NOTES ON THE AEROLOGICAL SITUATION.

The warm ridge associated with the secondary depression over the Eastern Atlantic moved east over Britain to reinforce the warm ridge off Scandinavia whilst the cold trough over Western Europe and the Western Mediterranean persisted. The cold outbreak from the Davis Strait penetrated further eastwards in the rear of the cold front.

NOTES ON THE AEROLOGICAL SITUATION.

The warm ridge over France and Eastern Britain moved slowly east to Eastern Germany and cooled by occlusion. The cold trough in the Eastern Atlantic swung into France and also enveloped the British Isles with the exception of Scotland. A new warm ridge South of 55°N advanced rapidly eastward to the Central Atlantic.

NOTES ON THE AEROLOGICAL SITUATION.

The warm ridge over Eastern Europe showed little change. The cold trough over Britain and France cooled a little and formed a shallow cold pool over Britain. The warm ridge south of latitude 55°N which had advanced rapidly in the previous 24 hrs changed little as the low with which the motion had been associated reached the crest of the ridge and was steered rapidly southeastward in the main thermal gradient.

NOTES ON THE AEROLOGICAL SITUATION.

The warm ridge extending north across the western British Isles moved steadily eastwards to North Germany. Over the Atlantic a strong Southerly advection produced a very sharp cold trough with thickness values falling very low. This trough extended steadily towards Biscay with a strong cyclonic vorticity developing in this area.

NOTES ON THE AEROLOGICAL SITUATION.

The cold trough in the Eastern Atlantic persisted and detached cold pools formed in the South, one moving in over Northwest France and the Channel later in the day. A very pronounced warm ridge in the Western Atlantic moved steadily east with a very strong Southerly thermal gradient on its western side.

NOTES ON THE AEROLOGICAL SITUATION.

The warm ridge over the British Isles moved quickly eastwards, while very cold air moved across the Atlantic from the Davis Straits into the British Isles in the afternoon. A well marked thermal jet stream from north of the Azores to the South of England weakened somewhat during the day.

NOTES ON THE AEROLOGICAL SITUATION.

The most marked feature is the considerable warm ridge that formed between longitudes 10° W and 5°E. ahead of a fairly sharp surface polar trough. A certain amount of dynamical warming took place in West Atlantic

NOTES ON THE AEROLOGICAL SITUATION.

The cold trough over the British Isles moved eastwards across the North Sea establishing a northwest thermal over the U. K. Pronounced warming by advection over the eastern half of the Atlantic resulted in a broad warm ridge covering most of the North Atlantic.
