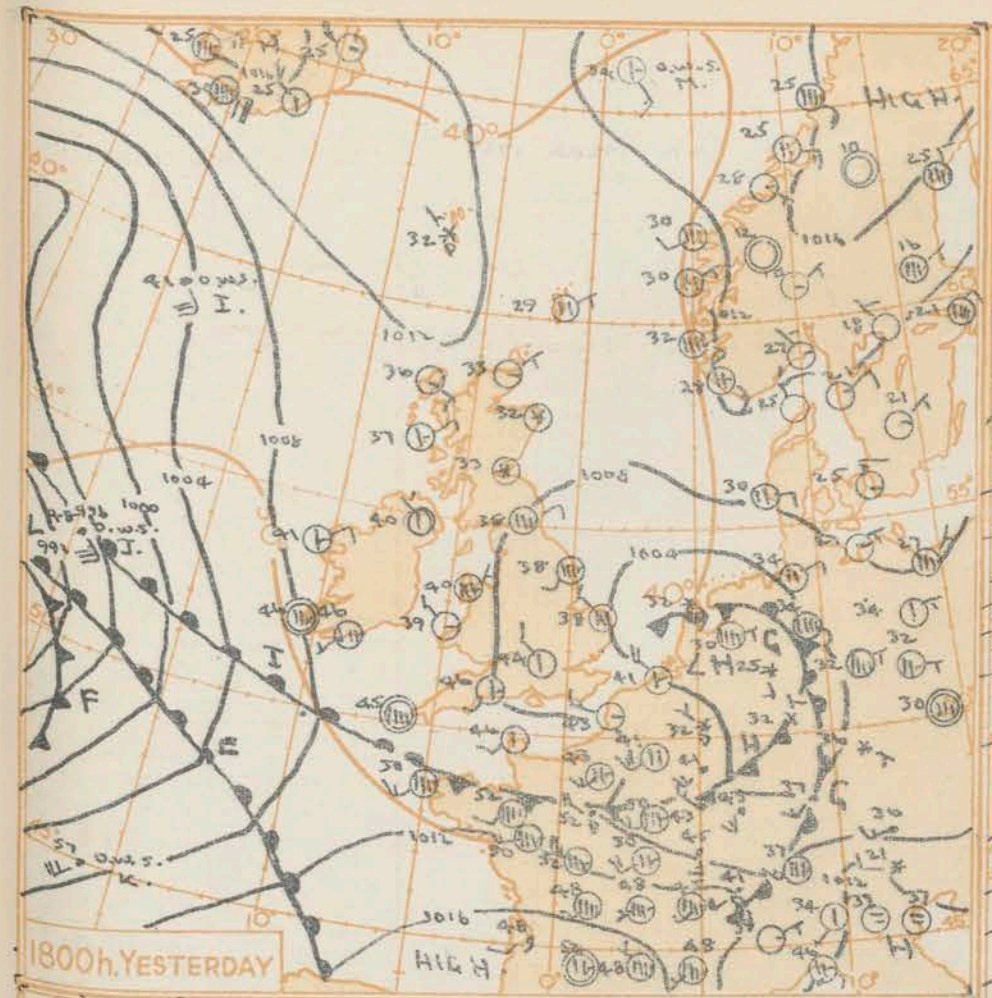
CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

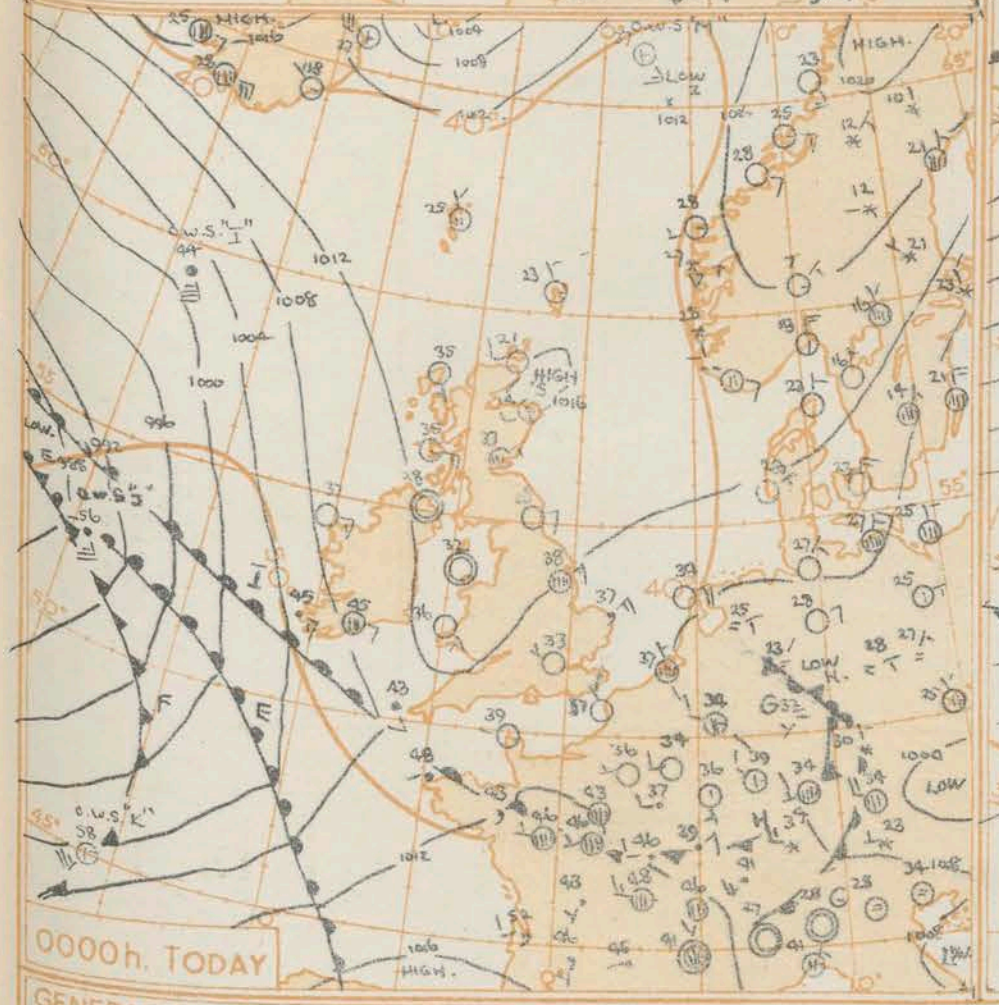
Mid-day (12h) of Thursday 13th March 1958

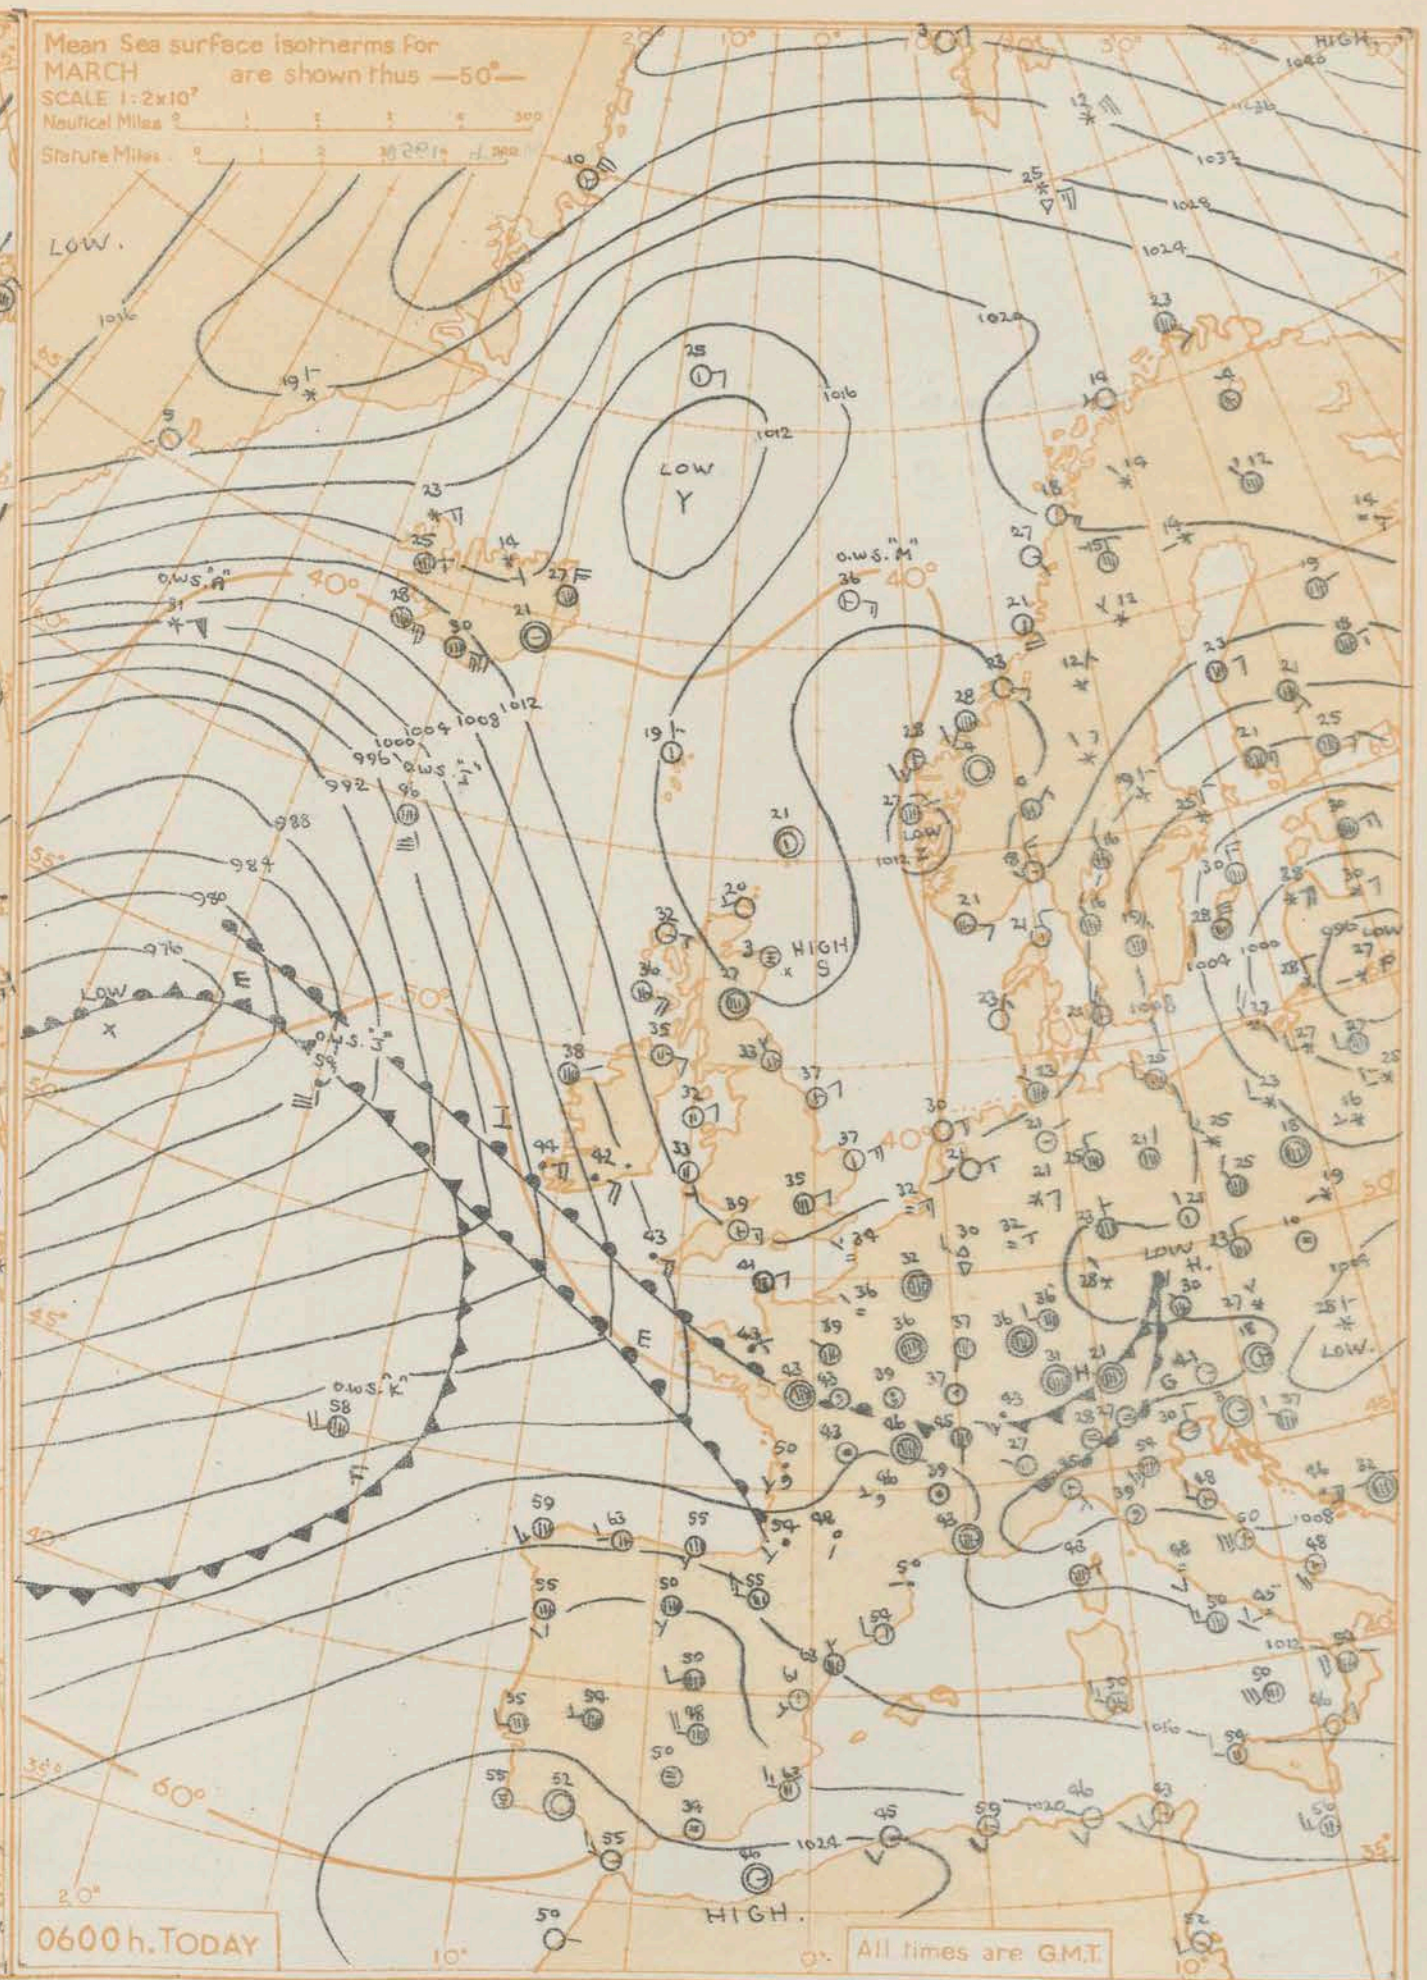
Equidistant azimuthal projection 1:3×10⁷ on the plane of 60°N.

NAUTICAL MILES.

0 500 1,000 1,500







All times are G.M.T.

GENERAL SYNOPTIC DEVELOPMENT

Issued at midday today Friday 14th March 1958

A depression over northern England yesterday morning moved steadily south east and filled up. Behind it a ridge of high pressure developed and is now over eastern districts of the British Isles. This ridge will intensify further as it moves southeast. A complex low will be slow moving in mid-Atlantic and its associated occlusion will be slow-moving from north west France to western Ireland.

FORECAST FOR BRITISH ISLES until noon tomorrow

Extreme southwest England will be mainly cloudy with occasional rain and during tonight and tomorrow occasional rain may also spread into Northern Ireland, the Hebrides and west Wales. Otherwise the weather will be mainly dry with sunny intervals. In the west temperatures will be near average but in the east it will continue cold with frost in places tonight.

OUTLOOK FOR the following 24 hours.

Probably continuing dry and rather cold in eastern districts. Occasional rain and near average temperatures in the west.

GENERAL SYNOPTIC DEVELOPMENT

Issued at midday today Saturday 15th March 1958

The ridge over eastern districts of England and the North Sea yesterday morning extended a little southeastwards but is now almost stationary. An occlusion which remained almost stationary from northwest France to western Ireland during yesterday is now moving slowly northeast over Ireland and will probably be lying from northwest Scotland to southwest England tomorrow morning.

FORECAST FOR BRITISH ISLES until noon tomorrow

Ireland and western districts of Great Britain will be mostly cloudy with occasional rain and with sleet or snow on higher ground. Other areas will be mostly dry today but occasional rain may spread eastwards tomorrow. Temperatures will be near average in the west but the east will be rather cold with frost in places tonight.

OUTLOOK FOR the following 24 hours.

Becoming milder with rain at times in most areas.

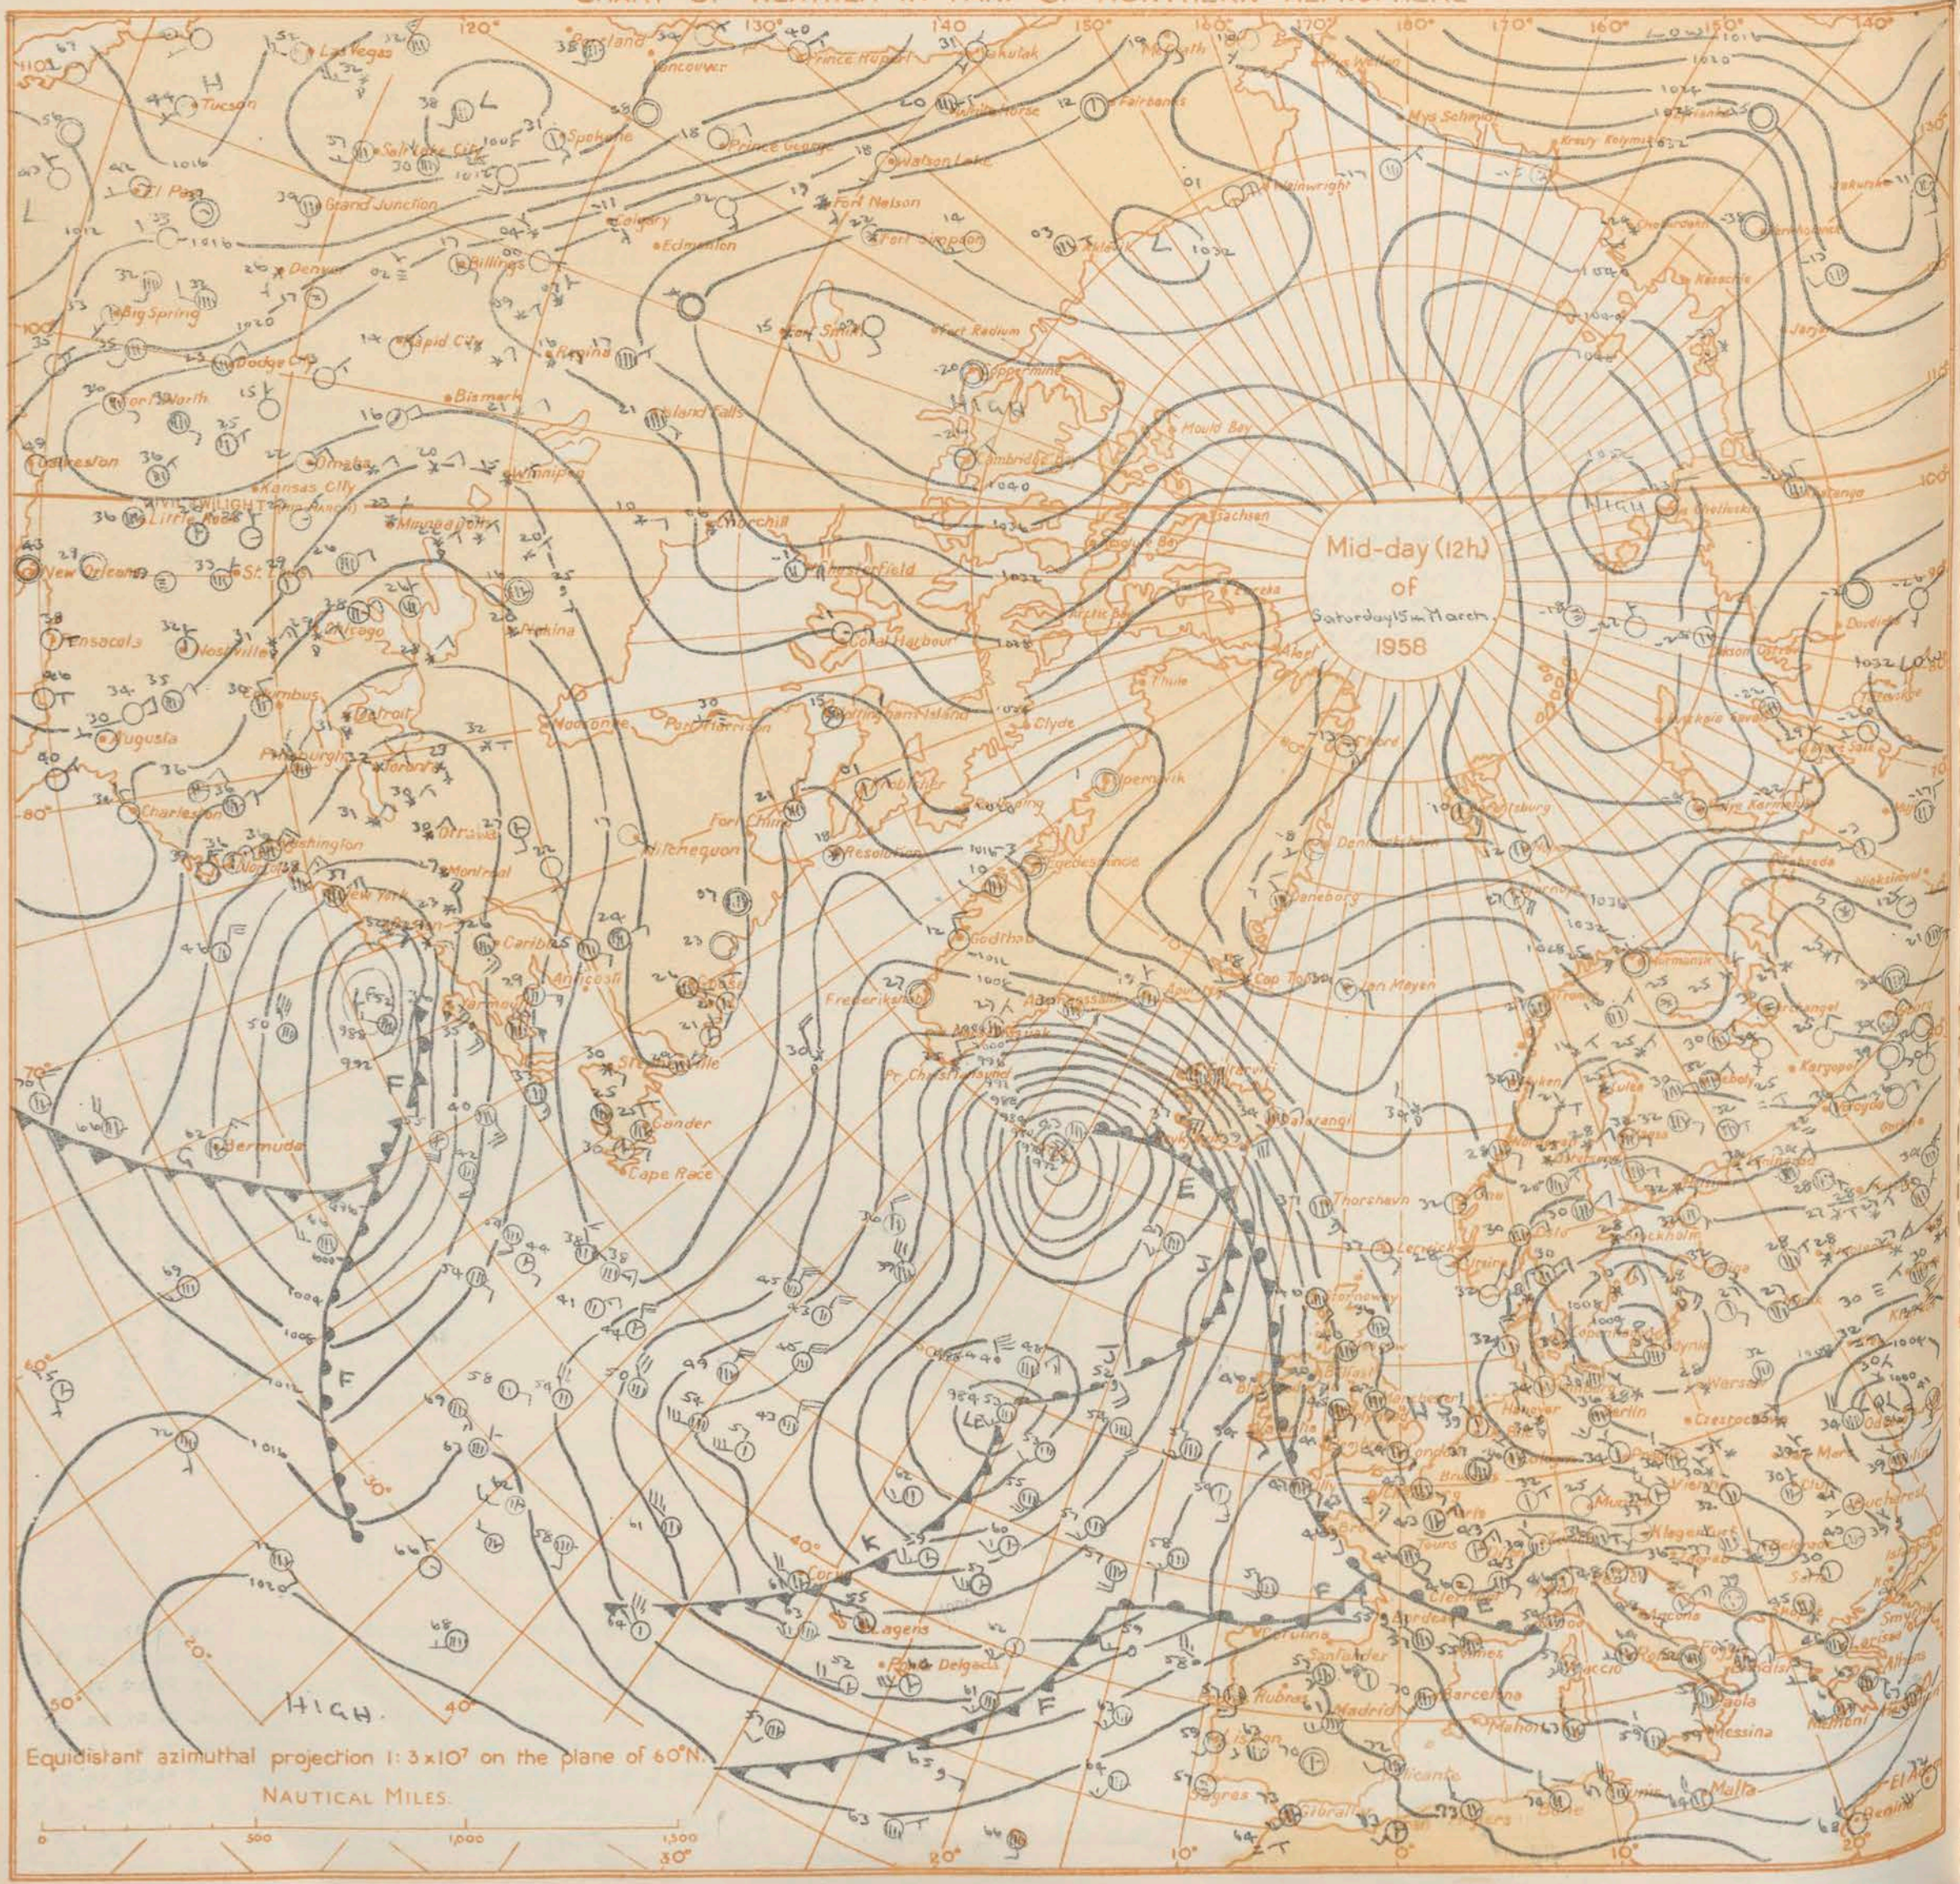
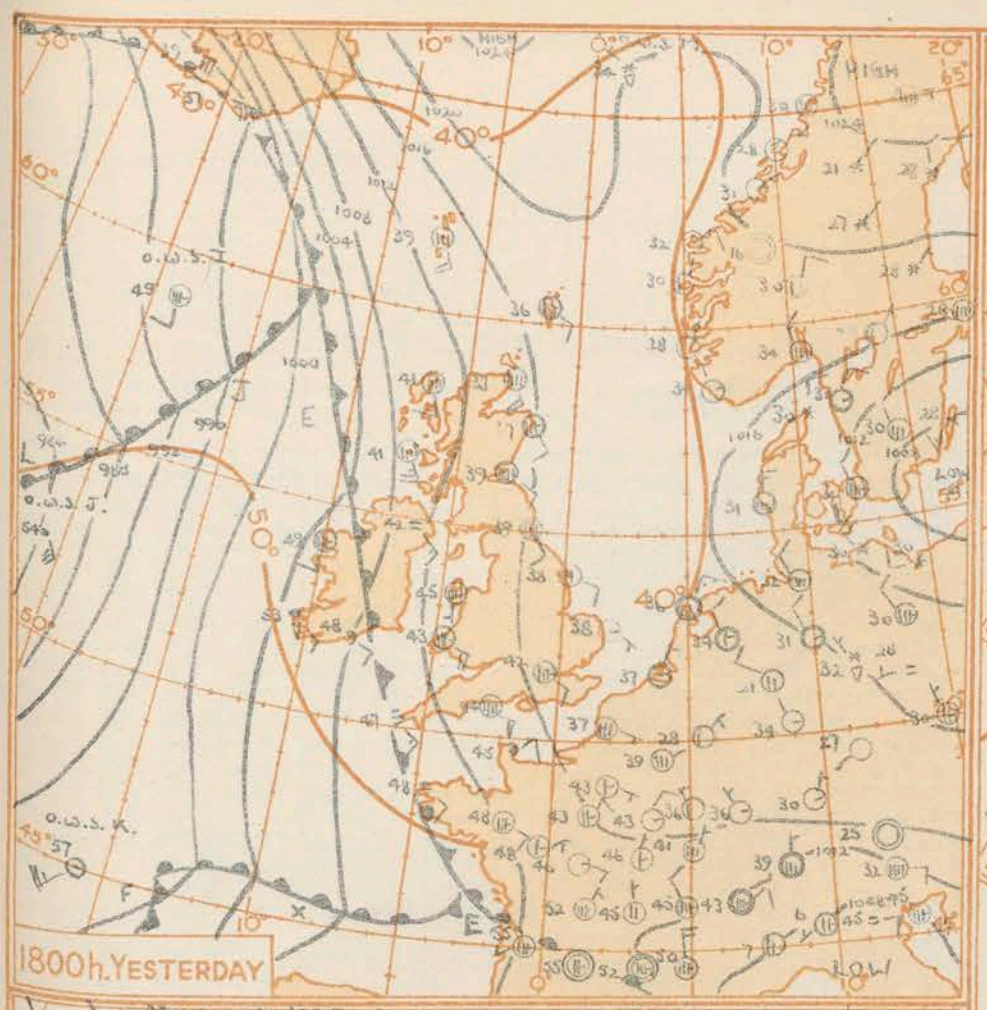
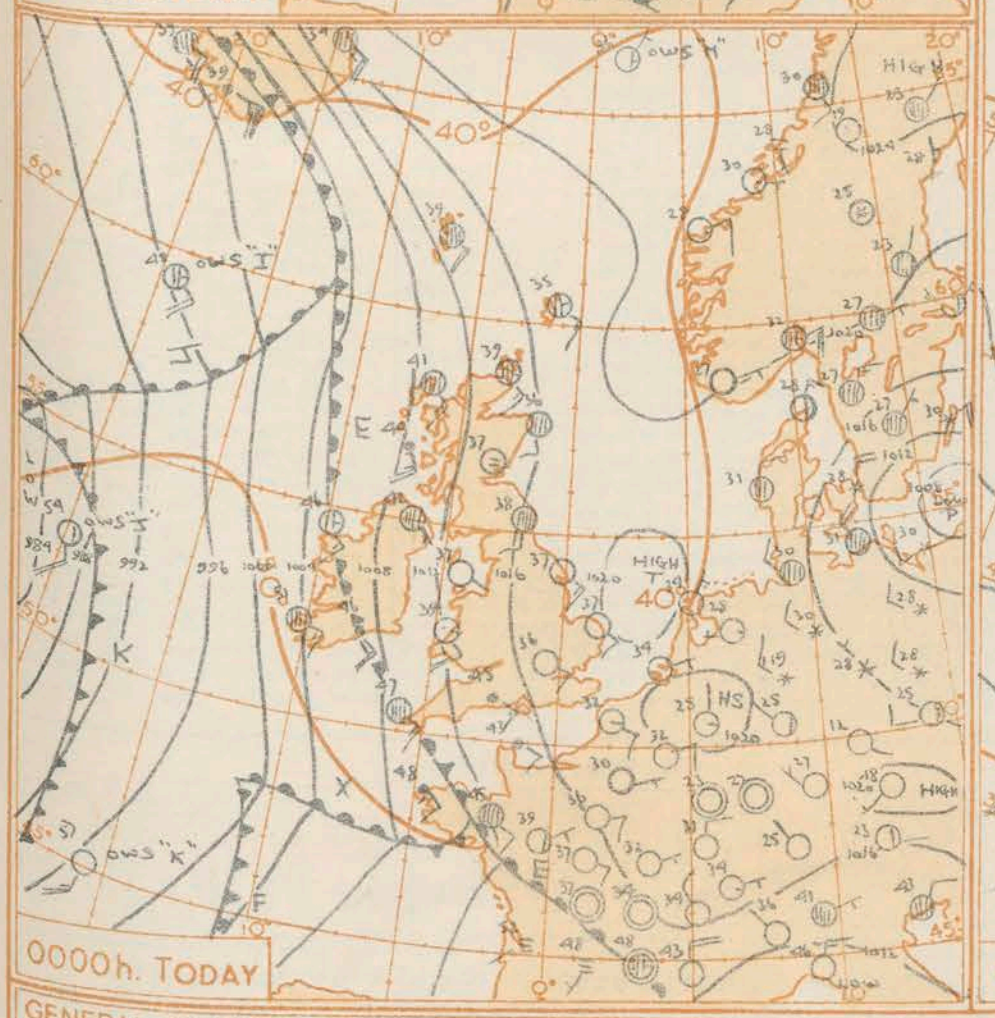
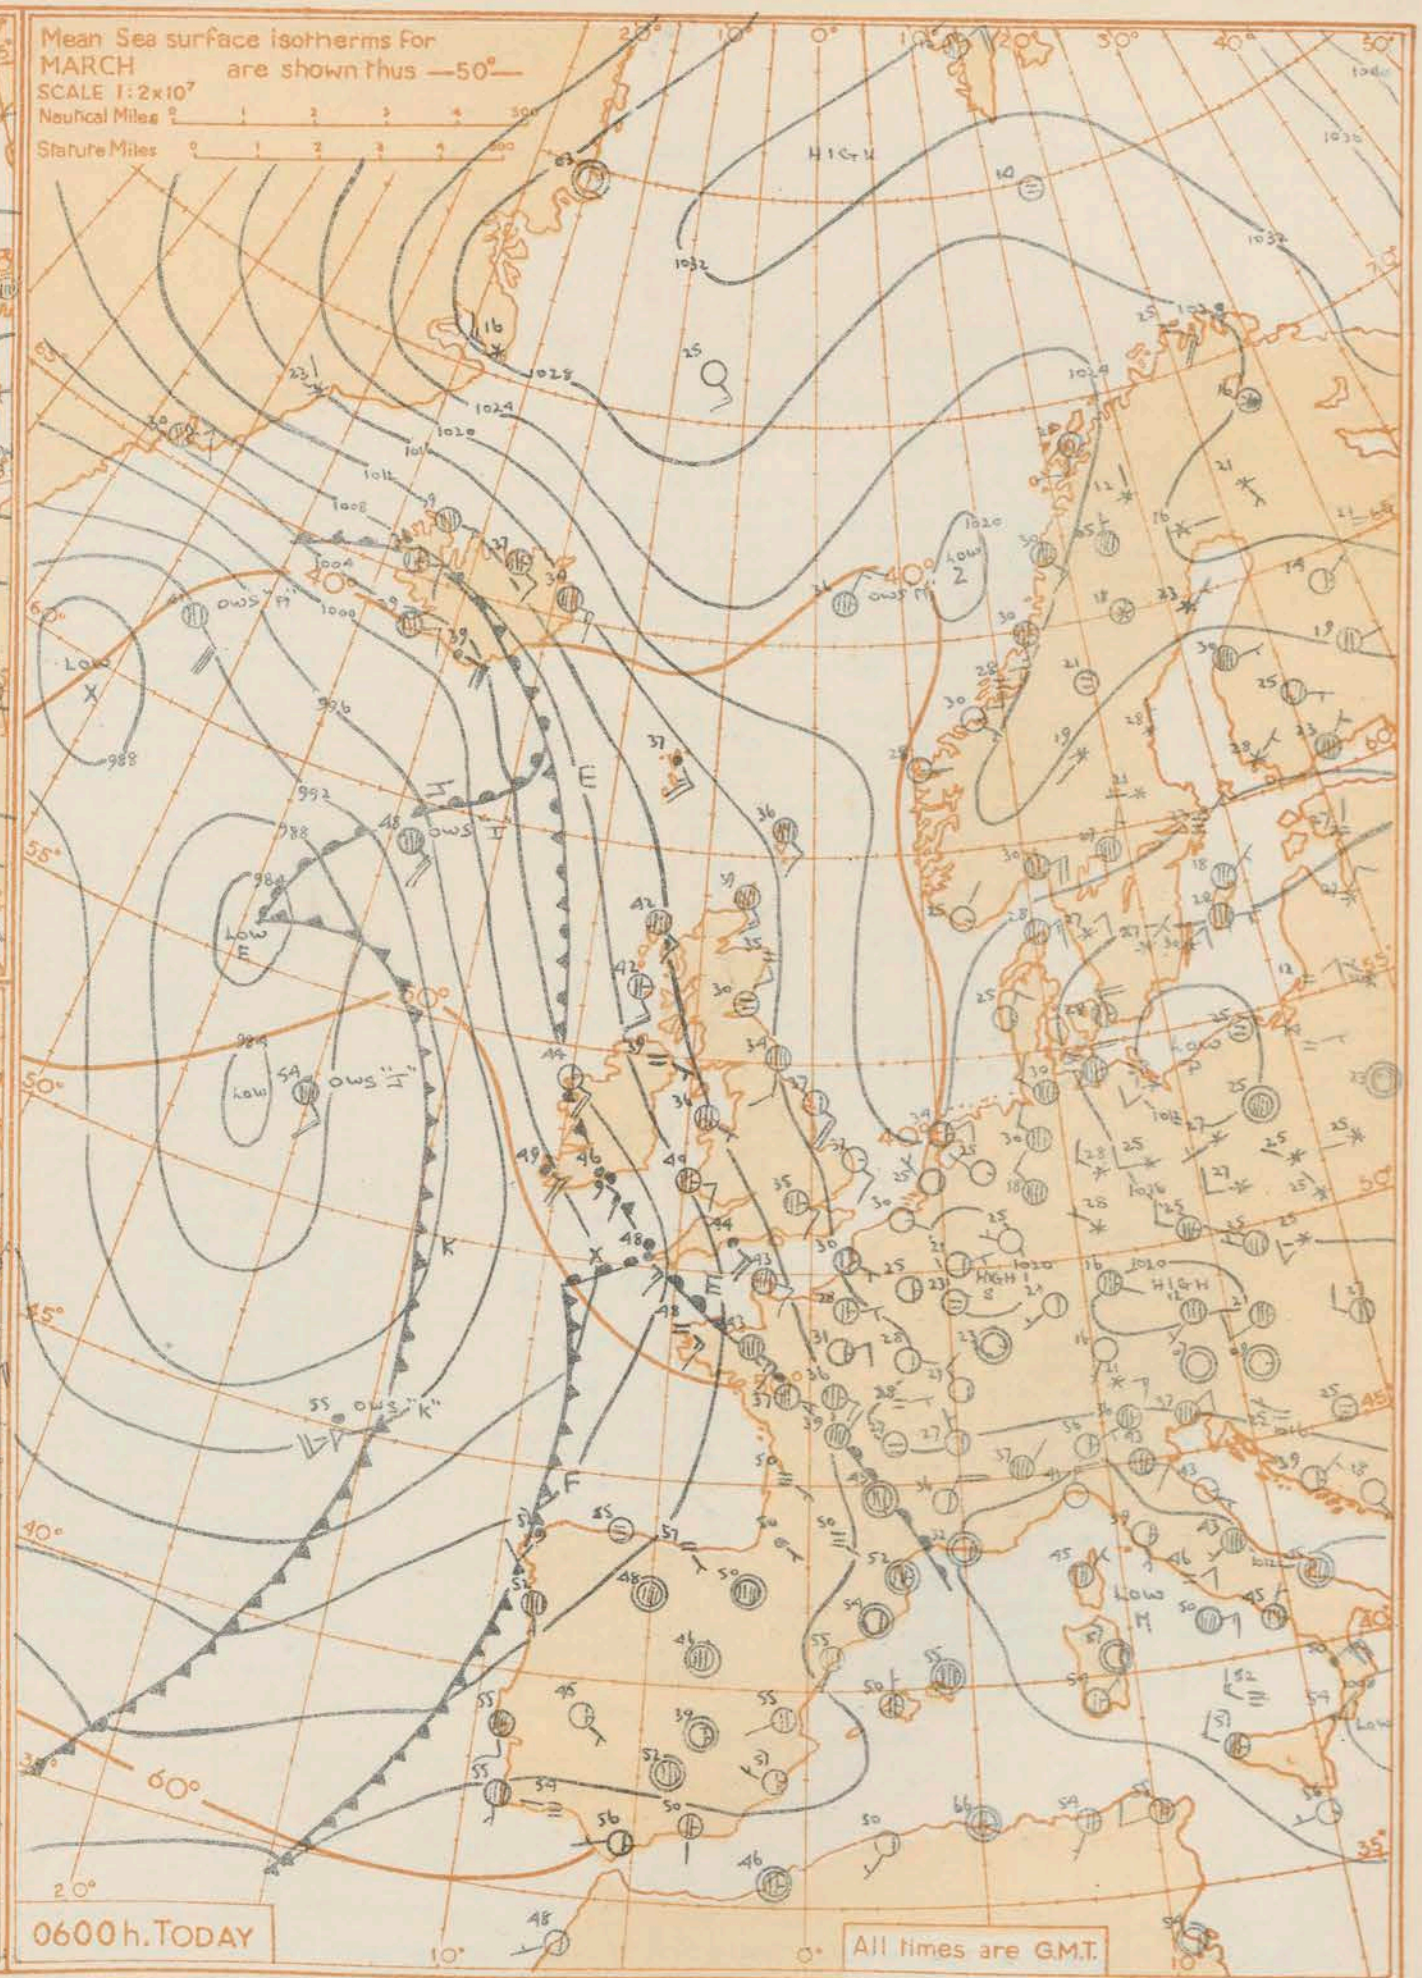
CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE









GENERAL SYNOPTIC DEVELOPMENT

A ridge of high pressure extending southwestwards from the intense anticyclone north of Russia, across Scandinavia and the North Sea is almost stationary. The occlusion which was tending to move northeast over Ireland yesterday has now become almost stationary over south west Ireland but has moved into the western English Channel and over the Scilly Isles. This occlusion will probably later move westward again as a shallow depression develops near western France and moves away southeast.

Issued at midday Today Sunday 16th March 1958

FORECAST FOR BRITISH ISLES until noon tomorrow

The cloudy weather over Wales and England south west of a line Liverpool to London giving slight rain in places and perhaps a little sleet in Wales and the midlands will clear gradually and tomorrow will be mostly dry with bright periods.

Elsewhere in England and in Scotland and Northern Ireland it will be fine with sunny periods and slight frost at night. Rather cold in the east, average temperatures elsewhere.

OUTLOOK FOR the following 24 hours

Dry in most places; rather cold in the east, near average temperatures elsewhere.

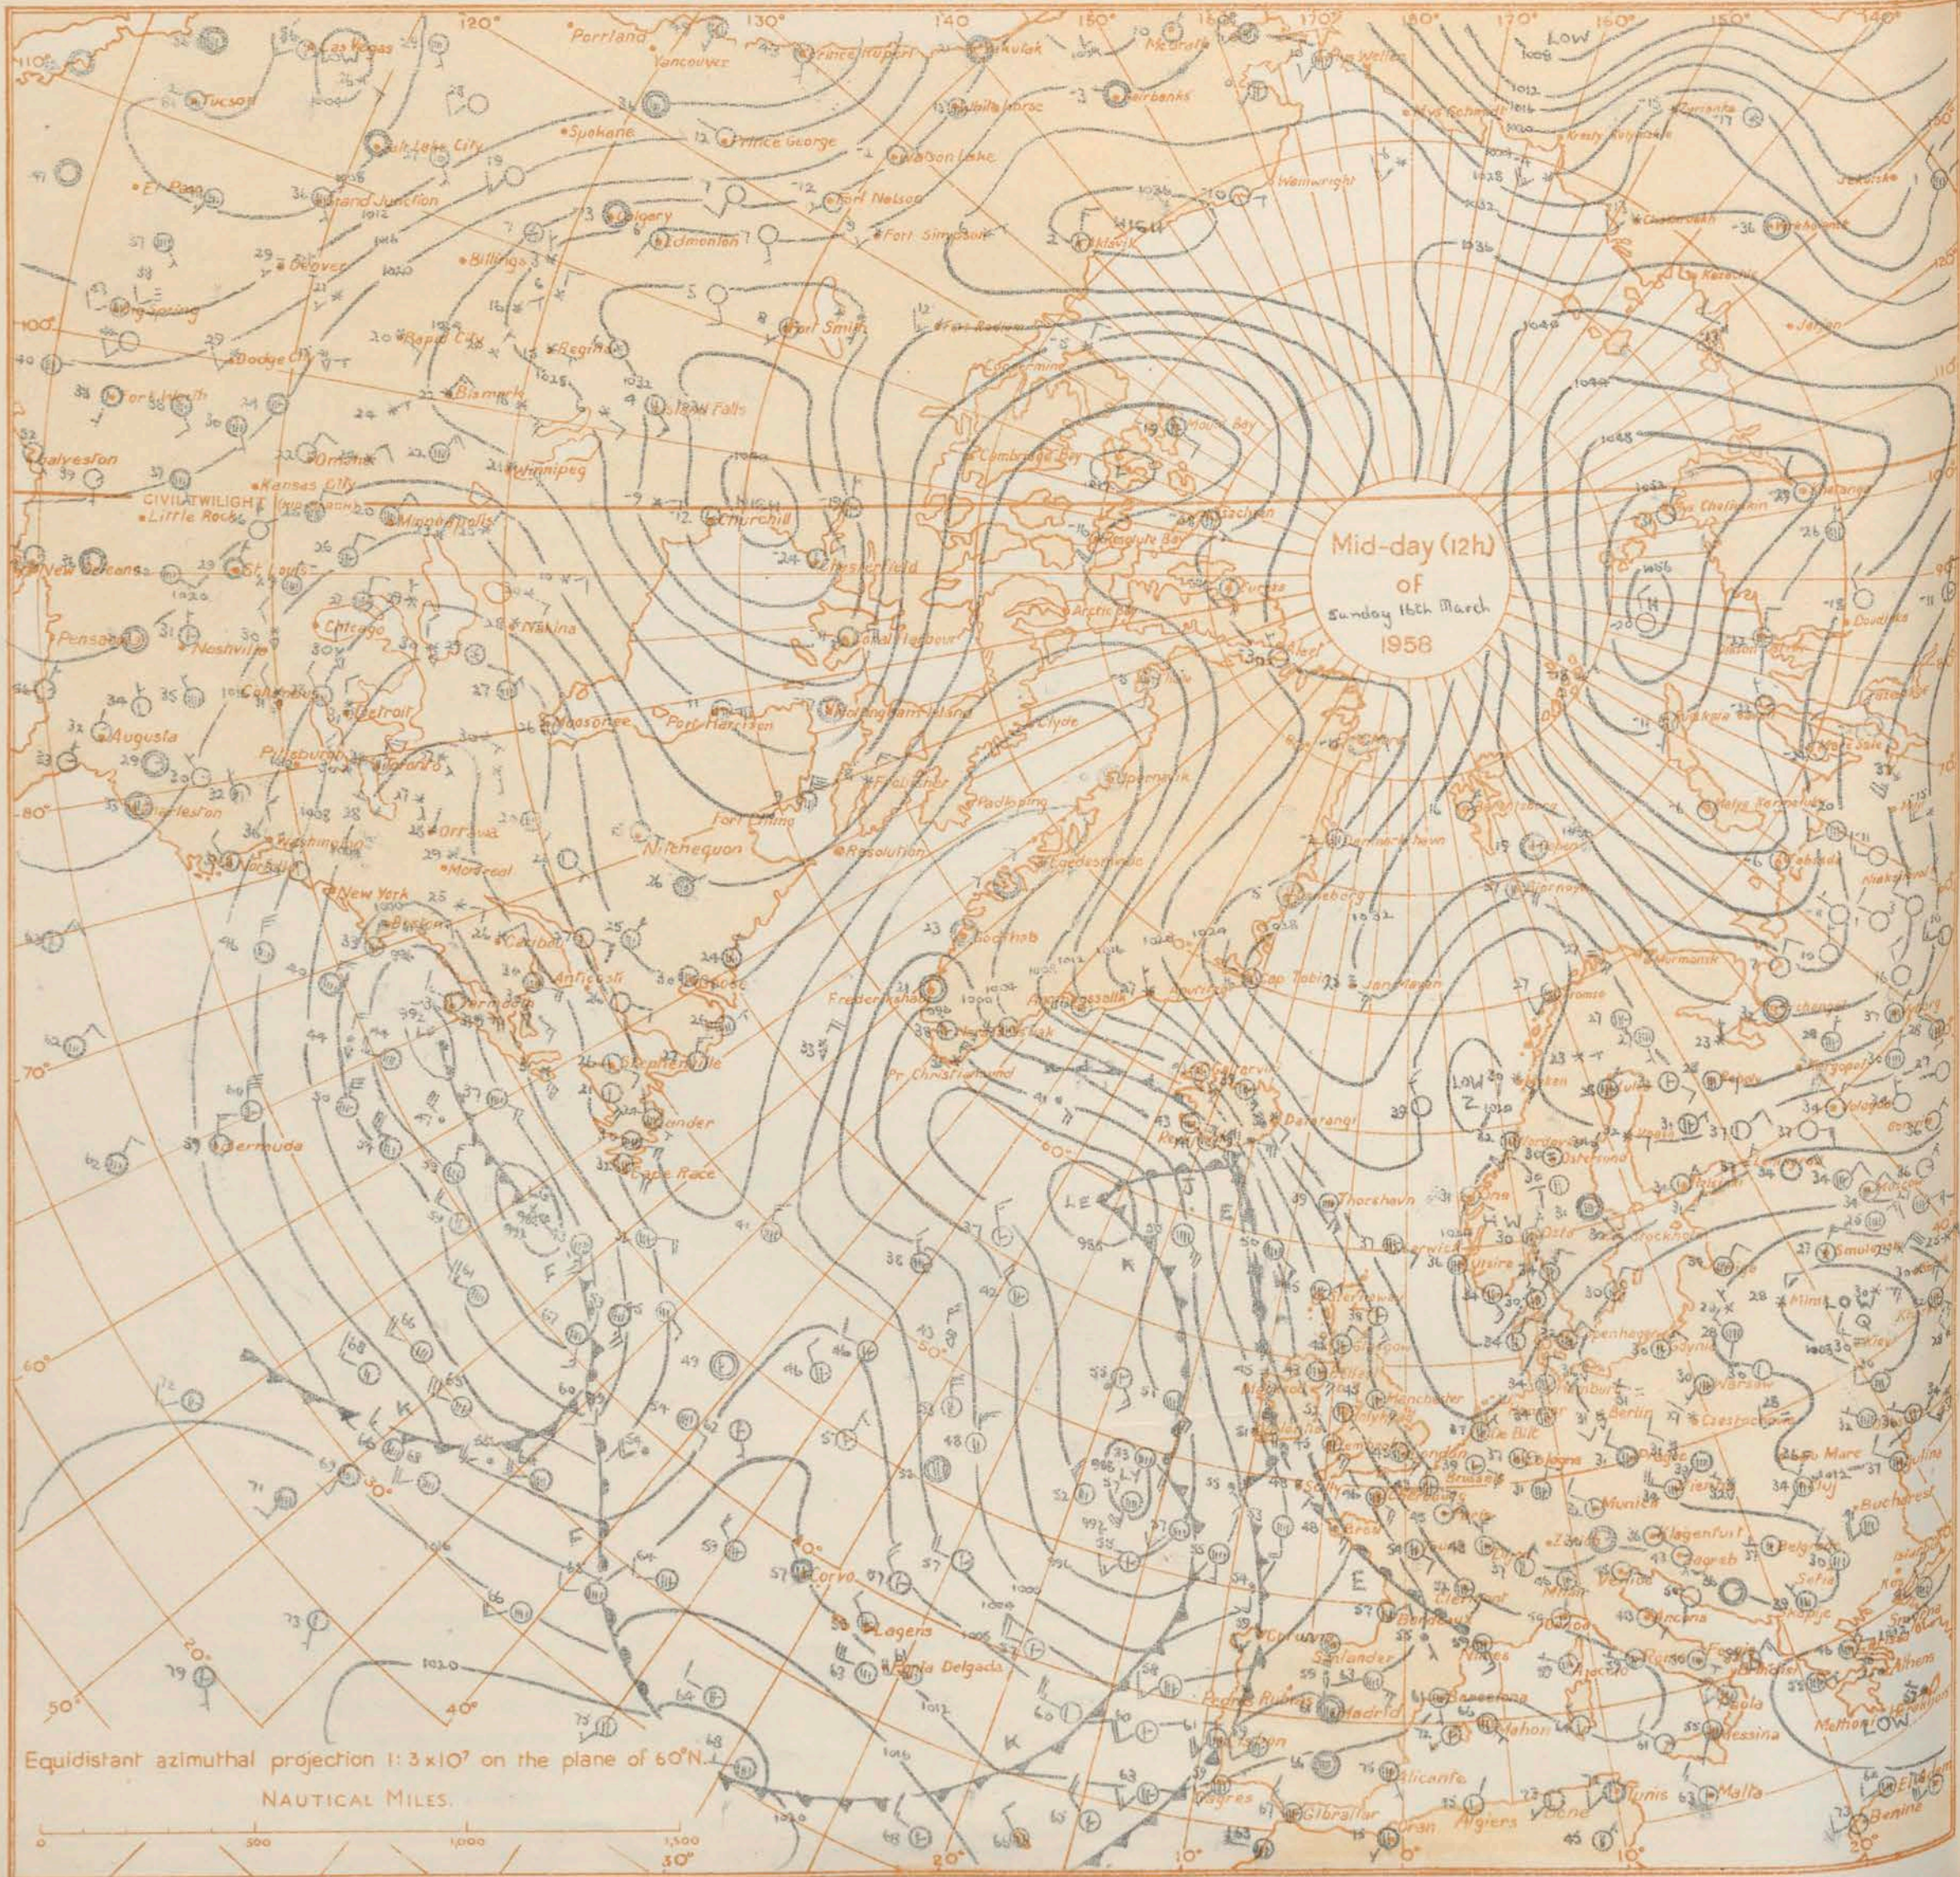
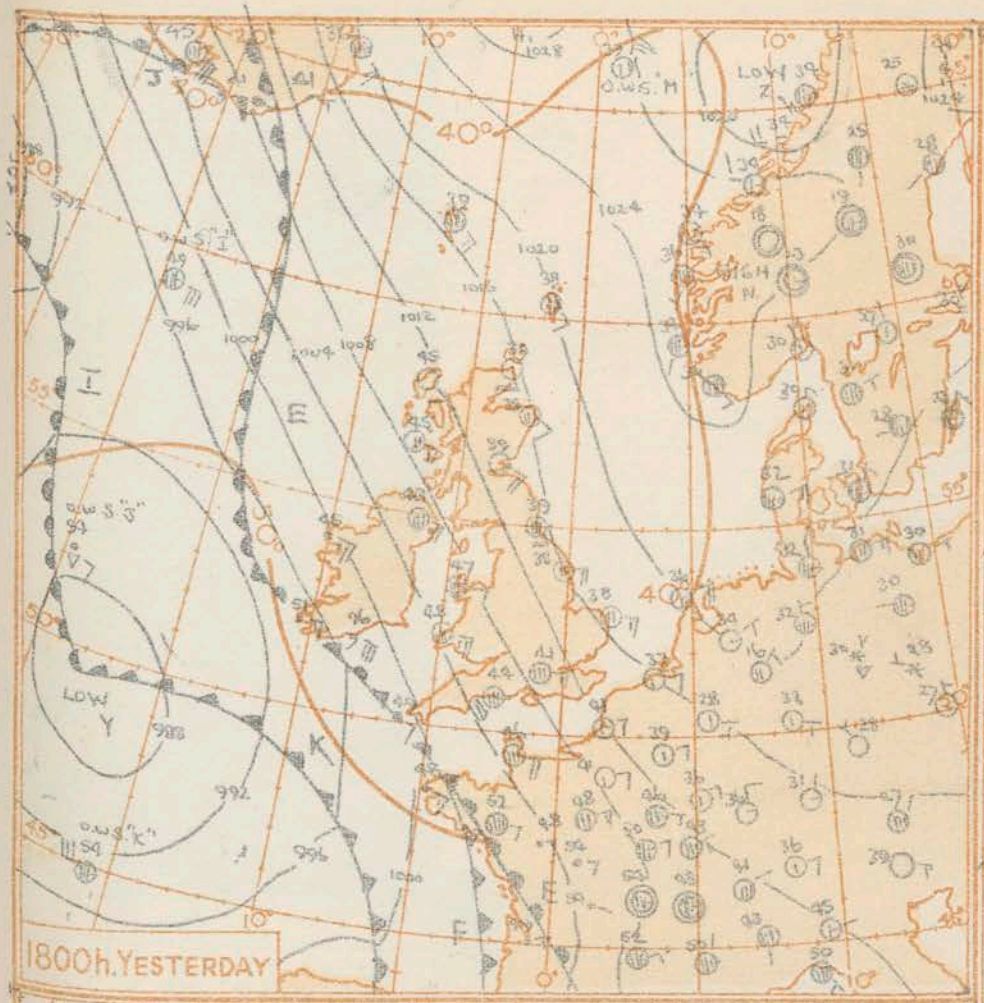
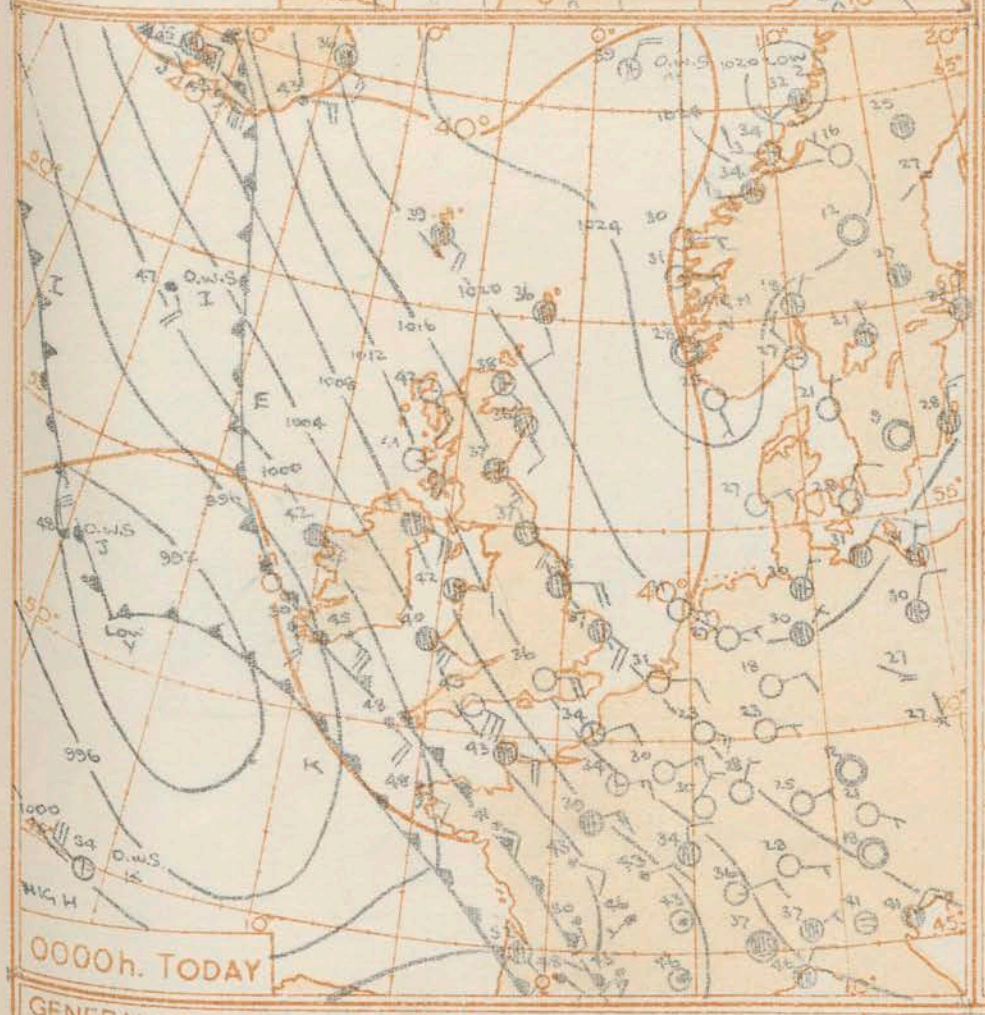
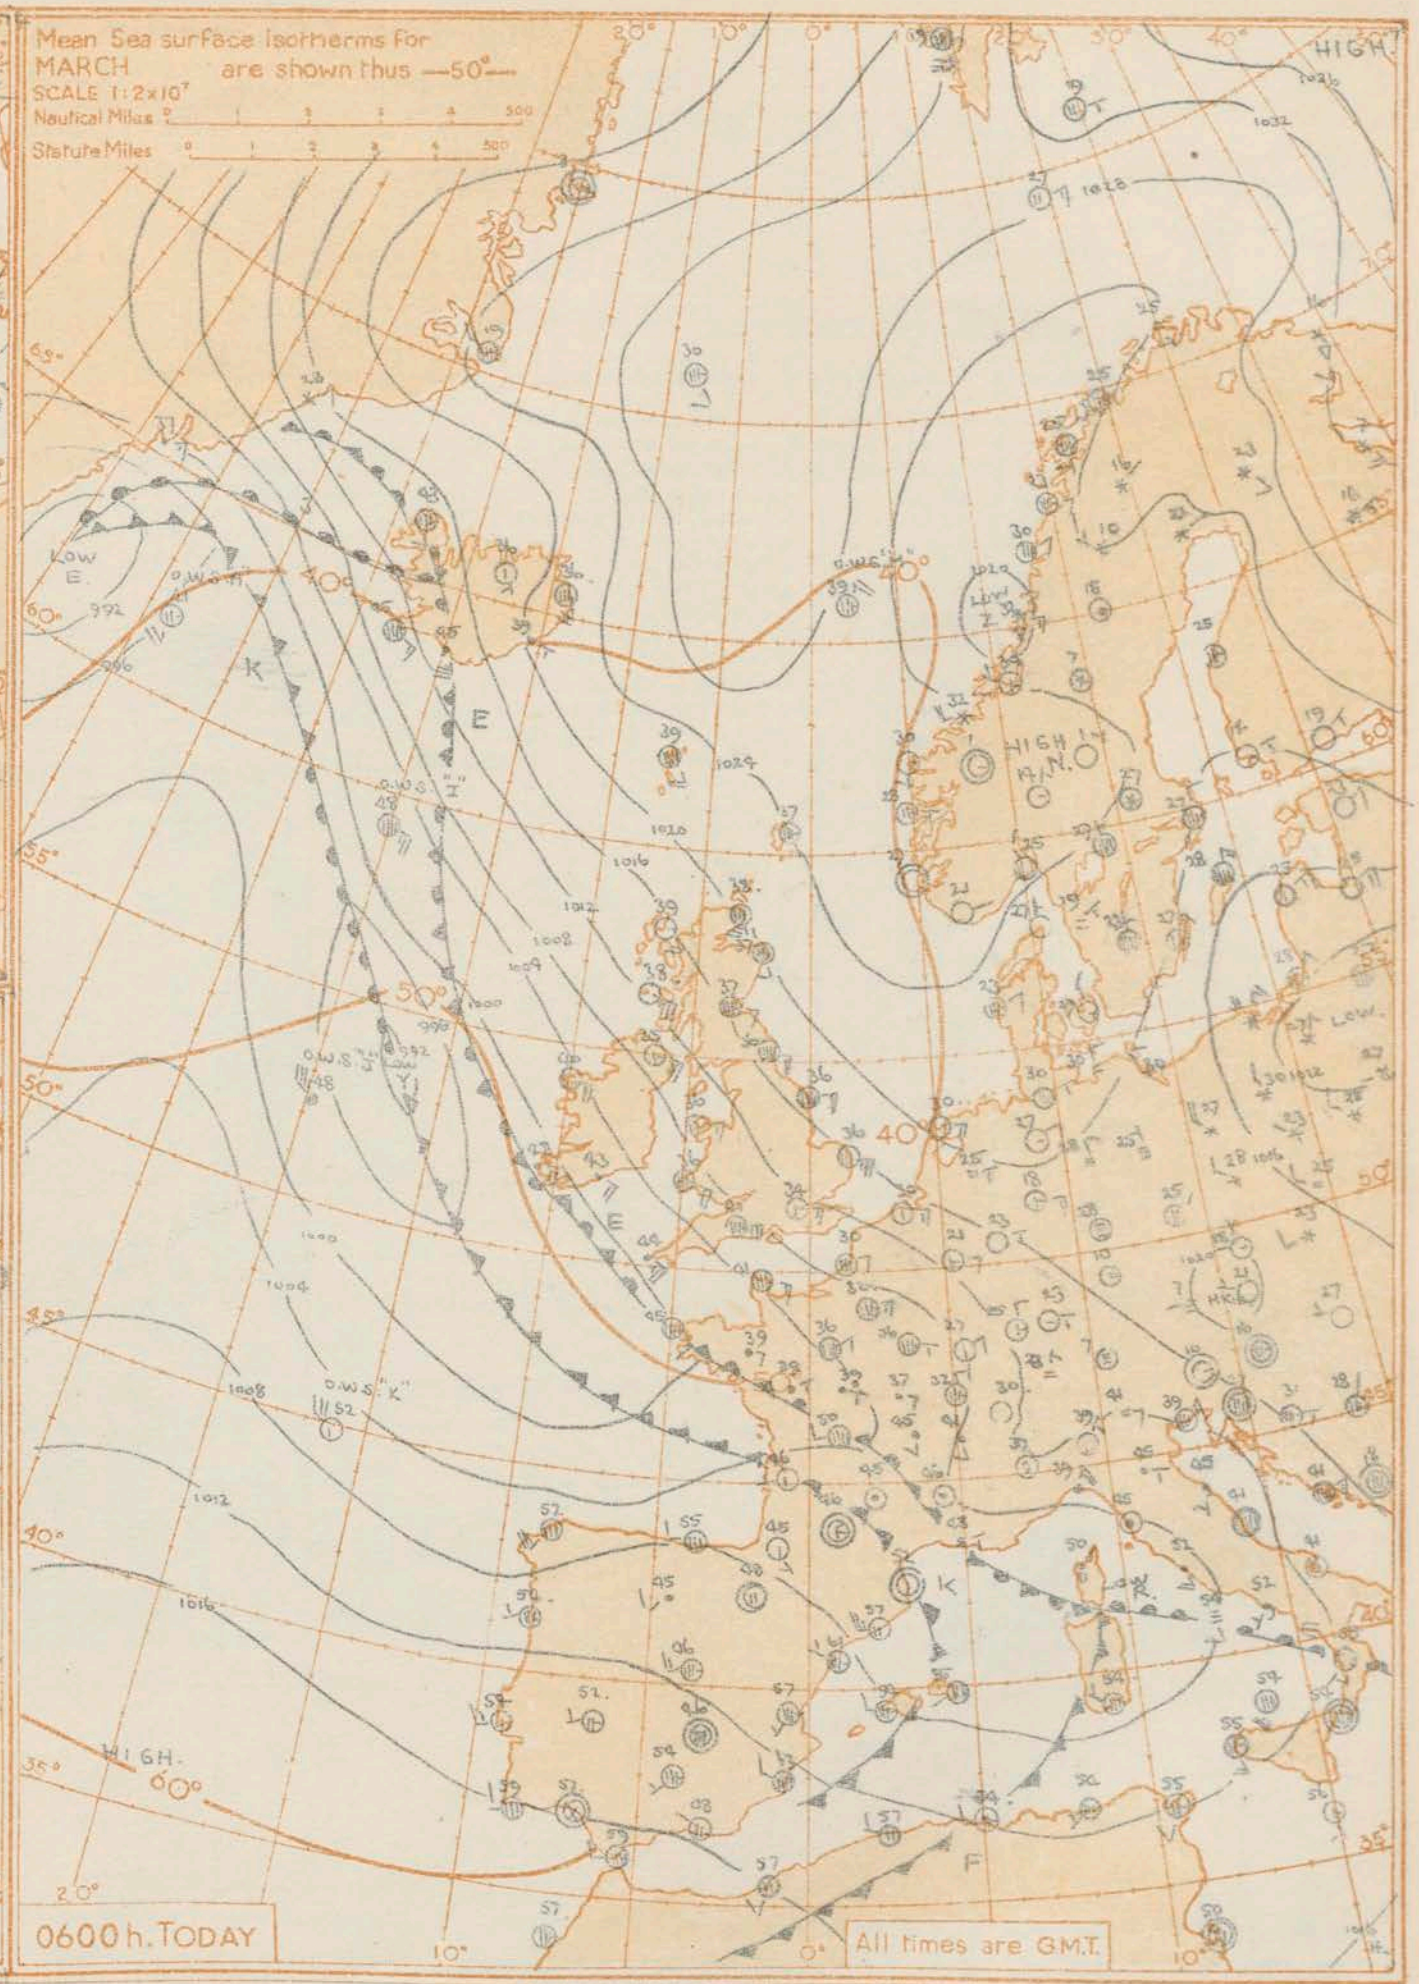
SIR GRAHAM SUTTON, C.B.E., D.Sc., F.R.S., Director General. Meteorological Office, Air Ministry, Kingsway, London, W.C.2.

CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE









GENERAL SYNOPTIC DEVELOPMENT

Issued at midday Today Monday 17th. March 1958

The ridge of high pressure over the North Sea yesterday is spreading westward and the occlusion over the South west approaches will weaken steadily and remain almost stationary during the next 24 hours. An anticyclone will probably form near the Shetlands in the ridge of high pressure to northeast of the British Isles.

FORECAST FOR BRITISH ISLES until noon tomorrow

Sunny periods will occur today in southeast England, Midlands, north west England, Wales, western Scotland and Northern Ireland and tomorrow in some western districts. Otherwise it will be mostly cloudy and cold with some night frost. The rain in southwest England and Channel Islands will gradually clear, but sleet or snow showers will affect eastern Scotland, eastern and central districts of England.

OUTLOOK FOR following 24 hours:—

Dry, rather cloudy weather in most places with cold easterly winds and some night frost.

GENERAL SYNOPTIC DEVELOPMENT

Issued at midday today Tuesday 18th. March 1958

A frontal trough over the Channel Approaches and west France has moved slowly south in the last 24 hours and a continuation of this process is expected with a further weakening of the trough and the development of a marked ridge south from the British Isles. Weak troughing is likely to the east from the Baltic to the North Sea. Another frontal trough approaching the Atlantic will become slow moving off western coastal districts of Britain.

FORECAST FOR BRITISH ISLES until noon tomorrow

Continuing cold with frost in many western areas tonight but only locally elsewhere. Mainly cloudy with a few light show or sleet showers in the east. Sunny periods in sheltered western districts.

OUTLOOK FOR following 24 hours:-

Probably becoming milder in Northern Ireland and extreme south west England with rain in places. Little change elsewhere.

CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

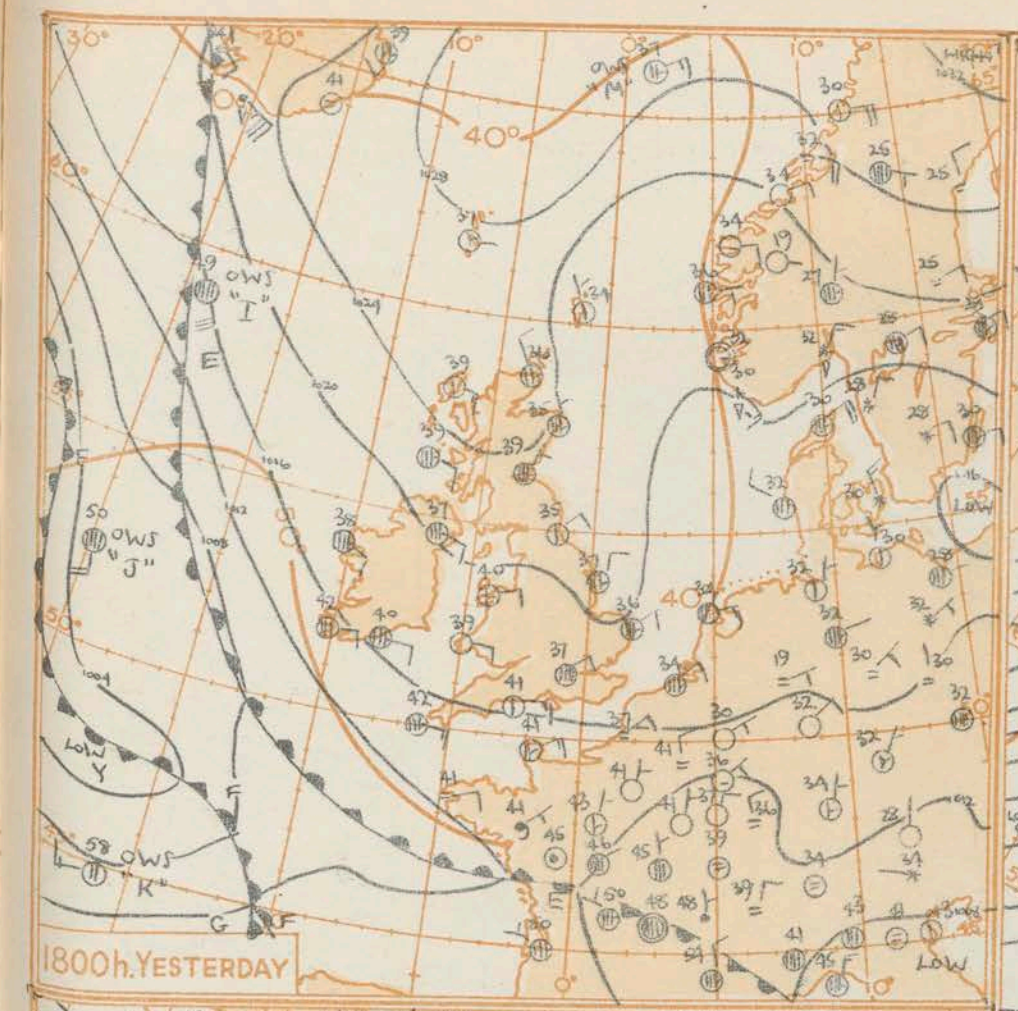
Mid-day (12h) of Tuesday 18th. March. 1958

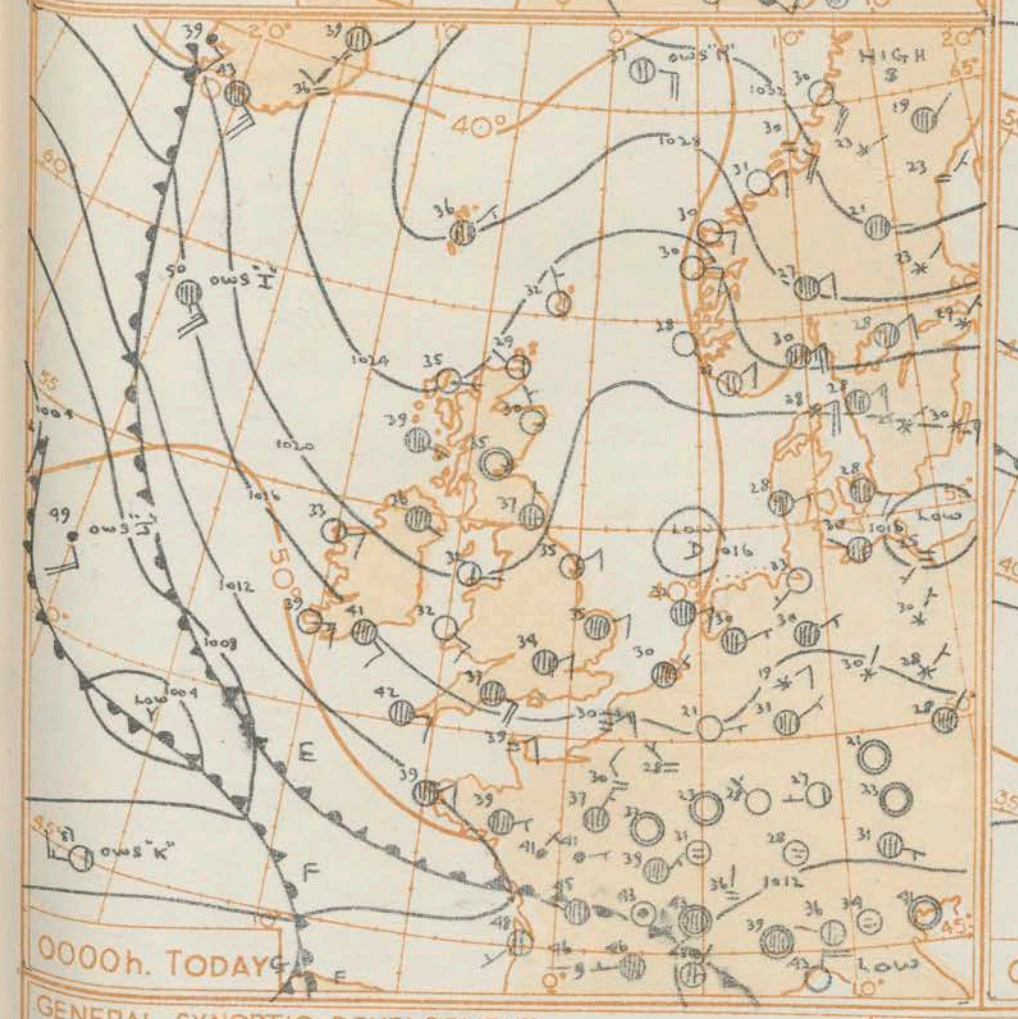
CIVIL TWILIGHT (midnight)

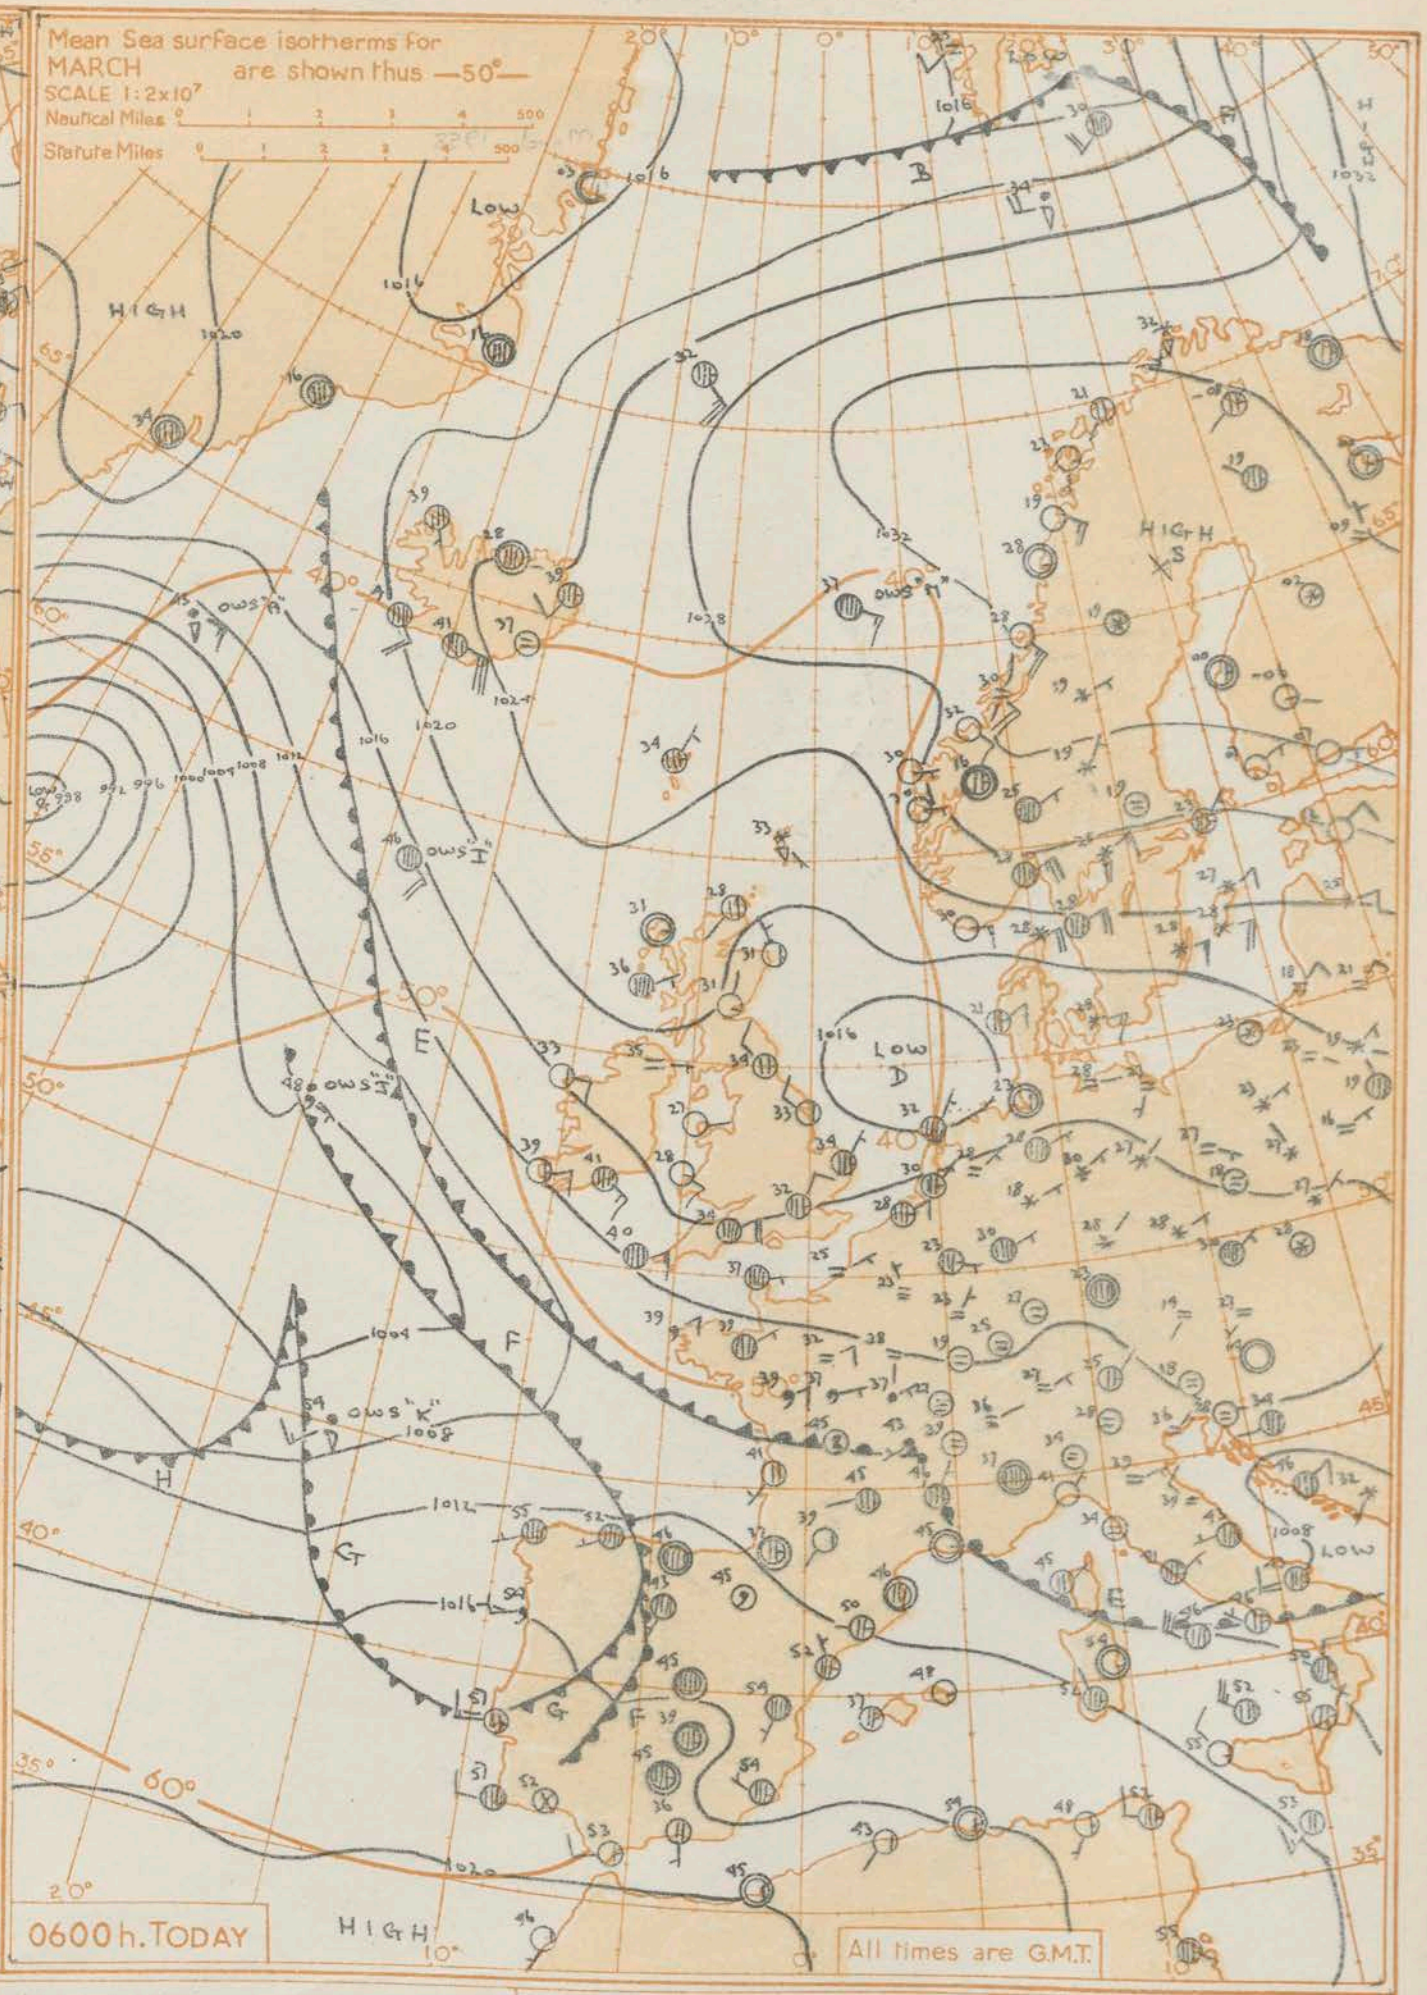
Equidistant azimuthal projection 1:3×10⁷ on the plane of 60°N.

NAUTICAL MILES.

0 500 1,000 1,500







GENERAL SYNOPTIC DEVELOPMENT

In an easterly airstream extending from Russia to the British Isles a small depression has formed over the North sea. This system will probably turn Southwest taking an associated trough across the British Isles during today and become part of the circulation of a low pressure system off South west Ireland as it moves Southeast into France. Pressure will continue high over Scandinavia and the anticyclone now centred over Sweden will drift slowly west.

Issued at midday today Wednesday 19th March 1958

FORECAST FOR BRITISH ISLES until noon tomorrow

Continuing cold with sunny periods but snow, sleet or hail showers will affect some eastern and central districts of the British Isles giving moderate falls in places. The showers will become mainly scattered away from the east coast and on high ground in the north during the night. Frost is expected tonight chiefly in western and central districts.

OUTLOOK FOR the following 24 hours:—

Continuing cold with with frost at night in many areas and showers of snow or sleet in some eastern districts

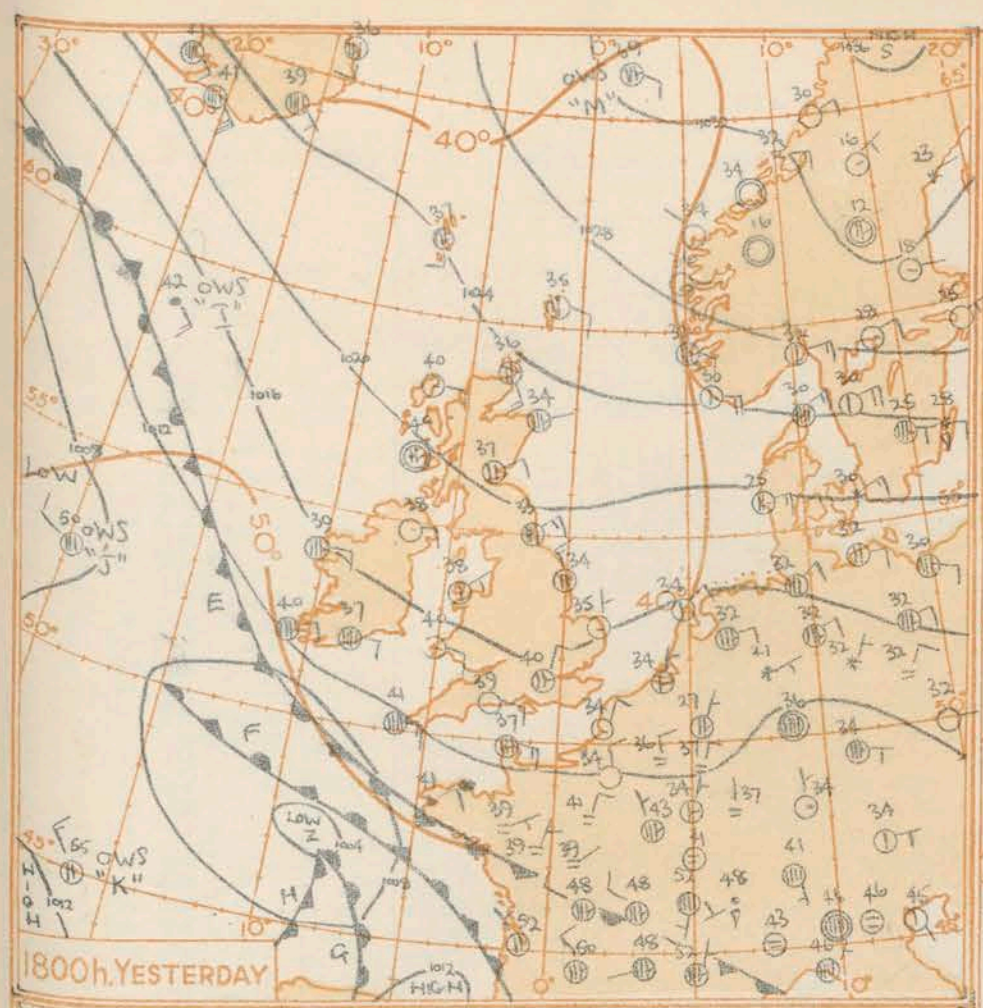
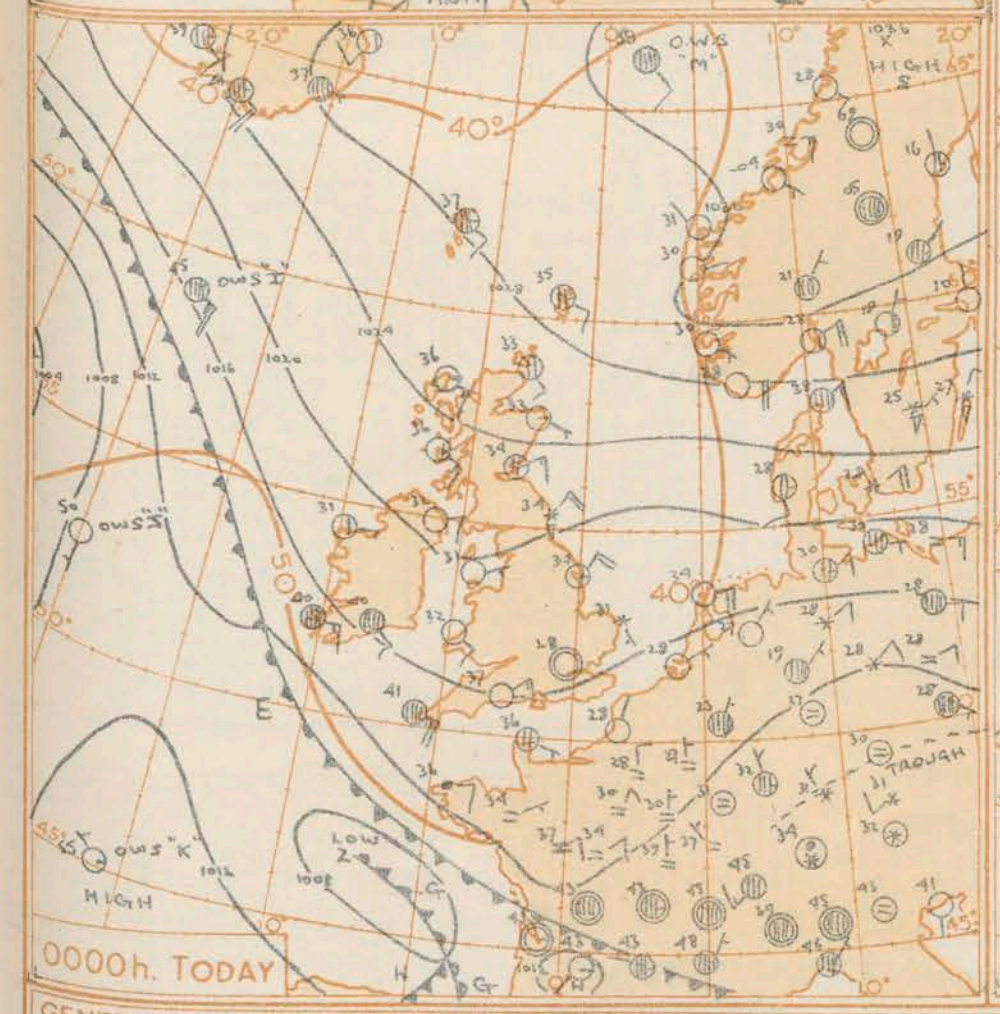
CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

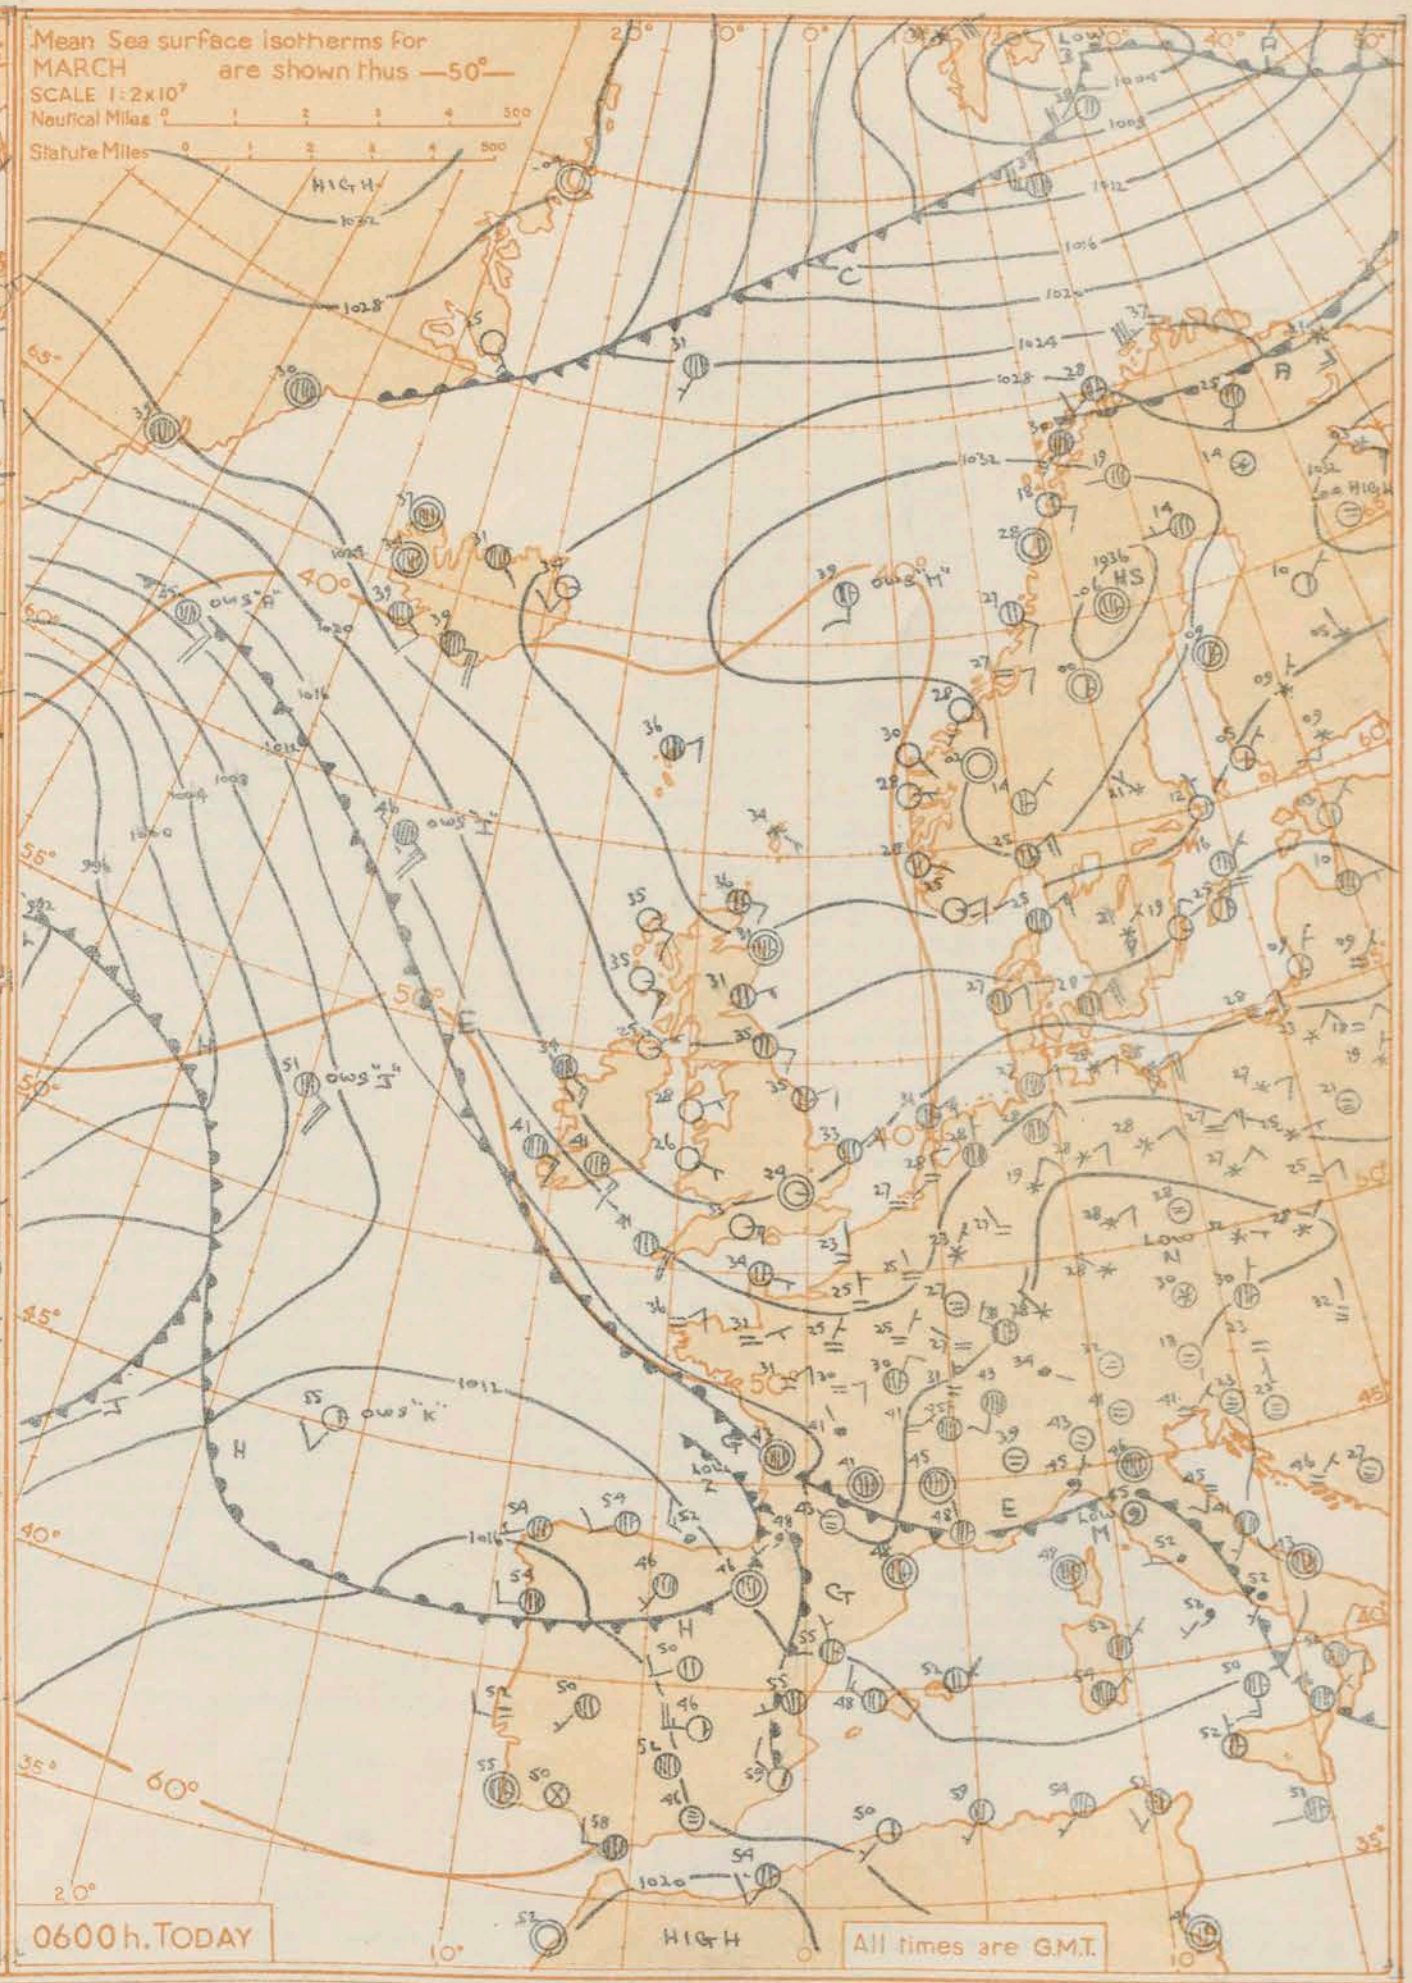
Mid-day (12h)
of
Wednesday 19th March
1958

Equidistant azimuthal projection 1:3×10⁷ on the plane of 60°N.

NAUTICAL MILES
0 500 1,000 1,500







GENERAL SYNOPTIC DEVELOPMENT

Issued at midday Today Thursday 20th March 1958

The anticyclone over Norway persists with a building ridge of high pressure across the British Isles. The small depression yesterday over the North Sea has moved east and entirely filled up over England. The large cyclonic complex over the western Atlantic persists with developing lows moving north then east then southeast as they approach south western districts of the British Isles. The wash in mid-Atlantic. Small depressions associated with the complex turn

FORECAST FOR BRITISH ISLES until noon tomorrow

Another cold day, will be followed by widespread frost tonight. Western districts of Britain will be mostly fine, apart from scattered showers of snow or sleet. Central districts will have occasional snow showers this afternoon with sunny intervals and mostly clear skies tonight. Eastern districts will have showers of snow today, and near the coast tonight also. Northern Ireland will have scattered showers of snow or sleet.

OUTLOOK FOR Following 24 Hours.

Probably little change.

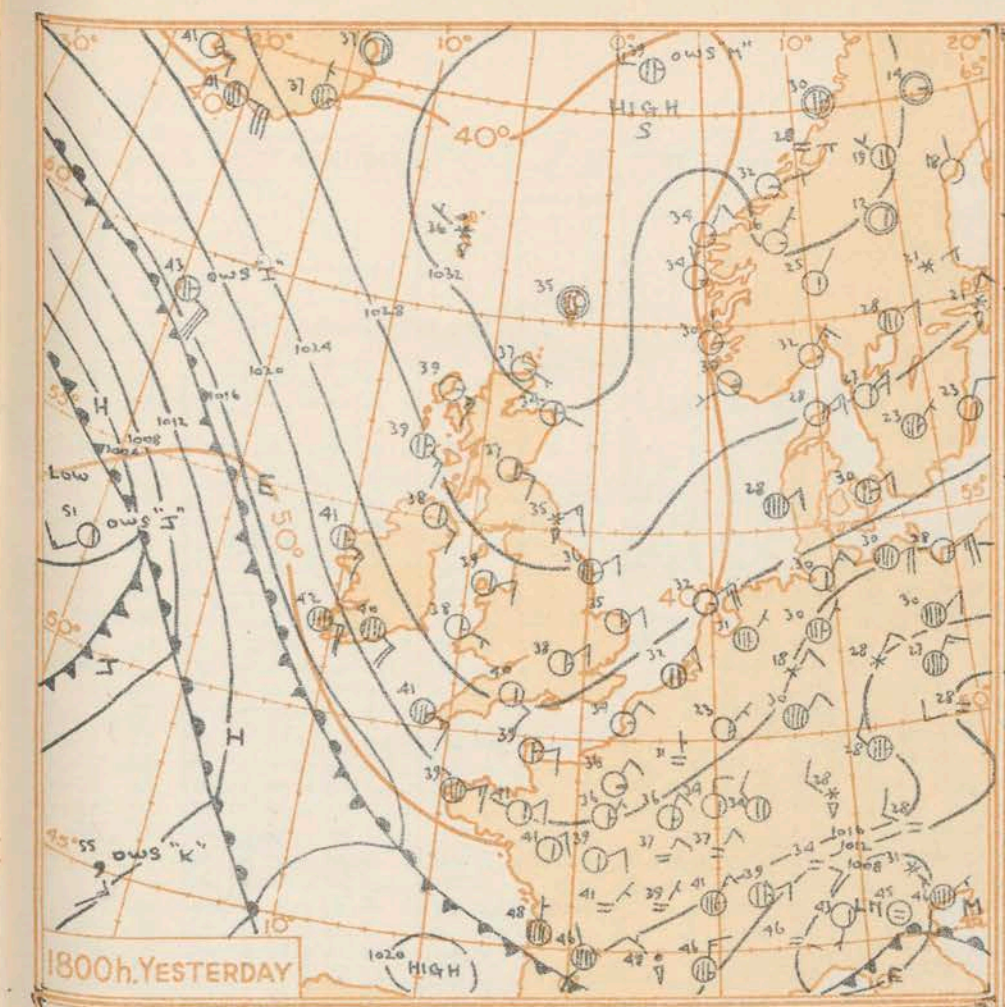
CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

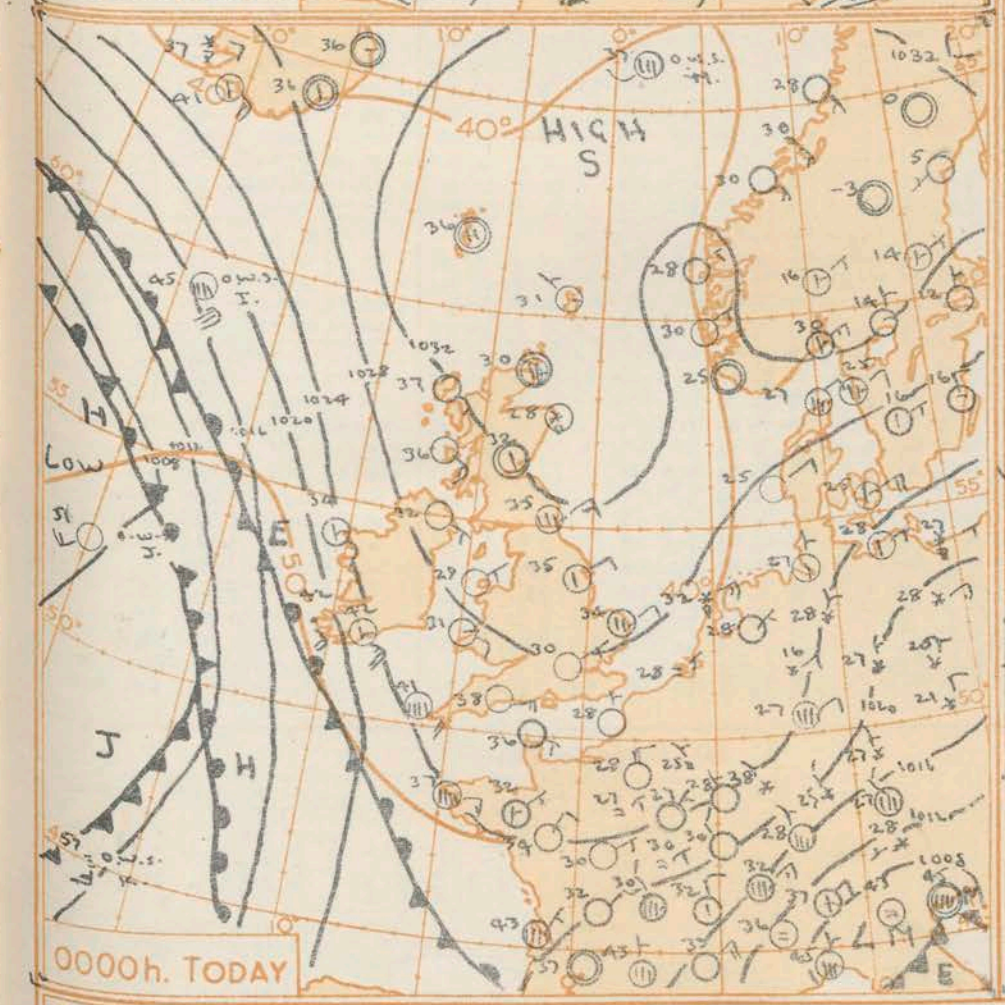
Mid-day (12h) of Thursday 20th March 1958

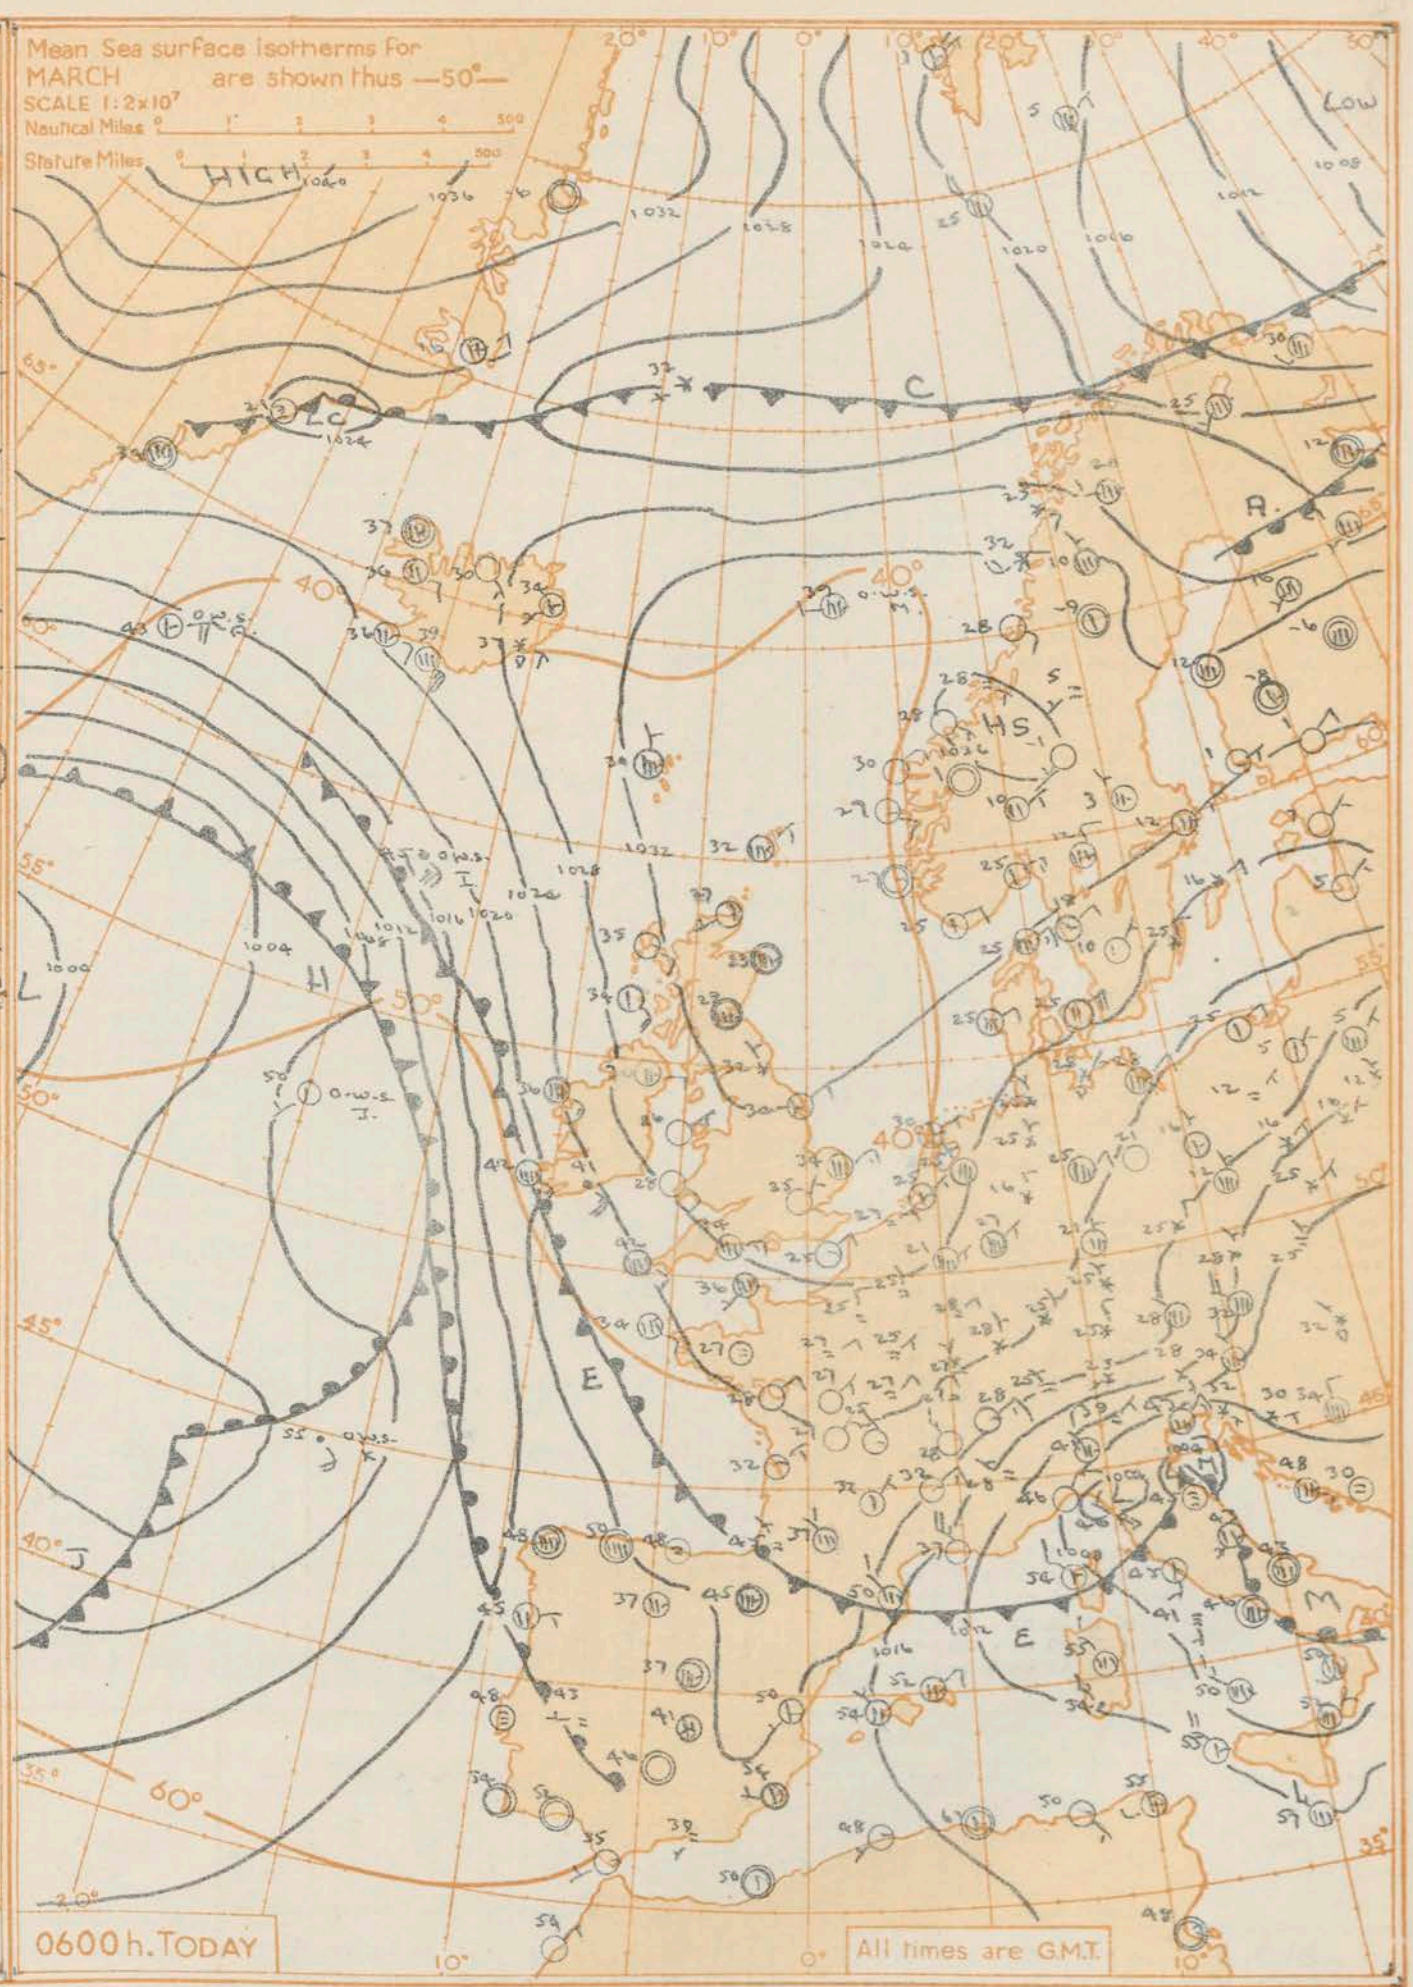
Equidistant azimuthal projection 1: 3×10^7 on the plane of 60°N.

NAUTICAL MILES.

0 500 1,000 1,500







GENERAL SYNOPTIC DEVELOPMENT

High pressure will continue over southern Scandinavia and the North Sea and the large Atlantic complex of cyclonic cells will persist with a wave depression probably encroaching towards southwest England before splitting northwards and east-southeastwards. The anticyclone west of Greenland will continue to spread east.

Issued at midday today Friday 21st March 1958

FORECAST FOR BRITISH ISLES until noon tomorrow

It will continue cold with sunny periods in most places by day and long clear periods by night, and widespread frost. Light showers of snow over eastern Britain will die out over east Scotland and tonight will die out over eastern England except near the coasts. A few showers of snow or sleet will occur near the coasts of southern England but Cornwall and Devon will probably have rain or sleet, chiefly tomorrow.

OUTLOOK FOR the following 24 hours

Probably little change.

All times of observation printed in this publication are GREENWICH MEAN TIME. | * Information not usually received. | SIR GRAHAM SUTTON, C.B.E., D.Sc., F.R.S., Director General. Meteorological Office, Air Ministry, Kingsway, London, W.C.2.

CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

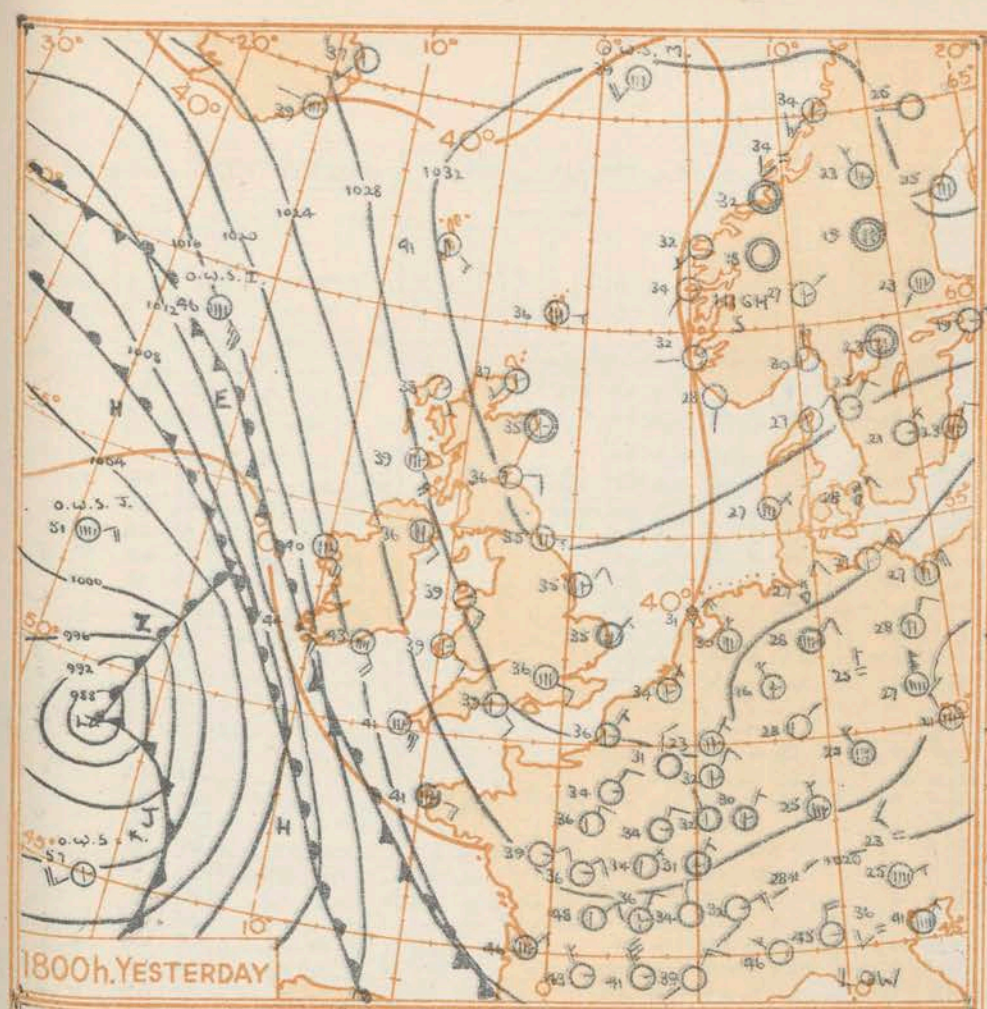
Mid-day (12h) of Friday 21st March 1958

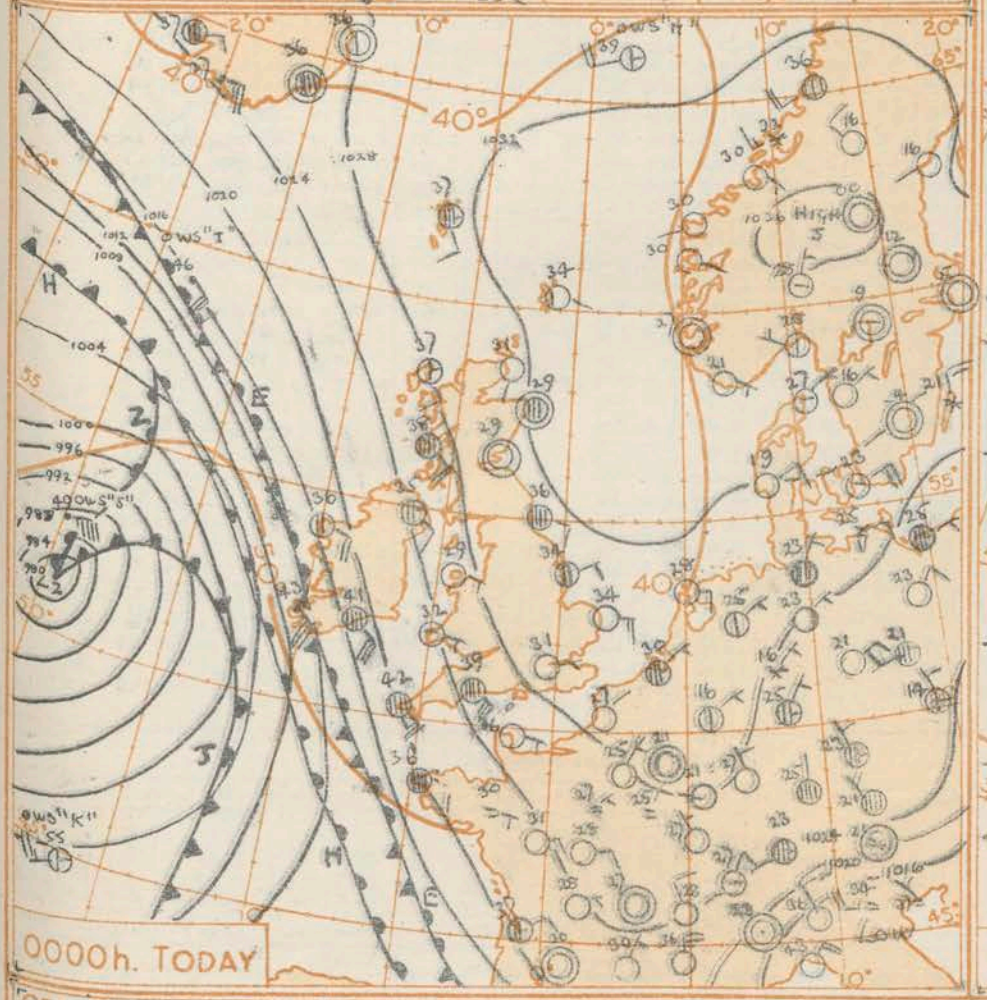
CIVIL TWILIGHT (mid-MARCH)

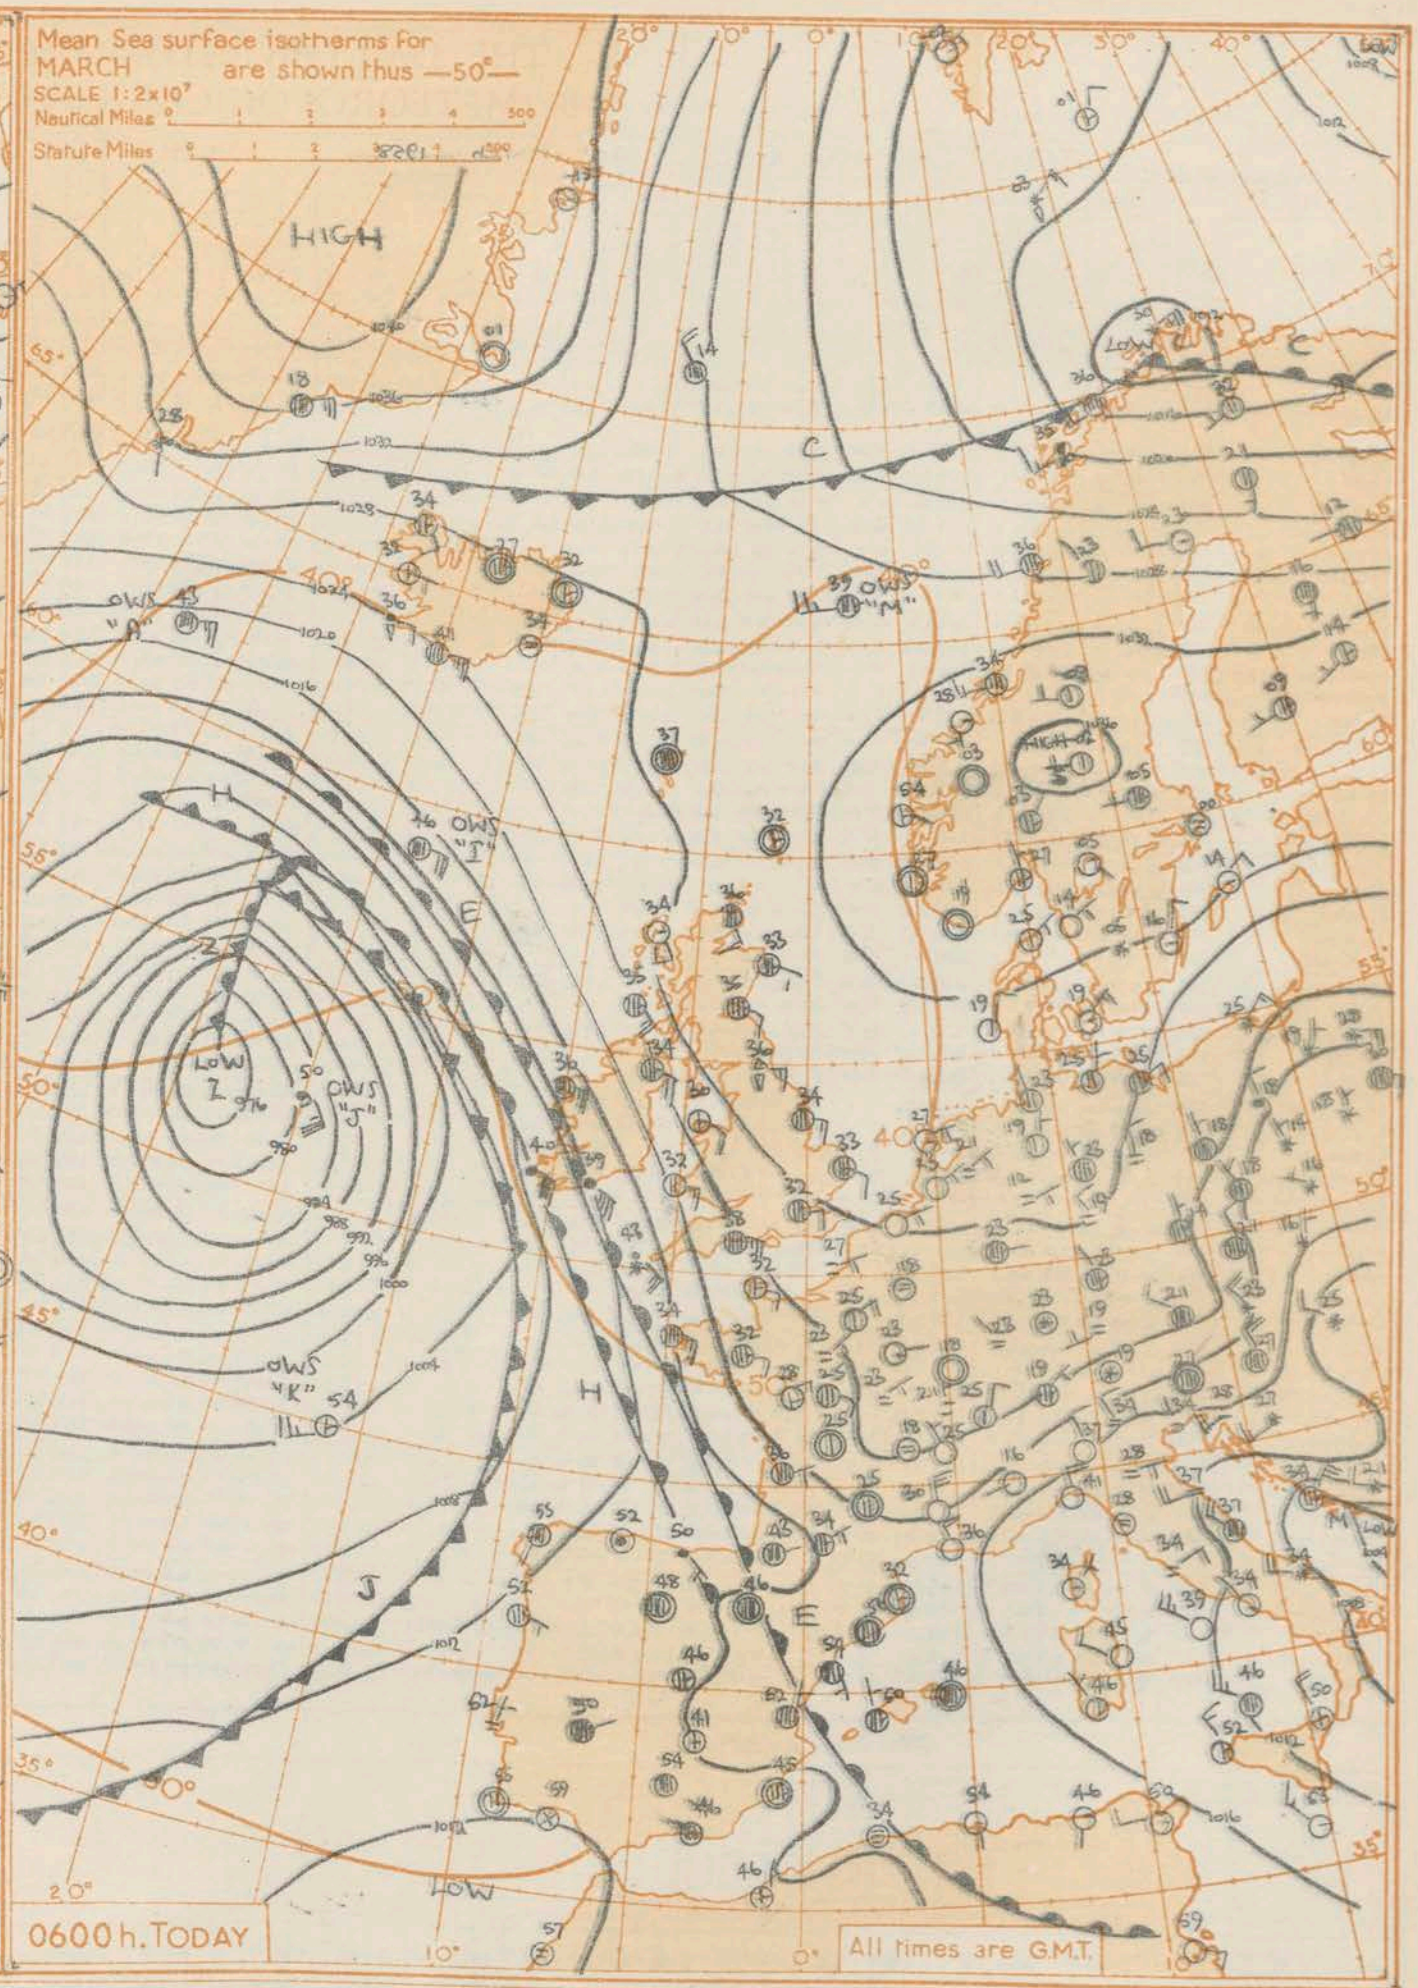
Equidistant azimuthal projection 1: 3×10^7 on the plane of 60°N.

NAUTICAL MILES.

0 500 1,000 1,500







GENERAL SYNOPTIC DEVELOPMENT

An anticyclone over Norway has declined a little and is expected to move a little westward and weaken further. A depression has moved quickly north and deepened to the west of Ireland and is expected to slow up and fill in mid-Atlantic while a further low moves east on its southern side with considerable troughing towards Spain.

Issued at midday today Saturday 22nd March 1958

FORECAST FOR BRITISH ISLES until noon tomorrow

It will be mainly dry and cold in central and eastern districts though scattered snow showers will occur on the east coast. In the west it will be cloudy and rather cold and some places will have occasional rain or sleet.

OUTLOOK FOR the following 24 hours

Probably little change.

CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

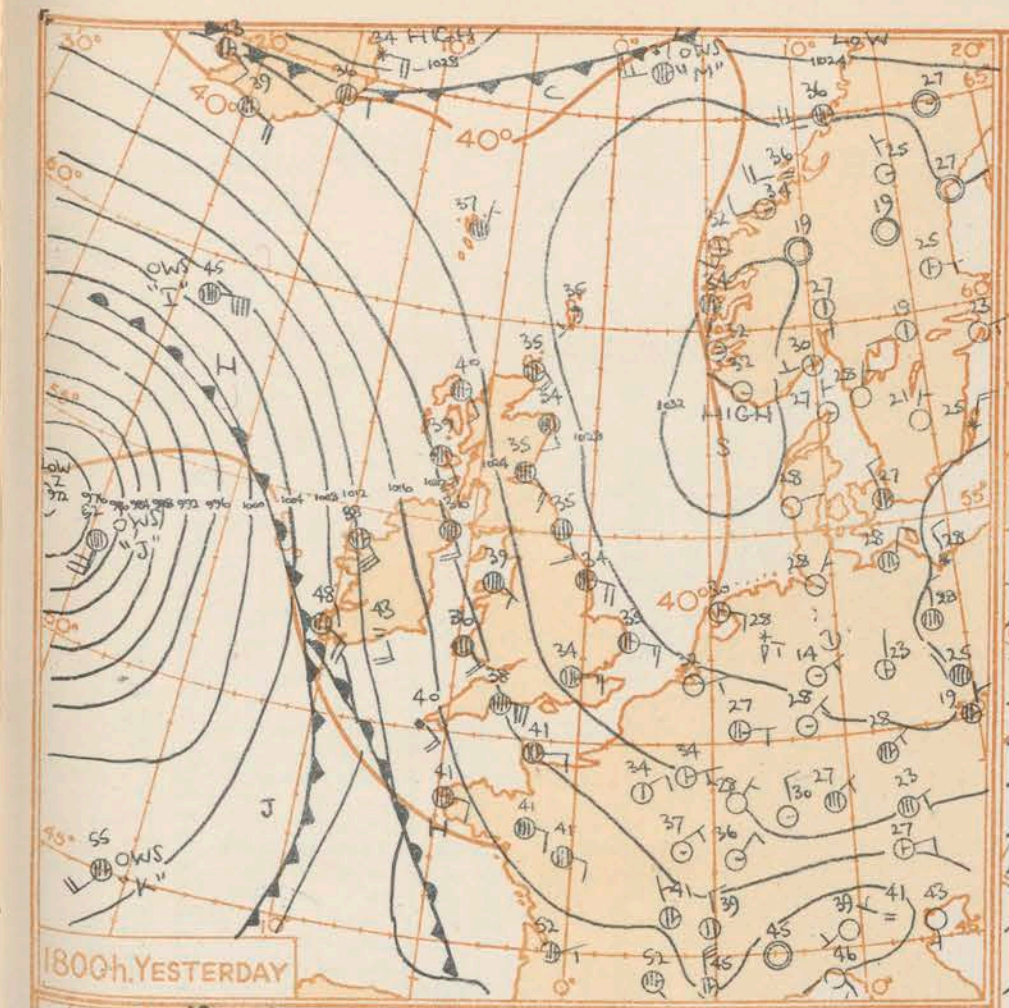
Mid-day (12h)
of
Saturday 22nd March
1958

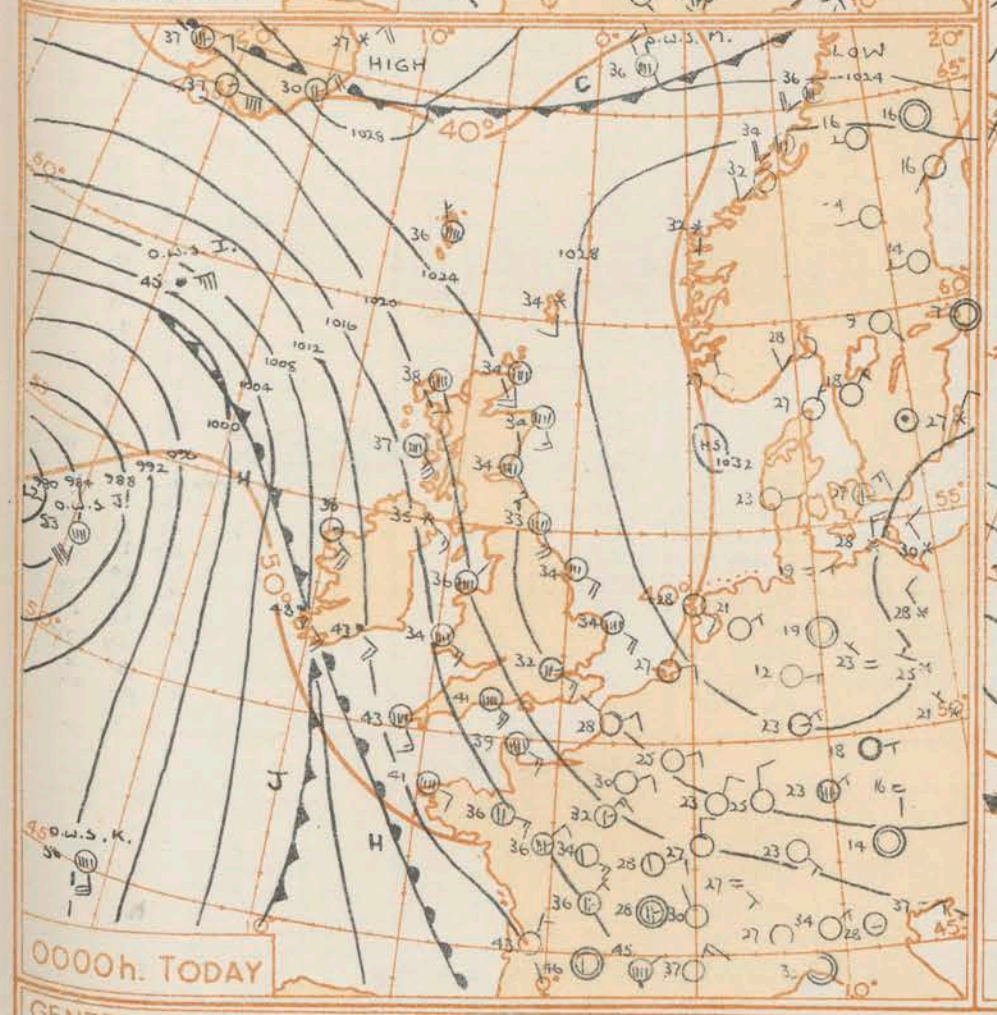
CIVIL TWILIGHT (sunrise)

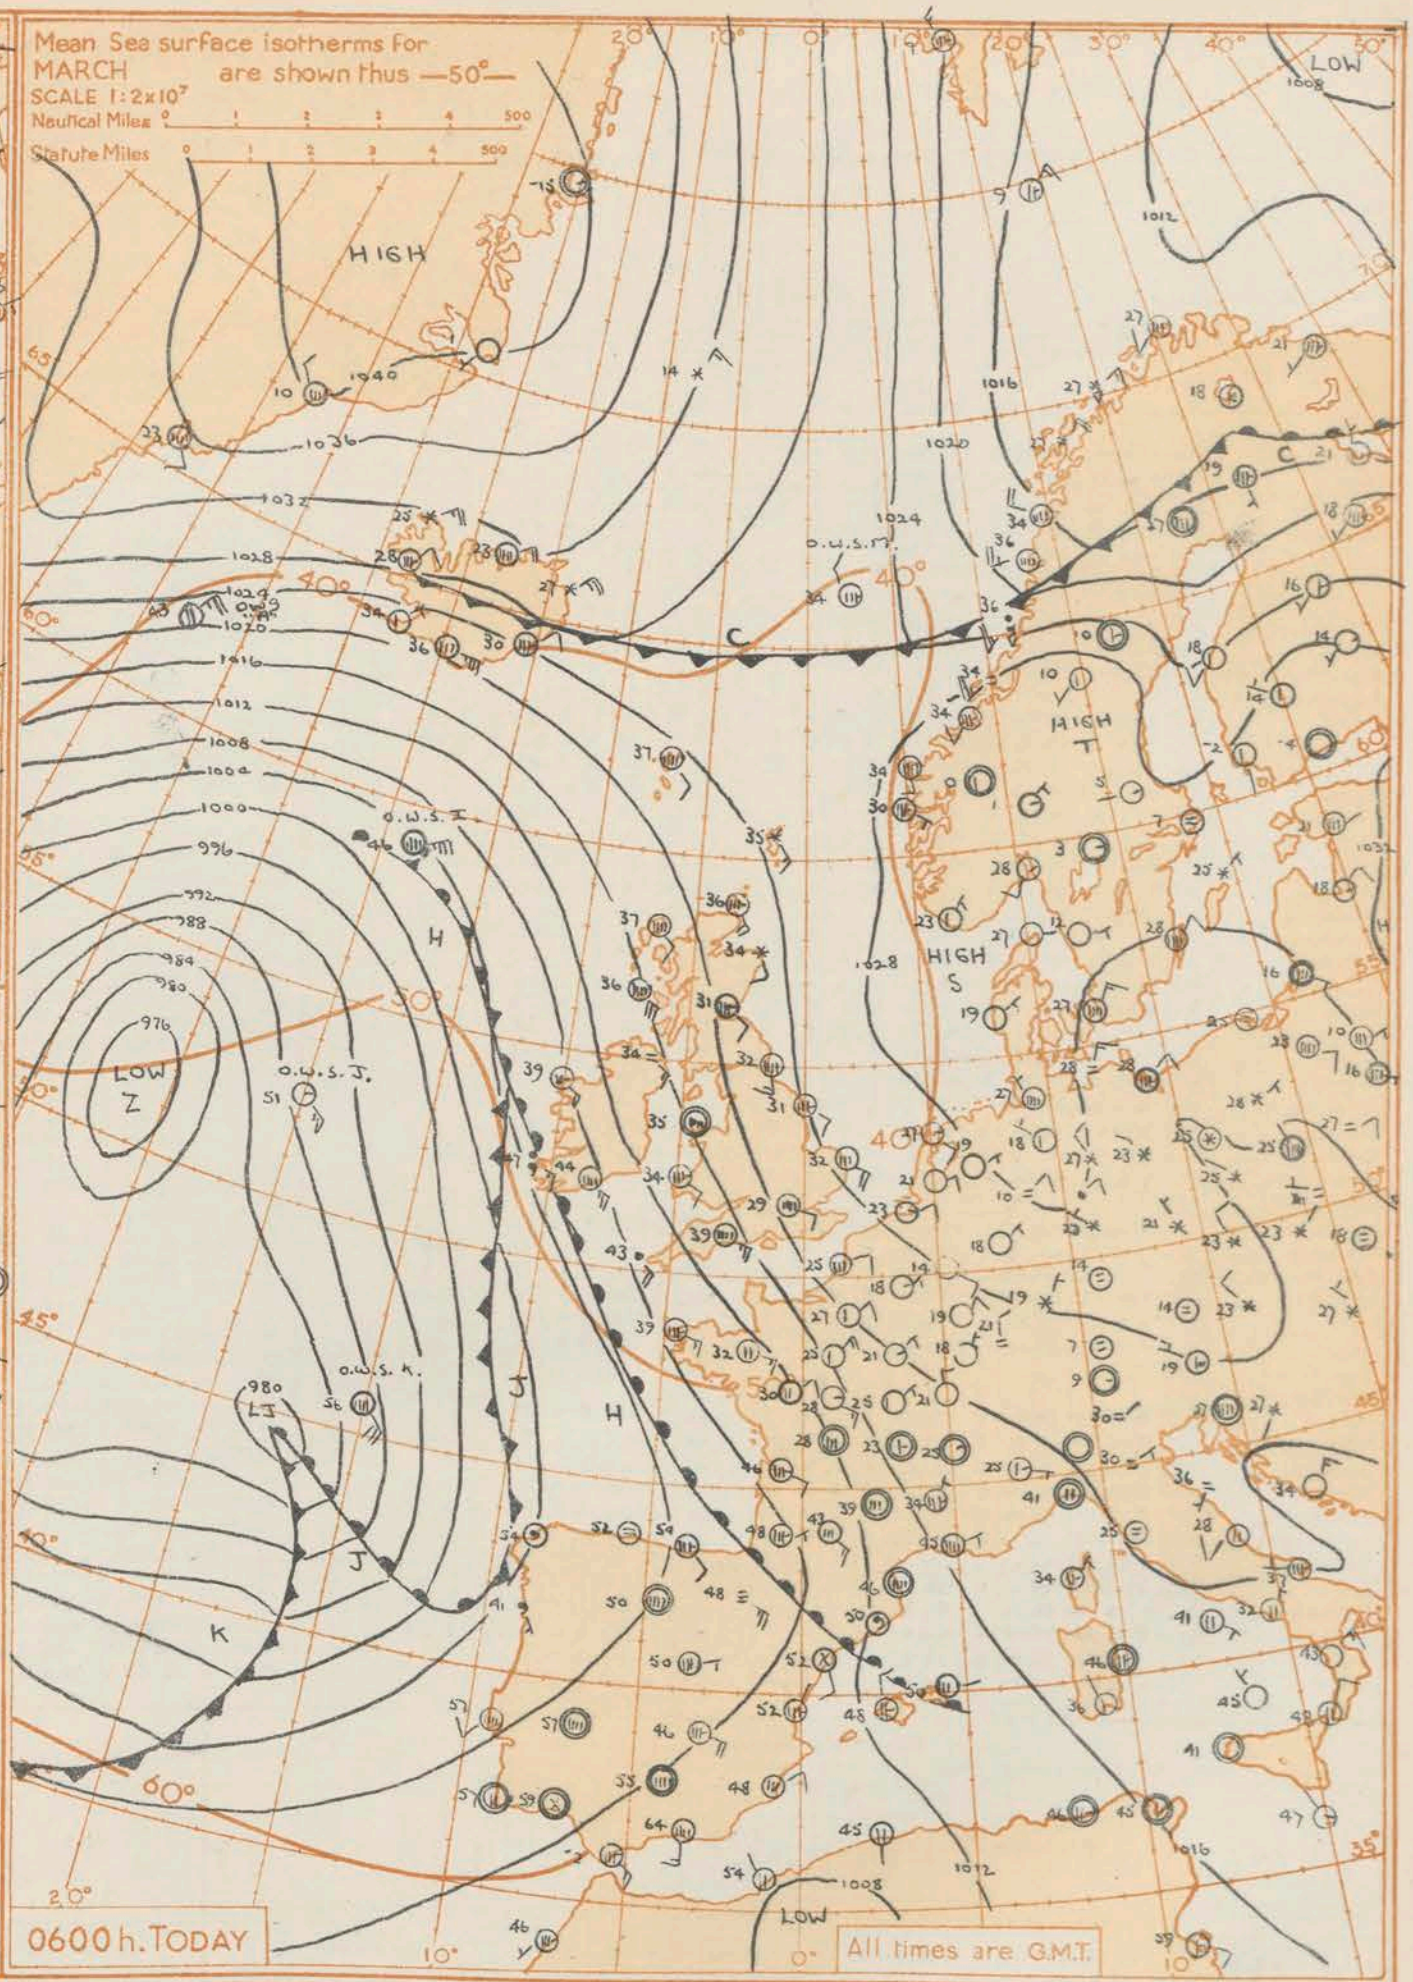
Equidistant azimuthal projection 1: 3 x 10⁷ on the plane of 60°N.

NAUTICAL MILES.

0 500 1,000 1,500







GENERAL SYNOPTIC DEVELOPMENT

Issued at midday today Sunday 23rd March 1958

A complex low has been maintained to the west of the British Isles while an anticyclone over south Scandinavia has moved southwards and declined a little. Little general change is expected during the next 24 hours with pressure continuing low to the west and southwest and High to the east of the British Isles.

FORECAST FOR BRITISH ISLES until noon tomorrow

It will continue dry and cold with sunny periods in most places and frost will occur tonight over Scotland, England and Wales except for some western areas. Occasional rain, sleet will occur in extreme southwest England today and may spread to much of southwest England, southwest Wales and Northern Ireland during tonight and tomorrow morning.

OUTLOOK FOR following 24 hours.

Probably continuing dry and cold in eastern areas. Perhaps becoming milder and wetter in the west.

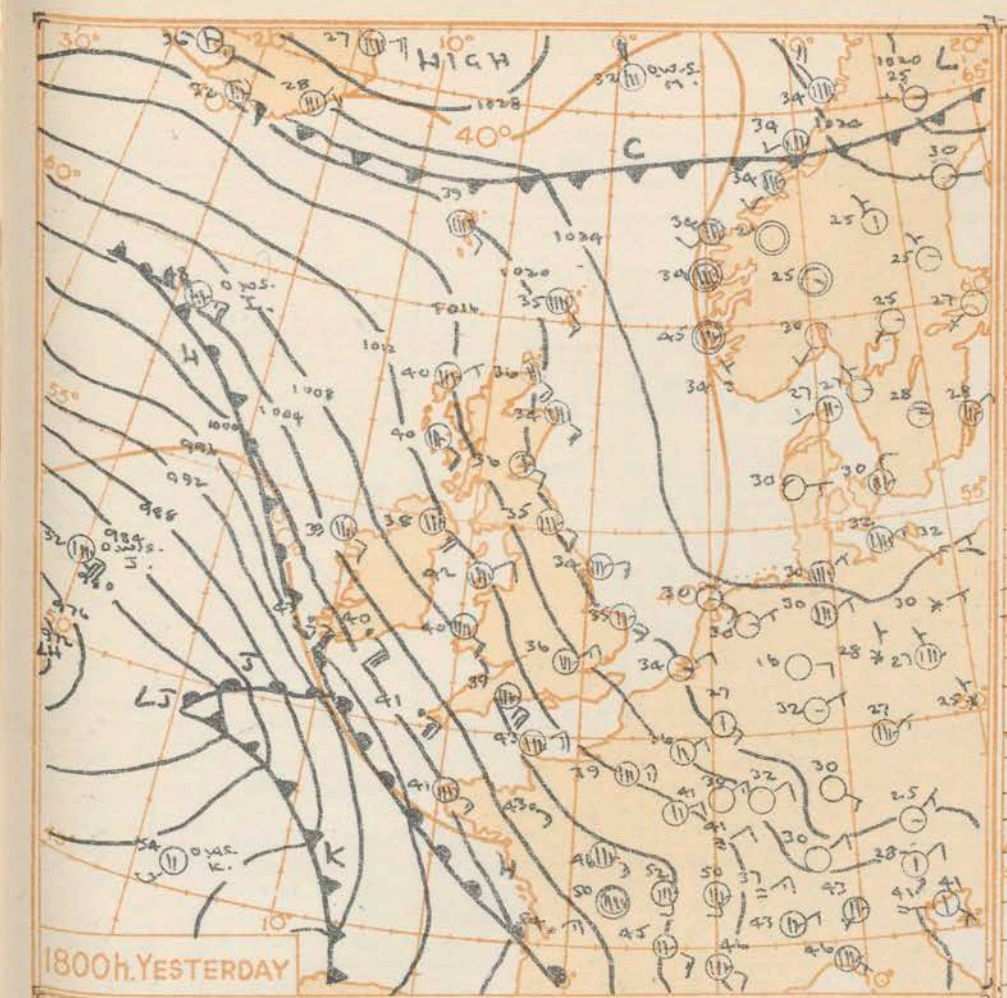
CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

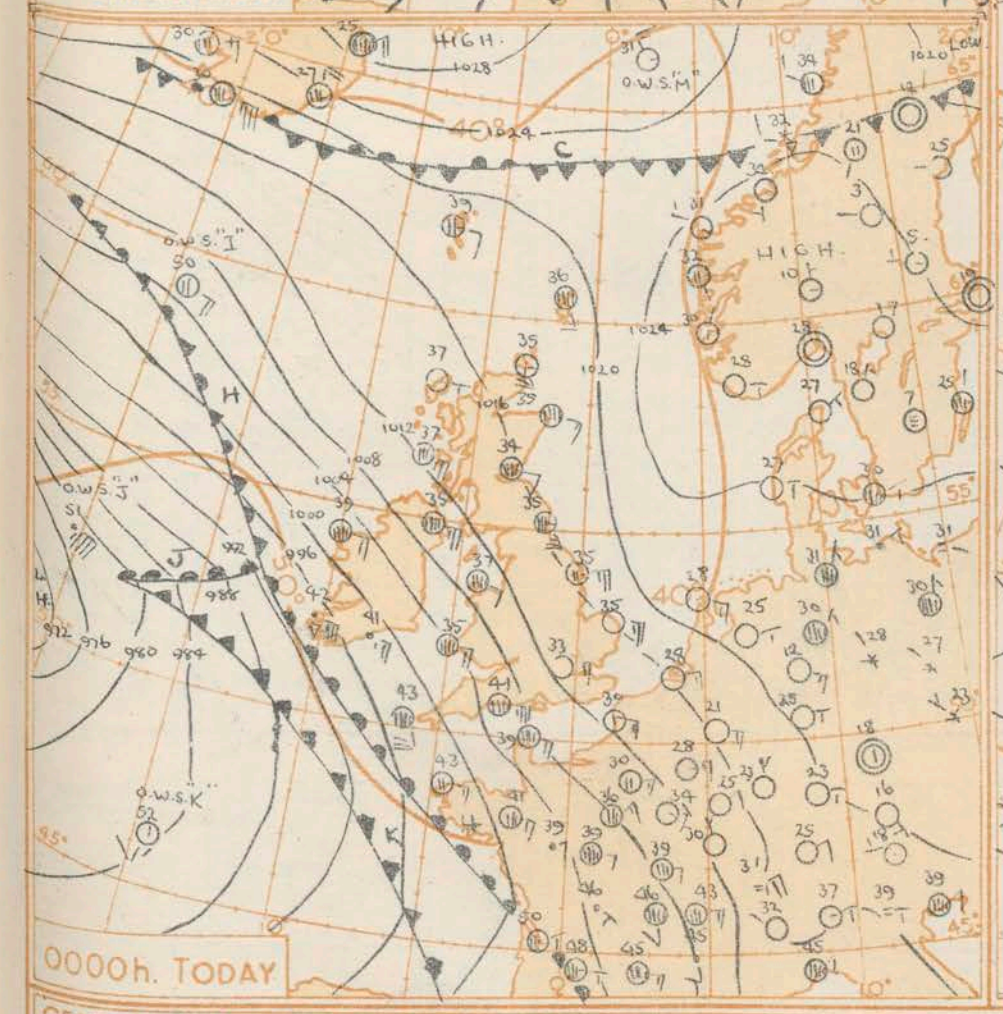
Mid-day (12h)
of
Sunday 23rd March
1958

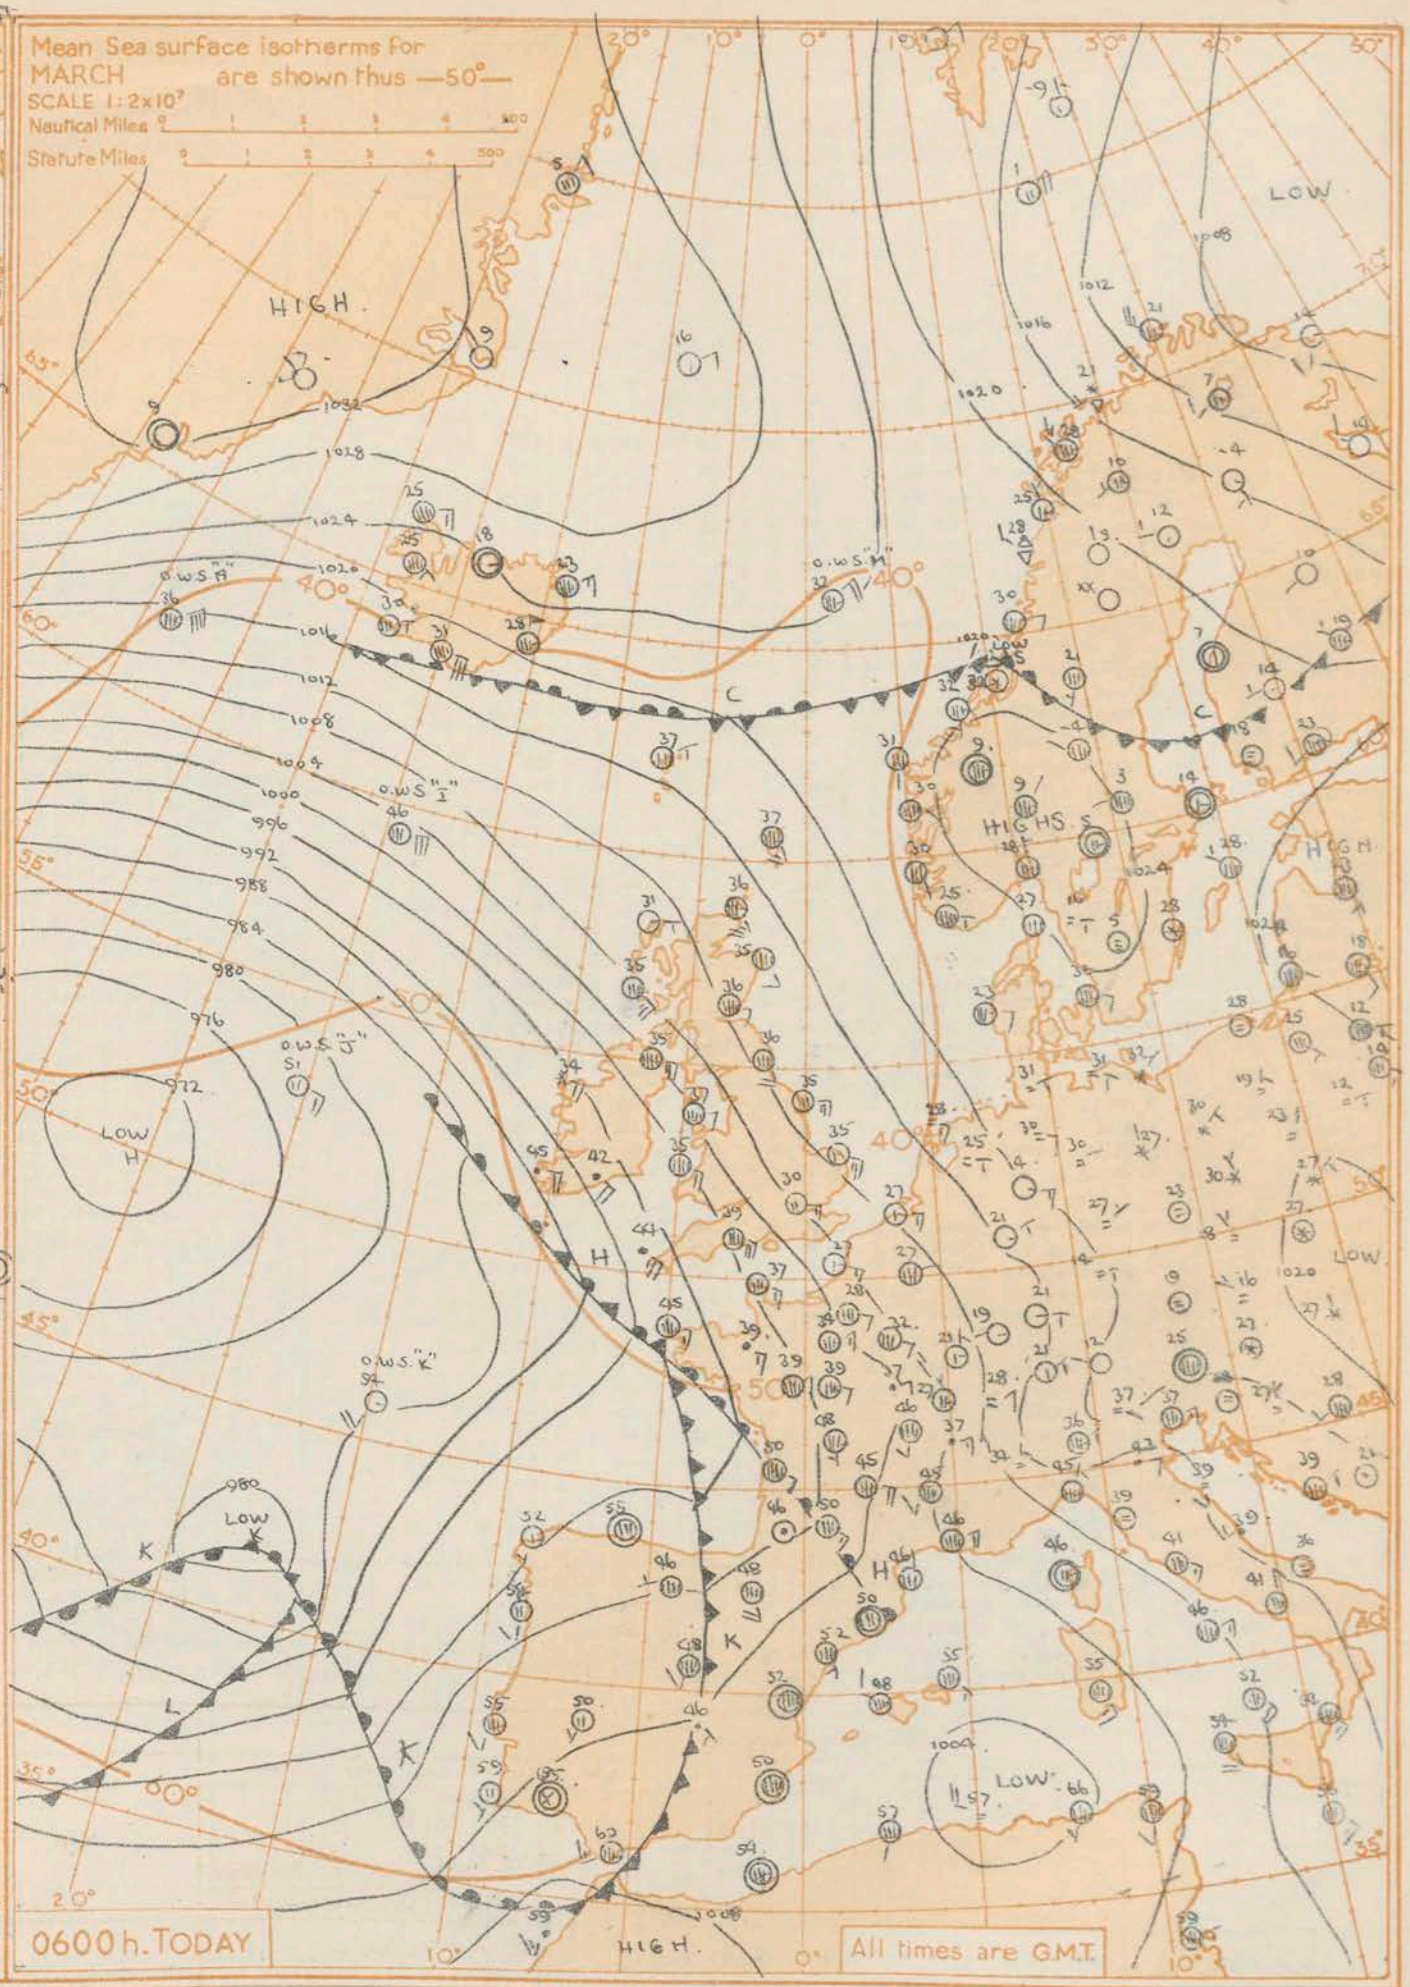
Equidistant azimuthal projection 1: 3×10^7 on the plane of 60°N.

NAUTICAL MILES.

0 500 1,000 1,500







GENERAL SYNOPTIC DEVELOPMENT

Issued at midday today Monday 24th March 1958

A large complex depression covers much of the Atlantic. Another secondary depression east of the Azores has moved quickly eastwards over the Atlantic during the last 24 hours. It is now expected to turn north and later northwest, skirting southwest districts of the British Isles. The anticyclone over south Norway continues to weaken gradually.

FORECAST FOR BRITISH ISLES until noon tomorrow

Dull rainy weather affecting southwest England and south Wales gradually spreading over England, except northeast, and western Scotland by noon tomorrow with snow and sleet in Northern Ireland turning to rain. Scattered sleet or snow showers will affect north east Scotland today, otherwise dry in Scotland and in central and eastern England, with bright periods. Still cold in most places with night frost in east.

OUTLOOK FOR the following 24 hours.

Becoming less cold generally over British Isles, with outbreaks of rain in south and west.

CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

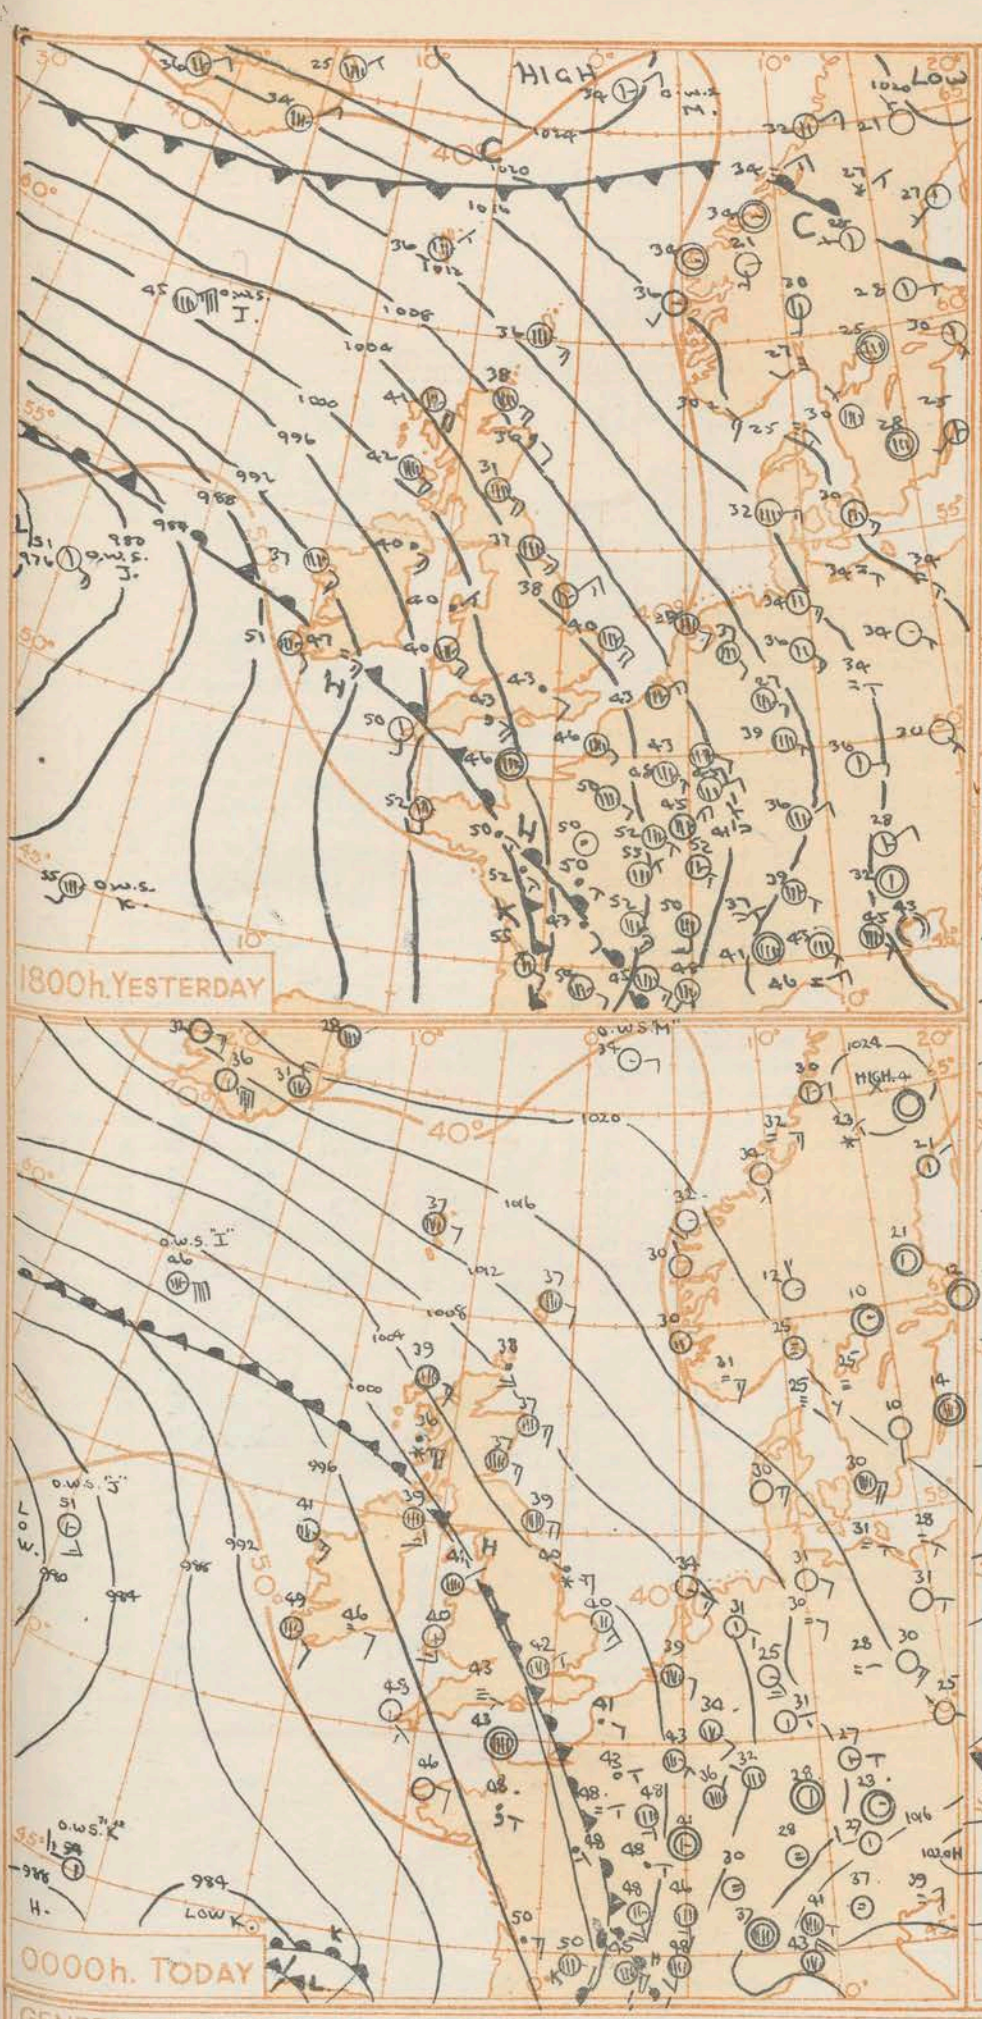
Mid-day (12h) of Monday 24th March 1958

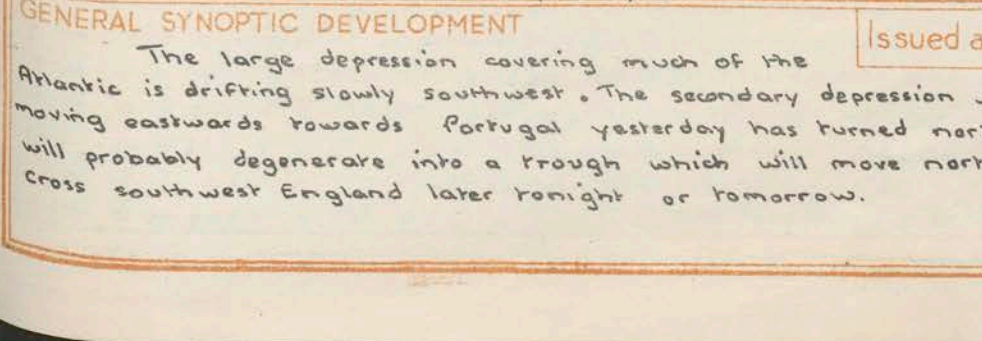
CIVIL TWILIGHT (Sunrise)

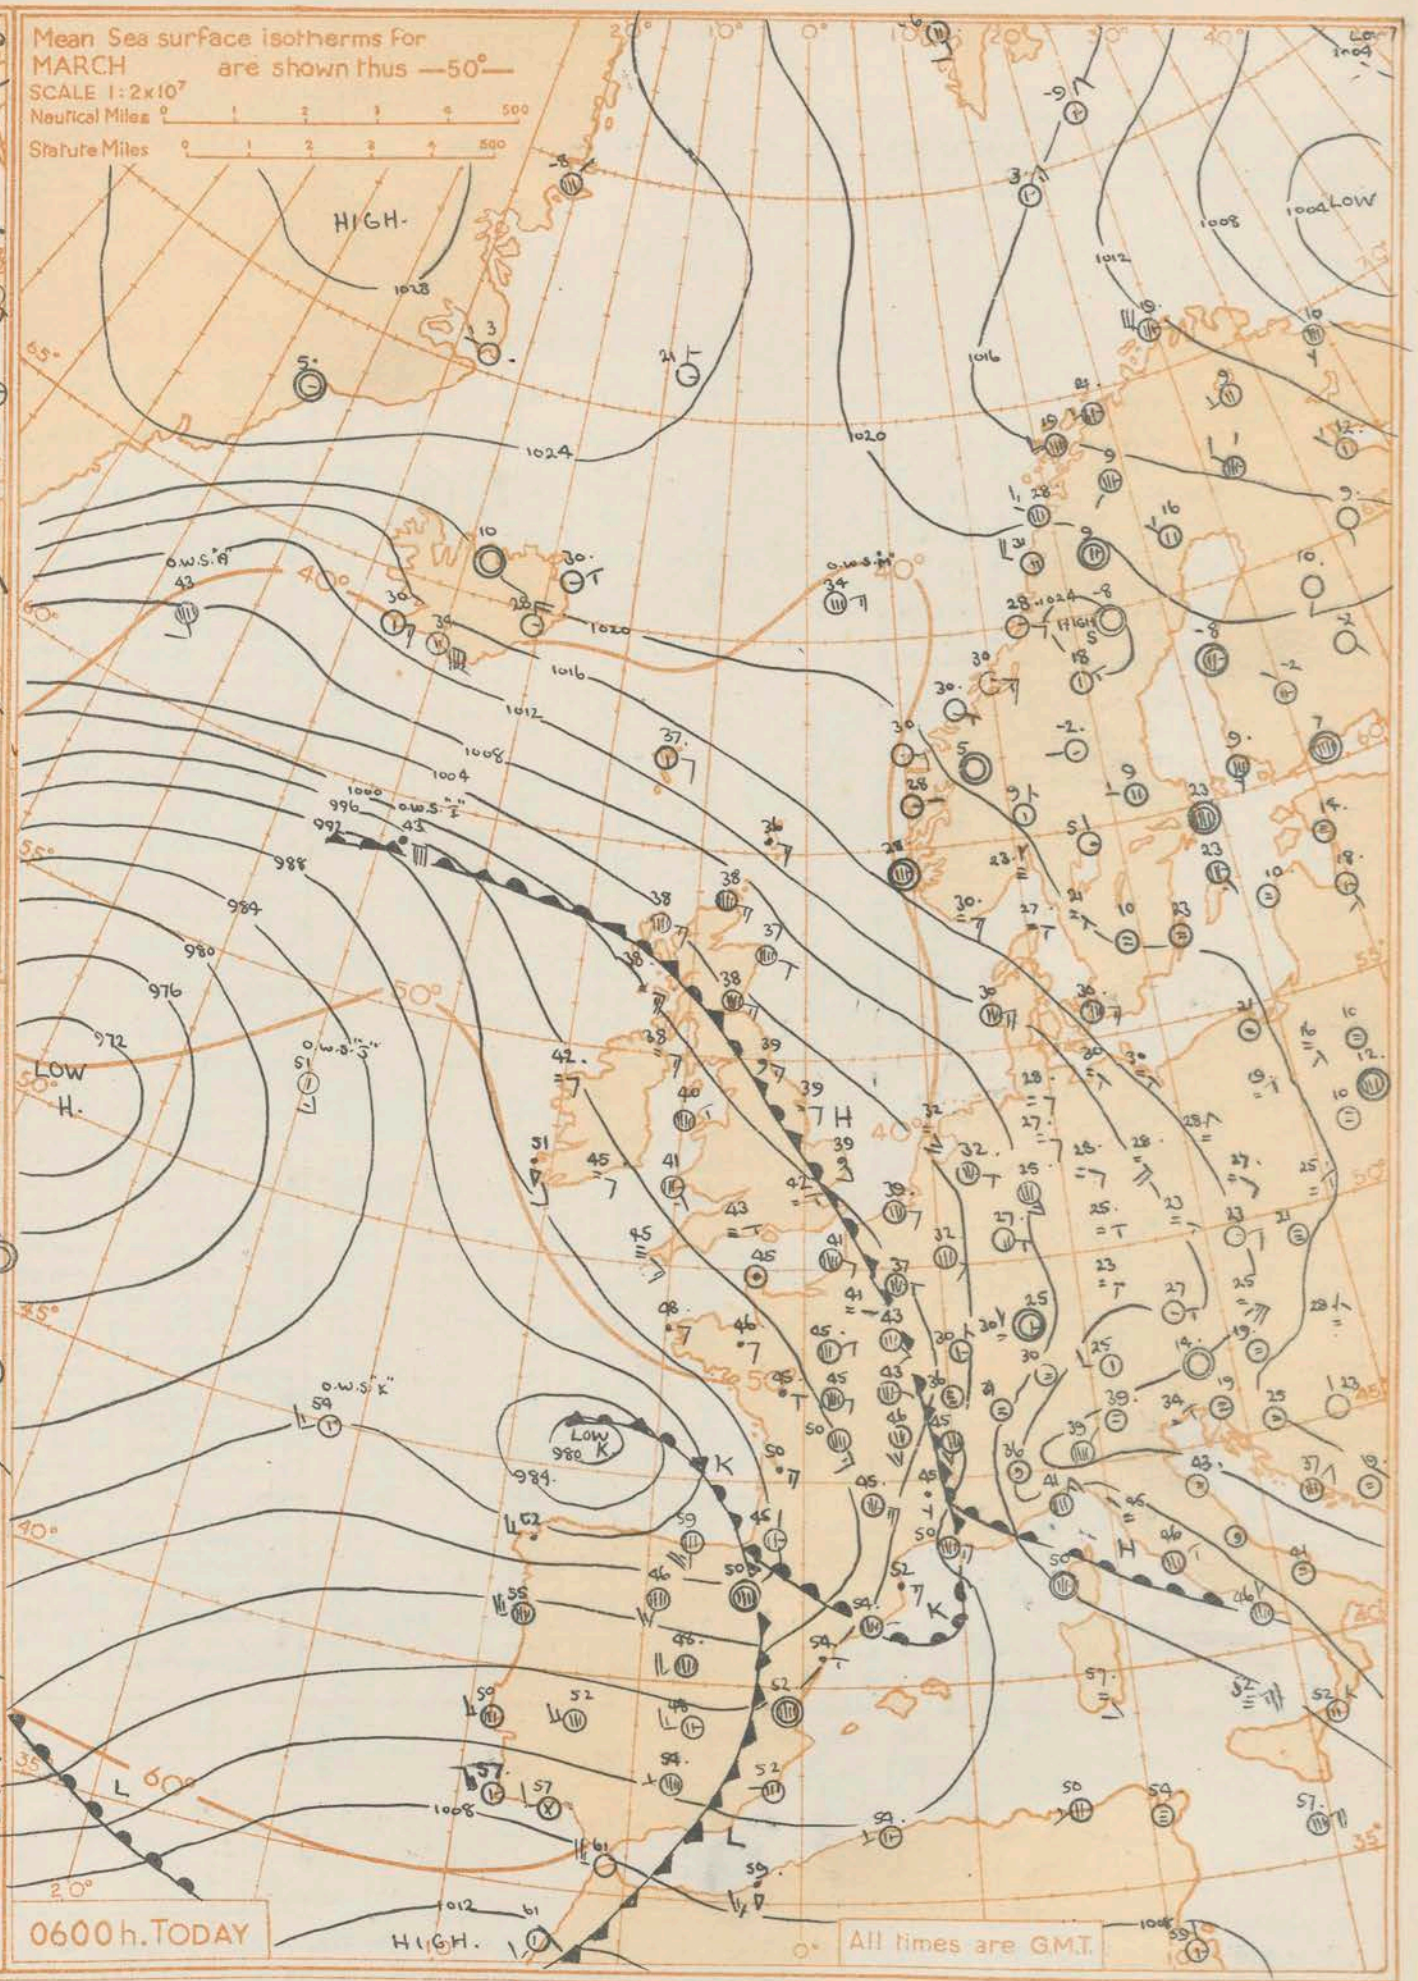
Equidistant azimuthal projection 1: 3×10^7 on the plane of 60°N.

NAUTICAL MILES.

0 500 1,000 1,500







GENERAL SYNOPTIC DEVELOPMENT

Issued at midday today Tuesday 25th March 1958

The large depression covering much of the Atlantic is drifting slowly southwest. The secondary depression which was moving eastwards towards Portugal yesterday has turned northeast and will probably degenerate into a trough which will move northwards to cross southwest England later tonight or tomorrow.

FORECAST FOR BRITISH ISLES until noon tomorrow

Generally cloudy; occasional rain or drizzle in most places with patches of fog over hills and also over parts of the Midlands and southeast England. Snow is likely to affect the higher parts of the Scottish mountains. Little change in temperature is expected and there will be no frost at night.

OUTLOOK FOR the following 24 hours.

Little general change.

CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

Mid-day (12h) of Tuesday 25th March 1958

HIGH

HIGH

LOW

LOW

LOW

LOW

LOW

HIGH

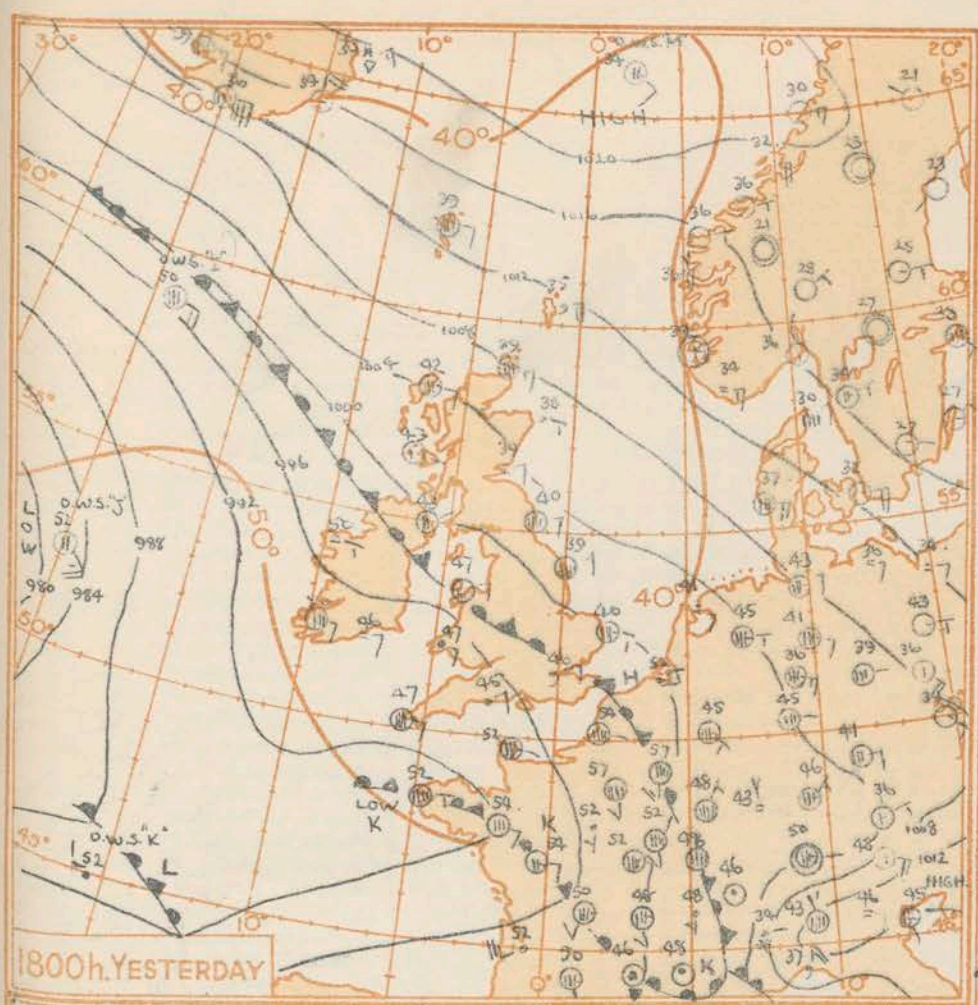
HIGH

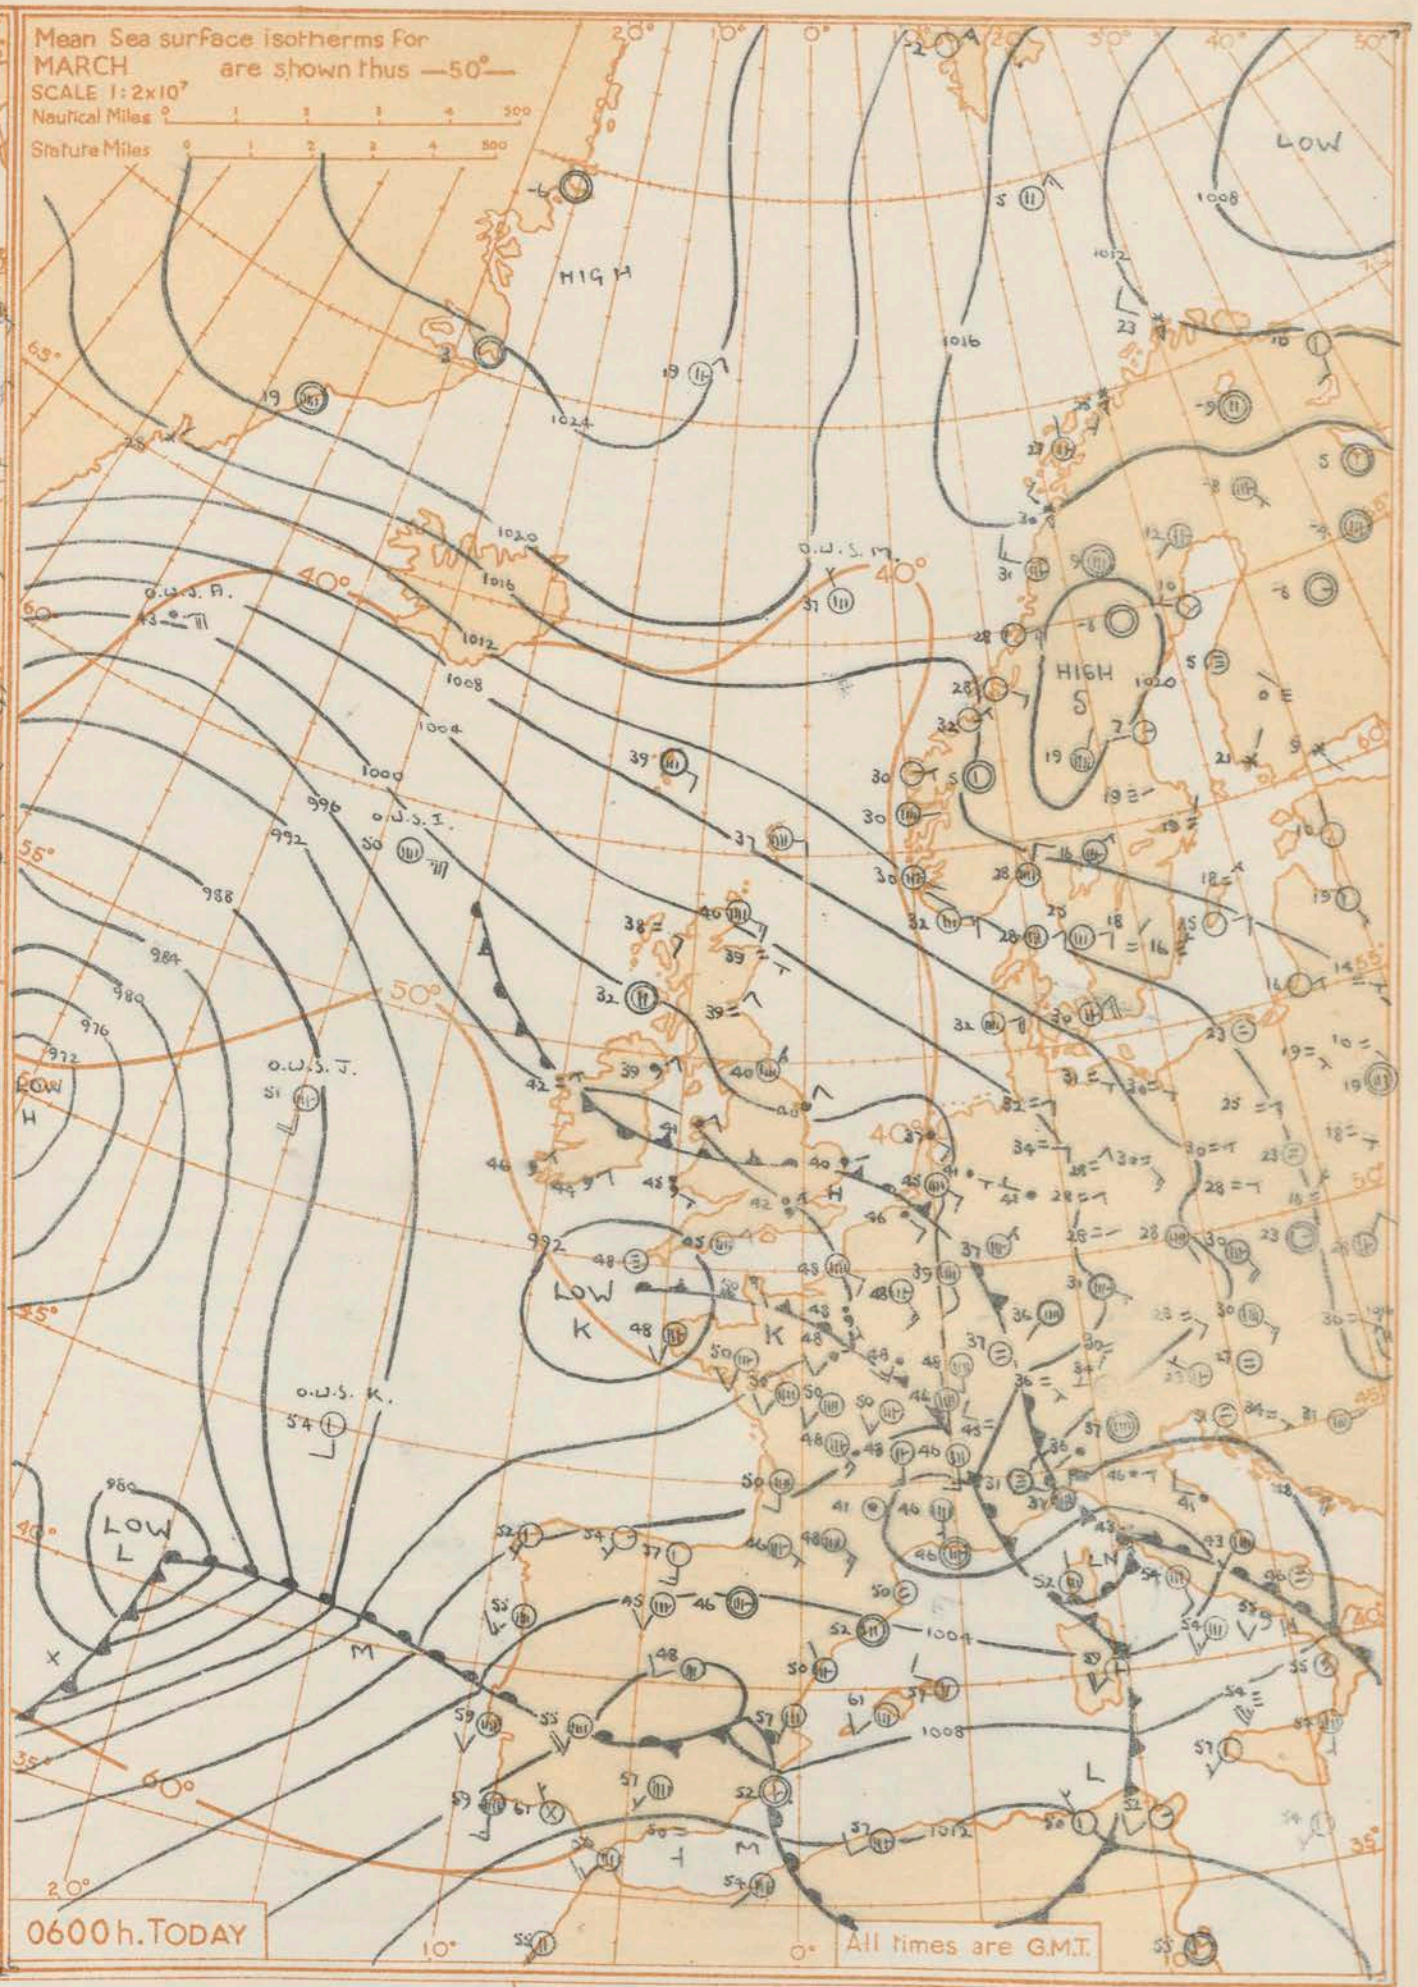
CIVIL TWILIGHT

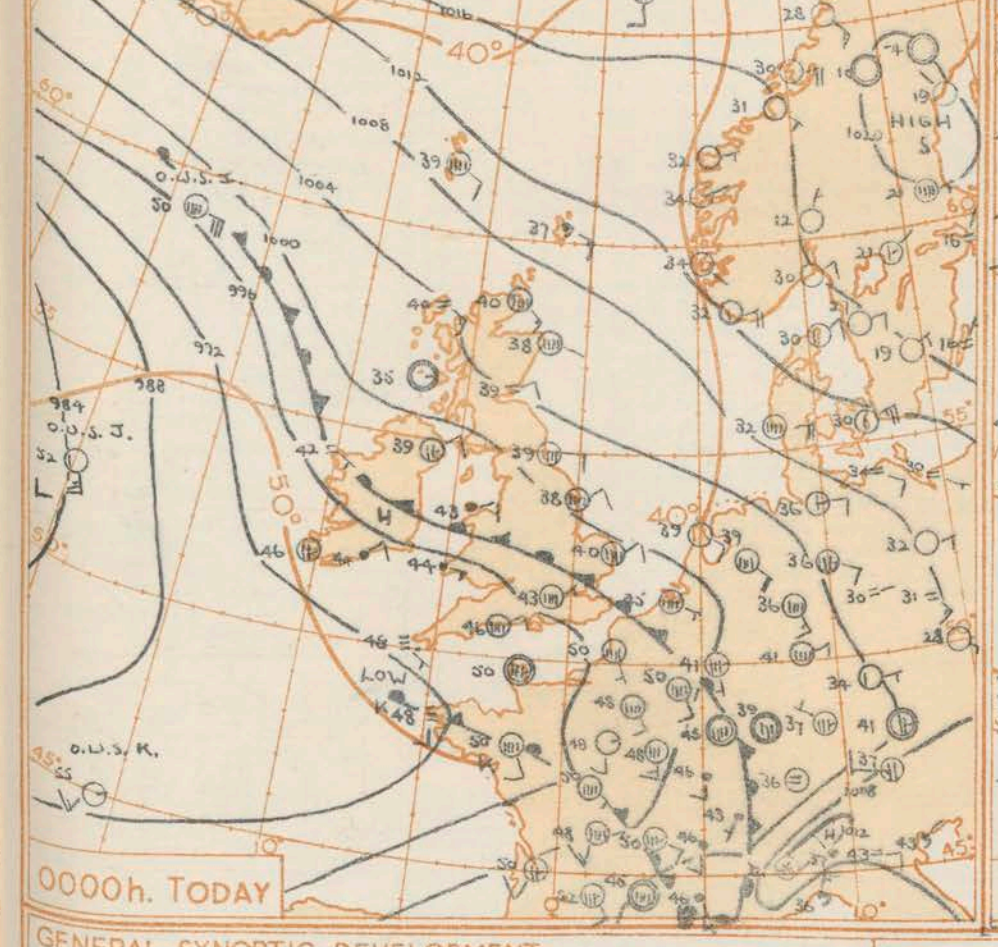
Equidistant azimuthal projection 1: 3×10^7 on the plane of 60°N.

NAUTICAL MILES.

0 500 1,000 1,500







GENERAL SYNOPTIC DEVELOPMENT

A large depression has persisted in mid-Atlantic and a small depression from Biscay has moved into the west Channel and is expected to move north over England as a trough. A small but deep depression northeast of Azores is expected to move fairly quickly towards south Ireland and then move northwards more slowly.

Issued at midday today Wednesday 26th. March 1958

FORECAST FOR BRITISH ISLES until noon tomorrow

It will be rather cold and cloudy in Scotland, north England and Northern Ireland with rain at times. In Wales and southern England temperatures will be near or above average and there will be periods of rain or drizzle with much hill and coast fog. South west gales may affect south west districts tonight.

OUTLOOK FOR following 24 hours:-

Changeable but mostly mild. Rain at times but bright periods also.

CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

Mid-day (12h)
of
Wednesday 26th. March
1958

CIVIL TWILIGHT

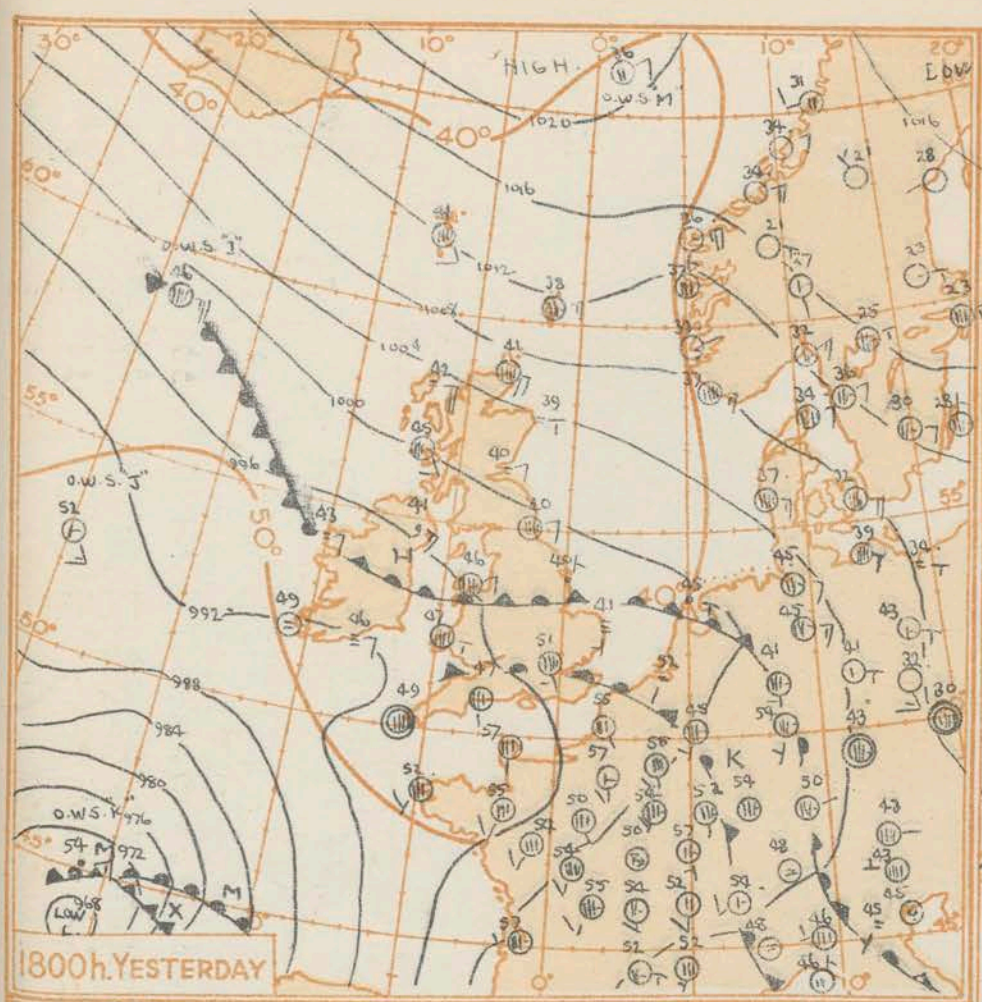
LOW

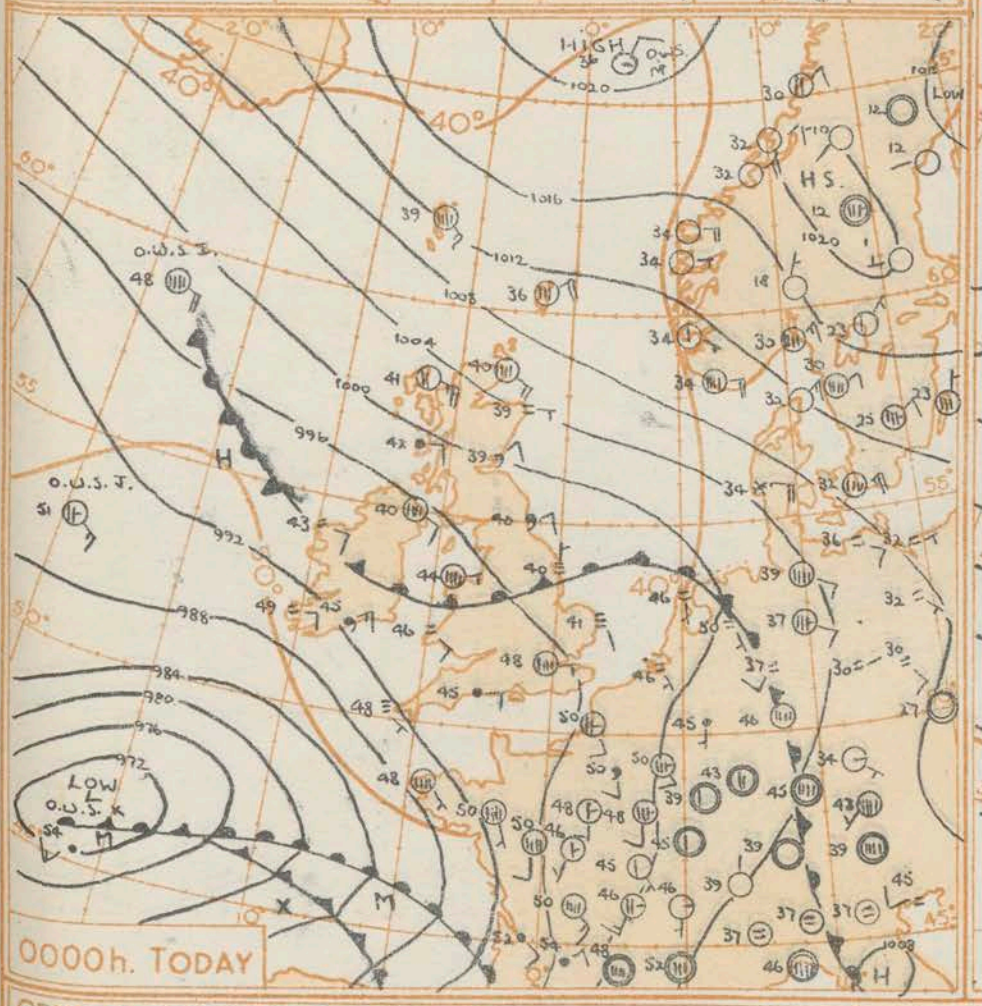
HIGH

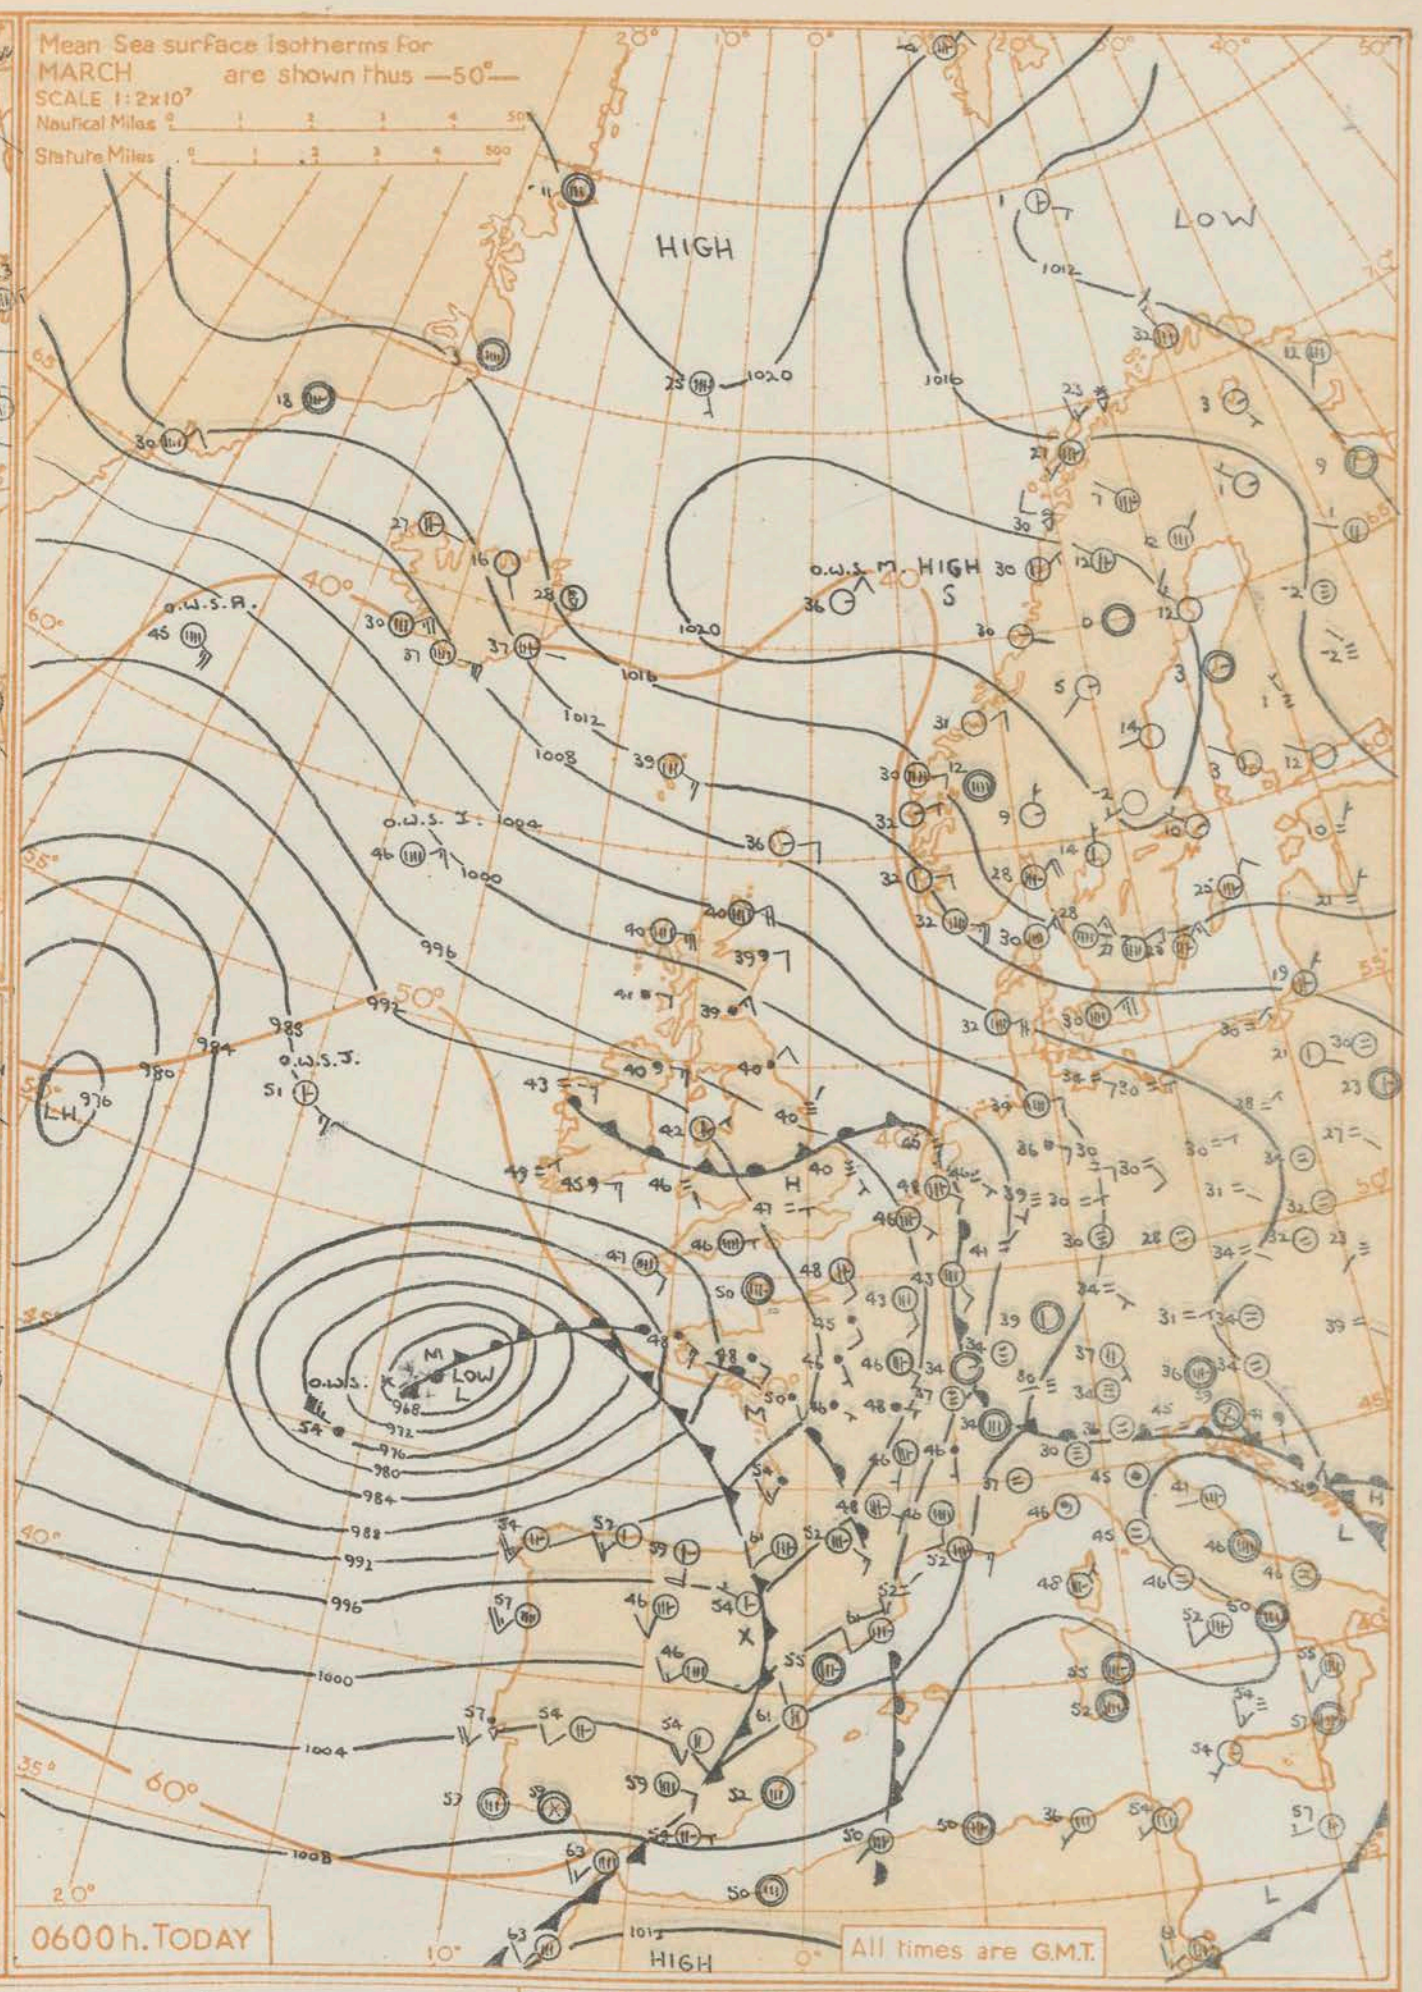
Equidistant azimuthal projection 1: 3×10^7 on the plane of 60° N.

NAUTICAL MILES

0 500 1,000 1,500







GENERAL SYNOPTIC DEVELOPMENT

A depression is expected to persist in mid-Atlantic. A trough which has moved into England is becoming merged with a low which moved northeast to north from near Azores and is becoming slow moving in west Channel area. An anticyclone over Norway will probably move southeast.

Issued at midday today Thursday 27th. March 1958

FORECAST FOR BRITISH ISLES until noon tomorrow

It will be rather cold and cloudy over Scotland, north England and Northern Ireland with periods of rain or drizzle. In Wales and the southern half of England temperatures will be near or above average with periods of rain but some bright periods may occur in places. There will be much hill and coast fog general

OUTLOOK FOR following 24 hours:-

Probably little change.

THE DAILY WEATHER REPORT
OF THE METEOROLOGICAL OFFICE, LONDON

OBSERVATIONS at 00h. G.M.T. 27th March 1958

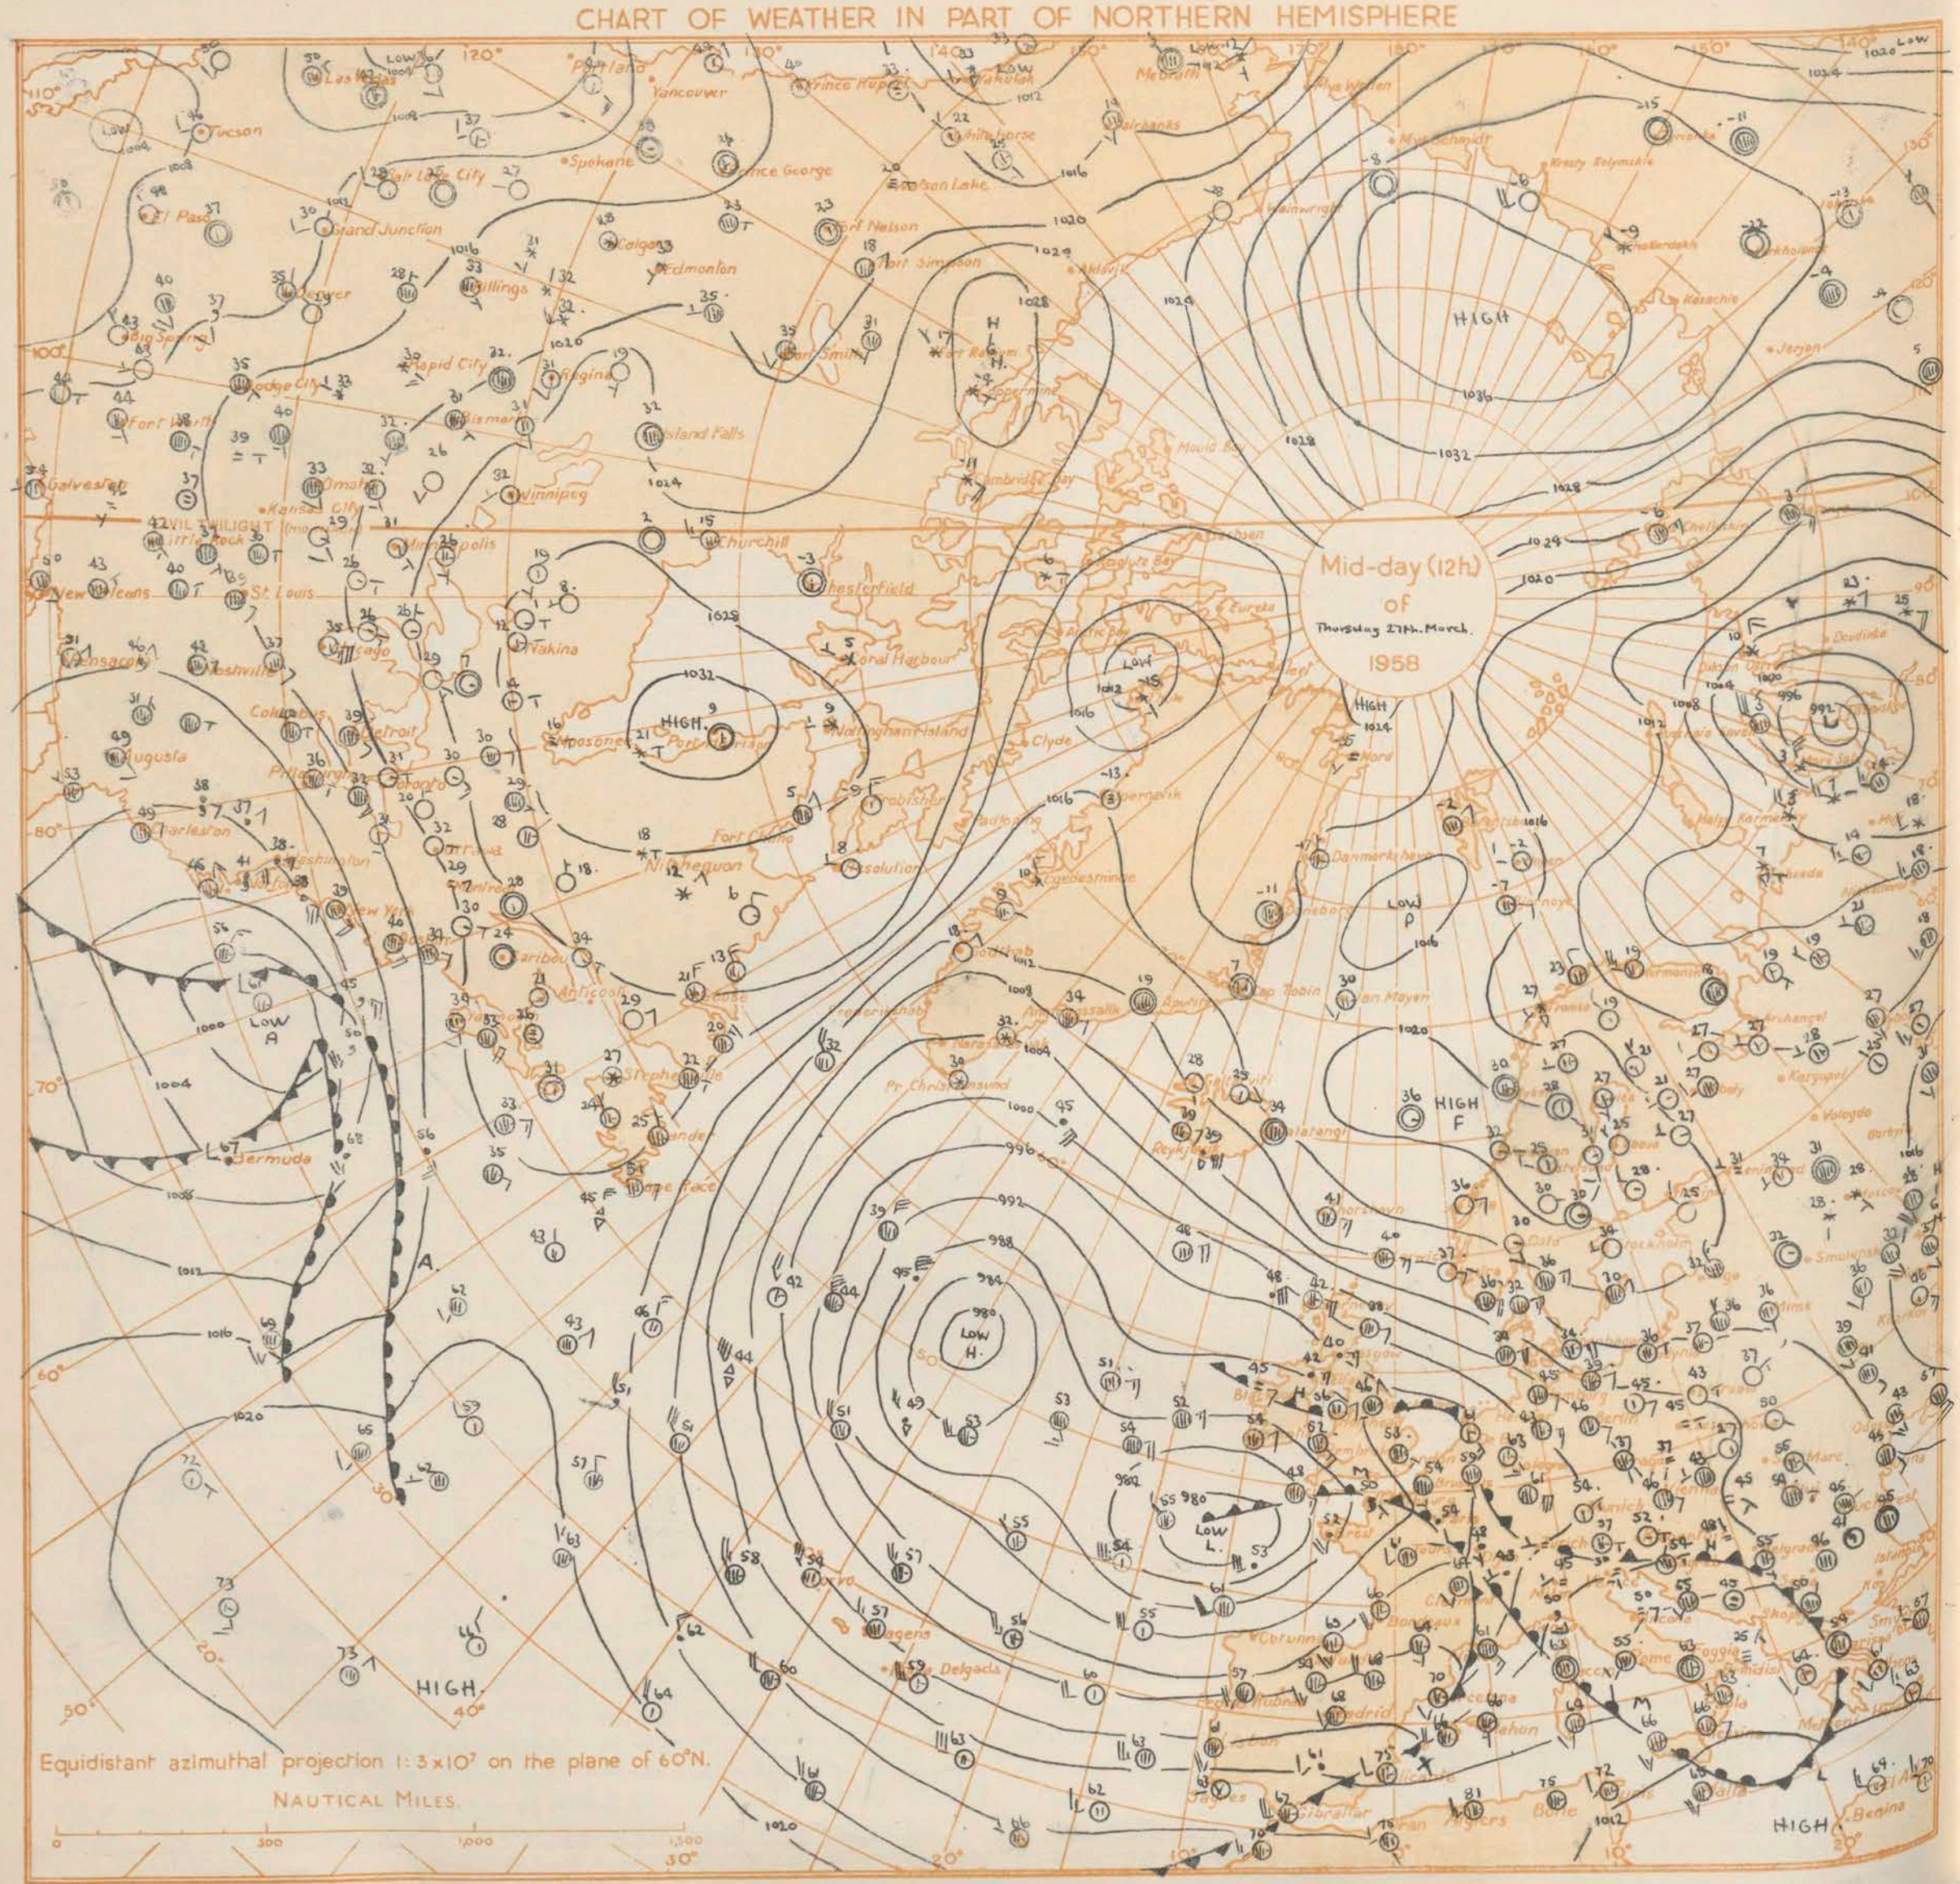
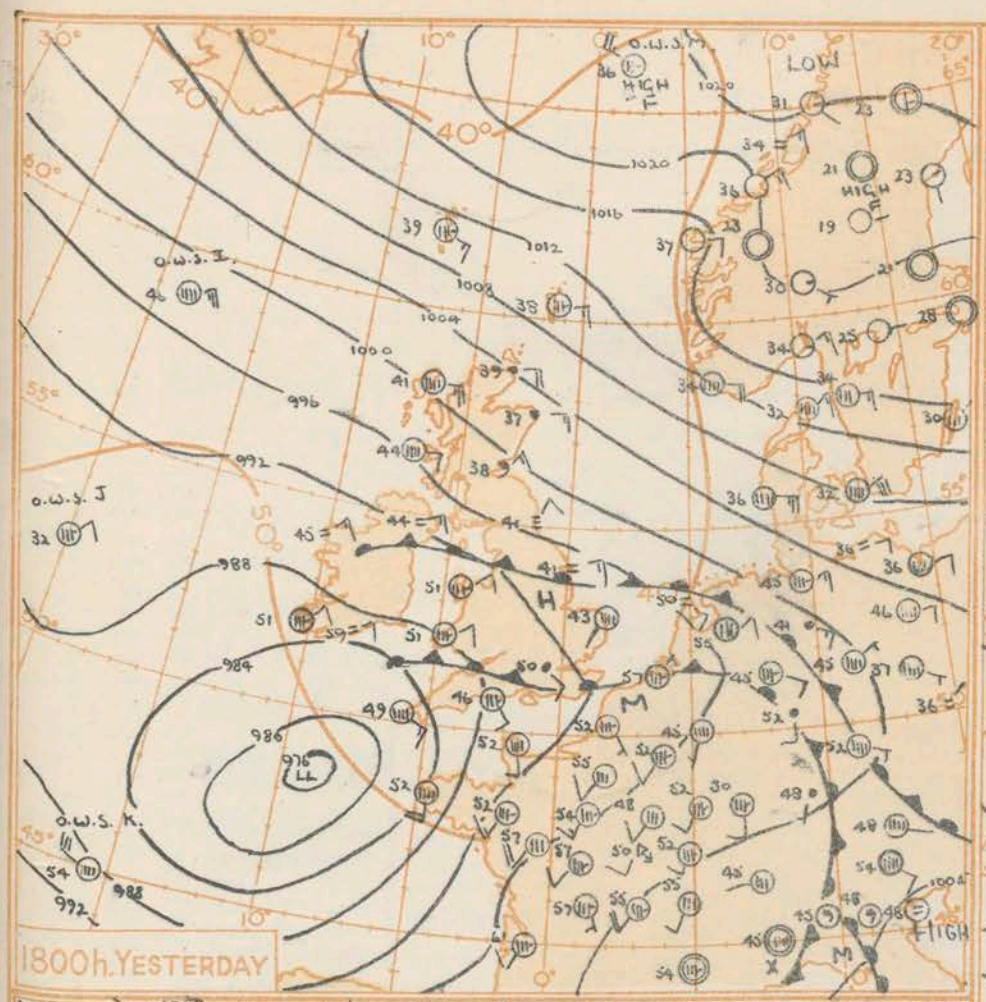
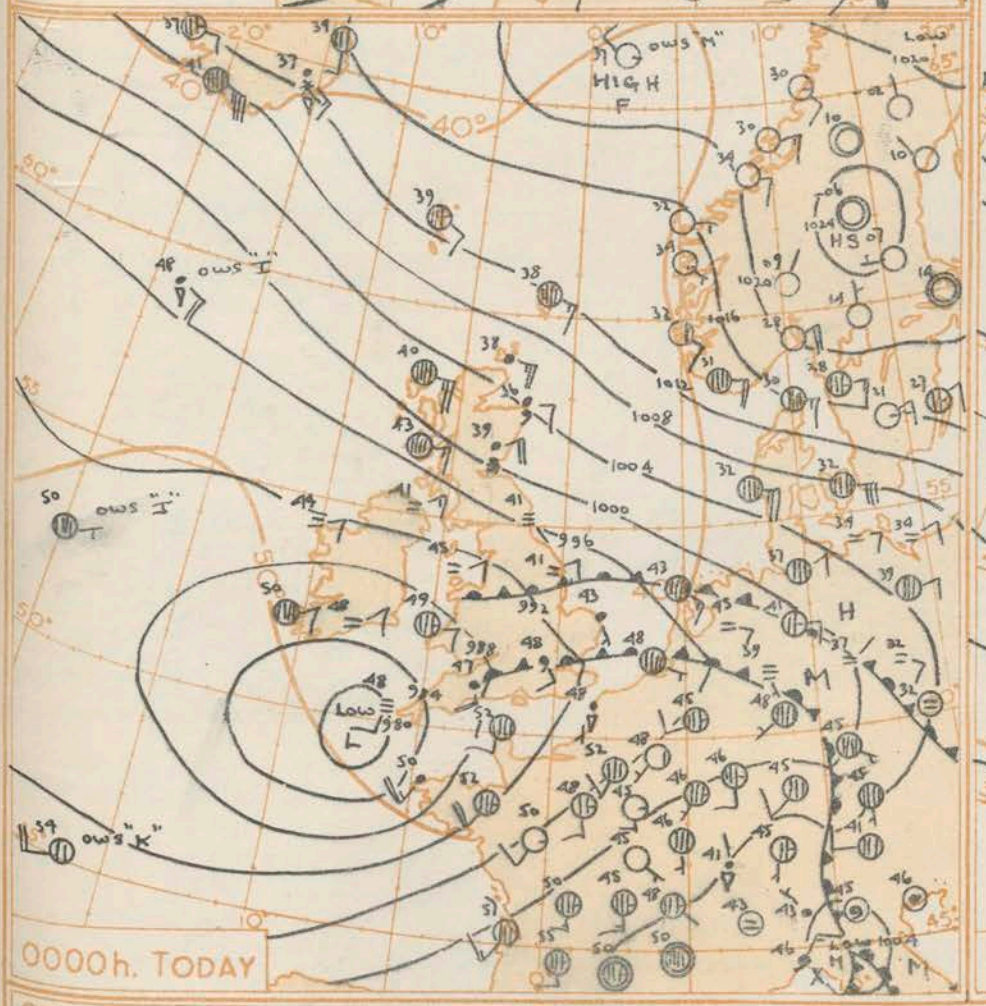
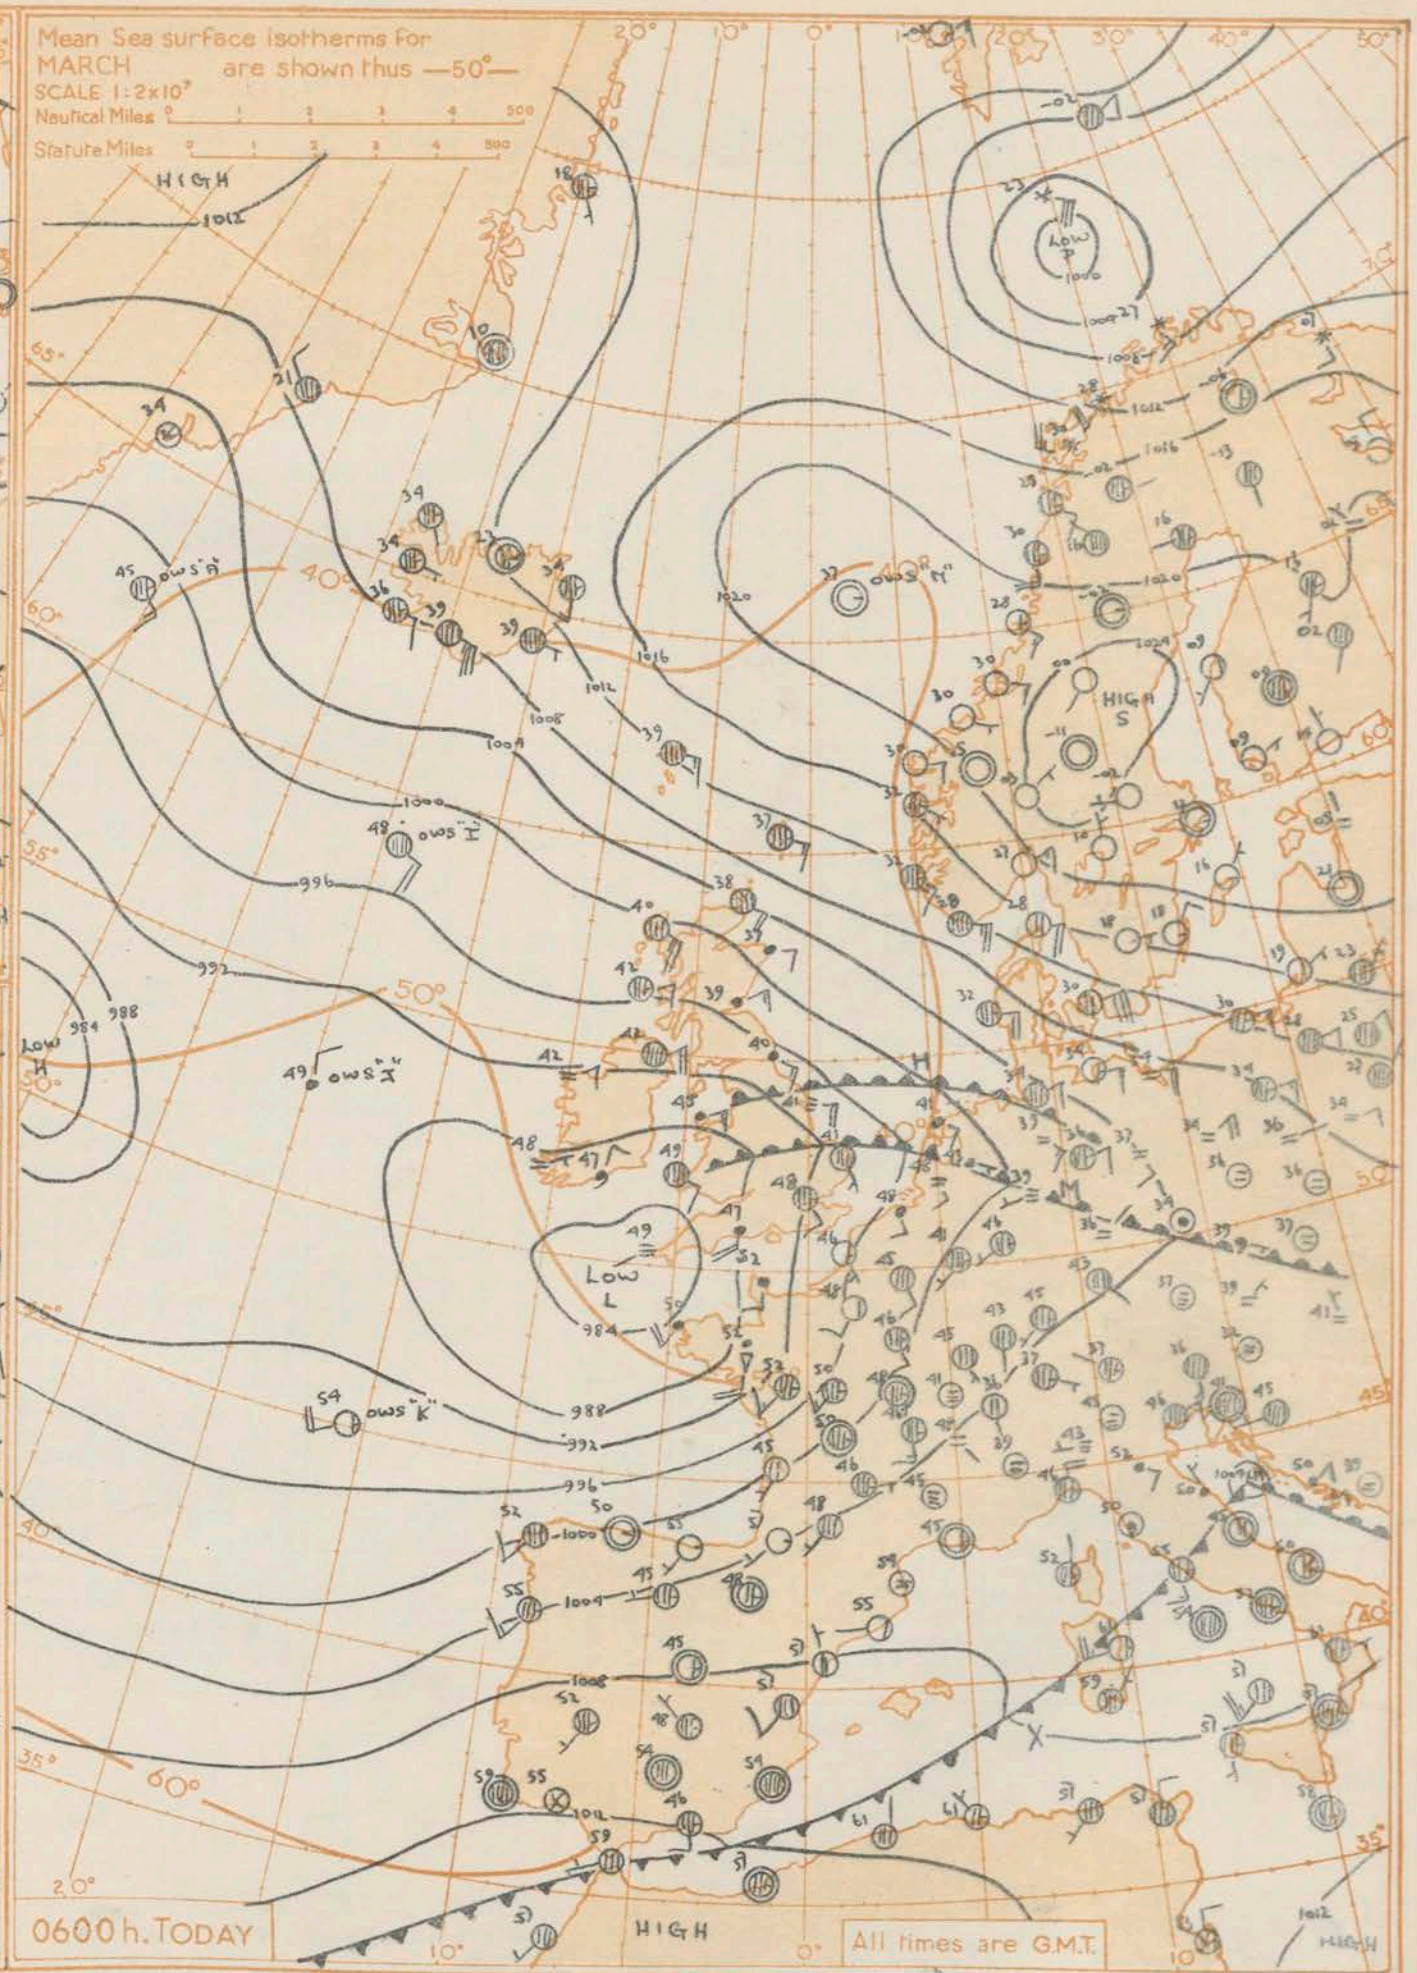
SIR GRAHAM SUTTON, C.B.E., D.Sc., F.R.S., Director General, Meteorological Office, Air Ministry, Kingsway, London, W.C.2.

CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE









GENERAL SYNOPTIC DEVELOPMENT

Issued at midday today Friday 28th March 1958

An intense small depression west of Biscay yesterday moved slowly northeast and is now expected to drift north into the Irish Sea and fill. The Atlantic low well to the west of the British Isles will be slow moving possibly with a little development later in the trough extending southeastwards. These changes will allow a slow penetration northwards over Britain of warmer air but Scotland may not be affected due to the persistence of high pressure over Scandinavia.

FORECAST FOR BRITISH ISLES until noon tomorrow

Mainly rather cold over Scotland with rain at times in most areas and perhaps some sleet or snow in part of the northeast.

Outbreaks of rain in other areas, thundery in places but drier, brighter weather with scattered showers will probably move north into much of England and Wales tonight and tomorrow.

OUTLOOK FOR the following 24 hours.

Rain becoming occasional in the north with temperatures rising a little. Sunny periods and scattered showers elsewhere but further rain may reach some southern districts.

GENERAL SYNOPTIC DEVELOPMENT

The slow moving depression now west of Wales will drift a little further north and degenerate into a filling trough. High pressure will persist over Scandinavia maintaining a strong easterly flow over the North Sea and north Britain. A disturbance southeast of Newfoundland is expected to move quickly east, turning northeast tomorrow into the Biscay area and becoming part of the circulation of the depression west of Ireland drifting slowly east.

Issued at midday today Saturday 29th March 1958

FORECAST FOR BRITISH ISLES until noon tomorrow

Continuing rather cold or cold in the north with further rain in most places and occassional sleet or snow in the extreme northeast chiefly on high ground. Mainly cloudy in central areas with occassional rain followed later by bright periods and scattered showers. In the south temperatures will be a little above average; there will be sunny periods and a few showers after early mist patches but rain may probably reach the extreme southwest around midday.

OUTLOOK FOR the following 24 hours

Occassional rain and mainly cold in the extreme north. Further rain may spread to most other areas from the southwest.

CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

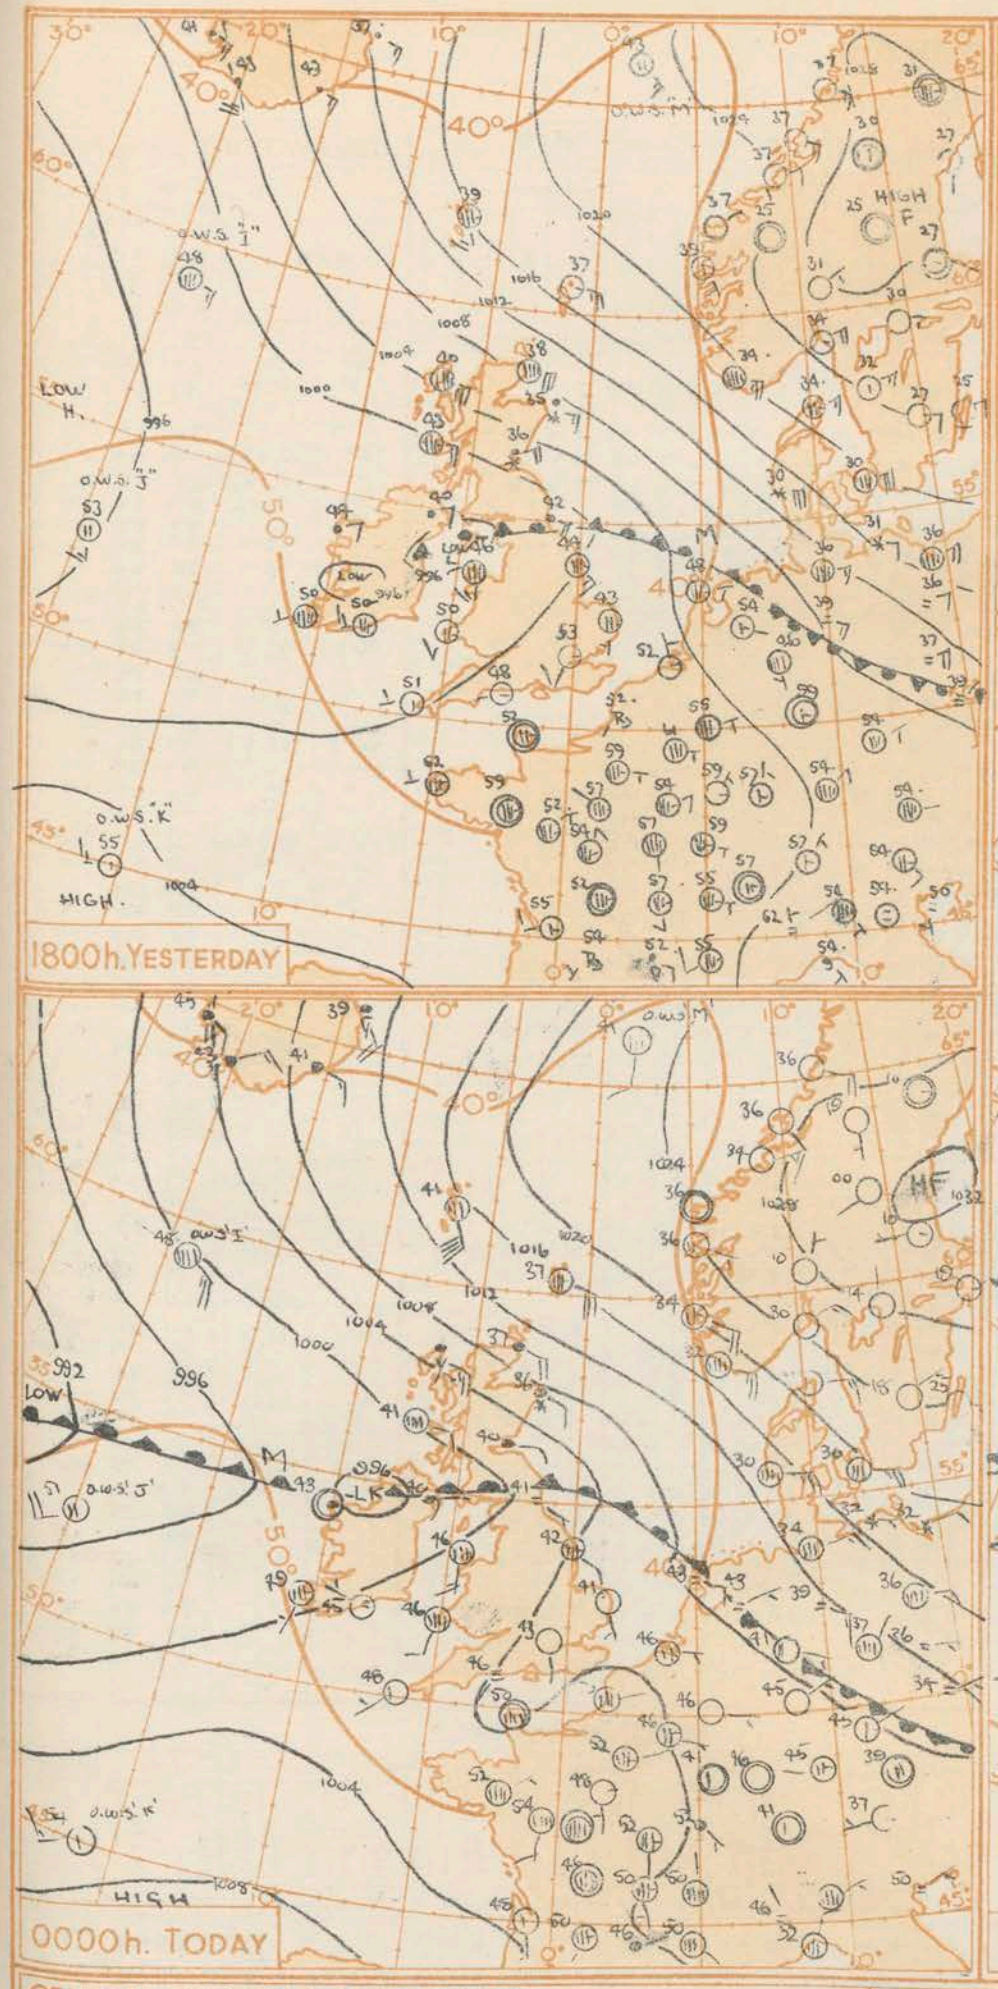
Mid-day (12h)
of
Saturday 29th March
1958

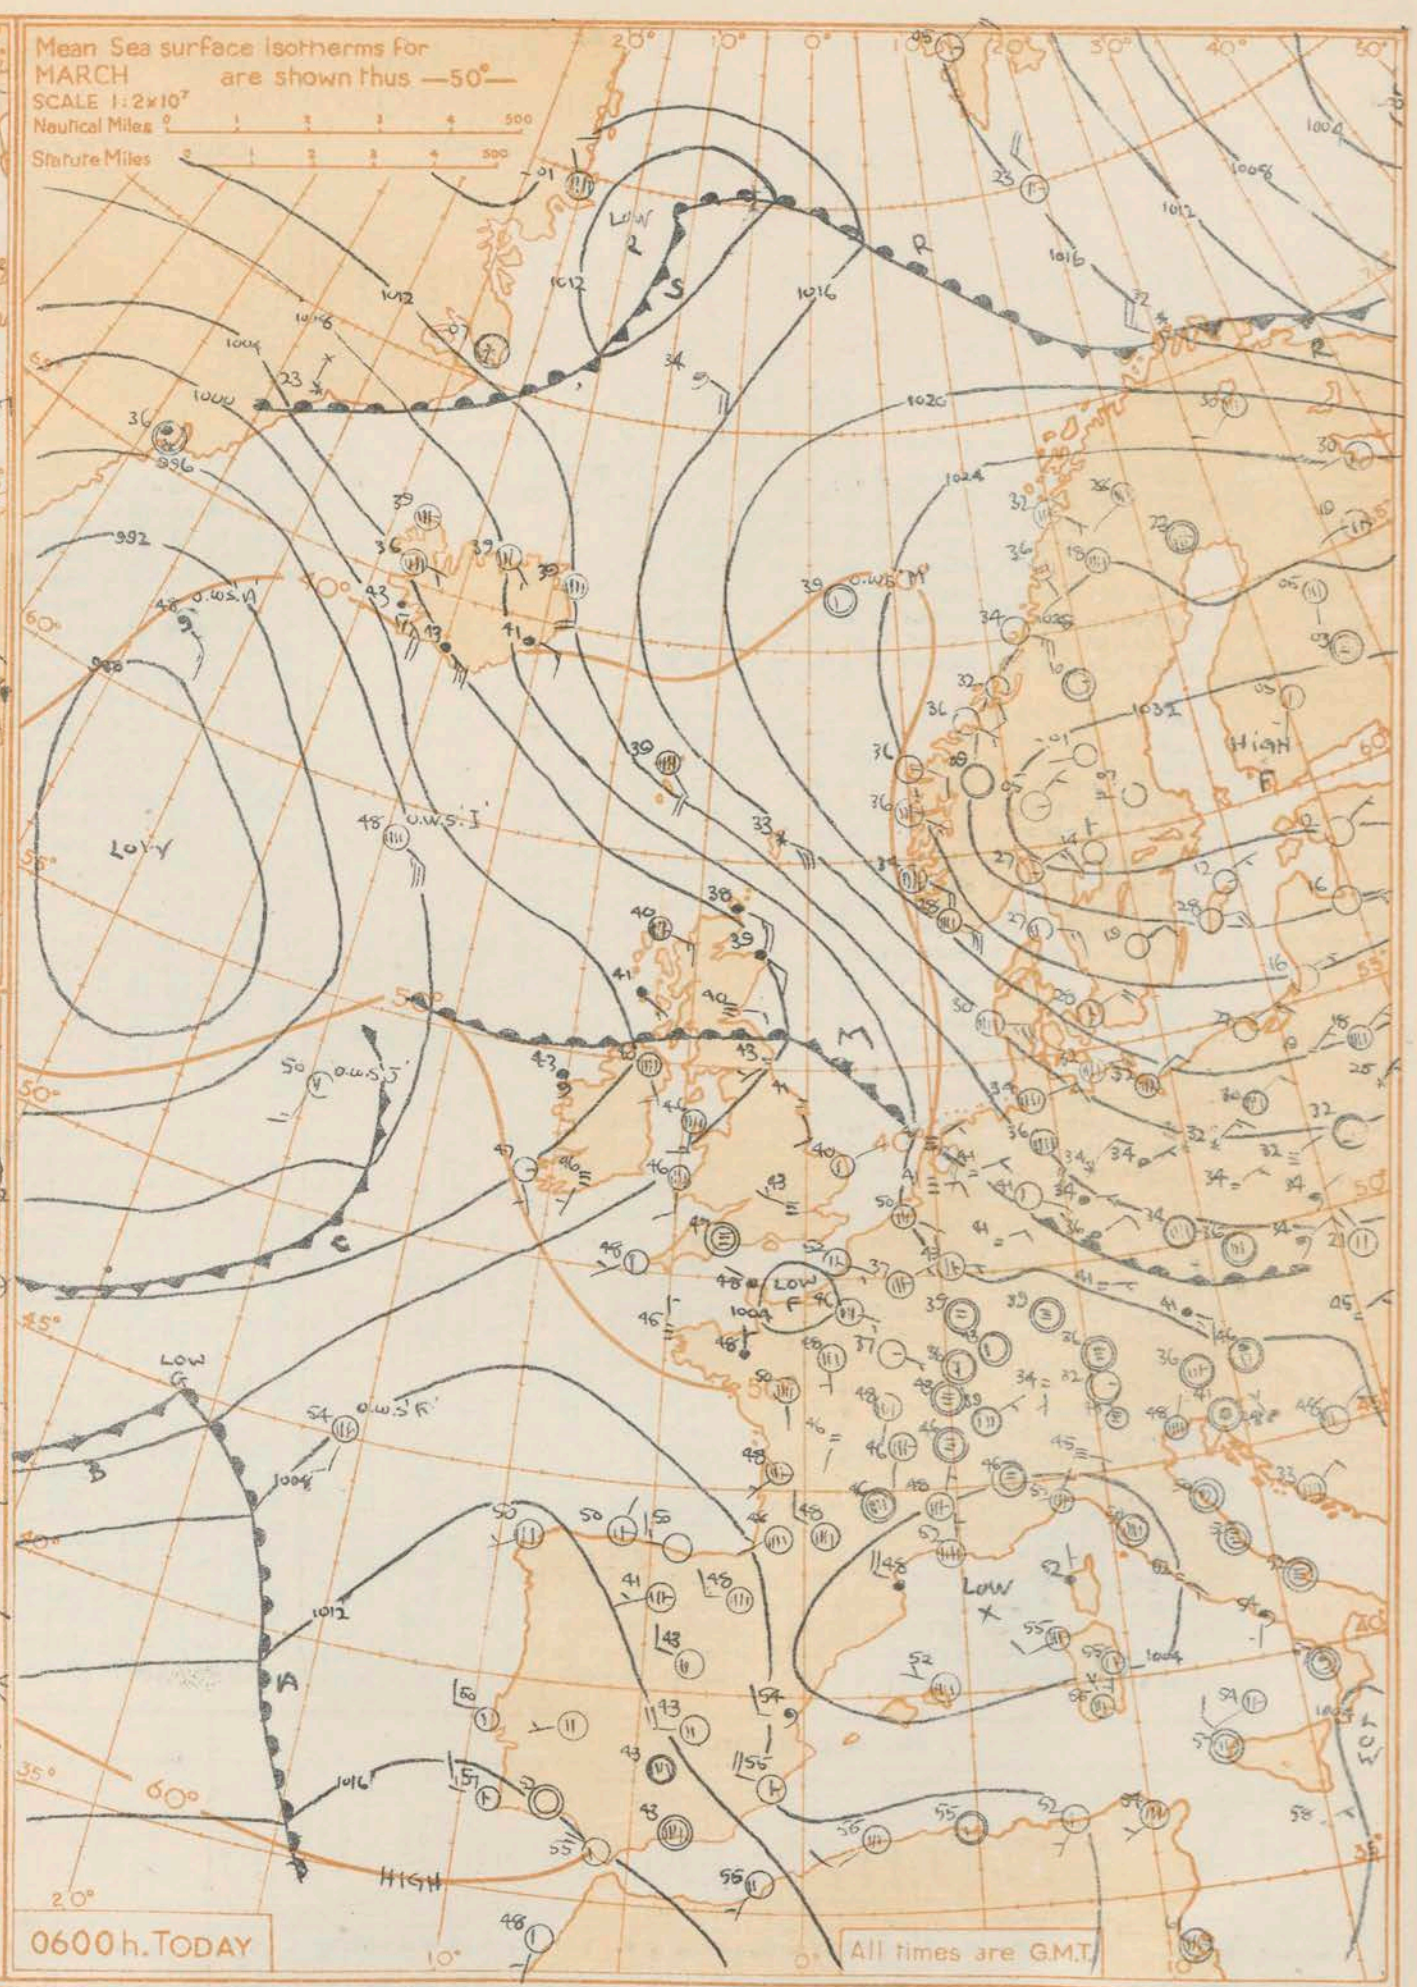
CIVIL TWILIGHT (Greenwich)

Equidistant azimuthal projection 1: 3×10^7 on the plane of 60°N.

NAUTICAL MILES

0 500 1,000 1,500





GENERAL SYNOPTIC DEVELOPMENT

Issued at midday today Sunday 30th. March 1958

A depression over the Irish Sea yesterday moved north and filled up and its associated occlusion now over central Scotland will continue to move north. A strong ridge is expected to develop across France and south east England with a warm front moving into south west districts of the British Isise tomorrow morning.

FORECAST FOR BRITISH ISLES until noon tomorrow

Rain over Scotland and Northern Ireland will move northward followed by brighter, warmer weather. England and Wales will be rather warm with sunny intervals today though with thundery rain locally and fog patches will develop tonight. Tomorrow morning, most areas will become bright but drizzle and much hill and coastal fog will spread into south west districts of England and Wales.

OUTLOOK FOR following 24hours:-

Probably becoming warmer. Mainly dry in the east but some drizzle with much hill and coastal fog in the west.

SIR GRAHAM SUTTON, C.B.E., D.Sc., F.R.S., Director General.

CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

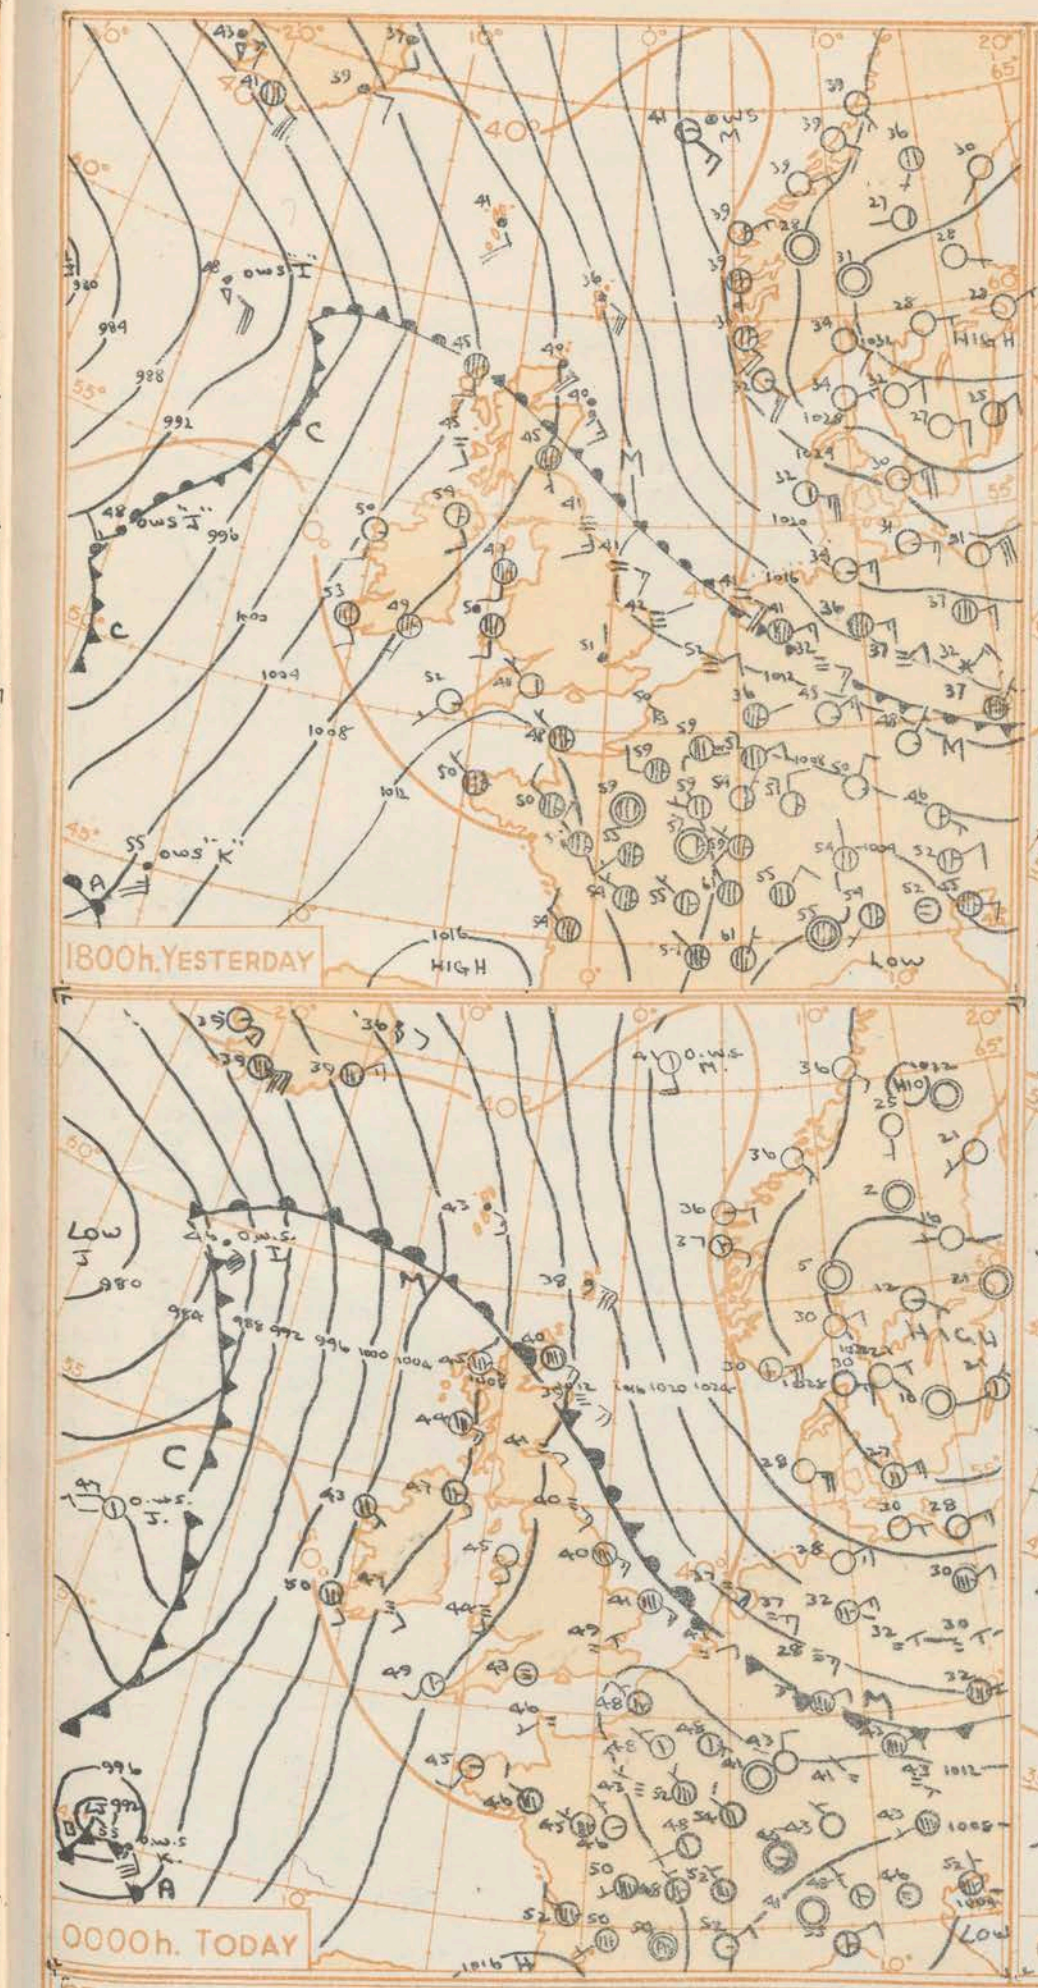
Mid-day (12h) of Sunday 30th. March. 1958

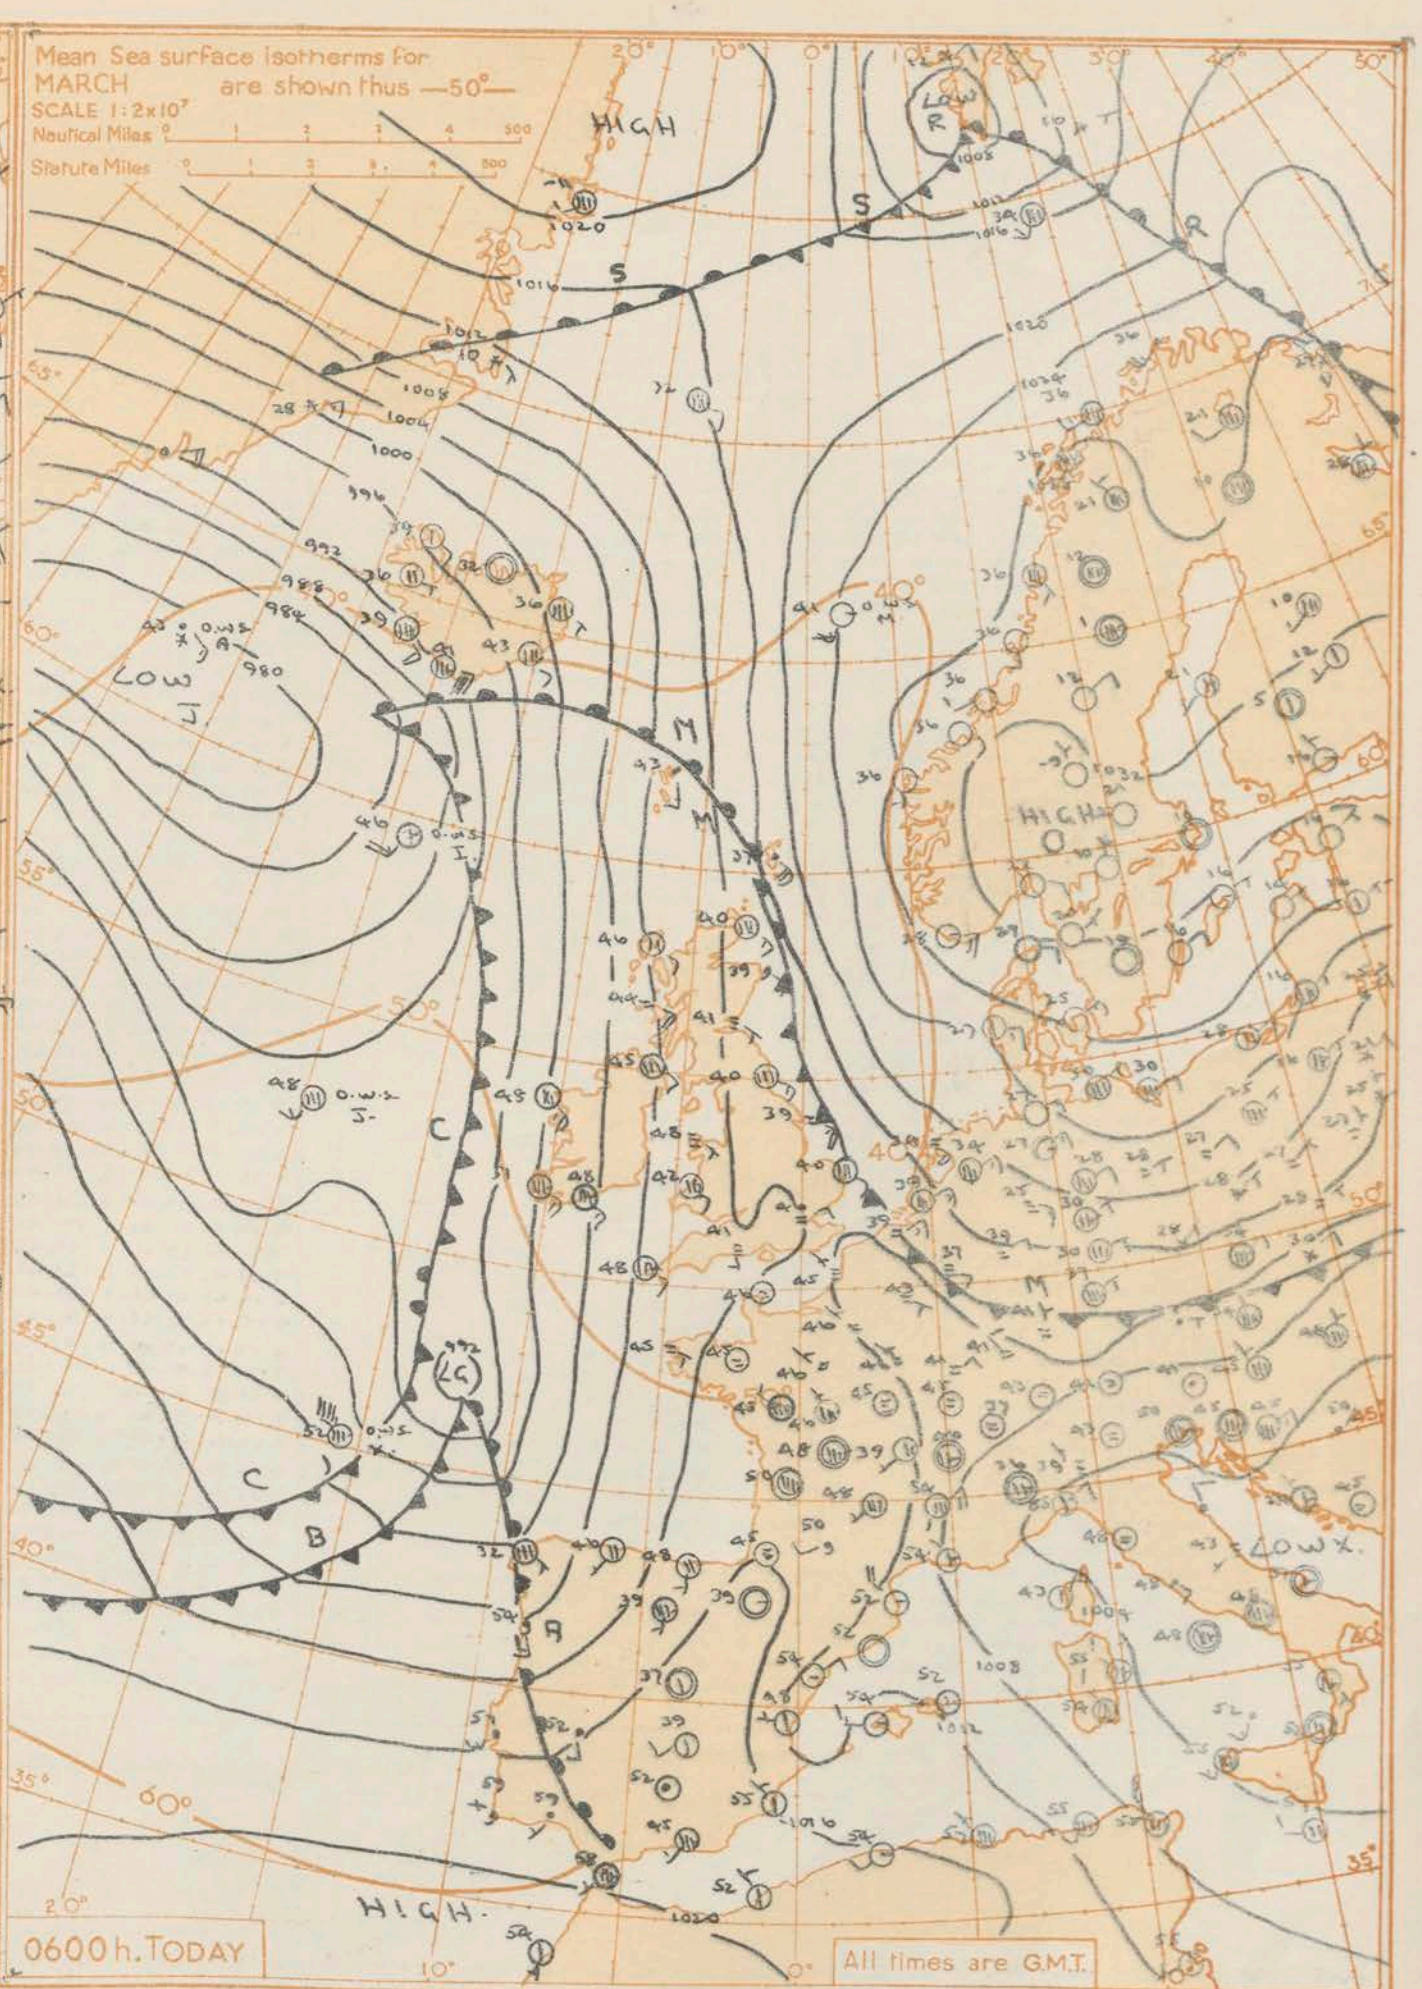
CIVIL TWILIGHT (Hid-March)

Equidistant azimuthal projection 1:3×10⁷ on the plane of 60°N.

NAUTICAL MILES.

0 500 1,000 1,500





GENERAL SYNOPTIC DEVELOPMENT

Issued at midday today Monday 31st March 1958

The occlusion over Scotland yesterday moved north and is now just clear of the Scottish mainland, but is lying close to the east coast of Scotland and England. The depression over the Atlantic which yesterday was expected to move to near southwest Ireland is now in Biscay and moving east-southeast. This will allow a ridge to extend eastwards across the British Isles from an almost stationary anticyclone over Scandinavia, and the occlusion will move slowly westward.

FORECAST FOR BRITISH ISLES until noon tomorrow

Eastern and central districts of England and Scotland will be mostly dull with rain or drizzle in places and it will become generally rather cold. Western areas of the British Isles will be rather warm on the whole with some sunny intervals but occasional rain may occur in extreme southwest England and the Channel Islands later.

OUTLOOK FOR the following 24 hours.

Mainly dry but becoming rather cold in most areas. Cloudy in the east. Bright periods in the west.

THE DAILY WEATHER REPORT
OF THE METEOROLOGICAL OFFICE, LONDON
