| Beaufort- Number. | Admiral Beaufort's General Descrip- tion of Wind. | Specification for use on Land, based on observations made at Land Stations. | Limits of Mean Velocities Statute Miles per Hour. |
|----------------------|--|--|--|
| 0 | Calm | Calm ; smoke rises vertically | Less than 1 |
| 1 | Light air .. | Direction of wind shown by smoke drift | 1-3 |
| 2 | Slight breeze .. | Wind felt on face ; leaves rustle .. | 4-7 |
| 3 | Gentle breeze .. | Leaves and small twigs in constant motion ; wind extends light flag .. | 8-12 |
| 4 | Moderate wind .. | Raises dust and loose paper ; small branches are moved | 13-18 |
| 5 | Fresh wind .. | Small trees in leaf begin to sway ; crested wavelets on inland waters .. | 19-24 |
| 6 | Strong wind .. | Large branches in motion ; whistling heard in telegraph wires | 25-31 |
| 7 | High wind .. | Whole trees in motion ; inconvenience felt when walking against wind .. | 32-38 |
| 8 | Gale | Breaks twigs off trees ; generally impedes progress | 39-46 |
| 9 | Strong gale .. | Slight structural damage occurs (chimney pots and slates removed) .. | 47-54 |
| 10 | Whole gale .. | Seldom experienced inland ; trees uprooted | 55-63 |
| 11 | | Very rarely experienced ; accompanied by widespread damage | 64-75 |
| 12 | Hurricane .. | | Above 75 |

b blue sky (not more than a quarter covered).
bc sky partly cloudy (one half covered).
c generally cloudy (three-quarters covered).
d drizzle, h hail. KQ line squall.
l lightning. o overcast sky.
m mist, visibility 1000—10000 m.
f fog. 200—1000 m.
F thick fog " less than 200 m.
fp precipitation within sight of station.
p passing showers r rain.
s snow. re sleet t thunder.
u unusual haziness. y dry air.
z dust haze; the turbid atmosphere of dry weather.

With present weather is combined, whenever possible, the general character of the weather. A "solidus" divides actual existing weather from preceding conditions, thus: b-c/r = fair weather after rain; i = intermittent; - = "decreasing"; + = "increasing"; h(r) = "hail" or "rain and hail".

Capital letters indicate intense, suffix o indicates slight and repetition of letters continuity, thus:—
R = heavy rain.
rr = continuous moderate rain.
rfo = continuous light rain.

The Meteorological Office issues warnings to ports and fishing stations of gales on or near the coasts of the British Isles. When one of these notices has been received at a station a black canvas cone is hoisted.

The *South Cone* (point downwards) is hoisted for gales from S.E., veering to S.W., W. or N.W.

" S.W., veering to W. or N.W.

" W., veering to N.W.

" E., veering to S. or S.W.

The *North Cone* (point upwards) is hoisted for gales from S.E., E. or N.E., backing to N.

" N.W., veering to N., N.E. or E.

" N., veering to N.E. or E.

" N.E., veering to E.

The Signals remain hoisted after the receipt of a warning telegram until danger of a gale is passed.

The Districts to which warnings are sent are shown in the British Section of the Daily Weather Report by the following symbols:—

NOTES ON THE INFORMATION CONTAINED IN THE BRITISH AND INTERNATIONAL SECTIONS OF THE DAILY WEATHER REPORT.

Heights of Stations.—The heights of British Stations above M.S.L. published in the British Section of the Daily Weather Report refer to the plot of ground on which the rain gauge is situated.

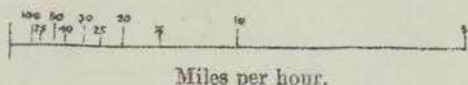

Pressure.—The distribution of barometric pressure at Mean Sea Level is shown by means of isobars which are drawn for intervals of 2 millibars on the British Section of the Report and for intervals of 4 millibars on the International Section.

The wind at a height of 1,500-2,000 feet above ground usually blows along the isobars and, for the same temperature, pressure and latitude, the speed of the wind is inversely proportional to the distance between the isobars, e.g., for isobars 1 inch apart (160 miles) in the Daily Weather Report the speed of the upper wind is about 12 m.p.h. in latitude 55°, with a temperature of 50° F. and a pressure of 1,015 mb; if, however, the isobars are $\frac{1}{2}$ inch apart the corresponding speed is 24 m.p.h.

The scale below can be used with both the International and the British Sections. If the distance between consecutive isobars is measured along the rule from the left-hand extremity the geostrophic wind is shown by the scale in miles per hour.

GEOSTROPHIC WIND SCALE FOR

4 mb isobars on 1 : 2 × 10⁷ Charts.
or 2 mb " " 1 : 10⁷ " "
or 1 mb " " 1 : 5 × 10⁶ " "

This scale applies under the following conditions:—

Pressure, 1,015 mb. Temperature, 283° A = 50° F. Latitude, 55°.

Corrections.—For an increase of 10 mb pressure, subtract 1% from velocity; for an increase of 10° F. add 2%. From Latitude 55° to Latitude 65° subtract 1% for each degree above 55°. From Latitude 55° to Latitude 45° add 1½% for each degree below 55°.

Weather.—In describing the distribution of weather over a district or during an interval of time such as a day, descriptive adjectives are used with the following meanings:—

Fine—mainly b and bc of the Beaufort notation (*see previous page*).

Fair or fair generally—mainly bc and c.

Cloudy—combinations of bc, c and o, c predominating.

Overcast—mainly c and o.

Dull—overcast with low heavy cloud.

Varying or variable cloud—combinations of b, bc, c, and o.

Precipitation when occurring is specifically mentioned.

Temperature.—Temperature is specified in degrees Fahrenheit, and is shown on the charts by means of figures written alongside the circles which indicate the positions of the stations.

Upper Air Temperature.—The British observations are made normally, one at 1,000 feet above the level of the aerodrome, and the remainder at pressures of 950, 900, 850, 800, etc., millibars. Heights are then computed and, apart from instrumental error, are correct heights: they do not require modification for differences of temperature from normal as these are allowed for in the computation. The values are shown graphically and in tabular form in the Upper Air Supplement. On the diagram, temperatures are given in degrees Fahrenheit and Absolute.

The oblique line marked "Dry Adiabatic" shows the lapse rate of temperature for dry air ascending or descending under adiabatic conditions, i.e., without communication of heat from external sources. The lapse rate under these circumstances is very approximately 5.5° F. per 1,000 feet, or 10a per kilometre. A lapse rate greater than this value indicates instability in a dry atmosphere.

The broken lines marked Saturated Adiabatic show lapse rates for saturated air. These are for air masses which contain just sufficient moisture at 1,015 mb. pressure to become saturated after rising 1 km. in an environment having the dry adiabatic lapse rate. The condensed moisture is assumed to be retained thereafter in the air as it rises.

The statement contained in the Upper Air Supplement from January 1st to May 31st, 1925, implying that these lines are for air saturated at exactly 900 mb. is not strictly true: the pressure corresponding with a height of 1 km. averages about 900 mb. for the range of temperature considered, but is different for each adiabat.

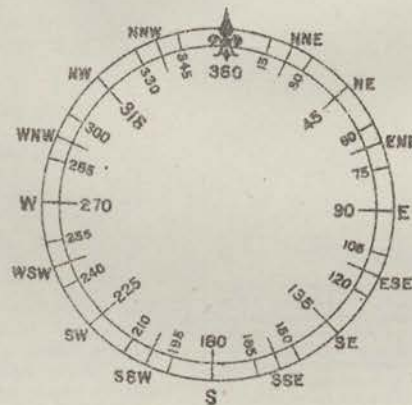

Times of Sunrise, Noon and Sunset.—In compiling the table of Greenwich times of sunrise and sunset for selected stations in the British Section of the Daily Weather Report, the mean declination of the sun for noon of each day is taken. No account is taken of the variation in declination on any given day as between leap year and the three following years, the same figures being repeated from year to year without change.

Wind.—All wind directions specified in the reports are "true," as distinguished from "magnetic." The arrows indicating wind direction are drawn to fly with the wind. Wind velocities are shown on the charts of the British Section and Upper Air Supplement in m.p.h. by the numbers placed within the small circles. In the International Section velocities are not shown. In both Sections the number of feathers on the arrows denotes wind force by Beaufort number.

Upper Winds.—The direction and velocity of the wind are given in the charts of the Upper Air Supplement for heights of 2,000 feet and 6,000 feet. The data are also given in tabular form for various heights. The reports are usually based on Pilot Balloon ascents.

Wind reports deduced from British Pilot Balloon Ascents refer to the 1,000 feet layers centering at the heights given in the table up to 16,000 feet. When winds are reported at greater heights, they refer to the 5,000 feet layers centering at 20,000 feet, 25,000 feet, 30,000 feet and 35,000 feet.

In the tabular statement direction is specified in degrees from true north measured through East 90°, South 180°, West 270° to North 360°. (*See diagram below.*)

SUPPLEMENT TO THE DAILY WEATHER REPORT OF THE METEOROLOGICAL OFFICE, LONDON.
SUMMARY OF METEOROLOGICAL OBSERVATIONS AT SELECTED STATIONS ISSUED ON THE 1st DAY OF EACH MONTH.

Notes on the Weather of **MARCH, 1925.**

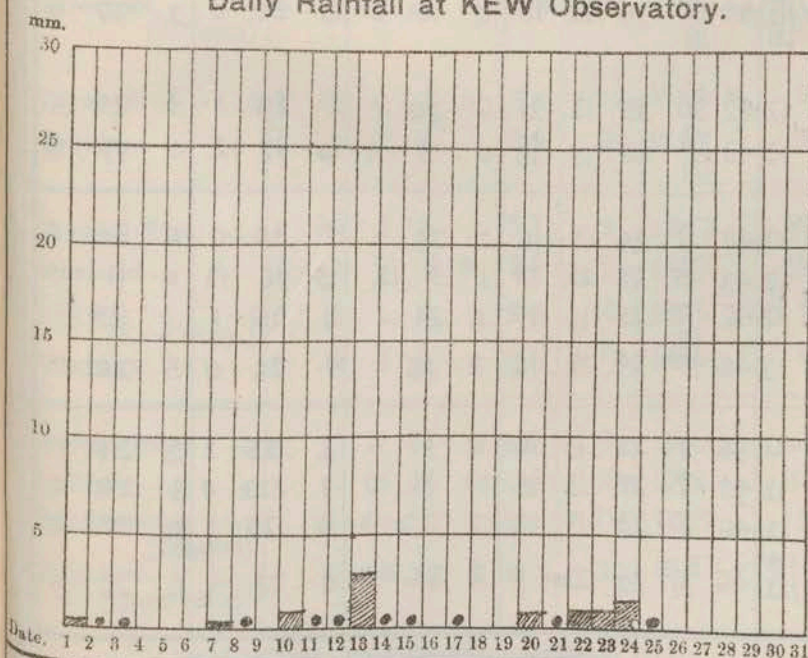

The outstanding feature of the weather of March, 1925, was the scarcity of rainfall due to the persistence of high pressure over or to the northwestward of the British Isles. In the rear of a depression, associated with local thunderstorms in southeast England on the 1st an anticyclone moved southwards from Iceland causing high northeasterly winds and gales in the Channel on the 3rd and 4th. During the next few days the wind backed towards northwest or west and the weather became temporarily milder but a rapid rise of pressure near Iceland on the 7th resulted in a renewal of northerly winds on the 8th which attained gale force in some places. Showers of snow, sleet or hail, yielding for the most part but small quantities of water, were of general occurrence and the mean temperature for the week, 8th-14th, was the lowest since the beginning of the year.

During the third week pressure was low over Iceland and high near the British Isles so that the air supply was mainly drawn from a westerly source and temperature rose above 50°F. on several occasions. Fog developed locally in the early morning on the 18th and 19th. On the latter date there was another marked increase of pressure over Iceland causing the return of cold northerly winds and further snow showers during the next few days. From time to time the anticyclone withdrew southwards temporarily with the approach of fresh disturbances but extended again towards Greenland as the Lows passed east or southeast.

It was not until the last few days of the month that the centre of high pressure shifted far enough south to give a southwesterly current from the Azores to Scandinavia. A depression which developed off Ireland on the 30th crossed the south of Scotland on the 31st causing heavy rain or snow in some places. At Renfrew precipitation during the last two days amounted to three times as much as the total for the preceding 29 days.

The total rainfall was less than 15 mm. in many parts while at Leafield and Calshot it was only 7 mm. and 5 mm. respectively. At Valencia (Cahirciveen) 25 mm. was the lowest record there for March.

+ Since March 1st, 1921, the readings used have (except in the case of Phoenix Park & Bidston) been the maximum for the period 7h.-18h., and the minimum for the period 18h.-7h. Bidston now adopts the same practice. The normal values given above are based upon extremes taken over the 24 hours.

NOTES ON CHART OF ISOPLETHS (p. 4).

The diagram is obtained by drawing a line from Akureyri in Iceland to the South of France, near Marseilles. The points at which the isobars drawn for 4 mb pressure intervals intersect this line at 1h, 7h, 13h, and 19h, are plotted consecutively and joined to show the variation of pressure from day to day at any point in the line. The line terminates at Lat. 60° N., Long. 18° W. in the north, at Lat. 44° N., Long. 4° E. in the south.

* Based in part on reports made by telegraph in which the day & night measurements are rounded off to the nearest whole millimetre. Small discrepancies may arise between these totals and those given in the Monthly Weather Report which are based on readings taken to 0.1 mm.

GENERAL INFERENCE.

A shallow depression of decreasing intensity lies over England and the North Sea and is drifting slowly E. or S.E. High pressure over Iceland is tending to spread southwards. Winds will be mainly northerly, light or moderate to fresh locally, except in S.E. and E. England, where winds will be light and variable, subsequently becoming N.W. or N. Weather will be mainly fair apart from some local showers with temperature continuing moderate.

EXPLANATION.

Isobars are drawn for intervals of two millibars.

Direction is shown by arrows lying with the wind. Force, on the scale 0-12, is indicated by the number of feathers. Mean velocity is shown in miles per hour by figures in small circles.

TEMPERATURE is given in degrees F.

WEATHER SYMBOLS.

sky: sky; cloudy; overcast sky; rain falling; snow; hail; fog; mist; thunder; squall storm; rough; very rough.

SYNOPTIC CHART FOR 7h. MONDAY, 2ND MARCH, 1925.

Scale - 1:10,000,000
Nautical Miles
Statute Miles

EXPLANATION.
BAROMETER.—Isobars are drawn for intervals of two millibars.
WIND.—Direction is shown by arrows pointing with the wind. Force, on the scale 0-12, is indicated by the number of lines. Mean velocity is shown in miles per hour by figures in small circles.
TEMPERATURE.—Temperature is given in degrees F.
WEATHER SYMBOLS.—
☉ sky; clear.
☁ sky; cloudy.
☂ sky; overcast.
☔ rain falling.
❄ snow.

GENERAL INFERENCE.

The large anticyclone off N.E. Ireland is moving slowly southwards. Over the southern half of the Kingdom winds will be north-easterly, moderate generally but strong to gale at first in the Channel. Over the northern half of the Kingdom winds will be variable or westerly. Weather will be fair in southwestern districts but mainly cloudy elsewhere. Local showers will occur on or near the eastern coasts.

EXPLANATION.
BAROMETER.—Isobars are drawn at intervals of two millibars.
WIND.—Direction is shown by arrows flying with the wind. Force, on the scale 0-12, is indicated by the number of feathers. Sea velocity is shown in miles per hour by figures in small circles.
TEMPERATURE.—Is given in degrees F.
WEATHER SYMBOLS.—
○ clear sky.
● sky cloudy.
⊙ sky & clouded.
⊖ overcast sky.
* snow. * hail. = fog = mist.
T Thunder.
SEA DISTURBANCE.—

GENERAL INFERENCE.

Pressure is low to the east of the British Isles and high to the North and West. Winds will remain northerly for a time and weather mainly bright but with snow showers locally. There are, however, indications of a disturbance near Iceland which, if its development continues, will cut off further supplies of very cold air.

EXPLANATION.
Isobars are drawn for intervals of two millibars.
Direction is shown by arrows pointing with the wind. Force, on the scale 0-12, is indicated by the number of feathers. Mean velocity is shown in miles per hour by figures in small circles.
TEMPERATURE is given in degrees F.

GENERAL INFERENCE.

A large anticyclone over the Netherlands is increasing in intensity, and will probably join the Scandinavian anticyclone to form a very large system over Central Europe and the Baltic. Weather will be fair, but with much cloud at first, and slight local rain or drizzle in Scotland today. Some mist and local morning fog will occur in the South.

Capital letters indicate intense; suffix o indicates slight; repetition of letters indicates continuity. R = heavy rain. r_o = slight rain. rr = continuous rain.

SYMBOLS.

< = (less than (for cloud height).
@ = (before (for precipitation).
☉ = solar halo. ☾ = lunar halo. With present weather is combined, whenever possible, the general character of the weather.
A "solidus" divides actual existing weather from preceding conditions, thus: - bc/r = fair weather after rain; - m^h has decreased + m^h has increased.

SEA DISTURBANCE.

GENERAL INFERENCE.

The anticyclone is now centred off our Southwest coasts and appears almost stationary. Winds will be west to southwest over Scotland and Ireland and northwest to north over England. Weather will be dry for two or three days except in the North of Scotland, but much cloud is probable in most places.

GENERAL INFERENCE.

The anticyclone over the British Isles continues, and another anticyclone centred near South Greenland is moving east. The two systems will probably unite to form a single large centre off our N.W. coasts. Colder northerly winds will soon extend over Scotland and probably over the eastern half of England tomorrow. Weather will continue mainly fair for some days, but local showers will occur in Scotland today, and possibly on the E. coast of England tomorrow.

| Districts. | Forecasts for the 36 hours commencing 15h G.M.T. Thursday, 19th March, 1925. | Farther Outlook. |

GENERAL INFERENCE.

Pressure is high over Iceland and a great part of the North Atlantic, and low over Northern Scandinavia. The passage of a secondary depression south-eastwards over the British Isles will be accompanied by rain. The cold northerly current in its rear has extended over Scotland and will spread to all districts by tomorrow, with mainly fair weather but local showers of snow or sleet.

SYNOPTIC CHART FOR 7h. FRIDAY, 20TH MARCH, 1925.

Scale - 1:10,000,000
Nautical Miles
Statute Miles

EXPLANATION.

BAROMETER.—Isobars are drawn for intervals of two millibars.

WIND.—Direction is shown by arrows lying with the wind. Force, on the scale 0-12, is indicated by the number of lines. Mean velocity is shown in miles per hour by figures in small circles.

TEMPERATURE.—Temperature is given in degrees F.

GENERAL INFERENCE.

The anticyclone centred about 600 miles westward of Ireland is tending to spread back slightly towards these Islands. Cold northerly winds will continue over the weekend with showers of snow, hail or sleet in most places but with considerable fine periods and sharp night frost. A fall of pressure in Iceland indicates that the cold spell will probably prove temporary.

Districts.

Forecasts for the 24 hours commencing 15h. G.M.T. Saturday, 21st March, 1925.

Further Outlook.

Becoming gradually milder again.

ALL DISTRICTS.

Wind northerly, fresh and squally at times locally; occasional showers of snow, hail or sleet, but considerable fine periods; visibility good apart from local morning mist; cold, with sharp frost in most places at night.

GENERAL INFERENCE.

The depression north of Scotland is moving eastwards. Winds will be northwesterly fresh to strong at times in the North, and the weather will be mainly fair but with occasional showers in the North and on our western coasts. Temperature will be generally less low but frost is likely at night in the South.

GENERAL INFERENCE.

The depression recently near the Shetlands has moved down to the North Sea and is growing less deep. There is a large anti-cyclone west of Ireland. Winds will be northerly for a day or two, strong and squally today except over Southeast England, and the weather will be mainly fine and bright with occasional sleet or snow showers in most places and frost at night.

Districts.

GENERAL INFERENCE.

A depression north of the Faeroes is likely to move south-east, pressure continuing high west of Ireland. Winds will be westerly for a time in Scotland but will remain northerly further south and there will be occasional showers of rain or sleet in most districts with considerable fine periods in the West.

GENERAL INFERENCE.

A trough of relatively low pressure that extends from off the Norwegian Coast to the Hebrides is moving quickly away eastwards. The wind will soon be northeasterly in all districts fresh to strong over England, reaching gale force on the south-east coasts. There will be local showers in the North and perhaps in Eastern England but elsewhere the weather will be fair.

Districts.

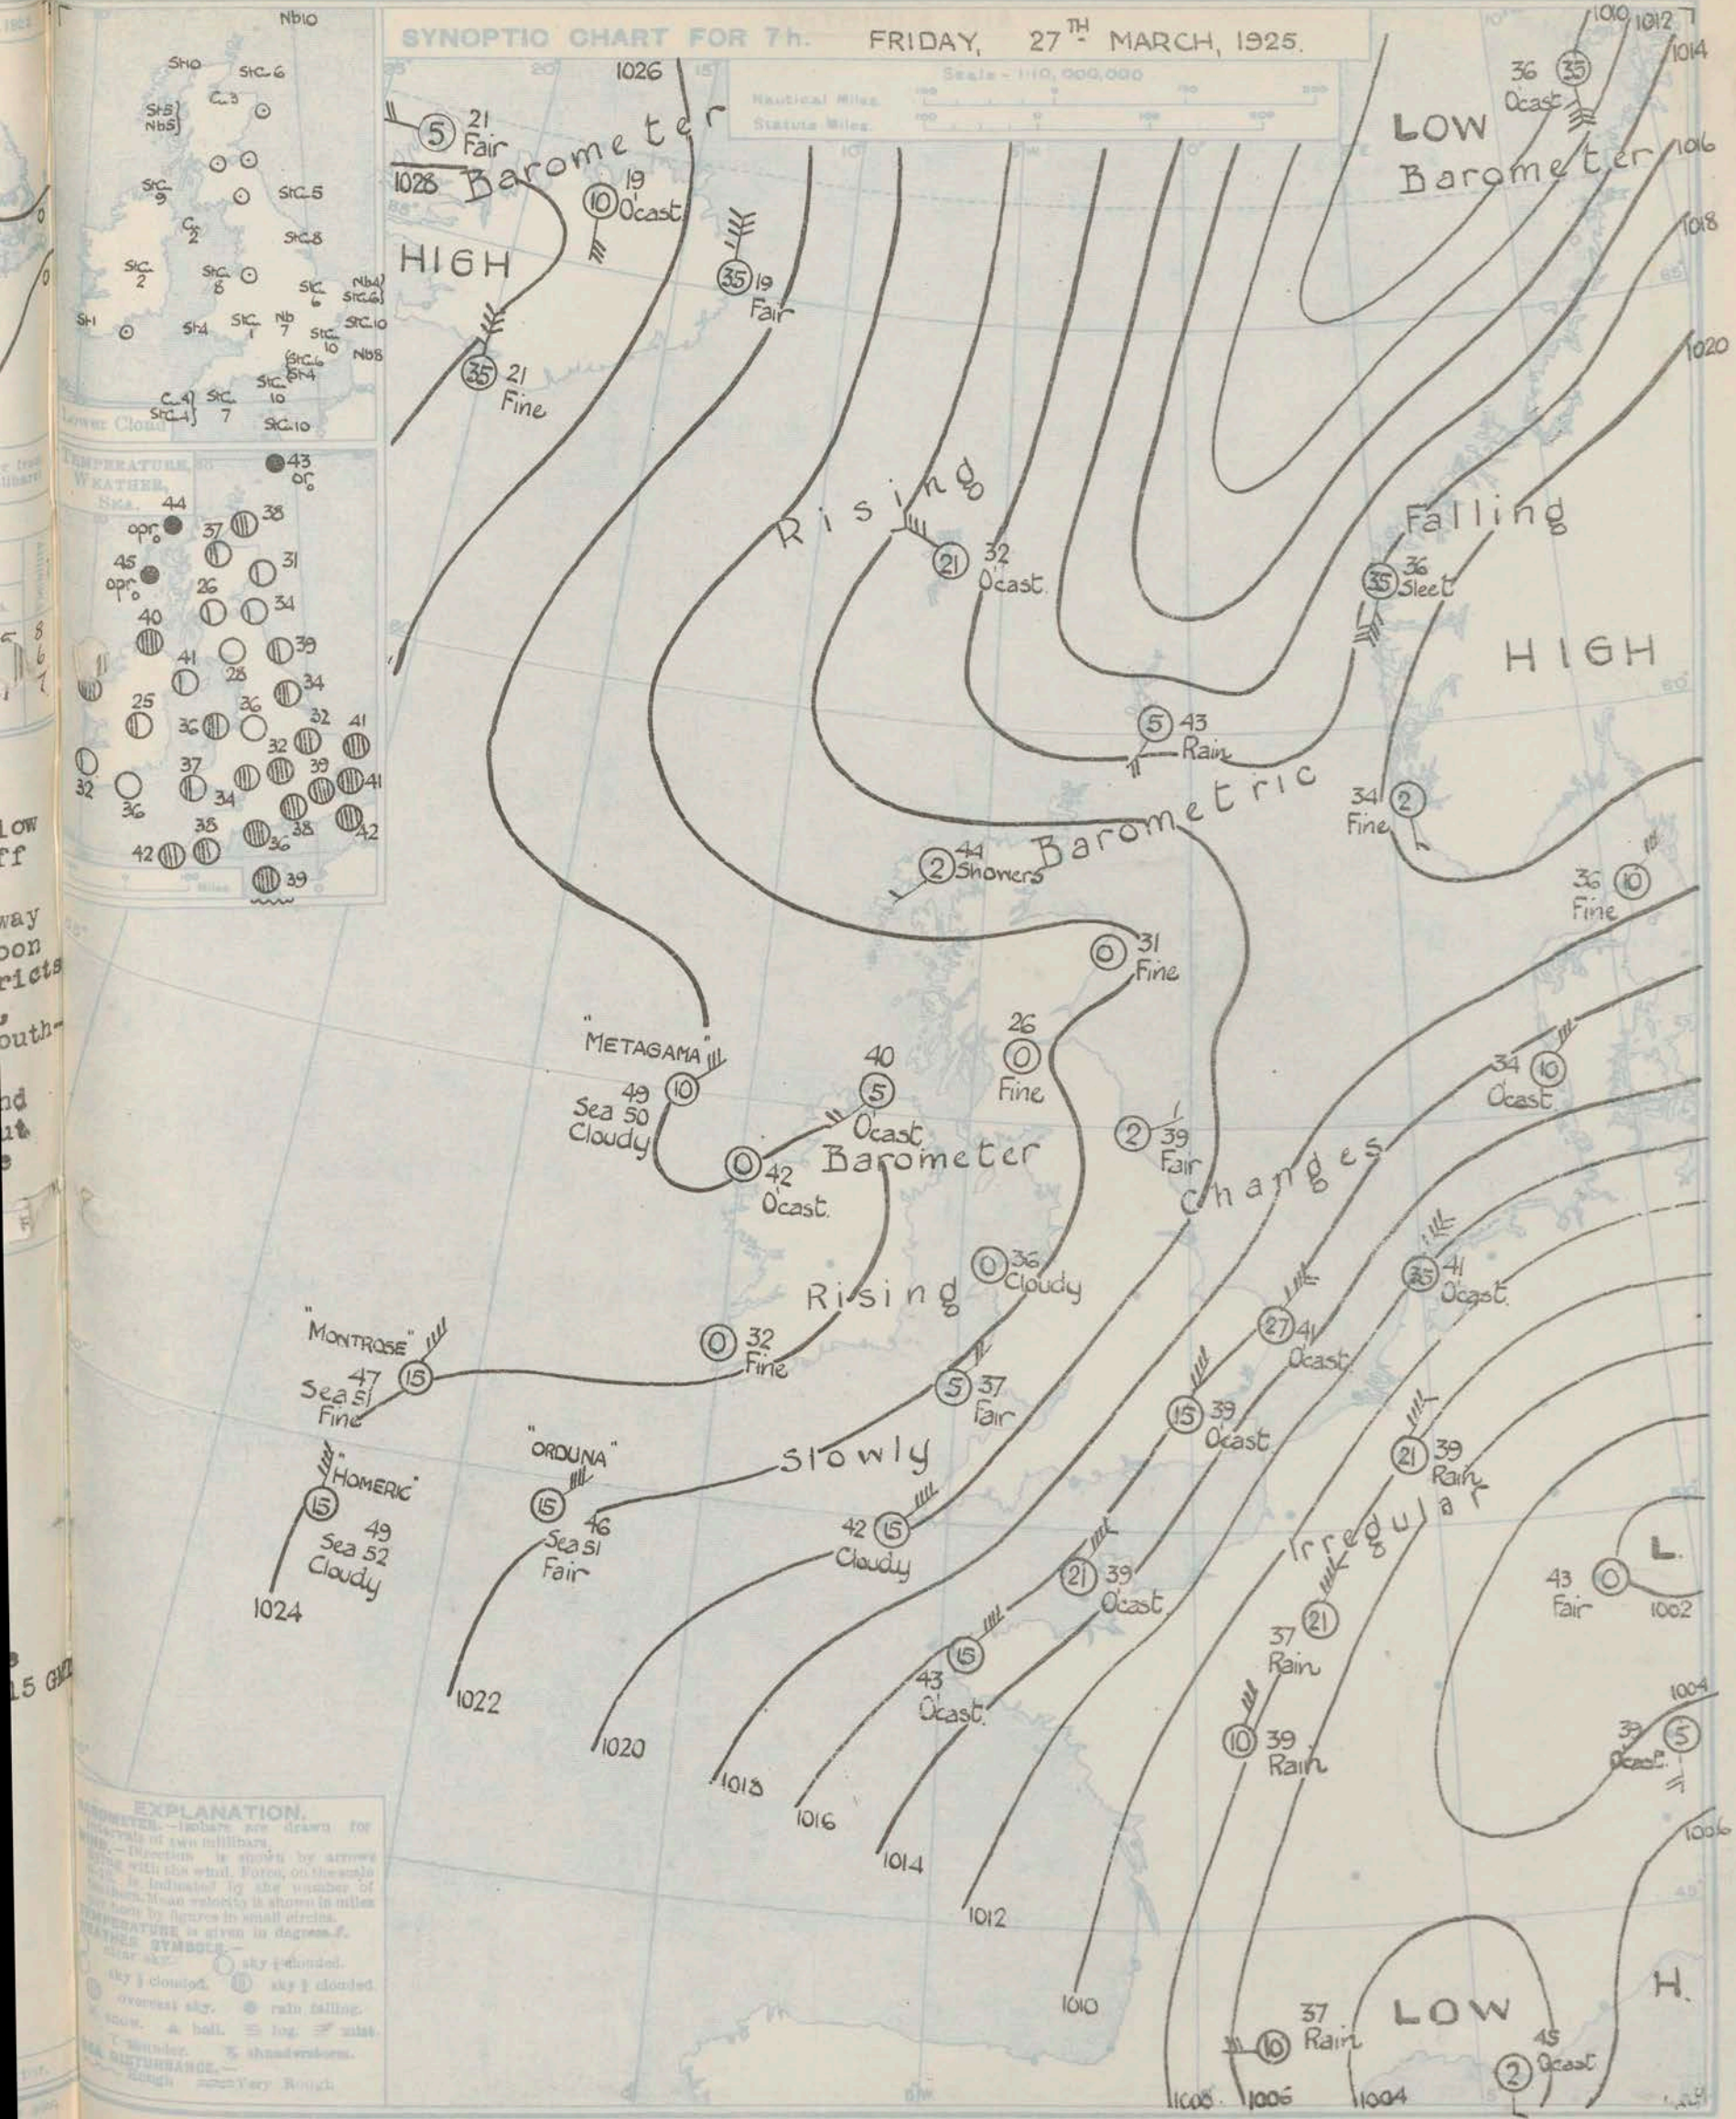

Forecasts for the 24 hours commencing 15h G.M.T. Friday, 27th March, 1925.

GENERAL INFERENCE.

An anticyclone persists off S.W. Ireland but a depression near Iceland is deepening and moving eastwards or south-eastwards. Winds will become generally westerly for a time with some rain or showers in the northern districts extending southwards later. Temperature will be higher than of late but will fall again in the North later.

Districts.

Forecasts for the 24 hours commencing 15h. G.M.T.

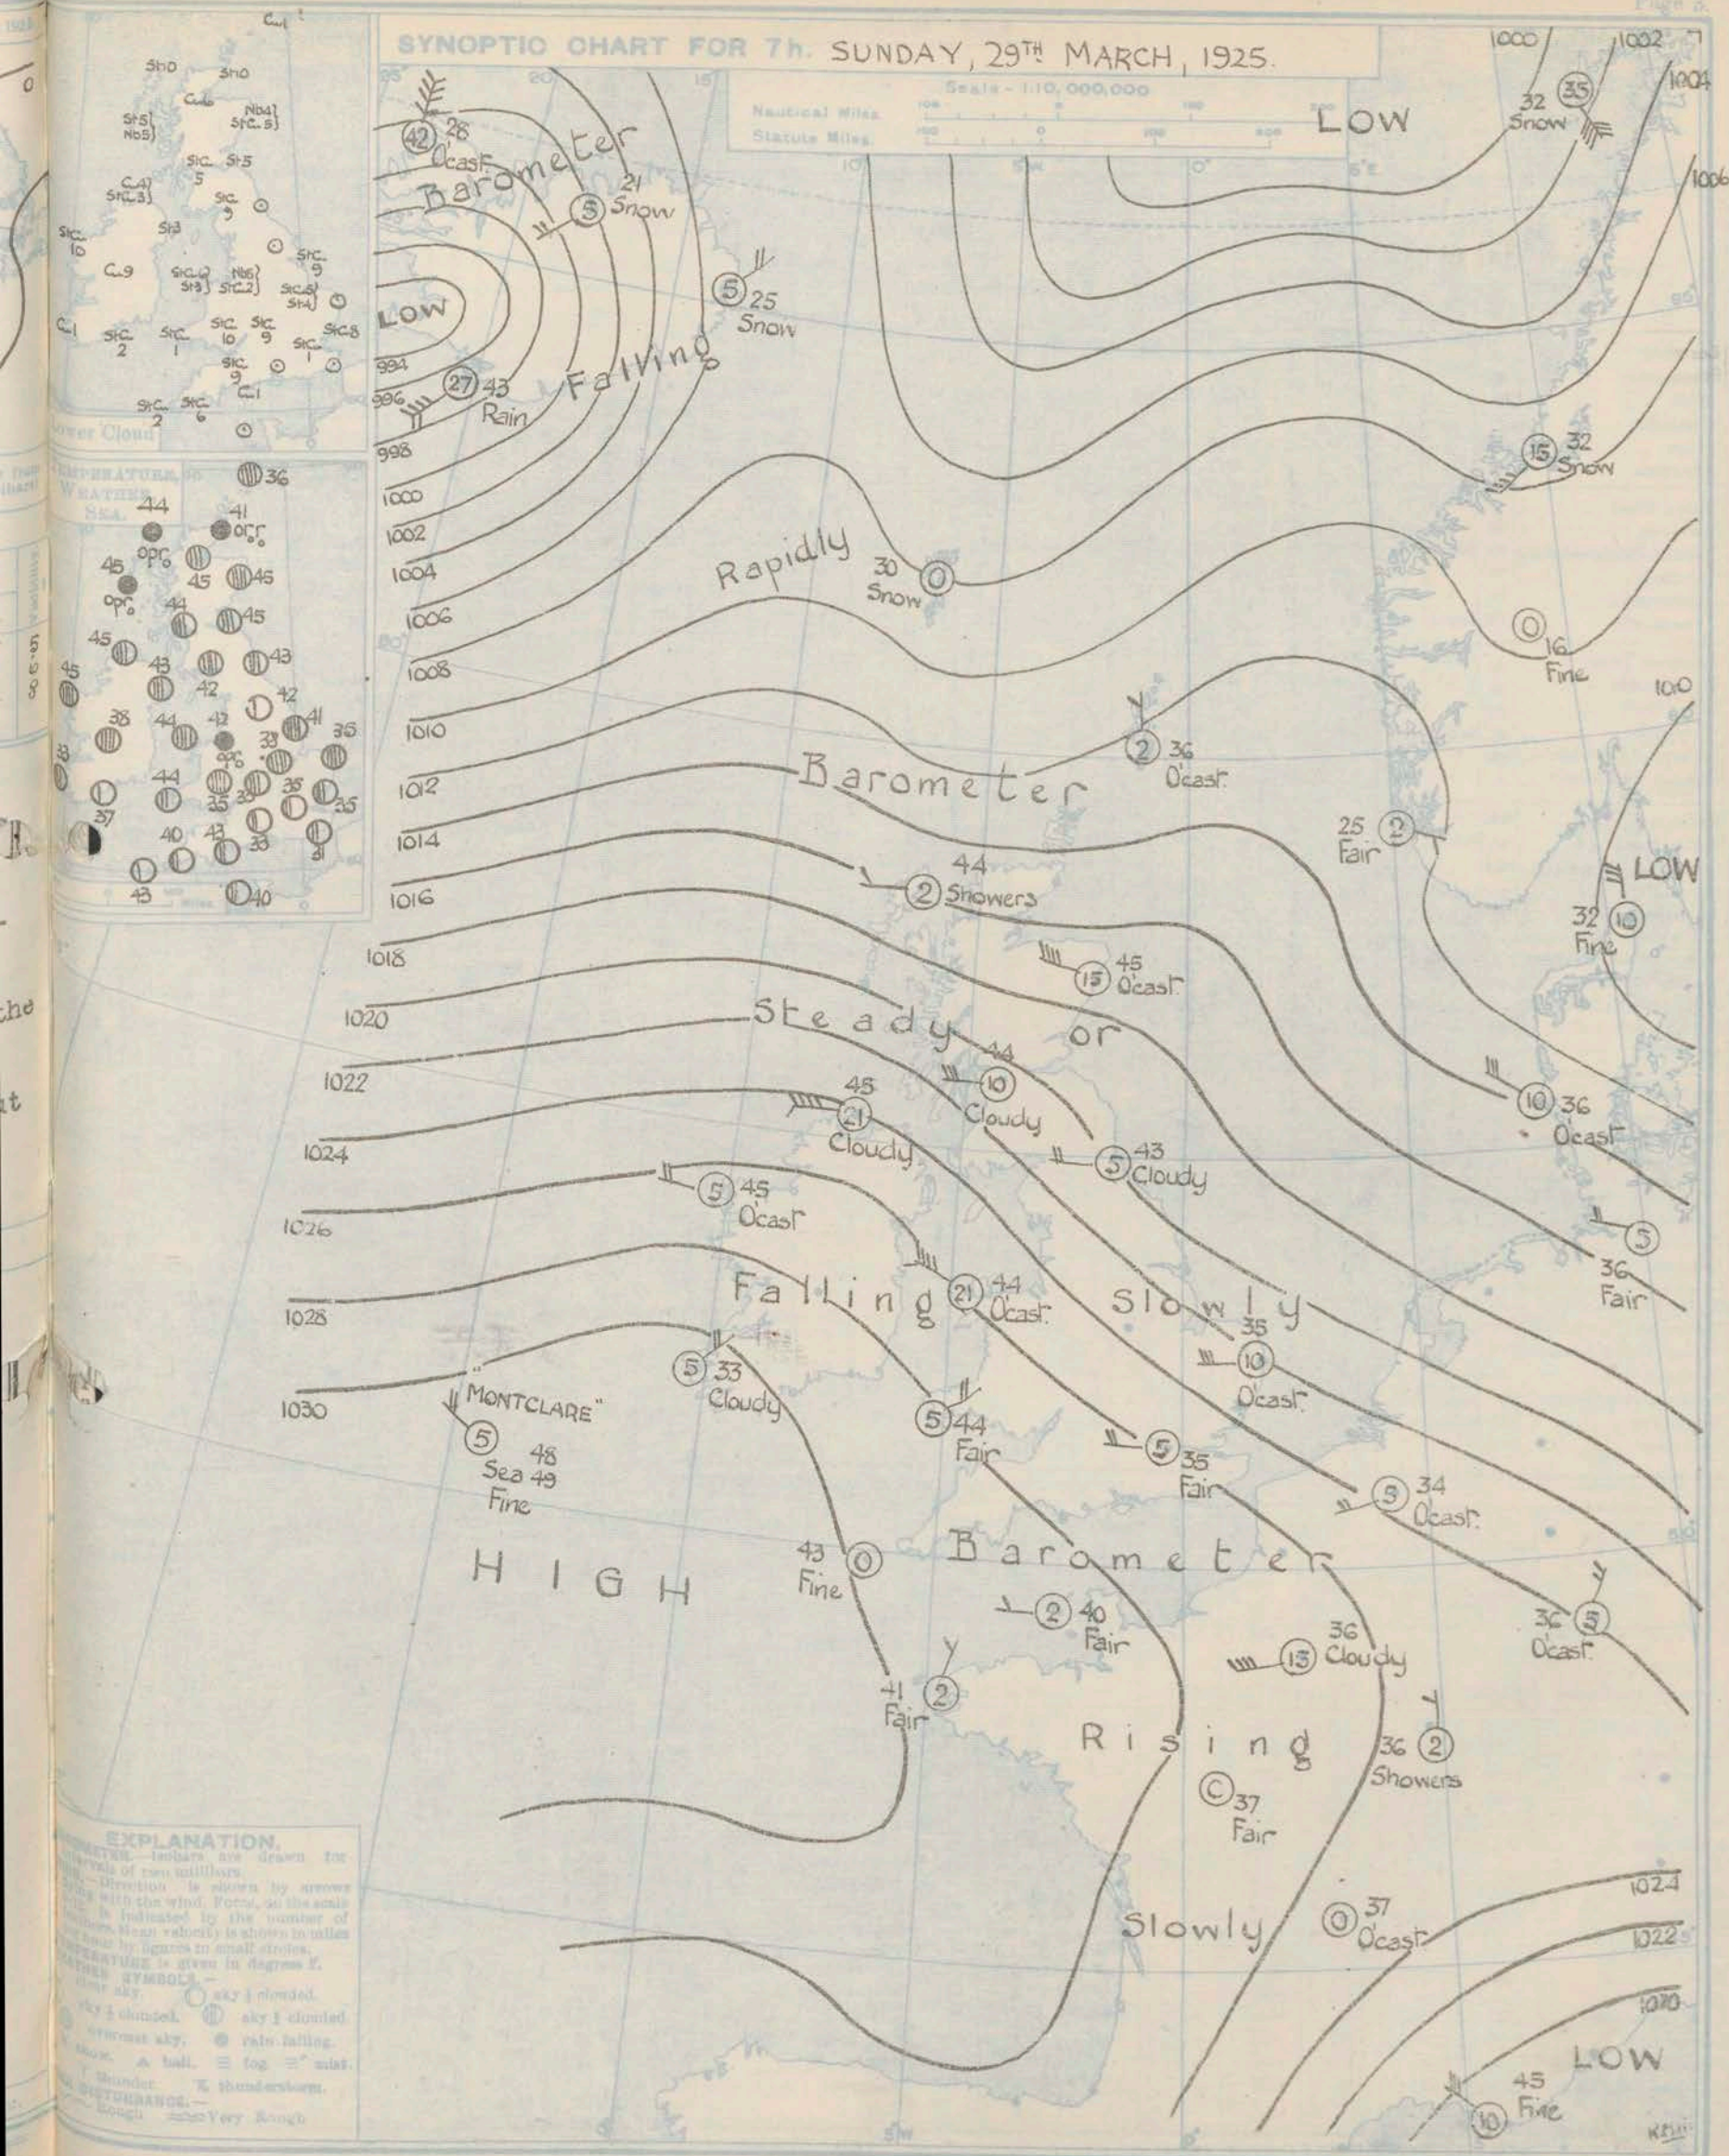

Sunday, 29th March, 1925.

SYNOPTIC CHART FOR 7h. MONDAY, 30TH MARCH, 1925.

Scale - 1:10,000,000

Nautical Miles
Statute Miles

EXPLANATION.
Isobars are drawn for intervals of two millibars.
Direction is shown by arrows pointing with the wind. Force, in the case of gales, is indicated by the number of strokes. Mean velocity is shown in miles per hour by figures in small circles.
TEMPERATURE is given in degrees F.
WEATHER SYMBOLS:

EXPLANATION.
ISOBARS.—Isobars are drawn for intervals of two millibars.
WIND.—Direction is shown by arrows pointing with the wind. Force, on the scale of 1 to 12, is indicated by the number of lines. Mean velocity is shown in miles per hour by figures in small circles.
TEMPERATURE.—Temperature is given in degrees F.
WEATHER SYMBOLS.—
