0600 GMT 01 NOVEMBER 1998 SIG WEATHER	1200 GMT 01 NOVEMBER 1998 SIG WEATHER	<p><b>Summary of UK weather for Sunday 1 November 1998</b></p> <p>Southeast England started wet, while showers were reported in west Wales, the Western and Northern Isles. The rain soon exited southeast England into the North Sea, as showers were still blown inland into parts of west Wales and more frequently the Western and Northern Isles, some of these of sleet or hail.</p> <p>During the morning showers become more widespread, and still with snow mixed in the far north. The main areas affected were west and north Wales, Lancashire, west and north Scotland, Northern Ireland and northeast Norfolk.</p> <p>In the afternoon showers continued in most of the above areas, but also stretched across further east on the wind into Yorkshire, the Midlands, East Anglia and the Thames Basin, while a few turned up in southwest England. A thunderstorm was indicated in Lancashire, while many parts in the east managed to stay dry.</p> <p>The evening saw the showers die out in the east, but keep going in parts of the west, particularly Lancashire, Shropshire and the western Pennines. Temperatures were normal or rather cold across most of the country.</p>

## SIGNIFICANT WEATHER

0600 GMT 02 NOVEMBER 1998	SIG WEATHER	1200 GMT 02 NOVEMBER 1998	SIG WEATHER	<b>Summary of UK weather for Monday 2 November 1998</b> <p>Apart from a scattering of showers much of Scotland had a dry night with long clear periods. It was also largely clear down the eastern side of England at first. However, cloud spread from the west during the night. The cloud brought rain from the west, erratically north and east during the night, to lie from Northern Ireland to southeast England by morning.</p> <p>The Northern Isles and northern Scotland had a bright day with sunny spells and scattered showers. Across the rest of the UK, it was cloudy and wet through the morning with heavy rain in places, and falling as snow across the Northern Pennines and Southern Uplands. Through the afternoon the rain began to clear from the Southwest, replaced by showery weather, although heavy, thundery showers were reported.</p> <p>Through the evening the band of rain became largely confined to Northern Ireland, the southern half of Scotland, and the northern half of England. To the north of this band there was a scattering of showers. To the south, the showers were more frequent, particularly across western parts and along the English Channel coast, with some heavy and thundery showers.</p> <p>Temperatures were close to normal across Wales and southwest England. Across Scotland it was cold or very cold, and elsewhere it was generally rather cold.</p>

## SIGNIFICANT WEATHER

<p>0600 GMT 03 NOVEMBER 1998 SIG WEATHER</p> 	<p>1200 GMT 03 NOVEMBER 1998 SIG WEATHER</p> 	<p><b>Summary of UK weather for Tuesday 3 November 1998</b></p> <p>It was mainly cloudy overnight in Northern Ireland, Northern England and southern parts of Scotland, with outbreaks of rain. To the north and south of this rain band, a more showery picture was evident, although most of the showers affected the coastal fringe, locally accompanied by hail and thunder. Out of showers there were clear spells. Gales developed in some coastal areas, especially in the English Channel.</p> <p>During the morning, the rain edged south into the north Midlands and north Wales, allowing drier, brighter weather to develop over Northern Ireland and southern Scotland. Elsewhere the mixture of bright spells and showers continued. As rain reached central areas by lunchtime it had largely turned more showery. Winds generally eased during the day.</p> <p>The evening saw most of the remaining showers affect England and Wales, with a generally dry and clearer spell further north. Towards the end of the period, though, as the showers died out in the south, more were starting to move into affect Scotland. Southern areas initially saw southwesterly winds on Tuesday, but they developed a northerly component everywhere with time.</p> <p>There was a touch of frost over northern Scotland, and it was mostly rather cold by day; during the evening a frost soon started to form in many inland parts of Scotland.</p>

0600 GMT 04 NOVEMBER 1998	SIG WEATHER	1200 GMT 04 NOVEMBER 1998	SIG WEATHER	<p><b>Summary of UK weather for Wednesday 4 November 1998</b></p> <p>Rain over Scotland soon cleared southeastwards to leave scattered wintry showers overnight. Over Northern England, Northern Ireland, Wales and The Midlands there was a mixture of clear spells and showery outbreaks. The south and southeast of England meanwhile had a fairly cloudy start, with showery rain, which gave way to clearing skies by the morning. The odd shower did however return to Cornwall around dawn.</p> <p>There were bright or sunny spells over England and Wales during the morning, along with locally wintry showers, these more persistent at times in the north. Scotland and Northern Ireland also saw a mixture of cold winter sunshine and well scattered light showers.</p> <p>Wintry showers continued to affect many northern and western parts of the British Isles into the afternoon, and over central and southeastern England there was a lot of cloud around, along with more showers. Elsewhere though, it was cold, but sunny.</p> <p>The extreme southeast of England remained fairly cloudy into the evening, and it was sometimes fairly cloudy over Scotland, Northern Ireland and in western parts of England and Wales, where showers persisted. For the bulk of Central, southern and Eastern England though, skies became largely clear, and a frost soon started to form.</p> <p>Overnight temperatures were rather cold to cold, with a frost in many parts, and it remained cold throughout the day, with frost soon returning in the evening.</p>

<p>0600 GMT 06 NOVEMBER 1998 SIG WEATHER</p> 	<p>1200 GMT 06 NOVEMBER 1998 SIG WEATHER</p> 	<p><b>Summary of UK weather for Friday 6 November 1998</b></p> <p>Most places across the UK had a dry night, with clear spells, but there were a few light showers scattered around. During the morning, there were some good spells of sunshine across England and Wales, but there were also showers scattered around through the day. Many places however, stayed dry with some good spells of sunshine right through the day. Southern Scotland and Northern Ireland stayed dry through the day, with broken cloud and sunny spells, however cloud increased through the morning in western Scotland. This brought outbreaks of rain, heavy at times, with a spell of snow over the hills, shortly after midday. The rain crept slowly across northern Scotland, not reaching the northeast until the end of the afternoon. During the evening the rain spread further south, just reaching the borders, before starting to die away, becoming confined to northern Scotland by the first part of the night. Otherwise the rest of the UK was dry with clear spells. Away from northeast Scotland, where it was rather cool, temperatures were near normal across the UK.</p>

Shetland reported some sleet for a time. For the rest of Britain and Northern Ireland, it was a largely dry night although it turned misty on parts of England and Wales. During the day there was further heavy rain at times over Shetland and a few outbreaks over south and west Scotland and northwest England. Most other areas had a dry day. It was bright at times but the best of the sunshine was in the south of England. Rain reached Northern Ireland by the end of the afternoon and spread across Scotland and eventually to much of Wales and western England by midnight. This rain was heavy in places. It was a windy day in northern and western areas. The wind strengthened further in the evening and freshened in eastern areas too. Temperatures were close to normal or a little above in most places.</p>

## SIGNIFICANT WEATHER

0600 GMT 09 NOVEMBER 1998	SIG WEATHER	1200 GMT 09 NOVEMBER 1998	SIG WEATHER	<b>Summary of UK weather for Monday 9 November 1998</b> <p>It was cloudy and wet across most parts at first, particularly eastern England with moderate rain in places. Drier weather with broken cloud soon reached Northern Ireland, spreading to Wales and southwest England during the early hours. The rain clear eastwards across most of England and by the end of the night, although across Scotland it remained cloudy and wet.</p> <p>During the day the rain over Scotland gradually slid away northwards, replaced by sunny spells and showers, those showers mainly in the west. Across the rest of the country it was a bright day with sunny periods, particularly in the east. There were some showers, but fairly isolated, and mainly in the west. However, during the evening a more organised band of showery rain moved across northern and into western parts.</p> <p>The wind was a notable feature of the weather with the remnants of what was hurricane Mitch bringing storm force winds to parts of Northern Ireland, northern Scotland and particularly the northern and western Isles.</p> <p>It was warm across southern England and across much of the country it was rather warm.</p>

<p>0600 GMT 15 NOVEMBER 1998</p> <p>SIG WEATHER</p> 	<p>1200 GMT 15 NOVEMBER 1998</p> <p>SIG WEATHER</p> 	<p><b>Summary of UK weather for Sunday 15 November 1998</b></p> <p>For northern and eastern parts, especially the coastal areas, there were occasional showers overnight. The showers were wintry over northern hills. There were also some showers near western coasts late in the night. There was generally a good deal of cloud around at times, but it was sufficiently broken to allow a ground frost away from the coasts, and local air frost.</p> <p>Northern Ireland, northern and eastern Scotland, along with eastern counties of England, had a rather cloudy day with frequent showers. The showers were wintry in the north. Scattered showers also affected some western coasts during the day and developed over some inland parts of England and Wales during the afternoon. Many western and southern counties had a good deal of sunshine.</p> <p>During the evening, most of the showers inland died away, but for northern and eastern counties there were further showers. Thunder was reported at Peterhead at 1800 hours. Temperatures over southwestern parts were close to normal, but elsewhere it was rather cold.</p>

## SIGNIFICANT WEATHER

0600 GMT 16 NOVEMBER 1998	SIG WEATHER	1200 GMT 16 NOVEMBER 1998	SIG WEATHER	<b>Summary of UK weather for Monday 16 November 1998</b> <p>Most parts of the UK had a dry night, but showers, some of them wintry, affected North Sea coasts at times. A shower was also reported further west in Pembrokeshire. Visibilities generally were good.</p> <p>During the morning, most places were dry with good sunny spells, but showers continued to affect North Sea coasts of both England and Scotland. There was rather more cloud over Northern Ireland, albeit fairly high and thin. This cloud extended across much of western Britain during the afternoon, but it remained dry. Elsewhere it was mostly dry with sunny spells, but the showers continued in some eastern counties. During the evening, the showers in the east became more isolated and some mist patches formed across East Anglia, these later turning into fog.</p> <p>It was a cold day in many places, especially Northern Ireland, and temperatures were typically 3 or 4 degrees below the seasonal norm. However, southwest England recorded values closer to the average.</p>

## SIGNIFICANT WEATHER

0600 GMT 17 NOVEMBER 1998	SIG WEATHER	1200 GMT 17 NOVEMBER 1998	SIG WEATHER	<b>Summary of UK weather for Tuesday 17 November 1998</b> <p>There was a good deal of dry weather during the night, but outbreaks of rain affected Northern Ireland and these extended into some of the western isles of Scotland. Some rain was also reported in Cornwall. Mist and fog formed, especially in central and eastern England, some of it dense and freezing.</p> <p>During the morning, the mist and fog gradually thinned, but it was still widespread across East Anglia at midday. The rain continued to affect Northern Ireland, western Scotland and Cornwall, and scattered showers drifted across coasts of southeast England. These showers then extended and developed further west, affecting southernmost counties of England in the afternoon. By the end of the afternoon, the fog had started to reform in East Anglia, and the rain in the west had spread to westernmost parts of Wales. During the evening, outbreaks of rain were reported across much of Northern Ireland, western Scotland, west Wales and Cornwall and there was sleet in Dumfries and Galloway by midnight.</p> <p>Temperatures were generally below average, and they hovered around zero where fog persisted.</p>

## SIGNIFICANT WEATHER

0600 GMT 19 NOVEMBER 1998	SIG WEATHER	1200 GMT 19 NOVEMBER 1998	SIG WEATHER	<b>Summary of UK weather for Thursday 19 November 1998</b> <p>A band of cloud stretched down the centre of the country and over southeast England overnight. The thickest cloud was over southeast England with outbreaks of rain. Near the east coast, though, skies were largely clear allowing mist and fog to form. Skies were clearer to the west as well. However, this filled in during the night as thicker cloud, with rain over southern Ireland, pushed in from the southwest.</p> <p>The cloud edging in from Ireland extended to southwest England, western parts of Wales and Scotland during the day, bringing outbreaks of rain and drizzle. Further east the cloud slowly broke up and the mist and fog patches cleared, allowing bright or sunny spells. However, the cloud was slowest to clear from southeast England. Meanwhile, medium and high level cloud edged into central parts of the country, ahead of the lower cloud out to the west.</p> <p>The cloud and rain down the western side persisted through the evening. Further east the cloud was more variable, but with clear spells in many areas.</p> <p>Temperatures ranged from normal in the west to cold in the east.</p>

## Summary of UK weather for Saturday 28 November 1998

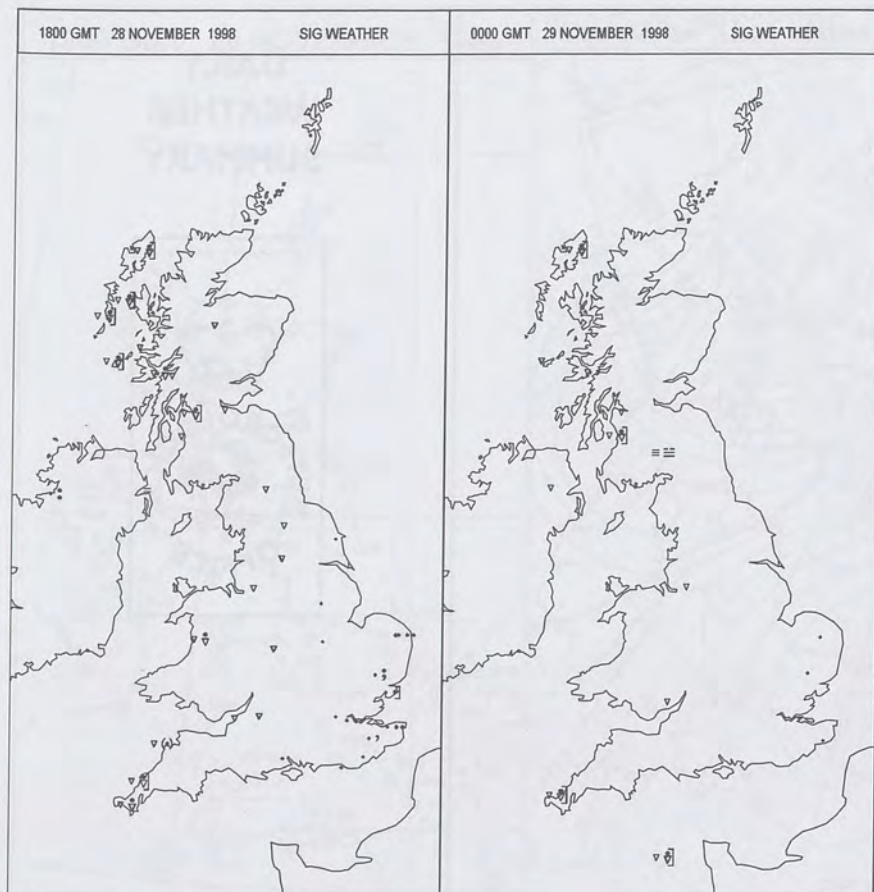

It was a cloudy night across the UK, with patchy mist and drizzle across much of England and Wales. Across western Scotland and northern Ireland there was some heavier more persistent rain, this spread east, into west Wales, southwest England and eastern Scotland later in the night. Northern Ireland and Western Scotland became dry and clear, with scattered showers.

The rain spread east through the morning, clearing Scotland, Wales, northern and southwest England by midday, with sunny spells and scattered showers following into these areas.

The rain continued east through the afternoon, still with some heavy bursts, finally clearing Kent and Norfolk by the evening. Further west there were sunny spells and scattered showers, particularly the northwest.

The evening was dry and fine with showers in northwest Scotland and Northern Ireland.

Temperatures were near normal, but mild in the east and south.

## Summary of UK weather for Sunday 29 November 1998

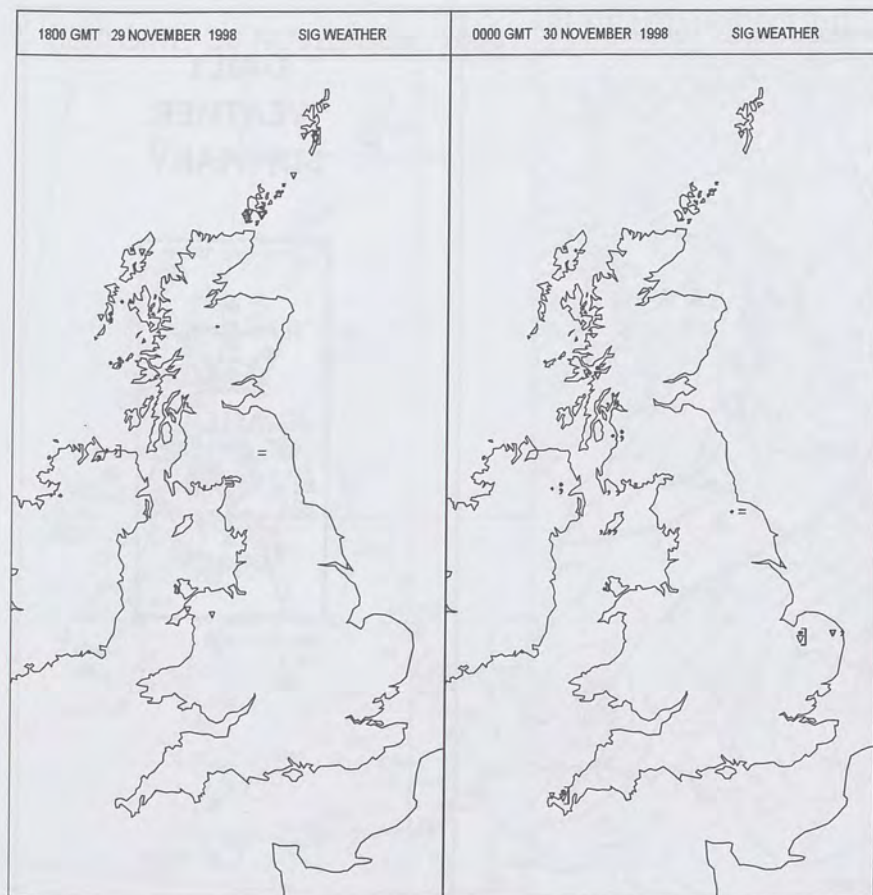

The early hours saw scattered showers in the Outer and Inner Hebrides, the Northern Isles, and parts of western mainland Scotland. Cornwall was also peppered by showers, while the odd one turned up through the Cheshire gap. Fog affected the odd spot in the Borders, more especially around dawn.

During the morning further showers fell across the Northern Isles, western Scotland, northwest facing slopes of Wales, the Cheshire gap and Cornwall. The fog persisted in parts of the Borders.

In the afternoon showers were still frequent and occasionally heavy in the Northern Isles, while the odd one turned up in western Scotland, Cardigan Bay and northwest facing coasts of southwest England.

The evening saw rain and/or drizzle spread into western Scotland, Northern Ireland, the Isle of Man and Anglesey from the west, while the showers largely died out in the Northern Isles. By midnight light rain had into spread into eastern Norfolk.

Temperatures were normal in many parts, but rather cold in a few places on the North Sea coast.

## EXTREMES

## SURFACE REPORTS

## SIGNIFICANT WEATHER

### Summary of UK weather for Monday 30 November 1998

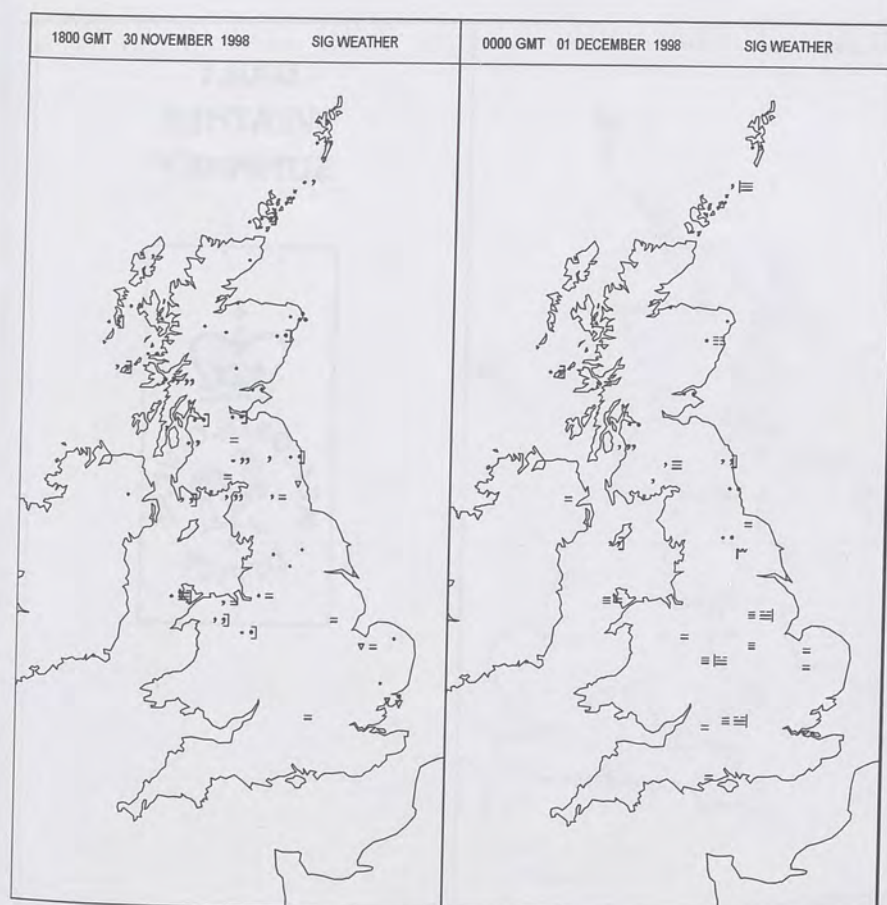

A band of light rain affected a strip from the Northern Isles down through the Isle of Man into Anglesey at first, while further mostly light rain edged into East Anglia and southeast England from the east. During the early hours the band of rain broadened across Scotland, as the rain in southern England petered out. A few showers turned up in Cornwall.

The morning saw outbreaks of light rain in many parts of Scotland, western Wales, Lancashire and Cornwall and the odd spot in East Anglia and southeast England.

During the afternoon many places northwest of a line from Pembroke to Yorkshire saw patchy rain as did East Anglia.

In the evening light rain or drizzle still fell in eastern and southern Scotland, northeast England and in Pembrokeshire. Fog patches formed in parts of Oxfordshire, Lincolnshire and the Borders as midnight approached.

Temperatures varied from mild to very mild in northwest Scotland, down to rather cold or cold in southeast England and East Anglia.

### EXTREMES

#### Highest Maximum:

12.8 Altnaharra, Sutherland

#### Lowest Maximum:
