

STATIONS OF THE SECOND ORDER 1900.

KEY MAP.

Showing the approximate positions of the Stations, observations from which are published in this Volume.

Different type is employed to indicate the information given for the several Stations,
SOUTHAMPTON - Daily observations (Form A), and Monthly Summaries (Form B).
Eastbourne - Monthly Summaries (Form B) only.

M. O., No. 169.

OFFICIAL COPY.

METEOROLOGICAL OBSERVATIONS

AT $\frac{10018}{73}$

STATIONS OF THE SECOND ORDER

For the Year 1900.

With Frontispiece Map.

Published by Direction of the Meteorological Council.

EDINBURGH:

PRINTED FOR HIS MAJESTY'S STATIONERY OFFICE
By NEILL & CO., LIMITED, BELLEVUE.

And to be purchased, either directly or through any Bookseller, from
WYMAN & SONS, LIMITED, FETTER LANE, E.C.; or
OLIVER & BOYD, EDINBURGH; or
E. PONSONBY, 116 GRAFTON STREET, DUBLIN.

1905.

Price Twenty-Two Shillings and Sixpence.

40

ERRATA.

Page 17, Cambridge :—Mean Min. Temp., for 39·7, read 31·0.
,, 63, for Parsonstown, read Birr Castle.
,, 132, Aberdeen :—30 years, 1871–1900, Dep. of Wet, for 1·6, 1·9, 1·8, read —, —, —.
,, 133 and Page 135, Aberdeen, Braemar, and Fort William :—35 years, 1866–1900, No. of Days of Rain, insert note “The rain-days mean is for 30 years, 1871–1900.”

OBSERVATIONS

AT

STATIONS OF THE SECOND ORDER, 1900.

Introduction.

RETURNS from 76 stations in the United Kingdom for the year 1900 are included in this volume. This is a decrease of four as compared with the previous year, five stations being omitted and one added.

The stations omitted are :—

Chester; Heysham, Lancashire; Ladylaw, Roxburgh; Londonderry; and Rochester, Kent: the station added being Lissan, Tyrone.

At Londonderry the observations have been discontinued, owing to the death of the observer Mr J. Conroy, F.R.Met.Soc. The observer at Heysham, Miss L. Grafton, removed to Wessington Court near Hereford, where observations have since been commenced; while at Chester, Ladylaw and Rochester, the observers have been obliged to relinquish sending up the regular observations at 9 a.m. and 9 p.m.

The only station added to the list is Lissan in Co. Tyrone. Observations from this station have already been published for the years 1886–1898. They were interrupted in 1899 owing to the death of Sir Nathaniel Staples, Bart.

The changes in the A. list (of stations for which the detailed observations are printed) are, that Ladylaw is removed from the list, and that Cockle Park (Morpeth) is added to it. From the B. list Chester, Heysham, Londonderry and Rochester disappear, and Lissan is replaced.

The 76 stations are distributed as follows :—

25	are in	Scotland,
40	„	England,
3	„	Wales,
and 8	„	Ireland.

The names of the stations in each country, with the respective observers, are given in the following Table arranged alphabetically under the various counties; but it must be observed that the Tables for the several stations follow the order of latitude as in previous volumes.

County.	Station.	Observer.
SCOTLAND.		
Aberdeen	Aberdeen - - -	Prof. C. Niven, M.A., F.R.S. (for the Meteorological Council).
"	Braemar - - -	James Aitken, J.P.
Argyll	Laudale - - -	A. Fletcher (for T. H. G. Newton, M.A., F.R.Met.Soc.).
"	Poltalloch - - -	D. S. Melville (for Lord Malcolm of Poltalloch).
Ayr	Pinmore - - -	Andrew Walker (for Captain Hamilton).
Banff	Gordon Castle - - -	C. Webster (for the Duke of Richmond and Gordon, K.G.).
Berwick	Marchmont - - -	John A. Wood.
Bute	Rothsay - - -	James Kay (for the Marquis of Bute).
Cromarty	Strathpeffer Spa - - -	J. Tregelles Fox, M.D.
Edinburgh	Edinburgh - - -	R. C. Mossman, F.R.S.E., F.R.Met.Soc.
"	Rosewell - - -	R. B. Mitchell, M.D.
Forfar	Dundee - - -	J. Carnochan.
"	Lednathie - - -	William Morrison (for P. Stormonth Darling).
Inverness	Ben Nevis - - -	R. T. Omond, F.R.S.E. (for Directors Ben Nevis Observatory).
"	Fort Augustus - - -	Rev. J. Martin Wall (The Monastery).
"	Fort William - - -	R. T. Omond, F.R.S.E. (for the Meteorological Council).
Kirkcudbright	Cargen - - -	Alexander Peacock.
"	Glenlee - - -	W. Melville.
Lanark	Glasgow - - -	Prof. L. Becker, Ph.D.
Orkney	Deerness - - -	M. Spence.
Perth	Ochertyre - - -	George Croucher (for Sir Patrick Keith Murray, Bart.).
Ross	Glencarron - - -	D. D. Munro.
Roxburgh	Wolfelee - - -	William Gordon (for Major Elliot).
Sutherland	Dunrobin Castle - - -	D. Melville (for the Duke of Sutherland, K.G.).
"	Lairg - - -	Rev. D. Macrae.
ENGLAND.		
Bedford	Woburn Farm - - -	Harold H. Mann, B.Sc., and H.M. Freear, F.C.S.
Cambridge	Cambridge - - -	Miss A. Walker (for Sir Robert Ball, F.R.S.).
Cheshire	Bidston (Liverpool) - - -	W. E. Plummer, F.R.A.S.
Cornwall	Falmouth - - -	E. Kitto, F.R.Met.Soc. (for the Meteorological Council).
Derby	Buxton - - -	W. Pilkington.
Devon	Plymouth - - -	H. Victor Prigg, C.E. (for the Corporation).
"	Rousdon - - -	<i>The late</i> Sir C. E. Peek, Bart., M.A., J.P., F.R.A.S., F.R.Met.Soc.
"	Whitchurch - - -	E. E. Glyde, F.R.Met.Soc.
"	Woolacombe - - -	Edward Henshall, A.M.I.C.E., F.R.Met.Soc.
Dorset	Parkstone - - -	<i>The late</i> R. Hawkesworth Barnes, B.A., F.R.Met.Soc.
Durham	Durham - - -	F. C. H. Carpenter (for Prof. Sampson, M.A., F.R.S.).
"	Seaham - - -	G. H. Aird.
Gloucester	Cheltenham - - -	<i>The late</i> R. Tyrer, B.A., F.R.Met.Soc.
Hampshire	Southampton - - -	J. T. Cook (for the Director-General of Survey).
Hertford	Bennington - - -	Rev. J. D. Parker, LL.D., F.R.Met.Soc.
"	Berkhamsted - - -	E. Mawley, F.R.H.S., F.R.Met.Soc.
Lancashire	Manchester (City) - - -	James Niven, M.A., M.B. (for the Corporation).
"	Prestwich - - -	T. R. H. Clunn, M.D., F.R.Met.Soc.
"	Stonyhurst College - - -	Rev. W. Sidgreaves, S.J.
Leicester	Belvoir Castle (Grantham) - - -	W. H. Divers (for the Duke of Rutland, K.G.).
Lincoln	Tealby - - -	Rev. S. Lewin, B.A.
Norfolk	Geldeston - - -	E. T. Dowson, F.R.Met.Soc.
"	Hillington - - -	Rev. H. E. B. Ffolkes, M.A., F.R.Met.Soc.
Northumberland	Cockle Park (Morpeth) - - -	Thos. Hacking and W. H. Hogg.
Stafford	Cheadle - - -	J. C. Philips, J.P.
Suffolk	Hollesley Bay - - -	Prof. C. G. Freer Thonger, M.R.A.C., F.C.S.
"	Lowestoft - - -	S. H. Miller, F.R.A.S., F.R.Met.Soc.

County.	Station.	Observer.
ENGLAND—cont.		
Surrey	Bramley - - -	James Bartlett, M.A.
"	Kew - - -	The National Physical Laboratory (for the Meteorological Council).
"	Norwood - - -	W. Marriott, F.R.Met.Soc.
Sussex	Eastbourne - - -	R. Sheward, F.R.Met.Soc. (for the Corporation).
"	St Leonards - - -	H. Colborne, M.R.C.S. (for the Corporation).
Warwick	Birmingham (Edgbaston) - - -	Alfred Cresswell (for the Midland Institute).
Yorkshire	Aysgarth - - -	<i>The late</i> Rev. Fenwick W. Stow, M.A., F.R.Met.Soc.
"	Rounton - - -	<i>The late</i> Sir I. Lowthian Bell, F.R.S., F.R.Met.Soc.
"	Scarborough - - -	W. W. Larkin (for the Corporation).
"	Sheffield (Weston Pk. Museum) - - -	Elijah Howarth, F.R.A.S.
"	Wakefield - - -	A. Clyde.
"	York - - -	H. M. Platnauer, B.Sc., F.G.S. (for the Yorkshire Phil.Soc.).
ISLANDS.		
Isle of Man	Cronkbourne (Douglas) - - -	A. W. Moore, M.A., J.P., C.V.O., F.R.Met.Soc.
WALES.		
Carnarvon	Llandudno - - -	W. Little (for the Corporation).
Montgomery	Churchstoke - - -	P. Wright, F.C.S., F.R.Met.Soc.
Pembroke	St David's - - -	W. P. Probert, LL.D., F.G.S., F.R.Met.Soc.
IRELAND.		
Armagh	Armagh - - -	J. L. E. Dreyer, Ph.D., F.R.A.S.
Dublin	Dublin (City) - - -	Sir John W. Moore, M.D., F.R.Met.Soc.
"	Dublin (Phoenix Pk.) - - -	Corpl. Blackmore, R.E. (for Col. C. Haynes, R.E.).
"	Glasnevin (Botanic Gardens) - - -	F. W. Moore, M.R.I.A.
Kerry	Valencia - - -	J. E. Cullum, F.R.Met.Soc. (for the Meteorological Council).
King's Co.	Birr Castle - - -	O. Boeddicker, Ph.D. (for the Earl of Rosse, K.P., F.R.S.).
Sligo	Markree Castle - - -	F. W. Henkel, B.A. (for the late Colonel Cooper, F.R.A.S.).
Tyrone	Lissan - - -	James H. Staples.

The stations in the above list marked "S" are in connexion with the Scottish Meteorological Society, and those marked "M" with the Royal Meteorological Society. By an arrangement made some years ago, the monthly schedules received from the observers at these stations are examined and checked in the offices of the respective Societies, where also the requisite reductions are completed and the results prepared for publication.

The map issued as a frontispiece to this volume indicates the approximate position of each of the stations enumerated above; the latitude and longitude in each case are given in the headings of the Tables.

As in previous volumes, the publication is essentially in two parts.

In Part I. (pp. 1-126) detailed observations at 9 a.m. and 9 p.m. each day are given *in extenso* for 21 carefully selected stations. These stations have been selected mainly as representative of the whole country. Regard has, however, been had in their selection to the prospect of the station being permanent.

The stations for which detailed observations are given are indicated in the list by heavier type, thus—**Deerness**.

Part II. (pp. 127-179) contains the Monthly Results for all stations, including the Monthly Sums and Means already given in Part I.

The Forms in which the results are tabulated are nearly identical with those adopted by the Meteorological Congress at Rome in 1879 for International use, and known as the International Forms A. and B. They differ from the International Forms in the following particulars:—they include columns showing the differences between the readings of the dry-bulb and the wet-bulb thermometers under the heading "Dep. of Wet" (Depression of Wet-bulb), in addition to those giving the Vapour Pressure and the Relative Humidity; while in the present volume columns have, for the first time, been inserted, showing the total hours of Bright Sunshine, together with the percentage of its possible duration. The additional details as to the heights of the instruments are given as in preceding volumes.

Moreover, in pursuance of the recommendation of the International Meteorological Conference that met in Munich in August 1891, the correction to be applied to the barometer readings, as printed, in order to allow for the difference of Gravity at the station from that at Latitude 45° , is now inserted, as in the volumes for 1889-1899, at the head of the Tables as "Gravity Correction."

It will be noticed that in the list of stations there are included, as in the years 1886-1899, the Observatories, or Stations of the First Order, in connexion with the Meteorological Office. Although the results from four of these stations have already been published in detail, abstracts based on two observations daily are included in the present volume in order to make the representation of the meteorology of the United Kingdom as complete as possible.

Hours of Observation.

The hours of observation were, as before, 9 a.m. and 9 p.m. local time at all the stations, excepting those marked **S**, and the five Observatories or Stations of the First Order. At these twenty-four stations Greenwich time was kept. The five observatories are Aberdeen, Fort William, Kew, Falmouth, and Valencia; and at these, while most of the instrumental observations were at 9 a.m. and 9 p.m. Greenwich time, the Cloud Amount was observed at 10 a.m. and 10 p.m., and the Rainfall at about 10 o'clock a.m.

Instruments.

The instruments in use at the various stations are all of Standard pattern, and have been carefully verified. Only mercurial barometers are accepted, and care is taken, by periodical inspection and testing, to guard against the introduction of errors through the deterioration of the instruments.

Heights of the Stations.

The Heights above the Mean Sea Level have been determined by levelling from the nearest Bench Mark, or in some other reliable manner.

That given as the height of the station is commonly the height of the ground on which the Rain-gauge stands, which is in almost every case the same, approximately, as that on which the thermometer screen is placed.

The height given as that of the Barometer above Ground, when applied to the Height of the station above Mean Sea Level, will accurately give the height of the barometer cistern above the Mean Sea Level.

In the volumes up to and including 1885, the heights given for the Irish stations above Mean Sea Level are in reality the heights of those stations above the datum level of the Irish Ordnance Survey, which is mean low-water mark, and which is 7 feet lower than the ordnance datum for Great Britain. In the present volume the heights of all the stations are referred to the Mean Sea Level.

Methods of Reduction, etc.

Barometer.

The readings, as printed, are the readings of the barometer at 9 a.m. and at 9 p.m., after correction for instrumental errors, and reduction to the temperature of 32° Fahrenheit.

In some preceding volumes the readings were reduced to the Mean Sea Level before publication, but in this volume, as in those from 1886, the correction for height has not been applied, and the values stand therefore at Station Level. From the heading of each Table the height of the barometer cistern above the Mean Sea Level can be obtained.

As in the volumes from 1883, the individual barometer readings have been printed to the nearest second place of decimals only. The monthly means are, however, given to the third place of decimals as heretofore, and these monthly means having been obtained from the original readings, to three figures, they will be found occasionally to differ by .001 inch from the arithmetical mean of the printed daily readings. When any such difference occurs, the mean, as printed, may be taken as that which is nearer the truth.

The Tables used in the reduction of the barometer readings to 32° Fahrenheit are those given in the "Instructions in the Use of Meteorological Instruments," London, 1892.

The Monthly Mean Pressure in Part II. has been obtained by adding together the means for 9 a.m. and 9 p.m., and dividing the result by 2.

Temperature.

The observations of temperature have all been corrected for the errors of the thermometers.

In accordance with the decision of the Meteorological Congress at Vienna, in 1873, to the effect "that the maximum and minimum should be noted at the last observation of the evening, and entered on the day on which they are taken," the maximum and minimum thermometers have been read and set at 9 p.m. each day, and the readings entered to the same day.

The Mean Temperature in Part II. is based upon the 9 a.m. and 9 p.m. readings of the dry-bulb thermometer, without taking into account the minima and maxima, the means of which are, however, given for each month.

The extreme readings of the maximum and minimum thermometers for each month in Part I., and for the year in Part II., are printed in heavier type.

Hygrometry.

The Tables employed for the hygrometrical reductions are Glaisher's, 5th edition, London, 1869.

In Relative Humidity, complete saturation is represented by 100.

The Monthly Means of the Depression of the Wet-bulb, the Vapour Pressure, and Relative Humidity, printed in Part II., are in most cases the averages of the daily values. For some stations, however, the monthly averages of the dry-bulb and wet-bulb temperatures have been used for obtaining these values, and in these cases the percentages of the humidity have been given in whole numbers instead of to the first place of decimals. The mean "Depression of Wet-bulb" is given for all the stations.

Wind.

The Wind Direction is *true*, as distinguished from magnetic or compass directions.

Wind Force is estimated by Beaufort's Scale (except at the stations marked "S") as follows:—

0 Calm.	5 Fresh breeze.	10 Whole gale.
1 Light air.	6 Strong breeze.	11 Storm.
2 Light breeze.	7 Moderate gale.	12 Hurricane.
3 Gentle breeze.	8 Fresh gale.	
4 Moderate breeze.	9 Strong gale.	

At most of the stations the Force of the Wind is estimated by the observer, but at four stations, namely:—

Deerness,
Glasgow,

Stonyhurst, and
Armagh,

Robinson Cup Anemometers of the Standard size and pattern are employed, and the velocity of the wind, as shown by the daily curves, is translated into Force by Beaufort's Scale, by the Table found in "Instructions in the Use of Meteorological Instruments," London, 1892.

At the stations in connexion with the Scottish Meteorological Society (marked "S" in the list on page vi.), the scale employed in estimating the Force of the Wind is that known as the Land Scale. Under this scale 0 indicates calm, and 6 indicates the strongest wind, and the entries under this head at these stations have therefore been multiplied by 2 to make them fairly comparable with observations under the Beaufort Scale.

Cloud.

The Cloud Amount is estimated by a scale in which 0 represents clear sky and 10 represents completely overcast. No account is taken under this heading of the *Form* of the clouds visible at the time of observation, or of their density.

Rainfall.

The Rainfall is measured each day at 9 a.m., except at the stations where the record is obtained automatically. At these stations the hour is about 10 a.m., the exact time being governed by the hour for the changing the papers on the self-registering Rain-gauges.

These stations are seven in number: namely, the five already mentioned on page viii, together with Glasgow and Stonyhurst.

The amounts measured each morning are entered to the *preceding* day. At some stations the Rainfall Amounts have been measured to the third place of decimals, and where this is the case, the amounts as measured have been printed.

The maximum fall for the month is printed in heavier type in Part I., and the maximum fall for the year, with the day on which it occurred, is also printed in heavier type in Part II.

Remarks.

The entries under this heading are a transcript of the notes as to the weather, etc. made by the observers on the monthly schedules; or, if these notes are too numerous to be inserted in full, a selection of the most important of them.

The following symbols, which have been adopted by international agreement, are used in the "Remarks" columns:—

Rain -	●	Hoar-frost -	⊖	‡Solar Corona -	⊙
Snow -	✱	Dew -	⊖	‡Solar Halo -	⊕
*Snow lying -	⊠	†Silver-thaw ("Rauh-frost," "Duft") -	⊖	‡Lunar Corona -	⊕
Snow Drift -	⊠	Glazed Frost ("Glatteis") -	⊖	‡Lunar Halo -	⊕
Hail -	⊠	Thunderstorm -	⊖	Rainbow -	⊖
Soft-Hail ("Graupel") -	⊠	Thunder without Lightning -	⊖	Aurora -	⊖
Ice Crystals -	⊠	Lightning without Thunder -	⊖	Dust Haze ("Höhenrauch") -	⊖
Mist, Fog -	⊠	Strong Wind -	⊖		

In respect of their intensity, the individual phenomena are distinguished by the figures 0 and 2, which are used as exponents of the symbols, in such a way that 0 indicates very slight, 2 strong,

e.g., ●⁰ slight Rain.

●² heavy Rain.

It is further to be remarked that Fog (mist) is only entered when the observer is quite enveloped in it.

In giving the period of occurrence of the various phenomena, "m" is never printed. Hence—

a.	indicates a.m.
p.	" p.m.
9a.—9p.	" 9 a.m. to 9 p.m., and further,
n.	is used to indicate night.

Interpolations.

Figures printed in *italic type* are interpolations adopted in the absence of the usual data. They have been obtained by careful comparison of the returns from adjacent stations, and have been used in calculating the monthly means.

* The symbol for "snow lying" is only to be employed if more than half of the country in sight round the station is covered with snow.

† "Rauh-frost" or "Duft-anhang" is the phenomenon of the deposition of a large quantity of frozen moisture on trees when the weather suddenly becomes warm after great cold, sometimes called, as above, "Silver-thaw."

‡ In some previous volumes (till 1887) the symbols for Solar and Lunar Halos and Coronæ have been by accident transposed. They are correct as printed above.

*Weather Summaries.**Days of Rain.*

In some earlier volumes the decision of the Vienna Congress that the days of precipitation, irrespective of amount, should be counted as the number of days of rain, has been literally observed; but since the common practice of British Meteorologists has been to take .01 inch (.005 inch in those cases where the rainfall was observed to thousandths of an inch) as the minimum for a rainy day, and as, moreover, many observers do not record closer than to hundredths of an inch, it has been deemed desirable to adopt this as the lower limit. In this volume, therefore, as in that for 1881 and subsequent years, a day of rain must be understood as one on which .01 inch (or .005 inch, as explained above) of rain was measured on the morning of the following day. As in former years, no regard is had to the form of the precipitation, those days on which snow, hail, etc. fell being all included in the number of days of rain.

Days of Snow.

In counting days of snow, no regard is had to the *amount* which fell. Every day on which snow was observed, even though it was so small in quantity as to yield no measurable amount in the rain-gauge, has been counted as a day of snow.

Days of Hail.

The same method as is detailed above with regard to snow has been followed in counting days of hail. Every day on which hail was reported, whether much or little, has been counted as a day of hail.

Days of Thunderstorm.

In counting days of thunderstorm, those days are included on which thunder was recorded, even though no lightning was seen; those on which lightning was seen, but no thunder heard, have not been counted.

Days of Clear Sky.

The days of clear sky are those days when the average cloud amount (Scale 0–10), as observed at 9 a.m. and at 9 p.m., is *less* than 2.

Days of Overcast Sky.

Similarly the days of overcast sky are those days when the cloud amount (Scale 0–10), as observed at 9 a.m., being added to that observed at 9 p.m., and the sum being divided by 2, the result is *more* than 8.

Days of Gale.

The days of gale are those days when force 7 or upwards, Beaufort's Scale (or its equivalent velocity of 37 miles per hour [Factor 3] on a Standard size Robinson Cup Anemometer), was recorded at any time during the day.

It must be observed, however, that while the period covered by a day of rain is the 24 hours ended at 9 a.m. (or 10 a.m.) on the following day, the days of snow, hail, thunderstorm, and gale, are the civil days ended at midnight.

Wind Summaries.

The Wind Summaries show the number of times that the wind was reported under each of the 8 points, N., NE., E., SE., S., SW., W., NW., and Calm; and the rule followed in their preparation has been to take such directions as S.byE., SE.byE., etc., as S., SE., etc.; while those under the intermediate points, as NNE., have been alternately thrown forward to NE. and backward to N.

No account has been taken of the *force* of the wind in preparing the Wind Summaries.

For some of the stations in connexion with the Scottish Meteorological Society (marked "S" in the list on pp. vi., vii.), a slightly different plan has been followed, under which directions between and including ENE. to ESE. have been counted as E., SSE. to SSW. as S., and so on.

Mean Values.

In addition to the average monthly and yearly values given for each station in Part II, the corresponding yearly mean, whenever available, is given at the foot of the tables.

The period to which this mean refers varies with different stations; but the particular years included are shown in each case.

Part III.—Annual Summary.

On pages 180–181 will be found the Annual Summary, showing at one opening the mean values and totals for the year of the various elements at all the stations, as well as the extreme temperatures and the maximum rainfall.

In this summary the stations are arranged in the same order as in Part II., namely, according to latitude, but starting afresh for the Irish stations.

Sunshine.

In the present volume the Sunshine Table formerly given as Part IV. has been omitted, the number of hours of Bright Sunshine at those stations which are supplied with Sunshine Recorders, together with the percentage of its possible duration, being given in Part II., with the other monthly results.

The form of instrument in most general use is that known as the Campbell-Stokes' Burning Recorder; but at Braemar, Belvoir Castle, Bennington, Buxton, Cheltenham, Manchester (City), and Norwood (Wallington), Jordan's Photographic Recorders were used. At all the other stations, Stokes', or some other form of Burning Recorder, was employed.

In four cases the Sunshine Records at other stations not far off, and having practically the same exposure, have been inserted in order to make this Table as complete as possible. These are Aspley Guise as representing Woburn; Hoylelake as representing Bidston; St Ann's Head as representing St David's, Pembroke; and Wallington, Surrey, as representing Norwood.

Of the observations which have been used in the compilation of this volume, some have been derived from public observatories, and others from establishments maintained by local municipal authorities, but the greater number are the work of voluntary and unpaid observers. The Council desire to record their thanks for the assistance which has thus been afforded to them in the compilation of appropriate Meteorological records for the United Kingdom, and their appreciation of the unremitting care and attention which the fulfilment of the duties of an observer demands.
