

## National Severe Weather Warning Service

### Chief Forecasters Assessment

An Atlantic depression and associated active fronts will cross Scotland on Monday becoming slow moving near the Northern Isles on Monday night and Tuesday. On the northeastern flank of this depression the southeasterly winds will strengthen to severe gale force, these winds tending to become more easterly during Tuesday, before easing on Tuesday evening.

The Met Office have issued a **Yellow Alert of Wind**

Valid from **21:00 on Mon, 06th Oct 2014** until **23:45 on Tue, 07th Oct 2014**

Easterly to southeasterly winds will reach severe gale force from late Monday evening and will last through Tuesday, before easing on Tuesday night. Gusts of around 65-75mph are expected, accompanied by persistent and at times heavy rain, while large waves may cause spray and over-topping on exposed coastlines. The public should be aware of the risk of disruption to transport, especially to ferry crossings.
