SUNDAY
1 DECEMBER 1985

SUMMARY
OF
BRITISH WEATHER

Scotland had a cloudy night, followed by a mostly cloudy day, with periods of heavy rain, though somewhat drier and clearer weather moved into most of Scotland by the end of the day.

Northern Ireland too had a wet night followed by a cloudy, wet morning, though the rain eased off during the afternoon, with some late afternoon sunshine and a few showers,

It was a cloudy night with rain, some heavy in northern England, though the rain did ease off for a while towards dawn, with some fog. In England and all of Wales, the night was cloudy, with some fog, the fog cleared by dawn, but rain spread into Wales and western parts of England during the morning and then slowly onto eastern areas during the afternoon. East Anglia and southeast England had sunny periods before further cloud and occasional rain spread in.

It was very mild everywhere (exceptionally mild in places) and there was a strong southerly wind reaching gale force around northern and western coasts.

PLOTTED SURFACE OBSERVATIONS

MONDAY
2 DECEMBER 1985

SUMMARY
OF
BRITISH WEATHER

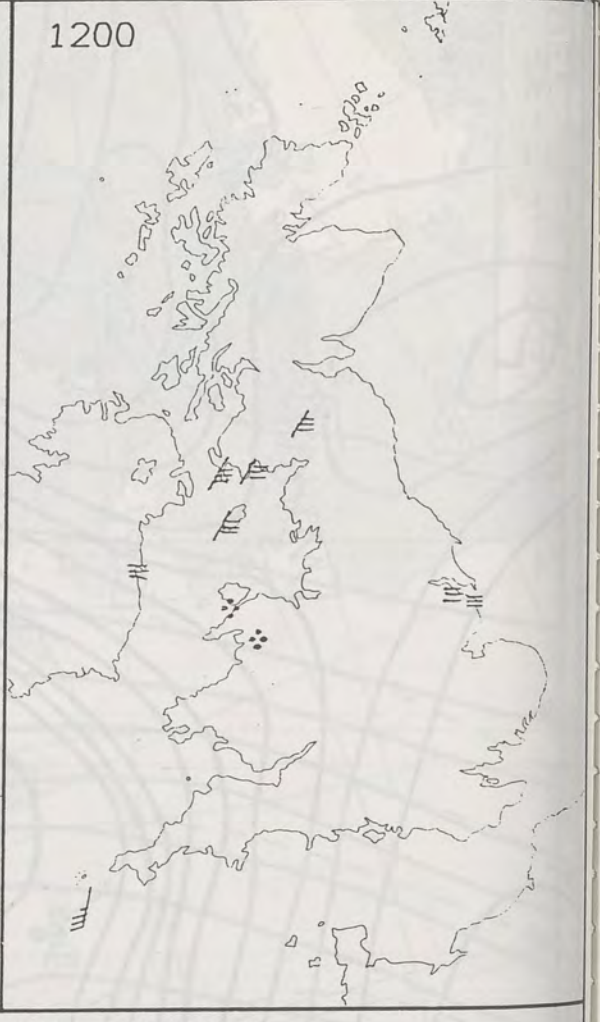

Scotland had a mostly dry night, then a few showers during the day with some more general rain into southwest Scotland around noon. This rain moved into most of Scotland by dusk, with some heavy rain in places. After a dry night in Northern Ireland, cloud thickened during the morning with rain, some of it heavy later, but it became dry by evening.

Northern England and North Wales had a dry start to the day. It soon clouded over though with some rain into all areas by midday. The rain petered out during the afternoon though the weather remained fairly cloudy. Southern England and South Wales had a mostly dry night, but some rain, heavy in places, moved quickly across all areas through the morning. There was some dry weather in the afternoon and in southeast England some sunshine. During the evening, further rain crossed many parts of southern Britain.

It was exceptionally mild almost everywhere, though in the Northern Isles temperatures were only a few degrees above normal.

TUESDAY
3 DECEMBER 1985

SUMMARY
OF
BRITISH WEATHER

Much of Britain had a dry night, but there was quite a lot of heavy rain in western and northern Scotland.

There was more heavy rain in Scotland in the morning, but during the afternoon the rain turned showery and the weather brightened up a little.

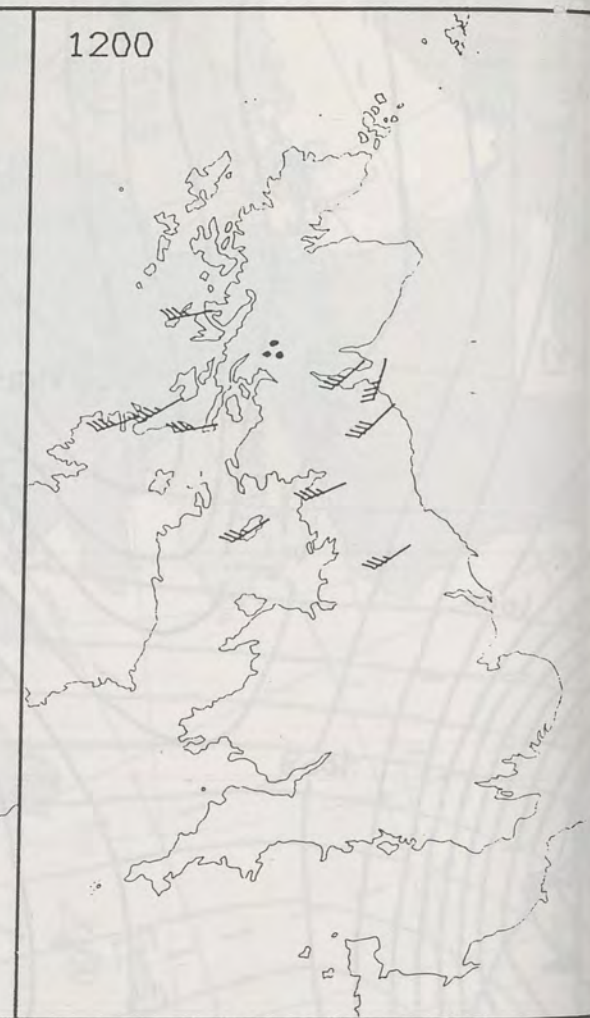

Northern Ireland had showers in the morning but then the afternoon was fairly sunny and the evening dry and clear.

Much of England and Wales stayed dry during the day with just a little rain here and there. In the north of both England and Wales there was a reasonable amount of sunshine and in central and southern England the weather turned a little brighter in the afternoon.

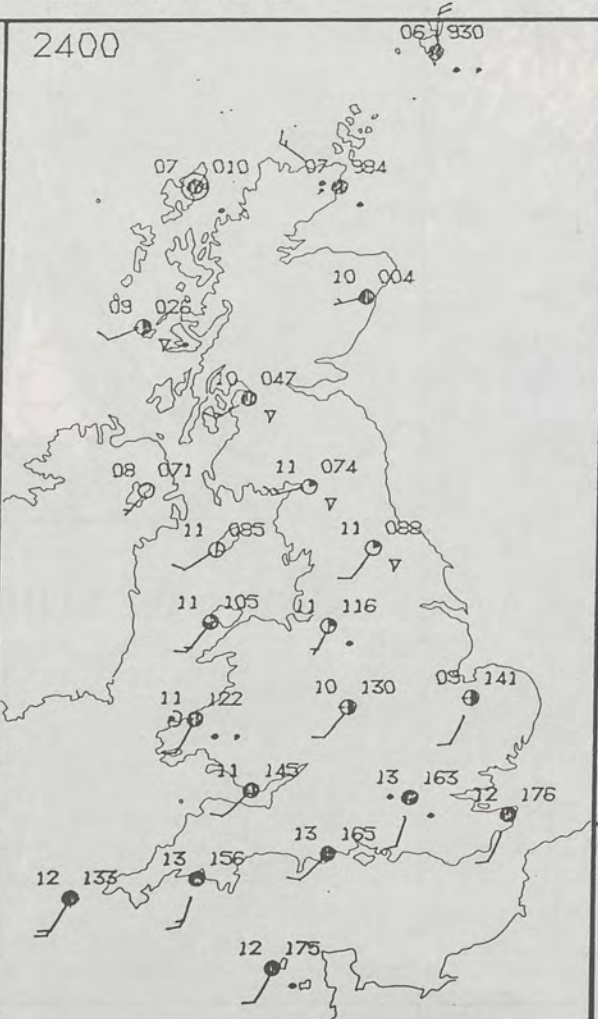

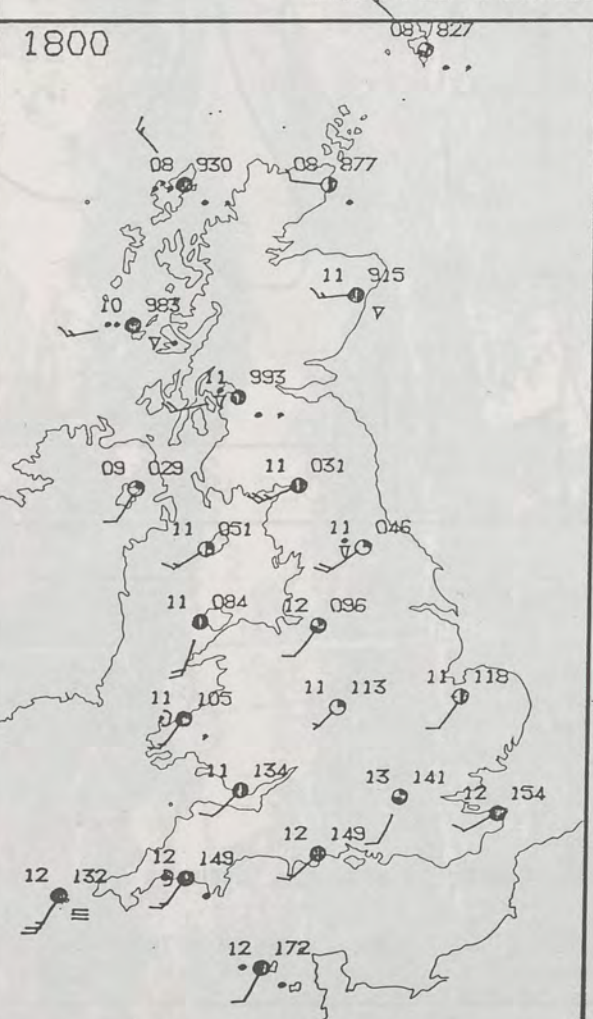

It was a very mild twenty-four hours over Britain but very windy, especially in northern and western areas, where many places had gales and at St. Abbs Head (Borders) a gust of 65 knots was reported in the middle of the afternoon.

SUMMARY
OF
BRITISH WEATHER

Much of Britain had a cloudy night. Northern Ireland and much of northern England were dry overnight and in southern Scotland there were a few showers. Over the rest of Britain it turned out a wet night with some heavy rain in western parts.

During the morning the persistent and at times heavy rain over Wales and central and southern England spread to northern England. Then the rain eased off, although the weather stayed cloudy and there was some rain and drizzle. In the afternoon and evening more continuous rain returned to southern areas.

Northern Ireland had a little bright weather and just a few afternoon showers and Scotland too was mainly cloudy with only a little sunshine here and there. There were showers over much of Scotland, some heavy, and there was a thunderstorm reported from Benbecula in the evening. Northern Scotland had some longer spells of rain.

Most places were very mild again, although northern Scotland had temperatures near normal and Shetland was rather cold.

THURSDAY
5 DECEMBER 1985

SUMMARY
OF
BRITISH WEATHER

Over central southern and south-east England, southeast Wales, most of the Midlands, East Anglia and Lincolnshire rain was heavy at times and dull wet weather persisted through the day in many parts. In southwest England and South Wales it became brighter with scattered showers and sunny intervals; this clearer weather extended to central and eastern England during the evening.

In west and north Wales, also northern England it was a dry night and fog patches developed, especially in northern England. Most places had a dull misty day and after a mainly dry morning there were outbreaks of rain later. In Wales and the north-west it became clearer with scattered showers.

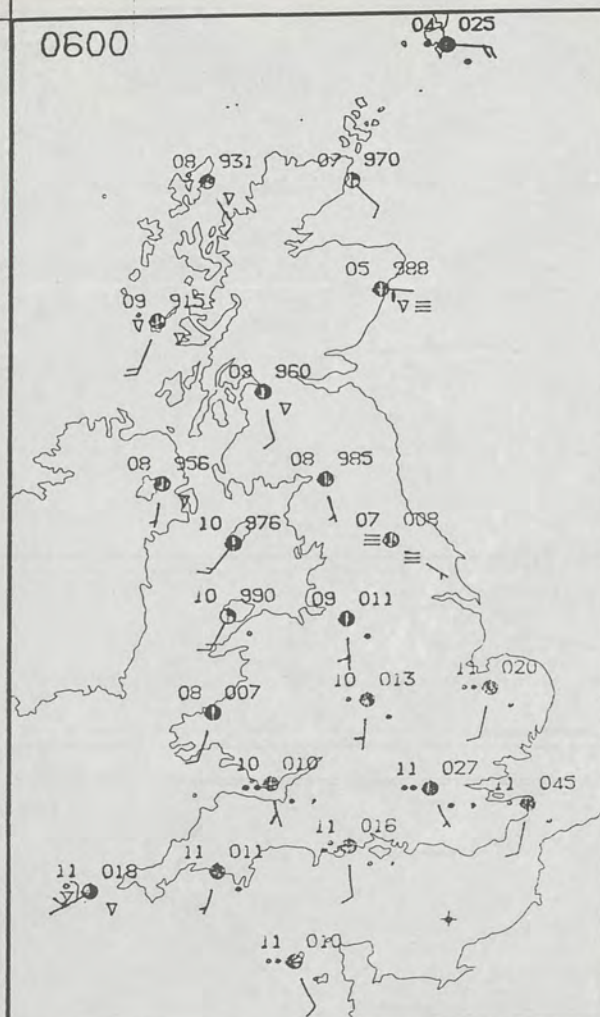

In Northern Ireland and Scotland there were bright spells and showers but in southeast Scotland rain was more persistent and locally heavy later. In Shetland it was a mainly cloudy wet day.

Much of England and Wales had a mild day, however Northern Ireland, Scotland and northern England had temperatures close to normal, while Shetland was rather cold.

FRIDAY
6 DECEMBER 1985

SUMMARY
OF
BRITISH WEATHER

Most places had a dry night but there were showers in some western and northern parts, and in eastern Scotland there was more persistent rain. There was a slight frost in parts of southern Scotland.

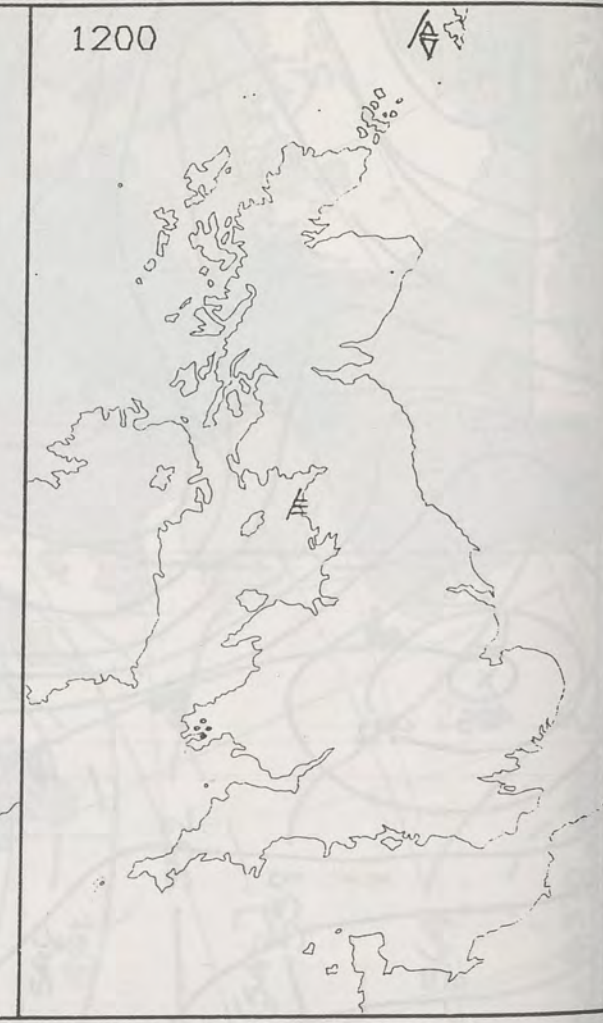

Over much of England, Wales and Northern Ireland it was a dry morning with sunny spells but in southwestern counties cloud soon thickened to bring outbreaks of rain heavy in places. During the afternoon rain spread quickly north and east to all parts. Clearer, mainly dry weather followed into Wales and western England during the evening.

In Scotland there was some dry bright weather at first but most of the day was cloudy. There were showers in the west and southeast at first. During the late afternoon and evening more persistent rain spread north across most of Scotland, with sleet in places and snow over high ground.

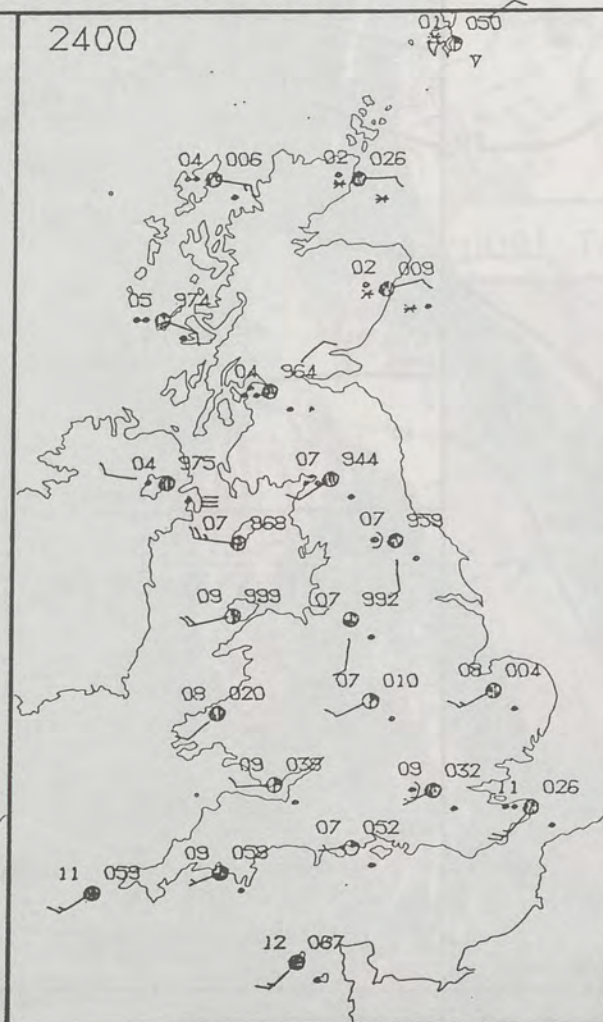

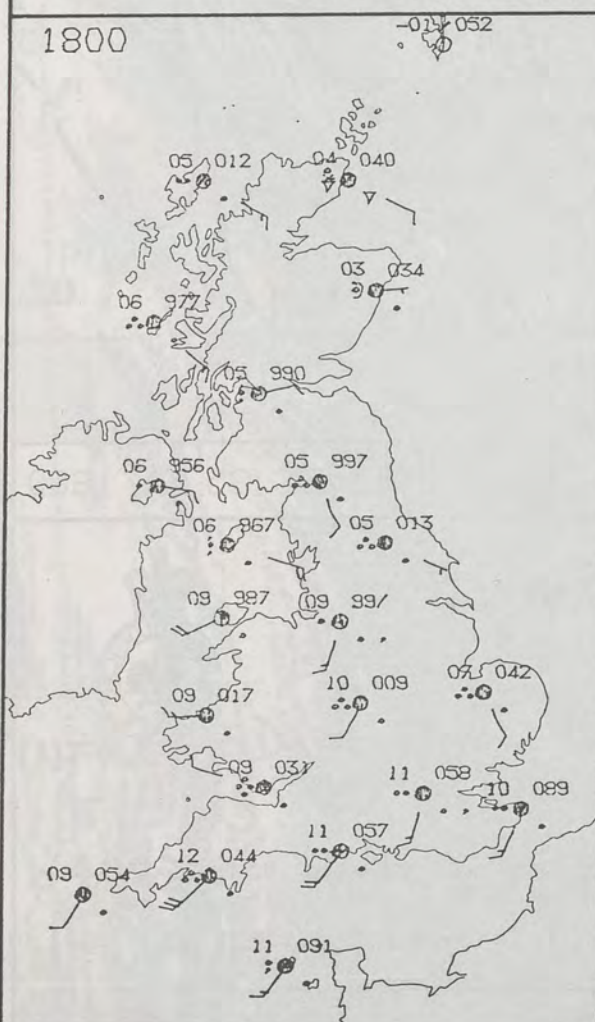

In the Northern Isles it was a cold day with sunny intervals and one or two light snow showers. Scotland, Northern Ireland and northern England were rather cold while Wales and the remainder of England were mild.

SUMMARY
OF
BRITISH WEATHER

Southern and central Scotland were dull, cold and wet, with some snow, chiefly at high levels. Northern Scotland had rain or sleet at first, but it gradually became drier and a little brighter from the north, and stayed cold.

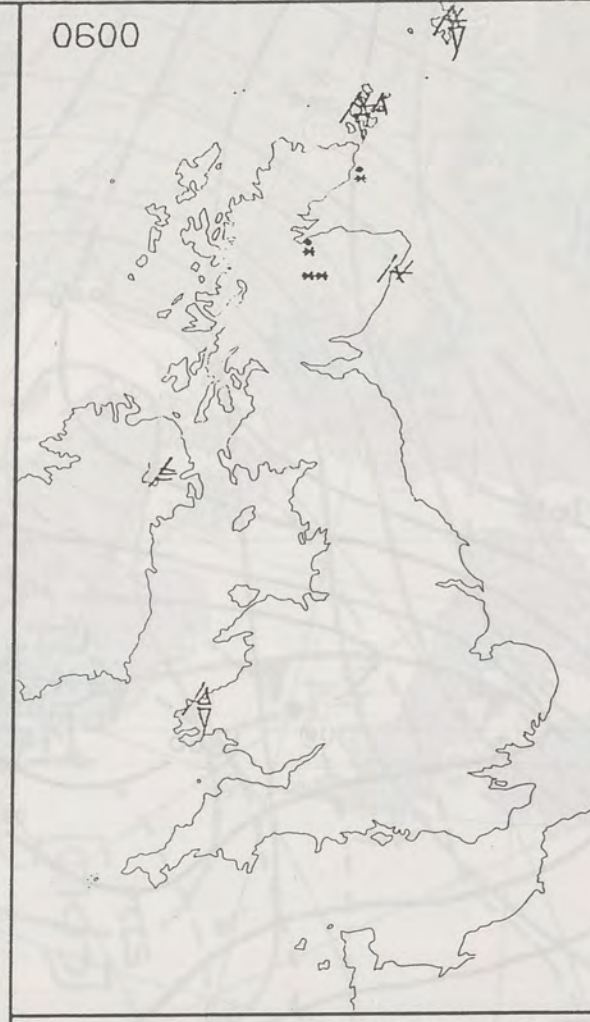

Northern Ireland and the northernmost counties of England had a lot of cloud and some rain with temperatures not far from normal.

Much of England and Wales had a dry, bright mild day, after overnight rain in the southeast. Some places had a shower or two. Cloud stayed thicker in the extreme southeast and over the Channel Islands, and in the evening showery outbreaks moved northeast across southwest and central southern England. In the north and east some places had frost and patchy fog by midnight.

SUNDAY
8 DECEMBER 1985

SUMMARY
OF
BRITISH WEATHER

Rain and snow in the southern half of Scotland in the early hours gradually moved northeast into eastern Scotland. The far north and west of Scotland stayed mostly dry and bright, and southern and southwest Scotland slowly became dry during the day. Northern Ireland had a little sunshine and a few showers.

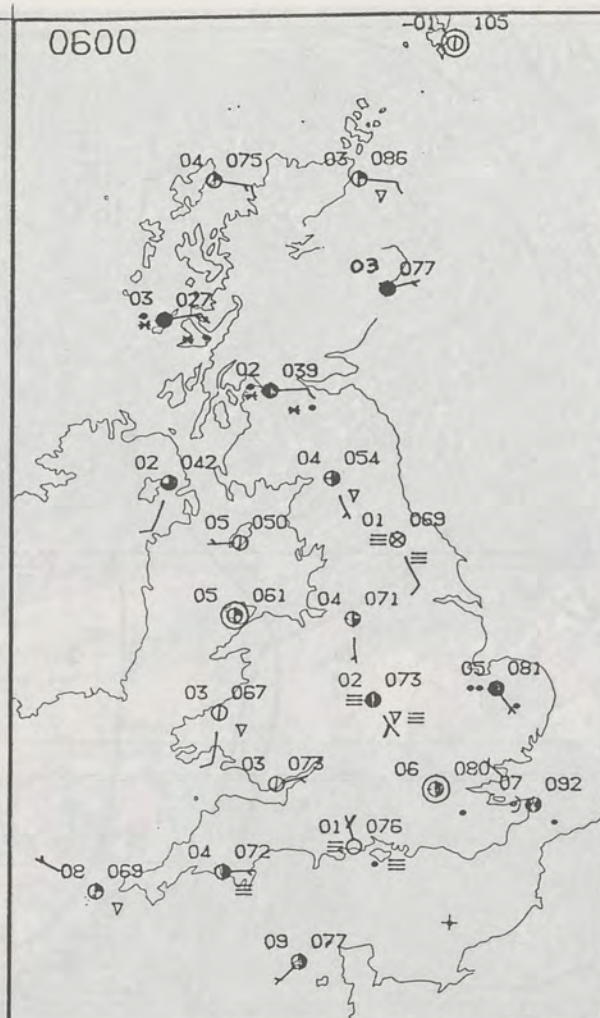

Over the southeasternmost counties of England there was some showery rain, but also some dry, bright spells. Many other coastal regions of southern and western England and Wales were quite bright with just a few showers, one or two of these were thundery though. Over the rest of England and Wales, many places were dull and misty, with areas of thicker fog, but a few areas did brighten up. There were some outbreaks of rain in the evening over central southern England.

Many places were rather cold, but temperatures were well up to normal in most coastal areas, and more generally in the southeast of England, East Anglia and Lincolnshire.

MONDAY
9 DECEMBER 1985

SUMMARY
OF
BRITISH WEATHER

There was rain in eastern Scotland overnight, with some snow over the higher ground but this died away by dawn. Extreme southeast England and East Anglia also saw heavy rain overnight, some of it lingering into the morning, but dying away by midday. Western coasts had a few showers.

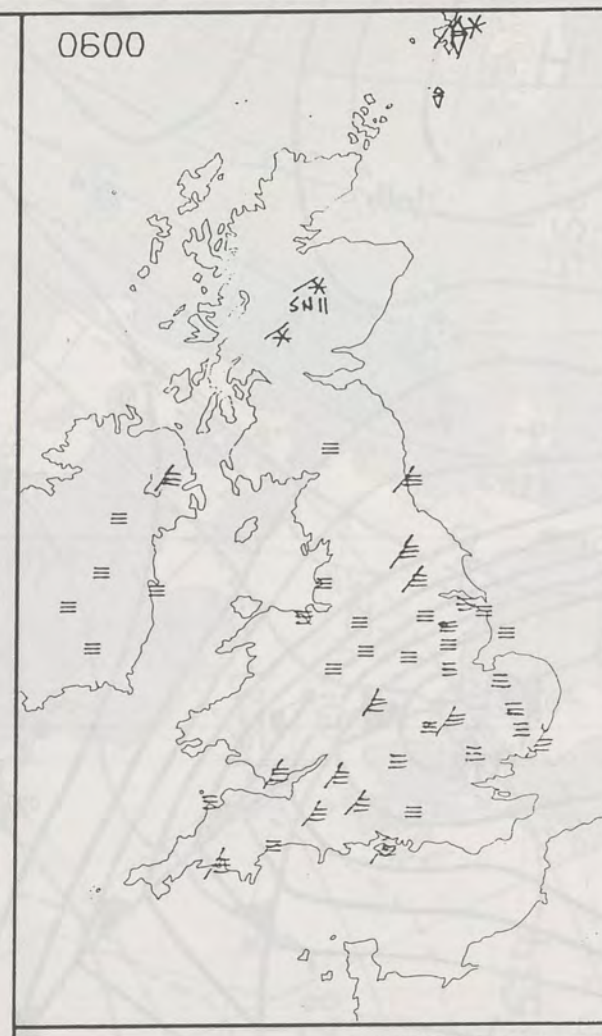

By dawn, fog had formed in much of England, with some dense, persistent patches in the North and East Midlands. Elsewhere, fog cleared quickly, and many western and central parts of England, Northern Ireland, north and west Scotland had sunshine, with remaining areas cloudy. Southeast Britain was dull much of the time.

During the evening, fog and frost occurred widely in lowland England, as skies cleared, though eastern Scotland remained cloudy and coastal areas remained clear of frost and fog.

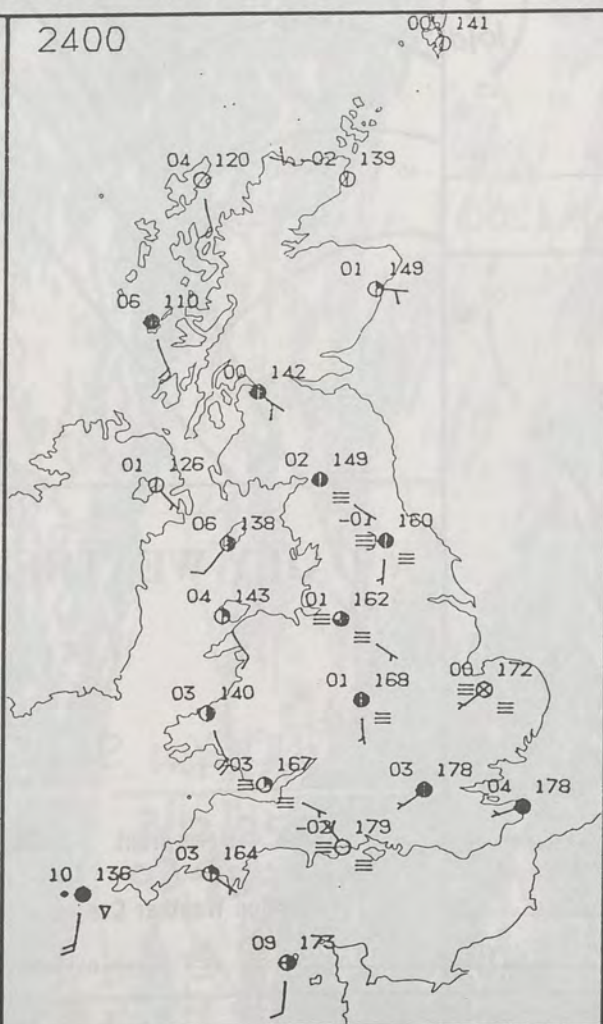

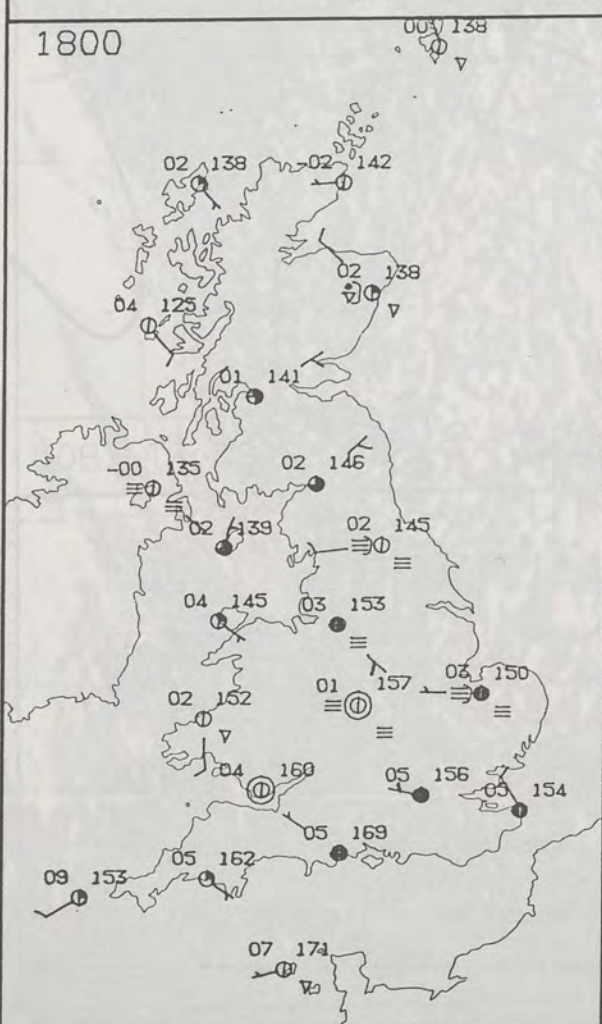

It was rather cold or cold in most places, however a few places in Wales and southwest England had near normal temperatures.

TUESDAY
10 DECEMBER 1985

SUMMARY
OF
BRITISH WEATHER

In Northern Ireland, cloud increased through the night, with rain around by dawn, some of it heavy. The rain cleared by midday, with some broken cloud towards dusk.

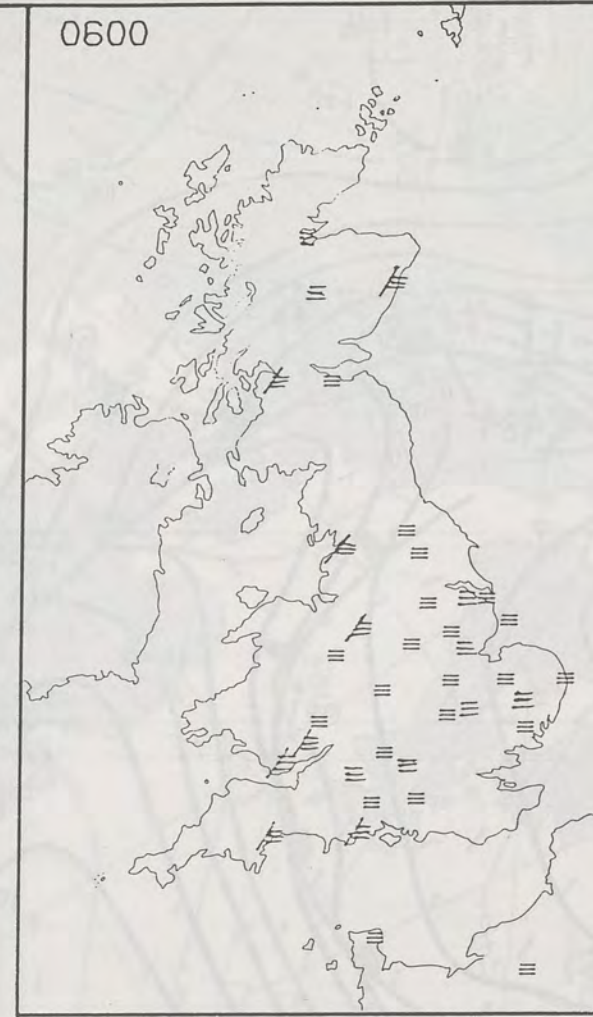

Some parts of Scotland had overnight fog, and much of the country away from the coast had a frost, severe in places. Through the morning, rain edged into southwestern Scotland, reaching central areas by mid-afternoon and eastern Scotland during the evening, whilst western Scotland became dry again.

After overnight fog and frost had cleared, Wales and southwestern parts of England had rain through the morning, lasting well into the evening, with some freezing rain being reported. Meanwhile, eastern, central and northern areas of England had some dense fog, some of it quite persistent, but rain reached most central and northern areas by dusk, and some rain moved into the east during the evening.

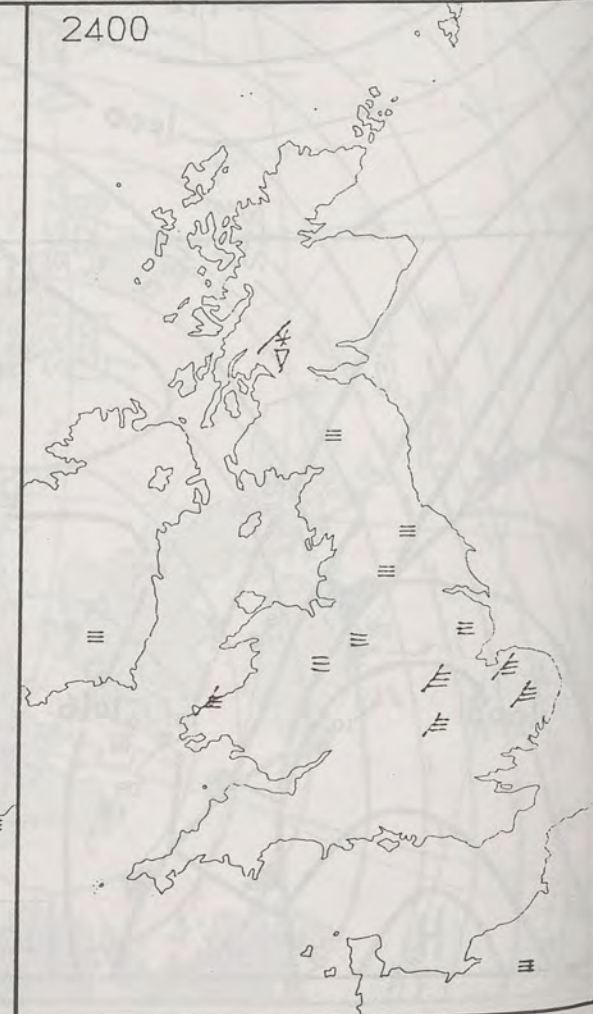

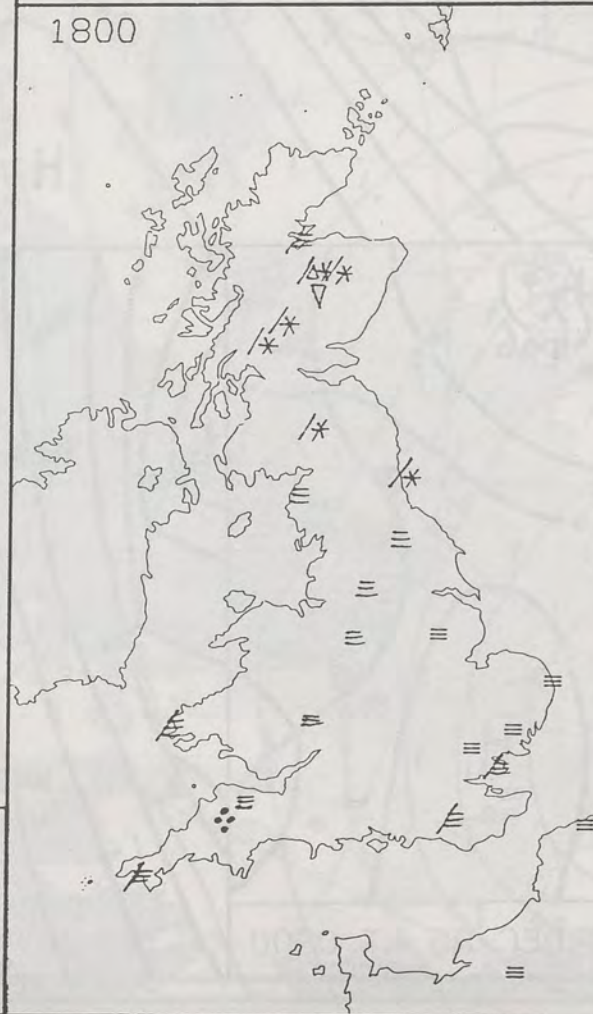

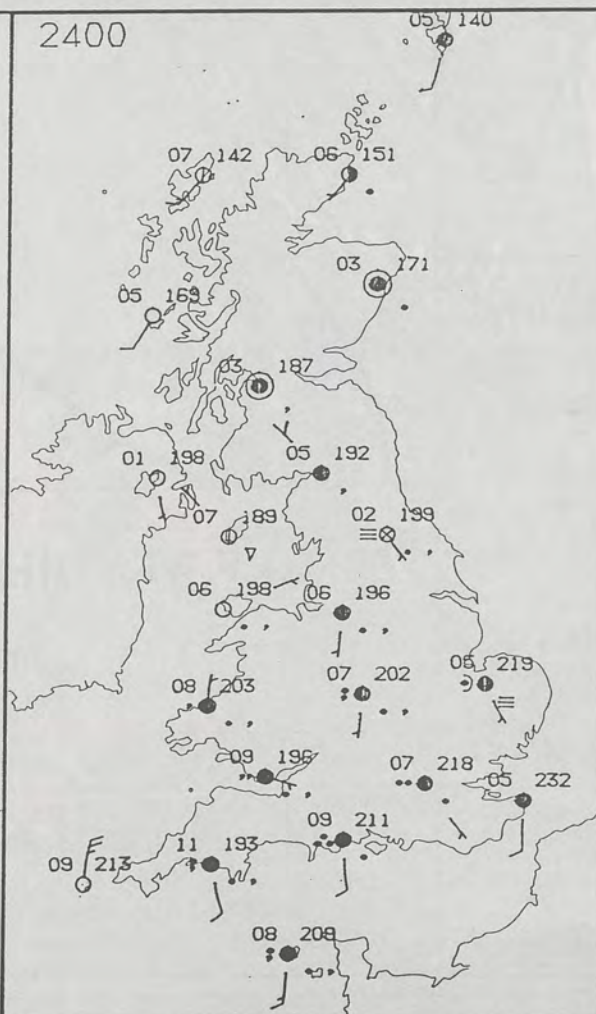

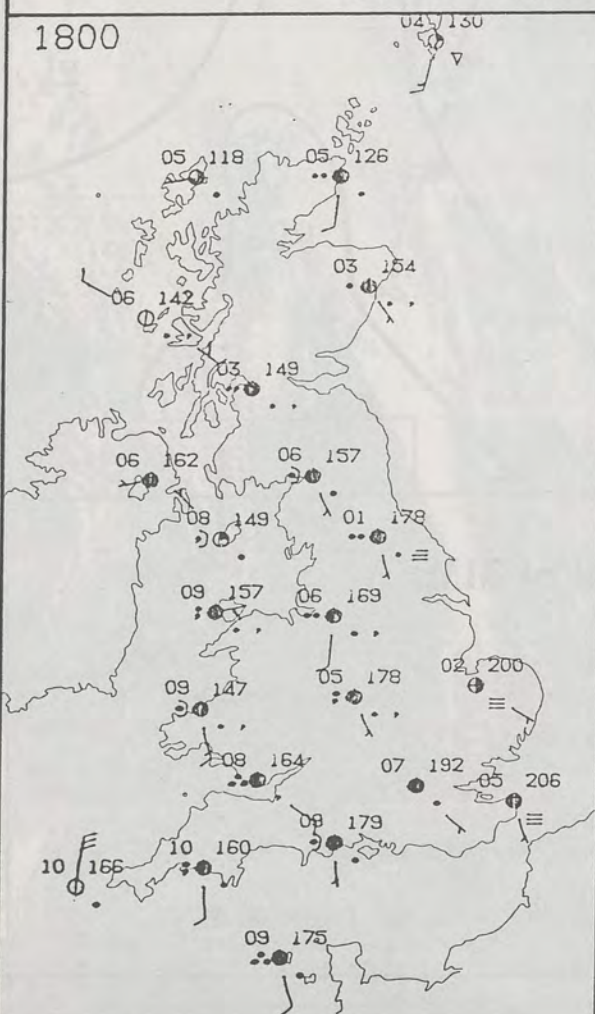

Temperatures were near or a little above normal in western and southern coastal regions and in Northern Ireland. Elsewhere it was rather cold or cold especially where fog persisted.

WEDNESDAY
11 DECEMBER 1985SUMMARY
OF
BRITISH WEATHER

Scotland, Northern Ireland and much of Wales had a dry night, with some patchy fog in southern Scotland at dawn. In northern England and the North Midlands fog was widespread, whilst over the South Midlands, Lincolnshire, East Anglia and much of southern England the night was misty with rain at times.

During daytime eastern Scotland and northeast England had quite a lot of sunshine. There was a bright start too, in western Scotland and Northern Ireland, before skies clouded over, with the Outer Hebrides having a few spots of rain. Northwest England, the North Midlands, Wales and the far southwest of England had a dry day with some sunshine at times. In the Vale of York and parts of northwest England fog hung around and thickened up again during the evening. In East Anglia, the South Midlands, central southern and southeast England it was cloudy. East Anglia had rain at times through the day, but elsewhere the rain died out during the morning.

Temperatures were generally on the mild side.

SUMMARY

OF

BRITISH WEATHER

Much of Britain had a cloudy night. Most places in England and Wales were dry, but Northern Ireland had some rain and drizzle. In southern and eastern Scotland there was wet weather for a while, but all of Scotland turned clearer before morning.

During the day most places were cloudy although some southeastern and eastern parts of England had some sunshine for a time.

Most places in England and Wales stayed dry but a few places in the south had a little rain. Later in the afternoon and evening heavier and more persistent rain reached northern England and the north and west of Wales.

Northern Ireland had rain and drizzle, and heavy rain spread northwards across Scotland during the morning and afternoon.

It was a mild day over England and Wales and very mild in Northern Ireland and Scotland. The north and west of Scotland were very windy with a gust of 72 knots reported from Collafirth Hill in Shetland at about 0600 GMT.

FRIDAY
13 DECEMBER 1985

SUMMARY
OF
BRITISH WEATHER

Much of Britain had a cloudy night with rain and drizzle in most places and some heavy rain in parts of Wales and northwest England, but in Scotland there was a lot of dry, clear weather.

During the day, many places in Scotland were dry and fairly sunny but there were a few showers, especially in northern Scotland. Later in the afternoon wet weather reached southern and western Scotland and spread across mainland Scotland during the evening.

Northern Ireland, England and Wales were mainly cloudy with just a little bright weather here and there. There was rain and drizzle too, but many places turned drier in the afternoon.

In most places it was very mild, although in northern Scotland and the Northern Isles temperatures were only a few degrees above normal. Northern Scotland and Orkney and Shetland had gale or severe gale force winds overnight and for a time in the early morning. Fair Isle reported a gust of 72 knots just after midnight.

PLOTTED SURFACE OBSERVATIONS

SATURDAY 14 DECEMBER 1985

SUMMARY OF BRITISH WEATHER

It was a very mild night just about everywhere and mostly cloudy with a little rain or drizzle from time to time, although Scotland had some clear periods.

The daytime was cloudy, though there were some cloud-breaks later in the evening in the north.

Rain or drizzle fell from time to time in various areas, most of it light, though with heavier and more persistent rain for a time in the far north of Scotland during the late morning and afternoon.

There was some hill and coastal fog in the south of England and South Wales.

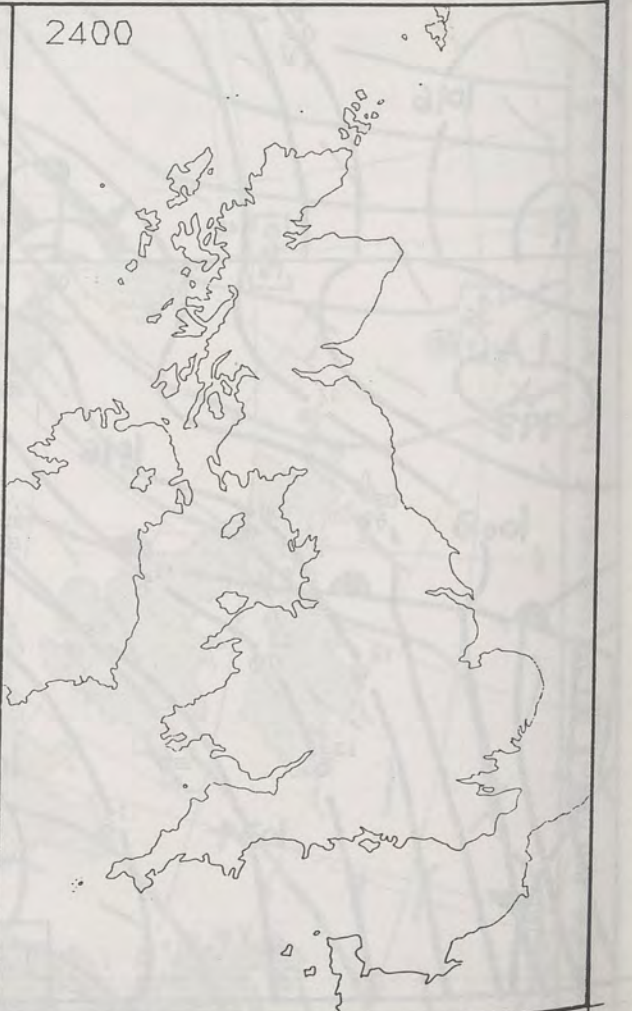

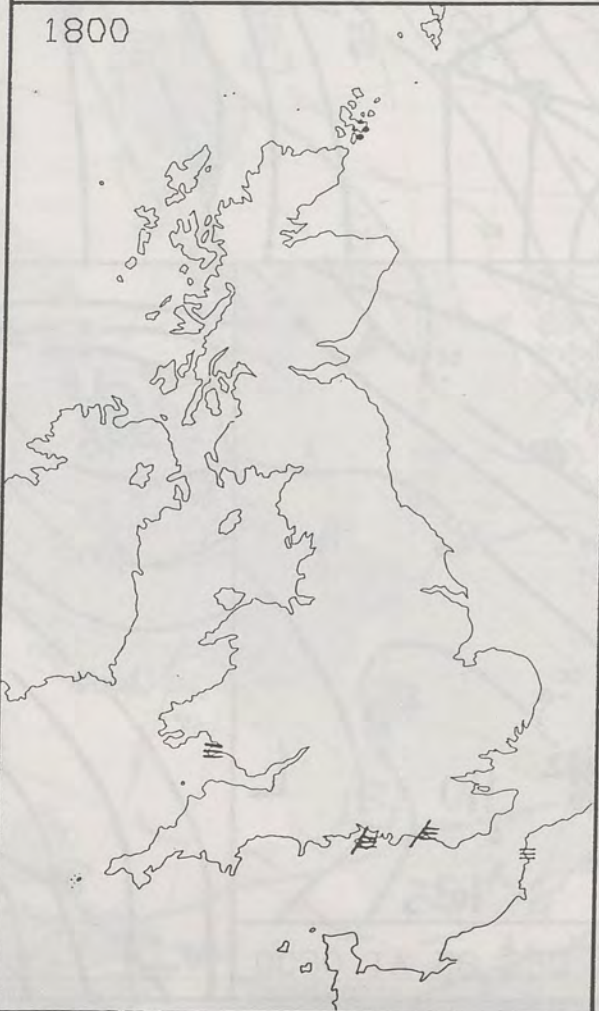

It was a very mild day everywhere and exceptionally mild in some places.

SUNDAY
15 DECEMBER 1985

SUMMARY
OF
BRITISH WEATHER

The night was very mild everywhere. Most places were cloudy, with patches of light rain or drizzle here and there, and some heavier bursts of rain in parts of Scotland early in the day.

There were also areas of well-broken cloud, with the brightest areas during the day chiefly over Scotland and parts of southwest Britain.

There were strong winds in some northern areas, with particularly strong gusts in hilly areas. A gust of 61 knots was reported from St. Abbs Head (Borders) late in the morning.

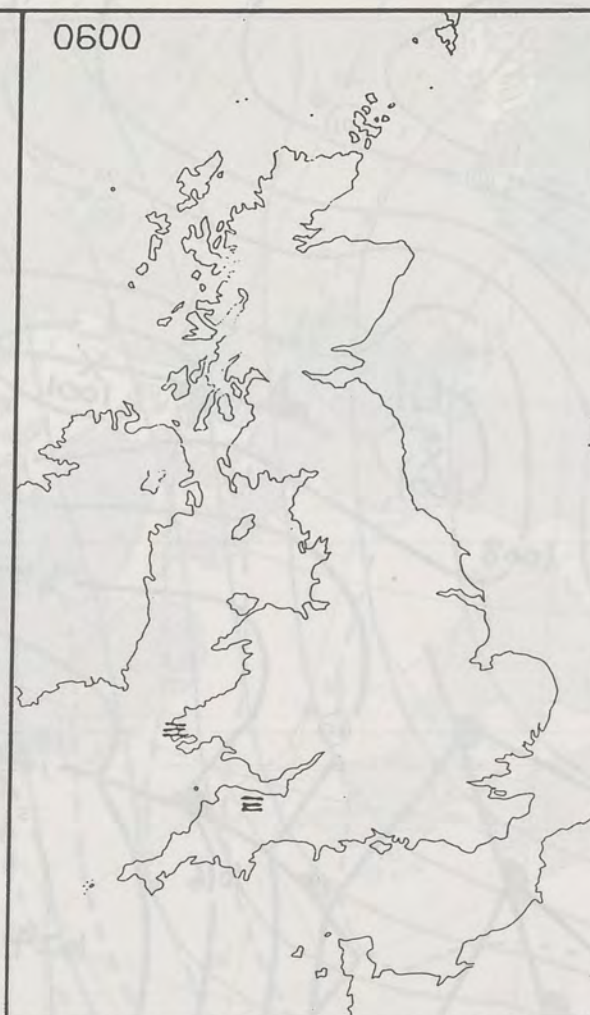

The daytime and evening was mainly dry, however from time to time Northern Ireland and some western areas of mainland Britain were affected by light rain or drizzle.

It was again very mild everywhere although northern Scotland only had temperatures a few degrees above normal.

MONDAY
16 DECEMBER 1985

SUMMARY
OF
BRITISH WEATHER

Northern Scotland had a cloudy night, with some heavy rain and strong winds for a time. A gust of 64 knots was reported from Sumburgh (Shetland) just before midday. During the day the rain moved across much of the rest of Scotland, tending to become much lighter, followed by showery weather in northwestern parts, though Scotland as a whole remained cloudy.

After a cloudy night and morning in Northern Ireland, with just a little rain the remainder of the day was mainly dry though cloudy. The afternoon brightened up with some sunshine but cloud increased again during the evening.

England and Wales had a mostly dry but cloudy day, any breaks in the cloud being mainly to the leeward of high ground, though some northwestern areas also saw some brief sunshine. The evening remained mostly cloudy.

It was mild or very mild almost everywhere although northern Scotland and the Northern Isles had temperatures near normal.

TUESDAY
17 DECEMBER 1985

SUMMARY
OF
BRITISH WEATHER

Scotland and Northern Ireland had rain overnight, quite heavy in places, which lasted into the morning. During the afternoon the persistent rain became confined to the far north with most other parts having dry conditions and only odd spots of rain. During the evening though, further rain came along to many parts.

Northern counties of England and North Wales were cloudy throughout with some heavy rain in the morning, then a somewhat drier period in the afternoon and early evening. More rain came along to some places later in the evening.

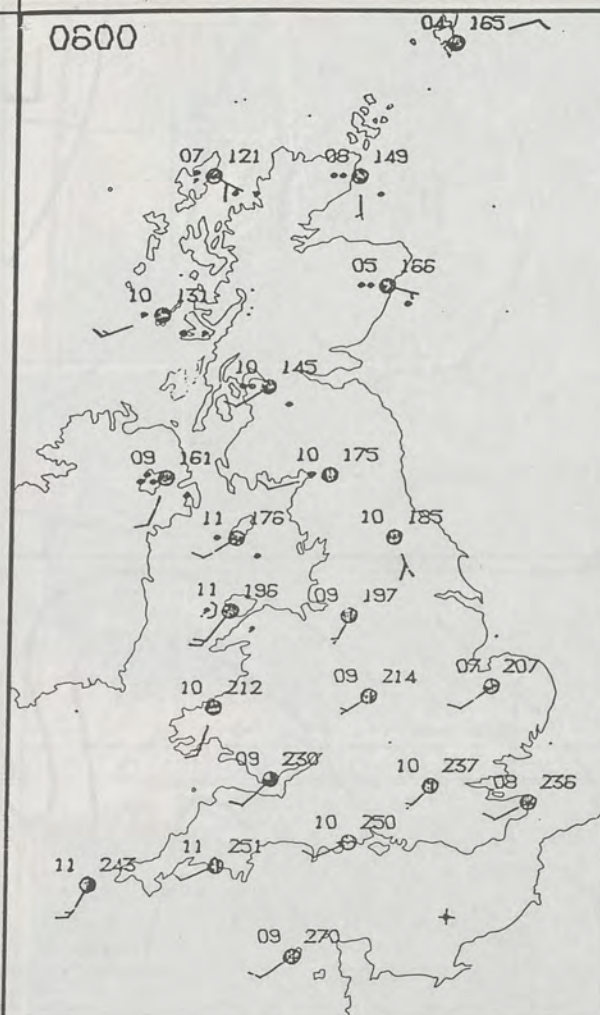

South Wales and all remaining areas of England were mostly cloudy overnight, though some areas had temporary breaks in the cloud. During the morning cloud thickened up and during the afternoon rain reached all western areas and the northern Midlands, spreading to other areas around dusk, with some heavier bursts in one or two places.

It was very mild again nearly everywhere, although northeastern Scotland and the Northern Isles had temperatures near normal.

WEDNESDAY
18 DECEMBER 1985

SUMMARY
OF
BRITISH WEATHER

There was wet weather for a while nearly everywhere overnight, but before daybreak much of Scotland, along with Northern Ireland, Wales and the west and north of England had turned drier, clearer and in many places colder.

There was rain for a time in the morning in Shetland, East Anglia and parts of southeast England, but here too the weather had brightened up by midday.

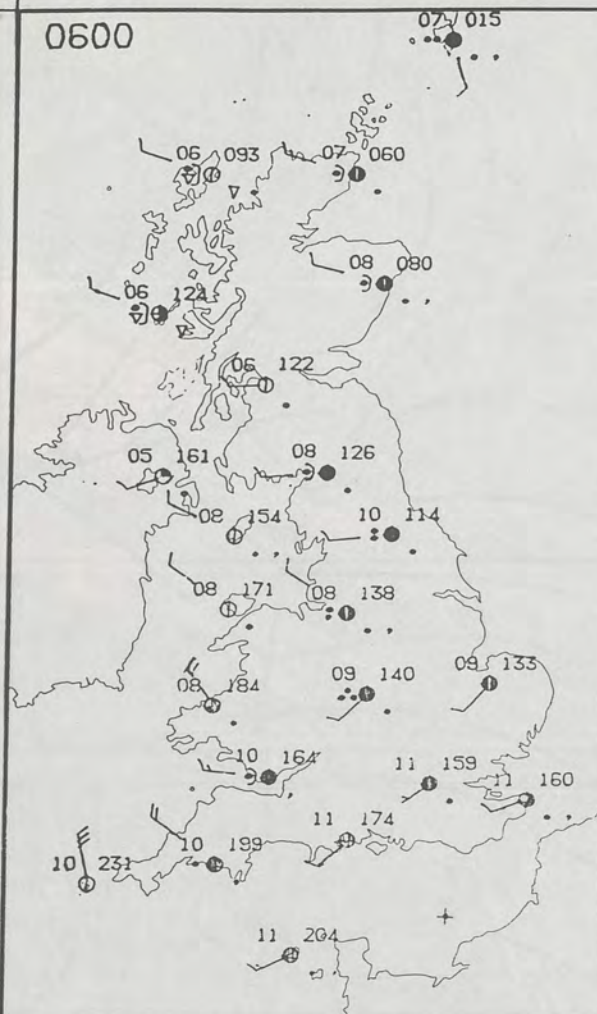

Over the British Isles there was a lot of dry, fairly sunny weather, but one or two places in England and Wales had a shower and there were some showers too in Scotland and Northern Ireland, most of them in the late afternoon and evening.

Temperatures were again on the mild side in most places, especially in the south.

THURSDAY
19 DECEMBER 1985

SUMMARY
OF
BRITISH WEATHER

There were some showers overnight and at first in areas exposed to the northwest to westerly winds. Many places, though, had a clear night, and there was a touch of frost in parts of Scotland.

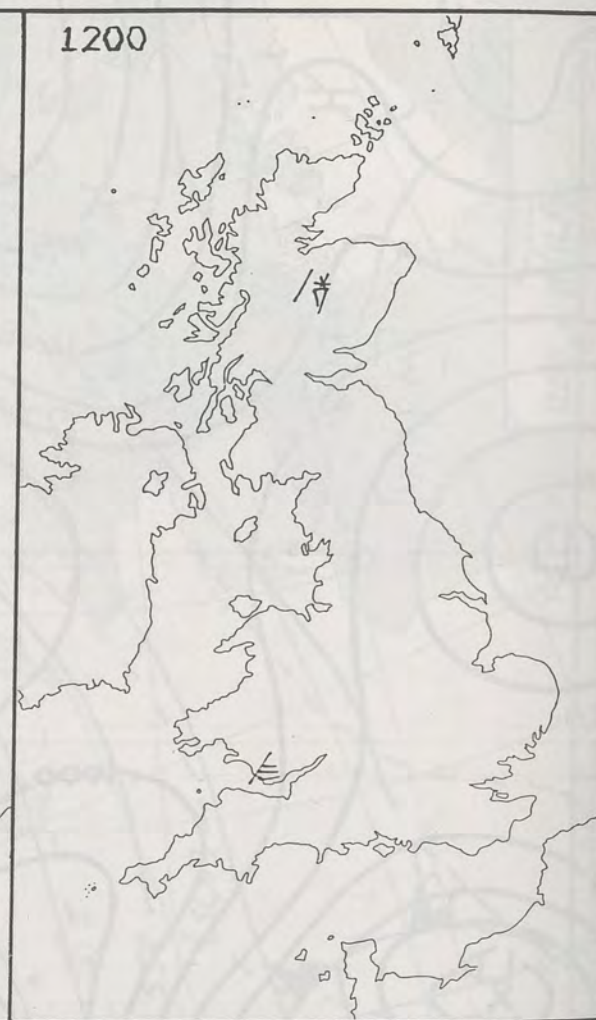

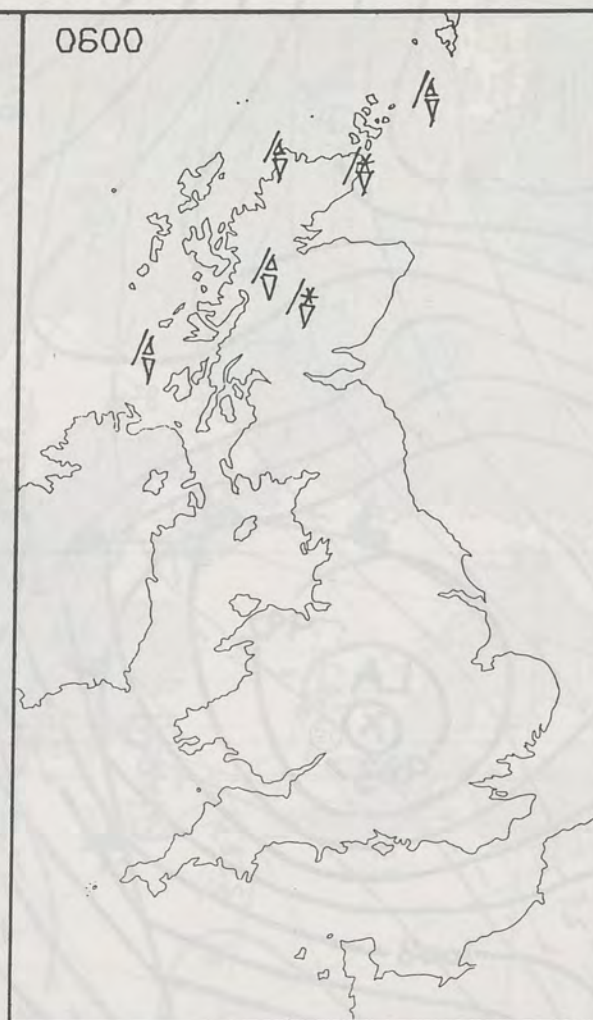

During the day, many places were bright for a time, and some southeastern counties of England had quite a sunny day. However, it clouded over steadily from the west in most districts, with rain reaching parts of Northern Ireland and western Scotland around midday and spreading across the rest of Scotland during the afternoon. There was some heavy rain for a time in the western half of Scotland. Clearer weather followed from the west across most of Northern Ireland and Scotland during the evening, though a line of thundery showers interrupted this clearance for a time.

Some rain affected parts of northern England and Wales in the evening, but southern England remained dry.

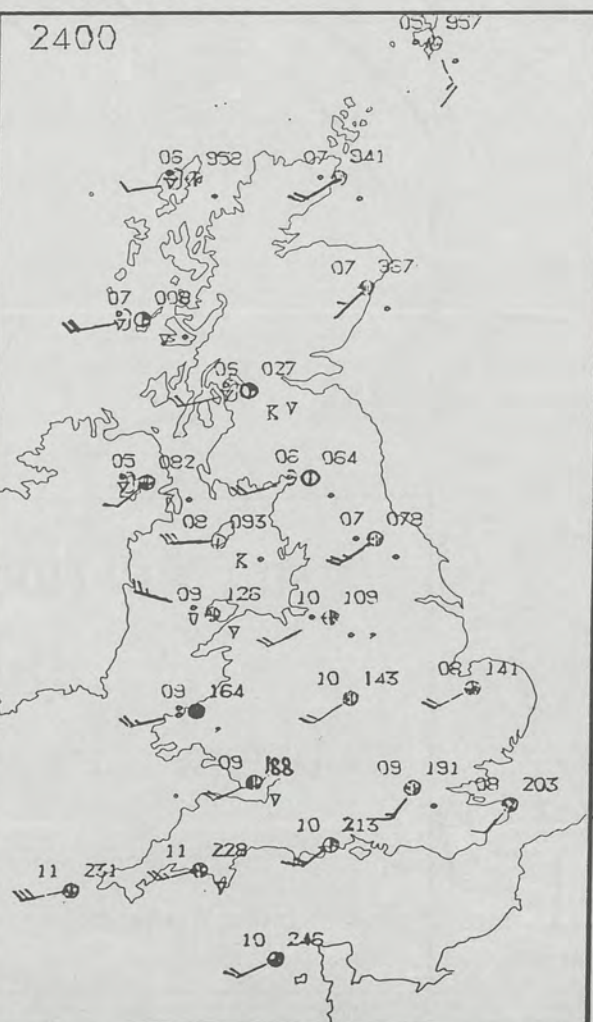

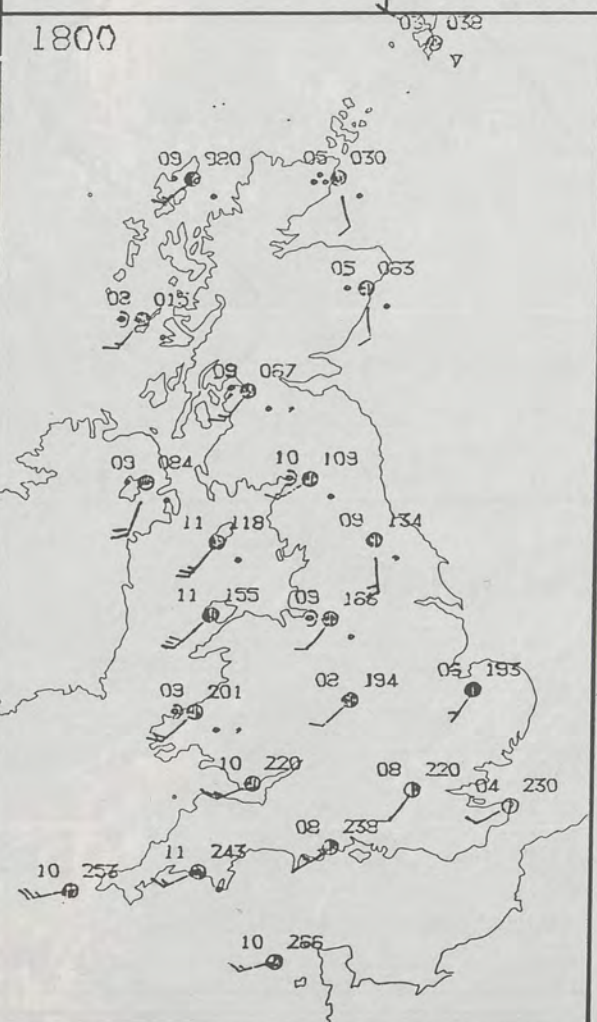

It was a mild day in most places but some northeastern and eastern areas had temperatures not far from normal. A gust of 62 knots was reported from Killogh (Co. Down) during the evening.

FRIDAY
20 DECEMBER 1985

SUMMARY
OF
BRITISH WEATHER

Outbreaks of rain moved southeast across England and Wales during the early hours, though parts of south and southeast England and East Anglia stayed dry. Scotland, Northern Ireland and the northern half of England became clearer, though still with some showers, heavy at times in the northwest.

The day was cloudy virtually everywhere, over the British Isles with the rain spreading back northeastwards - affecting mostly northwestern and northern regions, with most of eastern Britain having very little rain.

It cleared up again in the evening for a time over much of Scotland, but more rain spread back to most western parts by midnight.

Most of England and Wales had a dry, cloudy evening.

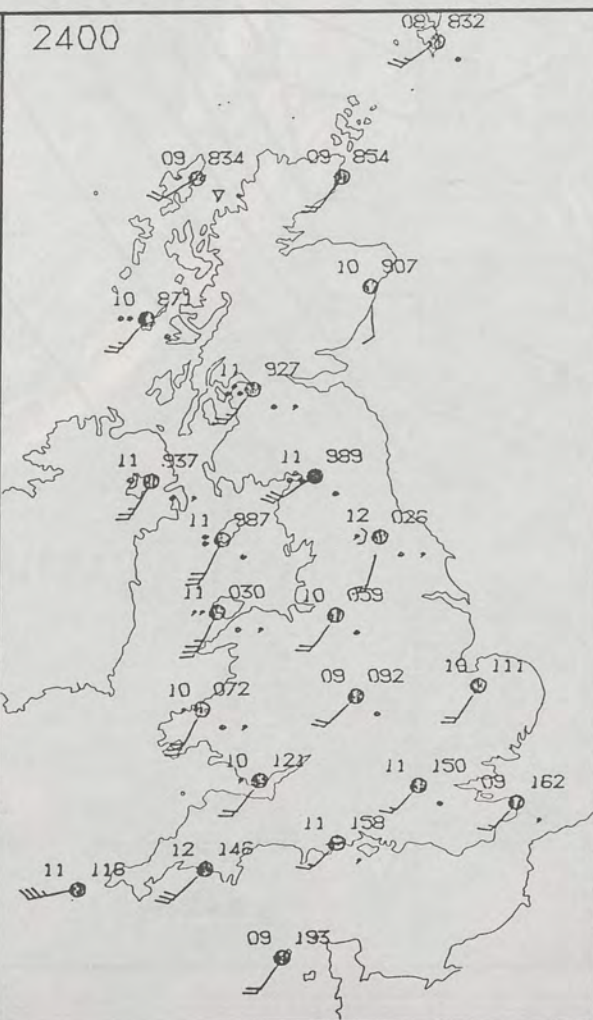

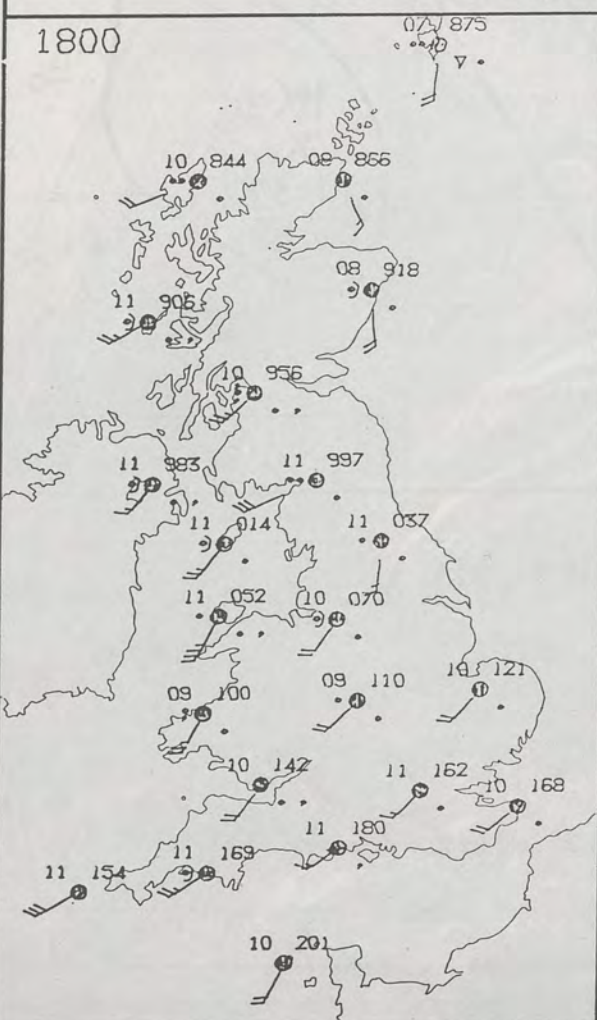

It was generally very mild, though windy.

SATURDAY
21 DECEMBER 1985

SUMMARY
OF
BRITISH WEATHER

Over Scotland and Northern Ireland there was rain for much of the night with the far northwest of Scotland becoming drier towards dawn.

England and Wales had a windy night with gales along western coasts and hills. Northern England had rain, most of it to the west of the Pennines, elsewhere it was mostly dry with just a few spots of rain in the more western counties.

During the morning the rain over Scotland and Northern Ireland edged south with some quite heavy falls in southern Scotland. By afternoon most of Scotland and Northern Ireland became brighter with a few showers.

Northern England and North Wales had a wet start to the day, with rain heavy in places, extending to the rest of Wales, the Midlands and southwest England later on. Much of southern and eastern England stayed dry and cloudy.

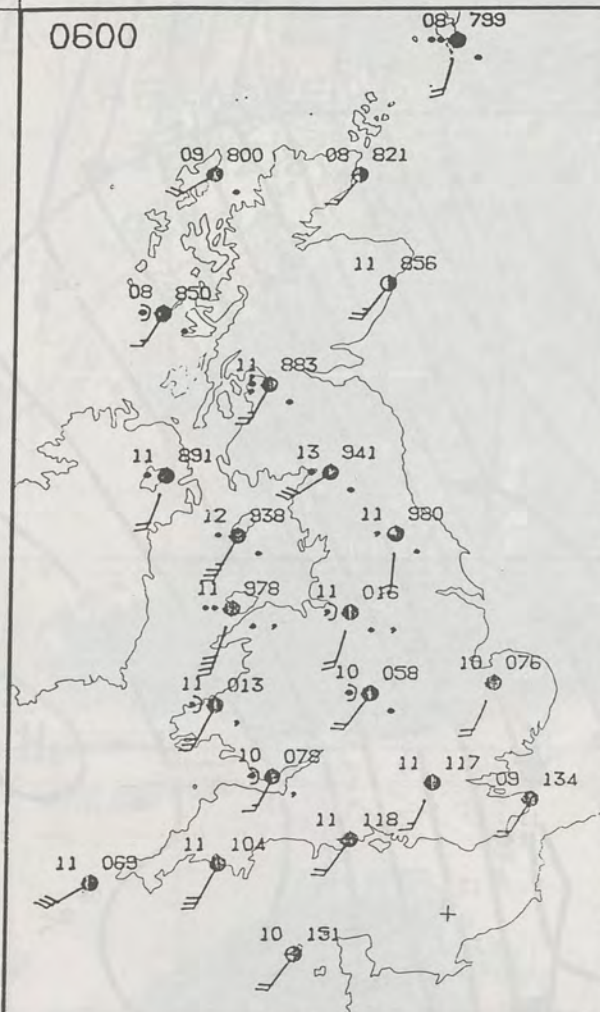

Temperatures were near normal over northern and western Scotland. Elsewhere over Britain it was very mild for late December.

A gust of 72 knots was reported from Gwennap Head (Nr. Lands End) late in the evening.

SUNDAY
22 DECEMBER 1985

SUMMARY
OF
BRITISH WEATHER

There were one or two showers in the far west of Scotland overnight but for the rest of Scotland and Northern Ireland it stayed dry and clear. Much of England and Wales had rain heavy in places, only the extreme southeast of England managing to stay dry. Clearer weather followed over northern England before morning.

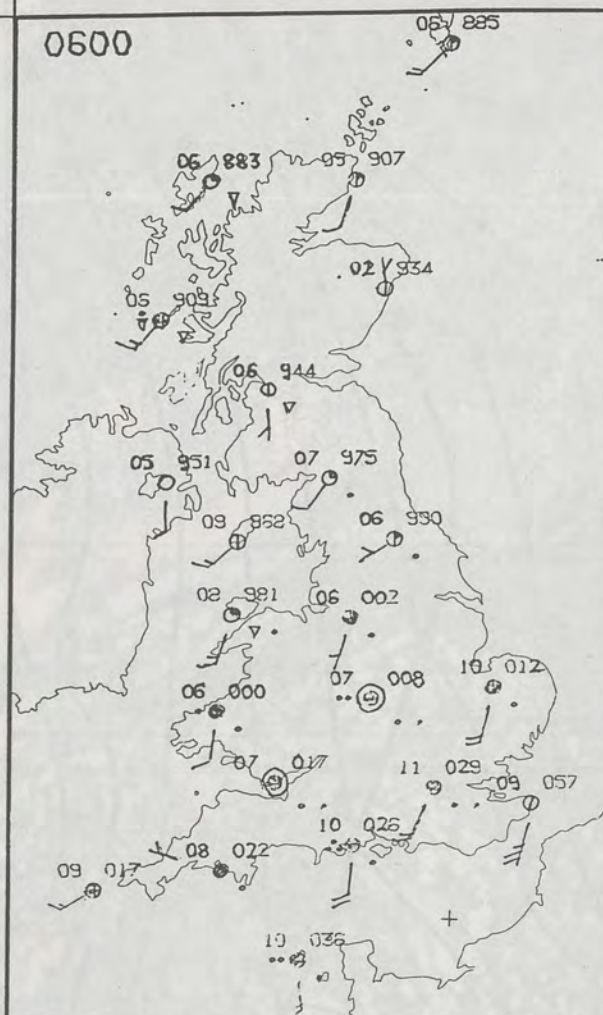

During the day the rain over southern and eastern England, gradually gave way to drier weather, but it was evening before the rain finally cleared the east coast. Over the rest of England and in Wales, Scotland and Northern Ireland there was some sunshine, with a few showers - most of them near west facing coasts.

Temperatures were in the mild category over east and southeast England and much of Wales. Elsewhere over Britain they were near normal.

PLOTTED SURFACE OBSERVATIONS

MONDAY
23 DECEMBER 1985

SUMMARY
OF
BRITISH WEATHER

There were showers and clear periods in most regions. The showers were most frequent on coasts and hills exposed to the fresh south to southwest wind. Some of the showers were heavy with hail and there were isolated thunderstorms.

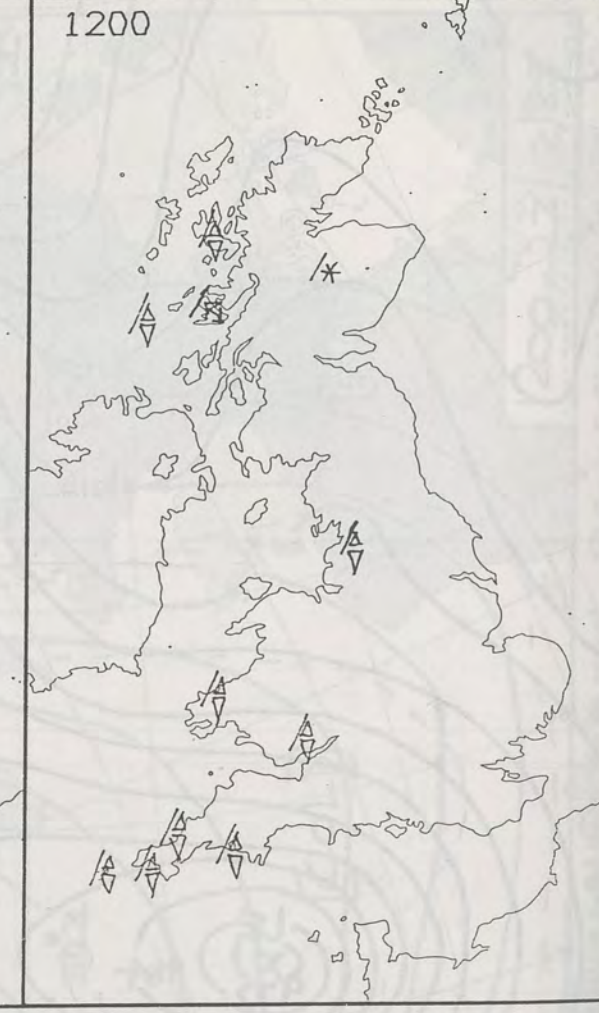

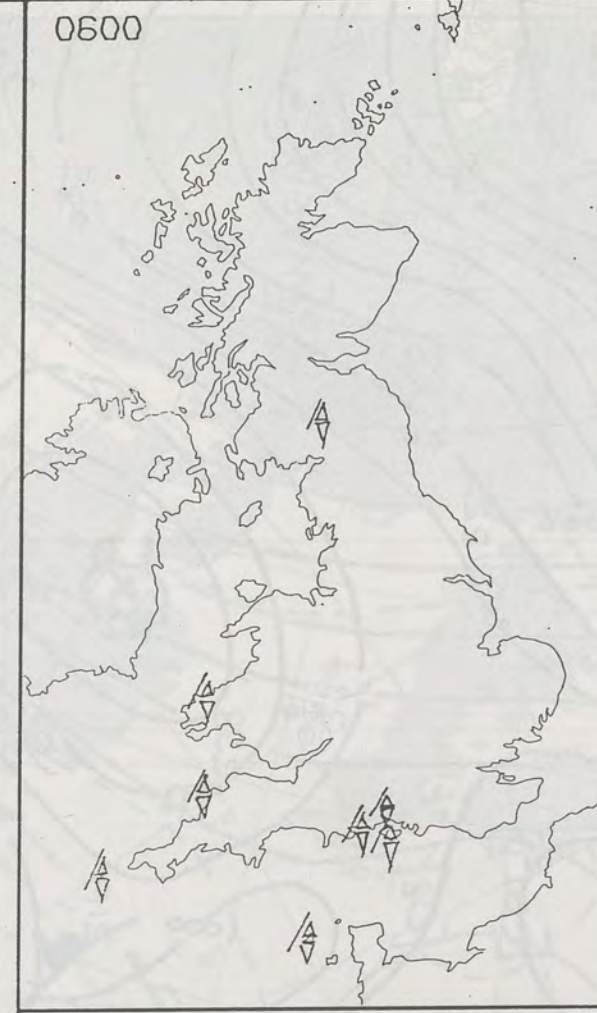

Scattered showers spread to eastern counties especially in northern Britain but in central southeastern and eastern parts of England most places had a dry fairly sunny day.

During the early evening more persistent rain heavy in places reached southwestern counties of England and Wales, and this rain extended to most southern regions by midnight.

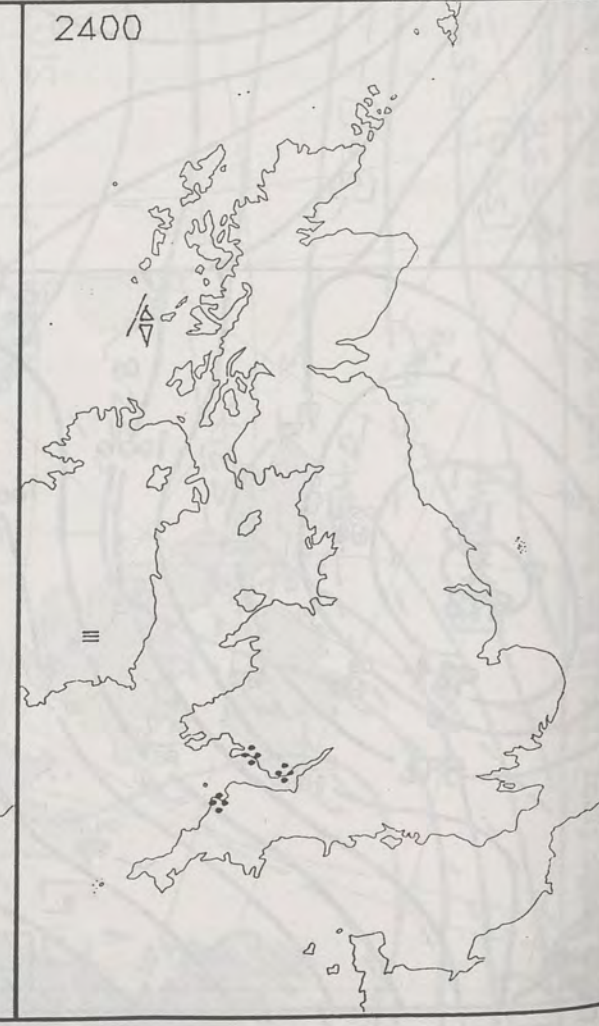

It was mild in most places but in Scotland and Northern Ireland temperatures were near normal.

TUESDAY
24 DECEMBER 1985

SUMMARY
OF
BRITISH WEATHER

In southern and central parts of England and Wales it was a wet night with heavy rain at times. During the day it was mainly cloudy with outbreaks of light rain or drizzle and another narrow band of rain moved quickly northeast across all parts during the afternoon and evening.

In North Wales, northern England and Northern Ireland it was mainly dry with a clear sky at times but fog developed in northern England late in the night and it remained foggy through the day in parts of Lancashire and Yorkshire. During the evening outbreaks of rain reached North Wales, parts of northwest England and Northern Ireland.

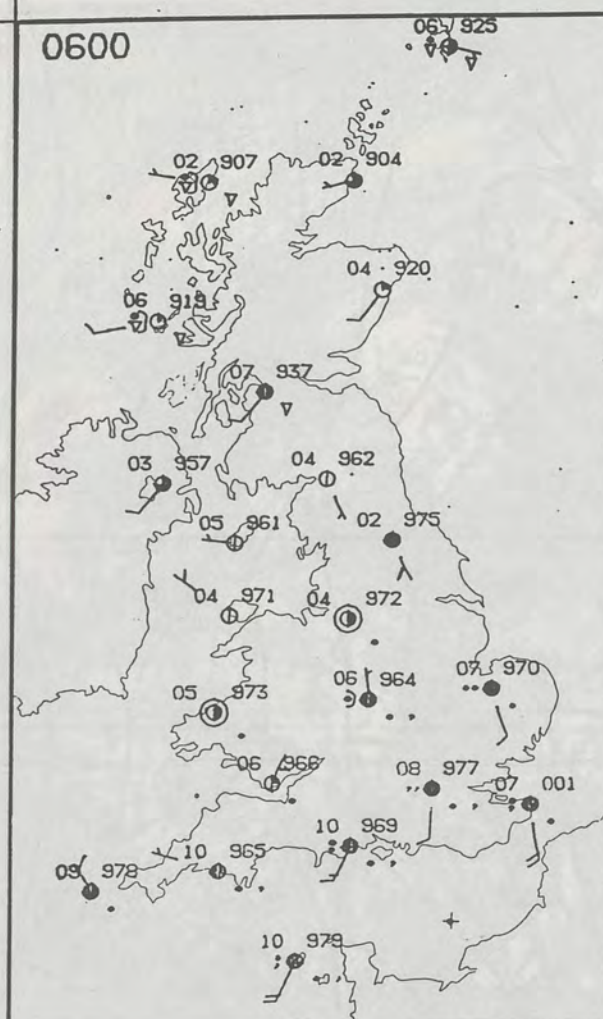

In Scotland there were isolated showers but many places remained dry with sunny intervals.

It was mild in the extreme south of England and East Anglia but further north temperatures were near or a little below normal and in the foggy regions it was a cold day.

WEDNESDAY
25 DECEMBER 1985

SUMMARY
OF
BRITISH WEATHER

Much of Britain had some rain overnight, but many places in Wales and central and southern England remained dry.

It was quite a cold night in central and northern areas of England and Wales and in Scotland, with slight frost in places.

During the day most of the British Isles was cloudy, although there was a brief glimpse of the sun here and there.

Northern Ireland, northern England and much of Wales were mainly dry but central and southern England and South Wales had heavy showers and some longer spells of heavy rain in many places.

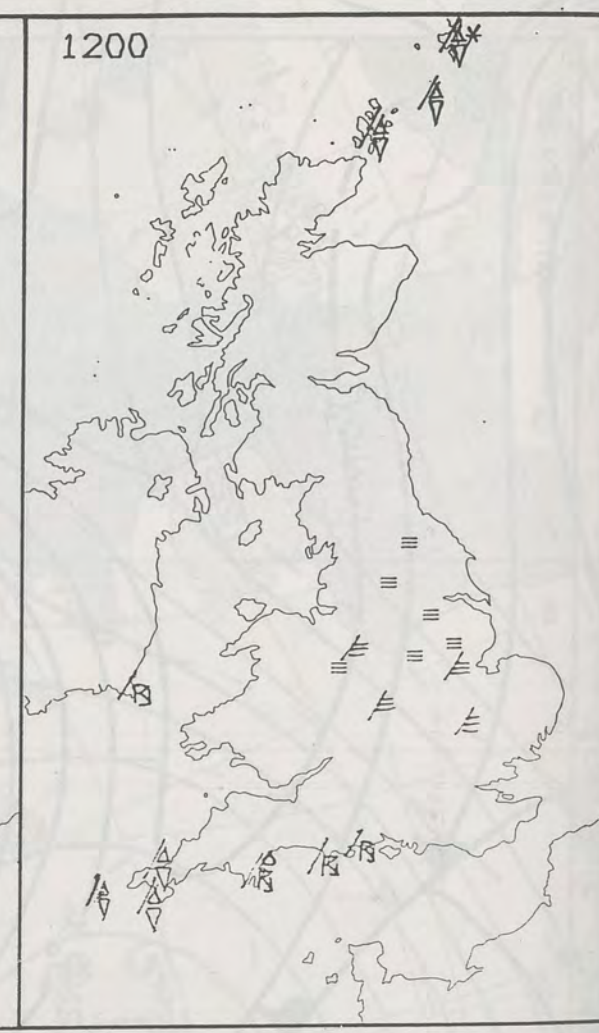

Scotland too had showers, with more persistent rain here and there. In northern Scotland and Orkney and Shetland there were snow and hail showers.

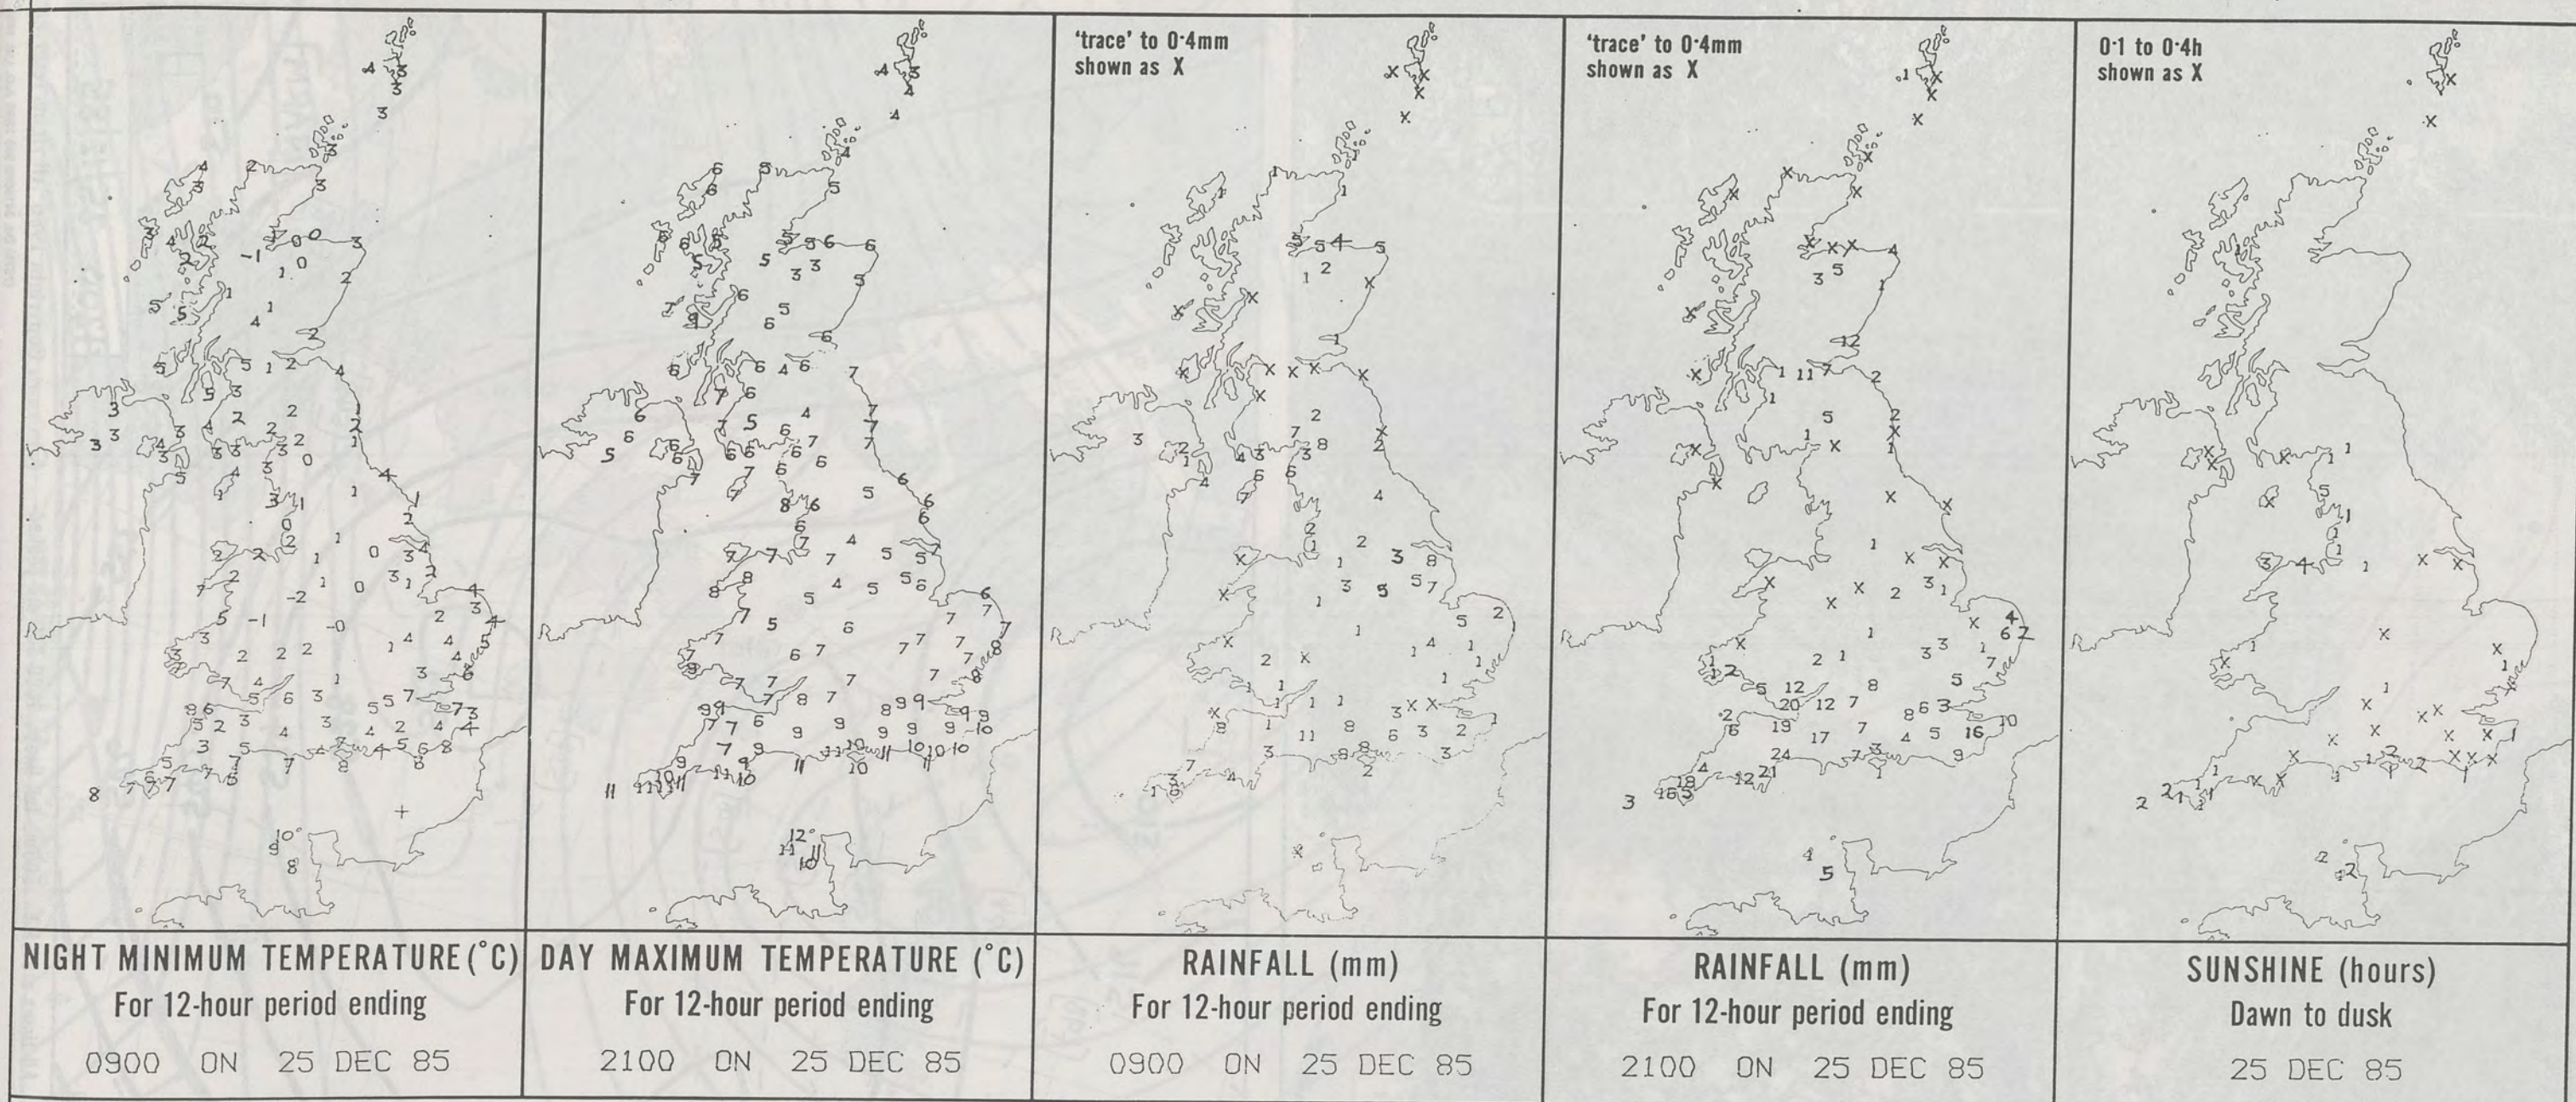

Most places had temperatures close to or a little below normal but southern England remained mostly mild.

Northern Ireland and Scotland had a windy day with gales on coasts and hills. A gust of 60 knots was reported from St. Abbs Head (Borders) late in the evening.

THURSDAY
26 DECEMBER 1985

SUMMARY
OF
BRITISH WEATHER

Much of southern England had a very wet twenty-four hours, with the heaviest and most persistent rain in a band from the Bristol Channel across central southern and southeastern England. The rain slowly cleared from the west, and by midnight only the extreme southeast of England was still wet. Much of the time the rain was accompanied by a strong and gusty northeasterly wind, and a fair amount of flooding and gale damage resulted. A gust of 63 knots was reported at Langdon Bay (Kent) in the early evening.

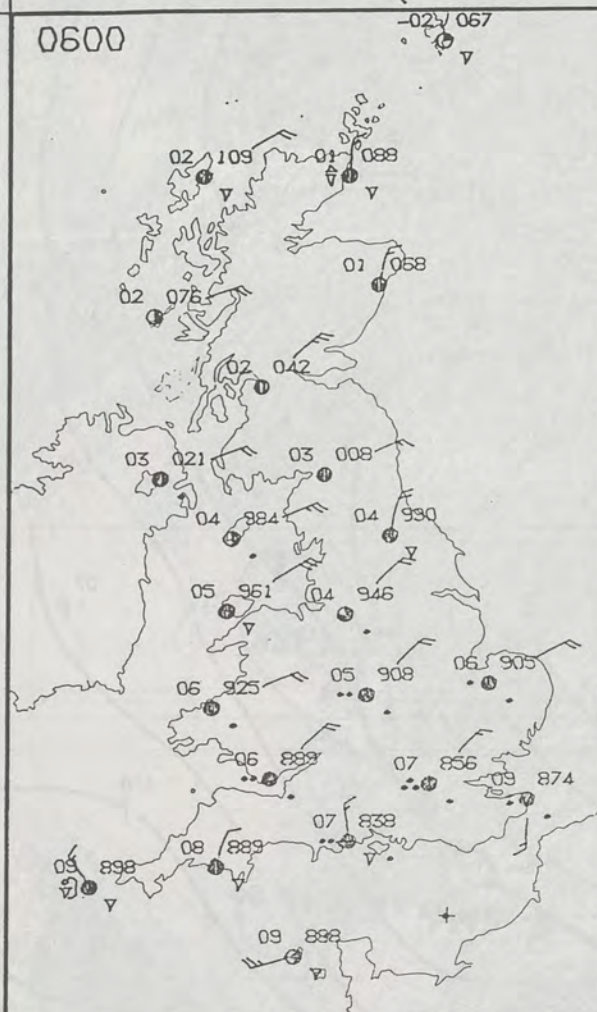

Over all other areas of the British Isles there was rain in places at first, and some snow and hail showers during the day, chiefly in northern and eastern Scotland. Most places became dry later and there was a little sunshine, chiefly in southwest Scotland and northwest England.

It was a cold day everywhere by the afternoon.

FRIDAY
27 DECEMBER 1985

SUMMARY
OF
BRITISH WEATHER

Most places were dry and bright after severe frost affected central and northern regions of the British Isles overnight.

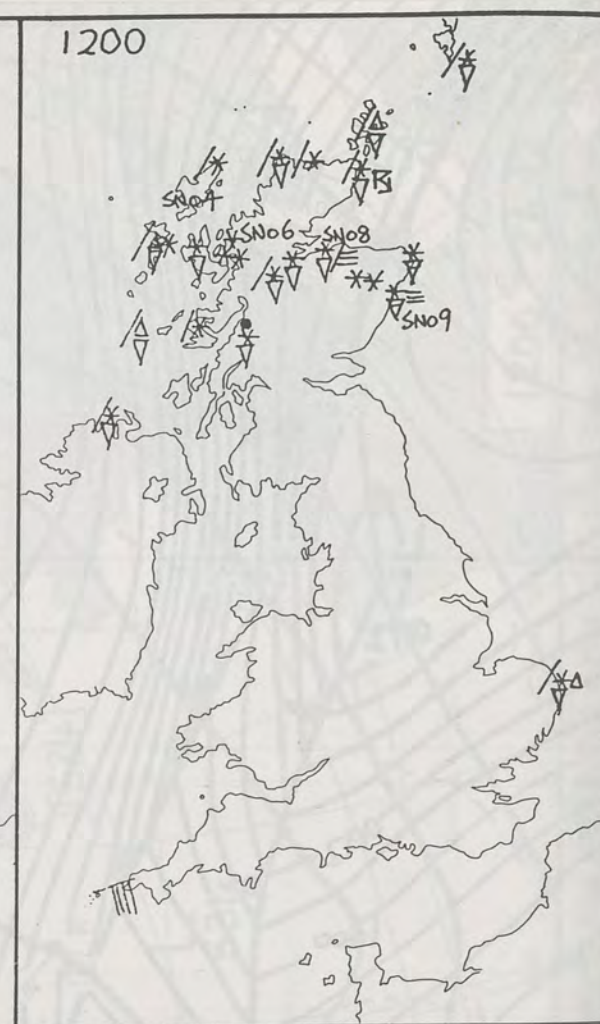

Snow and hail showers affected northern and parts of eastern Scotland and later spread to parts of northeastern England, with moderate accumulations in places. There were also a few very light snow flurries elsewhere.

It was a mostly cold or very cold day with temperatures staying below freezing in parts of central and eastern England and central and eastern Scotland.

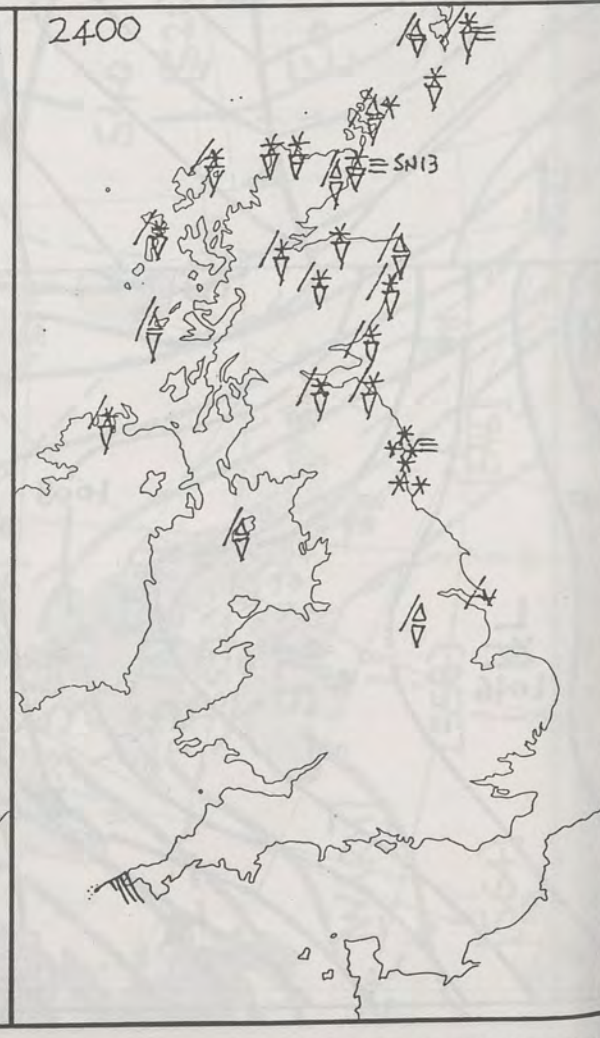

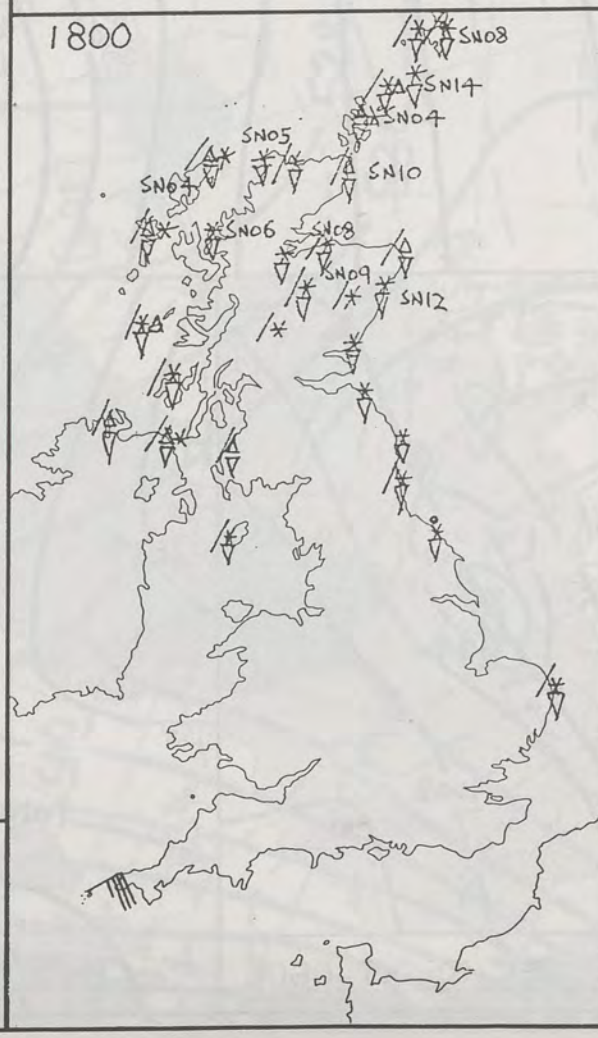

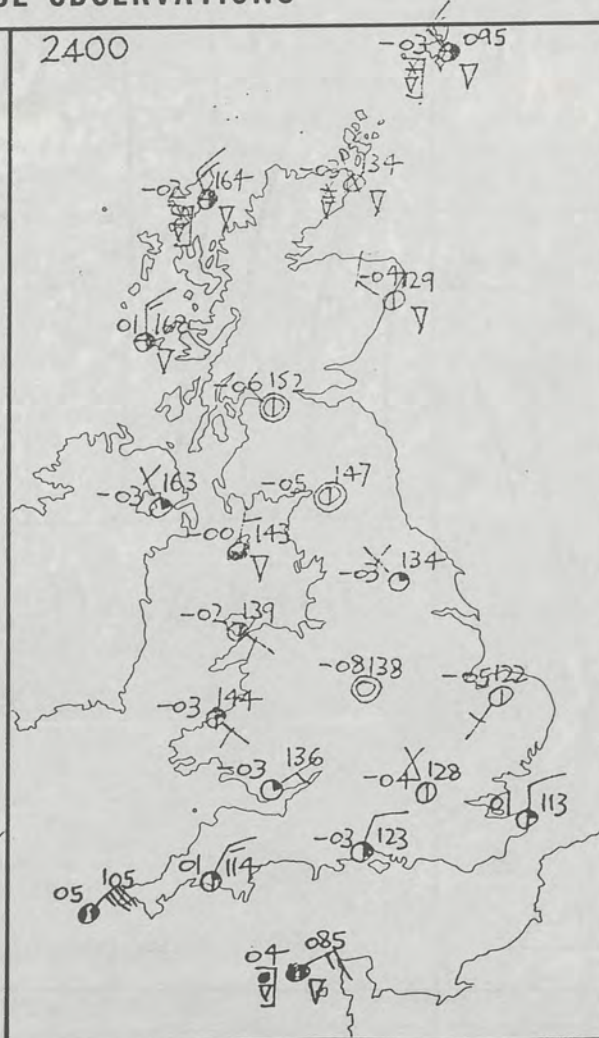

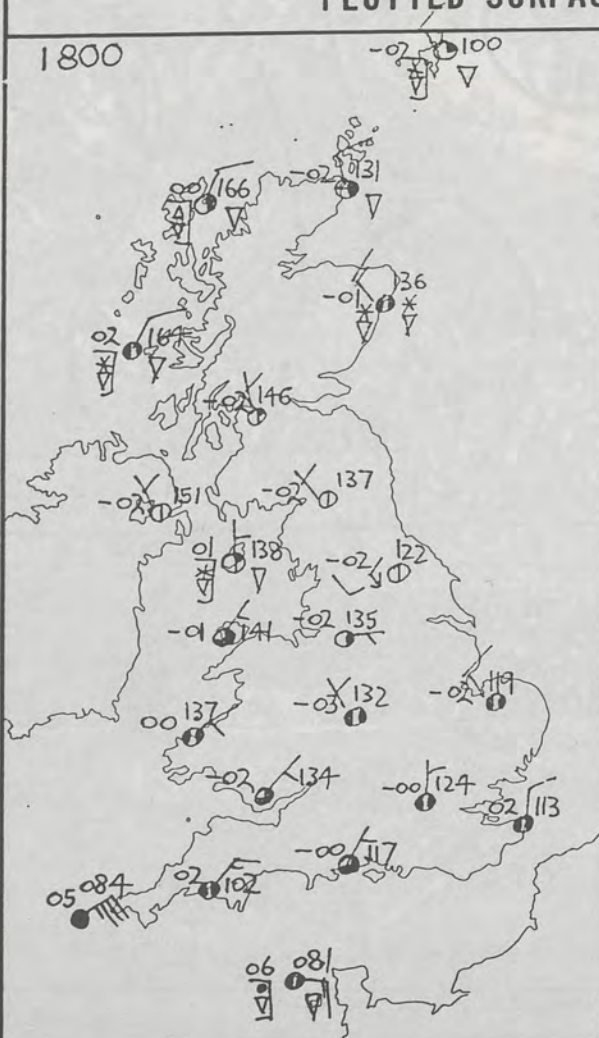

In the evening, severe frost became widespread throughout most of the British Isles.

SATURDAY
28 DECEMBER 1985

SUMMARY
OF
BRITISH WEATHER

After widespread severe frost, snow showers, some of them heavy and prolonged, affected many exposed northern parts of Scotland and coastal counties of northeast England, with some parts of Northumberland, Durham and North Yorkshire experiencing some quite heavy falls of snow. The snow in northeast England petered out, but the showers over Scotland persisted through the day. Other parts of eastern England had some mainly light snow showers, some snow showers also turned up in western and northern coastal districts of Wales and Northern Ireland. With these exceptions, much of England, Wales, southern and central Scotland and Northern Ireland had a dry day.

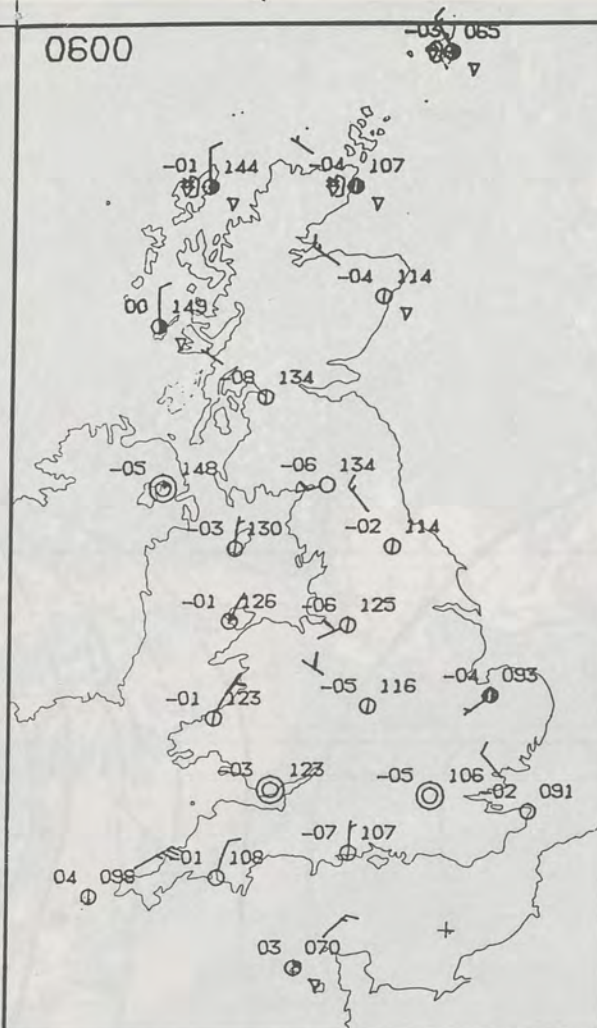

Most areas had some sunshine but many parts of east and southeast England had persistent cloud cover, and late in the afternoon and through the evening this cloud cover gave some mainly light snow flurries. North and west Scotland remained mainly cloudy also.

It was a very cold day everywhere and some strong winds in northern and some eastern areas drifted any lying snow. Much of the British Isles away from the west stayed below freezing point all day.

SUNDAY 29 DECEMBER 1985

SUMMARY OF BRITISH WEATHER

There was widespread severe frost again over the British Isles overnight.

Snow showers affected eastern coastal counties, with some heavy snowfall again being reported over the moors and other hilly areas. Parts of Northern Ireland, Wales, coastal Scotland and upland Cornwall also had some scattered snow showers. For a time North and West Wales experienced rather more organised snowfall earlier in the night.

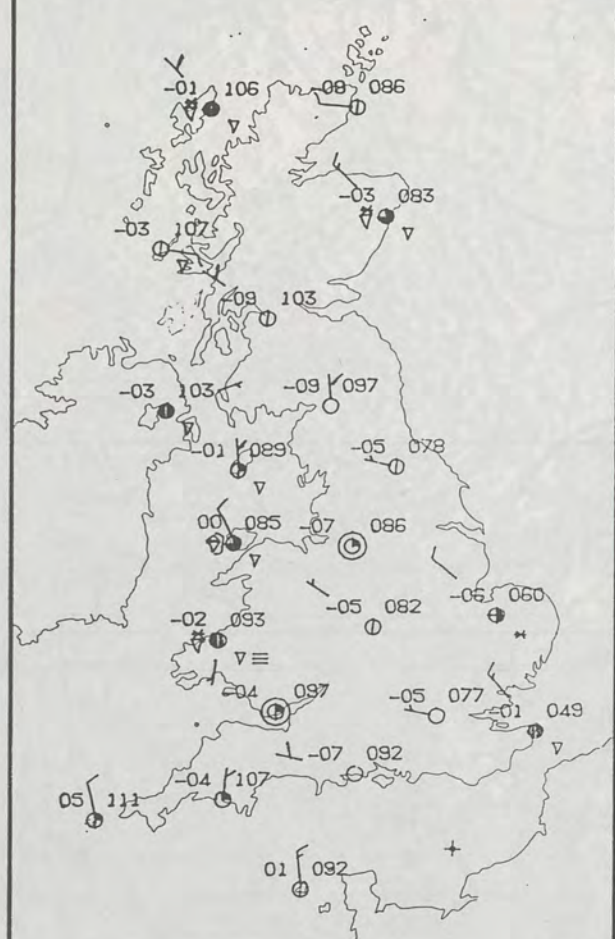

Much of the country away from the snowy areas had a sunny, dry day, though some patchy fog formed over parts of Northern Ireland. Winds were rather strong for a time along the east and northeast coast of England, but generally fairly light winds prevailed.

It was another very cold day with temperatures staying below freezing in many places, and in central Scotland maximum temperatures were up to twelve degrees below normal.

MONDAY
30 DECEMBER 1985

SUMMARY
OF
BRITISH WEATHER

Most places had a frosty night, with a very severe frost in many parts of central and eastern Scotland. Towards morning freshening southerly winds brought sleet and snow into Northern Ireland, the far west of Scotland and West Wales.

During daytime snow moved slowly north and east across Wales, the North Midlands, northern England and much of Scotland. Northern Ireland and southwest England on the other hand had rain at times and the snow turned to rain in Wales and the far west of Scotland during the afternoon. West Wales had a wet evening with heavy rain at times. In south-east and central southern England, the Channel Islands, East Anglia and the South Midlands the day was dry with some sunny intervals. By evening some light rain and sleet was falling over the South Midlands and parts of central southern England.

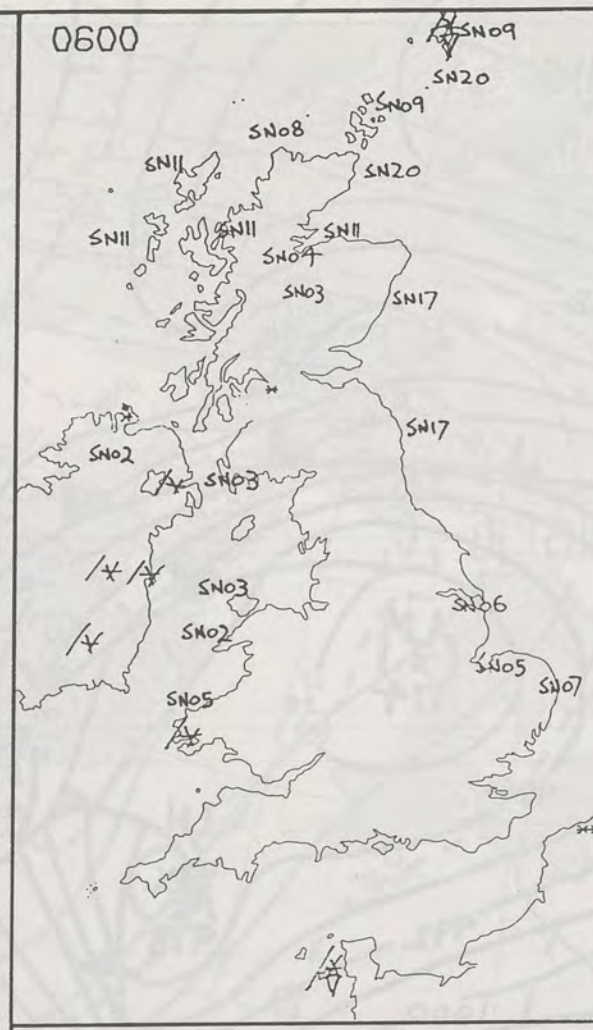

Temperatures were near average in southwest England, the Channel Islands, West Wales and Northern Ireland. The rest of Britain was cold or very cold with frost all day in east and northeast England and parts of central Scotland.

There were gales later in West Wales and southwest England, with a gust of 62 knots being reported from the Lizard (Cornwall) later in the evening.

PLOTTED SURFACE OBSERVATIONS

TUESDAY
31 DECEMBER 1985

SUMMARY OF BRITISH WEATHER

Scotland, Wales and much of England had a good deal of rain overnight with some sleet for a time in northern England. In southeast England, East Anglia and Lincolnshire, the night was mostly dry, whilst in Northern Ireland rain soon gave way to broken skies with a few fog patches around dawn.

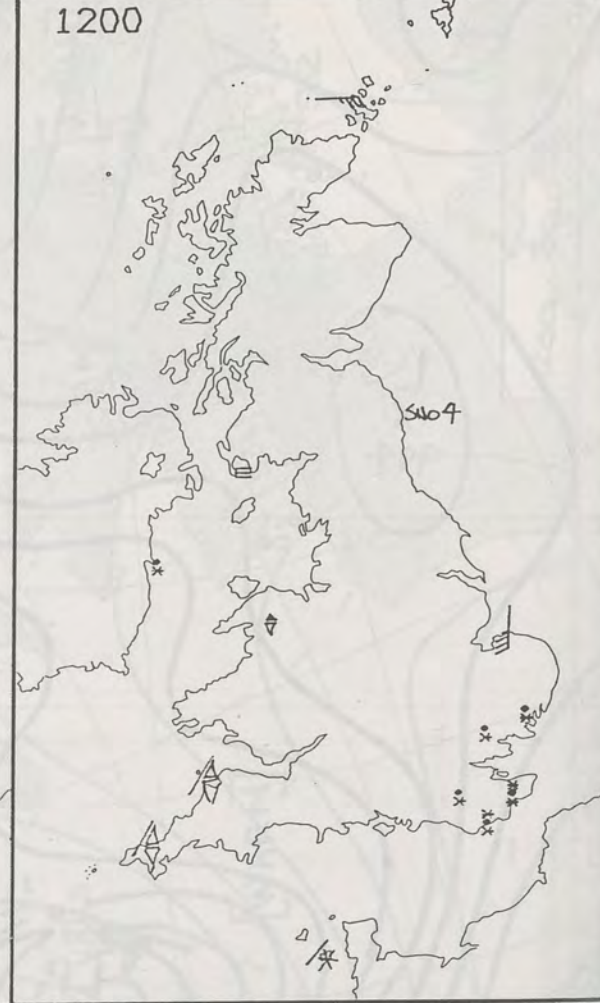

During daytime the rain continued slowly east, turning to sleet and wet snow in parts of Kent, East Anglia and the Channel Islands. Brighter skies followed in to western Scotland, Northern Ireland, South Wales, southwest England and the Channel Islands with a few showers. For the rest of Britain it stayed mostly cloudy with further outbreaks of rain and some more sleet at times over Kent and East Anglia.

It was a cold day generally; but in Wales, southwest England, the far west of Scotland and the coastal fringe of northwest England temperatures were near or rather below the average for late December.

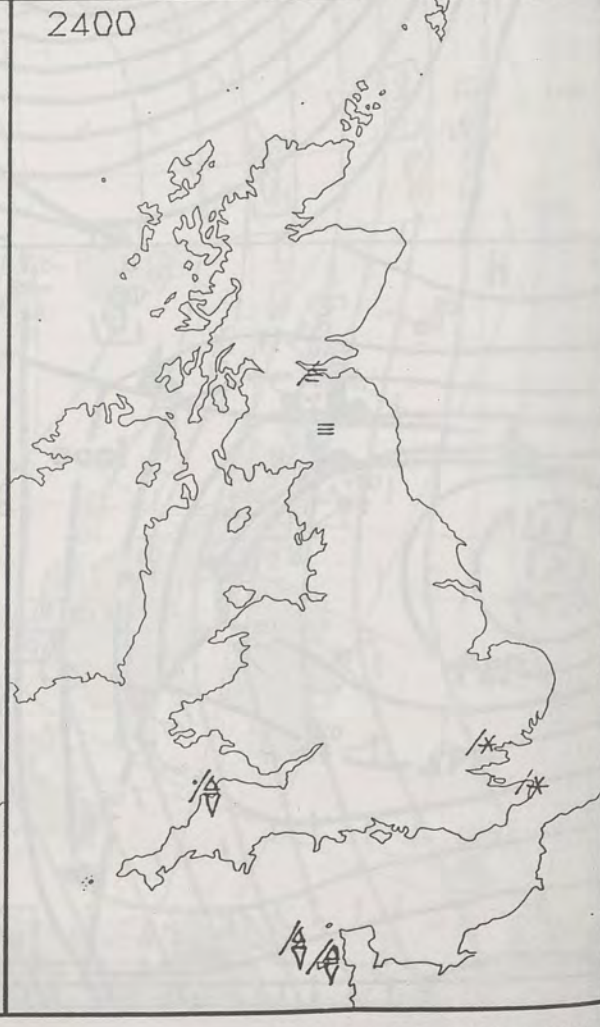

A gust of 67 knots was reported from Milford Haven (Dyfed) in the early hours of the morning.
