0600 GMT 02 FEBRUARY 2012 SIG WEATHER	1200 GMT 02 FEBRUARY 2012 SIG WEATHER	<p><b>Summary of UK Weather for Thursday 02 February 2012.</b>                      It was another very cold start to the day, with temperatures below freezing almost everywhere at dawn, the exception being some east-facing coastal fringes.                      Snow showers affected eastern coastal areas through the day, mainly around the Wash overnight and during the morning, and then more widely in the afternoon and evening. It also remained fairly cloudy along much of the east coast, with this cloud spreading westward across the Midlands and northern England at times.                      A warm front fringing the north-west of Scotland brought more cloud to these areas too, along with the highest temperatures of the day.                      Most other places had a sunny but cold day.                      Winds were light and variable across much of the country, but north-easterly and somewhat stronger in southern England.                      Daytime temperatures were around average in north-west Scotland and rather cold across Northern Ireland, while all other parts saw cold or very cold conditions.</p>

0600 GMT 03 FEBRUARY 2012 SIG WEATHER	1200 GMT 03 FEBRUARY 2012 SIG WEATHER	<p><b>Summary of UK Weather for Friday 03 February 2012.</b>                      High pressure continued to dominate the weather across the U.K., with largely settled but very cold conditions in most parts.                      Most areas had clear skies overnight, and as a result temperatures fell well below freezing over the majority of the country, with many places having their coldest night of the winter so far.                      Skies remained generally clear into the morning, and most places had a sunny day. In spite of this, temperatures struggled to rise above freezing with only low single figure maximum temperatures recorded.                      The main exceptions to the generally sunny weather were areas around the Irish Sea, which were rather cloudy at times. Northern Ireland and the Western Isles became generally cloudy during the afternoon, with outbreaks of rain arriving from the west by the evening.                      Most parts had a clear evening though, and temperatures rapidly fell below freezing once the sun had set.                      Winds were generally light and variable, and even with largely sunny skies, daytime temperatures were well below average for the time of year. It was especially cold overnight.</p>

# SIGNIFICANT WEATHER

## Summary of UK Weather for Saturday 04 February 2012.

After another very cold night, the coldest of the winter so far, many places saw their first significant snowfall of the winter during the day.

Most of England and Wales were dry overnight, and with generally clear skies, temperatures were well below freezing.

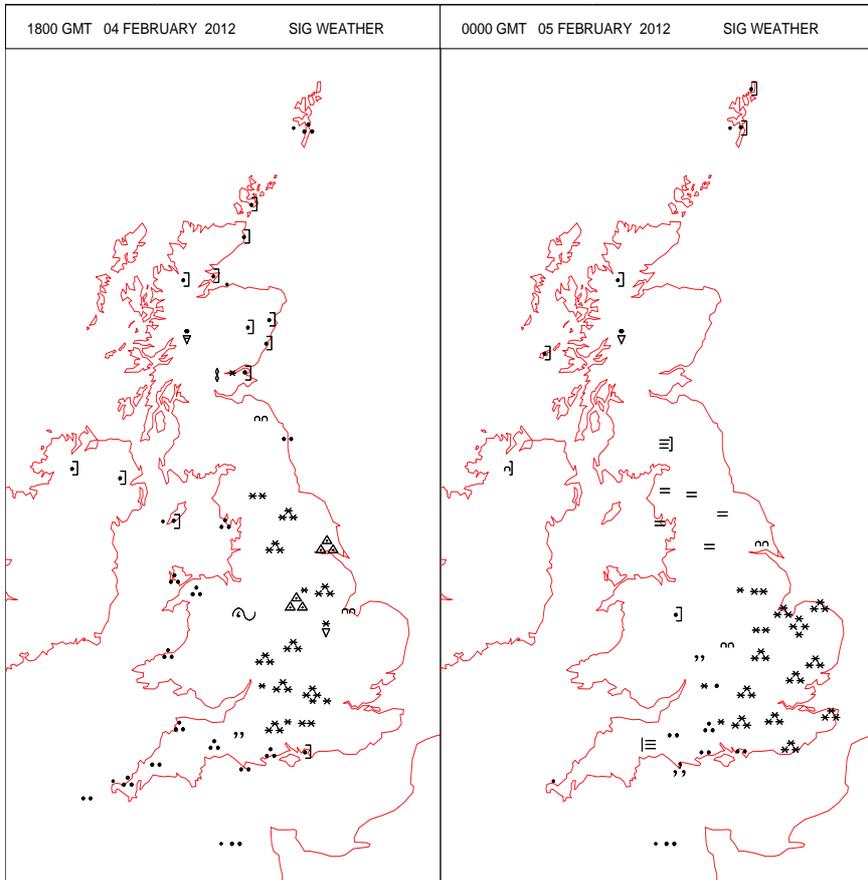

Cloud and outbreaks of rain over Northern Ireland and the Western Isles spread east into Scotland, west Wales and south-west England during the early hours, producing some icy conditions on roads.

The rain continued to spread eastwards during the morning and afternoon, turning to snow at increasingly low levels. By the afternoon it had reached central and north-east England, where there were some significant accumulations.

The snow then spread across southern and south-eastern counties of England during the evening, where there were also significant snow accumulations.

Clearer conditions spread into the north-western half of the U.K. from late afternoon onwards, allowing temperatures to fall to around freezing again during the evening.

Daytime temperatures were generally well below average in central and eastern parts of the country, but western and south-western England saw temperatures generally recover to around average for the time of year.

## EXTREMES

### Highest Maximum:

10.1 St. Marys Airport, Scilly Isles

### Lowest Maximum:

-1.0 Wattisham, Suffolk

### Lowest Minimum:

-11.7 Benson, Oxfordshire

### Lowest Grass Minimum:

-14.3 Benson, Oxfordshire

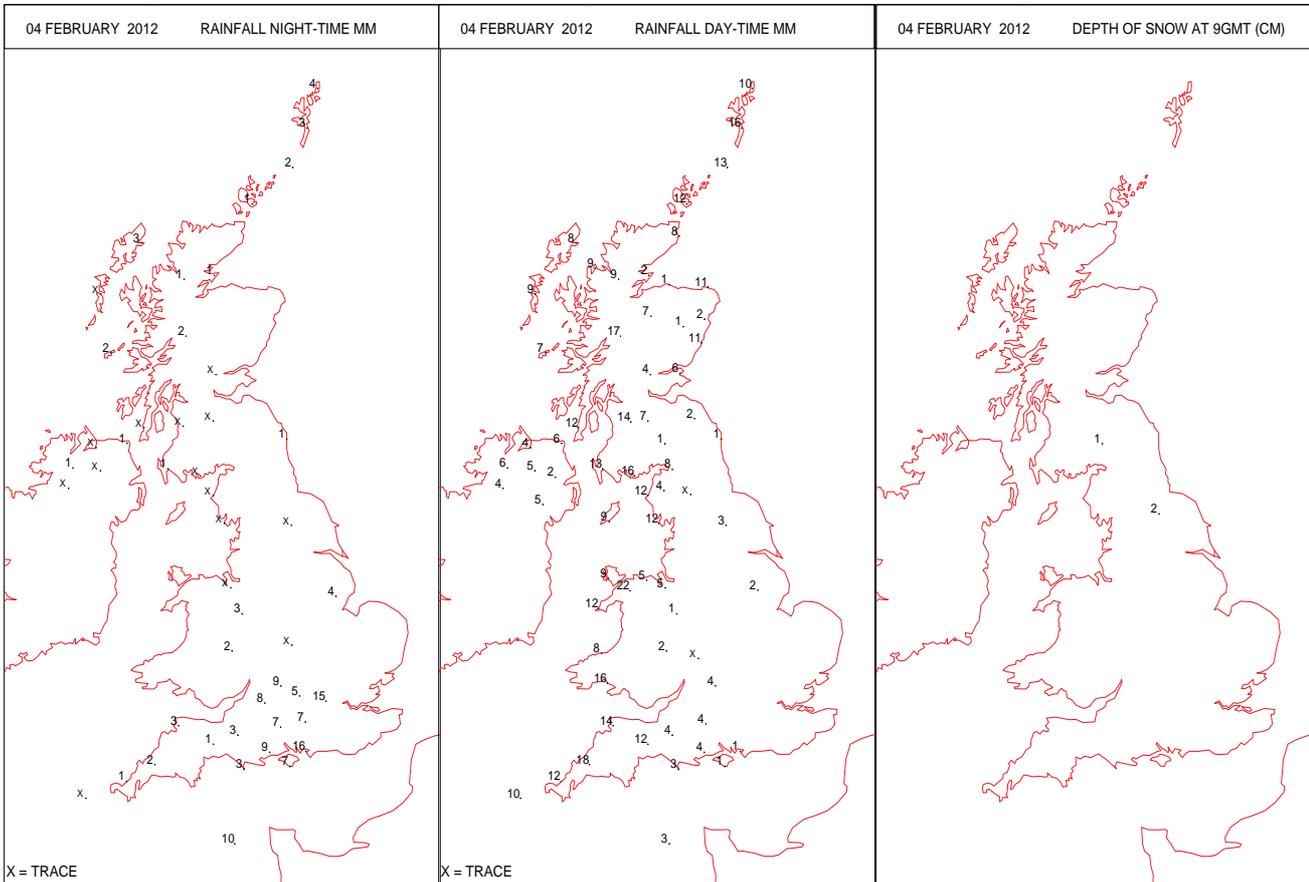

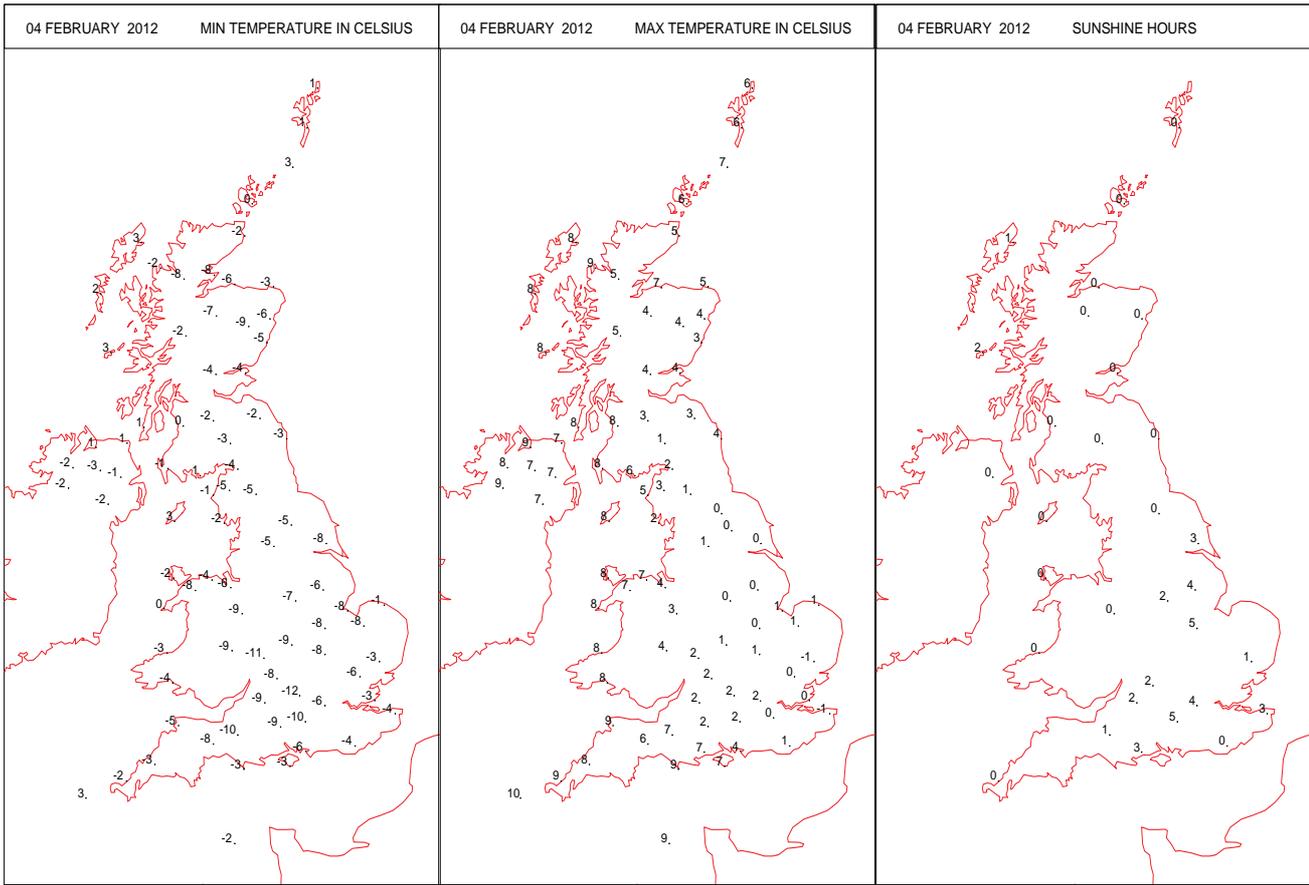

### Most Rain:

21.6 Capel Curig No3, Gwynedd

### Most Sun:

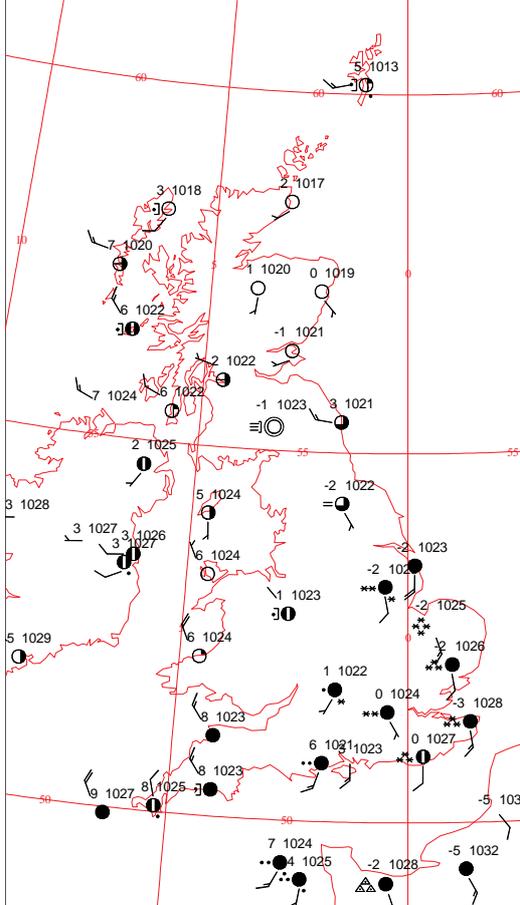

4.9 Odiham, Hampshire

# SIGNIFICANT WEATHER

## Summary of UK Weather for Sunday 05 February 2012.

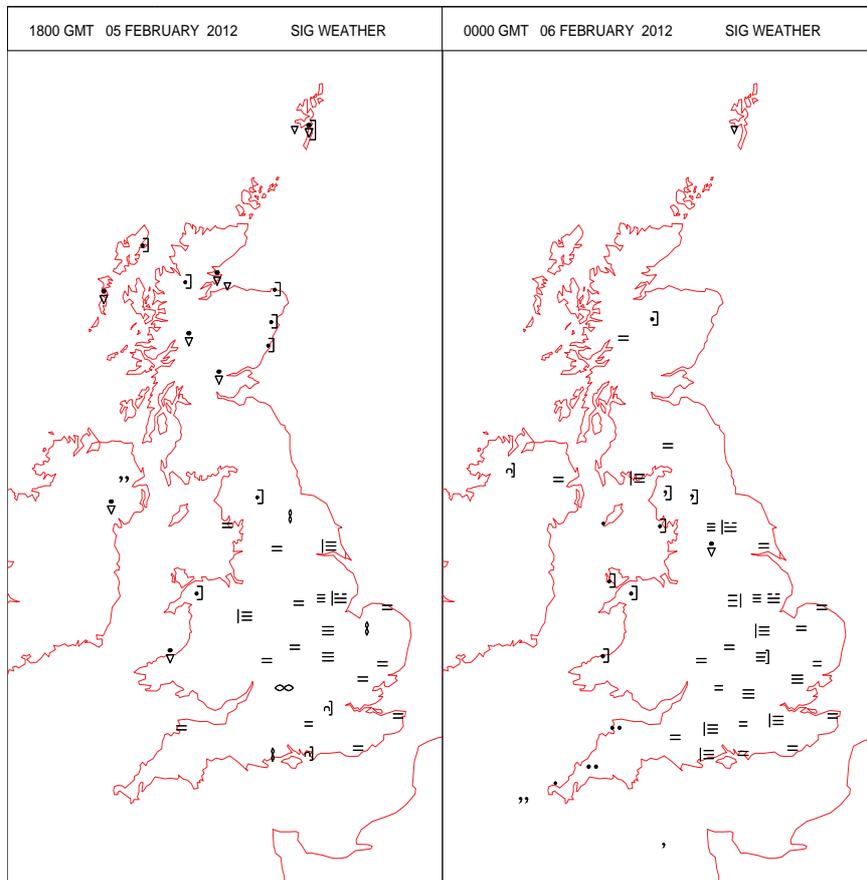

The band of rain, sleet and snow that had affected much of the country during the previous day gradually eased and finally cleared the south-east of the country during the morning. This left widespread icy patches, and the first significant snowfall of the winter for many, although areas of ice and snow were more sparse towards the far west as milder air followed the wintry weather.

These light westerly winds brought spells of rain to Northern Ireland, and increasingly to the far west of the mainland for much of the day, with north-western Scotland a little brighter with rain showers.

It was generally colder in the east, particularly over the fresh lying snow, with the light winds allowing areas of freezing fog to linger. These fog patches persisted in some areas for much of the day, lifting into low cloud in others.

During the evening, eastern parts saw areas of fog reform and thicken, with any thawing of the lying snow refreezing to give icy stretches once more.

The west stayed generally cloudy and a little less cold, with spells of mostly light rain edging slowly eastwards into the night.

## EXTREMES

### Highest Maximum:

10.1 St. Marys Airport, Scilly Isles

### Lowest Maximum:

-0.5 Wattisham, Suffolk

### Lowest Minimum:

-8.4 Leeming, North Yorkshire

-8.4 Dishforth Airfield, North Yorkshire

### Lowest Grass Minimum:

-12.6 Leeming, North Yorkshire

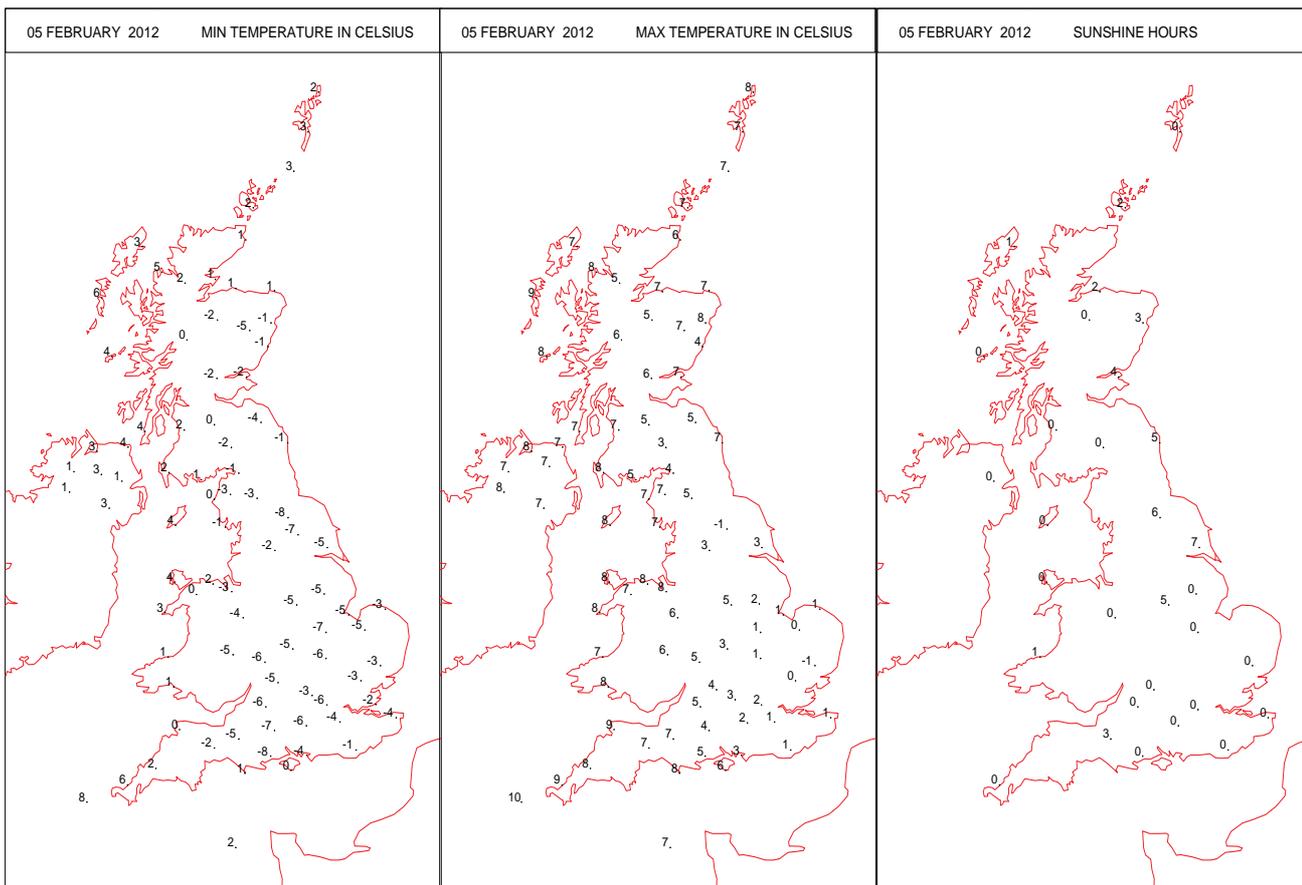

### Most Rain:

12.6 Coventry Coundon, West Midlands

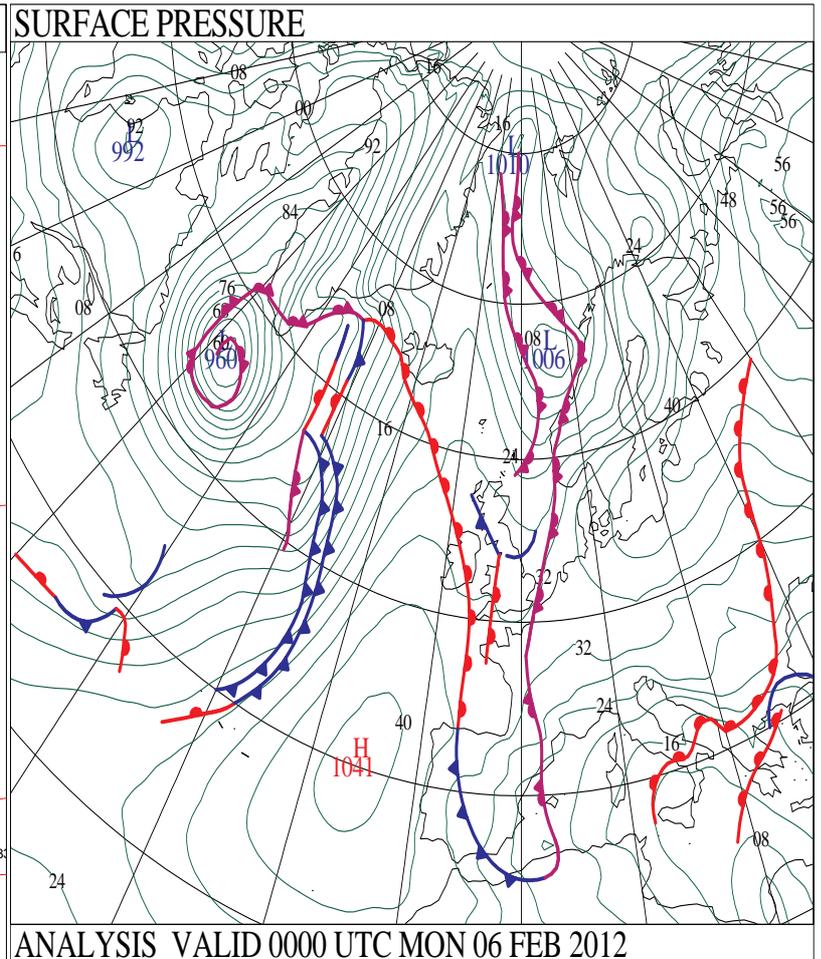

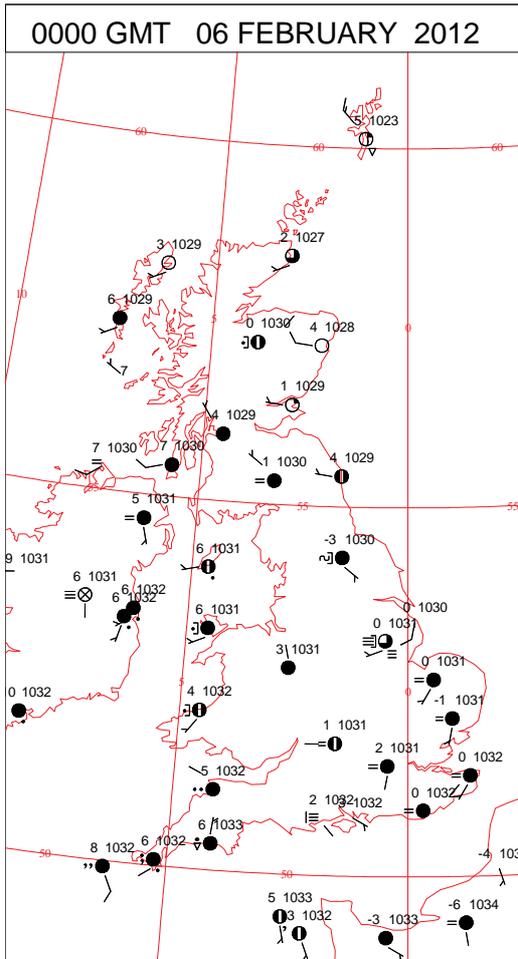

### Most Sun:

6.5 Leconfield, Humberside

0600 GMT 06 FEBRUARY 2012 SIG WEATHER	1200 GMT 06 FEBRUARY 2012 SIG WEATHER	<p><b>Summary of UK Weather for Monday 06 February 2012.</b>                      It was cold overnight towards the eastern U.K., with areas of fog forming in the generally light winds, particularly over the snowfields.                      Western parts were generally a little less cold, but rather cloudy, with spells of mostly light rain and drizzle, particularly in Northern Ireland, Wales and south-western England.                      There were a few light snow flurries and some freezing rain in central and eastern parts, giving icy stretches first thing.                      It was a very mixed day for the U.K. as a whole, with many areas that started in fog staying murky all day.                      It was brightest in the north throughout, with some sunny spells, whilst the south stayed generally cloudy, with spells of light rain in places gradually petering out towards the evening.                      During the evening much of the country was dry, with some further snow showers in the far east of England, and with areas of fog thickening once more.                      Temperatures generally exhibited an east-west split, with the east well-below average over the lying snow, and with persistent fog. The cloud and spells of rain towards some western parts moderated the temperature here somewhat.</p>

# SIGNIFICANT WEATHER

## Summary of UK Weather for Tuesday 07 February 2012.

It was another very cold night across much of the U.K., with temperatures widely below freezing. The coldest temperatures were recorded across eastern Scotland and the Vale of York.

It also turned out to be a foggy night in many areas, particularly the Glasgow area, around Merseyside, and along the M4 corridor. Fog that had earlier formed across eastern England steadily cleared as drier air worked in from the east.

There was also a scattering of light snow showers across eastern England, leading to some further slight accumulations in places.

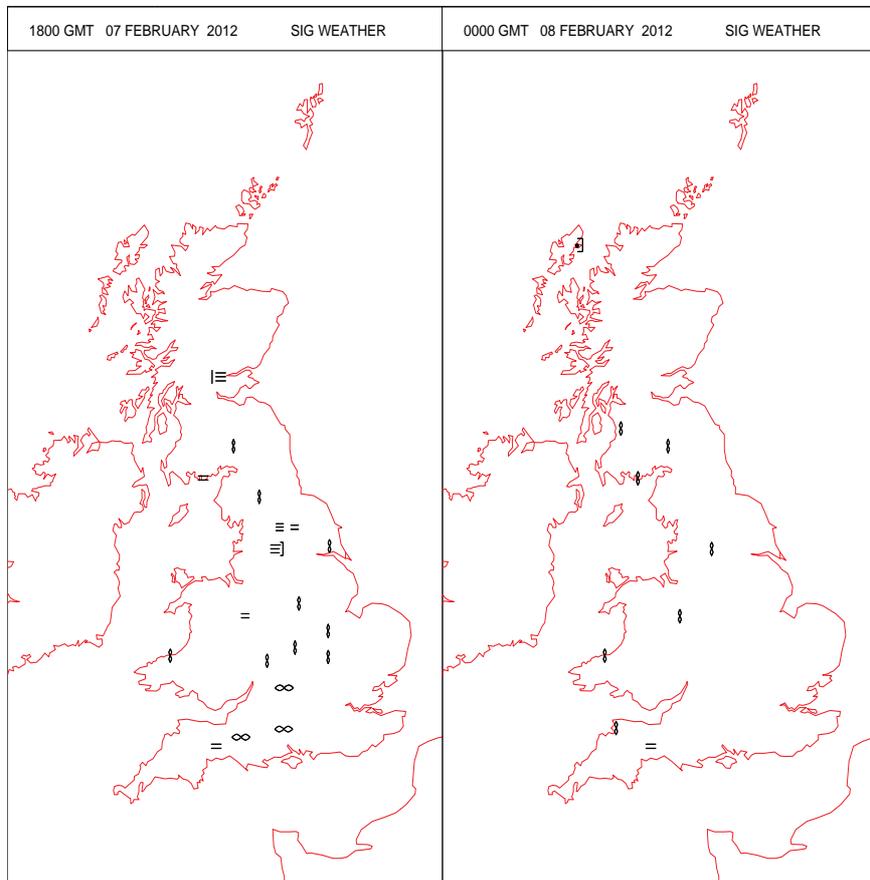

Through the day, the remnants of these showers spread westwards, and died out as they did so, but it did mean that areas that started bright further west became steadily cloudier by the afternoon.

Conversely, clearer but colder conditions moved into eastern England through the afternoon.

Northern Ireland and western Scotland slowly turned cloudier with rain at times in the evening.

A few snow flurries also returned to eastern England by evening.

Maximum temperatures reached around average in the far west, but it was another very cold day in many places, with a bitter wind accentuating the cold feel in the south-east.

## EXTREMES

### Highest Maximum:

9.7 St. Marys Airport, Scilly Isles

### Lowest Maximum:

-0.2 Wattisham, Suffolk

### Lowest Minimum:

-9.7 Aboyne No 2, Aberdeenshire

### Lowest Grass Minimum:

-13.7 Aboyne No 2, Aberdeenshire

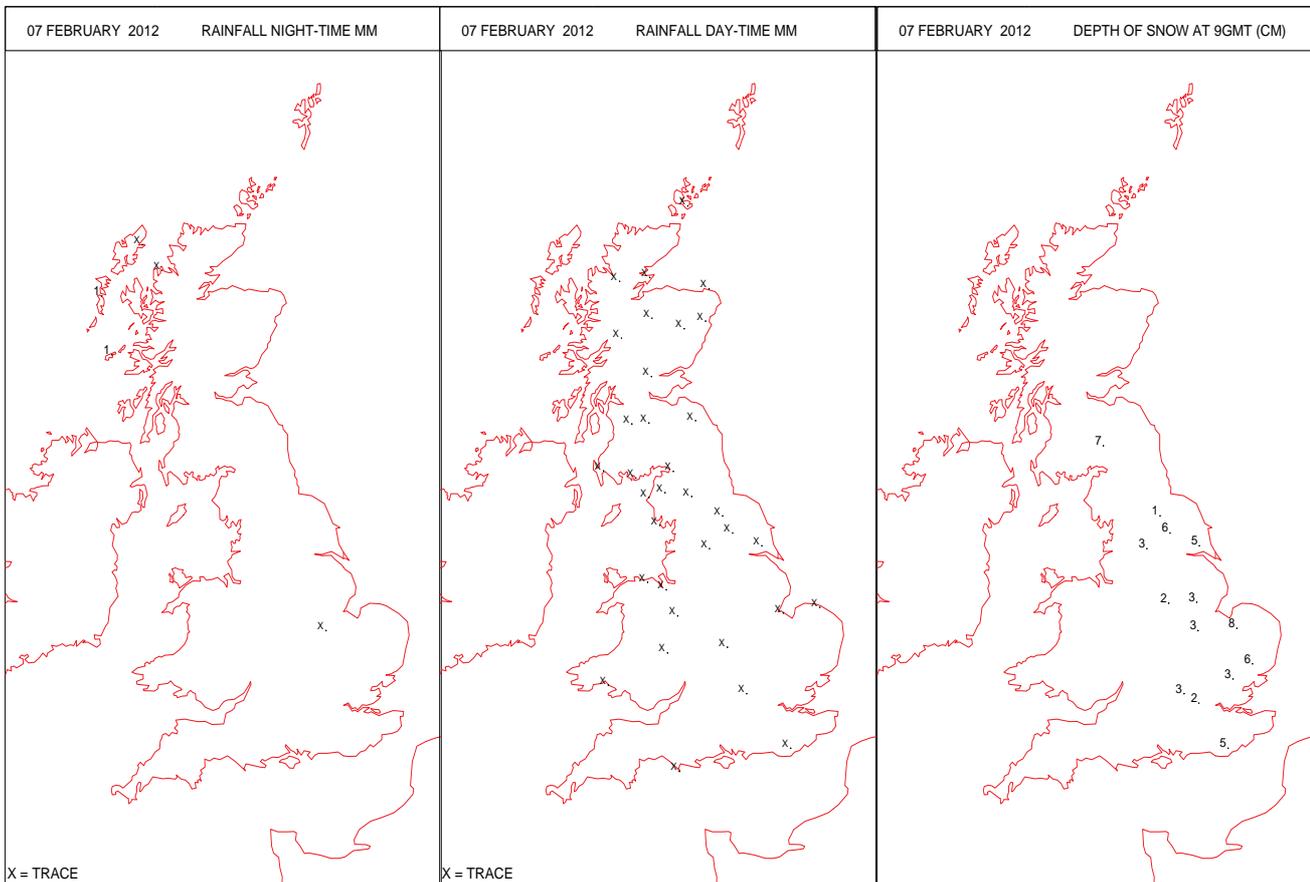

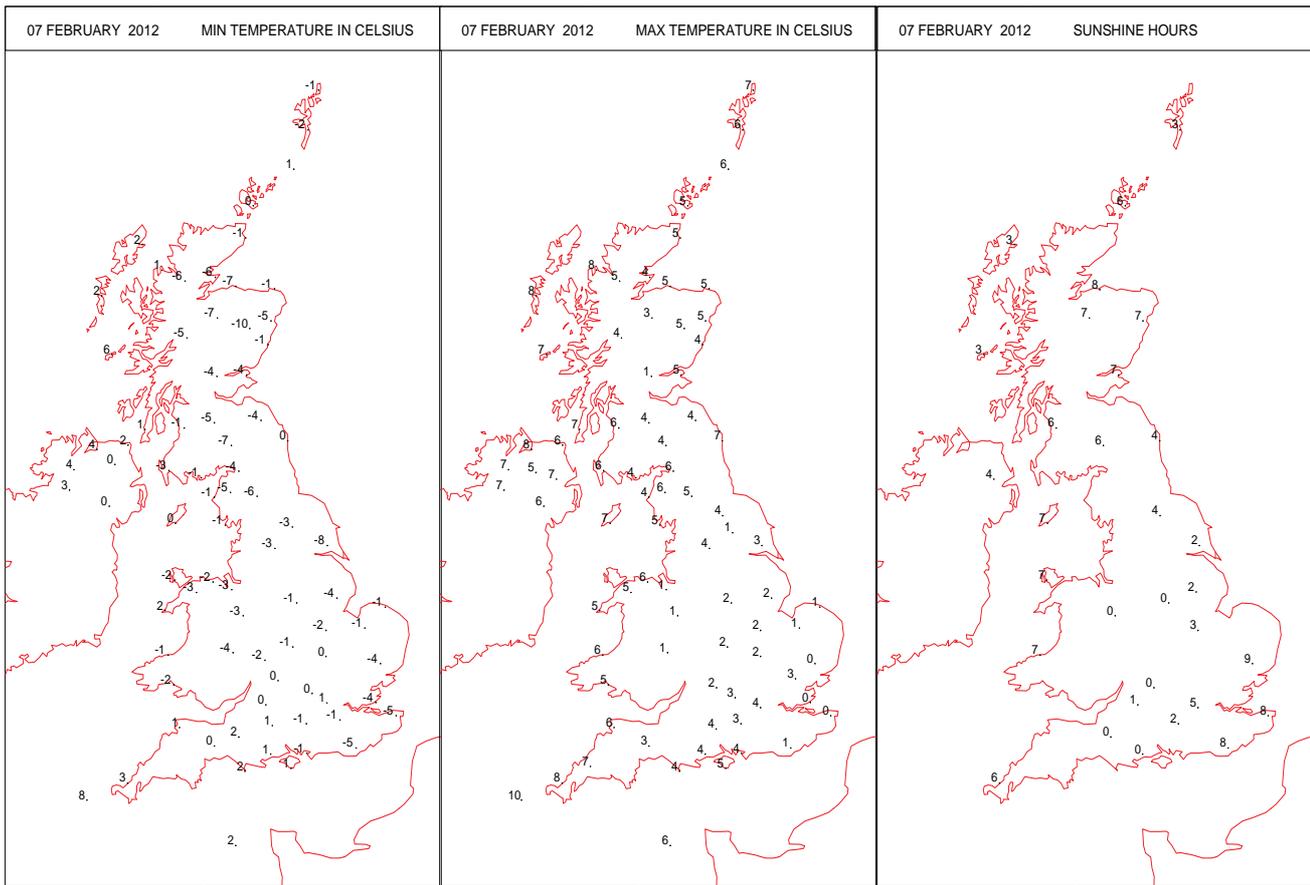

### Most Rain:

1.2 South Uist Range, Western Isles

### Most Sun:

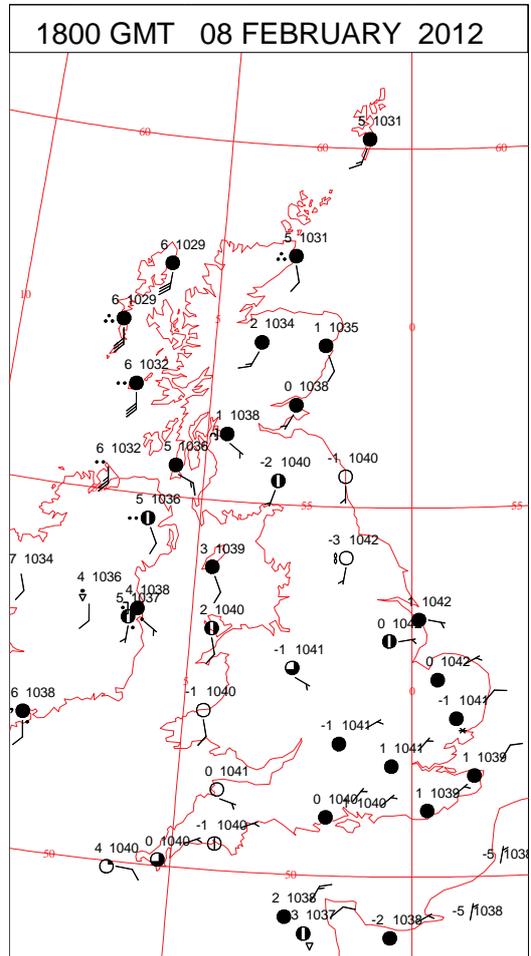

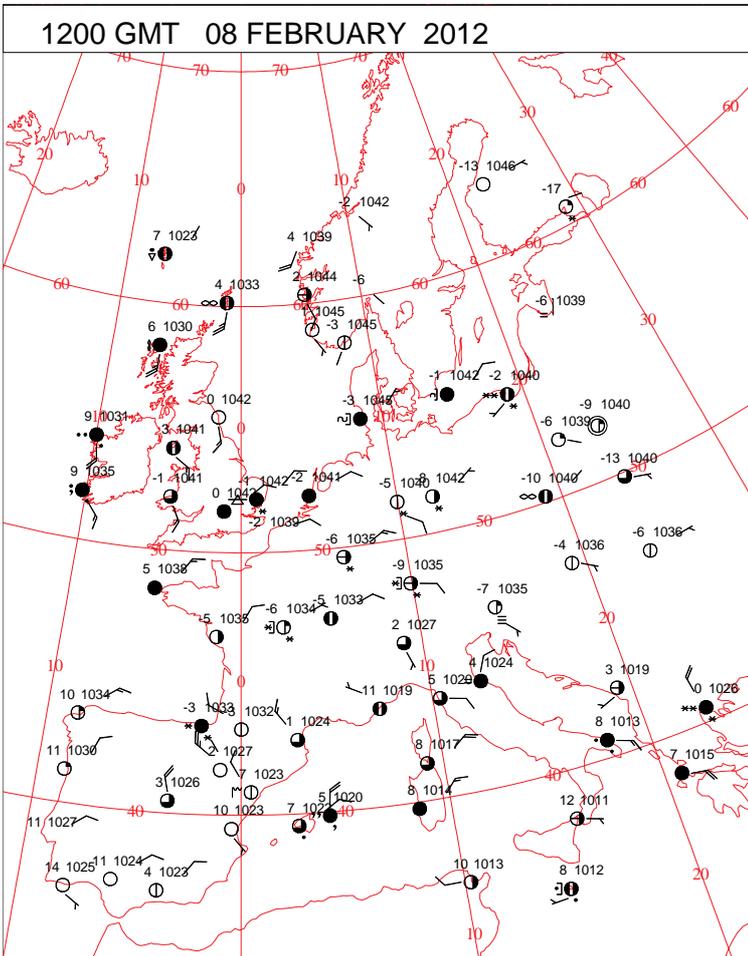

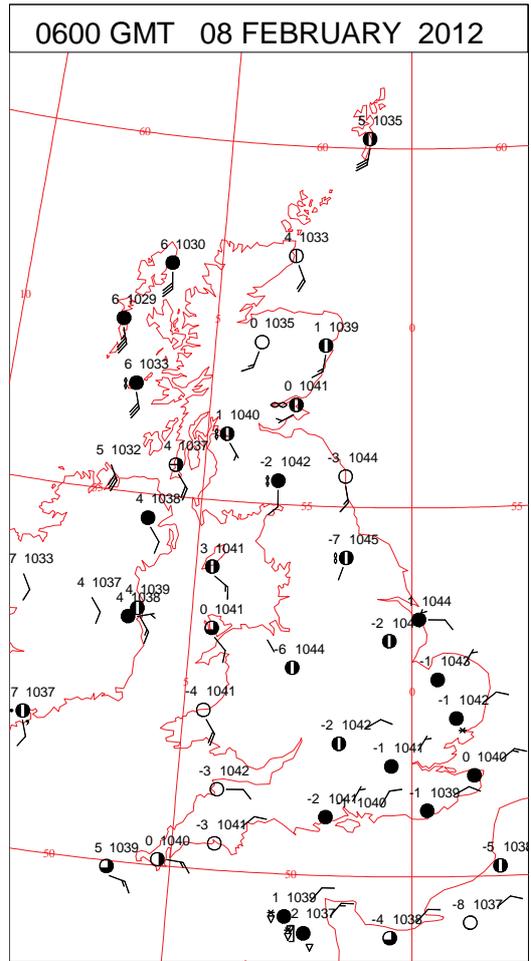

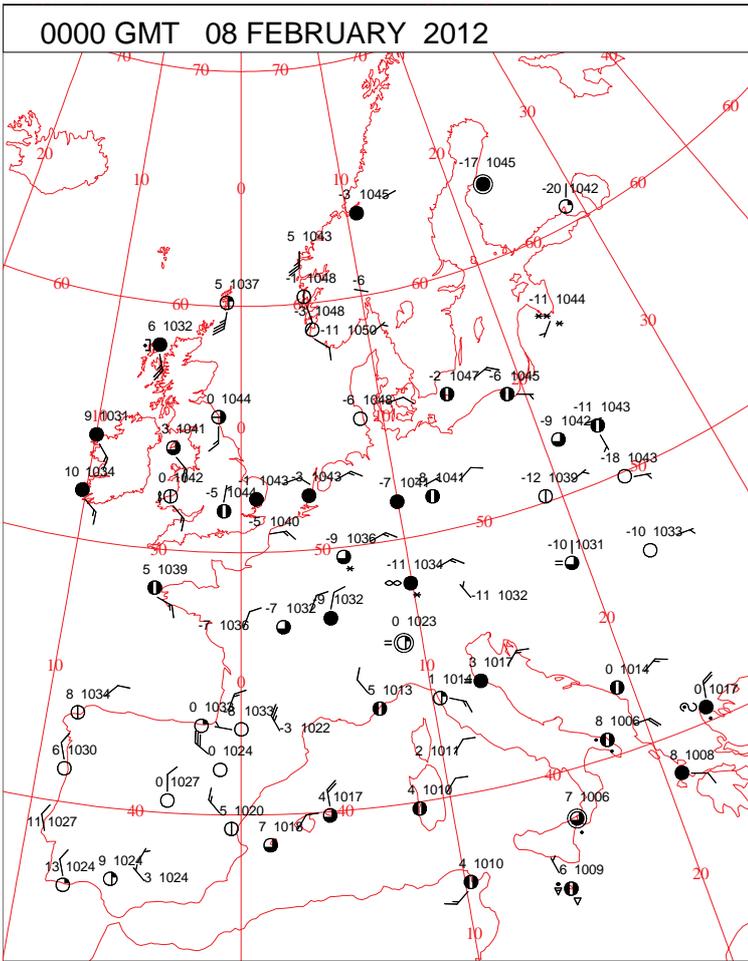

8.8 Wattisham, Suffolk

Monday 13 February 2012

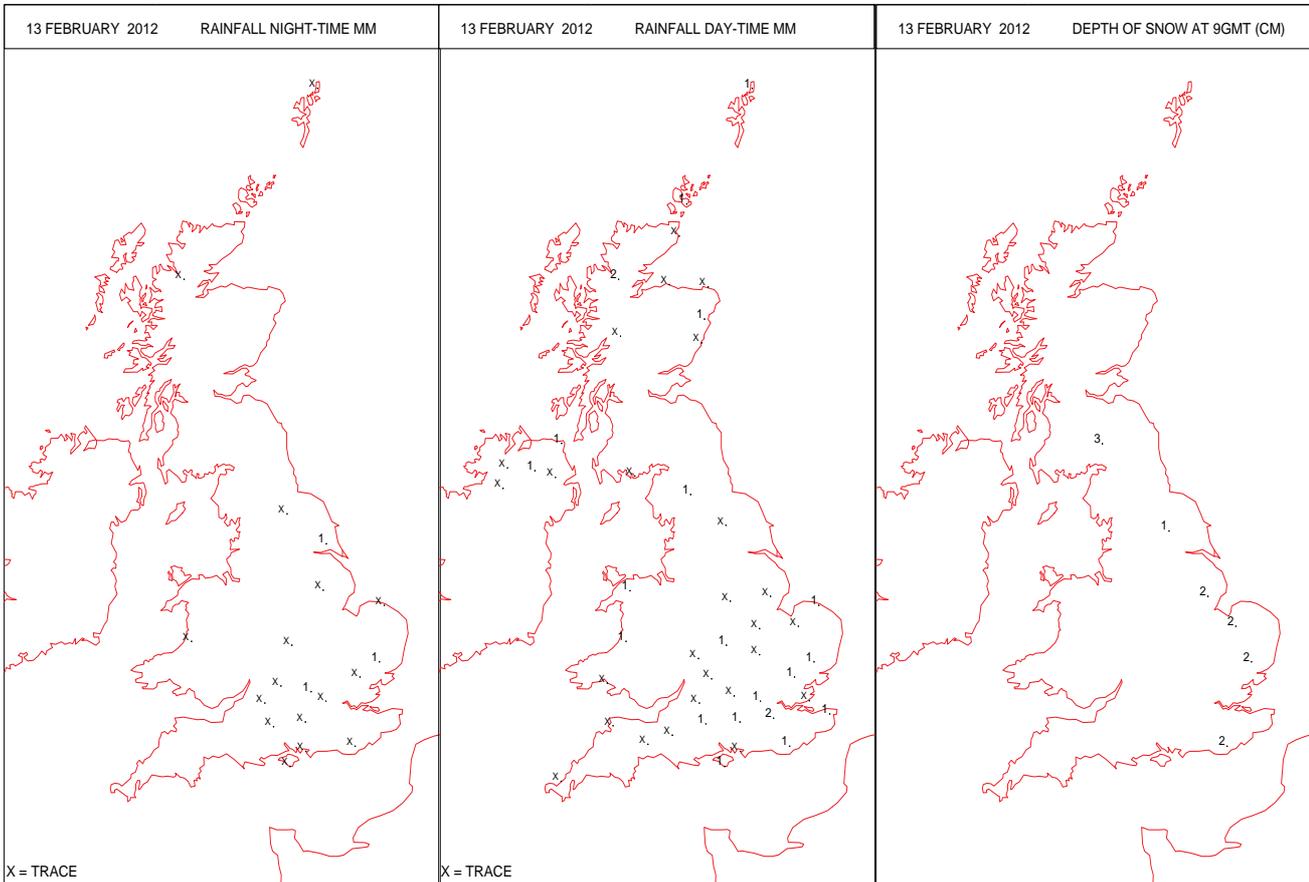

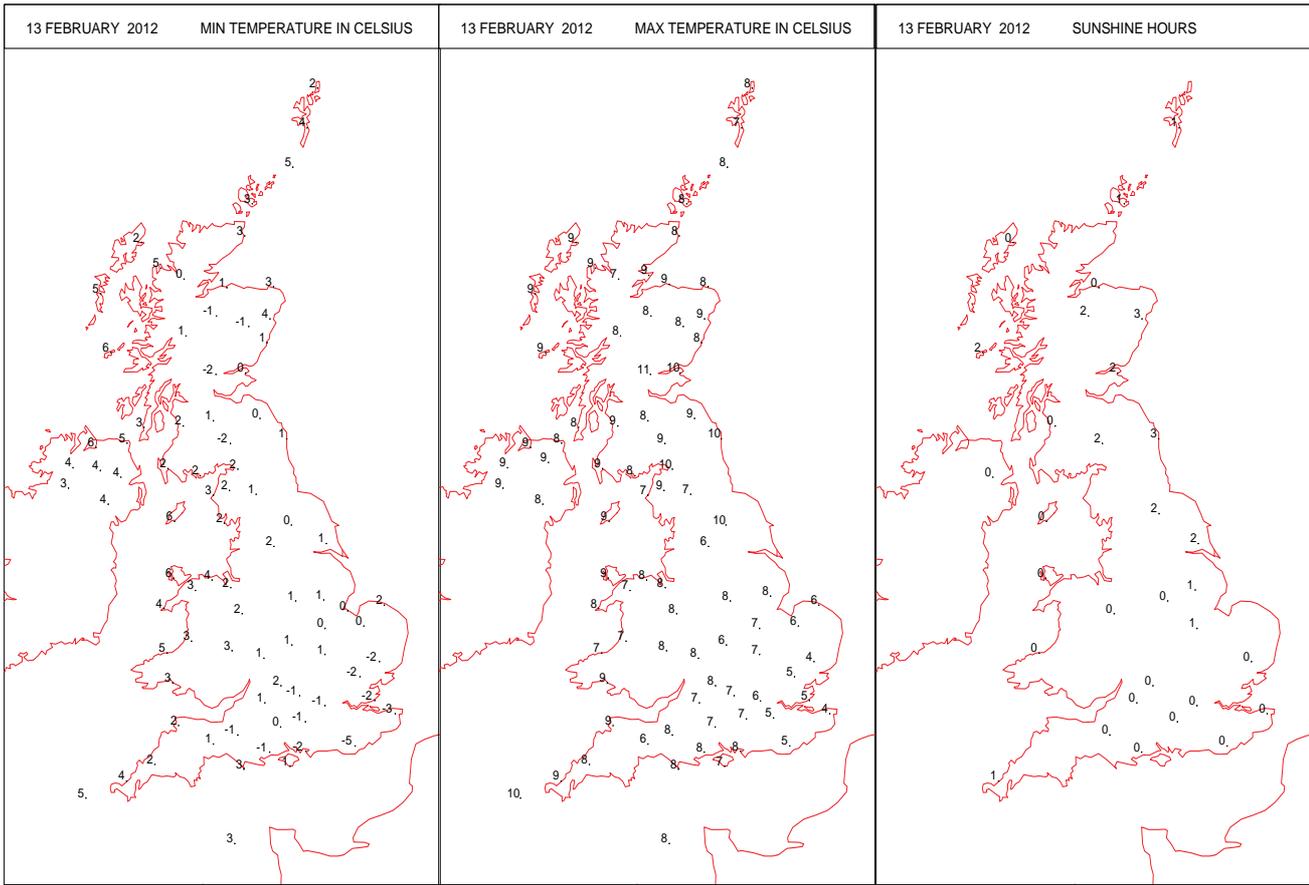

# SURFACE REPORTS

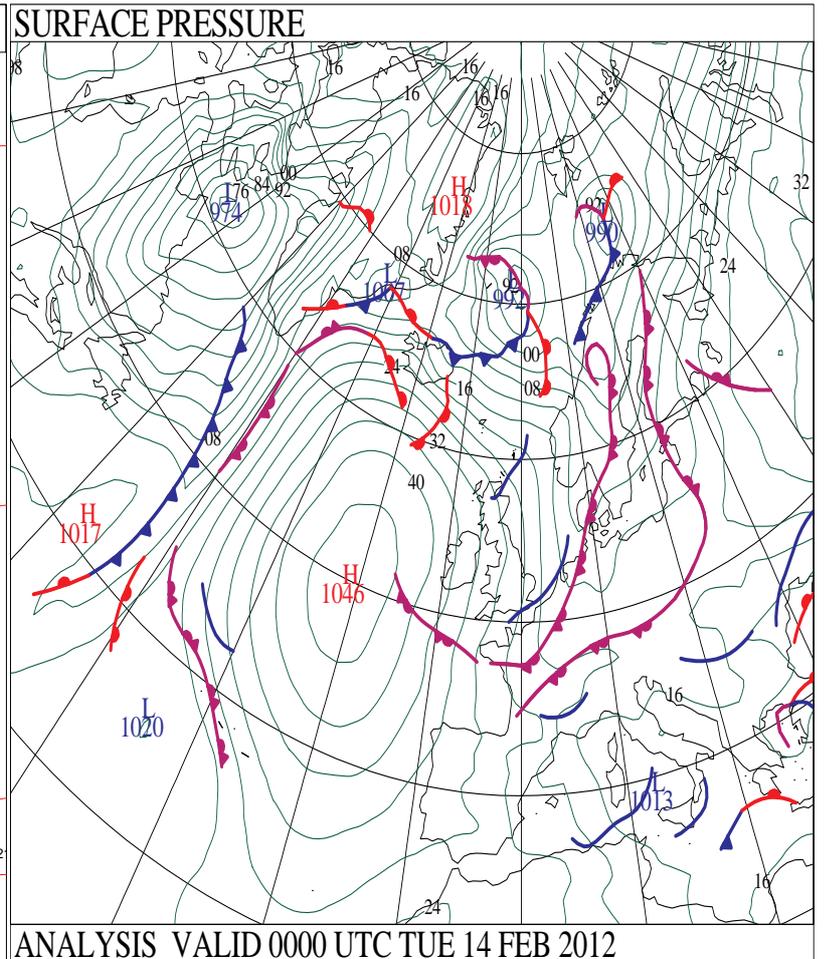

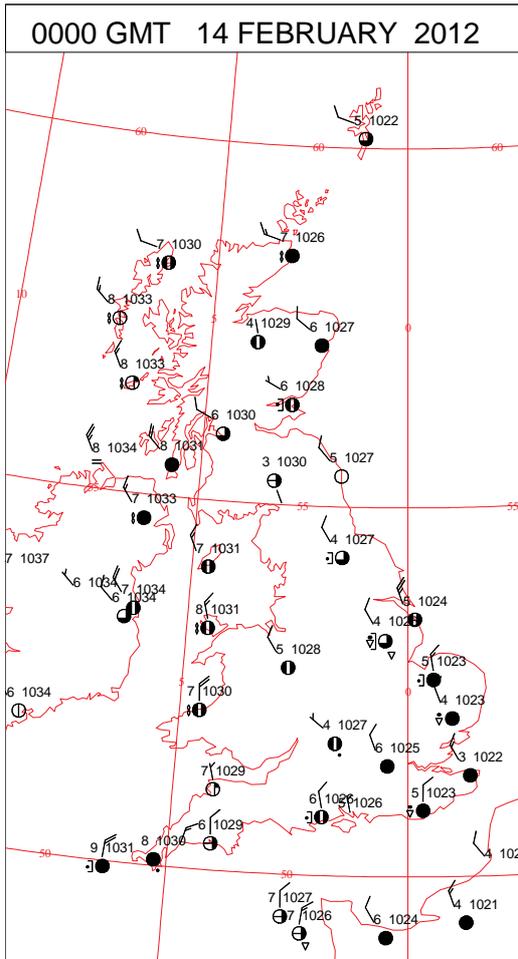

# SIGNIFICANT WEATHER

0600 GMT 13 FEBRUARY 2012 SIG WEATHER	1200 GMT 13 FEBRUARY 2012 SIG WEATHER	<p><b>Summary of UK Weather for Monday 13 February 2012.</b>                      It was a rather cloudy night with some fog patches. Temperatures were generally much milder than during the weekend, although they did drop low enough in some areas for a slight frost to start the day, particularly across eastern parts of Scotland and England.                      North-westerly winds continued to bring a good deal of cloud to many areas. This gave outbreaks of light rain or drizzle through the day, particularly across central, eastern and southern England, as well as Wales and Northern Ireland.                      There were also a few moderate showers that affected coastal areas of the Irish Sea through the early hours of the morning, and then North Sea coasts during the afternoon and evening.                      Temperatures were generally around average for the time of year, and much warmer than recent days, although this was tempered in most parts by the brisk north-westerly wind. This was strongest across north-east Scotland and the Northern Isles.                      However with some shelter, mainly to the south and east of higher ground, sunny spells developed, and this allowed temperatures locally to get just into double figures.                      The colder air was still clinging on to the far south-east of England, with temperatures here struggling to get out of low single figures.</p>

0600 GMT 16 FEBRUARY 2012 SIG WEATHER	1200 GMT 16 FEBRUARY 2012 SIG WEATHER	<p><b>Summary of UK Weather for Thursday 16 February 2012.</b>                      It was another generally mild night across the country, with most places remaining frost free.                      Many areas had a mainly cloudy night, although there were some clear spells in places, particularly across parts of south-east England and in the Vale of York.                      Later in the night clearer skies also developed across mid and south Wales, and the west Midlands, allowing it to become quite cold locally.                      Cloud thickened across Scotland and Northern Ireland, with persistent and locally heavy rain developing across north-west Scotland by the end of the night. This rain quickly cleared during the morning, with skies rightening, giving some sunny spells.                      With brisk westerly to south-westerly winds across Scotland, the highest temperatures were recorded on the east coast, where it became locally very mild, reaching the low teens Celsius in a few places.                      Across England and Wales, although there was some early brightness in the south, it generally became a cloudy day, with occasional outbreaks of rain and drizzle spreading south. The rain was most persistent on western hills and was accompanied by quite a lot of hill fog.                      During the evening showers spread to northern Scotland, with clear spells developing across parts of England and Wales. For most places it remained mild through the evening.</p>
1800 GMT 16 FEBRUARY 2012 SIG WEATHER	0000 GMT 17 FEBRUARY 2012 SIG WEATHER	<p><b>EXTREMES</b>  <b>Highest Maximum:</b>                      13.5 Leuchars, Fife  <b>Lowest Maximum:</b>                      7.3 Lerwick, Shetland  <b>Lowest Minimum:</b>                      1.4 Northolt, Greater London  <b>Lowest Grass Minimum:</b>                      -2.2 Northolt, Greater London  <b>Most Rain:</b>                      13.0 Capel Curig No3, Gwynedd  <b>Most Sun:</b>                      5.6 Leuchars, Fife</p>

# SIGNIFICANT WEATHER

**Summary of UK Weather for Tuesday 21 February 2012.**  
 Much of the U.K. remained cloudy overnight with outbreaks of light rain and drizzle across western areas.  
 Temperatures were generally on the mild side, but cloud breaks across south-east England allowed temperatures to fall low enough for a touch of frost in places.  
 During the morning, parts of eastern England saw lengthy periods of sunshine, however it became increasingly cloudy through the afternoon.  
 Western areas, on the other hand, were cloudy throughout with further spells of light rain and drizzle. During the afternoon, spells of more persistent and locally heavy rain developed across western Scotland.  
 South-westerly winds were fairly brisk across the country, but were particularly strong across Northern Ireland, Scotland and northern England.  
 During the evening it remained largely overcast, with further spells of light rain or drizzle in the west, although heavier bursts continued across western Scotland.  
 It was exceptionally mild in some places, particularly to the east or north-east of high ground, with north-eastern Scotland recording the highest temperatures.

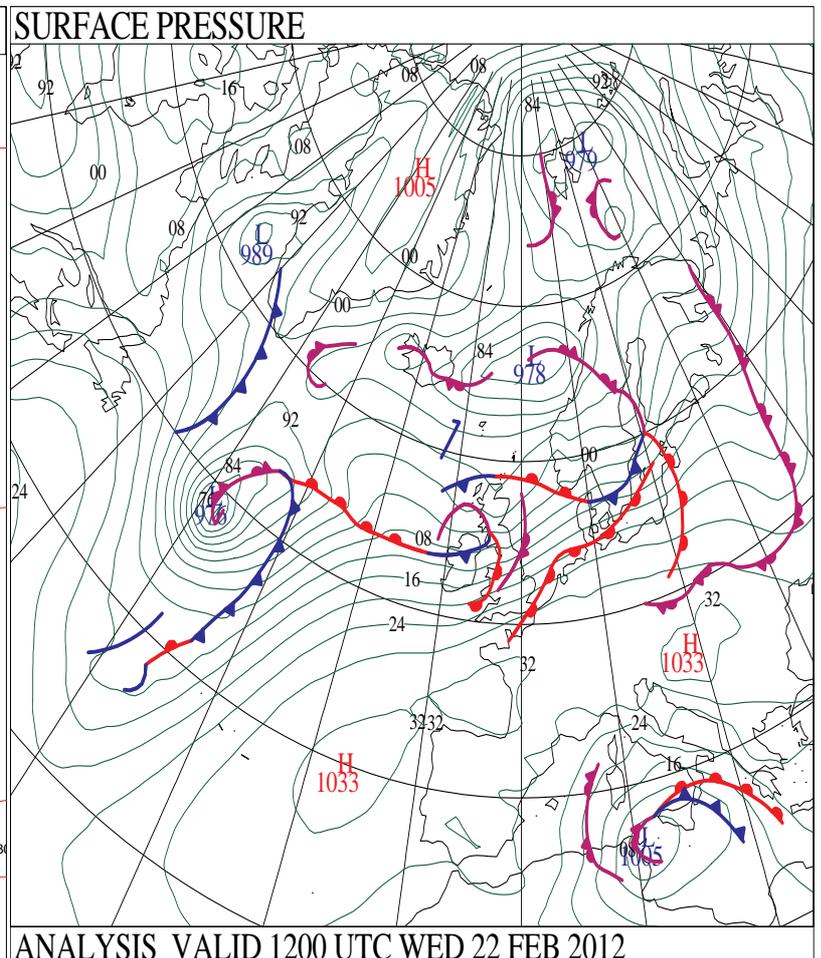

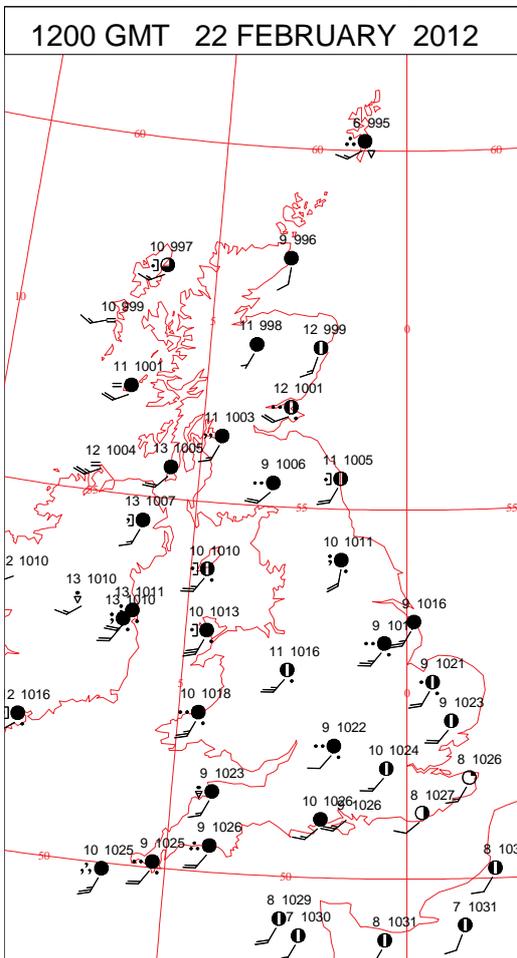

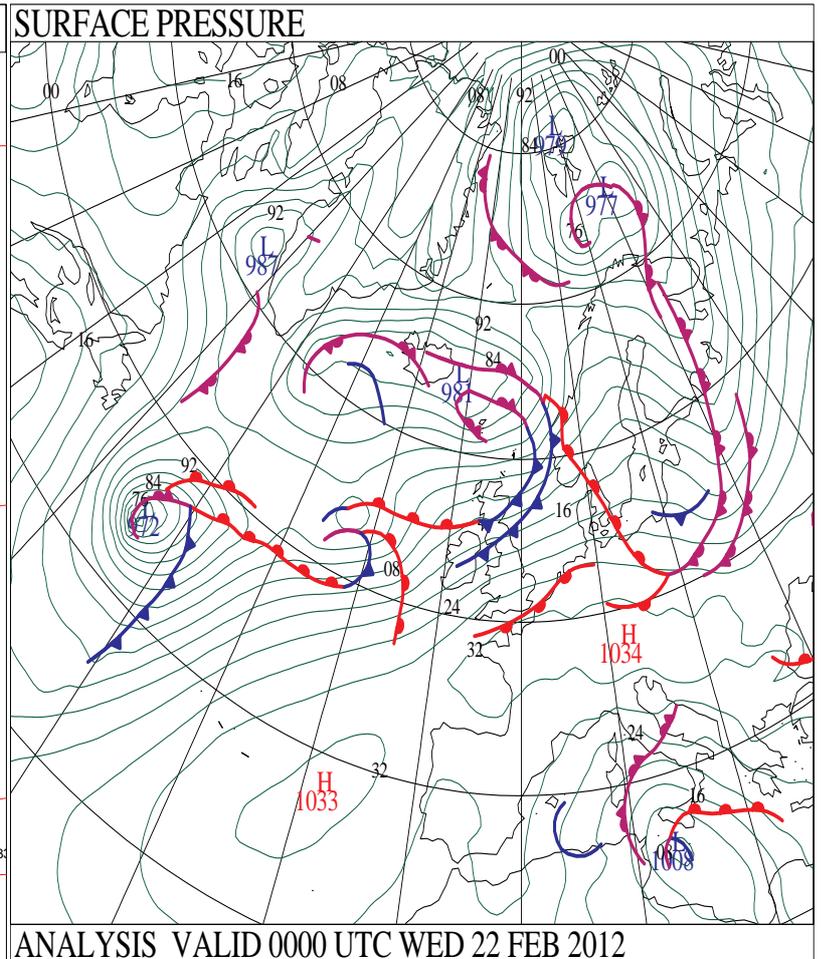

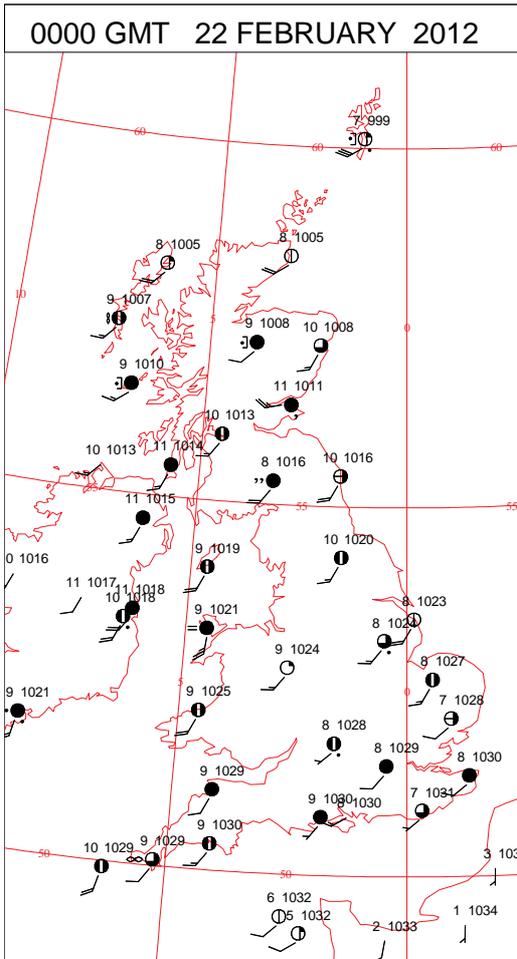

**EXTREMES**

# SIGNIFICANT WEATHER

0600 GMT 22 FEBRUARY 2012 SIG WEATHER	1200 GMT 22 FEBRUARY 2012 SIG WEATHER	<p><b>Summary of UK Weather for Wednesday 22 February 2012.</b>                      It was a largely cloudy and mild night with outbreaks of rain across Northern Ireland, western Wales, north-west England, and later north-west Wales, with some heavy rain across the Lake District, Pennines and the Highlands.                      However, south-eastern England was still clinging onto some colder air, with temperatures falling smartly under the clear spells that developed here.                      During the morning, heavy rain continued in the aforementioned areas, but the main area of rain gradually moved away south-eastwards, reaching south-east England by early afternoon. Behind, it stayed mostly cloudy with lighter rain and drizzle continuing on western high ground in particular.                      It was also a very windy day, with south-westerly winds reaching gale force across exposed coastal and upland areas of north-west England and western Scotland, but also to the east of the Pennines.                      Through the evening the main area of rain cleared south-east England, but it remained largely cloudy with further spells of light rain and drizzle in the exposed west.                      Also, a good deal of low cloud and hill fog developed across western parts, with south-western England and Wales particularly affected.                      The mildest part of the country was the sheltered north-east of Scotland.</p>
1800 GMT 22 FEBRUARY 2012 SIG WEATHER	0000 GMT 23 FEBRUARY 2012 SIG WEATHER	<p><b>EXTREMES</b>  <b>Highest Maximum:</b>                      15.7 Aboyne, Aberdeenshire  <b>Lowest Maximum:</b>                      6.6 Lerwick, Shetland  <b>Lowest Minimum:</b>                      4.6 Lerwick, Shetland  <b>Lowest Grass Minimum:</b>                      2.8 Lerwick, Shetland  <b>Most Rain:</b>                      26.2 Capel Curig No3, Gwynedd  <b>Most Sun:</b>                      1.6 Herstmonceux, East Sussex</p>

0600 GMT 23 FEBRUARY 2012 SIG WEATHER	1200 GMT 23 FEBRUARY 2012 SIG WEATHER	<p><b>Summary of UK Weather for Thursday 23 February 2012.</b>                      It was rather cloudy overnight, with temperatures rising steadily towards morning.                      Western parts of the U.K., especially south-west England and Wales, saw a good deal of coastal mist and hill fog, together with occasional drizzle. Northern Scotland also had light rain for a time.                      During the day, the mist, hill fog and intermittent drizzle continued in many western areas, but east of high ground the cloud broke to allow lengthy sunny periods, along with a further rise in temperatures.                      The best of the sunshine in the afternoon was across the Midlands, East Anglia, south-east England and east Wales.                      It was also quite a windy day across the northern half of the country, with gales in the far north. A gust of 61 knots was recorded at Loch Glascarnoch at 1500 UTC.                      During the afternoon and evening, north-west Scotland saw some more persistent, but still mainly light rain, as a weak cold front moved southwards across northern parts.                      It was an exceptionally mild day across most of the U.K., and generally very mild, even where low cloud persisted.</p>

0600 GMT 25 FEBRUARY 2012 SIG WEATHER	1200 GMT 25 FEBRUARY 2012 SIG WEATHER	<p><b>Summary of UK Weather for Saturday 25 February 2012.</b>                      Scattered, blustery showers continued to feed across north-west Scotland during the early hours on a strong west to north-westerly wind. These merged into a spell of more persistent and heavy rain around dawn.                      It was largely cloudy and damp across southern areas overnight, with intermittent drizzle, and patchy mist and fog.                      Elsewhere it was dry with some prolonged clear spells, allowing for a colder night than of late, with patchy frost.                      Showers continued across north-western areas through the day, spreading across many parts of Scotland and into northern England at times.                      Much of England and Wales remained dry, and saw some prolonged sunny periods with temperatures responding, rising well into double figures Celsius.                      South-west England remained fairly cloudy though, as did Northern Ireland and most of Scotland, but a few brighter spells developed before dusk.                      Outbreaks of rain continued across western Scotland and north-west England in the evening, but the rest of the U.K. was dry with clear spells.                      Temperatures were generally a little above the seasonal average.</p>

0600 GMT 26 FEBRUARY 2012 SIG WEATHER	1200 GMT 26 FEBRUARY 2012 SIG WEATHER	<p><b>Summary of UK Weather for Sunday 26 February 2012.</b>                      Most parts of the U.K. were dry overnight, with Northern Ireland, most of Scotland and western Wales being rather cloudy.                      However, skies were clearer across central and southern England and Wales, and some eastern parts of Scotland. In these areas temperatures fell to around freezing, and a slight frost formed during the early hours of the morning.                      Some patches of mist and fog also formed during the night, mainly around south-west England.                      The split in the weather conditions continued into the morning, with most parts of central and southern England and Wales having a fine, sunny morning.                      It remained cloudier elsewhere though, with some outbreaks of drizzle and light rain in places.                      Cloud became more widespread during the afternoon, and by the evening, outbreaks of rain affected Northern Ireland, north-west Scotland and parts of north-west England. This rain continued to spread eastwards during the evening.                      However, south-eastern England had sunny skies through the afternoon, and remained relatively clear into the evening, allowing a dip in temperatures after sunset.                      Overall, it was another mild day in most places, with temperatures above average for the time of year.</p>

0600 GMT 28 FEBRUARY 2012 SIG WEATHER	1200 GMT 28 FEBRUARY 2012 SIG WEATHER	<p><b>Summary of UK Weather for Tuesday 28 February 2012.</b>                      It was a mostly dry and cloudy night across the U.K., with parts of the north-east in particular exceptionally mild for February.                      Conditions across the country generally saw very little change, with most starting and ending the day dry, but under overcast skies.                      The main exceptions to this were parts of the far north-west of Scotland, which saw a little drizzle at times. These areas also experienced an occasionally brisk south-westerly breeze.                      Meanwhile, parts of eastern Scotland saw amongst the brightest conditions in the country, staying dry with some hazy sunny spells developing.                      Other areas that also saw some lasting brighter weather included north-eastern England, and latterly parts of east Wales and south-east England.                      Conditions remained similar during the evening, with the blanket of cloud leading to another mild night.                      The day's highest temperatures were generally in these brighter eastern and especially north-eastern areas, with thicker cloud further west helping to limit the rise in temperatures here, although the whole country enjoyed a very mild February day</p>
1800 GMT 28 FEBRUARY 2012 SIG WEATHER	0000 GMT 29 FEBRUARY 2012 SIG WEATHER	<p><b>EXTREMES</b>  <b>Highest Maximum:</b>                      17.2 Dyce, Aberdeenshire  <b>Lowest Maximum:</b>                      8.6 St. Bee's Head, Cumbria  <b>Lowest Minimum:</b>                      6.8 Wattisham, Suffolk  <b>Lowest Grass Minimum:</b>                      7.2 St. Bee's Head, Cumbria  <b>Most Rain:</b>                      1.4 South Uist Range, Western Isles  <b>Most Sun:</b>                      1.4 Aberporth, Dyfed                      1.4 Tiree, Argyll</p>

# SIGNIFICANT WEATHER

0600 GMT 29 FEBRUARY 2012 SIG WEATHER	1200 GMT 29 FEBRUARY 2012 SIG WEATHER	<p><b>Summary of UK Weather for Wednesday 29 February 2012.</b>                      It was yet another unusually mild February night across the U.K., with most areas dry but cloudy by dawn. The one main exception to the dry theme came to the north-west of Scotland, with the brisk south-westerly breeze there bringing occasional light drizzle.                      Most of the country started rather cloudy, however early cloud breaks in south-western England spread north and east during the day, giving many a much brighter day than of late. Sunny spells eventually stretched from the south-west, all the way to the north-east, although Northern Ireland, parts of Scotland and the south-east of England did stay generally cloudy.                      Into the evening, many kept their clearer skies, although sea fog drifted onto parts of the south coast of England, whilst cloud crept into west Wales.                      It was dry for most into the night, although the far north-west of Scotland stayed damp, with further spells of light drizzle.                      The sunny spells helped many to yet another very mild day, with parts of the West Midlands, and north Devon achieving the day's top temperatures, in the light winds.</p>
