NOTES ON THE AEROLOGICAL SITUATION.

The thermal trough over the Western Atlantic has warmed out as it has moved steadily eastwards, while the wedge in advance of it, although moving east in its northern section, has not declined.

The strong northeasterly current at all levels to the southwest of Ireland is carrying cold air towards the Azore - Portugal region.

NOTES ON THE AEROLOGICAL SITUATION.

Warmer air has spread southeastwards over the British Isles at all levels, breaking the abnormally cold spell of the last 3 days. While the main feature in the Atlantic is a wedge covering most of the ocean, there is evidence in the temperature and wind ascents during the day in position 52°N. 35°W. that there still exists a remnant, in the form of a cold pool, of the cold trough which moved eastwards from Newfoundland on the 4th.

NOTES ON THE AEROLOGICAL SITUATION.

The main cold trough over Europe was reinforced by the secondary trough which formed northwest of the British Isles on the 13th. The broad effect was an apparent westward regression of the main cold trough and the flooding of Britain with very cold air.

NOTES ON THE AEROLOGICAL SITUATION.

The major cold trough over Britain sharpened as the very cold air penetrated into France and somewhat warmer air advanced towards the Faeroes from both Iceland and Norway.

The broad pattern of warm ridge in the central Atlantic and cold trough over Britain showed little change.

NOTES ON THE AEROLOGICAL SITUATION.

The warm ridge on the Atlantic advanced a little eastward and warm air from Norway moved westward towards Shetland. In consequence the major cold trough was narrowed considerably in the region of the Faeroes and cold pools were cut off over England and Switzerland.

NOTES ON THE AEROLOGICAL SITUATION.

The cold pool central over the Alps moved very slightly east during the day and warmed out somewhat. Warm air associated with a developing depression near Iceland moved steadily east and the upper ridge moved to near the British Isles. A strong west to southwest thermal gradient continued to affect the Northwest Atlantic and the adjacent land areas.

NOTES ON THE AEROLOGICAL SITUATION.

The tongue of cold air from Norway to North Italy remained almost stationary. An upper warm ridge originally west of the British Isles moved southeast to Central France but the ridge weakened as the warm air was displaced during the occlusion of the surface warm sector. Another ridge over the Atlantic moved steadily east followed by a pronounced cold trough.
