

## Storm Dennis

Storm Dennis impacted the UK on Saturday 15 and Sunday 16 February, just a week after Storm Ciara which also brought strong winds and heavy rain to the whole of the UK.

Rainfall totals from Storm Dennis caused the most significant impacts with flooding in parts of south Wales and England. Between midnight on the morning of Saturday 15 February and 10:00 on Monday 17 February a Natural Resources Wales site at Crai Resr in Powys, south Wales, recorded 157.6mm of rainfall. A number of locations recorded significant portions of their monthly average rainfall totals for the month.

The strongest wind gust was recorded at Aberdaron in north west Wales, where 91mph was recorded at 18:00 on Saturday. The winds were not confined to the west, with gusts over 50mph recorded quite widely from Kent to Aberdeenshire.

The infographic is divided into two main sections. The left section has a dark background with white and yellow text. It features logos for the Met Office, the Welsh Government, and the Royal Netherlands Meteorological Institute. Below these, the title 'Storm Dennis' is written in large yellow letters. Underneath the title, it says '91 mph' with a wind icon, 'Aberdaron, West Wales' with a location pin icon, and '15-17/2/2020' with a calendar icon. Two paragraphs of text follow, summarizing the storm's impact and the highest recorded wind gust. The right section is a satellite image of the storm system over the North Atlantic, showing a large, swirling low-pressure area. At the bottom right of the infographic, there is a small credit line: 'Image: © Crown Copyright, Met Office, Data: EUMETSAT'.
