## Daily Weather Summaries for August 2020

**If you have any questions or feedback about this product or wish to obtain further data please contact the Met Office.**

This document contains daily weather summaries for each day of August 2020. The Met Office National Meteorological Library and Archive holds a continuous record of daily weather summaries or daily weather reports from 1860, and these daily weather summaries form a continuation of that series.

The purpose of each summary is to provide an overview of the weather conditions across the UK on that day, with the historical emphasis mainly based on observations from surface network of weather stations, although the format has varied over the decades. While the emphasis remains on observations from the surface network, the current daily weather summaries supplement these by including satellite and rain-radar imagery to provide a more complete overview. The current format of the daily weather summaries is as follows:

1. Text summary of the main characteristics of the weather during the day, written by an operational meteorologist in the Met Office operations centre.
2. Table of daily extremes for the UK for key climate variables including temperature, rainfall, sunshine and gust speeds.
3. Overview of the synoptic situation at 00 and 12 UTC comprising: analysis charts showing the surface pressure pattern and associated weather fronts; North Atlantic and European infra-red satellite images showing cloud-cover; combined infra-red and rain-radar images of the UK; maps of wind speed and direction at 00 and 12 UTC; observations of pressure, wind speed and direction, cloud cover, air and dewpoint temperature at selected UK and European stations in data tables.
4. UK maps of key climate variables from observing stations including maximum, minimum and grass minimum temperature, rainfall, sunshine, gust speed and snow.
5. Further guidance notes

If you spot any data errors or omissions in this product please contact the Met Office.

## Daily Weather Summary for Saturday 01 August 2020

This day's summary created 08/08/2020 03:00

### Summary of the UK Weather for Saturday 01 August 2020

Thundery showers continued to clear northeastwards from the UK overnight, with drier, clear spells across the west, which proceeded to spread eastwards through the small hours. Although there was the odd isolated shower at times, it was then largely dry with light winds throughout. It was a largely dry morning throughout the UK and despite temperatures being down on Friday's extreme values, it was still very warm for eastern counties in England. Showers developed for central parts as the morning went on, though there was plenty of long sunny spells. More cloud was present further north into Scotland, but there were still a few bright spells on offer. The afternoon saw rain moving into Northern Ireland, accompanied by stronger winds than recently and some very heavy bursts by the evening. Northern Ireland remained wet all evening, though elsewhere was predominantly dry with sunny spells and just a few showers over western Scotland.

### Summary of the UK Weather for Sunday 02 August 2020

A cloudy night across the north of the UK as a band of showers moved into western parts and continued eastwards with some heavy downpours in places. Showers developing across Wales and the southwest also but they eased in places for Scotland and Northern Ireland later. Elsewhere was largely dry with clear spells, especially for southern and southeastern parts. It was a mostly dry morning for most in the south of the UK, with some lengthy sunny spells on offer and only a few showers in southwest England. The northern half of the UK was more overcast, though predominantly dry as well. Strong diurnal heating would spark some hefty downpours in northern England during the afternoon, accompanied by flashes of lightning and hail in one or two spots. Most locations in the south remained dry, though it was beginning to cloud over more from the west. Despite it being slightly less warm than recently, the temperature was still able to reach mid-twenties for many in southeastern England. The evening would see a few showers forming in southern England to begin, though most showers dissipated as the evening turned into night.

### Summary of the UK Weather for Tuesday 04 August 2020

Northern Ireland saw a very wet overnight period, due to a band of rain moving in from the Atlantic. The rain eventually pushed into western parts of northern England and much of Scotland, with some very heavy bursts of rain observed and some gusty winds. Elsewhere it was predominantly dry with clear spells throughout. Heavy rain across Scotland and northeastern England at first slowly cleared northeast England during the morning but the rain persisted across Scotland throughout the day. Elsewhere it was largely dry and cloudy, though patchy rain developed across southern Wales during the afternoon.

### Summary of the UK Weather for Wednesday 05 August 2020

Overnight saw patchy rain lingering over Scotland and Northern Ireland, along with heavier outbreaks of rain in Northern England. Further south into Wales and southern England was mostly dry, though predominantly cloudy, with clear spells limited to the far southeast and northwestern Midlands. Breezy throughout, especially for coastal areas in the west. During the morning, showery rain pushed into western areas of Wales and England and continued to push eastwards through the morning. There was heavy rain across Northern Ireland which pushed eastwards, and later in the morning, this heavy rain pushed into the southwest, Wales, northwest England and southwest Scotland. The heaviest bursts were in southwest Scotland and Wales. The rain eased off into the afternoon, but continued across these areas, spreading into eastern areas at times. It wasn't until the evening when the rain cleared most western areas. Winds were very strong throughout the day, particularly along western coastlines.

This day's summary created 13/08/2020 03:00

### Summary of the UK Weather for Thursday 06 August 2020

It was a largely dry night with clear spells widespread across Northern Ireland, Scotland, East Anglia and the Southwest. A few isolated mist and fog patches developed in prone spots across the south west and Wales, but these soon began to clear with the sunrise. It was a cloudy and mostly dry start across the UK, barring the odd outbreak of rain across the southwest. It remained cloudy through the morning, and it wasn't until early afternoon when skies started to clear from the southeast. Sunny spells started to develop in the southeast and temperatures began to rise making it feel quite warm. However, it remained cloudy and on the slightly milder side across all areas except the southeast. Clearer skies became a little more widespread across southern and central England later in the evening.

This day's summary created 14/08/2020 03:00

### Summary of the UK Weather for Friday 07 August 2020

It was a largely dry night with clear skies across much of England and Wales. A few isolated mist or fog patches developed in prone spots across the far southwest and Welsh valleys. Cloudier across Northern Ireland and eastern Scotland but some clear spells persisted. A few outbreaks of rain developed across Northern Ireland during the morning. These outbreaks slowly moved eastwards into Scotland, becoming quite heavy at times by the afternoon. The rest of the UK remained mostly dry throughout the day, but some prolonged and showery outbreaks did occur in south and central England. It was a fairly cloudy day for most, though still plenty of sunny spells, with the best of the blue skies and sunshine towards the southeast of England. It became quite hot here, with this being the first August day to achieve temperatures above 35 Celsius since 2003.

### Summary of the UK Weather for Saturday 08 August 2020

It was a mostly dry and clear night across the UK. There was, however, the odd outbreak of rain across central England and East Anglia during the early hours. Fog started to form in western parts of the country, particularly in the southwest, and lingered until morning in these parts. Winds were light in most places, but the southwest was breezy at times. It stayed warm overnight for many in the south, but cooler for the north. Most areas remained dry throughout the day, with a few showers over southern and central UK. It was a fairly cloudy day but still feeling very warm when extended spells of sunshine broke through, with the hottest temperatures being observed towards the south and southeast.

### Summary of the UK Weather for Sunday 09 August 2020

It was cloudy across the east through the night, especially across East Anglia. These clouds spread westwards into central areas and eastern Wales through the early hours. Northern England, Scotland, Northern Ireland and the southwest stayed mostly clear through the night. It stayed dry for all areas except a few showers in the southeast. It was a warm and humid night for most areas, particularly in the south. The north was slightly cooler. The morning saw some long sunny spells in the north of the UK and the far south, though a bank of cloud was preventing the sun coming through over central parts. The afternoon would see the cloud over central parts burning away to allow long sunny spells for most parts away from Wales and the far southwest of England. It was another very hot day, particularly in the southeast, where temperatures managed to reach the mid-thirties in quite a few spots. During the evening, skies would turn milkier for many areas, though it was still a warm and pleasant feeling evening for many.

## Daily Weather Summary for Monday 10 August 2020

This day's summary created 20/08/2020 12:17

### Summary of the UK Weather for Monday 10 August 2020

A largely dry night for many with patchy cloud and long clear periods in places, especially in the southeast. Towards the end of the night showers, with some heavy downpours in places, developed across the southwest and some northeastern coasts of the UK. A warm and humid night, particularly in the south. During the morning, sunny spells turned into near wall to wall sunshine for many, as scattered cloud burned away for central and southern parts. However, out in the west some heavy thunderstorms were moving through Devon, Cornwall and western Wales. Skies were cloudier across Scotland and Northern Ireland, though there were still some long sunny spells on offer. The afternoon was predominantly hot and sunny for most parts, even Devon and Cornwall, though a few heavy thunderstorms did develop over central parts of England, northwest England and southeastern parts of Northern Ireland. Heatwave conditions continued for many parts of the south, where 30 Degrees was met or exceeded for the fifth day in a row.

This day's summary created 18/08/2020 03:00

### Summary of the UK Weather for Tuesday 11 August 2020

Overnight saw thunderstorms across northwest England spread to cover parts of Scotland. They persisted in northwest England as well however whilst also affecting more eastern areas. The associated showers gave some very heavy downpours. Elsewhere saw showers, again thundery at times, across southeast and central England with the best of the dry weather in the southwest, and Wales with clear spells here also. Clear spells allowed patchy fog to form in prone areas. Rain at first in Northern Ireland cleared through the night. The morning was sunny for much of the southwest and Wales, elsewhere saw sunny spells as showers in midlands, east, north and Scotland continued to clear to the northeast. By the afternoon, showers were mostly confined to the northeast and eastern Scotland with a few rumbles of thunder also, with plenty of sunshine elsewhere across the UK. Towards the evening there was some further thundery showers in the north and Scotland, as well as South Wales and off the coast of western Cornwall. Another hot and humid day for most.

### Summary of the UK Weather for Wednesday 12 August 2020

Another warm and muggy night throughout the UK with two lines of thunderstorms bringing heavy downpours and frequent flashes of lightning to northwestern England and central Scotland. Elsewhere, conditions remained dry with clear spells, away from the far southwest and western Wales, where overnight fog had formed and reduced visibility significantly. Through the morning it was largely dry with plenty of sunshine throughout the UK. By the afternoon showers had reach the westernmost parts of Cornwall. Through the afternoon those showers cleared, but others pushed westwards from London with some heavy downpours and plenty of thunder, as well as around North and Mid Wales, and Cumbria. Into the evening, thunderstorms became isolated to Wales, the western regions of the Midlands, and southern Scotland. Sunny spells persevered elsewhere.

### Summary of the UK Weather for Thursday 13 August 2020

Overnight, thunderstorms continued to affect parts of Wales, while a fresh batch of showers pushed into southeast England and a smaller patch over Devon. However, most locations were dry with clear spells, though it was another warm and muggy night in the south of the UK. Eastern parts of northern England and Scotland did see some low cloud and fog affecting visibility in the early hours, but this murk didn't hit much more than the immediate coastlines. It has been a warm day with thunderstorms developing through the afternoon across the south of the country. Largely dry elsewhere with sunny spells prevalent across Northern Ireland and northwestern England and Scotland, cloudier across eastern areas.

### Summary of the UK Weather for Friday 14 August 2020

Overnight it stayed largely dry in Scotland, northern England and Northern Ireland. Thundery downpours were initially isolated to the south, but these gradually pushed into South Wales and the south regions of the midlands during the small hours. Some patches of fog formed in the northeast of the UK. Showers continued across the southern half of the UK. The showers were thundery at times. Further north it stayed mostly dry with sunny spells across Northern Ireland, northwestern and central England.

### Summary of the UK Weather for Saturday 15 August 2020

A dry start overnight, with showers isolated to the southwest and South Wales. These showers cleared northwestward through the early hours. The clearest spells were seen across northwest England. Elsewhere was rather cloudy, particularly in the south making it generally warm and muggy. During the early hours, some fog patches started to form, mainly confined to Northern Ireland and west and south England. Most of the patches of fog cleared with the sunrise, but the southeast of England did remain hazy into the late morning. The south of England and South Wales remained cloudy throughout the day, with showers, which were heavy at times, and the odd thunderstorm. Further north saw the best of the dry and sunny weather, especially towards the northwest of England and north Wales where it felt quite warm during longer periods of uninterrupted sunshine.

### Summary of the UK Weather for Sunday 16 August 2020

A rather cloudy night for much of the UK with the best of any clear spells across the north. It was largely dry here also with just the odd shower for parts of eastern and southern Scotland. Elsewhere, there were showers for many parts which were often heavy and also thundery at times. There were drier spells, however, with southeast England avoiding any showers until later in the night. Towards dawn, mist and fog patches started to form across the south and east, lingering into the morning. It remained fairly hazy and misty across the southeast throughout the day, with cloudy and gloomy skies elsewhere. However, there were some sunnier spells towards the afternoon over the south coast as showers cleared northwards. These showers were heavy at times with thundery downpours, which slowly made their way into the Midlands by the late afternoon. These showers were fairly organised, but there were further showers across the UK throughout the day, with Scotland remaining mostly dry.

## Daily Weather Summary for Monday 17 August 2020

This day's summary created 24/08/2020 03:00

### Summary of the UK Weather for Monday 17 August 2020

Overnight a band of heavy rain, covering the breadth of the country, moved northwards through central England and Wales towards northern England with cloudy conditions here also. There were a few showers further south, which gave some heavy downpours but also plenty of dry and clear spells. The north had a largely dry night with clear spells and a few showers in the far northeast. The rain across northern England continued through the morning, slowly moving northwards into southern Scotland. There were also outbreaks of rain across Wales and the odd heavy, thundery shower in parts of the southeast. Elsewhere was mostly dry and there was the odd sunny spells inbetween any showers. The rain had mostly cleared northern England and Scotland by the afternoon and pushed into Northern Ireland where there were heavy bursts. The thundery showers across the southeast became more widespread as they pushed further north into the midlands and East Anglia. By the evening, most of the rain had cleared Northern Ireland and circled back into Wales. The thundery showers eased across the south of England.

### Summary of the UK Weather for Tuesday 18 August 2020

It was a largely dry night across much of Northern Ireland, England and Scotland with a few mist and fog patches across northern Ireland, eastern Scotland and northeastern England. Wales saw locally heavy rain slowly moving northwards through the early hours. The fog lingered into the morning and began to clear away later. The rain continued over Wales and pushed northeastwards into northwest England through the morning. There was also further rain across Northern Ireland. As the rain continued to travel northeastwards, it began to ease to showers during the afternoon. Across the south and the midlands there was the odd heavy shower, sometimes thundery in places. Inbetween the showers there were plenty of sunny spells, especially in the southeast. The showers continued into the afternoon but eased into the evening.

### Summary of the UK Weather for Wednesday 19 August 2020

It was a largely dry night with clear skies across much of Scotland and England though there were a few showers across Cumbria and Northumberland. It was cloudier across Northern Ireland, Wales and the Southwest. Heavy rain crept into the far west through the early hours and slowly spread northeastwards towards dawn. It was an unseasonably wet and windy morning across the southern half of the UK, as the band of rain with some very heavy bursts at times swept through. The rain made its way into northern England by lunchtime, but further north across Scotland and Northern Ireland was a predominantly dry morning, with some bright spells. During the afternoon, the rain crept into Northern Ireland and the far north of England, though it was now much lighter and patchier in nature. Scotland would, however, remain largely dry with sunny spells in the afternoon, as the rain also cleared away from much of southwestern England and Wales.

This day's summary created 27/08/2020 03:00

### Summary of the UK Weather for Thursday 20 August 2020

A band of heavy rain pushed across Wales, Northern Ireland and northwest England through the early hours. It continued to push northeast through the night into southwest Scotland and northeast England. Elsewhere, it was mainly dry, barring the odd shower across the southeast and northwest Scotland. The winds were very strong in the west, with coastal gales along the west coast. It was a dry morning for nearly all parts of the UK, though it was very windy, especially in the west, where a few station August wind speeds records were broken. Blue skies were frequent across the southern half of the UK, though skies were cloudier across Northern Ireland and Scotland, with a very isolated shower or two around. Conditions remained much the same across eastern parts during the afternoon, though a touch more cloud and a few showers worked their way into the west.

### Summary of the UK Weather for Friday 21 August 2020

A band of rain swept northeastward across the country through Northern Ireland and Wales into northern England and Scotland. This was followed by a second band behind which made its way through Ireland and Wales, with scattered showers also across southwest England. Very windy in the west with gales particularly along exposed coasts. Elsewhere mainly dry and less windy with some clear spells in parts of the south and southeast. Scattered showers continued to affect much of western UK throughout the day, these being particularly heavy in the north west of England and southern Scotland where a more persistent band moved northeastwards over the course of the morning. There were some drier and clearer spells with some sunshine in the east. Windy across all of the UK throughout the day, but particularly in the west where gales were experienced.

### Summary of the UK Weather for Saturday 22 August 2020

A cloudy night across the north and west of the UK with some clear spells at times. Many areas saw showers which were heavy in places, particularly in Wales and through the Midlands. The southeast saw the best of any dry and clear weather, however there was still the odd shower here. A windy night for many. Showers pushed westward across a large swathe of the UK throughout the morning, although East Anglia remained largely dry with some clear spells. Showers continued during the afternoon although these were mainly confined to more northern areas with some drier and clearer spells in the south. A band of rain pushed into the northwest of the country during the early afternoon moving eastward. Some sferics were recorded over Derby and Hull. Windy across the whole of the UK.

### Summary of the UK Weather for Sunday 23 August 2020

Windy for some with scattered showers, heavy in places, across the UK overnight, but still long dry periods for many parts. It was mostly cloudy but clear spells developed, especially in Scotland and east of the UK, later in the night. Heavier spells of rain moved eastward across Northern Ireland towards dawn. The outbreaks of heavy rain lingered over Northern Ireland for much of the day, but also spread into Wales, and western areas of England and Scotland through the morning, reaching the east by the afternoon. It was quite gusty near the bursts of showery rain, which also turned thundery at times over Northern Ireland and central and eastern England. In between showers it was mostly cloudy and bright, although there were some occasional spells of sunshine. The north of Scotland saw the driest conditions but still a few showers in places.

### Summary of the UK Weather for Monday 24 August 2020

Overnight it was largely dry with easing winds across much of the country. Clear skies developed over Northern Ireland, Scotland and East Anglia. It was cloudier across Wales and southern England. Patchy rain and drizzle crept into western Scotland, the far southwest and southern Wales through the night. Heavier outbreaks of rain moved eastwards over northern England through the early hours. Mostly dry to start with some patchy rain across southwest England, central Scotland and parts of the east coast. This eased throughout the morning, leaving showers behind, which became quite heavy in places. Otherwise, it was a largely cloudy day, although there were clearer skies over parts of central and northwest England bringing spells of sunshine at times. A few thunderstorms broke out in southeast England during the afternoon and lingered into the early evening. A band of rain and strengthening winds approached the far west of Cornwall by the evening.

### Summary of the UK Weather for Tuesday 25 August 2020

Heavy rain across southwestern England at first slowly spread northeastwards overnight accompanied by strengthening winds. Eastern England and Scotland initially stayed largely dry with a few clear spells, these mainly focused along coastal fringes in East Anglia and northeastern Scotland. The rain continued moving northeastwards reaching the coast of East Anglia by 0400Z. Storm Francis continued to move eastwards through the day, bringing outbreaks of heavy and persistent rain and very strong winds, which were particularly gusty across Wales and central England. In fact, many stations were reporting August records for gust observations and there were several accounts in the media of trees falling down and power cuts, as well as some localised flooding. By the afternoon, the centre of the low pressure system was focussed over northwest England, and continued to bring heavy rain to Northern Ireland, Scotland, Wales, as well as north and central England, whilst the south became drier with some showers developing at times.

### Summary of the UK Weather for Wednesday 26 August 2020

A largely wet night for the northern half of the England and Wales, and most of Scotland, as the remnants of Storm Francis moved off into the North Sea. The heaviest of that rain focused in the northwest England. The strong winds and gusts slowly died down in the early hours for most of the UK. The far north of Scotland and south of England both stayed relatively dry, but remained under thick cloud cover most of the night. It was dry in Southern areas and Wales this morning with clear spells while northern areas saw persistent rain, more focused in Scotland with all areas experiencing strong winds. Showers began forming along the western coastline of North England and Wales from late morning, spreading inland through the afternoon while the south stayed largely dry. Wind strength began to calm after midday. In the early evening most areas saw showers start to weaken and rain move off east being replaced by bright and sunny spells.

### Summary of the UK Weather for Thursday 27 August 2020

Overnight it was largely dry with light winds across much of the country. A band of patchy rain and drizzle moved northeastwards across the far north of England, southern and central Scotland through the night. Mist was observed in some areas of northern England. Generally a dry and cloudy start for much of England and Wales with only a few showers across central and northern England, though a band of rain persisted across western Scotland. Heavy rain and showers with thick cloud spread into Wales and the southwest of England during the morning. These then pushed northeastwards across the UK through the day along with an area of thunderstorms that developed in the south of England during the afternoon. Drier and brighter conditions followed into the southwest later in the afternoon with only a few light showers. A windy day across much of the UK especially around southern and western coasts of Wales.

### Summary of the UK Weather for Friday 28 August 2020

During the night it was overcast across the north and east with persistent rain, with the main band staying across northern England and southern Scotland, and into Northern Ireland. Meanwhile it remained drier north and south of this region but with scattered showers throughout, mainly in the west but spreading eastward. Winds strengthened particularly along the eastern portion of this rain band in coastal areas. The rain across northern England tracked south gradually through the morning, becoming more fragmented, though as daytime heating took hold some very intense downpours were forming, with thunder and lightning embedded as well. Further north, across Scotland and Northern Ireland was a drier picture, as only a few showers were around, with plenty of bright spells on offer. The afternoon saw a spell of more prolonged rain move into northeast England, accompanied by some very gusty winds. Further south continued to see intense downpours on and off in-between sunny spells.

This day's summary created 05/09/2020 03:00

### Summary of the UK Weather for Saturday 29 August 2020

Scattered showers across the country thinned out through the night, whilst some areas of more persistent rain in southeastern parts gradually moved southeastward with heavier bursts along eastern coasts. Some clear spells were seen in northern and southwestern areas mainly. It was fairly breezy across the country with particularly strong gusts in the east. Further cloud moved into eastern areas of England throughout the morning, bringing scattered showers with it. These pushed into northwest England and the West Midlands during the course of the afternoon. Elsewhere, the day saw a mixture of patchy cloud and brighter spells, though some isolated showers occurred along northern coasts of Scotland and southwest England, as well as across Northern Ireland. Winds remained breezy throughout the day, again particularly in eastern areas where strong gusts were observed. During the evening, the cloud began to clear in western areas of the UK leaving relatively clear skies. Meanwhile, the showers pulled back from inland areas and were focused along eastern coasts of England.

### Summary of the UK Weather for Sunday 30 August 2020

Isolated showers mainly confined to the far southeast of the UK continued to die out through the night, whilst the rest of the UK remained largely dry. Much of west and north England saw long periods of clear skies with the most widespread cloud focused in the south and east of England, as well as over Scotland. It was a fairly breezy night across the east of the UK, as well as the southern coasts where the wind remained strong and gusty. However, the wind became light overnight for much of the west. It was a chilly night. It was a largely dry morning across the UK with isolated showers across northern Scotland and northeastern England. Western and central areas saw largely clear skies for the first half of the morning before the cloud infilled in central areas. There were further isolated showers in eastern England through the afternoon. The southwest saw the clear skies for the whole day. It stayed breezy throughout the day in the southeast although it slackened towards the evening whereas the winds were light elsewhere.

### Summary of the UK Weather for Monday 31 August 2020

The UK remained largely dry overnight with only a few isolated light showers in the far east and southeast. The most widespread and long-lasting cloud was generally confined to the southeast of the UK and Devon overnight, however this largely faded away through the early hours of the morning. The rest of the UK saw long periods of clear skies overnight with only some patchy cloud around. It was another chilly night with light winds throughout. It was a dry day with light winds. The UK was generally cloudy but with plenty of bright, sometimes sunny, spells, especially in the morning across England. The dry conditions continued into the evening, with most areas seeing a mixture of cloud and brighter spells.

## Daily Weather Summary for Monday 31 August 2020

## Daily Weather Summary for Monday 31 August 2020

None of the selected stations observed a day of sleet or snow falling or non-zero snow depth at 0900 UTC.

## Guidance Notes

UTC = Universal Coordinated Time. For the UK UTC is the same as GMT (Greenwich Mean Time).

National boundaries shown on the European station map are for illustrative purposes only.

### Daily extremes

- Daily extremes have been manually confirmed by Met Office Observations Quality Management as valid observations from the live database at the time of checking. However, more extreme values may still be possible if they occur after the time of production.
- Mountain stations above 500 masl are excluded from lowest temperatures, highest gust speeds and greatest snow depths at 0900 UTC. This is because they are not considered representative of low level areas.
- Counties quoted against each station are based on historical county boundaries pre-1974 and may not reflect current administrative boundaries.

### Analysis charts and satellite imagery

- The satellite imagery is infra-red imagery from the geostationary MSG satellite.
- The rainfall image is derived from satellite data from MSG and rain-radar data. This represents a snapshot of instantaneous rain-rates at 0000 UTC and 1200 UTC and so does not necessarily reflect daily accumulations in the rainfall station map.
- Any analysis charts or satellite images which are unavailable will be displayed as white space.

### Station maps

- The UK maps show station data for the same set of stations presented UK data table. These stations are selected to provide good spatial coverage across the UK; they represent only a fraction of the overall UK observing network.
- Wind speed maps show wind speed in Kt and direction both averaged over the hour up to the time of observation. 1 Kt = 1.151 mph.

### Hourly station data

- The data tables provide spot hourly observations from synoptic messages at 0000 and 1200 UTC. Missing data are denoted by '-'.

- Pressures are mean sea level pressure in hPa.
- For UK stations, Gibraltar and Jersey, the wind speeds and directions are both averaged over the hour up to the time of observation. However, for European stations wind speeds and directions are both averaged over a 10-minute period up to the time of observation.
- Wind speeds are in Kt. Wind directions are stored in the database every 10 degrees and have been converted to the nearest point of the compass. These give the direction the wind is blowing from, not to.
- Cloud amounts are in Oktas from 0 (clear) to 8 (overcast). 9 indicates sky obscured (eg by fog).
- Air temperature and dew point temperature are in Celsius.

### **Temperature maps**

- Daily maximum, minimum and grass minimum temperatures are in Celsius.
- The period for the daily maximum temperature on day D is defined from 0900 UTC day D to 0900 UTC day D+1.
- The period for the daily minimum and grass minimum temperatures on day D is defined as 0900 UTC day D-1 to 0900 UTC day D.
- On any given day D the minimum will typically occur in the early hours of the morning and the maximum in early afternoon.

### **Rainfall, sunshine and max gust speed maps**

- Daily rainfall is in mm from 0900 UTC day D to 0900 UTC day D+1.
- Daily sunshine is in hours from Kipp and Zonen CSD1 automatic sunshine records. Bright sunshine is defined as exceeding 120 W/m<sup>2</sup>.
- Max gust speeds are the daily max gust in Kt from 0000-0000 UTC

### **Snow maps**

- The day of snow falling map displays data from present weather sensors, showing stations which have recorded sleet or snow falling at any point in the day (0000-0000 UTC).
- The snow lying map shows level snow depth as recorded by the automatic snow depth sensors at 0900 UTC. These snow depth sensors do not record snow depth if this is less than 1cm.
- Snow depth sensors are normally operational from October to April, in the event of snow falling outside this period data availability may be limited.
- Snow maps will only be displayed if one or more of the selected stations on that date have recorded either snow falling or non-zero snow depths. If snow maps are not

displayed it is still possible that other stations in the network have recorded a day of sleet or snow falling or non-zero snow depth.
