THE BEAUFORT SCALE OF WIND FORCE.

Beaufort Number.	Admiral Beaufort's General Description of Wind.	Specification for use on Land, based on observations made at Land Stations.	Limits of Mean Velocities Statute Miles per Hour.
0	Calm	Calm; smoke rising vertically	Less than 1
1	Light air	Direction of wind shown by smoke drift	1-3
2	Slight breeze	Wind felt on face; leaves rustle	4-7
3	Gentle breeze	Leaves and small twigs in constant motion; wind extends light flag	8-12
4	Moderate wind	Raises dust and loose paper; small branches are moved	13-18
5	Fresh wind	Small trees in leaf begin to sway; crested wavelets on inland waters	19-24
6	Strong wind	Large branches in motion; whistling heard in telegraph wires	25-31
7	High wind	Whole trees in motion; inconvenience felt when walking against wind	32-38
8	Gale	Breaks twigs off trees; generally impedes progress	39-46
9	Strong gale	Slight structural damage occurs (chimney pots and slates removed)	47-54
10	Whole gale	Seldom experienced inland; trees uprooted	55-63
11		Very rarely experienced; accompanied by widespread damage	64-75
12	Hurricane		Above 75

GALE WARNINGS.

The Meteorological Office issues warnings to ports and fishing stations of gales on or near the coasts of the British Isles. When one of these notices has been received at a station a black canvas cone is hoisted.

The South Cone (point downwards) is hoisted for gales from S.E., veering to S.W., W. or N.W.
 " S.W., veering to W. or N.W.
 " W., veering to N.W.
 " E., veering to S. or S.W.

The North Cone (point upwards) is hoisted for gales from S.E., E. or N.E., backing to N.
 " N.W., veering to N., N.E. or E.
 " N., veering to N.E. or E.
 " N.E., veering to E.

The Signals remain hoisted after the receipt of a warning telegram until danger of a gale is passed.

The Districts to which warnings are sent are shown in the British Section of the Daily Weather Report by the following symbols:—

▼ South Cone hoisted.
 ▲ North " "

BEAUFORT NOTATION OF WEATHER.

b blue sky (not more than a quarter covered).
 bc sky partly cloudy (one half covered).
 c generally cloudy.
 d drizzle. h hail. KQ line squall.
 l lightning. o overcast sky.
 m mist, visibility 1000-10000 m.
 n fog. 200-1000 m.
 F thick fog. less than 200 m.
 p precipitation within sight of station.
 p passing showers. r rain.
 s snow. re sleet. t thunder.
 v unusual visibility. y dry air.
 z dust haze; the turbid atmosphere of dry weather.

With present weather is combined, whenever possible, the general character of the weather. A "solidus" divides actual existing weather from preceding conditions, thus: bc/r = fair weather after rain; i = intermittent; - = "decreasing"; + = "increasing"; h(r) = "hail" or "rain and hail"; Capital letters indicate intensity, suffix o indicates slight; and repetition of letters continuity, thus:—
 R = heavy rain.
 rr = continuous moderate rain.
 rro = continuous light rain.

NOTES ON THE INFORMATION CONTAINED IN THE BRITISH AND INTERNATIONAL SECTIONS OF THE DAILY WEATHER REPORT.

Heights of Stations.—The heights of British Stations above M.S.L. published in the British Section of the Daily Weather Report refer to the plot of ground on which the rain gauge is situated.

Pressure.—The distribution of barometric pressure at Mean Sea Level is shown by means of isobars which are drawn for intervals of 2 millibars on the British Section of the Report and for intervals of 4 millibars on the International Section.

The wind at a height of 1,500-2,000 feet above ground usually blows along the isobars and, for the same temperature, pressure and latitude, the speed of the wind is inversely proportional to the distance between the isobars, e.g., for isobars 1 inch apart (160 miles) in the Daily Weather Report the speed of the upper wind is about 12 m.p.h. in latitude 55°, with a temperature of 50° F. and a pressure of 1,015 mb; if, however, the isobars are $\frac{1}{2}$ inch apart the corresponding speed is 24 m.p.h.

The scale below can be used with both the International and the British Sections. If the distance between consecutive isobars is measured along the rule from the left-hand extremity the geostrophic wind is shown by the scale in miles per hour.

GEOSTROPHIC WIND SCALE FOR

4 mb isobars on 1 : 2 × 10⁷ Charts.
or 2 mb " " 1 : 10⁷ " "
or 1 mb " " 1 : 5 × 10⁶ " "

This scale applies under the following conditions:—

Pressure, 1,015 mb. Temperature, 50° F. Latitude, 55°.

Corrections.—For an increase of 10 mb pressure, subtract 1% from velocity; for an increase of 10° F. add 2%. From Latitude 55° to Latitude 65° subtract 1% for each degree above 55°. From Latitude 55° to Latitude 45° add $\frac{1}{2}$ % for each degree below 55°.

Temperature.—Temperature is specified in degrees Fahrenheit, and is shown on the charts by means of figures written alongside the circles which indicate the positions of the stations.

Relative Humidity.—From January 1st 1926, relative humidity at British stations has been calculated from the following hygrometric formulae:

$$x = f - .444(t - t') \text{ for wet bulb readings above } 32^\circ \text{ F.}$$

$$x = f - .400(t - t') \text{ for wet bulb readings below } 32^\circ \text{ F.}$$

where x is the vapour pressure in mb.;

f the saturation vapour pressure at the temperature of the wet bulb;

t the dry bulb temperature; and

t' " wet " "

The use of Glaisher's tables has been discontinued.

The tables, used for calculating humidities from the readings of the dry and wet bulb thermometers on aeroplanes, are based on a formula similar to the above, but allowance is made for variation of barometric pressure with height and for the increased ventilation of the thermometers.

Upper Air Temperature.—The British observations are made normally, one at 1,000 feet above the level of the aerodrome, and the remainder at pressures of 950, 900, 850, 800, etc., millibars. Heights are then computed and, apart from instrumental error, are correct heights: they do not require modification for differences of temperature from normal as these are allowed for in the computation. The values are shown graphically and in tabular form in the Upper Air Supplement. On the diagram, temperatures are given in degrees Fahrenheit and Absolute. The oblique line marked "Dry Adiabatic" shows the lapse rate of temperature for dry air ascending or descending under adiabatic conditions, i.e., without communication of heat from external sources. The lapse rate under these circumstances is very approximately 5.5° F. per

1,000 feet, or 10°a per kilometre. A lapse rate greater than this value indicates instability in a dry atmosphere.

The broken lines marked Saturated Adiabatic show lapse rates for saturated air. These are for air masses which contain just sufficient moisture at 1,015 mb. pressure to become saturated after rising 1 km. in an environment having the dry adiabatic lapse rate. The condensed moisture is assumed to be retained thereafter in the air as it rises.

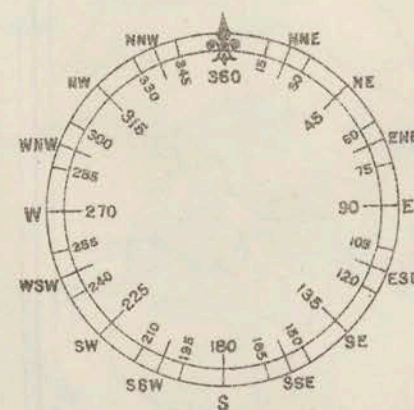

Times of Sunrise, Noon and Sunset.—From January 1st, 1926, the times of Sunrise, Noon and Sunset published in the British Section of the Report for certain stations have been recalculated from (1) the figures for the duration of sunshine contained in the International Meteorological Tables and (2) the value of the sun's declination and the equation of time published in the Nautical Almanac. The change of declination of the sun on the same day from year to year over a cycle of four years is now taken into account. This change has formerly been neglected, as stated in previous issues of Form 2373.

Wind.—All wind directions specified in the reports are "true," as distinguished from "magnetic." The arrows indicating wind direction are drawn to fly with the wind. Wind velocities are shown on the charts of the British Section and Upper Air Supplement in m.p.h. by the numbers placed within the small circles. In the International Section velocities are not shown. In both Sections the number of feathers on the arrows denotes wind force by Beaufort number.

Upper Winds.—The direction and velocity of the wind are given in the charts of the Upper Air Supplement for heights of 2,000 feet and 6,000 feet. The data are also given in tabular form for various heights. The reports are usually based on Pilot Balloon ascents.

Wind reports deduced from British Pilot Balloon Ascents refer to the 1,000 feet layers centering at the heights given in the table up to 16,000 feet. When winds are reported at greater heights, they refer to the 5,000 feet layers centering at 20,000 feet, 25,000 feet, 30,000 feet and 35,000 feet.

In the tabular statement direction is specified in degrees from true north measured through East 90°, South 180°, West 270° to North 360°. (See diagram below.)

Sea Disturbance.—The code for sea disturbance used at coastal stations is given on p. 1 of the British Section of the Report. Ships at sea use the following code:—

- | | | | |
|-----------------------|--|-----------------------|--------------------------------------|
| 0. No or slight swell | } and {

SUPPLEMENT TO THE DAILY WEATHER REPORT OF THE METEOROLOGICAL OFFICE, LONDON.
SUMMARY OF METEOROLOGICAL OBSERVATIONS AT SELECTED STATIONS ISSUED ON THE 1st DAY OF EACH MONTH.

Notes on the Weather of **JUNE**, 1926.

Unlike June 1925 which was so remarkably dry and sunny the weather during the greater part of June 1926 was of an unsettled character with much rain during the first three weeks, occasional thunderstorms and day temperature more often below normal than above it.

On the 1st, a secondary depression began to develop off our southwest coast causing heavy rain that night in Devon and Cornwall, a gale near the Channel Islands on the following day and much rain generally in Southern England as it passed to northeast France. Kew recorded 25 mm. and Croydon 32 mm. on the 2nd. The improvement in the rear of this depression lasted some days and temperature rose well above 70°F. in many places on the 3rd. From the 9th - 13th pressure was generally low over Ireland while secondaries passed across England. Strong southwesterly winds were experienced on several parts of the coast and attained gale force near St. Ann's Head and the Scilly Isles, rainfall measurements exceeded 30 mm. at times in Ireland and thunderstorms developed locally. One occurred in the London area on the 10th. The passage of the centre of this system caused heavy rain in Northern England on the 14th and 15th while another depression gave fairly heavy rain in the southern half of the country about the 17th. Thunderstorms occurred locally in eastern England, hailstones $\frac{1}{2}$ to $\frac{3}{4}$ inch in diameter being observed at Norwich.

A marked improvement followed at the third week-end, temperature rising again above 70°F. in several places on the 19th, 20th and 21st, but subsequently high pressure extended from the Azores towards Iceland giving cooler, northerly winds for some days until near the end of the month when the anticyclone moved southeast across the British Isles to the Continent, causing a renewal of fine, warm weather.

The total rainfall of the month varied considerably. At several southern and eastern stations, including Kew Observatory, it was more than 50% above the average whereas at Aldston, Liverpool the deficit was equally great. Sunshine was rather below normal in many parts but Falmouth enjoyed an excess of 59 hours.

NOTES ON CHART OF ISOPLETHS (p. 4).
 The diagram is obtained by drawing a line from Akureyri in Iceland to the South of France, near Marseilles. The points at which the isobars drawn for 4 mb pressure intervals intersect this line at 1h, 7h, 13h, and 19h, are plotted consecutively and joined to show the variation of pressure from day to day at any point in the line. The line terminates at Lat. 68° N., Long. 18° W. in the north, at Lat. 44° N., Long. 4° E. in the south.

* Based in part on reports made by telegraph in which the day & night measurements are rounded off to the nearest whole millimetre. Small discrepancies may arise between these totals and those given in the Monthly Weather Report which are based on readings taken to 0.1 mm.

GENERAL INFERENCE.

A depression continues of our northern coasts and a secondary trough extending southwards from it will move east. In the southern half of the kingdom weather will be mainly fine to fair at first but later cloudier conditions will prevail with occasional local rain or thundery showers. In the north of Scotland and perhaps Northern Ireland weather will be mainly cloudy with occasional rain or drizzle in most places.

Further Outlook.

GENERAL INFERENCE.

The depression over Central France is almost stationary but is gradually filling up. Another area of low pressure is indicated centred to the southwest of Iceland. Anticyclones centred over Scandinavia and to the southwest of Ireland are connected by a narrow ridge of high pressure across Scotland. Weather will mainly fair to cloudy apart from local showers, perhaps of a thundery type, and along the east coast some mist locally.

GENERAL INFERENCE.

A depression centred to the South of Iceland is moving Eastwards. A secondary to this depression is likely to form off Southwest Ireland and move Northeast across the British Isles. In East and Southeast England weather will be mainly fair and warm but in western and northern districts weather will be cloudy with some rain at times later.

Districts.	Forecast for the 24 hours commencing 15h. G.M.T. Friday, 4th June, 1926.
1. S.E. England	Wind variable to Southwesterly, light to moderate; mainly fair today but risk of rain tomorrow; mist locally; warmer.
2. E. England	
3. E. Midlands	
4. W. Midlands	Wind Southerly to Southwesterly, moderate, stronger at times locally; cloudy, occasional rain; visibility moderate to good; moderate temperature.
5. S.W. England	
6. South Wales	
7. North Wales	Winds Southerly, light to moderate; cloudy, occasional rain or drizzle; local coastal mist or fog; moderate temperature.
8. N.W. England	
9. N. Midlands	
10. N.E. England	Southerly winds; fresh locally; cloudy, occasional rain; visibility moderate to good; moderate temperature.
11. E. Scotland	
12. S.W. Scotland	
13. Isle of Man	As 10 - 11.
14. N. & N.W. Scotland	
15. Hebrides	
16. Orkneys and Shetlands	Wind S to SW or W, strong at times locally; cloudy, occasional rain then some fair periods; visibility moderate to good; moderate temperature.
17. N.W. Ireland	
18. N.E. Ireland	
19. S.E. Ireland	
20. S.W. Ireland	

Further Outlook.

Unsettled, particularly in Northwestern districts; some rain but considerable fair periods and warmer in Southeastern districts.

GENERAL INFERENCE.

A large anticyclone centred off N.W. Norway extends over most of the British Isles. The Atlantic depression is filling up, but another centre has probably developed near S. France or Northern Spain. Weather will be mainly fair except in the extreme S.W., but may become less settled and thundery later in Southern districts. Fog will be prevalent on the east coast.

Further Outlook.

Mainly fair in the North, rather unsettled in the South, with local thunderstorms; rather warm except on E. coast.

Districts.	Forecast for the 24 hours commencing 15h. G.M.T. Saturday, 5th June, 1926.
1. S.E. England	Wind E., light or moderate; mainly fair, but risk of local rain or thunderstorms tomorrow; some coastal fog; rather warm inland.
2. E. England	
3. E. Midlands	Wind E., light or moderate; mainly fair, but risk of local rain or thunderstorms tomorrow; local morning mist; rather warm.
4. W. Midlands	
5. S.W. England	Wind E., moderate; fair to cloudy, local rain and perhaps thunder; moderate temperature.
6. South Wales	As 3 - 4.
7. North Wales	
8. N.W. England	Wind E. to S.E., light; fair; local morning mist; rather warm.
9. N. Midlands	
10. N.E. England	Wind E., light; mainly fair, but much low cloud and fog near coast, and perhaps a little drizzle; cool on coast, rather warm inland.
11. E. Scotland	
12. S.W. Scotland	
13. Isles of Man	
14. N. & N.W. Scotland	As 7 - 9.
15. Hebrides	
16. Orkneys and Shetlands	As 10 - 11.
17. N.W. Ireland	
18. N.E. Ireland	As 7 - 9.

Capital letters indicate intense; suffix o indicates slight; repetition of letters indicates continuity. R = heavy rain. r = slight rain. rr = continuous rain. SYMBOLS. < = (less than (for cloud height). > = (more than (for precipitation). ☉ = solar halo. ☾ = lunar halo. With present weather is combined, wherever possible, the general character of the weather. A "solidus" divides actual existing weather from prevailing conditions, thus -bc/r= fair weather after rain; -bc/r= has decreased; -bc/r= has increased.																																
The BEAUFORT SCALE of WIND is used only for surface observations. In the accompanying table the speed of the wind corresponding with the different numbers is the speed at about 50 feet above the ground.

GENERAL INFERENCE.

The deep two-centred depression over the British Isles will move north slowly, and rotate counter-clockwise. It will soon become stationary and fill up slowly, causing showery weather over the British Isles for two or three days.

Further Outlook.

Showery and rather cool.

South Cone hoisted 1405 G.M.T. 9/6/26.

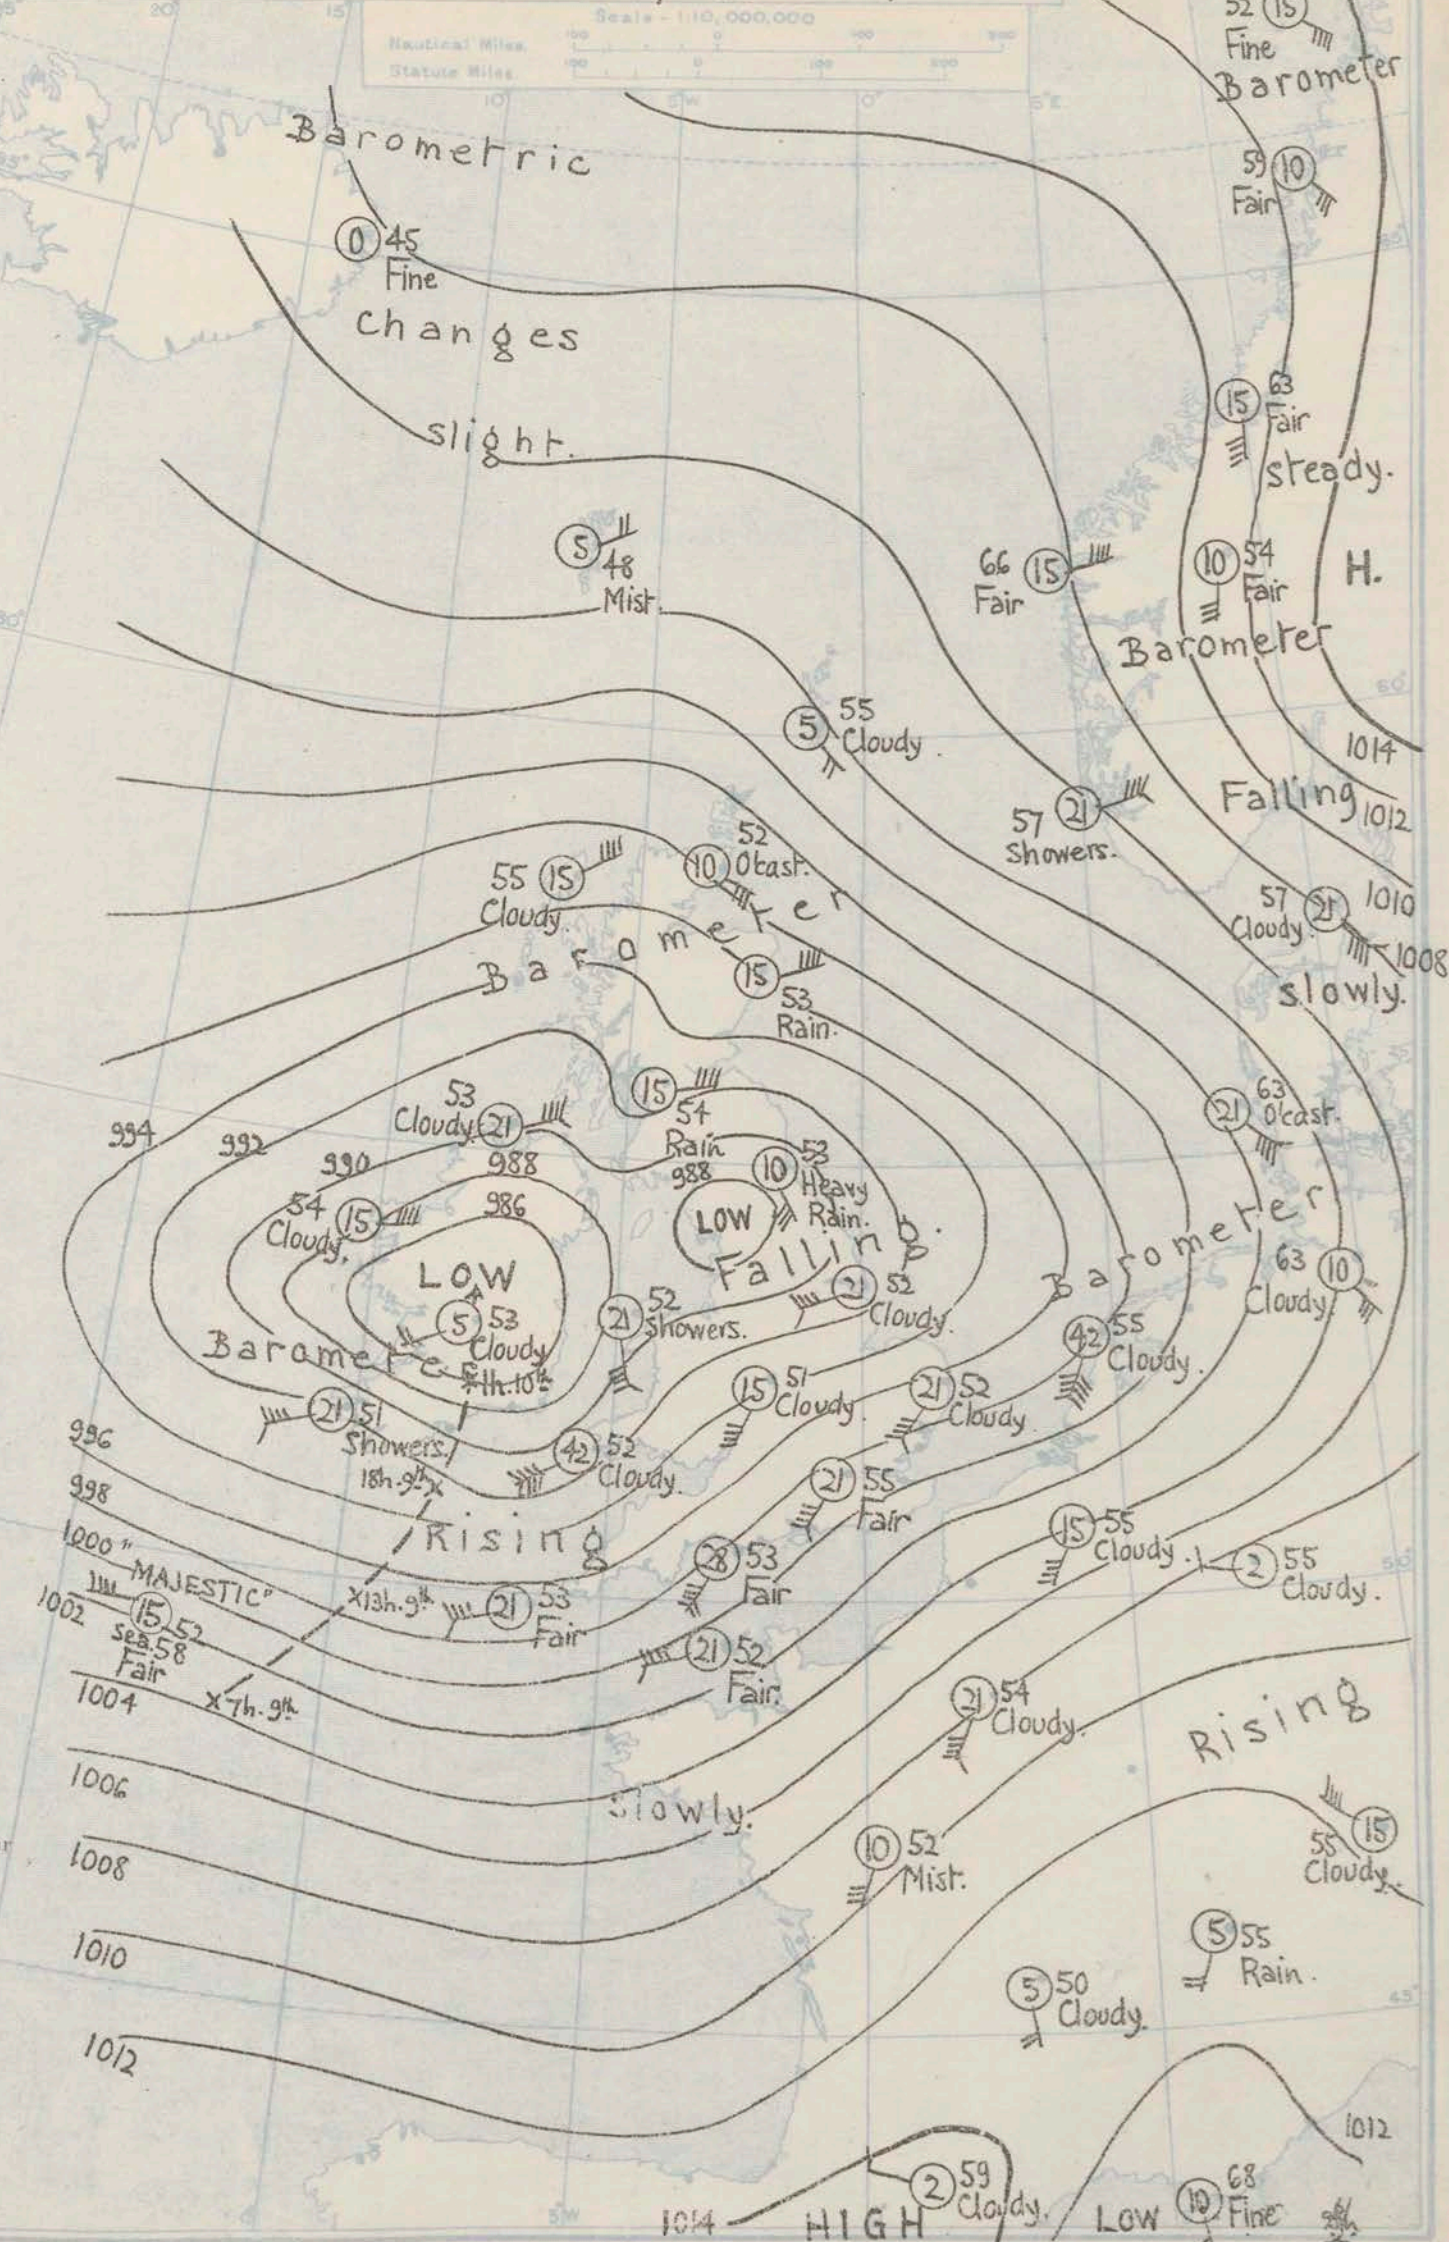

Wind S.W., fresh or strong; showers and bright intervals; local thunder; visibility good; rather cool.

Wind variable, finally W. to S.W., light to fresh; improving with showers and bright intervals and local thunder; visibility becoming good; rather cool.

Wind easterly to variable, mainly light or moderate; cloudy, occasional rain; fairer intervals later; visibility moderate to good; rather cool.

As 11 - 13.

Wind west, fresh or strong; showers and bright intervals; visibility good; cool.

All times are G.M.T. Add one hour
for summer time.

GENERAL INFERENCE.

The depression off the north-west of Ireland is filling up, but small secondary disturbances are still likely to cross the British Isles where the weather will be mainly fair apart from local thundery showers or occasional rain.

Further Outlook

Continuing unsettled.

				rr = continuous rain.														
				SYMBOLS.														
				< = (less than (for cloud height).														
				⊕ = solar halo. ⊙ = lunar halo.														
				With present weather is combined, whenever possible, the general character of the weather.														
				A "solidus" divides actual existing weather from preceding conditions, thus: - h/r = fair weather after rain; - = has decreased; + = has increased.														
The BEAUFORT SCALE OF WIND is used only for surface observations. In the accompanying table the speed of the wind corresponding with the different numbers, is the speed at about 30 feet above the ground.

The depression over Northern England is filling in but the main areas of high pressure are still far to the southwest and north of the British Isles and there is no indication as yet of a change to settled fair weather. Showers and local thunder are probable today but there will be considerable sunny periods especially possibly in northern England and eastern Scotland.

Unsettled.

All times are G.M.T. Add one hour to get summer time.

x hoar frost. y dry air.
z dust haze; the turbid atmosphere of dry weather.
h(r)="hail" or "rain and hail."
Capital letters indicate intense; suffix o indicates slight; repetition of letters indicates continuity.
R = heavy rain. ro = slight rain.
rr = continuous rain.

SYMBOLS.

< = { less than (for cloud height).
< = { before (for precipitation).
⊕ = solar halo. ⊙ = lunar halo.
With present weather is combined, whenever possible, the general character of the weather.
A "solidus" divides actual existing weather from preceding conditions, thus: -bc/r = fair weather after rain; ~ = has decreased; + = has increased.

SEA DISTURBANCE.

0=no swell	Calm or
1=mod. swell	slight

Nautical Miles 100 200 300
Statute Miles 100 200 300

All times are G.M.T. Add one hour to get summer time.

EXPLANATION.
Isobars are drawn for intervals of two millibars.
Direction is shown by arrows along with the wind force, on the scale indicated by the number of lines. Mean velocity is shown in miles per hour by figures in small circles.
TEMPERATURE is given in degrees F.
CLOUD SYMBOLS:
sky i. clouded.
overcast sky.
rain falling.
fog.
thunder.

GENERAL INFERENCE.

A wedge of high pressure over the British Isles is moving eastward and increasing in intensity, and a depression south of Iceland is moving northeast. Over the greater part of England weather will be fair or fine and rather warm, but in northwest districts weather will be cloudy with some rain.

Further Outlook.

Unsettled in the N.W. In the S.E. weather will be fine and warm for a day or two at least, and the general prospects appear better than for some time past.

SYMBOLS.
< = (less than (for cloud height).
@ = (before (for precipitation).
☉ = solar halo. ☽ = lunar halo.
With present weather is continued, whenever possible, the general character of the weather.
A "solidus" divides actual existing weather from preceding conditions.
thus -bc/r = fair weather after rain; - = has decreased; + = has increased.

The BEAUFORT SCALE of WIND is used only for surface observations. In the accompanying table the speed of the wind corresponding with the different numbers, is the speed at about 30 feet above the ground.

h(r) = " hail " or " rain and hail."
Capital letters indicate intensity; suffix o indicates slight; repetition of letters indicates continuity.
R = heavy rain. r = slight rain.
rr = continuous rain.
SYMBOLS.
< = (less than (for cloud height).
= = before (for precipitation).
☉ = solar halo. ☾ = lunar halo.
With present weather is contained, whenever possible, the general character of the weather.
A "solidus" divide actual existing weather from preceding conditions, thus: -bc/r = fair weather after rain; - = has decreased; + = has increased.

THE BEAUFORT SCALE OF WIND.

WIND is used only for surface observations. In the accompanying table the speed of the wind corresponding with the different numbers, is the speed at about 30 feet above the ground.
SEA DISTURBANCE.
0 = no swell. 1 = mod. swell. 2 = heavy swell. 3 = no swell. 4 = mod. swell. 5 = heavy swell. 6 = rather rough sea. 7 = rough sea. 8 = very rough sea. 9 = mountainous sea.

2 = Soft (muddy) wet ground.
3 = Bare ground frozen (but less than 2 ins. deep).
4 = Bare ground frozen (but more than 2 ins. deep).
5 = Dew (or wet grass but not wet ground).
6 = Skating to-day in 1900 and 1900 reports (Hoar frost in 1100 and 0700 reports).
7 = Snow (thin layer, often not continuous).
8 = Snow (deep, impeding traffic, usually a continuous layer).
9 = Glazed roads (ice on roads from frozen rain or melted snow).

GENERAL INFERENCE.

Pressure is high over the Eastern Atlantic and lowest over Scandinavia, and is relatively low over Spain. Winds will be northwest to north and weather fair apart from a few scattered showers, chiefly in the north of Scotland.

Further Outlook.

Mainly fair but cool, especially in eastern districts; wind probably becoming northeasterly over Southern England.

EXPLANATION.
Isobars are drawn for every 2 millibars.
Wind direction is shown by arrows.
Wind force is shown by the number of lines.
Rain falling is shown by a circle with a vertical line through it.
Thunderstorms are shown by a circle with a lightning bolt through it.
Fog is shown by a circle with a horizontal line through it.
Drizzle is shown by a circle with a diagonal line through it.
Other symbols are used to represent different weather conditions, such as 'Fair', 'Cloudy', 'Rain', 'Fog', 'Drizzle', 'Thunderstorms', etc.

GENERAL INFERENCE.

An anticyclone remains stationary over the northeast Atlantic and a depression over Skagerrak is moving slowly southeast and becoming less deep. Shallow secondaries are likely to develop over the Eastern half of England, with some thundery showers or occasional rain in that area. In the west and north, weather will be fair apart from local showers.

The anticyclone is now centred over Southern Ireland and is moving eastwards. Further small and shallow secondaries are likely to cross Scotland and northeast England causing in those areas occasional showers or drizzle locally. In the southern half of the British Isles weather will be mainly fair and rather warm. Mist or fog will be rather widespread during the night.

GENERAL INFERENCE.

The anticyclone is now centred over the Southern North Sea and is moving eastwards slowly. In southern districts weather will be mainly fair and warm but conditions are becoming more favourable for the formation of local thunderstorms. In northern districts skies will be variable and, owing to the passage eastwards of small and shallow secondaries, occasional local showers or drizzle is probable.

Districts.	Forecasts for the 24 hours commencing 15h. G.M.T.	Tuesday, 29th June, 1926.	Further Outlook.
1. S.E. England 2. E. England 3. E. Midlands 4. W. Midlands 5. S.W. England 6. South Wales 7. North Wales 8. N.W. England 9. N. Midlands 10. N.E. England	Wind variable, light or moderate; mainly fair but risk of local thunderstorms or thundery showers; mist or fog locally during night; warm.		Probably continuing mainly fair and local thunderstorms; there is a tendency to become less settled again generally.
11. E. Scotland 12. S.W. Scotland 13. Isle of Man 14. N. & N.W. Scotland 15. Hebrides 16. Orkneys and Shetlands 17. N.W. Ireland 18. N.E. Ireland	Wind variable or westerly, light or moderate; variable skies, occasional local showers or drizzle; morning mist or fog locally; moderate temperature.		
19. S.E. Ireland 20. S.W. Ireland	Wind variable or easterly, light or moderate; mainly fair, slight risk of local thundery showers; morning mist in places; warm.
