

DAILY WEATHER SUMMARY

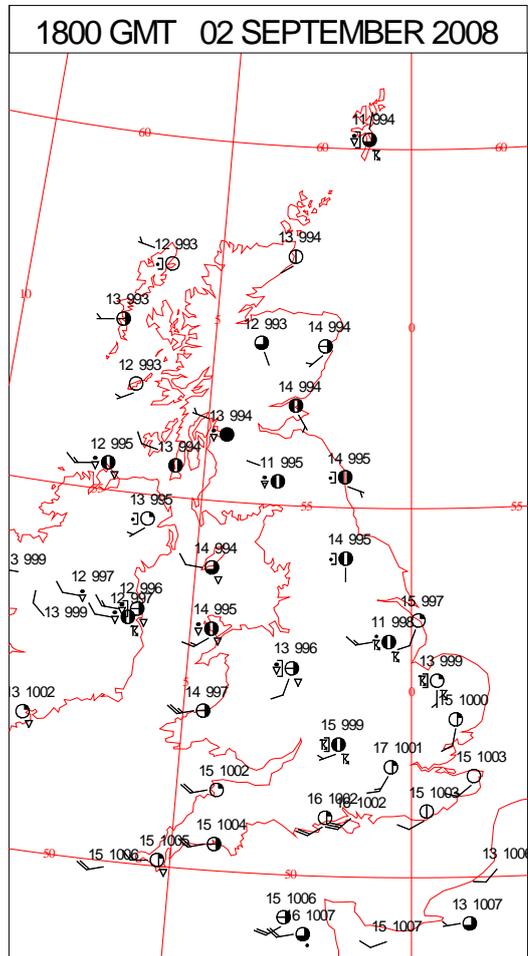

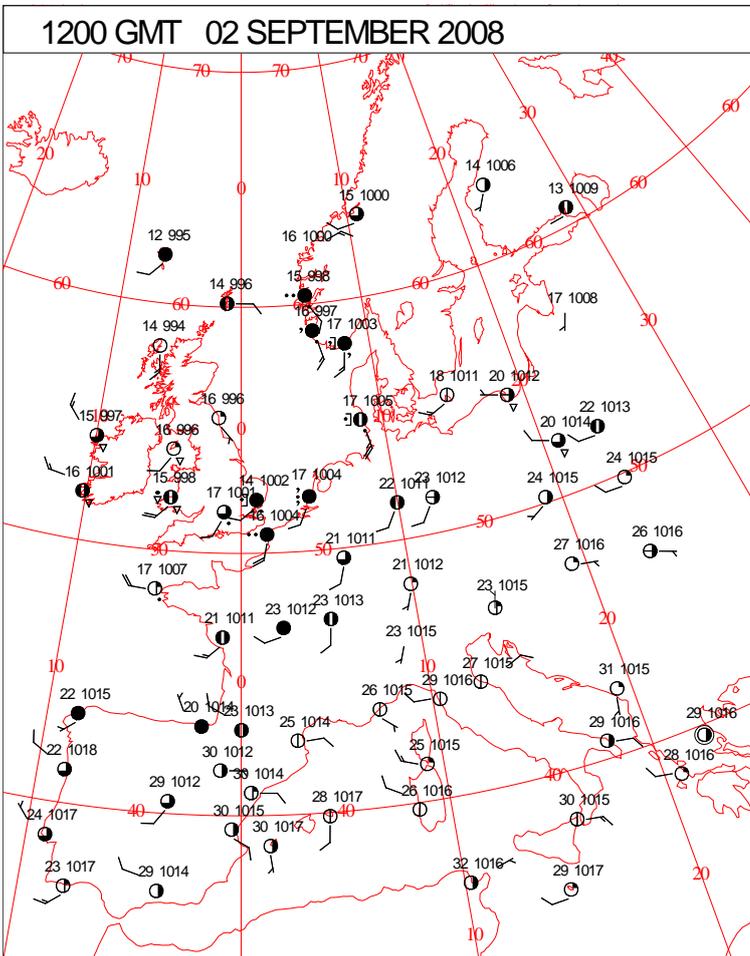

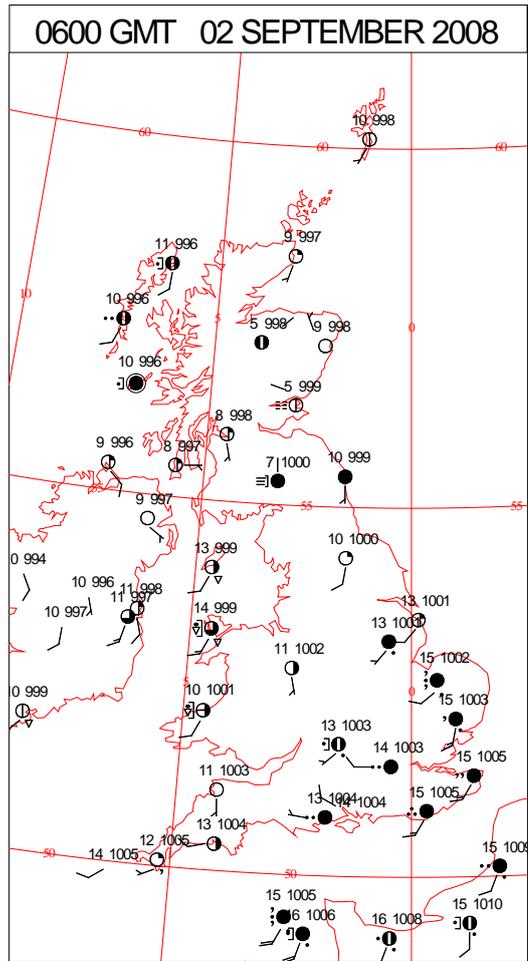

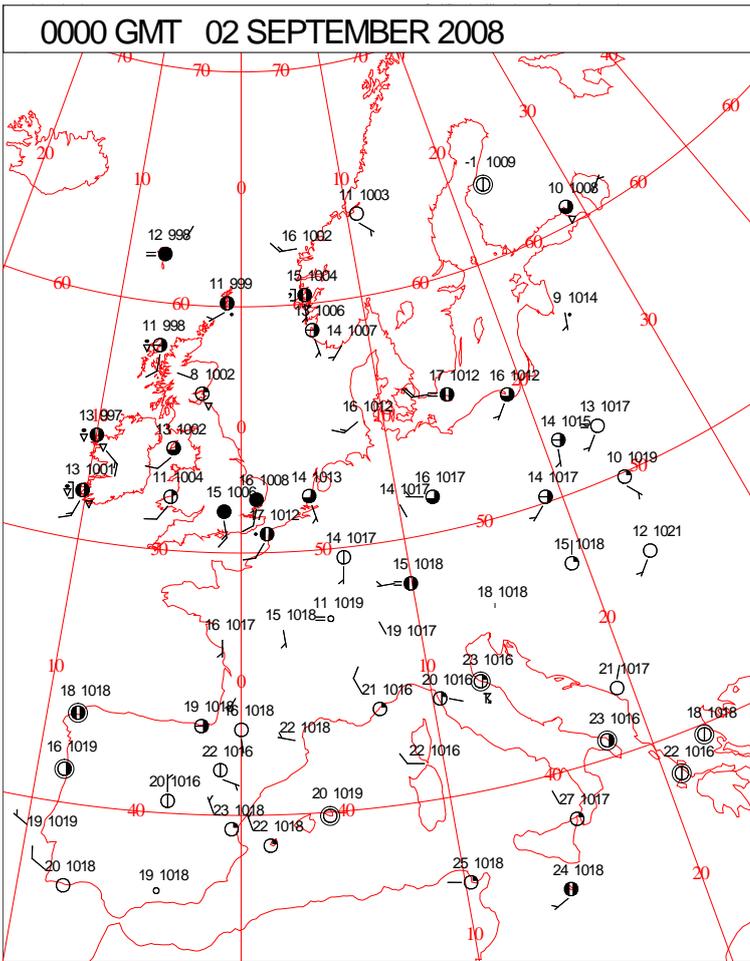

SIGNIFICANT WEATHER

0600 GMT 01 SEPTEMBER 2008 SIG WEATHER	1200 GMT 01 SEPTEMBER 2008 SIG WEATHER	<p>Summary of UK Weather for Monday 01 September 2008. Outbreaks of rain across eastern England overnight cleared away, then many places had a mostly dry night with broken cloud and some clear spells. It became cooler and fresher from the west with lowest temperatures generally in the range 8–12 °C. During the day, there were some sunny spells, especially during the morning, but the best of the sunshine and warmest weather was in the south-east where some places reached 21 °C. However, showers in the west developed during the day to become quite widespread. These merged into longer spells of rain for a time across western Scotland. Meanwhile showers across Northern Ireland became thundery during the afternoon and spread into south-west Scotland and north-west England during the evening. Across Wales and south-west England, showers merged into longer spells of rain during the afternoon, with these longer spells of rain extending north-eastwards across much of the Midlands by evening. The rain was locally heavy too, with places in South Wales recording more than one inch of rain.</p>

SIGNIFICANT WEATHER

0600 GMT 02 SEPTEMBER 2008 SIG WEATHER	1200 GMT 02 SEPTEMBER 2008 SIG WEATHER	<p>Summary of UK Weather for Tuesday 02 September 2008. A band of rain lay across much of southern England and into south Wales overnight. Some of the rain was heavy and there were some short-lived torrential downpours in places. During the morning, the band of rain cleared away slowly south-eastwards, the rain clearing south-west England by around dawn but taking until the early afternoon to clear from Sussex and Kent. Scattered heavy showers over western Scotland, Northern Ireland and western Wales early in the day became more widespread and developed to become frequent during the afternoon. Some of the showers were heavy and slow-moving with thunder. There was a report of tornado near Stornoway and a funnel cloud was reported off Aberdeen (near Peterhead) both at around 1330 UTC. During the evening there were further showers in many areas, these especially heavy across northern England, and especially thundery across eastern England. Marble-sized hailstones were reported in Aylesbury early in the evening. Later on, the showers became less frequent and less heavy. It was a cool day generally, and it felt especially cool across southern areas during the afternoon as winds became strong and, around some of the heavier showers, very gusty.</p>

SIGNIFICANT WEATHER

0600 GMT 03 SEPTEMBER 2008 SIG WEATHER	1200 GMT 03 SEPTEMBER 2008 SIG WEATHER	Summary of UK Weather for Wednesday 03 September 2008.
		<p>During the night many eastern parts of England, Scotland and Northern Ireland were dry with clear spells. It was also chilly in parts of Scotland and a ground frost formed in places with air temperatures at Altnaharra falling close to freezing. Further west there were some showers around during the night. Then, during the morning, an area of locally very heavy rain transferred eastwards across Northern Ireland. This cleared away early in the afternoon, moving into south-western Scotland, north-western England and Wales instead. Elsewhere, there was a mixture of sunny intervals and scattered showers, some of which were heavy. There were also some thunderstorms. It was a very windy day in exposed southern and western parts of both England and Wales with gusts in excess of 60 m.p.h. along the south coast of Wales. During the evening, showers became fewer and further between across many central and northern areas, but a line of showery rain edged slowly southwards across parts of south Wales and inland parts of southern England. Some very heavy rain was recorded across the hills of south Wales, whilst another narrow band of thundery showers affected parts of the Manchester Basin before weakening later.</p>

SIGNIFICANT WEATHER

0600 GMT 04 SEPTEMBER 2008 SIG WEATHER	1200 GMT 04 SEPTEMBER 2008 SIG WEATHER	Summary of UK Weather for Thursday 04 September 2008.
		<p>During the night parts of Gloucestershire, southern Wales and northern parts of Cornwall, Devon and Somerset had some outbreaks of locally very heavy rain which led to flooding in places. Other southern and western areas also had some showers, but further north and east it was mainly dry and quite chilly with clear spells and a few mist and fog patches. Overnight the minimum temperature was 1.2 °C, at Cairngorm. Then, during the day, there were further outbreaks of locally very heavy and thundery showers or longer spells of rain across Wales and the southern half of England. Scotland, Northern Ireland and northern England also had some showers, some of which were heavy and thundery, although there were also some sunny intervals. The top temperatures were 19.6 °C at Strathallan airfield and 19.3 °C at Gravesend. During the evening the showers largely died away across Northern Ireland, northern England, East Anglia and much of Scotland. Meanwhile, outbreaks of rain, locally heavy, moved across southern England and Wales, with more persistent and also locally heavy rain arriving across the far south-west by midnight.</p>

SIGNIFICANT WEATHER

0600 GMT 05 SEPTEMBER 2008 SIG WEATHER	1200 GMT 05 SEPTEMBER 2008 SIG WEATHER	<p>Summary of UK Weather for Friday 05 September 2008.</p> <p>During the night, an area of locally heavy rain moved north-eastwards across Wales and the southern half of England, with some very heavy bursts affecting Cornwall, Devon and Pembrokeshire later. Northern Ireland, Scotland and the north of England were mainly dry and locally chilly with patchy fog. There was even an air frost in a few Highland glens (−1.7 °C at Braemar). During the day, the rain continued to move northwards, spreading into northern England, southern Scotland and Northern Ireland, while at the same time a clearance to locally very heavy, prolonged and thundery showers followed into Wales and southern and western parts of England. There were reports of flooding in places, especially across parts of southern Wales and also in parts of south-western England. In the evening, isolated flooding occurred across south-east England; up to 60 mm fell in parts of southern Wales while 25–40 mm fell over large areas. It was also windy during the morning in exposed parts of southern England, with the strong winds then transferring to northern England as the day went on. The maximum temperatures during the day were around 19 °C in London, but only around a disappointing 13 °C on the north-eastern coast of England.</p> <p>In the 24 hours up to midnight, 75 mm of rain fell at Liscombe, and 52 mm at Harwarden airport, with many places across England and Wales receiving 20–40 mm.</p>

SIGNIFICANT WEATHER

0600 GMT 06 SEPTEMBER 2008 SIG WEATHER	1200 GMT 06 SEPTEMBER 2008 SIG WEATHER	<p>Summary of UK Weather for Saturday 06 September 2008. Overnight, areas of heavy rain across northern and central England continued to move slowly northwards, though parts of northern Scotland and southern England remained largely dry. It was a generally mild night with strong winds at times around the coasts. There was, however, a patchy ground frost in the far north of Scotland. Then, during the day, often heavy and persistent rain continued across parts of southern Scotland and northern England, particularly in Borders Region and Northumberland. Further south across England and Wales there was a mixture of showers and longer spells of rain, locally very heavy with thunder. Many areas in England and Wales experienced localised flooding. In Northern Ireland there were a few spots of rain in eastern areas but central and western areas were dry with sunny intervals. Most of northern Scotland was also dry and bright. It was windy across much of the UK. Afternoon temperatures were generally close to or slightly below average, although it was disappointingly chilly in the wind and rain on the north-east coast of England and south-east coast of Scotland.</p>

SIGNIFICANT WEATHER

0600 GMT 11 SEPTEMBER 2008 SIG WEATHER	1200 GMT 11 SEPTEMBER 2008 SIG WEATHER	<p>Summary of UK Weather for Thursday 11 September 2008. It was mild in places overnight with a minimum temperature of 17.3 °C at London Weather Centre, and many places in the south-east recording 15–17 °C. The minimum at Mumbles Head was 14.8 °C, while Cardinham recorded 11.4 °C, and values were in single figures over the Scottish hills. Rain spread from the west overnight from Northern Ireland to Wales and western England, locally heavy over western hills. Showers occurred in western areas behind the front — overnight rainfall values included 17 mm at Capel Curig, and 11 mm at West Freugh. It was dry and warm in the far east at first, but during the day rain continued to spread across England with sunny spells and a scattering showers developing further west. The highest temperature was recorded at Weybourne (22.8 °C), with Manston at 21.5 °C, and Carlisle at 20.0 °C. Throughout the evening, outbreaks of rain continued to feed north across eastern England, with locally heavy showers or longer spells of rain across western England and western Scotland, Wales and Northern Ireland.</p>

SIGNIFICANT WEATHER

0600 GMT 12 SEPTEMBER 2008 SIG WEATHER	1200 GMT 12 SEPTEMBER 2008 SIG WEATHER	<p>Summary of UK Weather for Friday 12 September 2008. Scotland and Northern Ireland, along with much of England and Wales, had a dry night, although there were a few showers in western areas, and cloudy skies with outbreaks of rain moved into eastern parts of England as well. Patches of mist and fog formed, and the minimum temperature of 5.7 °C was recorded at Larkhill. Then, during the day, widespread rain continued to spread northwards along the eastern side of England, although the south-east brightened up again. Through the evening the rain cleared north from East Anglia, allowing patchy mist and low cloud to form late evening. Elsewhere in England, Wales and Northern Ireland there was a mixture of bright or sunny intervals and scattered showers. Across central and southern England many of these showers became very heavy with thunder, and parts of Dorset, Wiltshire and Hampshire had some locally torrential downpours with hail. In the hour ending 1800 UTC, 28.2 mm of rain fell at Larkhill and 21.0 mm at Boscombe Down. Flooding was reported in Bournemouth. These showers slowly weakened during the course of the evening. Most of Scotland had a dry day, with sunny intervals in western areas. However, outbreaks of rain moved into the east later. The maximum temperature was recorded in London (20.0 °C).</p>

SIGNIFICANT WEATHER

Summary of UK Weather for Monday 15 September 2008.
 Northern Ireland and western and northern parts of Great Britain had a cloudy night with outbreaks of rain. The rain was heavy for a time across Northern Ireland, although it became light and patchy here after dawn. Central and eastern parts of England had a dry albeit generally rather cloudy night. Then during the day the rain became heavy and persistent across western and southwestern Scotland. There was also some rain across most other parts of Scotland, some eastern parts of Northern Ireland, northwestern England and parts of Wales (especially the north). Away from these areas it was a generally dry day. There was a lot of higher level cloud around, which tended to blot out the sun in quite a few places, but that said there was some pleasant sunshine across much of central southern England. The afternoon temperature was generally quite close to the average for September across the drier areas but a bit cooler than average in the wetter areas in the north.

0600 GMT 18 SEPTEMBER 2008 SIG WEATHER	1200 GMT 18 SEPTEMBER 2008 SIG WEATHER	Summary of UK Weather for Thursday 18 September 2008.
		<p>England and Wales had a dry night with clearing skies. This allowed some mist and fog patches to form which were stubborn to clear in places, especially in the Vale of York. It was also a cold night in places, with parts of the Midlands down to around 3 °C in the air. Rain moved across western Scotland overnight, gradually progressing eastwards and southwards through the day with the odd heavier bursts. England and Wales remained essentially dry with some pleasant sunshine in just a light breeze. The afternoon temperatures widely reached 19–20 °C in places from as far north as North Yorkshire. Liscombe in Devon was the warmest place with a top temperature of 21.7 °C. Under the cloud and rain many parts of Scotland struggled to reach the mid 'teens. Through the evening, rain continued across Northern Ireland and Scotland, with some locally heavy bursts of rain still, also extending south-eastwards across northern England. Further south and east of the rain band the cloud gradually thinned, with clear skies across much of southern England, south Wales and East Anglia during the evening. This allowed patchy mist and a few fog patches to develop late evening across parts of southern Wales and southern England.</p>

SIGNIFICANT WEATHER

0600 GMT 19 SEPTEMBER 2008 SIG WEATHER	1200 GMT 19 SEPTEMBER 2008 SIG WEATHER	<p>Summary of UK Weather for Friday 19 September 2008. Cloud and outbreaks of rain gradually moved south through the night, with the rain becoming lighter and more patchy with time. The south of England saw some brief mist patches before the cloud arrived, and it did turn quite chilly in places with some of the colder spots in the south-east down to 3 °C and a touch of grass frost. The rain area had all but petered out by the time it reached the Midlands, so much of England and Wales stayed generally dry through this zone. The cloud broke to give a good deal of sunshine through the day, though western Scotland and Cumbria did retain a large amount of cloud. With just a light breeze and little cloud it did turn quite warm with the temperature around 20 °C in many places. Through the evening the majority of the UK was dry, with largely clear skies across Wales, the southern half of England and the Channel Islands. Further north there was much more cloud, although still some breaks occurred, especially across Northern Ireland.</p>

0600 GMT 20 SEPTEMBER 2008 SIG WEATHER	1200 GMT 20 SEPTEMBER 2008 SIG WEATHER	<p>Summary of UK Weather for Saturday 20 September 2008. During the night it was cloudy over most of Scotland, Northern Ireland and much of northern England although, apart from a little light rain and drizzle in western areas, it was dry. Further south across England and Wales it was dry with clear spells, although patchy mist and fog formed. It also became chilly in places, especially in southern England probably with a touch of ground frost in places. The mist and fog patches dispersed during the morning to leave a dry day across England and Wales with plenty of sunshine. North-east Scotland also had plenty of sunshine, as did Northern Ireland once early extensive cloud had broken up. Most of western and central Scotland had a cloudy day. With a few patches of light rain here and there, although even here most places remained dry. The sunshine and light breeze gave much of the UK a warm feel to the day; this was reflected in the temperatures with many parts seeing in excess of 20 °C, certainly warmer than normal for the latter part of September.</p>

SIGNIFICANT WEATHER

0600 GMT 21 SEPTEMBER 2008 SIG WEATHER	1200 GMT 21 SEPTEMBER 2008 SIG WEATHER	<p>Summary of UK Weather for Sunday 21 September 2008. With the exception of western Scotland where it was cloudy with some rain, the UK awoke to another fine and sunny day. There were some mist and fog patches around though, particularly up the Vale of York and across central and south-eastern England. These did not take too long to clear, and so the majority of England and Wales had another fine and sunny day. Meanwhile, over Scotland the rain along the west coast made slow progress eastwards across the country, reaching the east coast around dusk. The rain did turn increasingly light and patchy and some areas did stay dry, although some heavier bursts did occur at times across the western Highlands. Across Northern Ireland it turned cloudy by the afternoon as it did also across northern England, and by the end of day there were a few spots of rain. Following a cold start, particularly so across southern England, temperatures recovered to a little above normal for the time of year, though it did turn quite cool over Scotland later as the rain cleared.</p>

SIGNIFICANT WEATHER

0600 GMT 22 SEPTEMBER 2008 SIG WEATHER	1200 GMT 22 SEPTEMBER 2008 SIG WEATHER	<p>Summary of UK Weather for Monday 22 September 2008. During the night, outbreaks of chiefly light rain moved south through south-eastern Scotland and down the eastern side of England. Elsewhere, although it was dry, it was also chilly in the north. Indeed, in the Scottish Highlands there was a widespread ground frost and patchy air frost by dawn, along with a few mist and fog patches. Then during the day, outbreaks of chiefly light but occasionally moderate rain continued to move down the eastern side of England, with a few showers also moving into the west Midlands and Wales. In general, England and Wales experienced less sunshine compared to the weekend, although there were some sunny intervals in southern and western areas, and also in the far north of England, especially later. Scotland and Northern Ireland, however, experienced a dry day with plenty of sunshine. The afternoon temperature was generally close to the average for September across southern areas, and also across Scotland and Northern Ireland. However, it was distinctly chilly across parts of north-eastern England in a moderate northerly breeze.</p>

SIGNIFICANT WEATHER

0600 GMT 23 SEPTEMBER 2008 SIG WEATHER	1200 GMT 23 SEPTEMBER 2008 SIG WEATHER	<p>Summary of UK Weather for Tuesday 23 September 2008. During the night, patches of chiefly light rain pushed across parts of eastern and south-eastern England, accompanied by a brisk north to north-easterly wind. Elsewhere, although it was generally dry, in the north there were a few mist and fog patches. It was also distinctly chilly in the southern Highlands of Scotland, with the town of Tyndrum recording an air frost. Then during the day, eastern, south-eastern and central southern England were cloudy for most of the time with further patches of rain. Much of the rain was light but there were a few heavier bursts around, especially in Kent. Away from these areas the day was largely dry with variable, often large, amounts of cloud allowing some bright or sunny intervals to develop in most locations, especially in Northern Ireland, northern Wales and north-western England. The bulk of Scotland however became rather cloudy. The afternoon temperatures were generally close to average in central, southern and western areas but a bit below average in the east and north.</p>

SIGNIFICANT WEATHER

0600 GMT 25 SEPTEMBER 2008 SIG WEATHER	1200 GMT 25 SEPTEMBER 2008 SIG WEATHER	<p>Summary of UK Weather for Thursday 25 September 2008. Many areas had a fine day, with broken cloud and sunny spells. With the sunshine and light breezes — north-easterly across southern parts and southerly across northern Scotland — it felt very pleasant. Most places remained dry, but some thicker cloud bought outbreaks of light rain to the far north-west of Scotland throughout the day. Throughout the evening, large amounts of high cloud spilled south-eastwards across the northern half of the UK, but still areas of mist and also fog developed across north-east England. Places further south remained dry with long clear periods.</p>

SIGNIFICANT WEATHER

0600 GMT 26 SEPTEMBER 2008 SIG WEATHER	1200 GMT 26 SEPTEMBER 2008 SIG WEATHER	<p>Summary of UK Weather for Friday 26 September 2008. Mist and fog was widespread at first, thickest over the east Midlands where it lifted to low cloud during the morning. Plenty of mainly high cloud fed across Scotland although, later, lower cloud affected western Scotland and Northern Ireland. Otherwise it was dry and rather warm with sunny spells. Temperatures reached the upper 'teens Celsius widely. Throughout the evening, Northern Ireland, western and central Scotland remained cloudy, while thinner high cloud continued to drift across the rest of the northern half of the UK. Further south, the sky remained largely clear, which allowed some mist and patchy fog to form across parts of East Anglia and north-east England.</p>

0600 GMT 27 SEPTEMBER 2008 SIG WEATHER	1200 GMT 27 SEPTEMBER 2008 SIG WEATHER	Summary of UK Weather for Saturday 27 September 2008.
		<p>Mist and fog formed over many parts of England and Wales during the night, but lifted into low cloud over much of southern England by daybreak. The mist, fog and low cloud generally dispersing during the morning although, in a few spots, it persisted into the early afternoon, then becoming dry and quite sunny with light winds. Mist and fog returning to parts of southern England and south Wales in the evening. Chilly overnight minima were in single figures inland, becoming pleasantly warm by day. After some early brightness over southern Scotland and Northern Ireland, a band of cloud and light occasionally moderate rain affecting north-western areas overnight moved steadily south-east. Clearer conditions following with a few showers over the north of Scotland. The rain crossing northern England during the evening.</p>

SIGNIFICANT WEATHER

0600 GMT 28 SEPTEMBER 2008 SIG WEATHER	1200 GMT 28 SEPTEMBER 2008 SIG WEATHER	<p>Summary of UK Weather for Sunday 28 September 2008. Patchy fog across southern England and south Wales cleared away during the morning to leave these parts fine and dry with a good deal of warm sunshine. A band of cloud across north Wales, the north Midlands and Lincolnshire gave occasional light rain during the morning, before moving southwards into southern Wales, the south Midlands and Norfolk during the afternoon. To the north of the cloud band, fine weather prevailed across northern England and the south and east of Scotland, albeit with a fresher, breezy feel to the day. Partly sunny, cool and breezy across Northern Ireland and the rest of Scotland, although here showers became increasingly frequent through the afternoon, especially across western Scotland. The showery weather continued across western Scotland throughout the evening, while elsewhere across the UK it remained largely fair. The maximum temperature ranged from slightly below normal in the north-west, to above average across southern England.</p>

SIGNIFICANT WEATHER

0600 GMT 29 SEPTEMBER 2008 SIG WEATHER	1200 GMT 29 SEPTEMBER 2008 SIG WEATHER	<p>Summary of UK Weather for Monday 29 September 2008. Heavy showers affected western Scotland through the early hours, while elsewhere across the UK it was largely dry with only isolated light showers. During the morning, heavy showers continued to affect western Scotland, before spreading to the rest of Scotland and Northern Ireland during the afternoon, although there was some sunshine between the showers. Elsewhere across England and Wales, the day saw a mix of sunshine and broken cloud, with the best of the sunshine across southern England. The broken cloud giving a scattering of fairly light showers across northern and central England and Wales. The evening was largely cloudy across England, Wales and Northern Ireland, with some outbreaks of rain in the north and west. Further north over Scotland, it became clear in the east during the evening, while remaining very showery in the west. A stiff westerly wind made it feel fresher across all parts, with maximum temperatures generally near or just below the seasonal norm. Maximum temperatures in the far south were just above average for late September.</p>

SIGNIFICANT WEATHER

0600 GMT 30 SEPTEMBER 2008 SIG WEATHER	1200 GMT 30 SEPTEMBER 2008 SIG WEATHER	<p>Summary of UK Weather for Tuesday 30 September 2008. During the night outbreaks of rain spread eastwards across much of the country. This was mainly light and intermittent in the south and east, although some heavy and persistent rain occurred in western Wales, north-western England, Northern Ireland and south-western Scotland. Scattered heavy showers fed into north-western Scotland but north-eastern Scotland stayed mainly dry. It also became windy in the west of England and Wales, with gales along some western coasts. Then during the day, outbreaks of rain continued across England and Wales, with some heavy and persistent rain falling in western Wales and north-west England. Brighter weather with scattered showers gradually spread across Northern Ireland and Scotland, although the east and south-east Scotland became mainly dry and experienced plenty of afternoon sunshine. It was a windy day, especially in exposed western areas.</p> <p>The afternoon temperature was generally a bit below average and it felt distinctly cool in the more exposed windy areas.</p>
