

THE DAILY WEATHER REPORT

(INTRODUCTION)

84

1st July to 30th September, 1978

Stations published in the Daily Weather Report

METEOROLOGICAL OFFICE
Bracknell, Berkshire

I. HISTORY

A brief history of changes in contents and format between 1st April, 1919, and December, 1949, will be found in the introduction to the British Section for 1st October to 31st December, 1949. On 1st January, 1950, the British and International Sections of the former Report, which had been issued in three sections since 1919, were combined in a single publication, the present Daily Weather Report. At the same time, the third section was published separately with the title of Daily Aerological Record. A number of changes in meteorological codes and specifications were introduced on 1st January, 1955, and incorporated in the Report. Changes in format introduced on 1st July, 1955, provided for the elements of station and ships' observations to be given in the order of the appropriate meteorological code and for some modification of the scales and projections of charts. On 1st January, 1961, the Celsius scale was adopted for reporting surface temperatures. On 1st January, 1967, the metric system was adopted for all references to heights and distances. Certain changes relating to position and wave groups in the Ship-Code were introduced on 1st January, 1968.

2. FORM OF PRESENTATION

(i) **Observations.**—Pages 1 and 4 of the Daily Weather Report contain reports for the four main hours of observation from a representative number of stations in Great Britain and Ireland which provide full reports together with a selection of reports from ocean weather stations for the same hours. In addition, Beaufort letters (Table 20), mainly describing precipitation, are given for each of the four six-hourly periods, together with reports of maximum and minimum temperature, sunshine, rainfall and state of ground (Table 13), in respect of the land stations listed. Explanations of the codes and specifications used are given below.

(ii) **Charts.**—Page 2 contains a chart of the weather in a large part of the northern hemisphere for mid-day of the previous day. Page 3 contains charts of slightly larger scale, for the British Isles and Western Europe, for 1800 h. of the previous day and for 0000 h and 0600 h on the day of issue.

4. EXPLANATION OF CODES AND SPECIFICATIONS

CODE FM 1IV—Land Stations	VV ww W	PPP TT	Nh CL h CM CH	Td Td a pp	8Ns C hshs	RRTxTx E RRTnTn E	sss Tg Tg
N = Total amount of cloud in eighths (Table 1). dd = Wind direction on scale 01-36 (see also Table 2). ff = Wind speed in knots.	VV = Visibility (Table 3). ww = Present weather (Table 5). W = Past weather (Table 4).	PPP = Last three figures of pressure (reduced to M.S.L.) in millibars and tenths. TT = Temperature in whole degrees Celsius. Note.—In reports from ocean weather stations (FM 2IV) only the tens and units figure of air temperature are reported. The tenths figure is reported by t _T .	Nh = Fraction of celestial dome covered by CL (or CM if no CL). CL = Form of low cloud (Table 6). h = Height above ground of base of lowest cloud (Table 9). CM = Form of Medium Cloud (Table 7). CH = Form of high cloud (Table 8).	T _d T _d = Dew point temperature in whole degrees Celsius. a = Characteristic of barometric tendency (Table 10). pp = Barometric tendency (change of pressure in last three hours in tenths of millibars).	8 = Indicator figure. Ns = Amount in eighths of individual cloud layer or mass (Table 1). C = Type of cloud (Table 11). hshs = Height of base of cloud (Table 12).	RR = Rainfall (Table 19) (Code 3577) (09h-21h) (21h-09h). TxTx = Maximum temperature in whole degrees Celsius (09h-21h). TnTn = Minimum temperature in whole degrees Celsius (21h-09h).	T _g T _g = Minimum temperature on grass in whole degrees Celsius (21h-09h). sss = Duration of sunshine (in hours and tenths). E = State of ground (Table 13) (Code 0900) (at 21h and 09h).
CODE FM 2IV—Ships	QcLoLoLoLo	YYGGi _w	D _s v _s a pp	O T _s T _s T _d T _d	IT _w T _w T _w t _T	3P _w P _w H _w H _w	d _w d _w P _w H _w H _w
99=Indicator group. L _a L _a L _a =Latitude in tenths of a degree.	Q _c =Quadrant of the globe (Table 17). L _o L _o L _o =Longitude in tenths of a degree.	YY=Day of the month. GG=Actual time to the nearest whole hour G.M.T. i _w =Wind indicator (Table 18).	D _s =Direction of movement of ship (Table 14). v _s =Speed of ship in knots (Table 15). a = Characteristic of barometric tendency (Table 10). pp = Barometric tendency (change of pressure in last three hours in tenths of millibars).	O = Indicator figure. T _s T _s =Difference between air temperature and sea temperature in $\frac{1}{2}$ degree Celsius. (If the air temperature is less than the sea temperature, 50 is added to the difference.) T _d T _d =Dew point temperature in whole degrees Celsius.	I = Indicator figure. T _w T _w T _w =Sea surface temperature in tenths of a degree Celsius. For negative temperatures 500 is added. t _T =The tenths figure of the air temperature.	3=Indicator figure. P _w P _w =Period of waves in seconds. H _w H _w =Height of the waves in units of 0.5 metre. This group refers to wind waves. If there is a swell with no wind waves this group is reported as 3/00.	d _w d _w =Direction (in tens of degrees) from which waves come. P _w Period of waves (Table 16). H _w H _w Height of the waves in units of 0.5 metre. This group is used to report swell when it is possible to make a clear distinction between swell and wind waves.

Table 1.—Code for Cloud Amount (N, Nh, Ns)

- 0 = None.
- 1 = 1 eighth of sky covered or less, but not zero.
- 2 = 2 eighths of sky covered.
- 3 = 3 eighths of sky covered.
- 4 = 4 eighths of sky covered.
- 5 = 5 eighths of sky covered.
- 6 = 6 eighths of sky covered.
- 7 = 7 eighths of sky covered or more, but not 8 eighths.
- 8 = 8 eighths (sky completely covered).
- 9 = Sky obscured or cloud amount cannot be estimated.

Note.—"Trace" would be included under Figure 1, which should be used for amounts up to 1/8th (i.e., not up to 3/16ths). "Overcast but with openings" would be included under Figure 7, which should be used for amounts down to 7/8ths (i.e., not down to 13/16ths).

Note.—The direction to be observed is "true" not "magnetic"

2. FORM OF PRESENTATION (continued)

(iii) **General Synoptic Development.**—Below the weather charts on page 3 will be found a statement which describes the main features in the evolution of the synoptic situation over the United Kingdom during the preceding 24 hours together with an indication of the manner in which it is expected to develop.

3. NOTES

- (i) **Standard of Time.**—Greenwich Mean Time is exclusively used throughout the Report.
- (ii) **Temperature.**—On pages 1 and 4 temperature is specified in whole degrees Celsius, negative temperatures being coded by removing the minus sign and adding 50. Equivalent values in degrees Fahrenheit can be obtained by reference to the table printed between these pages. See also note under PPP TT in para. 4 below.
- (iii) **Adjusted Readings.**—Where an instrumental reading is found to be in error and some adjustment is necessary, the adjusted reading is published in brackets thus (59).
- (iv) **Rainfall Readings in Eire.**—The rainfall totals for stations in Eire are for the periods 18h-06h, reported at 0900h.
06h-18h, reported at 2100h.
- (v) Readers of the Report who are unacquainted with the method of construction and the use of weather charts are recommended to read "The Practice of Weather Forecasting" which may be purchased from H.M. Stationery Office, 49 High Holborn.
- (vi) Correction sheets will be issued weekly. These will contain corrected observations, where appropriate, for all stations with the exception of the following:—stations in Eire, Cape Wrath, Sule Skerry, Mull of Galloway, Kilnsea, Guernsey, Scilly, Hartland Point.

Table 4.—Code for Past Weather (W) (Code 4500)

0 = Cloud covering $\frac{1}{2}$ or less of the sky throughout the appropriate period.	3 = Sandstorm, duststorm or blowing snow.
1 = Cloud covering more than $\frac{1}{2}$ of the sky during part of the appropriate period and covering half or less during part of the period.	4 = Fog, ice fog or thick haze (visibility less than 1000 m.).
2 = Cloud covering more than $\frac{1}{2}$ of the sky throughout the appropriate period.	5 = Drizzle.
	6 = Rain.
	7 = Snow, or rain and snow mixed.
	8 = Shower(s).
	9 = Thunderstorm(s) with or without precipitation.

The code for W covers the weather occurring during the last six hours.

In the range 01-50 the figures give actual visibility in tenths of kilometres. This table gives the meanings of higher code figures.

* Values not given may be obtained by interpolation.

† Code figures not used.

‡ Decade 90-99 is used when visibility cannot be determined with sufficient accuracy to justify lower code figures.

Table 5.—Code for Present Weather (ww) (Code 4677)

Table 5.—Code for Present Weather (WW) (Code 4077)									
00-19 No precipitation at the station at the time of observation.	00 Cloud development not observed. 01 Clouds generally dissolving or becoming less developed. 02 State of sky on the whole unchanged. 03 Clouds generally forming or developing. 04 Visibility reduced by smoke, e.g., veldt or forest fire, industrial smoke or volcanic ashes. 05 Haze 06 Widespread dust in suspension in the air, not raised by wind at or near the station at the time of observation 07 Dust or sand raised by wind at or near the station at the time of observation, but no well-developed dust whirl(s) or sand whirl(s), and no duststorm or sandstorm seen; or in the case of ships, blowing spray at the station. 08 Well developed dust whirl(s) or sand whirl(s) seen at or near the station during the preceding hour, but no duststorm or sandstorm. 09 Duststorm or sandstorm within sight of the station or at the station during the preceding hour. 10 Mist. 11 Shallow fog or ice fog, in patches. 12 Shallow fog or ice fog, land or 10 metres at sea. 13 Lightning visible, no thunder heard. 14 Precipitation within sight, not reaching the ground or the surface of the sea. 15 Precipitation within sight, reaching the ground or the surface of the sea but distant (estimated to be more than 5 km) from the station. 16 Precipitation within sight reaching the ground or the surface of the sea near to but not at the station. 17 Thunderstorm, but no precipitation at time of observation. 18 Squalls. 19 Funnel cloud(s)† at or within sight of the station during the preceding hour or at the time of observation.	Characteristic change of the state of the sky during the past hour.	30-39 Duststorms, Sandstorms, drifting or blowing snow. 40-49 Fog or ice fog at time of observation. 50-59 Drizzle at time of observation. 60-69 Rain at time of observation.	30 31 Slight or moderate duststorm or sandstorm. 32 33 34 Severe duststorm or sandstorm. 35 36 Slight or moderate drifting snow. 37 Heavy drifting snow. 38 Slight or moderate blowing snow. 39 Heavy blowing snow. 40 Fog or ice fog at a distance at the time of observation, but not at the station during the last hour, the fog or ice fog extending to a level above that of the observer. 41 Fog or ice fog in patches. 42 Fog or ice fog, sky discernible. 43 Fog or ice fog, sky not discernible. 44 Fog or ice fog, sky discernible. 45 Fog or ice fog, sky not discernible. 46 Fog or ice fog, sky discernible. 47 Fog or ice fog, sky not discernible. 48 Fog, depositing rime, sky discernible. 49 Fog, depositing rime, sky not discernible. 50 Drizzle, not freezing, intermittent. 51 Drizzle, not freezing, continuous. 52 Drizzle, not freezing, intermittent. 53 Drizzle, not freezing, continuous. 54 Drizzle, not freezing, intermittent. 55 Drizzle, not freezing, continuous. 56 Drizzle, freezing, slight. 57 Drizzle, freezing, moderate or heavy (dense). 58 Drizzle and rain, slight. 59 Drizzle and rain, moderate or heavy. 60 Rain, not freezing, intermittent. 61 Rain, not freezing, continuous. 62 Rain, not freezing, intermittent. 63 Rain, not freezing, continuous. 64 Rain, not freezing, intermittent. 65 Rain, not freezing, continuous. 66 Rain, freezing, slight. 67 Rain, freezing, moderate or heavy. 68 Rain or drizzle, and snow, slight. 69 Rain or drizzle and snow, moderate or heavy.	has decreased during preceding hour. no appreciable change during preceding hour. has begun or has increased during preceding hour. has decreased during preceding hour. no appreciable change during preceding hour. has begun or has increased during preceding hour. generally low. generally high. has become thinner during the preceding hour. no appreciable change during the preceding hour. has begun, or has become thicker during the preceding hour. generally high.	70-79 Solid precipitation not in showers. 80-90 Showery precipitation. 91-99 Precipitation with current or recent thunderstorm.	70 Intermittent fall of snow flakes. } slight at time of observation. 71 Continuous fall of snow flakes. } observation. 72 Intermittent fall of snow flakes. } moderate at time of observation. 73 Continuous fall of snow flakes. } 74 Intermittent fall of snow flakes. } heavy at time of observation. 75 Continuous fall of snow flakes. } 76 Ice prisms (with or without fog). 77 Snow grains (with or without fog). 78 Isolated starlike snow crystals (with or without fog). 79 Ice pellets type (a).	80 Rain shower(s), slight. 81 Rain shower(s), moderate or heavy. 82 Rain shower(s), violent. 83 Shower(s) of rain and snow, slight. 84 Shower(s) of rain and snow, moderate or heavy. 85 Snow shower(s), slight. 86 Snow shower(s), moderate or heavy. 87 Shower(s), or snow pellets or ice slight } 88 rain or rain and snow mixed. } moderate or heavy. 89 Shower(s) of hail, with or without } slight. 90 rain or rain and snow mixed, not } moderate or associated with thunder. } heavy.	
20-29 Precipitation, fog or thunderstorm at station during the last hour but not at time of observation.	20 Drizzle (not freezing), or snow grains. 21 Rain (not freezing). 22 Snow. 23 Rain and snow or ice pellets type (a). 24 Freezing drizzle or freezing rain. 25 Shower(s) of rain. 26 Shower(s) of snow, or of rain and snow. 27 Shower(s) of hail*, or of hail and rain. 28 Fog or ice fog. 29 Thunderstorm (with or without precipitation).	Not falling as shower(s).			91 Slight rain at time of observation. 92 Moderate or heavy rain at time of observation. 93 Slight snow, rain and snow mixed, or hail* at time of observation. 94 Moderate or heavy snow, rain and snow mixed or hail* at time of observation. 95 Thunderstorm, slight or moderate, without hail* but with rain and/or snow at time of observation. 96 Thunderstorm, slight or moderate, with hail* at time of observation. 97 Thunderstorm, heavy, without hail*, but with rain and/or snow at time of observation. 98 Thunderstorm combined with duststorm or sandstorm at time of observation. 99 Thunderstorm, heavy, with hail* at time of observation.	thunderstorm during the preceding hour, but not at time of observation.			
					The expression "at the station" refers to a land station or a ship at the point from which observations are normally taken. † Tornado cloud or water spout. * Hail, ice pellets type (b), snow pellets. ICE PELLETS are defined as transparent or translucent pellets of ice, which are spherical or irregular, rarely conical, and which have a diameter of 5 mm. or less. They may be subdivided into two main types. (a) Frozen raindrops or largely melted and refrozen snowflakes. (b) Pellets of snow encased in a thin layer of ice. HAIL is defined as small balls or pieces of ice (halostones) with a diameter ranging from 5 mm. to 50 mm. or sometimes more, falling either separately or aggregated into irregular lumps.	thunderstorm at time of observation.			
Table 6.—Code for form of Low Cloud (CL) (Code 0513)		Table 7.—Code for form of Medium Cloud (CM) (Code 0515)		Table 8.—Code for form of High Cloud (CH) (Code 0509)		Table 9.—Code for Cloud Height (h) (Code 1600)			
0 = No stratocumulus, stratus, cumulus or cumulonimbus. 1 = Ragged cumulus other than of bad weather, or cumulus with little vertical extent and seemingly flattened, or both. 2 = Cumulus of moderate or strong vertical extent, generally with protuberances in the form of domes or towers, either accompanied or not by other cumulus or by stratocumulus: all having their bases at the same level. 3 = Cumulonimbus, the summits of which, at least partially, lack sharp outlines, but are neither clearly fibrous (cirriform) nor in the form of an anvil: cumulus, strato-cumulus or stratus may also be present. 4 = Stratocumulus formed by the spreading out of cumulus: cumulus may also be present. 5 = Stratocumulus not resulting from the spreading out of cumulus. 6 = Stratus in a more or less continuous sheet or layer, or in ragged shreds, or both, but no stratus fractus of bad weather. 7 = Stratus fractus of bad weather or cumulus fractus of bad weather (pannus), or both; usually below altostratus or nimbostratus. By "bad weather" is meant the conditions which generally exist before, during or after precipitation. 8 = Cumulus and stratocumulus, other than those formed from the spreading out of cumulus: the base of cumulus is at a different level from that of stratocumulus. 9 = Cumulonimbus, the upper part of which is clearly fibrous (cirriform), often in the form of an anvil: either accompanied or not by cumulus, stratocumulus, stratus or pannus. / = Stratocumulus, stratus, cumulus and cumulonimbus are invisible owing to darkness, fog, blowing dust or sand, or other similar phenomena.	0 = No altocumulus, altostratus or nimbostratus. 1 = Altostratus, the greater part of which is semi-transparent: through this part the sun or moon may be weakly visible as through ground glass. 2 = Altostratus, the greater part of which is sufficiently dense to hide the sun (or moon), or nimbostratus. 3 = Altocumulus, the greater part of which is semi-transparent, and no part of which is crenelated or in cumuliform tufts: the various elements of the cloud change only slowly and are all at a single level. 4 = Patches (often in the form of almonds or fishes) of altocumulus, the greater part of which is semi-transparent: the clouds are at one or more levels and the elements are continually changing in appearance. 5 = Semi-transparent altocumulus in bands or altocumulus in one more or less continuous layer progressively invading the sky: these altocumulus clouds generally are growing denser as a whole. The layer may be opaque or may consist of two or more sheets. 6 = Altocumulus resulting from the spreading out of cumulus. 7 = Any one of the following cases:— (a) Altocumulus in two or more layers, usually opaque in places and not progressively invading the sky. (b) Opaque layer of altocumulus not progressively invading the sky. (c) Altocumulus together with altostratus or nimbostratus or both. 8 = Altocumulus with sprouts in the form of small towers or battlements, or altocumulus having the appearance of cumuliform tufts. 9 = Altocumulus, generally at several levels, in a chaotic sky: dense cirrus is usually also present. / = Altocumulus, altostratus and nimbostratus are invisible owing to darkness, fog, blowing dust or sand, or other similar phenomena, or more often because of the presence of a continuous layer of lower clouds.	0 = No cirrus, cirrocumulus or cirrostratus. 1 = Cirrus in the form of filaments, strands or hooks, not progressively invading the sky (often called "mares' tails"). 2 = Dense cirrus, in patches or entangled sheaves, which usually do not increase and sometimes seem to be the remains of the upper part of a cumulonimbus: or cirrus with sprouts in the form of towers or battlements, or having the appearance of cumuliform tufts. 3 = Dense cirrus, often in the form of an anvil: either the remains of the upper parts of a cumulonimbus or parts of distant cumulonimbus, the cumuliform portions of which cannot be seen. 4 = Cirrus in the form of hooks or of filaments, or both, progressively invading the sky: they generally become denser as a whole. 5 = Cirrus, often in bands converging towards one point or two points of the horizon, and cirrostratus, or cirrostratus alone: in either case, they are progressively invading the sky, and generally growing denser as a whole, but the continuous veil does not reach 45 degrees above the horizon. 6 = Cirrus, often in bands converging towards one point or two points of the horizon, and cirrostratus, or cirrostratus alone: in either case, they are progressively invading the sky, and generally growing denser as a whole; the continuous veil extends more than 45 degrees above the horizon, without the sky being totally covered. 7 = Veil of cirrostratus completely covering the celestial dome. 8 = Cirrostratus not progressively invading the sky and not completely covering the celestial dome. 9 = Cirrocumulus alone or cirrocumulus accompanied by cirrus or cirrostratus, or both, but cirrocumulus is the predominant cirriform cloud. / = Cirrus, cirrocumulus and cirrostratus are invisible owing to darkness, fog, blowing dust or sand, or other similar phenomena, or more often because of the presence of a continuous layer of lower clouds.	Code figure 0 1 2 3 4 5 6 7 8 9 /	Height of base of cloud metres 0-50 50-100 100-200 200-300 300-600 600-1,000 1,000-1,500 1,500-2,000 2,000-2,500 Above 2,500 Height of base of cloud not known or base of clouds at a level lower and tops at a level higher than that of the station.

Table 19.—Code for Amount of Precipitation (RR) (Code 3577)		Table 20.—Explanation of Beaufort Letters (pages 1 and 4)		Table 18.—Wind Indicator (i _w) (Code 1855)			
mm 01–55 Amount to the nearest whole millimetre. 56 60 57–90 Add 10 mm for each unit above 56 e.g., 73 = 230 mm 91 0·1 92 0·2 93 0·3 94 0·4 95 0·5 96 0·6 97 Trace (There has been precipitation but amount less than 0·05 mm). 98 >400 99 Measurement impossible or inaccurate.		d = drizzle. f = fog, visibility 200 metres, or more but less than 1 kilometre. F = thick fog, visibility less than 200 metres. h = hail, ice prisms or ice pellets types (a) and (b). ks = storm of drifting snow.	l = lightning p = shower(s). r = rain. s = snow rs = rain and snow. t = thunder.	0 = wind speed estimated 1 = wind speed obtained by anemometer 3 = wind speed estimated 4 = wind speed obtained by anemometer	wind speed in metres per second wind speed in knots		
5. EXPLANATION OF CHARTS		FRONTS or boundaries between masses of air of different origin are indicated, wherever their characteristics are well pronounced, in the following way—					
BAROMETER. Isobars are drawn for intervals of four millibars.		Warm Front at the surface.		Occluded Front.			
WIND. Arrows fly with wind. A full length feather represents 10 Kt. and a short feather 5 Kt. A solid pennant represents 50 Kt. Calm is indicated by circle outside Station circle.		Cold Front at the surface.		Cold front frontogenesis.			
TEMPERATURE is given in degrees C., and is shown on the charts by means of figures alongside the Station circle.		Stationary Front.		Cold front frontolysis.			
CLOUD SYMBOLS		Axis of trough.		Warm front frontogenesis.			
○ Clear sky. ○ Sky ½ covered. ○ Sky ¾ covered. ○ Sky ½ covered. ○ Sky ¾ covered. ○ Sky obscured. ○ Sky ½ covered. ○ Sky ¾ covered. ○ Sky ½ covered. ○ Sky ¾ covered. ○ Sky obscured. ⊗ Missing or doubtful data.				Warm front frontolysis.			
WEATHER SYMBOLS				Note.—The symbols are placed on the side of the line towards which the front is moving. Identification letters are inserted in systems.			
● Rain. ● Drizzle. ● Snow. ● Rain and snow. △ Hail. ▽ Shower. ▽ Thunderstorm. ■ Fog. — Mist.							
ALITUDES OF STATIONS.—The altitudes, in metres, of British and Irish stations are given below. These refer in each case to the datum level of the ground beneath or nearly beneath the thermometer screen. Where the official name of the station differs, this is given in brackets.

DAILY WEATHER REPORT OF THE BRITISH METEOROLOGICAL OFFICE

No. 272

MONTHLY SUMMARY

MOSTLY CHANGEABLE AND COOL; SOME WARM DAYS LATER

For AUGUST 1978

During most of the first week an area of low pressure and a complex system of slow-moving fronts persisted over or near the British Isles. On the 7th and 8th the main depression retreated slowly eastwards and was followed by a ridge of high pressure which moved across the whole area between the 10th and 12th. A series of fronts from the Atlantic crossed the British Isles from the 12th to the 16th. A ridge of high pressure followed on the 17th and high pressure persisted in the south and east on the 18th while fronts from the Atlantic skirted northern and western districts. Pressure remained high over southern districts during the next few days but fronts moved into Scotland on the 19th and into Wales and western England on the 20th weakening all the time. A further frontal system crossed northern and central districts on the 21st but on the 22nd a waving cold front moved southwards across remaining parts of the British Isles. Pressure increased behind the front and from the 22nd to 31st an anticyclone persisted to the west of the British Isles. During this period weak fronts crossed all districts from time to time moving mostly from north to south.

Outbreaks of rain occurred in many districts during the first week or so. The rain was occasionally heavy and there were scattered thunderstorms. Clear or sunny intervals were sparse. Sea and coastal fog was often widespread in eastern and northern Scotland and northeastern England and fog also occurred at times in South Wales and southwestern England. After the 8th rainfall was lighter and more scattered although there were some heavy showers and thunderstorms in parts of England on the 9th. Fog patches developed over England during the night of the 10th/11th but these had dispersed by mid-morning and many districts had sunny periods thereafter. Cloud spread into western districts later on the 11th heralding a return to a period of changeable weather in all districts. Rainfall was heavy from time to time and there were scattered hail showers and thunderstorms but most districts had clear or sunny periods as well. From the 17th to the 21st Scotland, Northern Ireland and western parts of England and Wales were often cloudy and there was occasional rain. Rainfall was heavy for a time in Northern Ireland and in the Hebrides on the 18th and also in southwestern Scotland on the 21st. Early on the 20th fog

patches occurred in Northern Ireland and southwestern Scotland; in Shetland, fog occurred intermittently throughout the day. During the same period (17th to 21st) remaining districts of England and Wales were mostly dry. There were clear or sunny periods and occasional overnight fog patches. On the 22nd, Northern Ireland had scattered showers and clear or sunny intervals. Scotland had similar weather after early rain in the east and south. The rain moved southwards over most of England and Wales during the day and, although amounts were small in southeastern England, there were some heavy outbreaks in northern districts. Between the 23rd and the 28th it became dry over much of the United Kingdom. A little rain or drizzle fell at times mainly in the north or northwest but most districts had clear or sunny periods and some of these were prolonged. There was fog at night especially in parts of southern and eastern England and the Channel Islands. On the 28th northern Scotland had occasional heavy rain; outbreaks of heavy rain and thunderstorms occurred in southeast Scotland and northeast England on the following day. Many other districts also had rain at times from the 29th to the 31st but there were also some clear or sunny periods. Day to day temperatures were mostly near or below average but in some places throughout the United Kingdom it became warm by day during the latter half of the month.

In England and Wales monthly mean temperatures were mostly between 0.5 and 1.0°C below average. In Scotland and Northern Ireland they were mostly near the average.

Monthly rainfall expressed as a percentage of the long term average varied considerably over the United Kingdom. In parts of Northern Ireland, southern Scotland, North Wales and northern and eastern England rainfall totals were above average; more than twice the monthly average was recorded at Colwyn Bay (Clwyd). Elsewhere rainfall was below average; some places in northern Scotland, South Wales and southern England had less than 50 per cent of their average monthly rainfall.

Sunshine duration was below average generally except in parts of southern Scotland, northern England, southern England and South Wales where sunshine was near or a little above average.

(a) 1947, 1976

Corrections to MONTHLY SUMMARY No.255 for MARCH 1977
In column SUNSHINE % of average, delete asterisks against values
for RHOOSE, MOUNT BATTEN and VALLEY

In column SUNSHINE Total for month, insert asterisk against value for RHOOSE. At foot of SUNSHINE columns, amend "*New lowest" to read
"*Equal lowest".

Corrections to MONTHLY SUMMARY No.267 for MARCH 1978
In columns SUNSHINE Lowest and Year, amend entries as
follows: ~~PHCOSF~~ 080 (a)

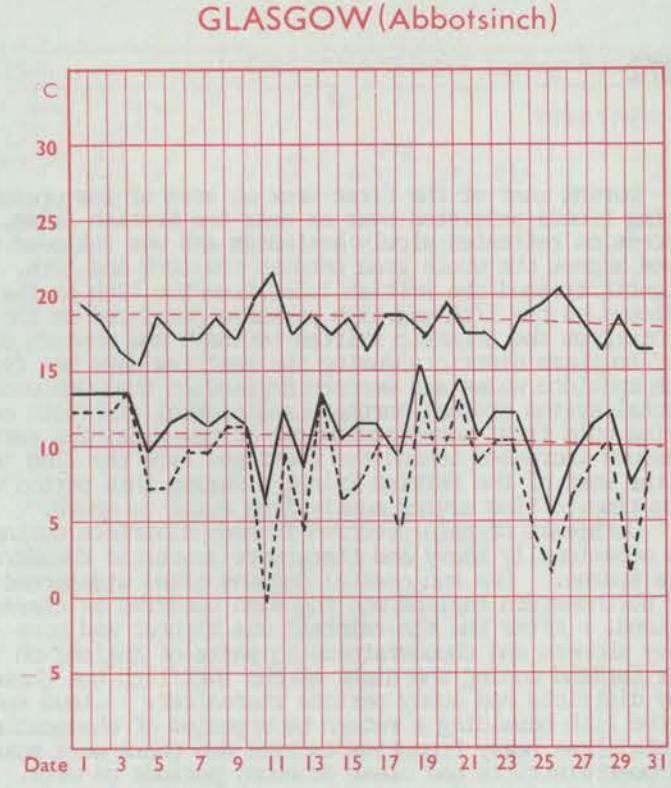

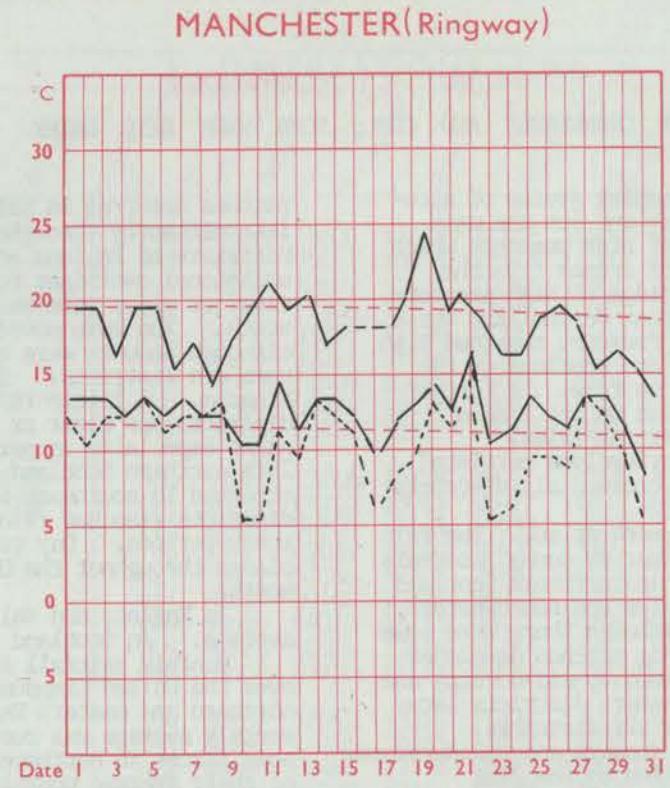

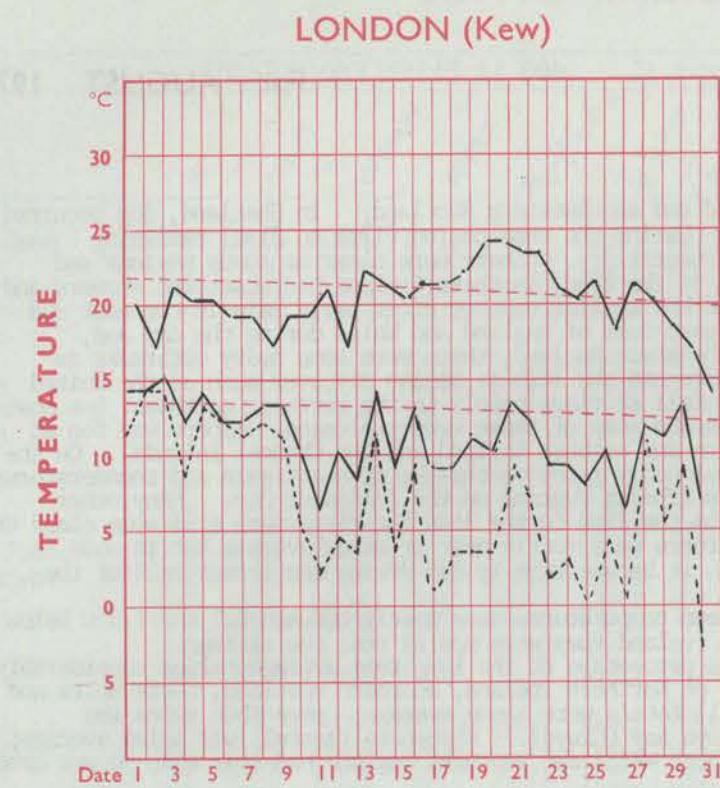

follows: RHOUSE 080 (a)
MOUNT BATTEN 081 1947

VALLEY 085 1951
At foot of SUNSHINE columns insert "(a) 1964-1977"

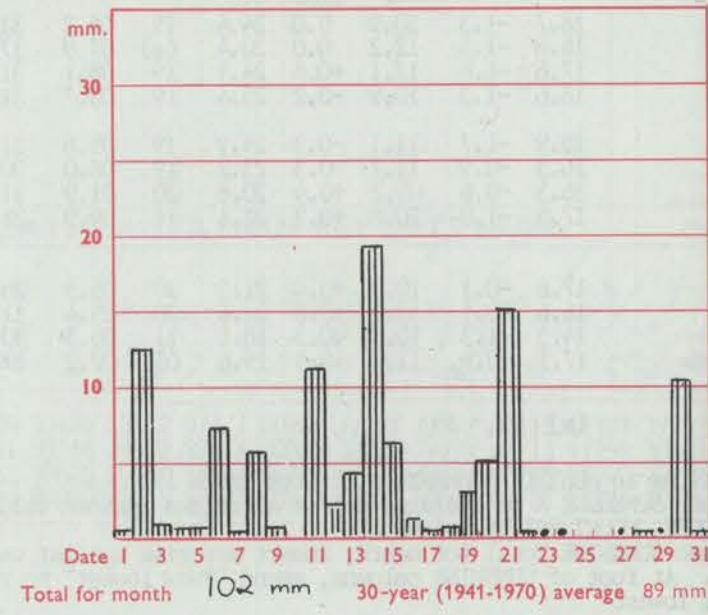

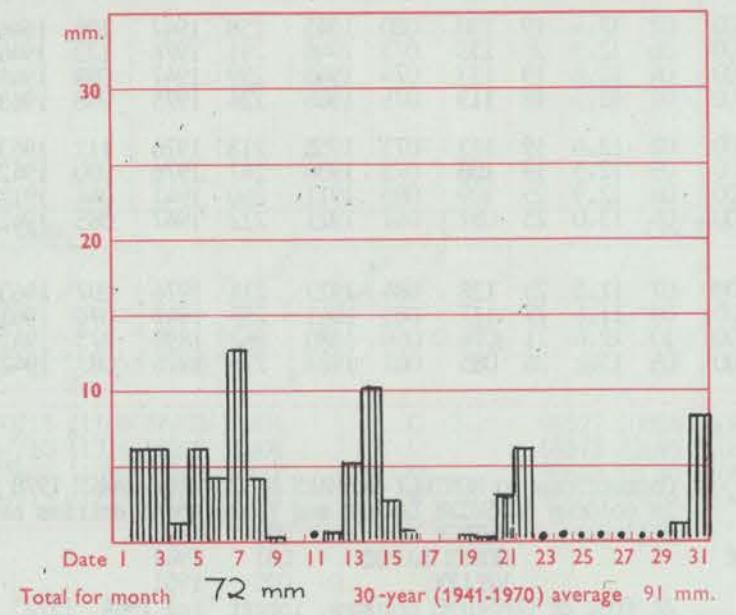

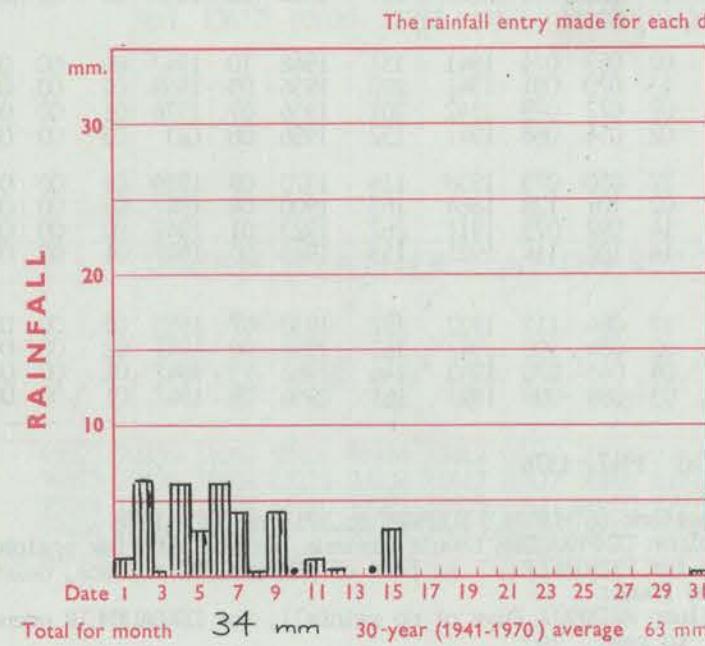

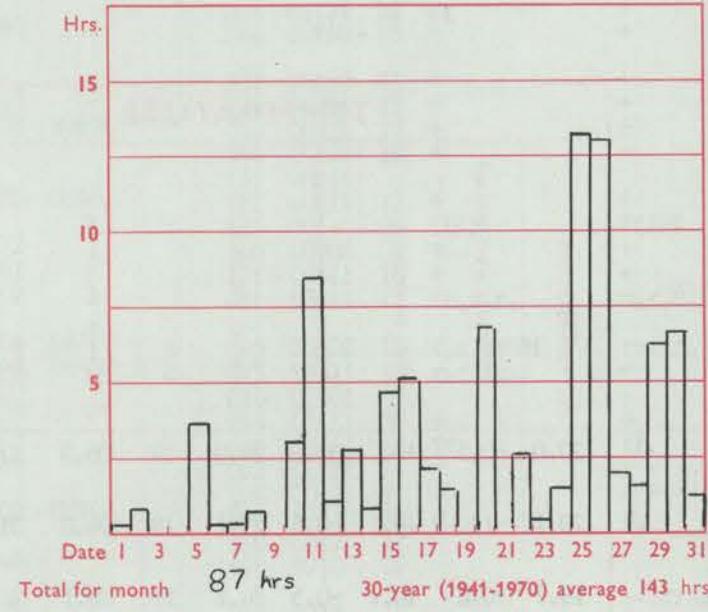

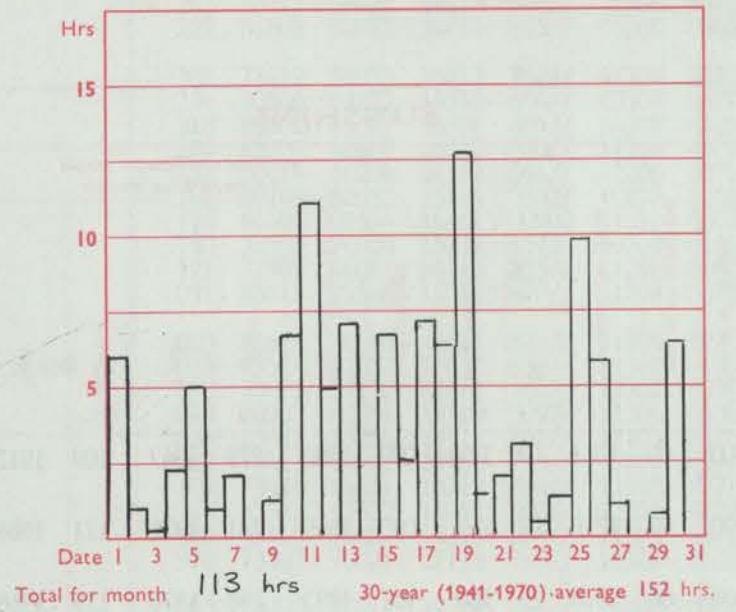

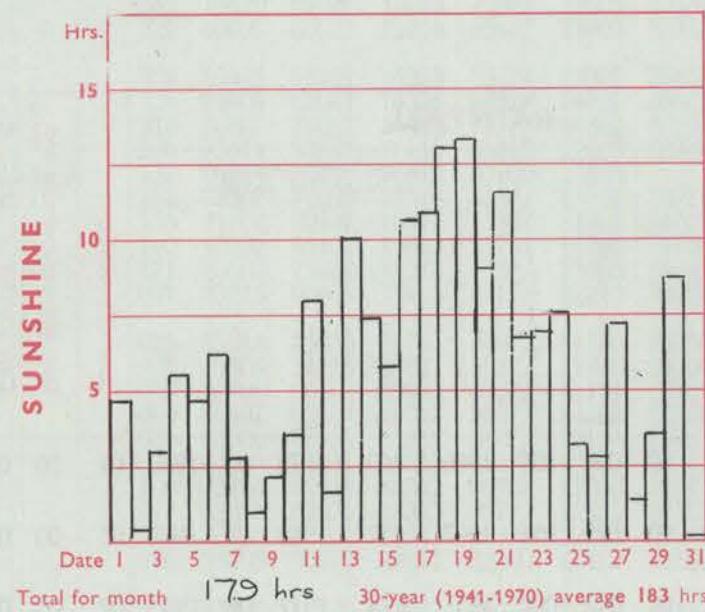

Corrections to MONTHLY SUMMARY No.271 for JULY 1978
In column TEMPERATURE Lowest minimum, delete asterisk against
~~value from CINNAMON~~

value for FINNINGLEY. At foot of TEMPERATURE columns, delete
"New lowest"

In column RAINFALL Days of no rainfall, for ESKDALEMUIR amend "15" to read "11".

Maximum temperatures read at 21 h. G.M.T. daily, and minimum temperatures, read at 09 h. G.M.T. daily, are shown in full lines.
Grass minimum temperatures, read at 09 h. G.M.T. daily, are shown by a pecked line. Pecked lines in red show normal values. (1941-1970)
Normals for Kew are based on North Wall readings and may not be absolutely comparable with the daily values plotted above which are obtained from psychrometer measurements.

CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

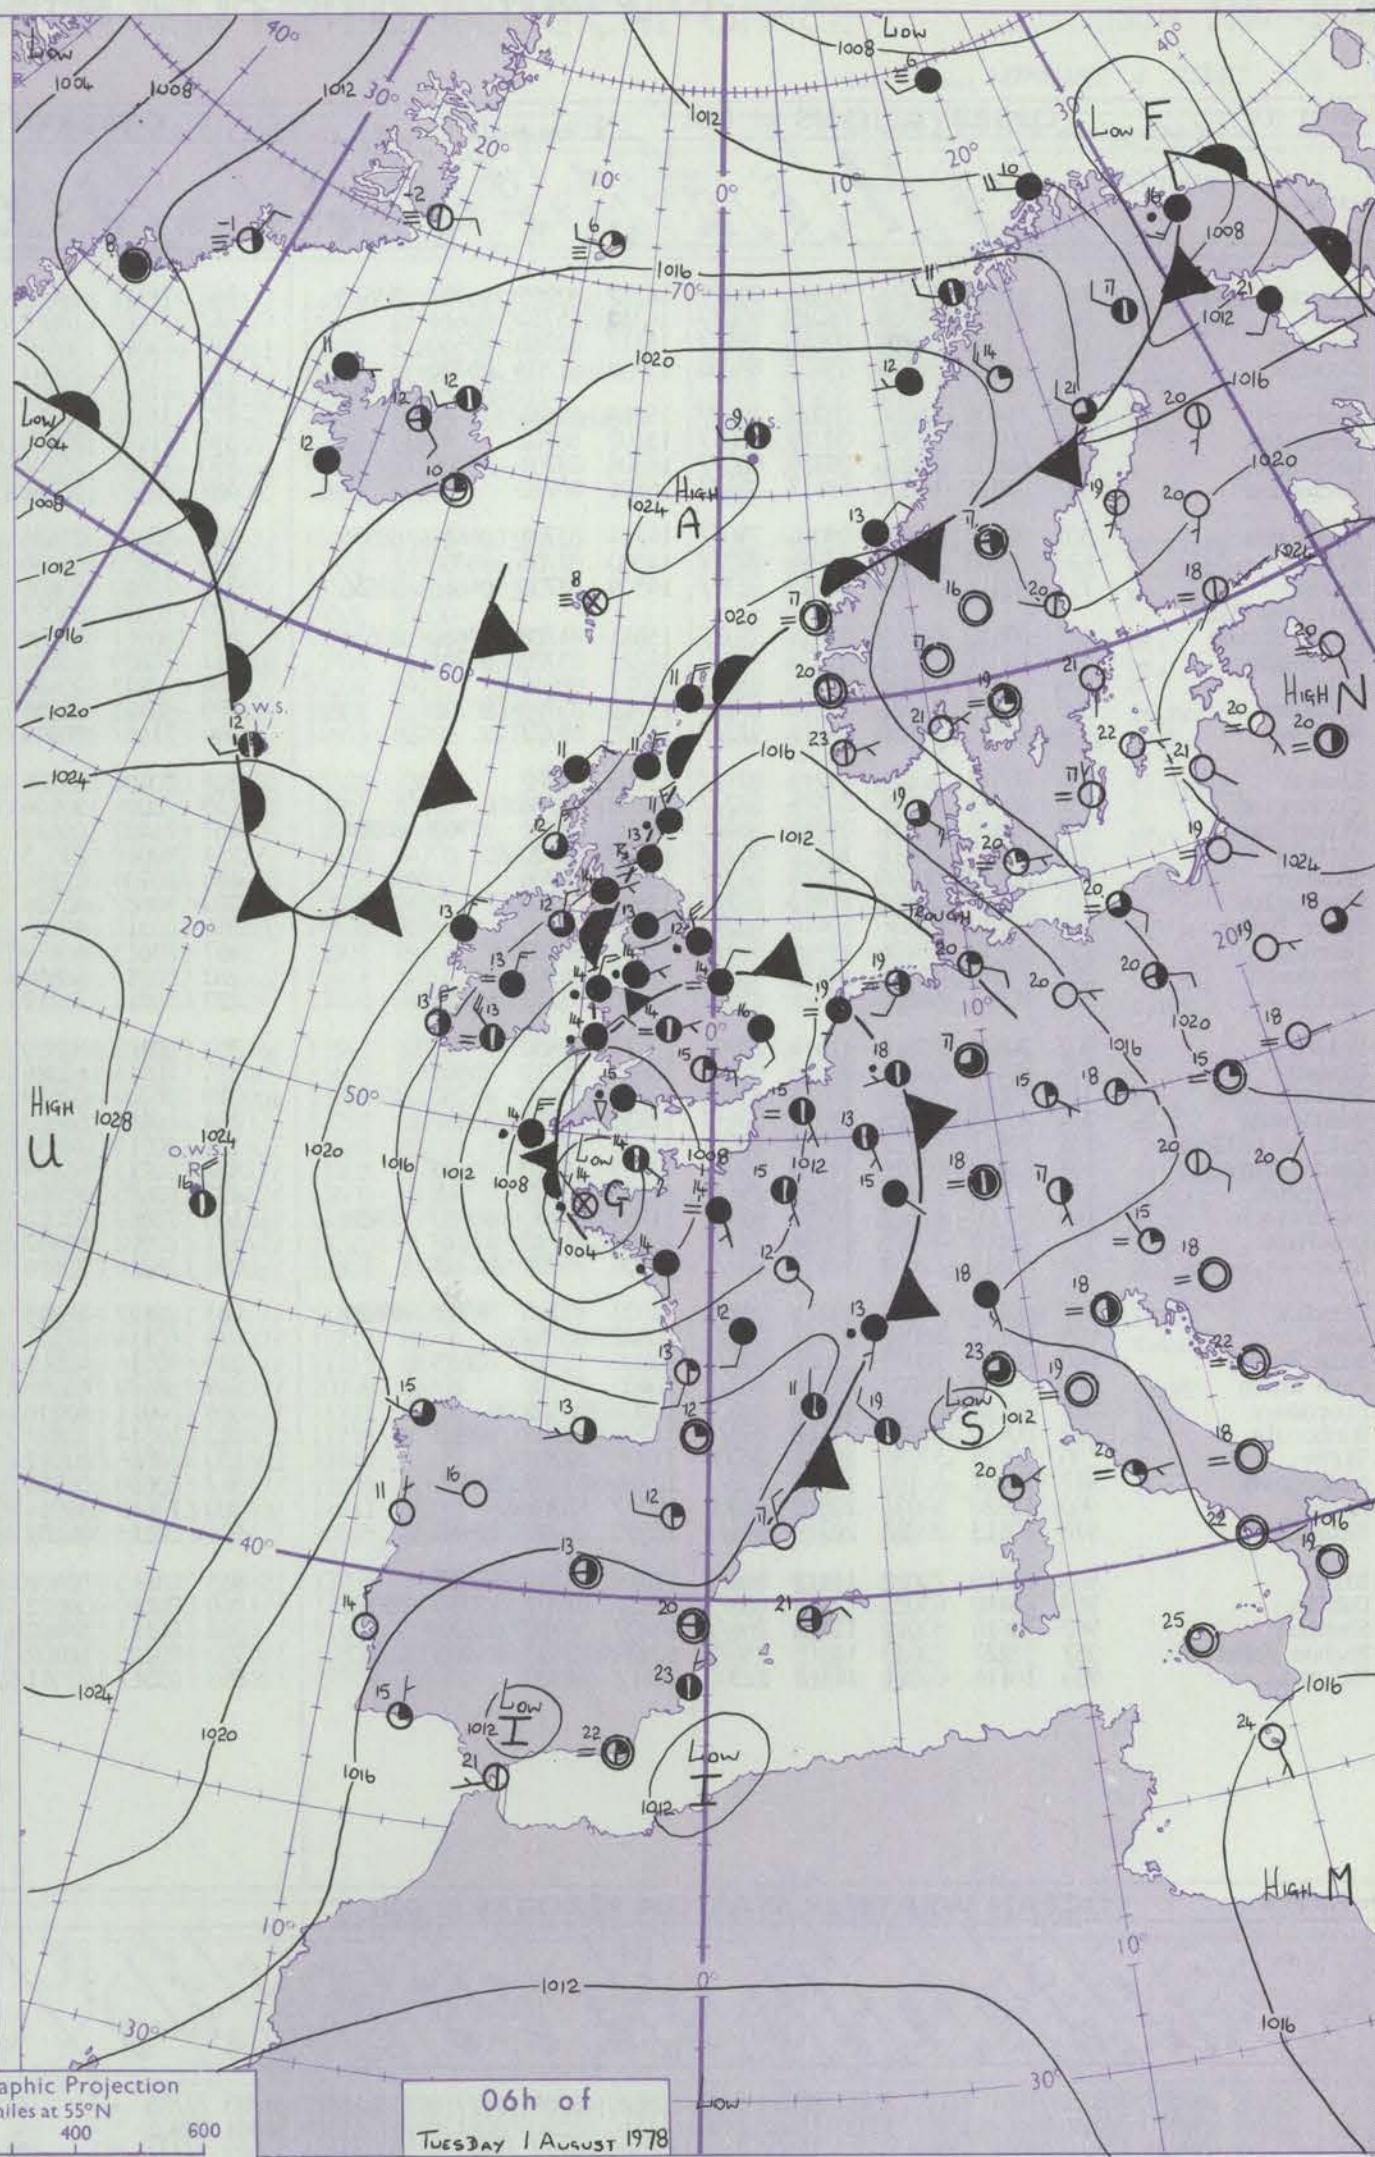

CHARTS OF WEATHER IN WESTERN EUROPE

GENERAL SYNOPTIC DEVELOPMENT

A thundery depression over Belgium has moved slowly northwest then west and later southwest and is now centred over the west Channel. An associated trough to southwest Norway has persisted.

Issued at midday TUESDAY 1 AUGUST 1978

During the next 24 hours the depression is expected to remain slow-moving in west Channel or northwest France but a separate low centre is expected to form over the central North Sea later today.

OCEAN WEATHER STATION REPORTS at 12h.

OCEAN WEATHER STATION REPORTS at 18h.

CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

CHARTS OF WEATHER IN WESTERN EUROPE

GENERAL SYNOPTIC DEVELOPMENT

During the past 24 hours a depression moved from Brittany to the Isle of Wight area while a frontal trough was almost stationary over Scotland and the Irish Sea; also an associated cold front moved steadily north over eastern districts.

During the next 24 hours the depression near the south coast is expected to move slowly to northeast England with a frontal trough remaining slow-moving over Scotland and the Irish Sea.

Issued at midday WEDNESDAY 2 AUGUST 1978

Polar Stereographic Projection

Statute miles at 55°N

200 400 600

Scale is 1:20,000,000 at 60°N.

CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

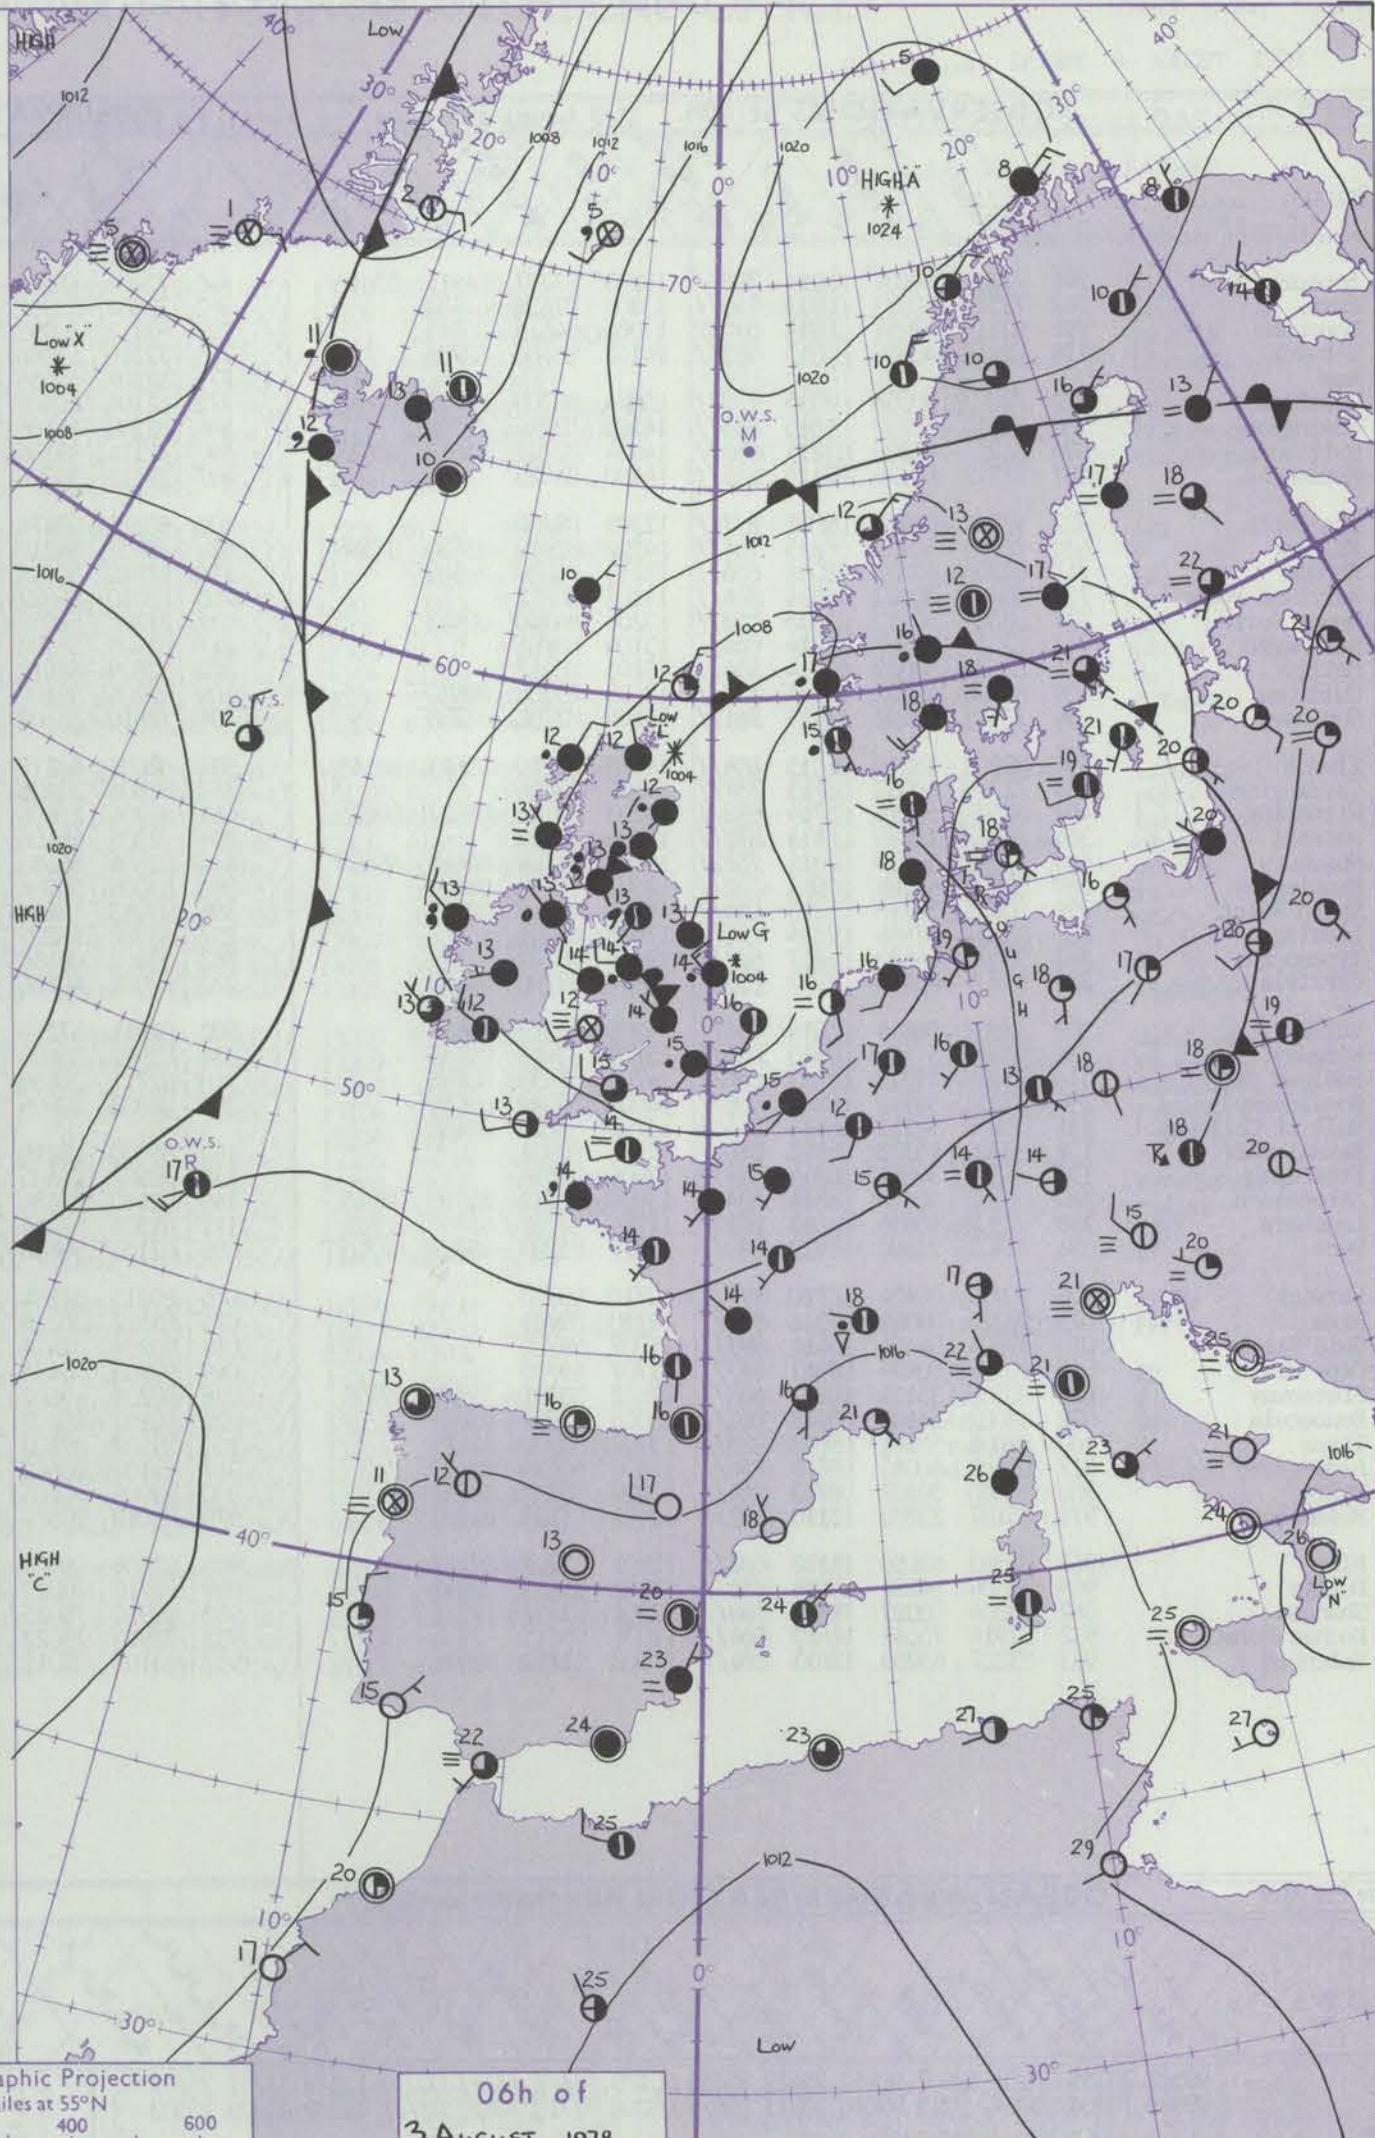

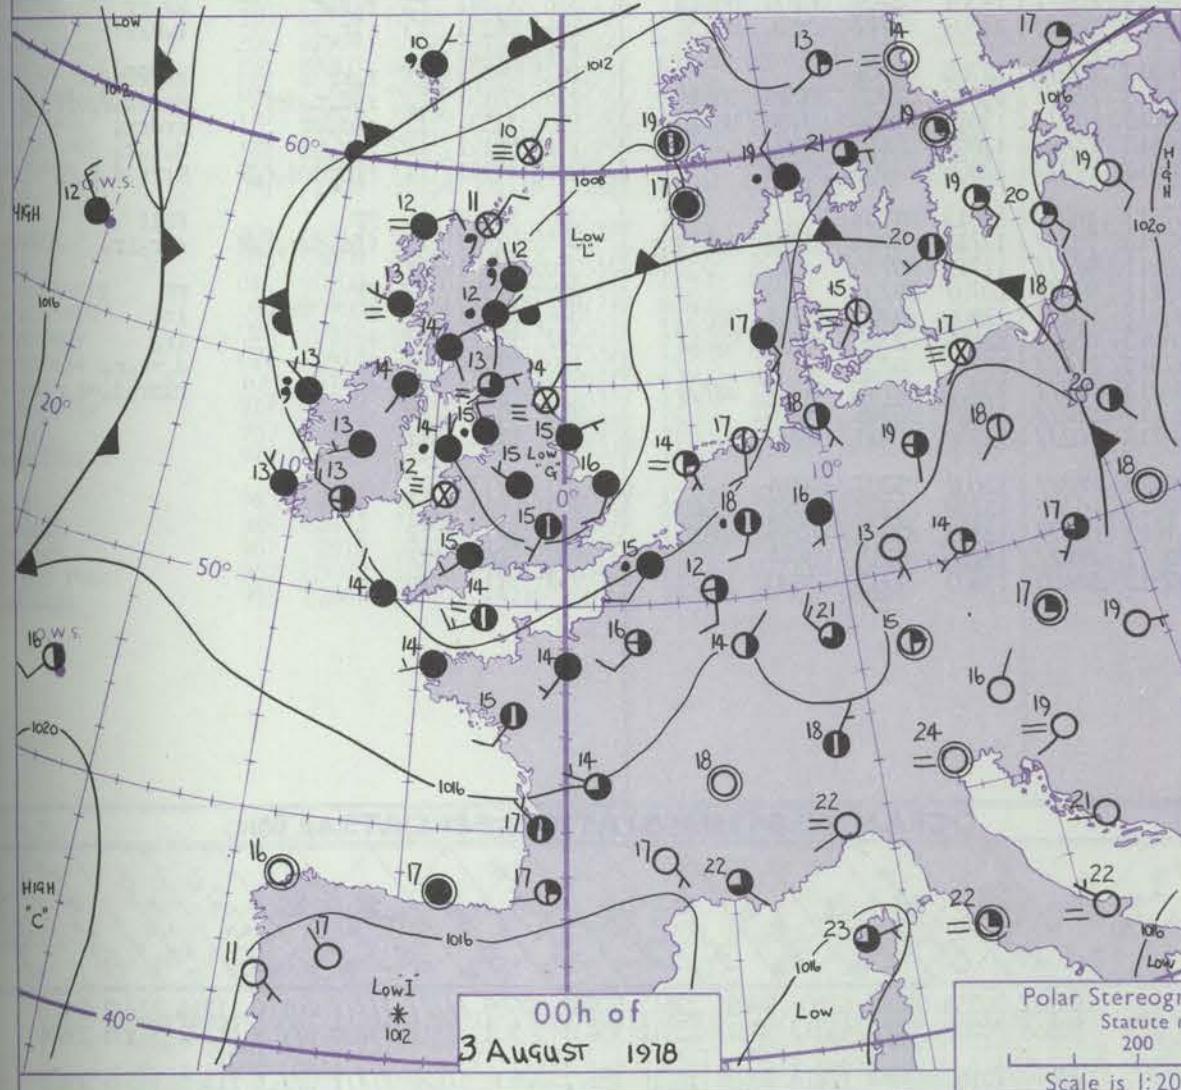

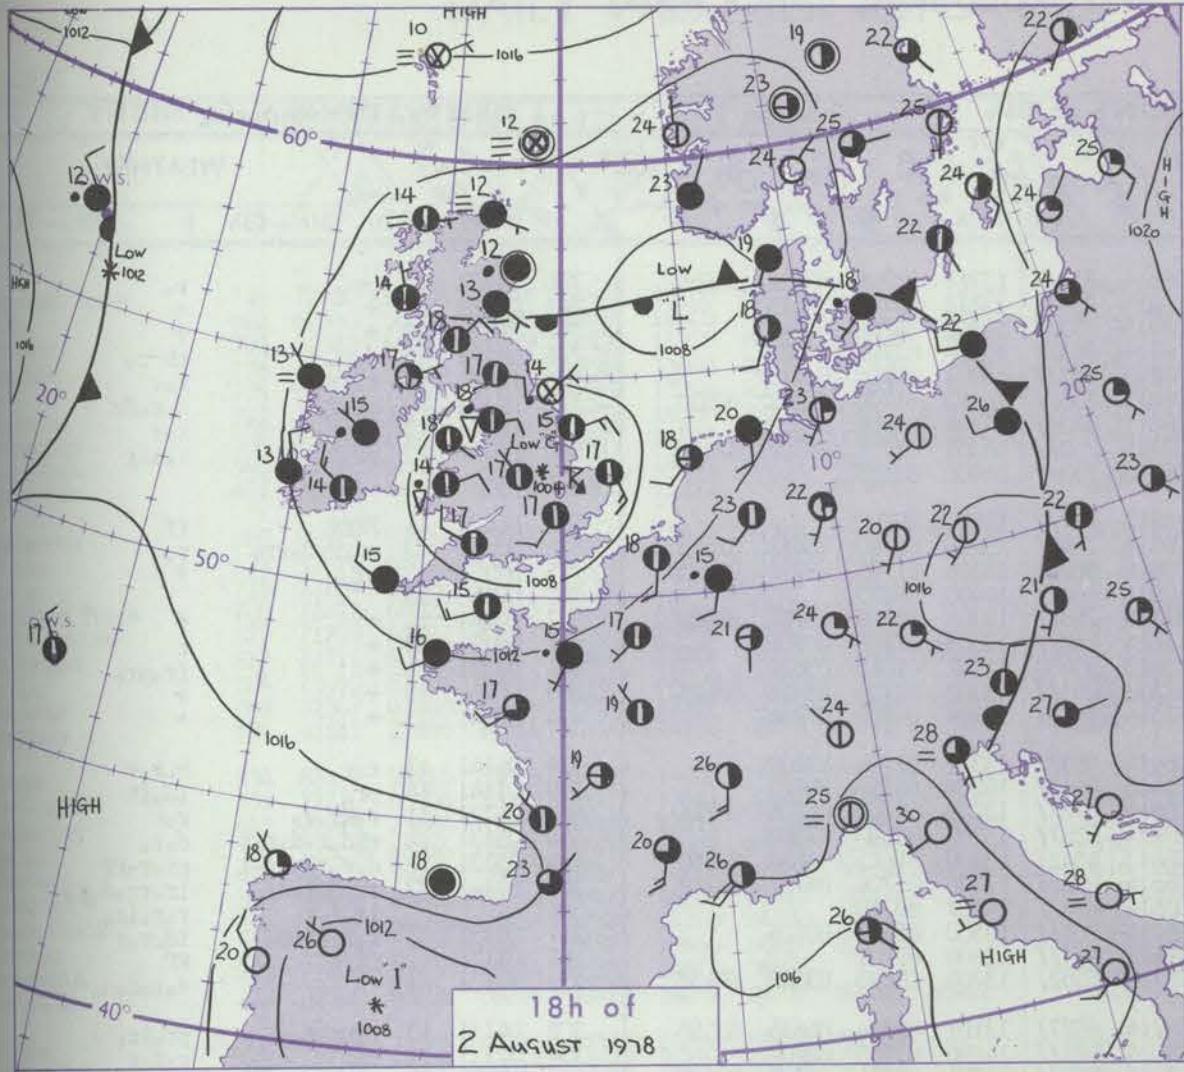

12 h of
2 AUGUST 1978

NAUTICAL MILES

Polar Stereographic projection
Scale 1:30,000,000 at Latitude 60°N.

CHARTS OF WEATHER IN WESTERN EUROPE

GENERAL SYNOPTIC DEVELOPMENT

During the past 24 hours a depression over the central English Channel has moved slowly north to eastern England. Another depression which formed over the eastern North Sea moved westwards towards north Scotland.

During the next 24 hours these depressions will merge to form a complex which will be slow-moving over the northern North Sea.

Issued at midday THURSDAY 3 AUGUST 1978

Polar Stereographic Projection
Statute miles at 55°N
Scale is 1:20,000,000 at 60°N.

CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

CHARTS OF WEATHER IN WESTERN EUROPE

GENERAL SYNOPTIC DEVELOPMENT

A complex depression over the east of England and Scotland has transferred to the northern North Sea and an anticyclone has developed over the Bay of Biscay. An occluded front northwest England across Shetland to southern Norway has moved very slowly but has weakened in the south.

During the next 24 hours the North Sea low will move slowly northeast to near Oslo. A small wave will move eastwards across southern England, followed by an unstable northwesterly airstream into western parts of England and Wales.

Issued at midday FRIDAY 4 AUGUST 1978

CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

CHARTS OF WEATHER IN WESTERN EUROPE

GENERAL SYNOPTIC DEVELOPMENT

During the last 24 hours a depression has remained over southern Norway with a trough persisting across the northern North Sea to Scotland. A ridge of high pressure in Biscay extended further east across France while a cold front moved eastwards across southern England and Wales.

During the next 24 hours a broad trough of low pressure is expected to continue almost stationary across the North Sea and northern Britain while a small frontal disturbance is likely to move into the western English Channel.

Issued at midday
SATURDAY 5 AUGUST 1978

OCEAN WEATHER STATION REPORTS at 12h-

CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

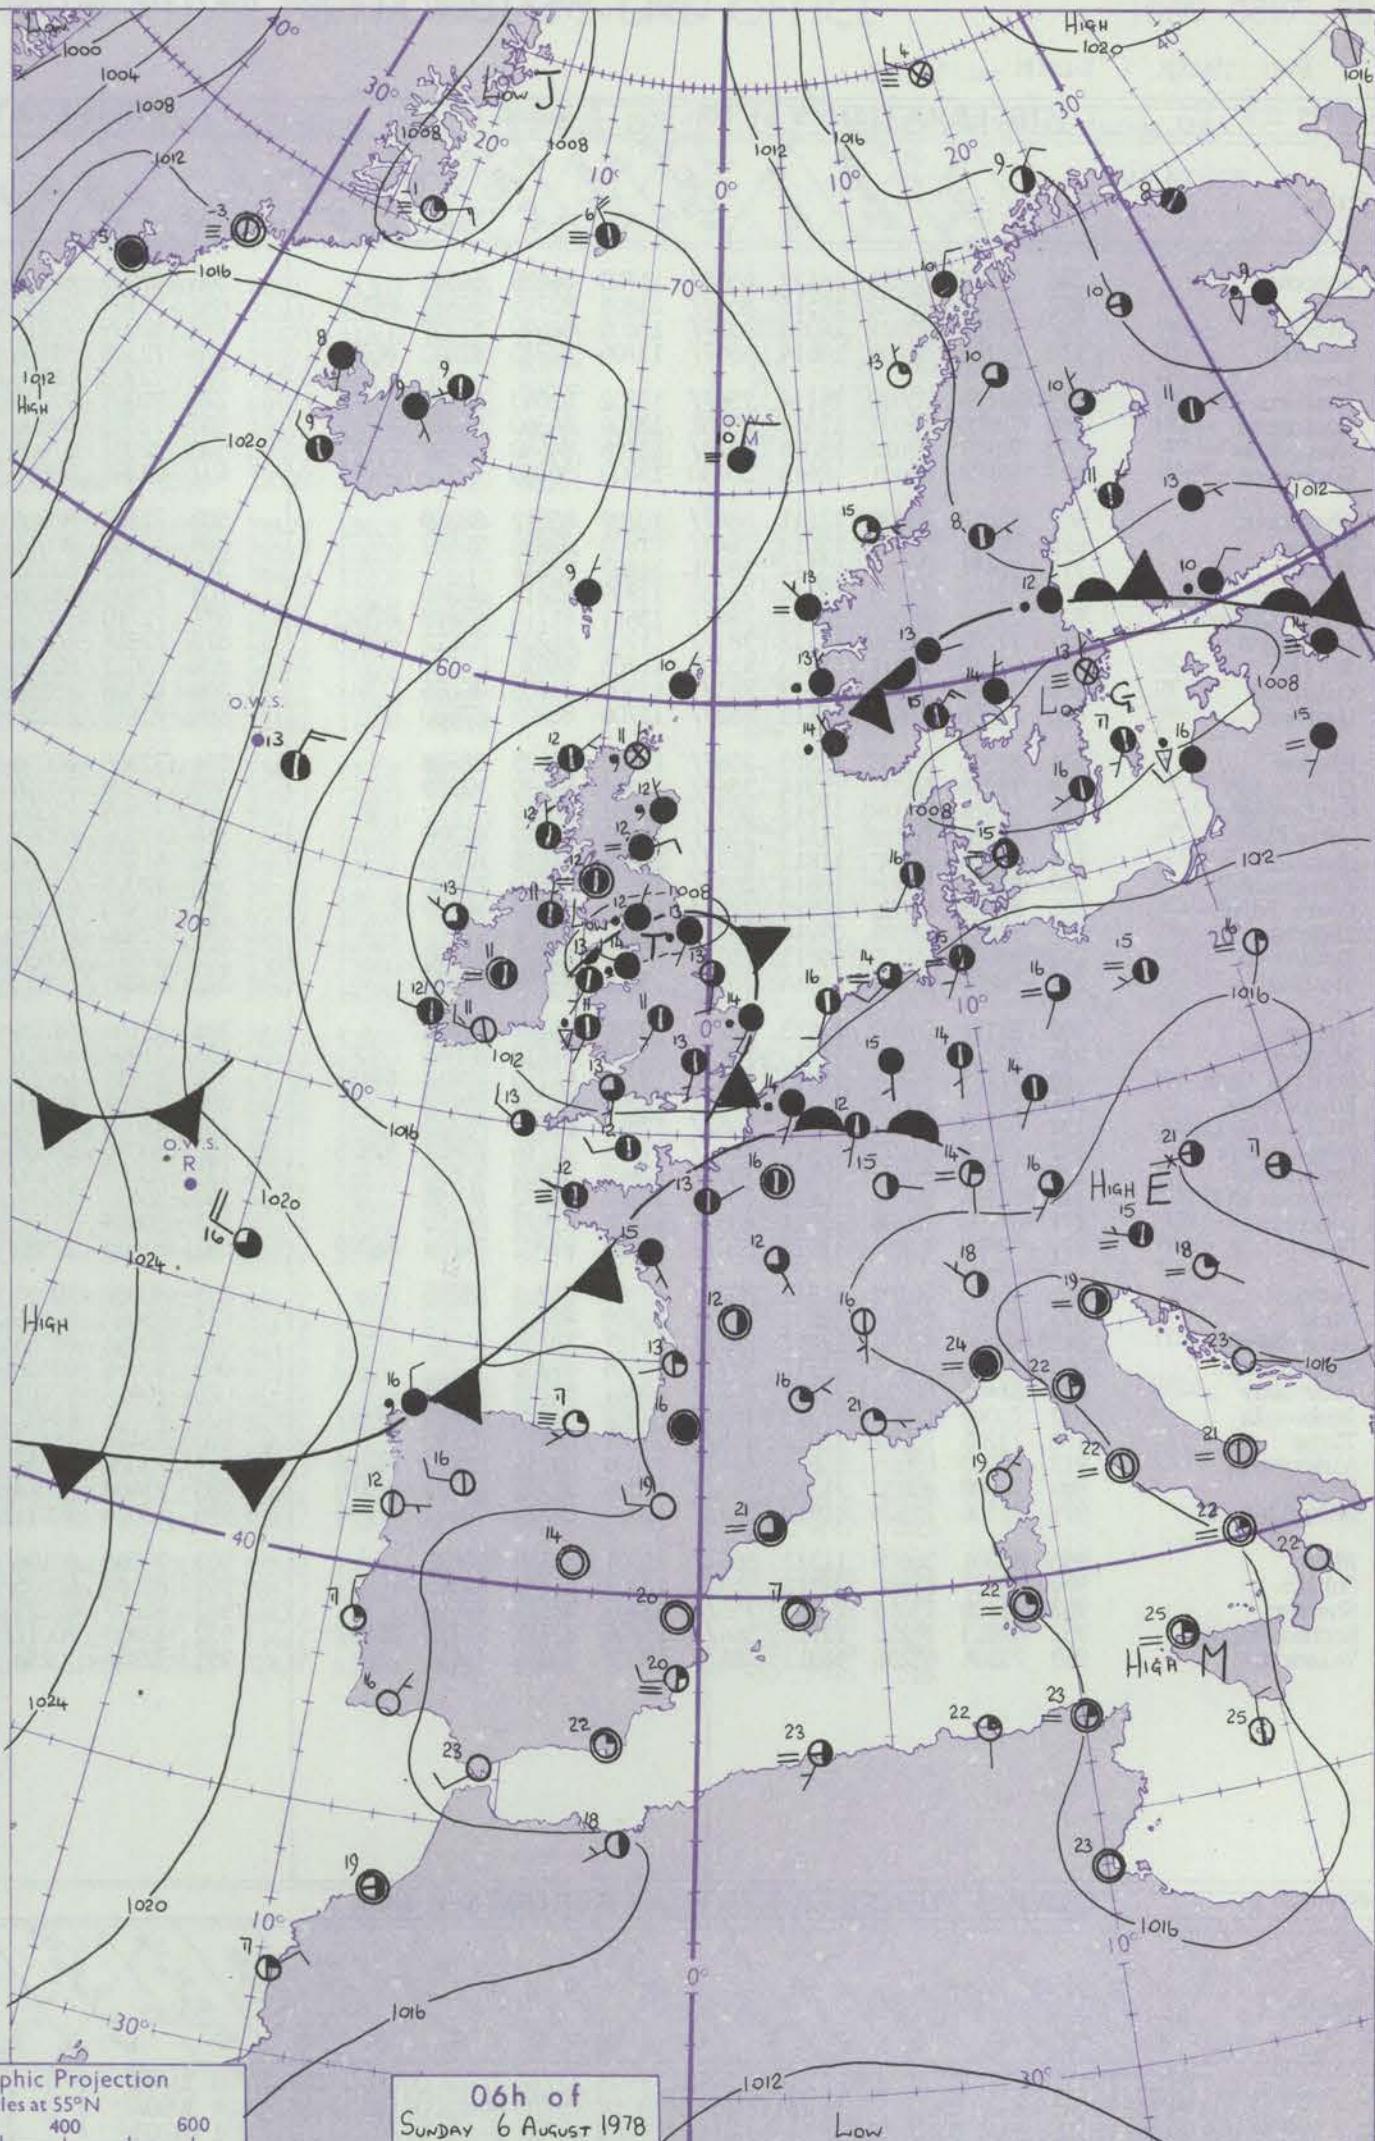

CHARTS OF WEATHER IN WESTERN EUROPE

GENERAL SYNOPTIC DEVELOPMENT

During the past 24 hours a slow-moving trough of low pressure from a North European low pressure complex covered the British Isles. A shallow low centre formed over the Irish Sea during the period.

During the next 24 hours this low centre is expected to move eastwards into the North Sea and a northerly gradient should become established over most of the British Isles.

Issued at midday SUNDAY 6 AUGUST 1978

Polar Stereographic Projection
Statute miles at 55°N
Scale is 1:20,000,000 at 60°N.

CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

CHARTS OF WEATHER IN WESTERN EUROPE

GENERAL SYNOPTIC DEVELOPMENT

During the past 24 hours a shallow low over northern England moved slowly eastwards to the eastern North Sea and troughs of low pressure swung southeast across the British Isles.

During the next 24 hours the low over the eastern North Sea will continue to move away eastwards, maintaining a cool northerly airflow over Britain.

Issued at midday MONDAY 7 AUGUST 1978

CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

CHARTS OF WEATHER IN WESTERN EUROPE

GENERAL SYNOPTIC DEVELOPMENT

During the past 24 hours a low over the eastern North Sea moved away eastwards and a cool north to northwest airstream persisted over the British Isles.

During the next 24 hours the north to northwest airstream is expected to persist over much of the British Isles as a weak ridge of high pressure moves slowly from the Atlantic towards western districts.

Issued at midday TUESDAY 8 AUGUST 1978

Polar Stereographic Projection
Statute miles at 55°N
Scale is 1:20,000,000 at 60°N.

CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

CHARTS OF WEATHER IN WESTERN EUROPE

GENERAL SYNOPTIC DEVELOPMENT

A deep depression over Poland has moved slowly east. An associated broad trough of low pressure extended westwards to northeast England and has moved south to East Anglia but has also relaxed from the west. A ridge of high pressure extending northwards from an anticyclone about 300 miles west of Portugal has moved slowly east.

During the next 24 hours the trough of low pressure will move away southeast. The ridge of high pressure in the west will move east extending from west Portugal across the Irish Sea and Shetland to northern Norway by tomorrow morning.

Issued at midday WEDNESDAY 9 AUGUST 1978

CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

CHARTS OF WEATHER IN WESTERN EUROPE

GENERAL SYNOPTIC DEVELOPMENT

During the past 24 hours a weak ridge of high pressure to the west of Ireland moved slowly eastwards across most of the British Isles, as a trough of low pressure, over England and Wales early in the period, moved slowly southeast, clearing all areas by the end of the period.

Polar Stereographic Projection
Statute miles at 55°N
Scale is 1:20,000,000 at 60°N.

During the next 24 hours the ridge of high pressure will move slowly further eastwards whilst frontal troughs, within the circulation of an Atlantic low pressure complex, are likely to affect western districts of the British Isles.

Issued at midday THURSDAY 10 AUGUST 1978

CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

CHARTS OF WEATHER IN WESTERN EUROPE

GENERAL SYNOPTIC DEVELOPMENT

As frontal troughs moved slowly eastwards to western Ireland during the past 24 hours, the ridge of high pressure from Biscay across the Irish Sea to Faeroes moved slowly east to lie from Brittany to Orkney.

During the next 24 hours the frontal troughs will edge slowly eastwards over Ireland whilst the ridge of high pressure over Britain moves east to the North Sea.

Issued at midday FRIDAY 11 AUGUST 1978

CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

CHARTS OF WEATHER IN WESTERN EUROPE

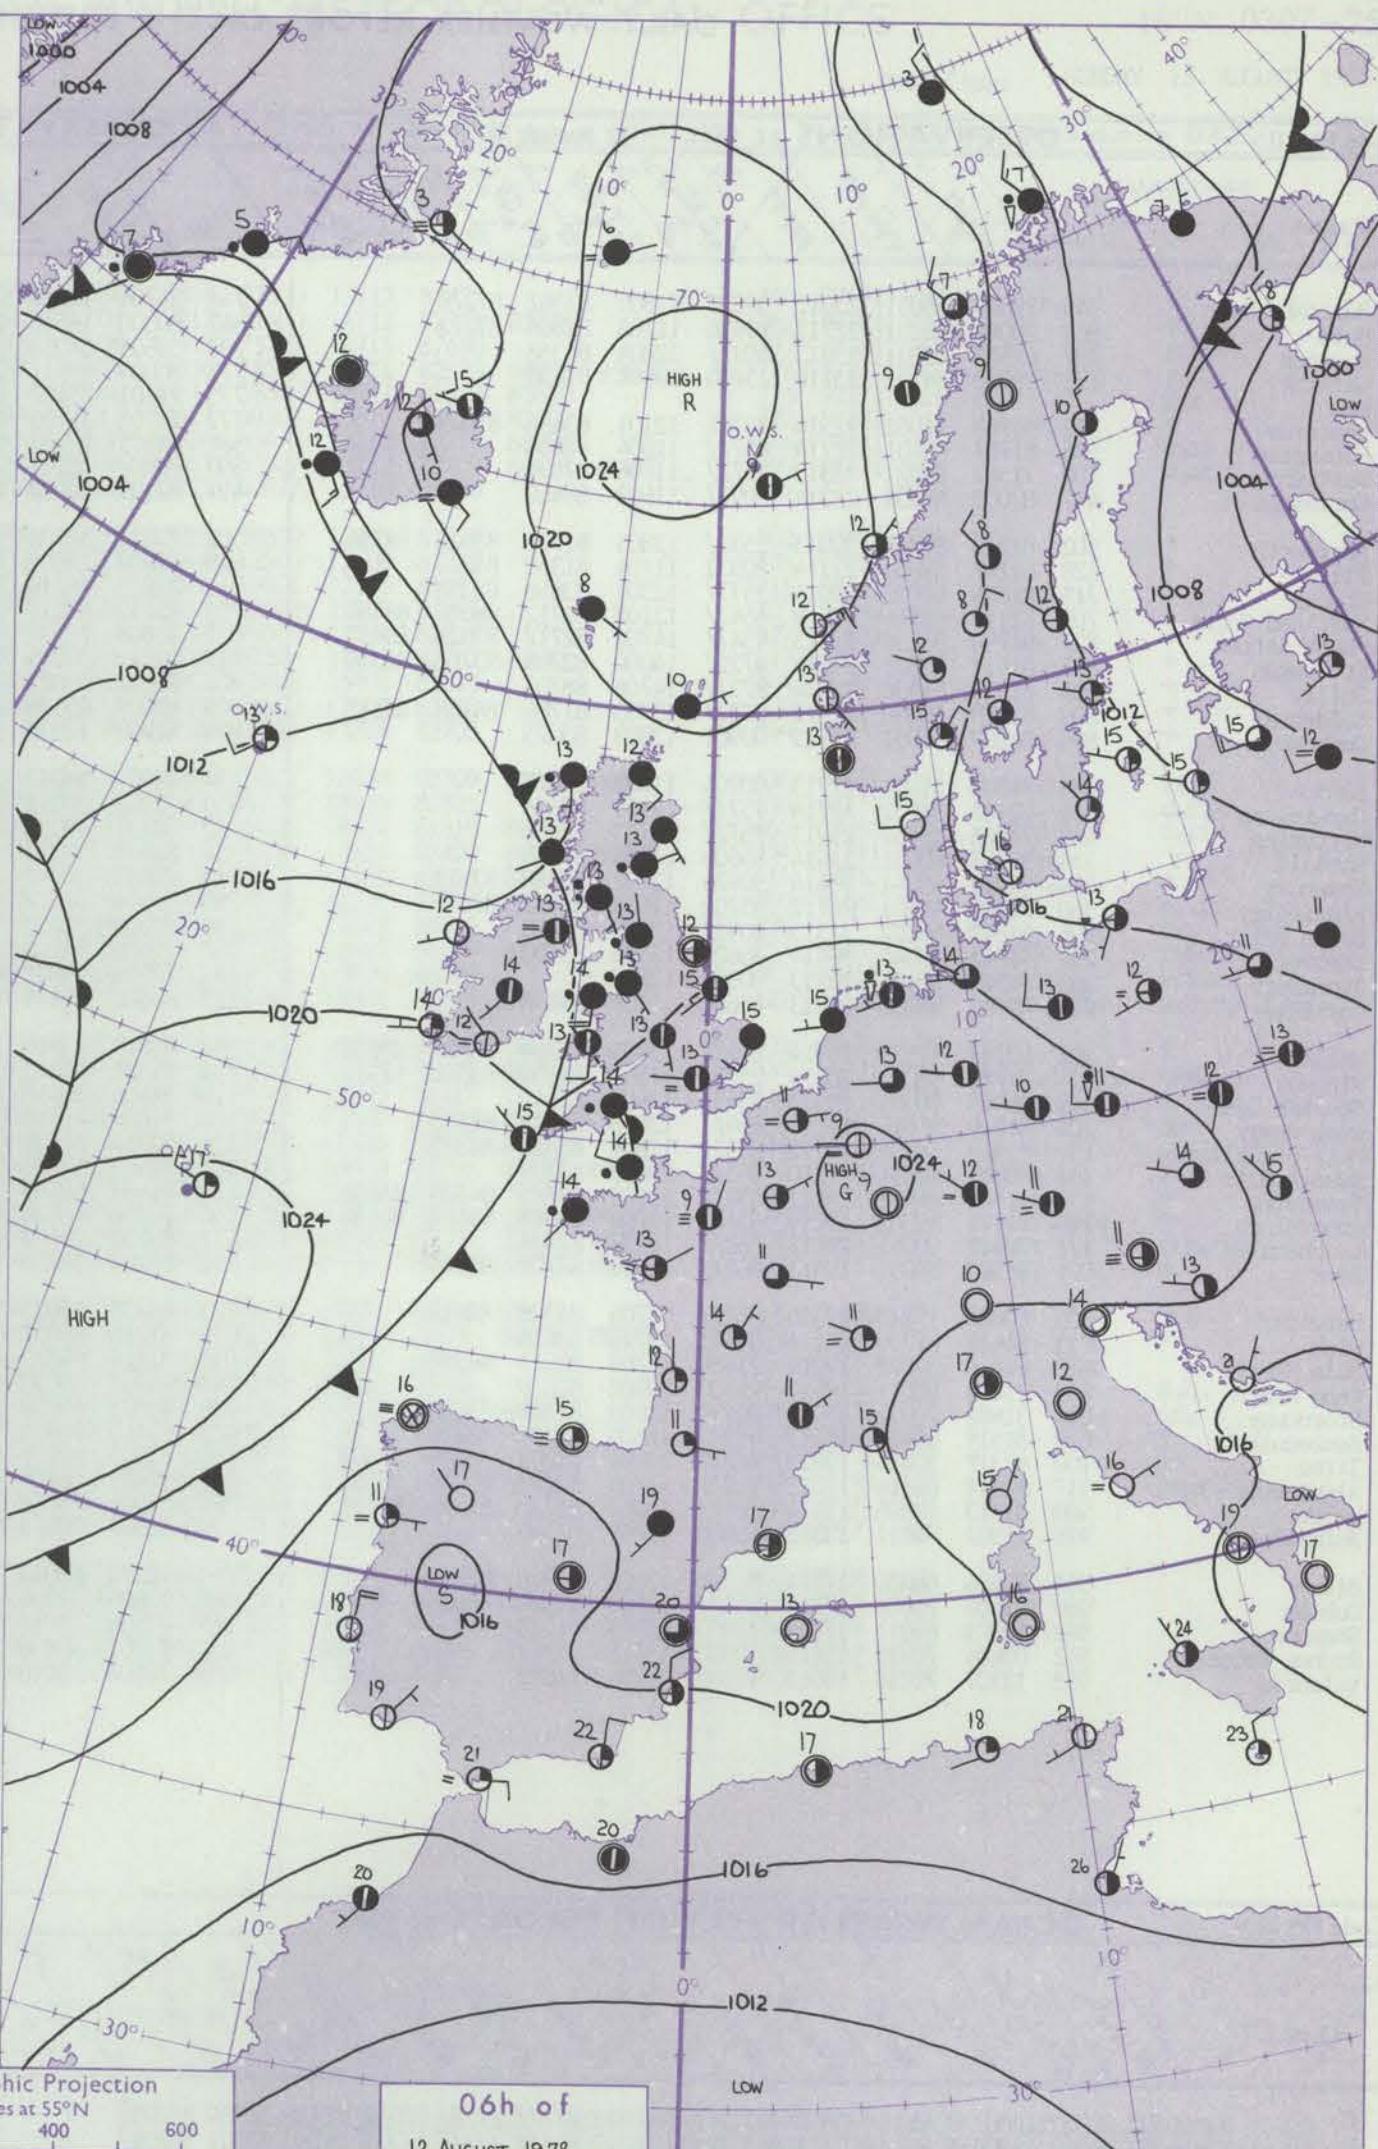

18h of
11 AUGUST 1978

00h of
12 AUGUST 1978

GENERAL SYNOPTIC DEVELOPMENT

The ridge of high pressure, extending northwards from Biscay across the British Isles, moved slowly eastwards as frontal troughs from the Atlantic moved across Ireland into western districts of England, Wales and Scotland.

06h of
12 AUGUST 1978

Issued at midday SATURDAY 12 AUGUST 1978

During the next 24 hours the frontal troughs will continue to move east to clear most of the country but further troughs will move into western Ireland.

Polar Stereographic Projection
Statute miles at 55°N
Scale is 1:20,000,000 at 60°N.

CHARTS OF WEATHER IN WESTERN EUROPE

GENERAL SYNOPTIC DEVELOPMENT

During the past 24 hours a frontal trough over western districts moved east to the North Sea as a warm front moved east towards Ireland.

During the next 24 hours a depression in the North Atlantic is expected to move steadily east to just south of Iceland whilst associated frontal troughs move eastwards over the British Isles.

Issued at midday SUNDAY 13 AUGUST 1978

Polar Stereographic Projection
Statute miles at 55°N

Scale is 1:20,000,000 at 60°N.

CHARTS OF WEATHER IN WESTERN EUROPE

GENERAL SYNOPTIC DEVELOPMENT

A weakening occluded frontal trough from Iceland across Orkney to northwest Germany has moved slowly east and now extends from South Norway to Poland. A complex depression about 400 miles southwest of Iceland has moved steadily east. Its associated warm frontal trough has moved east across England and Wales with the cold front extending from northeast England to Southern Ireland, its southeast movement being retarded by wave developments along it. The occluded portion of this frontal system extends across the south of Faeroes and Shetland to northeast England.

During the near 24 hours the waving cold front will move to the Wash to Scilly, maintaining a moist southwesterly airstream over southern England and an unstable southwesterly airstream over remaining parts of the British Isles.

Issued at midday MONDAY 14 AUGUST 1978

Polar Stereographic Projection
Statute miles at 55°N
Scale is 1:20,000,000 at 60°N.

CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

CHARTS OF WEATHER IN WESTERN EUROPE

GENERAL SYNOPTIC DEVELOPMENT

During the past 24 hours a cold front, within the circulation of a slow-moving low pressure complex to the south of Iceland, moved slowly eastwards across the British Isles, the front lying from Humberside to the Isle of Wight by the end of the period.

During the next 24 hours the low pressure complex is expected to be centred north of Scotland and its cold front will have cleared all districts.

Issued at midday TUESDAY 15TH AUGUST 1978

Polar Stereographic Projection
Statute miles at 55°N
Scale is 1:20,000,000 at 60°N.

CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

CHARTS OF WEATHER IN WESTERN EUROPE

GENERAL SYNOPTIC DEVELOPMENT

During the past 24 hours a complex low pressure area persisted between Scotland and Iceland. The cold front from this system cleared all areas during the morning. An unstable westerly airstream covered the country for the rest of the period.

During the next 24 hours the depression to the north of Scotland is expected to move slowly northeast and a ridge of high pressure is expected to move from the Atlantic into western areas of the British Isles.

Issued at midday WEDNESDAY 16 AUGUST 1978

CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

CHARTS OF WEATHER IN WESTERN EUROPE

GENERAL SYNOPTIC DEVELOPMENT

During the past 24 hours a trough of low pressure over the British Isles, associated with a depression to the north of Scotland, moved east and was replaced by a ridge of high pressure moving in from the west.

During the next 24 hours the ridge of high pressure is expected to move east to the North Sea as frontal troughs move northeast over northwestern areas of the British Isles.

Issued at midday THURSDAY 17 AUGUST 1978

Polar Stereographic Projection
Statute miles at 55°N
Scale is 1:20,000,000 at 60°N.

OCEAN WEATHER STATION REPORTS at 18 $^{\circ}$

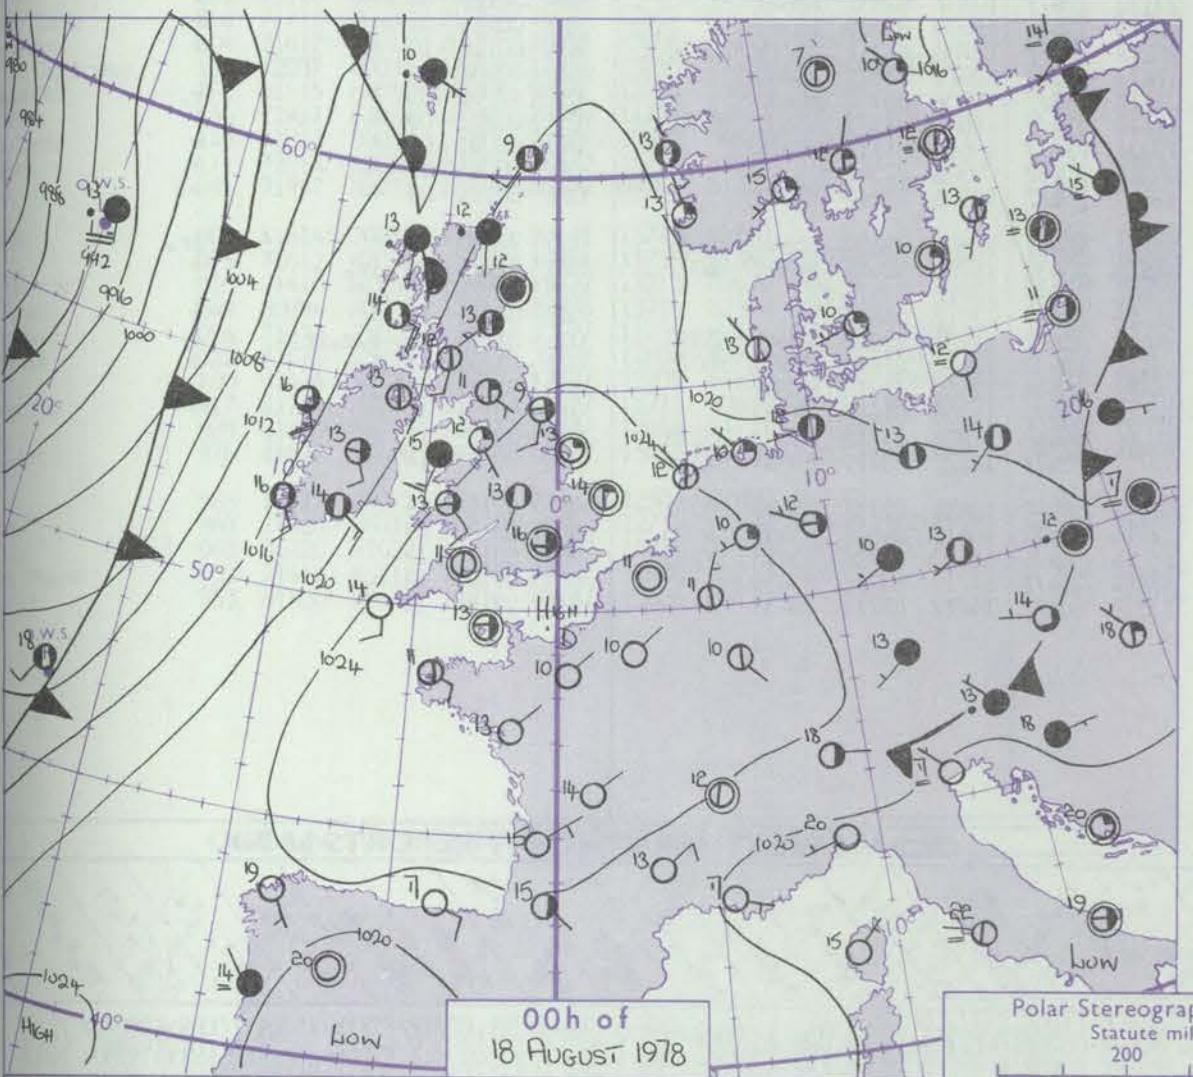

CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

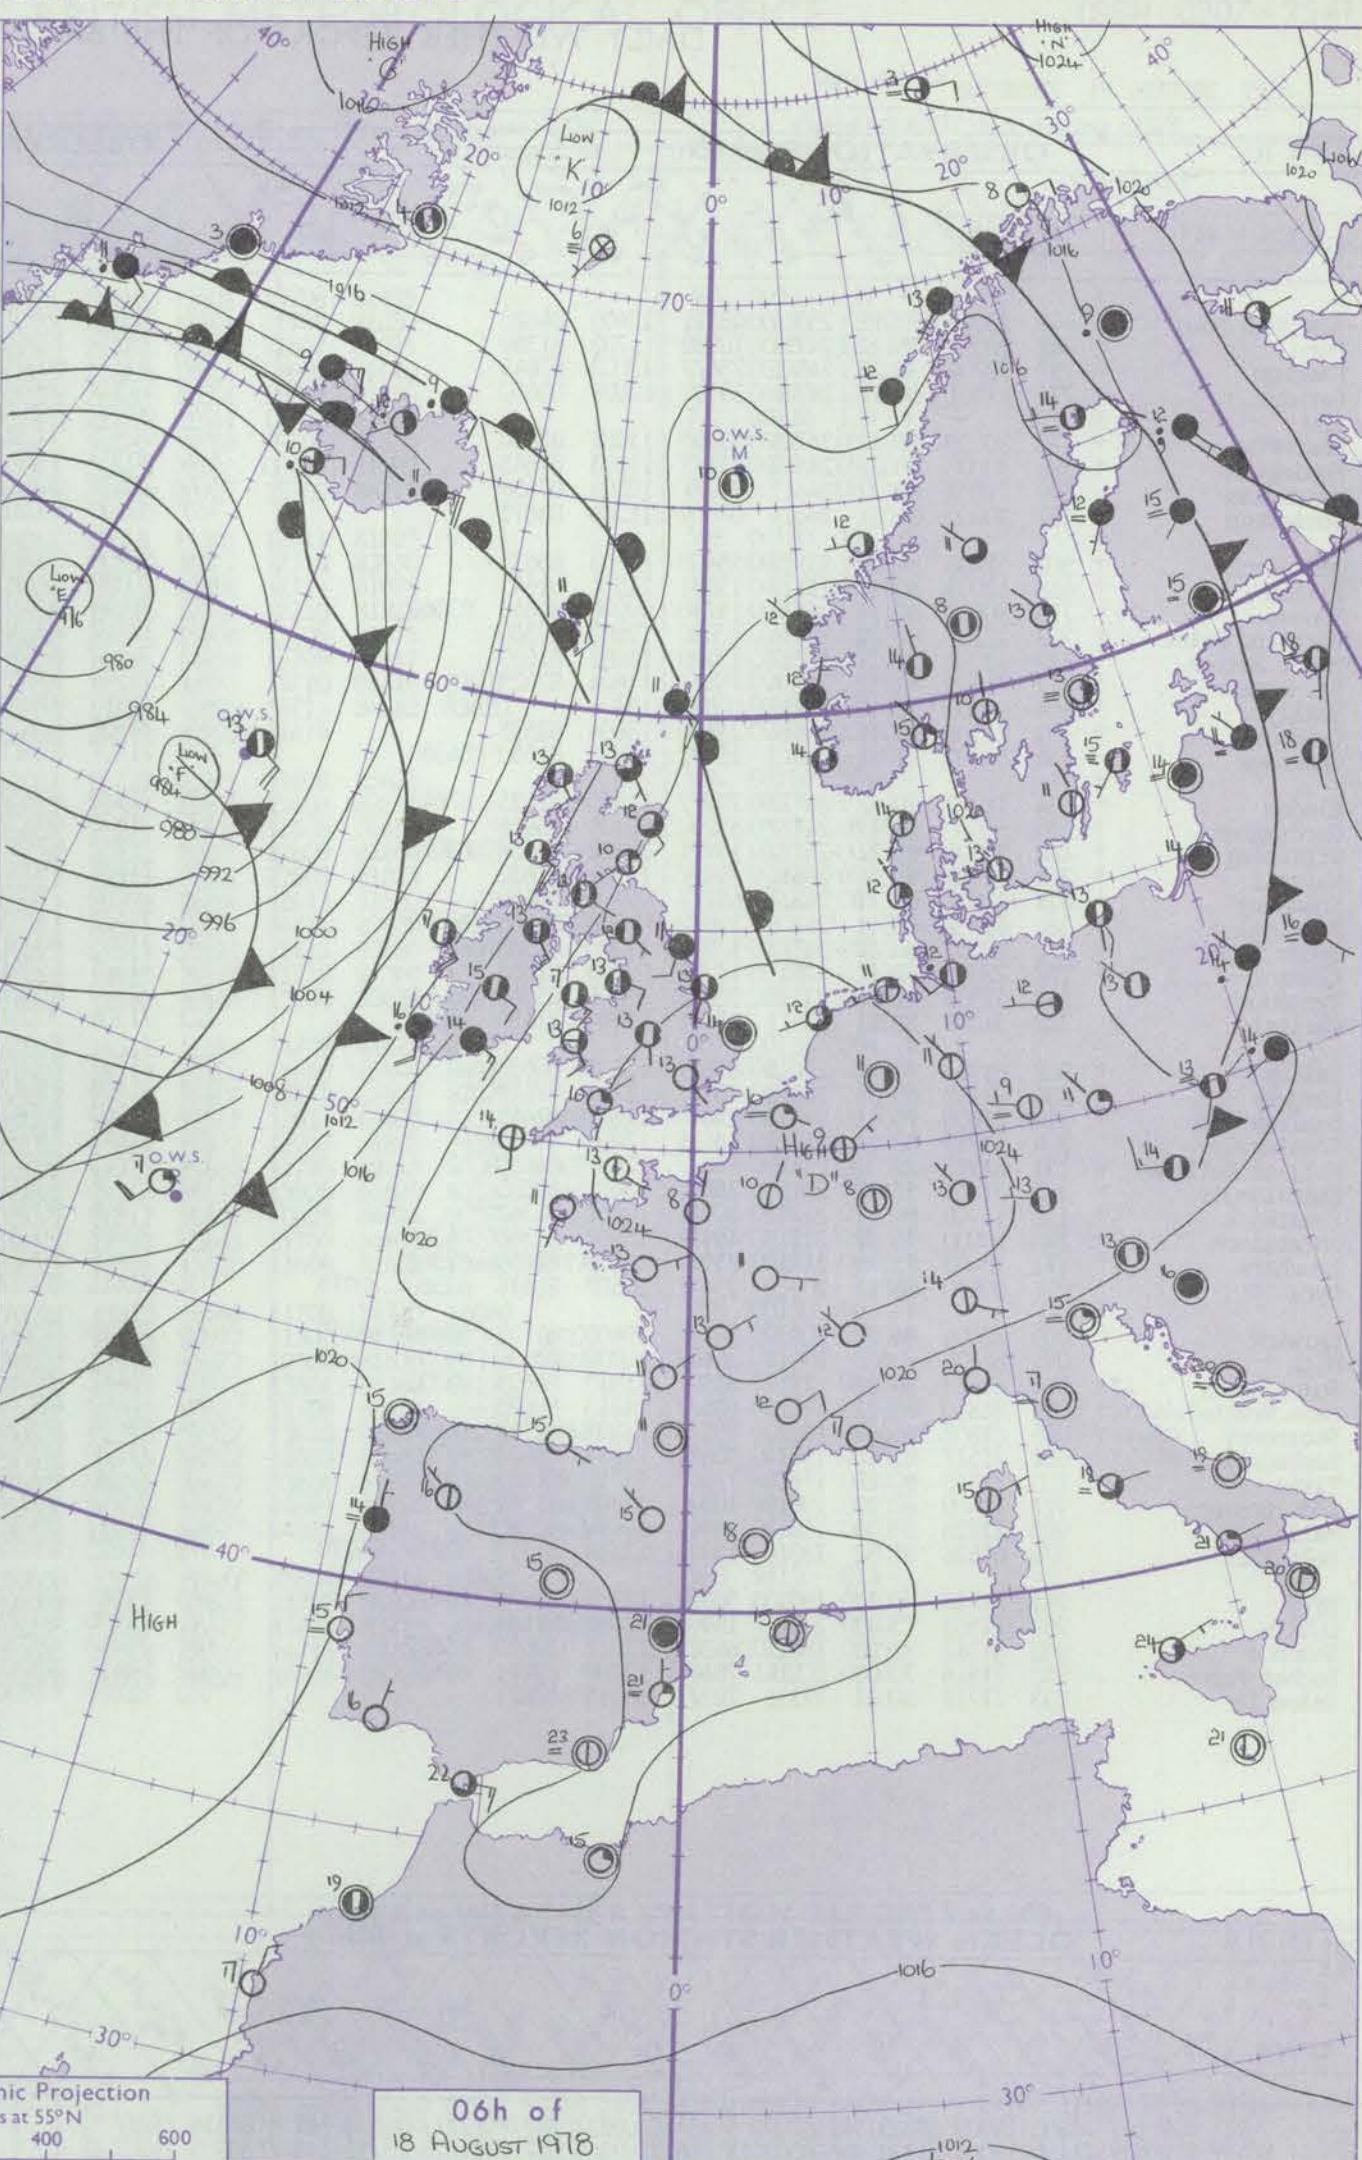

CHARTS OF WEATHER IN WESTERN EUROPE

18h of
17 AUGUST 1978

00h of
18 AUGUST 1978

06h of
18 AUGUST 1978

Polar Stereographic Projection
Statute miles at 55°N
Scale is 1:20,000,000 at 60°N.

GENERAL SYNOPTIC DEVELOPMENT

An anticyclone over the Bay of Biscay with an associated ridge of high pressure to the Faeroes has moved to Belgium with the ridge now extending to southern Norway. A deep depression about 600 miles southwest of Iceland has moved slowly northeast. Its associated warm front has moved slowly northeast across Ireland and Scotland and the cold front has moved slowly east towards western Ireland.

During the next 24 hours the Atlantic low will remain almost stationary, filling a little, and the anticyclone over Belgium will move slowly east. The cold frontal trough off western Ireland will move very slowly east.

Issued at midday FRIDAY 18 AUGUST 1978

CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

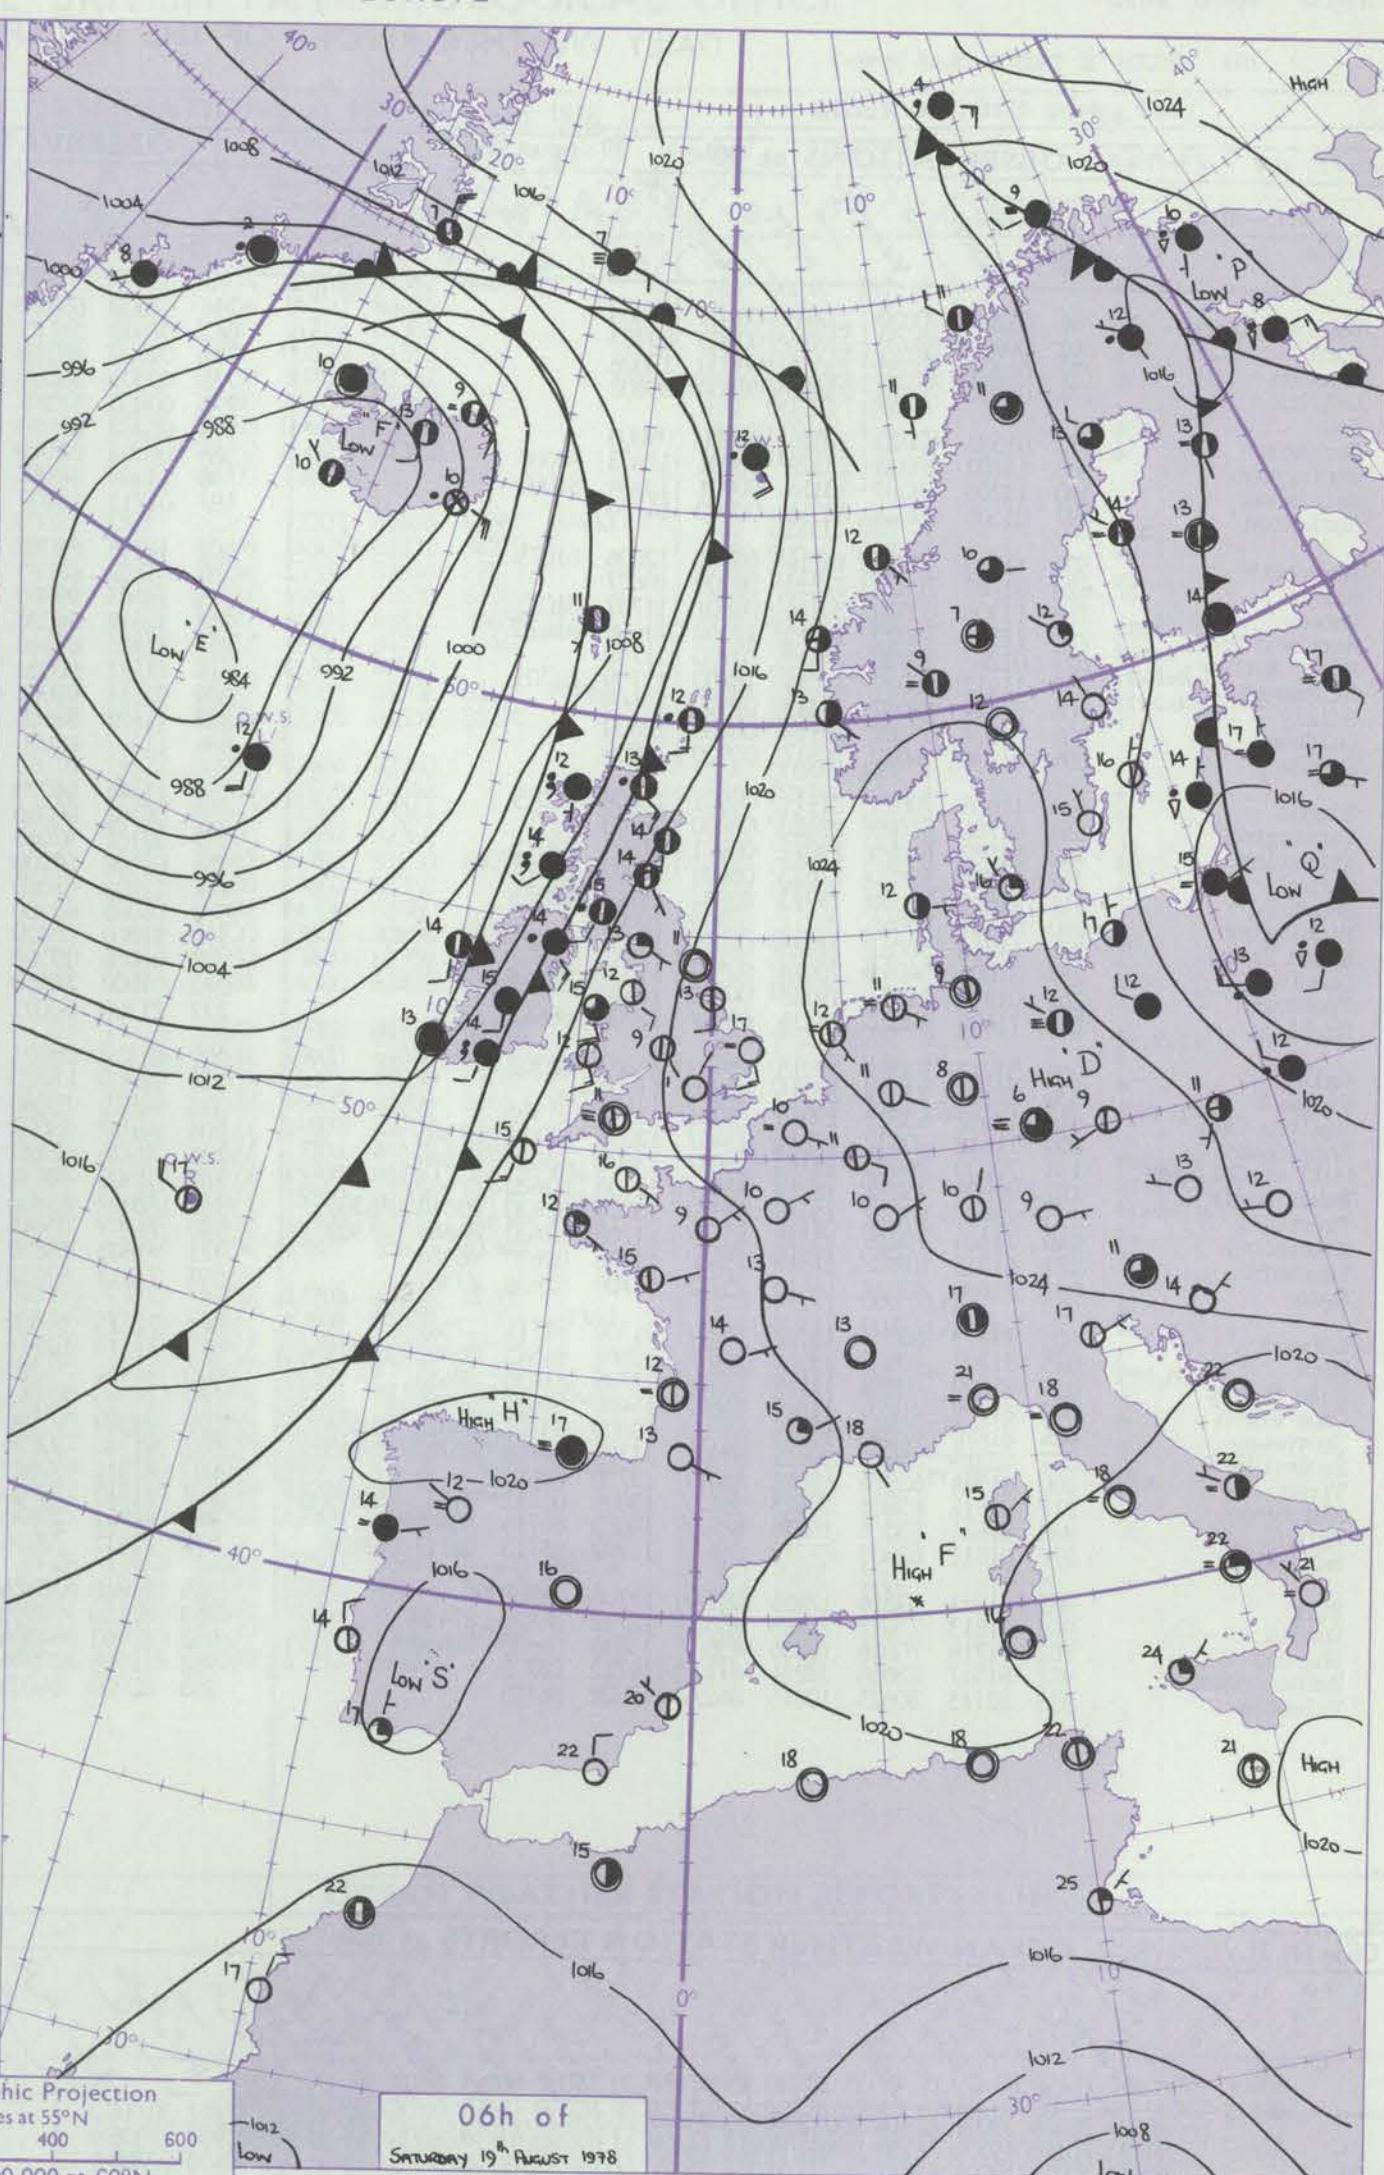

CHARTS OF WEATHER IN WESTERN EUROPE

GENERAL SYNOPTIC DEVELOPMENT

During the past 24 hours an anticyclone over Belgium moved slowly east. A deep low pressure complex persisted to the south of Iceland, its associated frontal troughs moved slowly eastwards into Ireland and a strong to gale force southerly airflow affected western parts of the British Isles.

Issued at midday SATURDAY 19 AUGUST 1978

During the next 24 hours, there will be little change in the pressure distribution although the wind gradient will decrease and the frontal troughs should continue to move slowly east across Great Britain.

CHARTS OF WEATHER IN WESTERN EUROPE

GENERAL SYNOPTIC DEVELOPMENT

During the past 24 hours pressure remained low near Iceland and high to the south and east of the British Isles. A frontal trough over Ireland and western Scotland moved slowly east to central districts of England.

During the next 24 hours little change in pressure distribution is expected. The frontal trough over England is expected to move slowly east to the North Sea while further frontal troughs move eastwards to western districts of Britain.

Issued at midday
SUNDAY 20 AUGUST 1978

Polar Stereographic Projection
Statute miles at 55°N
Scale is 1:20,000,000 at 60°N.

CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

CHARTS OF WEATHER IN WESTERN EUROPE

GENERAL SYNOPTIC DEVELOPMENT

During the past 24 hours, a complex depression south of Iceland has moved slowly northeast while to the south, pressure has remained high from the Azores to central Europe. Troughs of low pressure moved east into Scotland, Northern Ireland and northern districts of England.

During the next 24 hours, the depression near Iceland is expected to continue moving slowly northeast. The associated frontal trough will move east into Scandinavia, but trail across the North Sea and become slow-moving over northern England with shallow waves developing and moving quickly east.

Issued at midday

CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

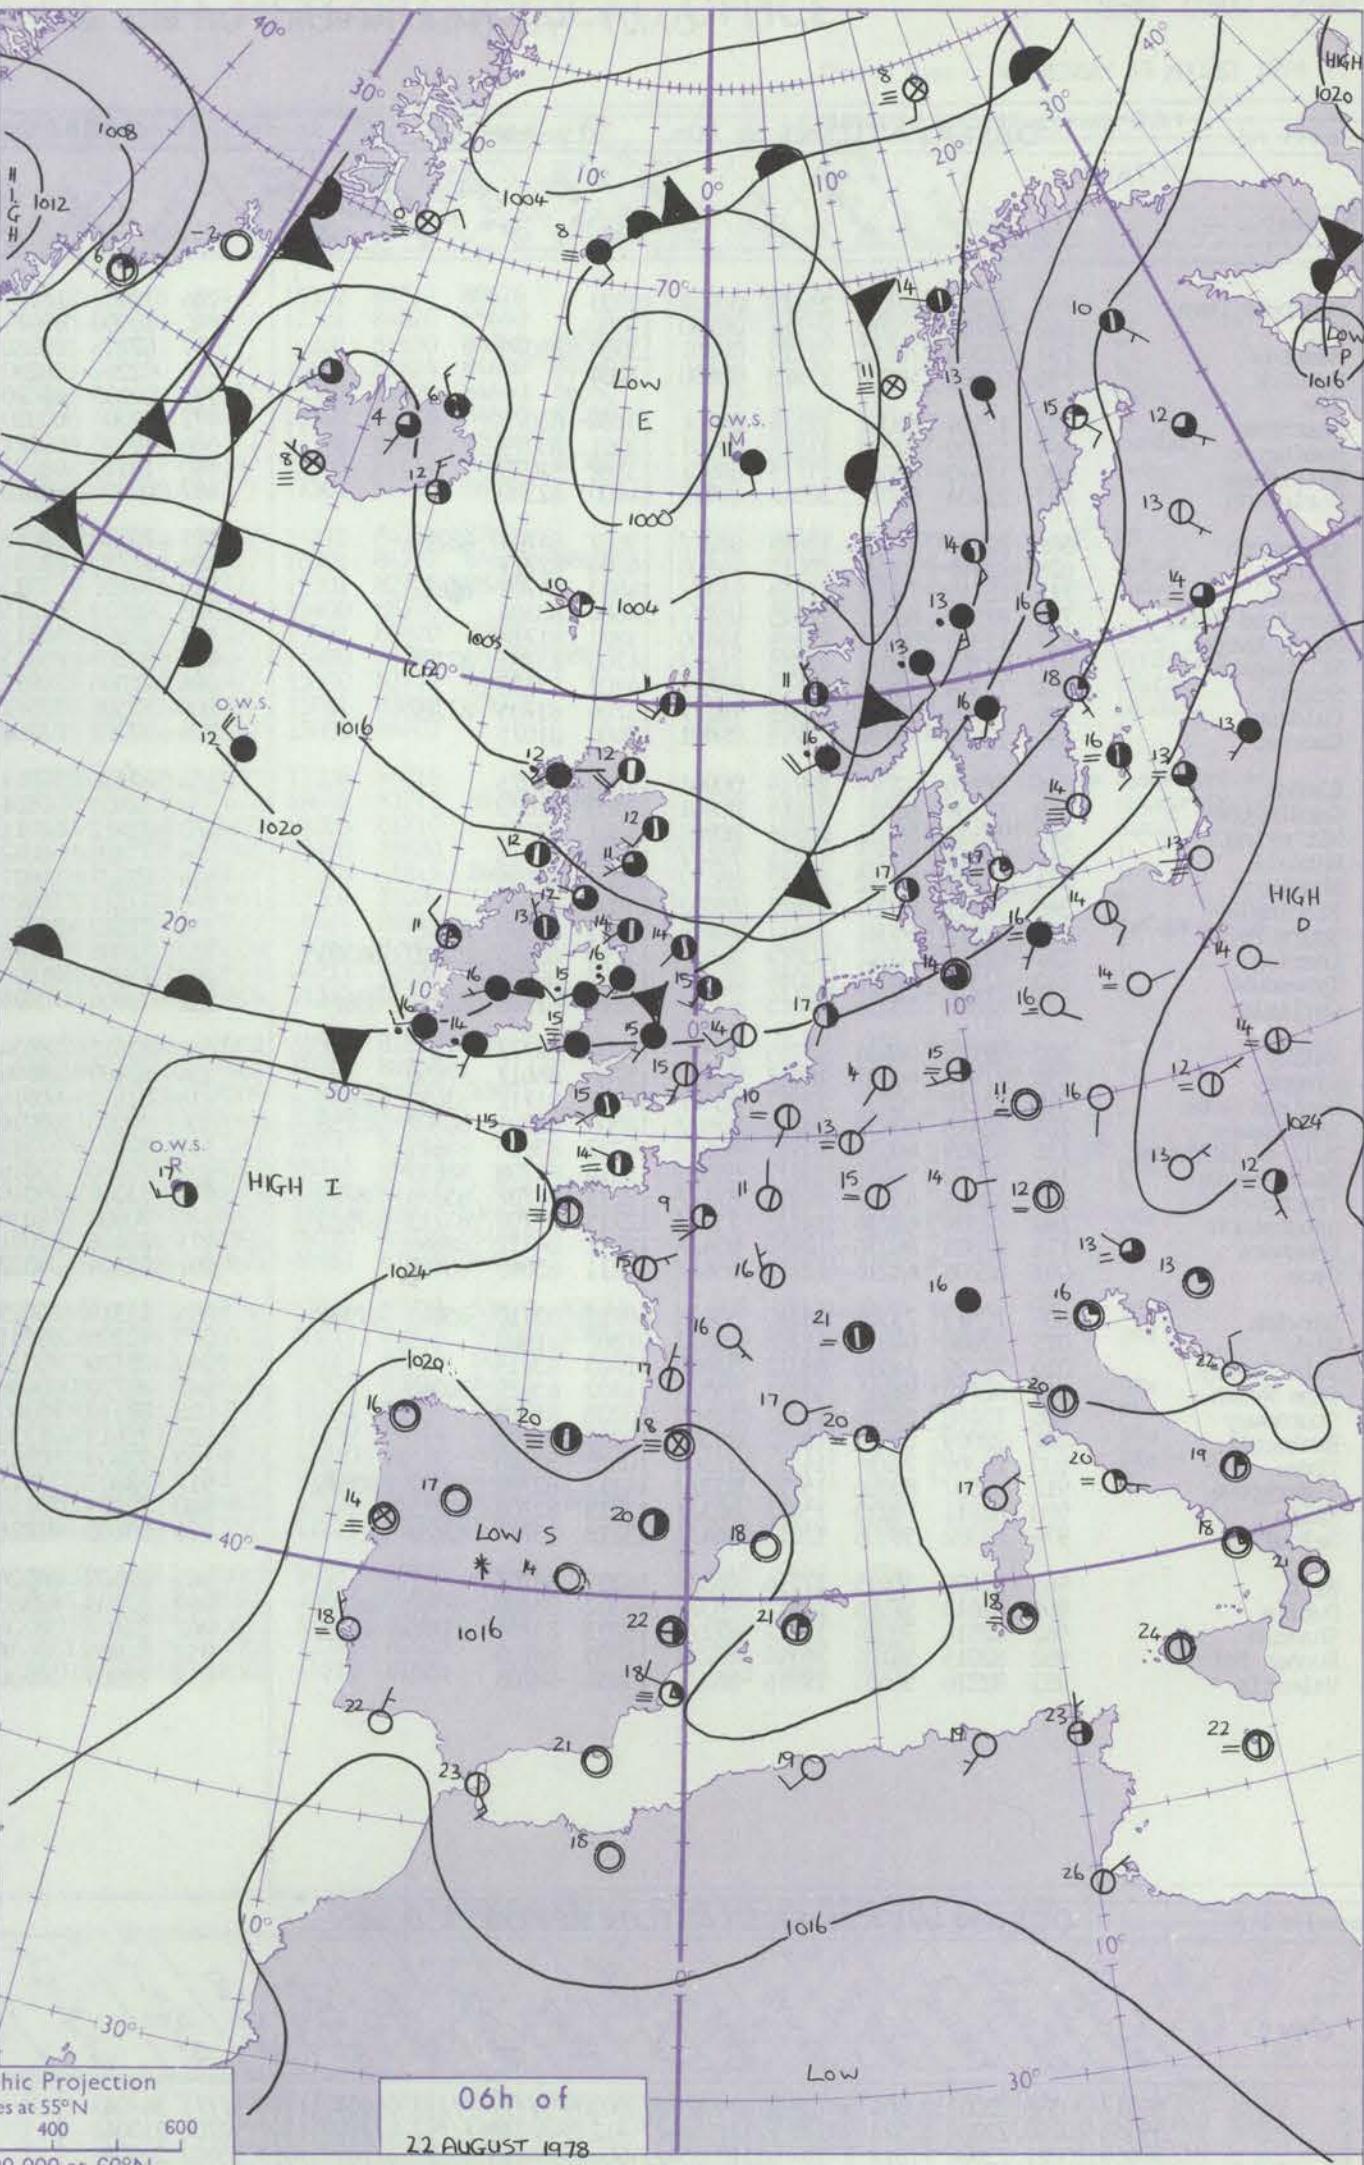

CHARTS OF WEATHER IN WESTERN EUROPE

GENERAL SYNOPTIC DEVELOPMENT

A depression off east Iceland has moved slowly northeast. Its associated cold front across Scotland and north Ireland to a slow-moving depression northwest of Azores, has moved slowly south into northern England and North Wales, but its movement has been retarded by the development of small waves along it. An anticyclone over North Biscay with an associated ridge to east Azores has intensified a little.

Issued at midday TUESDAY 22 AUGUST 1978

During the next 24 hours the anticyclone is expected to intensify further with a ridge developing northwards across the cold front which is expected to frontolyse. A northwesterly airstream will become established across northern parts of the British Isles with frontal troughs approaching northwest Scotland tomorrow morning.

CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

CHARTS OF WEATHER IN WESTERN EUROPE

GENERAL SYNOPTIC DEVELOPMENT

During the past 24 hours a cold front which was lying across northern England and central Ireland, early in the period, continued to move slowly southeastwards, eventually frontolysing, as an anticyclone, which was almost stationary, over the Southwest Approaches steadily built pressure across the British Isles.

Polar Stereographic Projection
Statute miles at 55°N
Scale is 1:20,000,000 at 60°N.

06h of
23 AUGUST 1978

Issued at midday TUESDAY 23 AUGUST 1978

During the next 24 hours pressure is expected to remain high over the British Isles but weak frontal troughs may affect the north of Scotland at times.

CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

CHARTS OF WEATHER IN WESTERN EUROPE

GENERAL SYNOPTIC DEVELOPMENT

During the past 24 hours an anticyclone centred near western Ireland maintained a ridge of high pressure over much of the British Isles.

During the next 24 hours the ridge of high pressure over the British Isles is expected to drift slowly south with a weak frontal trough becoming slow-moving over north Scotland.

Issued at midday THURSDAY 24 AUGUST 1978

CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

CHARTS OF WEATHER IN WESTERN EUROPE

GENERAL SYNOPTIC DEVELOPMENT

During the past 24 hours, an anticyclone, centred off the west coast of Ireland has drifted northwest. A weak trough, associated with a depression in the Norwegian sea, moved south across Scotland and northern districts of England and Wales.

During the next 24 hours, the anticyclone is expected to move slowly north, maintaining a general northerly flow over the British Isles with the frontal trough moving into the near Continent.

Issued at midday FRIDAY 25 AUGUST 1978

Polar Stereographic Projection
Statute miles at 55°N

Scale is 1:20,000,000 at 60°N.

GENERAL SYNOPTIC DEVELOPMENT

During the past 24 hours an anticyclone centred off northwest Ireland became almost stationary and a weakening cold front moved slowly southwards over Wales and southern England.

During the next 24 hours the anticyclone is expected to decline a little as it drifts slowly southeast towards Northern Ireland whilst a shallow frontal wave moves rather quickly southeastwards from the Faeroes across the North Sea.

Issued at midday SATURDAY 26 AUGUST 1978

CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

CHARTS OF WEATHER IN WESTERN EUROPE

GENERAL SYNOPTIC DEVELOPMENT

During the past 24 hours an anticyclone, to the west of Scotland, was almost stationary. A weak frontal trough moved slowly Southwards from the Northern Isles across northeast Scotland.

During the next 24 hours the anticyclone is expected to move slowly southeastwards into western Ireland ahead of a developing low near Iceland, whilst the frontal trough moves slowly further south into northeast England.

Issued at midday SUNDAY 27 AUGUST 1978

Polar Stereographic Projection
Statute miles at 55°N
Scale is 1:20,000,000 at 60°N.

06h of
28 AUGUST 1978

GENERAL SYNOPTIC DEVELOPMENT

During the past 24 hours pressure has remained high to the west of the British Isles and low over the Baltic. A weak frontal zone remained stationary over Scotland but moved southwestwards from the North sea into England.

During the next 24 hours there will be little change in the pressure pattern apart from a minor wave on the front moving southeast into the North sea, with associated trough moving slowly south over Scotland and into northern England.

Issued at midday MONDAY 28 AUGUST 1978

CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

CHARTS OF WEATHER IN WESTERN EUROPE

Polar Stereographic Projection

Statute miles at 55°N

Scale is 1:20,000,000 at 60°N.

GENERAL SYNOPTIC DEVELOPMENT

During the past 24 hours, an anticyclone has remained almost stationary just west of Ireland, with a ridge extending over southern districts of England and Wales. A shallow low near the Faeroes moved southeast with the associated frontal trough affecting northern areas of Scotland.

06h of
29th AUGUST 1978

Issued at midday TUESDAY 29 AUGUST 1978

During the next 24 hours, the anticyclone to the west will drift a little south. The frontal trough over Scotland will make further southward progress into northern England and Northern Ireland followed by a cooler, northerly airstream.

CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

CHARTS OF WEATHER IN WESTERN EUROPE

GENERAL SYNOPTIC DEVELOPMENT

During the past 24 hours, an anticyclone has remained slow moving off western Ireland. A low over North Denmark has moved east and the associated frontal trough, already over north Scotland, moved slowly south.

During the next 24 hours, the anticyclone to the west is expected to move slowly south as a depression near Iceland moves east with the associated warm front affecting western districts of the British Isles.

Issued at midday WEDNESDAY 30 AUGUST 1978

CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

CHARTS OF WEATHER IN WESTERN EUROPE

GENERAL SYNOPTIC DEVELOPMENT

The low over southern Sweden has moved steadily east. Its associated cold front across Poland to Belgium to southwest England has moved steadily south, weakening from the west. An anticyclone off southwest Ireland has remained almost stationary. A depression over the Denmark Strait moved east across Iceland to north of the Faeroes.

During the next 24 hours the high off Ireland will persist and the depression in the north will move southeast to the southern North Sea by tomorrow morning.

Issued at midday THURSDAY 31 AUGUST 1978
