MONDAY  
1 JULY 1985

SUMMARY  
OF  
BRITISH WEATHER

Most places had a good deal of cloud overnight and in Scotland and parts of northern England it was thick enough to give a little rain. East Anglia also had some showers but they died out before dawn.

During the day many places had good sunny spells, especially along the south coast of England and in Shetland.

Northern Ireland had a cloudy day with rain for much of the morning and early afternoon. Southwest Scotland, much of northern England and Lincolnshire also had a good deal of cloud, but it brightened up later in the day. Showers were fairly widespread over the Scottish mainland and a few developed during the afternoon in eastern counties from East Anglia to northeast England. Wales and the remainder of England were dry.

The day ended dry and bright over most of the country, though during the evening sea fog began to affect the coast of southwest Wales and parts of north Devon and Cornwall.

Temperatures were mainly near normal but it was rather cool in parts of the north and west. Along the coasts of southern and eastern England it became quite warm during the afternoon.

PLOTTED SURFACE OBSERVATIONS

TUESDAY  
2 JULY 1985

SUMMARY  
OF  
BRITISH WEATHER

It was dry over most of the British Isles, but there was a little rain or drizzle in some northwestern areas.

Scotland had, mostly, a lot of cloud, but it was bright at times, especially in the east and south.

Most of Northern Ireland, England and Wales had a good deal of sunshine, although it was rather cloudy at times in North Wales, eastern and northern England and Northern Ireland.

There was some patchy fog around coasts of western Scotland, Wales, the Isle of Man and at first in southwest England.

Most places had a warm day, but temperatures stayed near normal in some western and northern coastal regions, and also near parts of the east coast of England. In Northern Ireland, and over much of Wales and southwest England and around the Moray Firth it was very warm.

WEDNESDAY  
3 JULY 1985

SUMMARY  
OF  
BRITISH WEATHER

Over Scotland and Northern Ireland it was mostly cloudy with rain at times; the heaviest and most persistent rain was in northern Scotland.

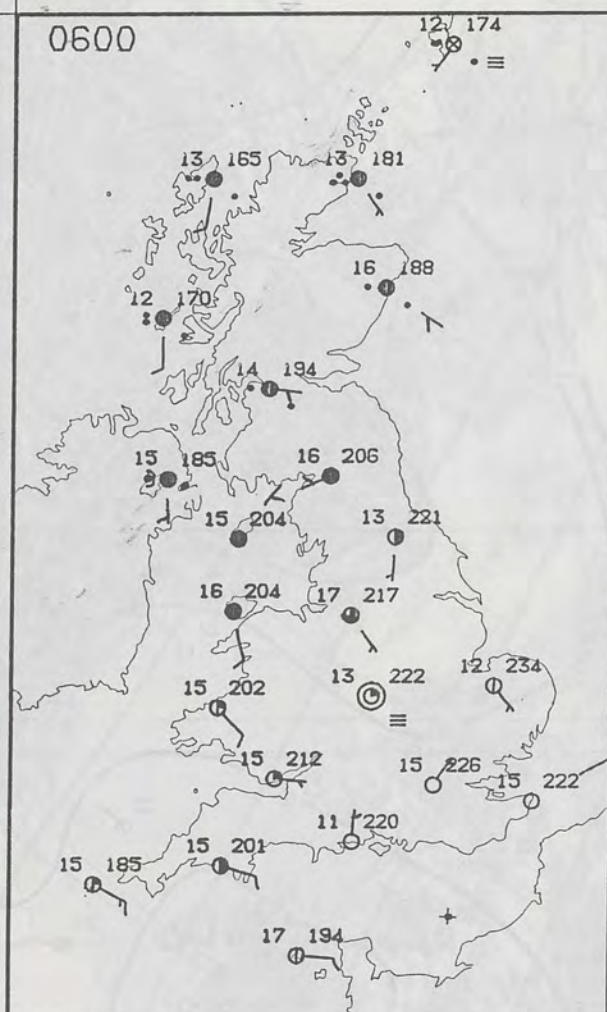

Northern England and North Wales had rather a lot of cloud at times, but it was dry, and often bright. Central and southern England and South Wales had a clear night and a sunny day, though sea fog drifted onto some coasts of eastern England at times.

Temperatures were mostly near normal over Scotland and Northern Ireland, but most of England and Wales had a warm day, and it became hot in places. However, much of the east coast was cooler.

THURSDAY  
4 JULY 1985

SUMMARY  
OF  
BRITISH WEATHER

There was a little rain in Scotland overnight, mainly in the west, but the rest of Britain had a dry night. In England and Wales the weather turned misty and there was fog here and there.

Wales and much of England had a dry day with long sunny periods but southern England clouded over in the afternoon. In southwest England there were a few showers, while Wales had a cloudy evening with rain in parts of the south.

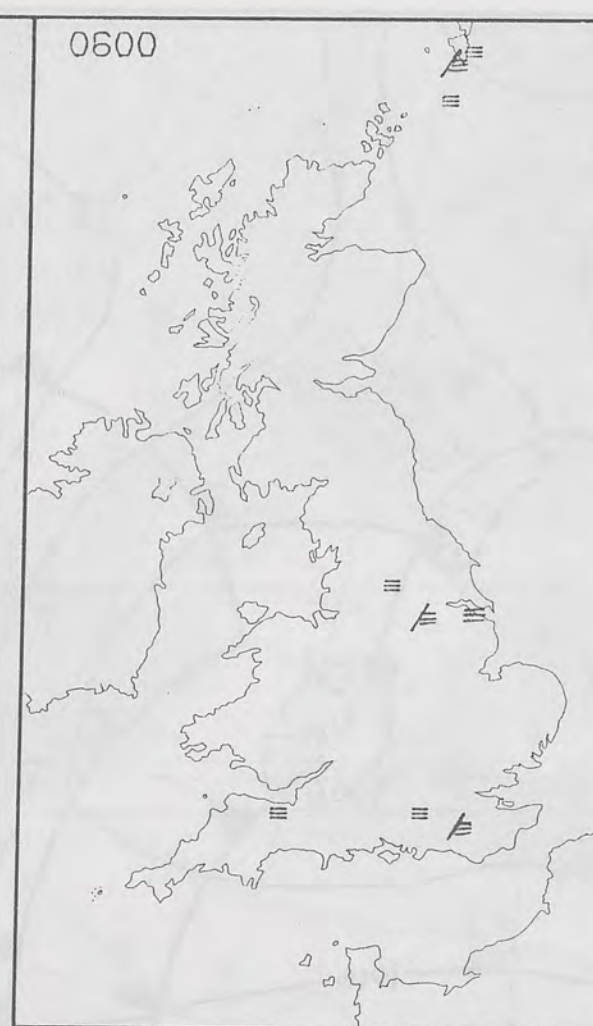

Scotland and Northern Ireland had a lot of cloud and there was a little rain here and there, but many places stayed dry. South-eastern Scotland had good sunny periods.

Most of Britain had a very warm or hot day, only Shetland and some northeast coastal places had near normal temperatures due to persistent sea fog.

A map of the British Isles showing the locations of the 12 apostles. The map includes the British Isles and the surrounding seas. The locations are marked with symbols: three horizontal lines (≡) for the apostles who were martyred in Britain, and a cross (✕) for the apostles who were martyred in Ireland. The symbols are placed on the coastlines of the British Isles. The map is titled '2400' in the top left corner.

### SUMMARY OF BRITISH WEATHER

Overnight the northeastern half of Scotland had some rain, elsewhere in the British Isles it was mainly dry.

Most of England and Wales had a dry day with long sunny periods but in the north of England there were isolated light showers during the morning, mostly in northwest England.

In Northern Ireland and most of Scotland there were sunny intervals and scattered showers but parts of northeast Scotland were dull at first with outbreaks of rain. In the Northern Isles it was damp and misty most of the day.

Temperatures were generally near normal.

## PLOTTED SURFACE OBSERVATIONS

1800

2400

SUNDAY  
7 JULY 1985SUMMARY  
OF  
BRITISH WEATHER

Overnight it was mainly dry with clear skies and a touch of frost in central Wales. Scotland and Northern Ireland had more cloud with an occasional light shower in the Clyde valley.

In southern and central parts of England and Wales it was a dry day with a good deal of sunshine.

In North Wales and northern England much of the day was dry with sunny periods but it turned cloudier later and there was light rain in places during the evening.

In Northern Ireland and Scotland it was a dry, bright start in most places but cloud spread from the west across all parts during the morning. There were patches of light rain in western areas before midday and outbreaks of rain extended to most of Scotland and Northern Ireland later in the afternoon and evening. In Shetland it was a mainly dry day with sunny intervals.

Temperatures were mostly near normal but in Northern Ireland and parts of Scotland it was rather cool.

MONDAY  
8 JULY 1985SUMMARY  
OF  
BRITISH WEATHER

Overnight rain affected Northern Ireland and the western half of Scotland.

Scotland and Northern Ireland had a mostly cloudy day with rain or drizzle in western areas during the morning, which gradually moved across to eastern areas by the evening. Some of the rain was heavy, and hills and coasts were quite misty.

Northern England too had a mostly cloudy start with some rain around, though this moved away quite early in the day and many areas in northern England became bright or sunny during the afternoon. Rain returned during the evening though, and some of this was heavy in the northeast.

Southern England and Wales had a dry and generally sunny day, though there was some early cloud in the Midlands and southeast England to begin with.

It was a warm day over most of England, Wales and eastern Scotland, very warm in parts of southern England. Northern Ireland, western and central Scotland were mostly rather cool.

TUESDAY  
9 JULY 1985SUMMARY  
OF  
BRITISH WEATHER

Northern and central areas of England and North Wales had a cloudy start to the day, with here and there some rain around dawn, whilst southern areas started out clear and dry. During the morning, this cloudy weather moved to other southern areas of England and Wales, though the rain tended to die away. The afternoon over England and Wales was dry with some sunshine in most places.

Northern Ireland had a day of sunny periods and showers, these mostly in the morning. The afternoon was dry but during the evening cloud increased again.

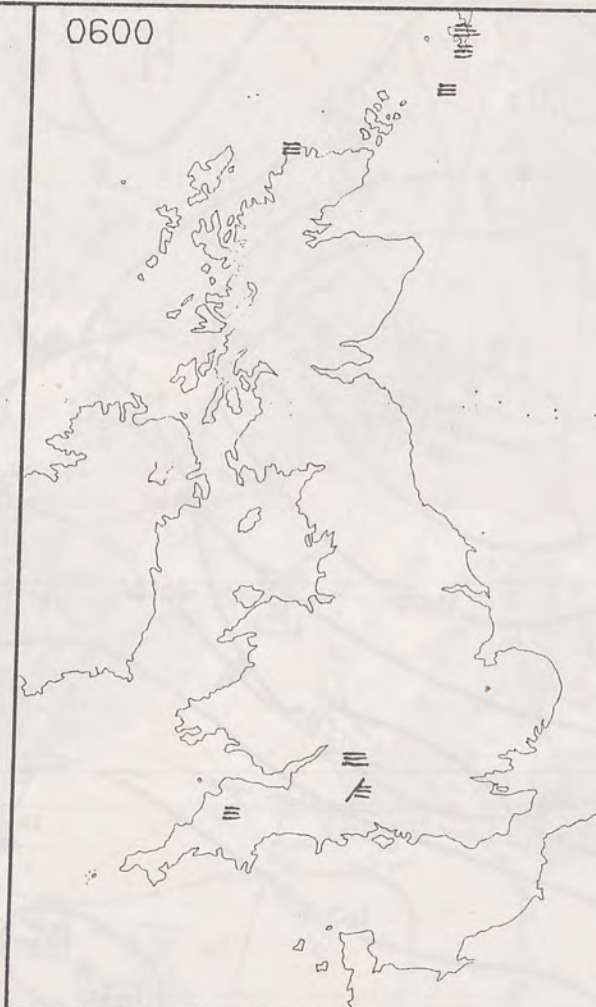

The Shetland Isles were cloudy and misty with drizzle much of the day. Otherwise, mainland Scotland had a fairly cloudy day. There were bright or sunny periods and a few showers in northeast Scotland. During the evening, cloud thickened up in western Scotland but it remained dry.

Temperatures were close to normal almost everywhere.

OF  
BRITISH WEATHER

Much of Britain had a dry night, the exception being the north and west of Scotland where it turned rather wet as the night progressed, with some heavy bursts of rain in places.

During the day most of Scotland had some rain. It was persistent in the more northern and western counties, whilst in parts of southeast Scotland skies brightened up from time to time. Over Northern Ireland the day started with some hazy sunshine; later skies clouded over with some rain coming along during the afternoon and evening.

England and Wales had a good deal of patchy cloud, but skies stayed bright for the most part and in central southern and southeast England there was quite a lot of sunshine. It was a dry day generally but in the late morning and afternoon southwest England had one or two showers.

Parts of southern England had a warm day. Elsewhere temperatures were generally near the normal for early July, though northern and western Scotland had a rather cool day.

THURSDAY  
11 JULY 1985SUMMARY  
OF  
BRITISH WEATHER

Scotland and Northern Ireland had rain at times during the night and in western Scotland and Northern Ireland the rain was occasionally heavy. England and Wales were mainly dry overnight although there was a little rain in northwest England and the Isle of Man towards Dawn.

During the day much of Scotland and Northern Ireland had some further rain but in northeast Scotland amounts were small and it brightened up at times.

Over England and Wales it was cloudy with north England, west and north Wales having rain at times. In parts of northwest Wales the rain was heavy for a time. Later in the day the Midlands, East Anglia and southern England also had a little rain but these areas also had some bright spells.

Temperatures were generally near normal over much of Britain with northeast Scotland becoming warm.

## PLOTTED SURFACE OBSERVATIONS

1800

2400

FRIDAY  
12 JULY 1985SUMMARY  
OF  
BRITISH WEATHER

Overnight Scotland, Wales and northwest and southwest England had rain, heavy in a few places.

After a mainly cloudy start with patches of light rain or drizzle in a few places much of England and Wales had a dry day with bright or sunny intervals. In northern counties there was light rain at times especially in the northwest. In East Anglia and southwest England there was light rain during the evening.

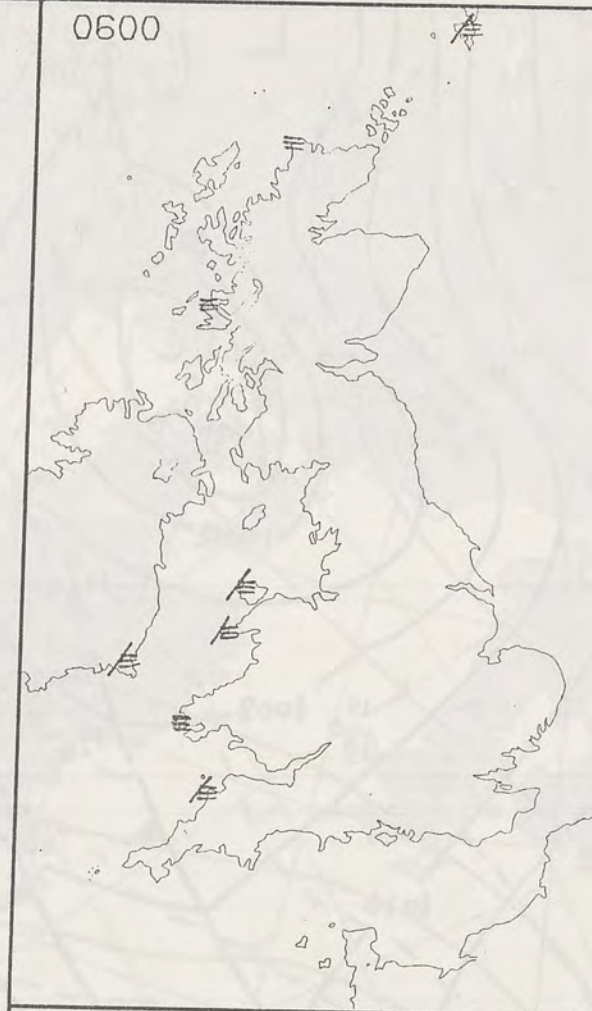

In Scotland and Northern Ireland it was rather cloudy with some rain in most places. An area of more persistent and locally heavy rain moved eastward across much of Scotland during the afternoon and early evening followed by a sunny end to the evening in many places.

Temperatures were near or a little above normal in most places, although west Scotland and West Wales were mostly rather cool.

# SUMMARY OF TISH WEATHER

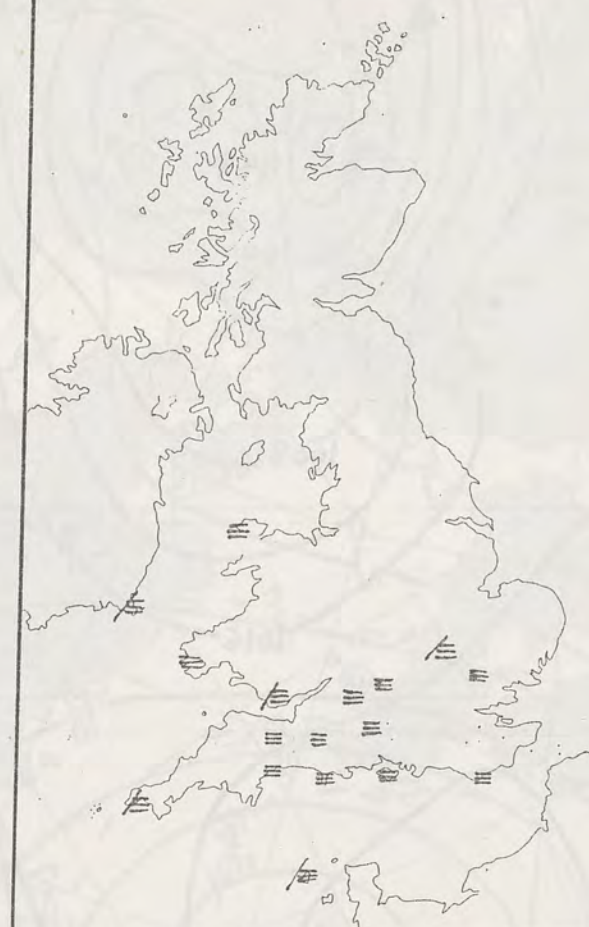

Over much of southern England, the Midlands, East Anglia and Lincolnshire it was sunny much of the day but it turned cloudy later with showery outbreaks of rain during the evening and isolated thunderstorms. In South Wales and southwest England there were sunny spells in the morning but the afternoon and evening was mostly cloudy with outbreaks of rain, and thunderstorms later.

In central and northern Scotland there were sunny periods and scattered showers, the showers chiefly in the far north.

**PLOTTED SURFACE OBSERVATIONS**

**SUNDAY  
14 JULY 1985**

**SUMMARY  
OF  
BRITISH WEATHER**

Rain over southern Scotland and northern England died out during the morning, but not before it had given several hours of heavy rainfall.

The rest of Scotland had a day of sunny or clear intervals and showers, and a few of these showers penetrated further south over Scotland and northern England later in the day.

After some overnight rain, Northern Ireland had a day of sunshine and scattered showers, these mostly during the evening.

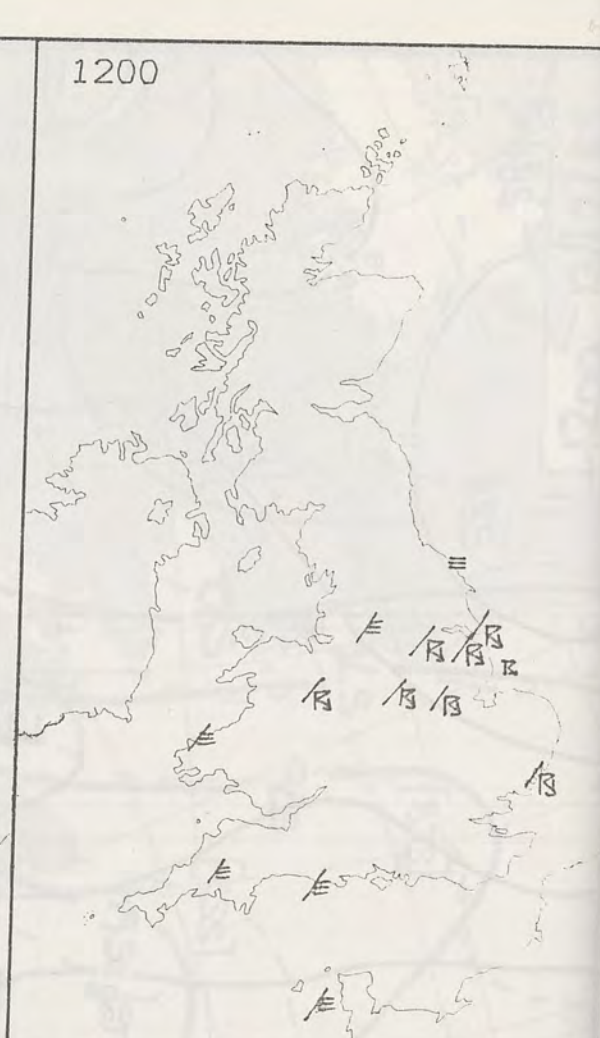

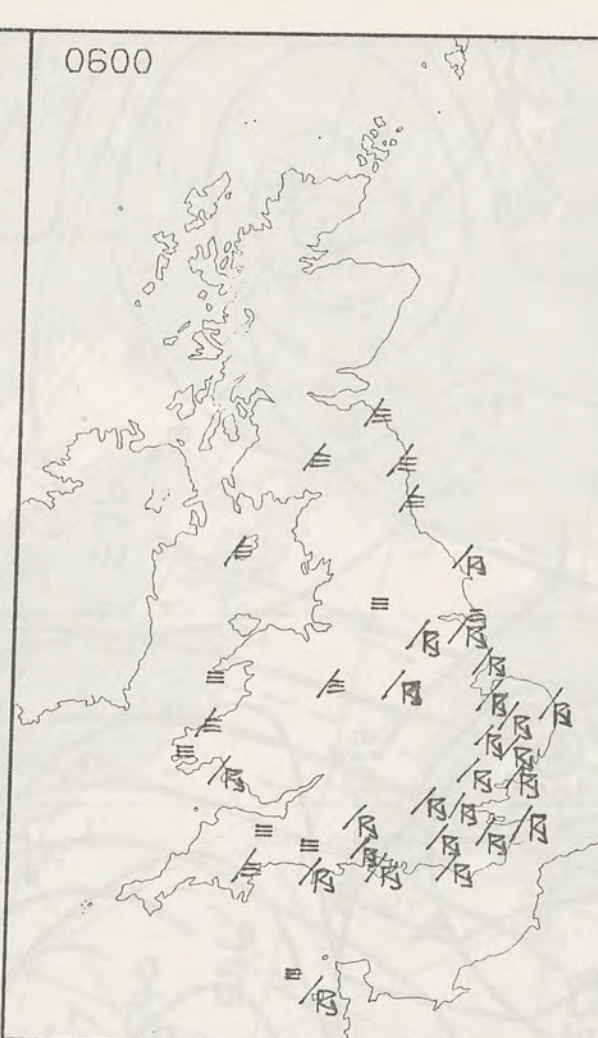

The remainder of England and all of Wales had a cloudy night with thunderstorms around, some quite heavy especially in eastern England. The thunder died away for a while during the morning but returned later in East Anglia and Essex during the afternoon and early evening.

Elsewhere in England and Wales, there was quite a lot of cloud and some outbreaks of rain, though the west became progressively dry as the afternoon wore on.

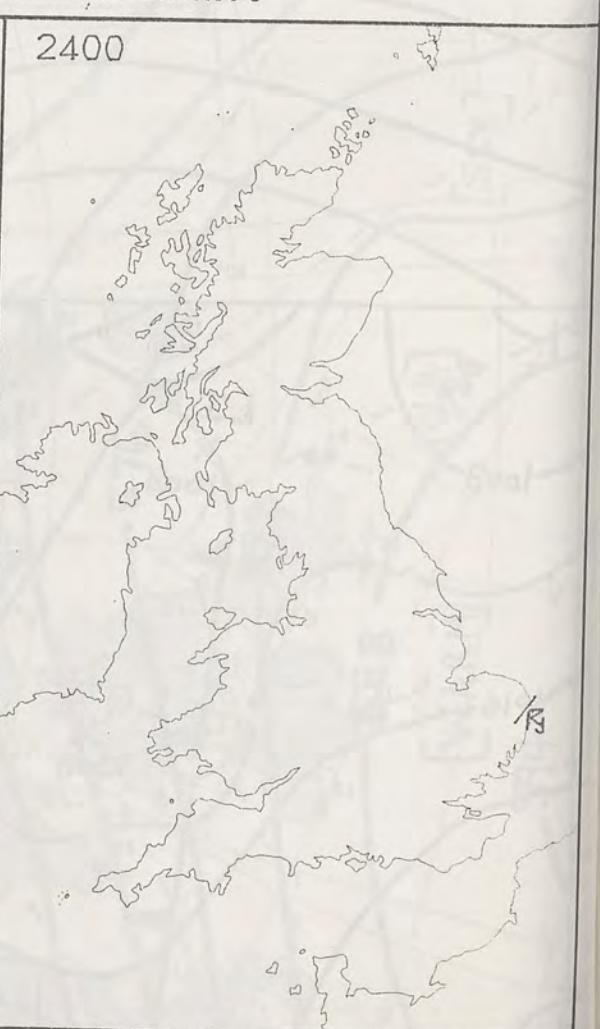

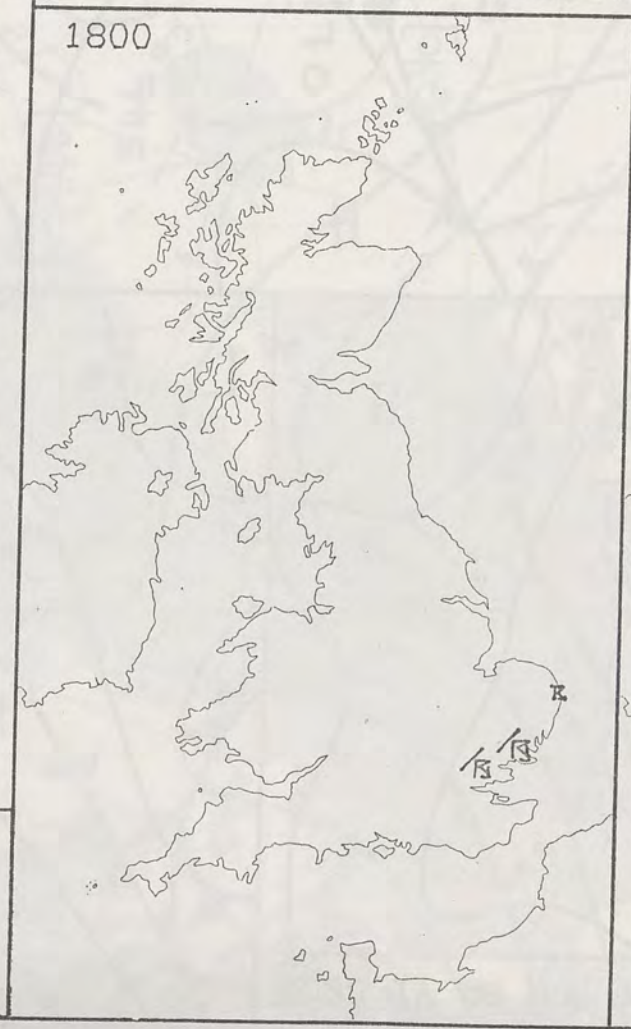

Temperatures were a little below average in most parts, however in East Anglia and southeast England it was warm for a time before the arrival of cooler fresher air by evening.

PLOTTED SURFACE OBSERVATIONS

MONDAY  
15 JULY 1985

SUMMARY  
OF  
BRITISH WEATHER

Most places in the British Isles had a dry night.

Much of Scotland had a sunny start, with showers. The showers continued in eastern and northern areas, but it became cloudy through the day and by evening, rain had spread to the whole of mainland Scotland.

After a bright start in Northern Ireland, it became cloudy with some rain. During the evening, drier weather spread in from the west.

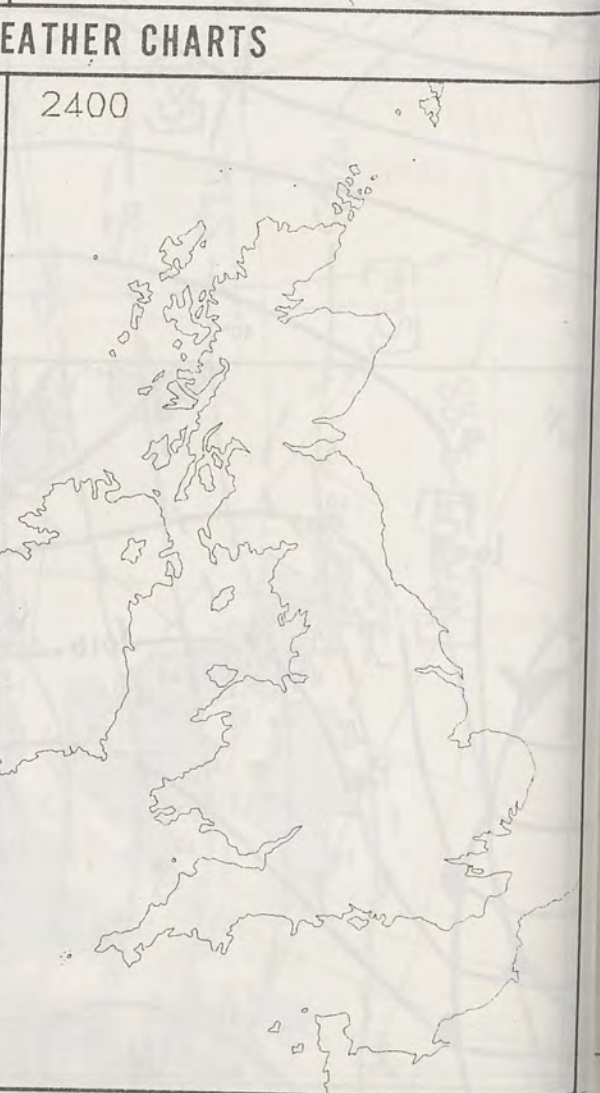

Wales had a bright start, but it did cloud over later, with rain reaching all of Wales by late afternoon, easing off again in the evening.

England started bright or sunny, but cloud increased during the day and rain reached northwest England in early afternoon, the West Midlands by late afternoon. During the early evening, rain broke out in many parts, though amounts were variable.

It was rather cool or cool in most places, however Kent had near normal temperatures.

TUESDAY  
16 JULY 1985SUMMARY  
OF  
BRITISH WEATHER

Much of Scotland had a wet start to the night, but clearer weather over Northern Ireland soon spread across from the west, along with a few showers. In Shetland it stayed wet throughout the night. England and Wales had rain over-night but around dawn it began to clear up in West Wales and the far northwest of England.

During the day Scotland and Northern Ireland had a good deal of cloud and showers but there were enough breaks to let the sun come through at times. Shetland started wet but skies brightened up as drier weather came along in the early afternoon.

2400

Over England and Wales the early morning rain gradually cleared away eastwards but it took until mid afternoon before it finally cleared the extreme east of East Anglia and Kent. A thunderstorm was reported at Manston (Kent) later in the afternoon. Behind the rain belt it was mostly dry with well broken cloud and quite a lot of sunshine.

Temperatures were generally near average or rather below.

## PLOTTED SURFACE OBSERVATIONS

1800

2400

WEDNESDAY  
17 JULY 1985SUMMARY  
OF  
BRITISH WEATHER

England and Wales were dry overnight. Scotland and Northern Ireland started dry but before dawn rain arrived in Northern Ireland and northwest Scotland - some of it quite heavy.

After dawn the rain became more widespread. Over southern Scotland the rain, heavy in places, continued for much of the day easing off only during the evening. Over the rest of Scotland and Northern Ireland the rain became more intermittent during the afternoon and evening, with most places having some sunny spells.

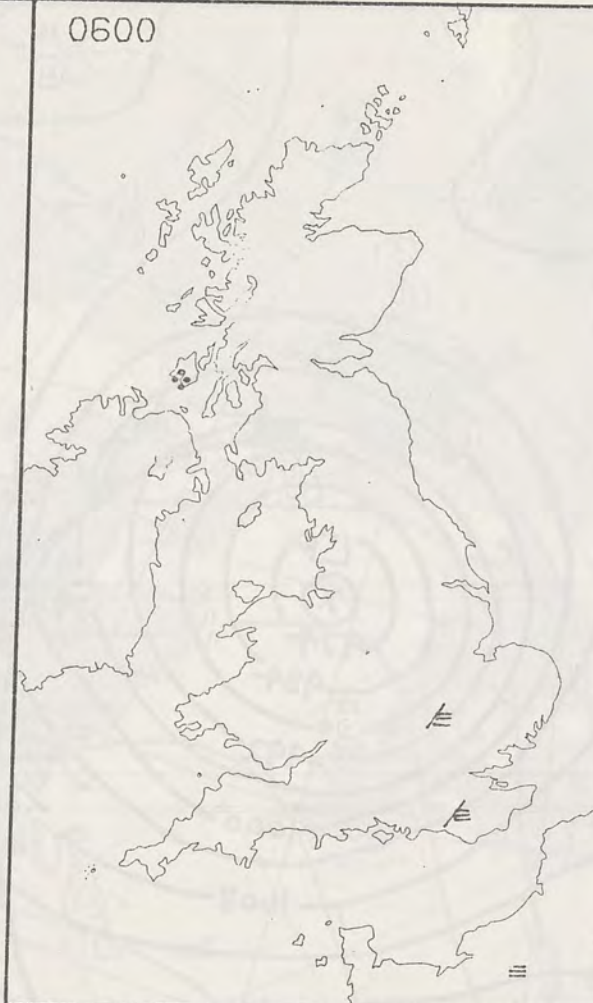

England and Wales were dry at first but during the morning rain spread west across the Isle of Man and parts of West Wales and on into the rest of Wales and northern and southwestern England during the afternoon. The north Midlands had some rain by evening. For the rest of England the day was dry, with a good deal of sunshine through patchy cloud.

In southern Scotland and northwest England it was a rather cool day. Elsewhere temperatures were around the mid-July average.

## PLOTTED SURFACE OBSERVATIONS

1800

2400

THURSDAY  
18 JULY 1985SUMMARY  
OF  
BRITISH WEATHER

A belt of rain moved southeast across southern Britain in the early hours; most of the rain was light, and drier weather followed. However, there were further outbreaks of rain in parts of Northern Ireland and western Scotland.

Rain cleared from most of the southeast soon after dawn, but further rain spread northeast over Sussex and Kent, and parts of Surrey and Essex. Elsewhere in southern England it was generally quite cloudy and there were a few showers. Wales, central and northern England had a fairly bright day, though there was often a lot of cloud and some places had a shower or two.

Many parts of Scotland and Northern Ireland were rather cloudy and showery, with the heaviest and most persistent showers on the western slopes of the Highlands, whilst parts of east and northeast Scotland stayed dry and bright.

It was rather cool in most places.

## PLOTTED SURFACE OBSERVATIONS

1800

2400

FRIDAY  
19 JULY 1985SUMMARY  
OF  
BRITISH WEATHER

It was dry at first, in most places, apart from a few showers in the north and west.

Rain spread into southwest England, South and West Wales by dawn, moving on quickly across the rest of England and Wales by mid-morning. Amounts of rain were small in the extreme north, northwest and southeast, but many other areas had a few hours of cool, wet weather before brighter weather with just one or two showers spread from the west.

The brighter weather reached most places by early afternoon, though it was late in the day before it reached east Norfolk.

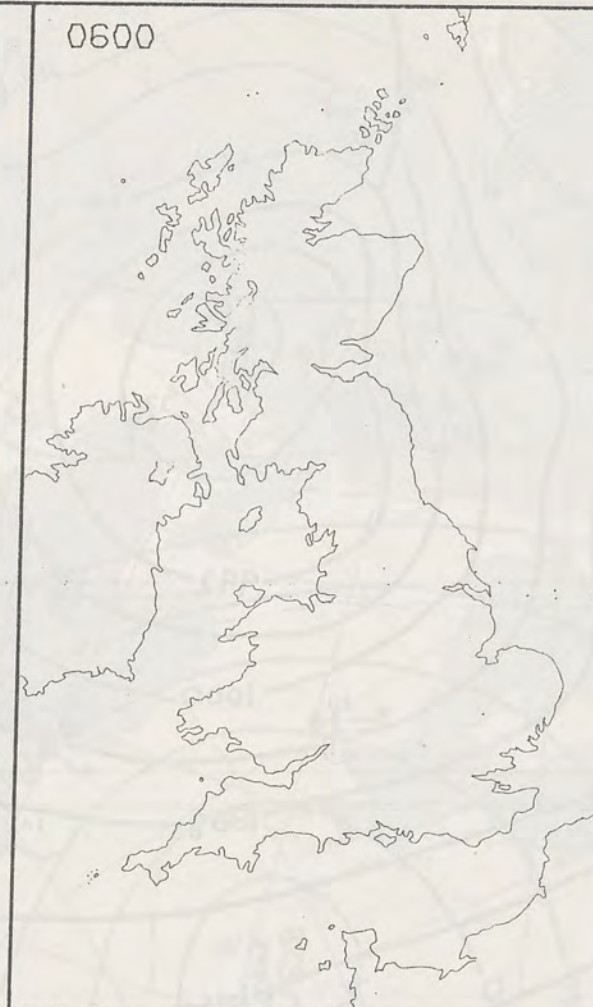

Most places in Scotland and Northern Ireland had sunny spells and showers although some places did escape the showers and stayed dry.

East Anglia and Lincolnshire were cool while the rest of Britain remained rather cool.

SATURDAY  
20 JULY 1985

SUMMARY  
OF  
BRITISH WEATHER

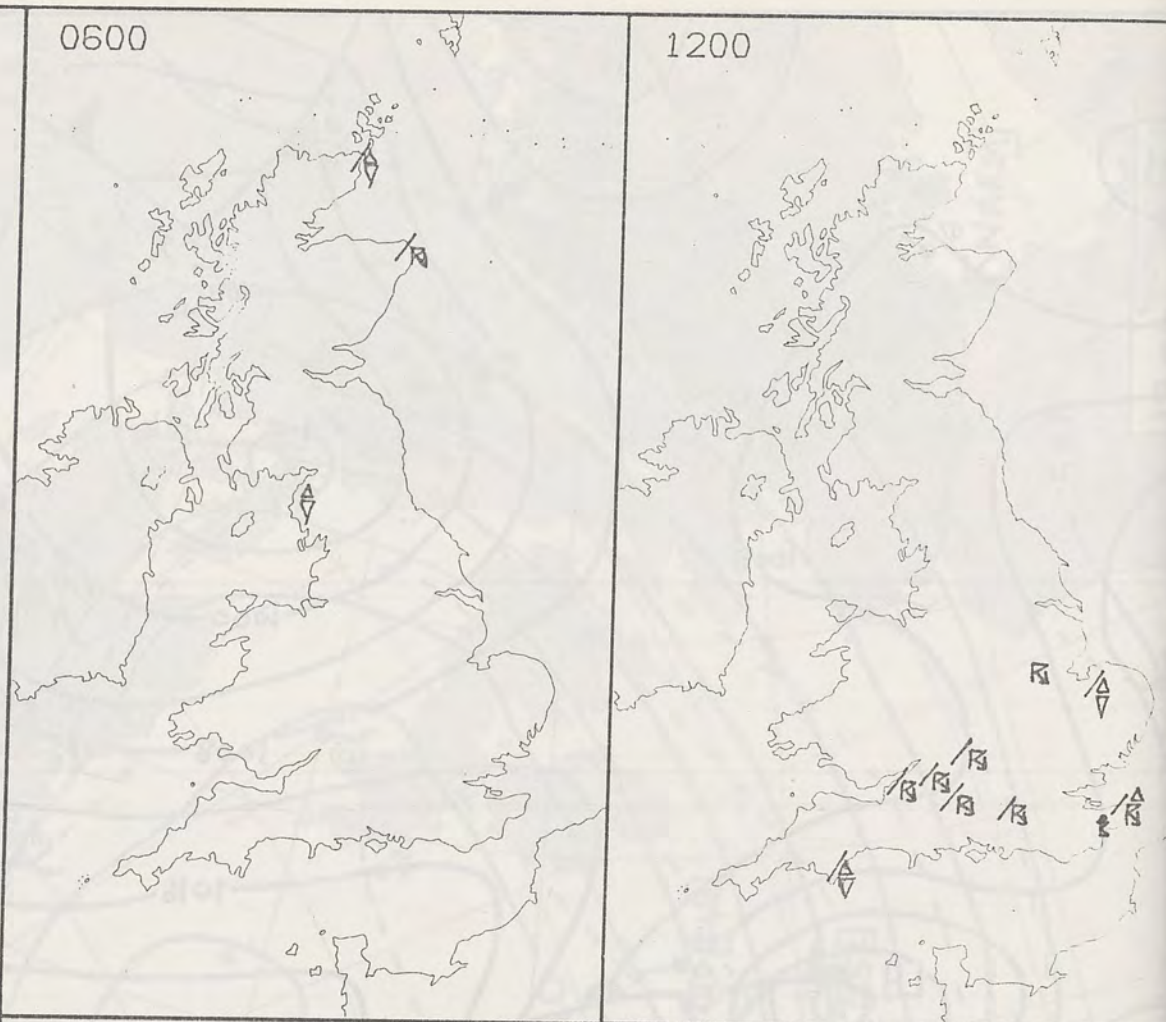

After a dry start in eastern England the whole of Britain had a day of sunshine and blustery showers. The showers became heavy in places and in the south and east of England especially there were some hail showers and a number of thunderstorms. Between the showers however there were some quite long sunny periods. It was cool or rather cool everywhere.

SUNDAY  
21 JULY 1985

SUMMARY  
OF  
BRITISH WEATHER

Overnight there were some mainly light showers, mostly in the northwest of the British Isles.

In parts of the Midlands and northern England during the day there were isolated showers and at least one thunderstorm, (Nottingham midday). Most of eastern and northern England and North Wales had a good deal of sunny weather. In southwestern regions it was mainly cloudy with patches of mainly light rain or drizzle and during the afternoon and evening this cloudier weather extended to most of England and Wales bringing light rain to some places, chiefly central and southern counties.

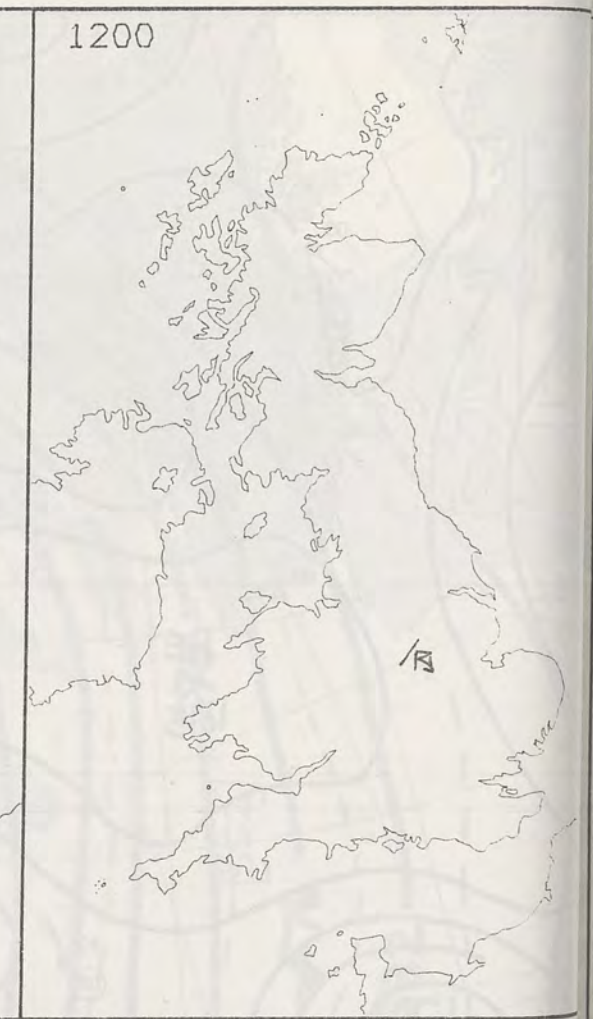

Northern Ireland had a dry day with sunny intervals and only odd light showers in the evening.

In Scotland there were sunny periods and scattered showers, but in the extreme north it was mainly cloudy.

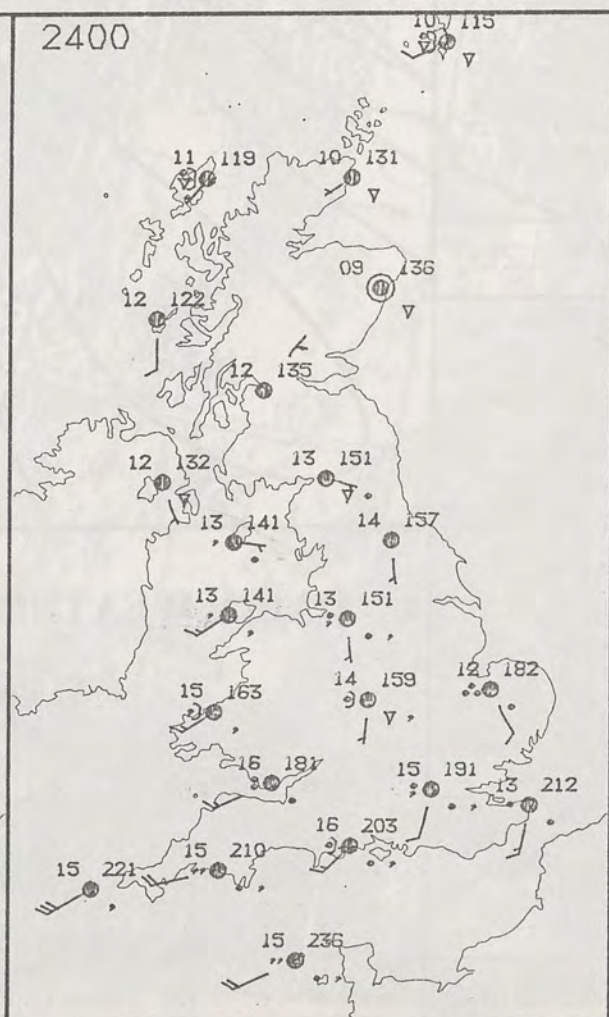

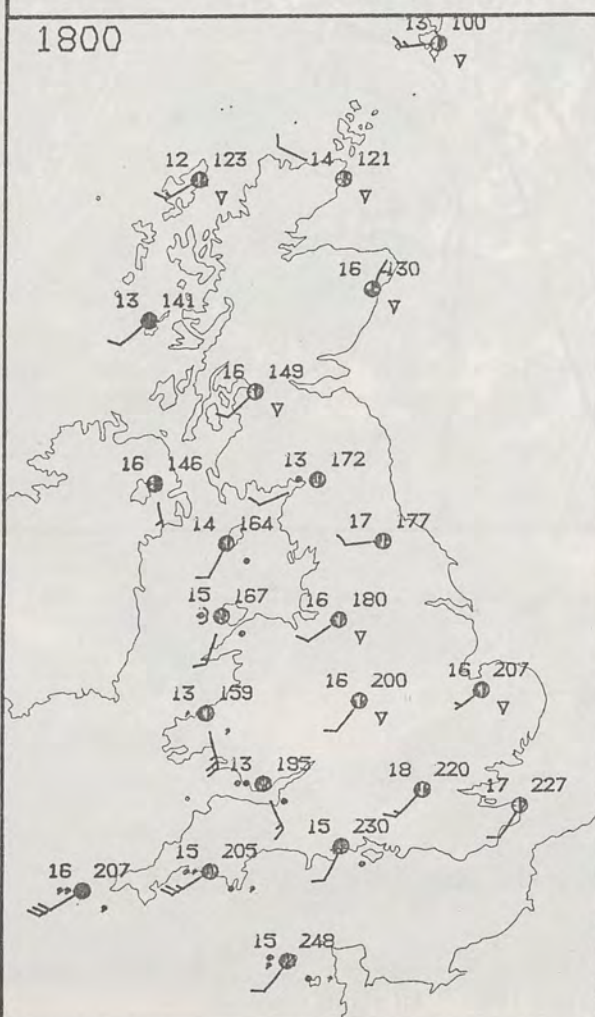

It was rather cool in most regions but in parts of eastern Scotland and southeast England temperatures were near normal.

2400

MONDAY  
22 JULY 1985

SUMMARY  
OF  
BRITISH WEATHER

England and Wales had a dull and damp start to the day with rain, some of it heavy especially in the north and west and over any high ground. It was also misty and foggy around coasts and hills. During the afternoon, somewhat brighter weather spread down from the northwest, clearing the misty, rainy weather away but also allowing a few showers to develop.

Northern Ireland also had a cloudy, dampish start but by late morning, brighter weather with a few showers had spread over the area from the northwest.

Extreme northern Scotland had a day of sunshine and showers, whilst the remainder of Scotland started out dull and wet with some heavy rain in places clearing away during the afternoon then becoming brighter with a little sunshine.

A windy day in many places with gales along the Channel coast. Temperatures were near or rather below normal.

TUESDAY  
23 JULY 1985SUMMARY  
OF  
BRITISH WEATHER

The night was dry and clear in most places, although northern Scotland had occasional light showers.

England and Wales had a dry day, apart from some coastal drizzle in the southwest and the Channel Islands. There was quite a lot of sunshine, though it was cloudier in southwestern and northwestern areas.

Northern Ireland was generally cloudy with some rain at times later though it became generally dry by evening.

Southern and central Scotland, after a sunny start, soon became cloudy with some rain, which was heavy at times and lasted well into the evening.

Northern Scotland had a day of showers.

England and Wales away from western parts were mostly warm, Scotland was rather cool while remaining areas of the British Isles had near normal temperatures.

FRIDAY  
26 JULY 1985SUMMARY  
OF  
BRITISH WEATHER

Over southeast Wales, the Midlands, East Anglia and southern England there was a good deal of dry weather, though it was mostly cloudy. Drizzle or showers fell here and there, and there were one or two thunderstorms early in the day and during the afternoon in the more eastern and northern counties. Some brighter intervals developed in many areas during the day.

Over northern England, North and West Wales, Northern Ireland and Scotland it was generally cloudy with outbreaks of rain and thunderstorms some of which were severe and extensive hill and coastal fog. In quite a few districts, very heavy rain was reported; Ronaldsway, on the Isle of Man had 47 mm in two hours in the early evening and in Newry 36 mm fell in 45 minutes. Giant hailstones, up to 3 cm were recorded at Trassey in the foothills of the Mourne.

Temperatures were mostly not far from normal, but it was cool in southeast Scotland.

SATURDAY  
27 JULY 1985

SUMMARY  
OF  
BRITISH WEATHER

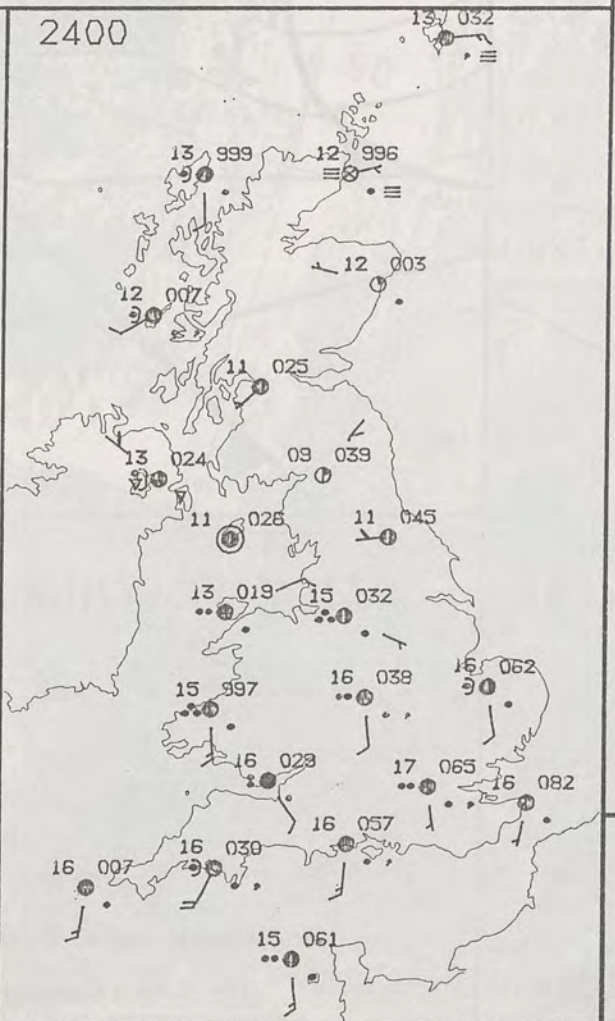

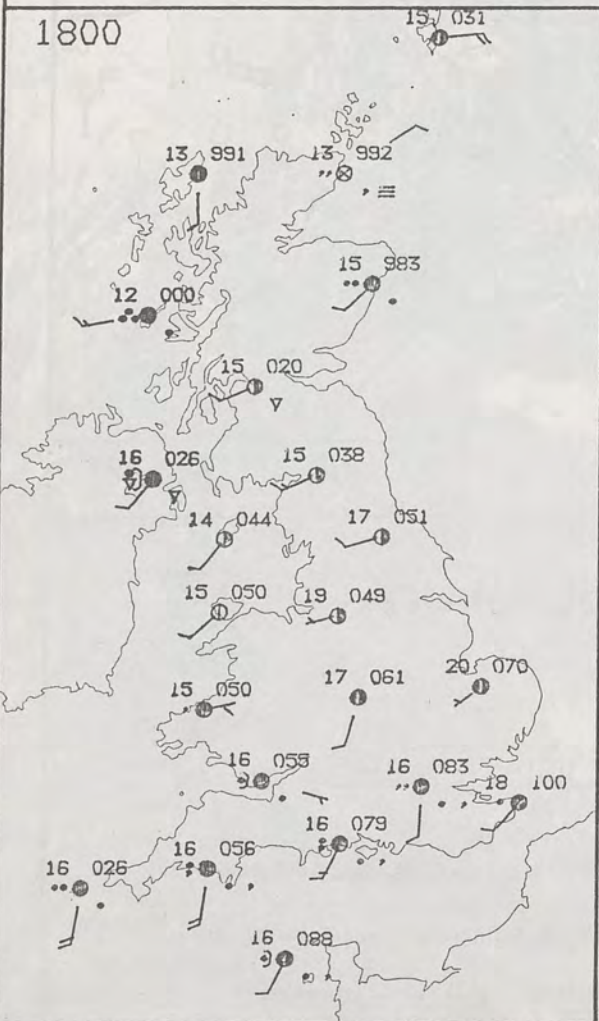

Much of Scotland was cloudy with outbreaks of rain, heavy in places. There was coastal fog in the east and north. However, some brighter spells occurred, especially in northeast Scotland, and Shetland was sunny. The brighter spots were warm, elsewhere it was mostly rather cool. Mostly dry weather with broken cloud spread slowly from the south into southern Scotland during the day.

Over Northern Ireland, England and Wales there was a good deal of dry and bright weather, after a wet start near the Scottish border. There was a fair amount of cloud at times and some light showery outbreaks. More general cloud and rain spread slowly northeast across southern England during the late morning and afternoon, moving up into Wales, the Midlands and East Anglia in the evening.

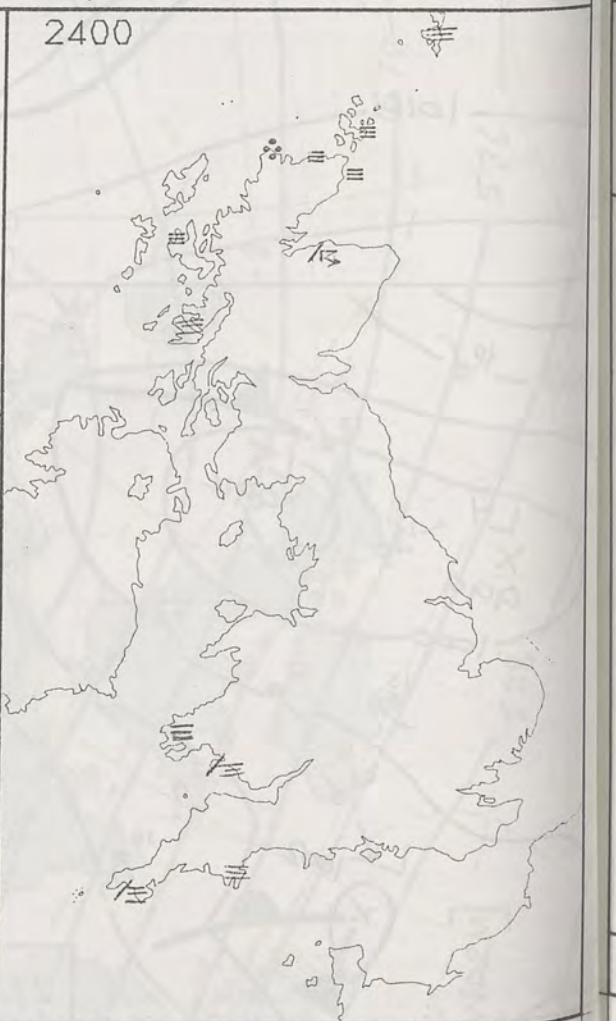

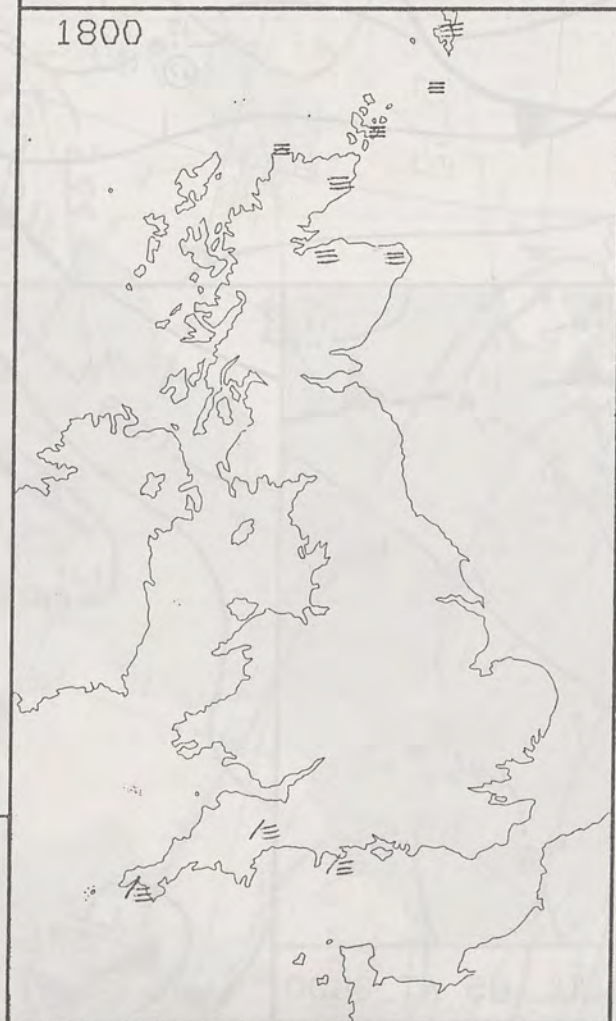

Temperatures were mostly not far from the seasonal normal.

SUNDAY  
28 JULY 1985SUMMARY  
OF  
BRITISH WEATHER

In southern and central parts of England and Wales it was a dull wet morning with some locally heavy bursts of rain. Southwestern counties became brighter with scattered showers during the morning and this brighter weather reached all parts later in the day. Further rain came into southern England during the evening.

In northern England it was a dull wet day but dry brighter weather spread from the south during the evening.

Over much of Scotland and Northern Ireland it was dry at first but rain soon arrived in southern Scotland and Northern Ireland and most of the day was dull and wet. By early evening the rain had extended northward to the Aberdeen and Inverness regions but the far north of Scotland, Orkney and Shetland, had a mainly dry day with sunny periods.

It was rather cool in most regions but in parts of northern Scotland temperatures were near or a little above normal.

MONDAY  
29 JULY 1985

SUMMARY  
OF  
BRITISH WEATHER

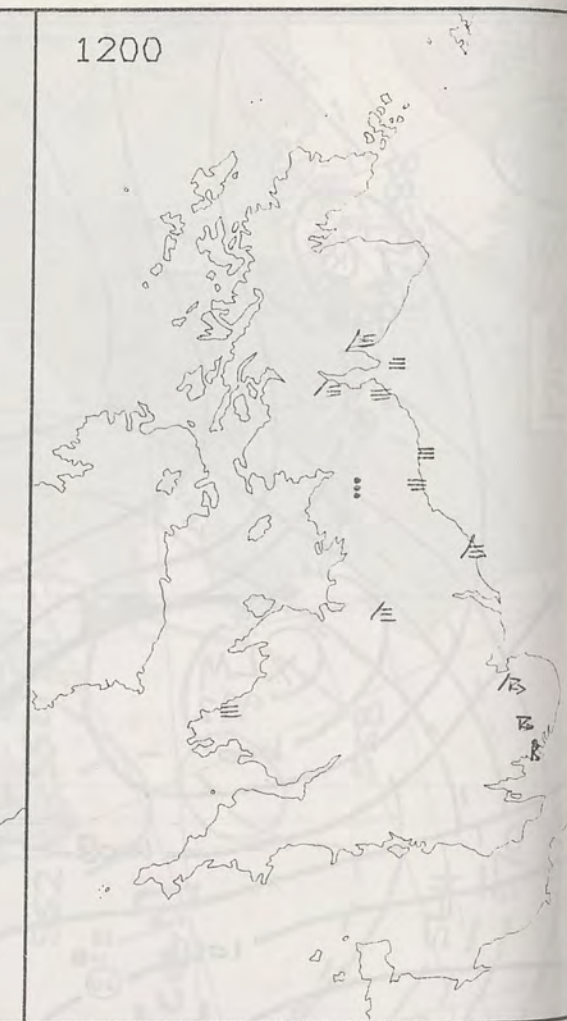

In most regions it was a cloudy day with outbreaks of rain, heavy and thundery in places. In East Anglia there were several thunderstorms. There were some sunny intervals early in the day in East Anglia and southeastern England. In Northern Ireland, western and northern Scotland rain was mostly light and patchy and many places had a mainly dry day with sunny intervals.

Western coastal regions of Scotland became quite warm and in Northern Ireland temperatures were near normal, as they were in parts of Norfolk. Generally however it was a cool day, especially near eastern coasts of northern England and Scotland where it remained dull and misty.

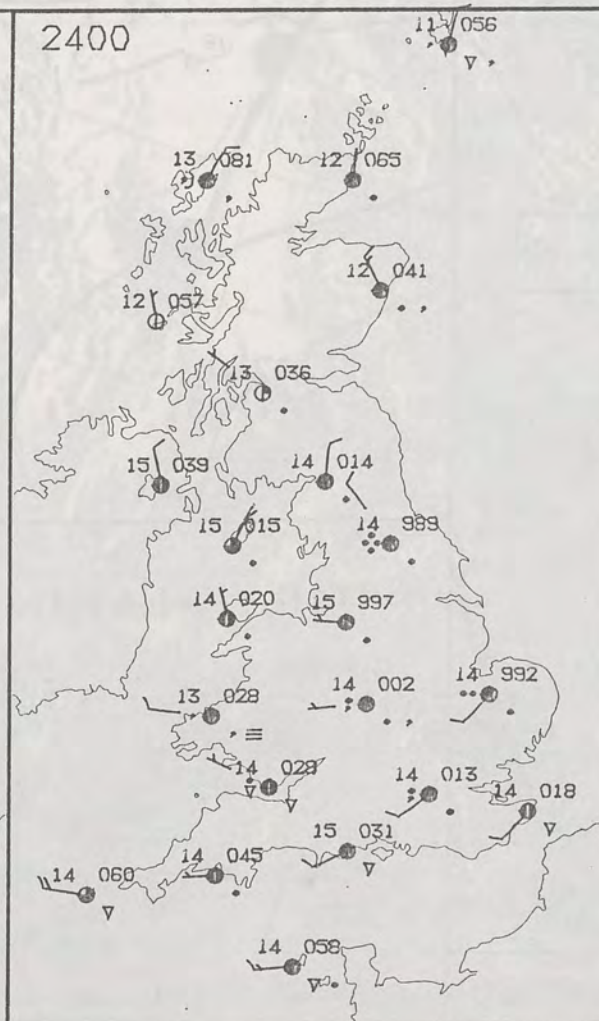

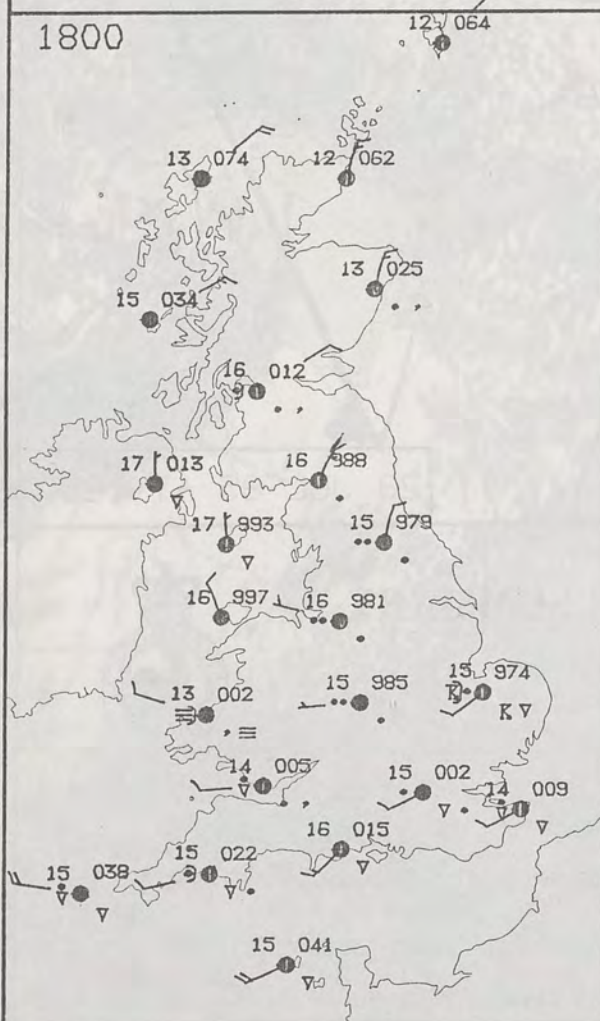

Along southern coasts of England the southwesterly wind reached gale force at times.

TUESDAY  
30 JULY 1985SUMMARY  
OF  
BRITISH WEATHER

Scotland had a cloudy start to the day but southern and western areas became brighter with plenty of sunshine in the south. North and east Scotland remained generally cloudy with rain at times, more especially around the coast.

Northern Ireland had a dry day and a cloudy morning, but some sunshine during the afternoon.

Wales and western England started cloudy with extensive hill and coastal fog, giving some drizzle in places. Through the day, this cloud gradually became more broken and sheltered western areas became quite sunny.

Eastern England started wet with coastal mist. The rain only slowly died away from the north and in northeast England it became quite bright or sunny. Over the rest of eastern England, cloud tended to persist, except for short breaks and there was further rain and isolated thunderstorms, especially in the southeast.

Temperatures were near or a little above normal, but rather cool on the east coast.

WEDNESDAY  
31 JULY 1985

SUMMARY  
OF  
BRITISH WEATHER

Scotland and Northern Ireland had a fairly cloudy day with some coastal drizzle in the north and west at first, and some well scattered showers elsewhere later. However, southeast Scotland had a dry day with some sunshine and there were some bright intervals elsewhere.

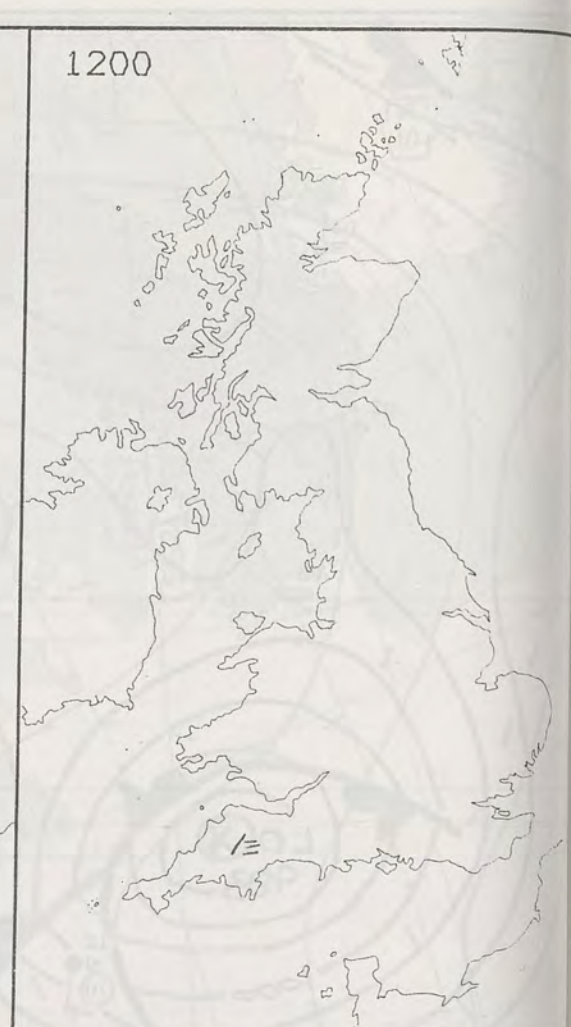

Southeast England, East Anglia and the East Midlands had a reasonable amount of sunshine and it was generally dry once any overnight mist and patchy fog had cleared. There were however some very isolated showers to the southwest of London.

Wales and the rest of England were fairly cloudy, though some sheltered areas did see some reasonable sunshine. It did however become generally cloudy with some light rain in parts of southwest England and this rain cropped up in other areas, mainly in the north and in central southern England.

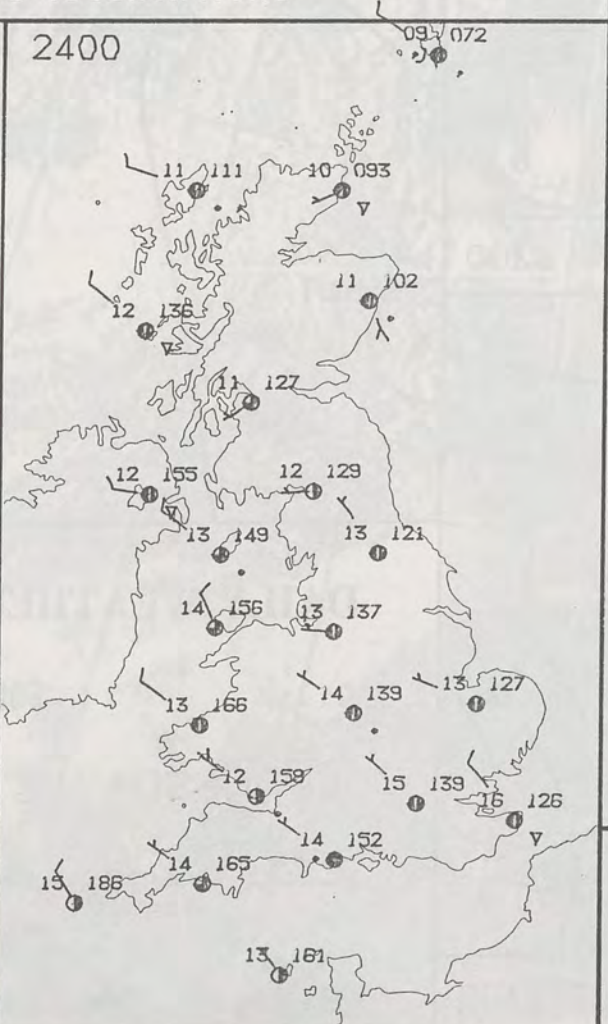

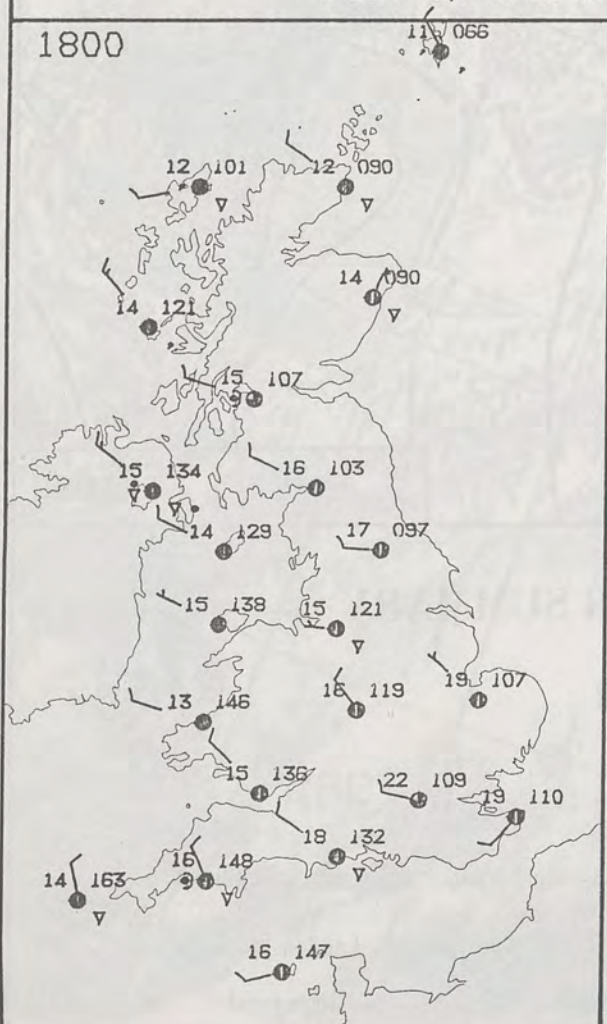

Temperatures were near normal, though cooler on the coast, but parts of southeast England were quite warm.
