Sunday 1 June 2008

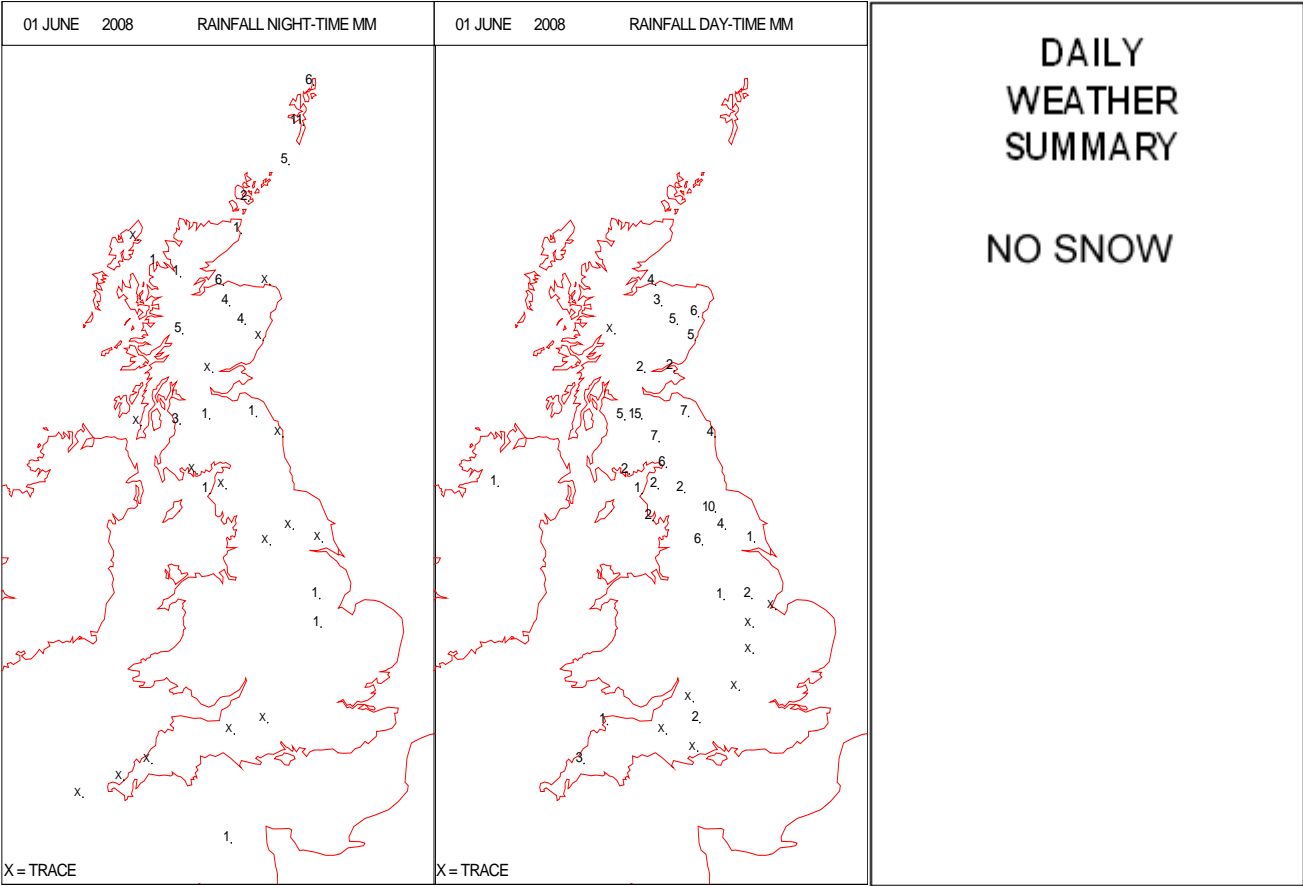

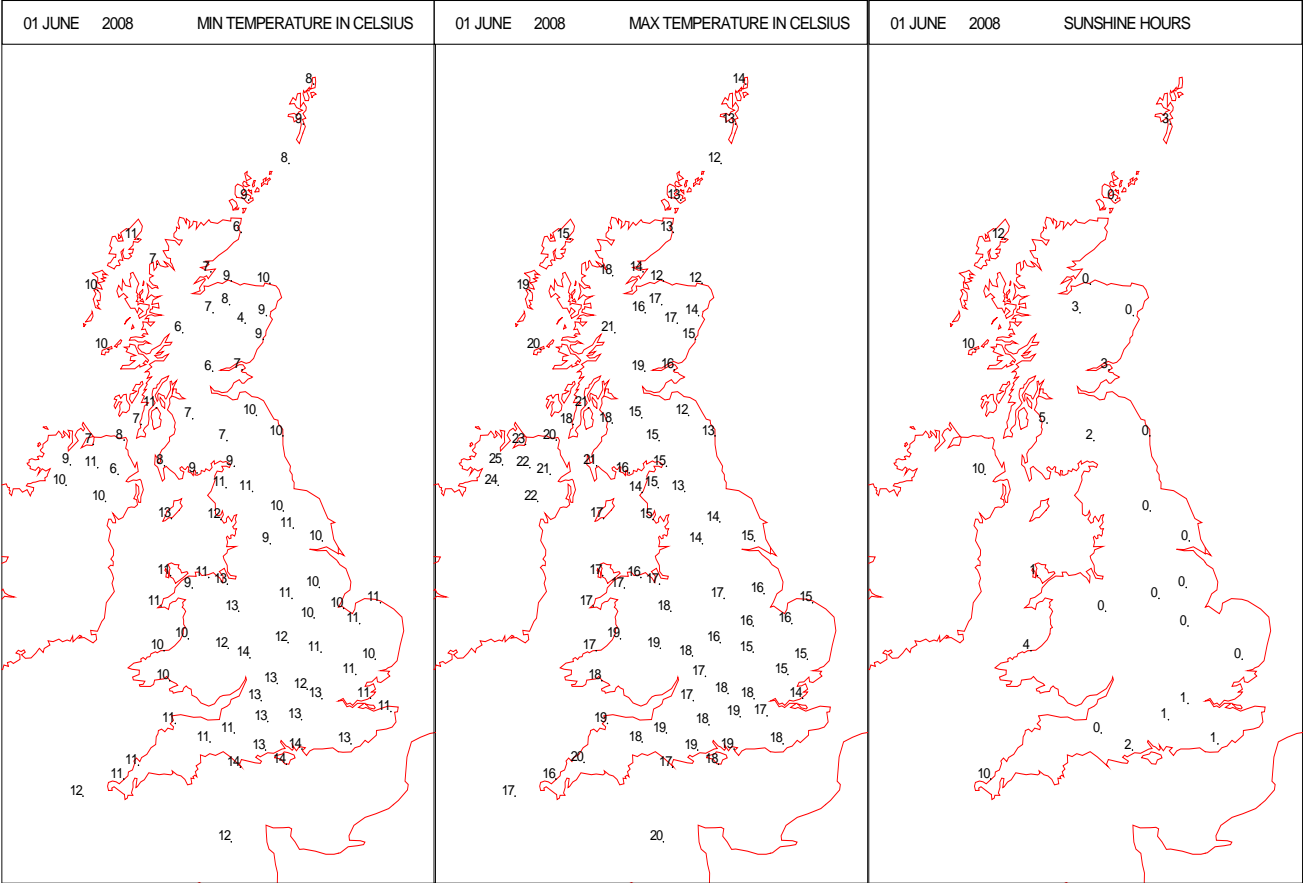

SURFACE REPORTS

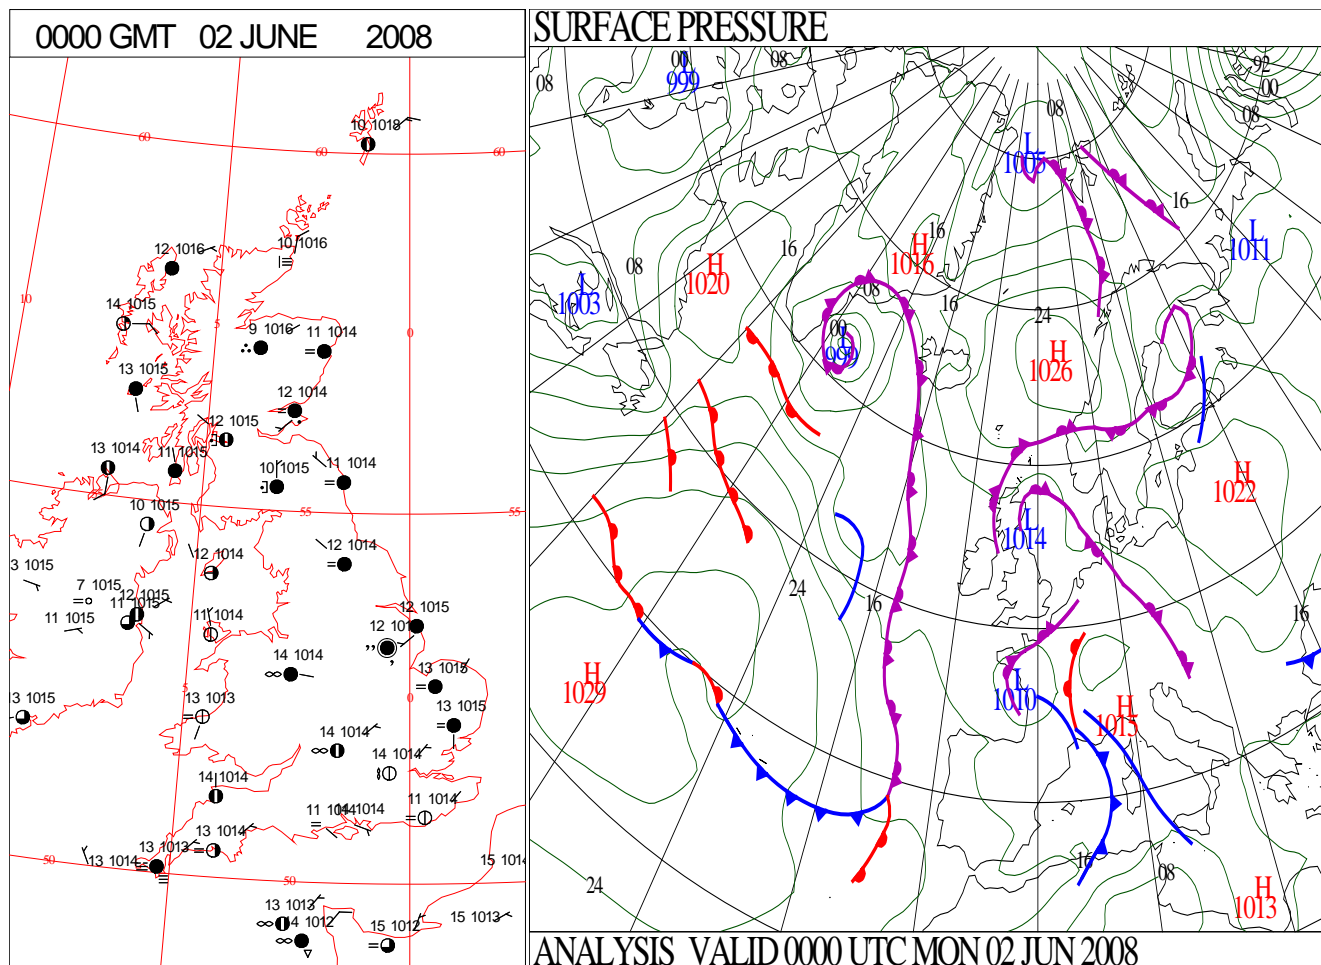

SIGNIFICANT WEATHER

0600 GMT 01 JUNE 2008	SIG WEATHER	1200 GMT 01 JUNE 2008	SIG WEATHER	<p>Summary of UK Weather for Sunday 01 June 2008.</p> <p>It was a wet start to the day in north-east England as an area of persistent rain gradually worked its way north-westwards across the country and into southern Scotland. During the course of the afternoon the rain eventually spread to most parts of Scotland, giving some moderate to heavy rain and the occasional crack of thunder. The rain cleared northern England by the afternoon giving a drier end to the day there.</p> <p>Elsewhere it was a similar story to the day before, with most places remaining dry and with broken cloud allowing some sunny spells. The sunniest part of the UK was Northern Ireland, where extended cloud-free periods allowed for the highest temperatures of the day. However, this warmth did mean that heavy showers broke out in the afternoon. Showers, locally heavy, also broke out across south-west England and Wales from the late morning, but had mostly died away by the evening.</p> <p>Temperatures were generally at or above average for the time of year except in areas which had cloud and rain all day, where it was cooler than average.</p>
1800 GMT 01 JUNE 2008	SIG WEATHER	0000 GMT 02 JUNE 2008	SIG WEATHER	
				<p>EXTREMES</p> <p>Highest Maximum: 24.5 Castlederg, Tyrone</p> <p>Lowest Maximum: 11.7 Rosehearty, Aberdeenshire</p> <p>Lowest Minimum: 4.4 Aboyne No 2, Aberdeenshire</p> <p>Lowest Grass Minimum: -1.6 Aboyne No 2, Aberdeenshire</p> <p>Most Rain: 15.4 Drumalbin, Lanarkshire</p> <p>Most Sun: 11.8 Guernsey: Airport, Guernsey</p>

SURFACE REPORTS

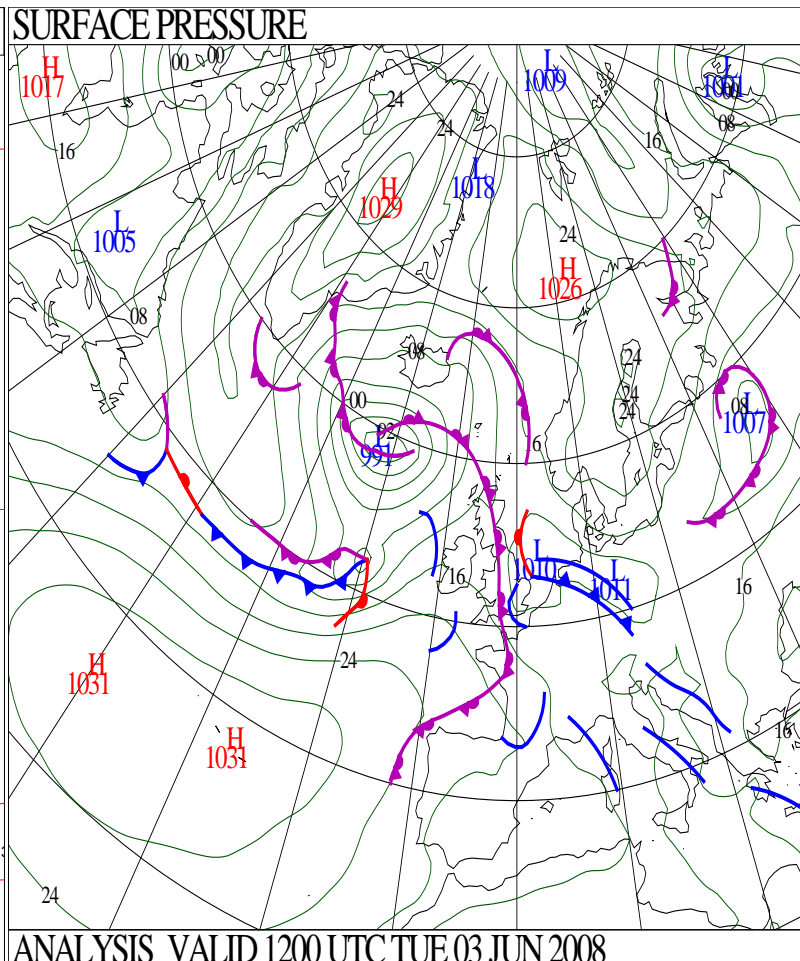

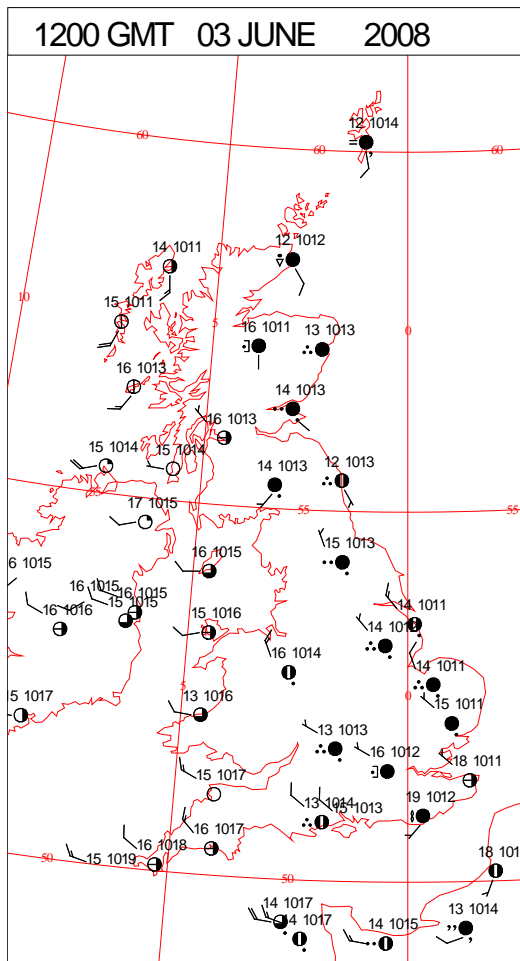

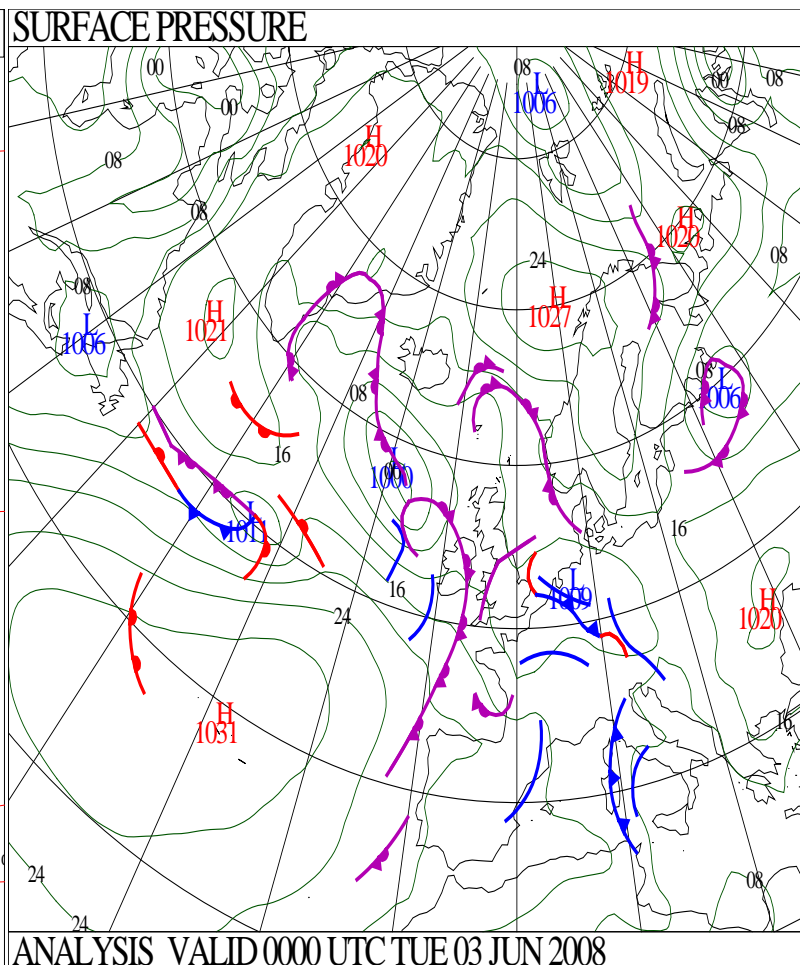

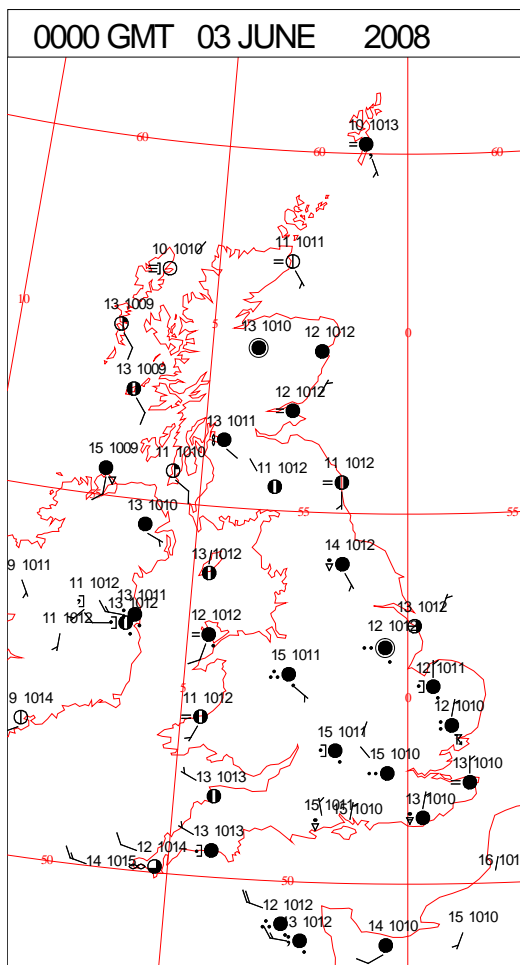

SIGNIFICANT WEATHER

0600 GMT 02 JUNE 2008	SIG WEATHER	1200 GMT 02 JUNE 2008	SIG WEATHER	<p>Summary of UK Weather for Monday 02 June 2008.</p> <p>Most parts had a dry night, apart from northern Scotland where there was some showery rain. It was fairly misty in south-west England and in southern parts of Wales, although the mist became confined to coastal areas during the morning. Northern parts of the country stayed dry during the day. Locally very heavy showers and isolated thunderstorms moved into south-west England and then into Wales during the afternoon, before easing later in the evening. The western side of Northern Ireland also had some heavy showers and the warmest temperatures were recorded in Northern Ireland, with a high of 24 °C in Castlederg. Other parts of the UK had near average temperatures and it was slightly cooler than average in the south-east. Later in the day another area of showers moved into south-east England from France, and then tracked through Lincolnshire and into Yorkshire during the evening. These showers became very heavy and thundery as they moved northwards, giving sharp downpours in places.</p>
1800 GMT 02 JUNE 2008	SIG WEATHER	0000 GMT 03 JUNE 2008	SIG WEATHER	<p>EXTREMES</p> <p>Highest Maximum: 24.2 Castlederg, Tyrone</p> <p>Lowest Maximum: 11.6 Fair Isle, Shetland</p> <p>Lowest Minimum: 6.4 Castlederg, Tyrone</p> <p>Lowest Grass Minimum: 2.9 Aldergrove, Antrim 2.9 Glenanne No 2, Armagh</p> <p>Most Rain: 31.0 Guernsey: Airport, Guernsey</p> <p>Most Sun: 1.0 St Mawgan, Cornwall</p>

SURFACE REPORTS

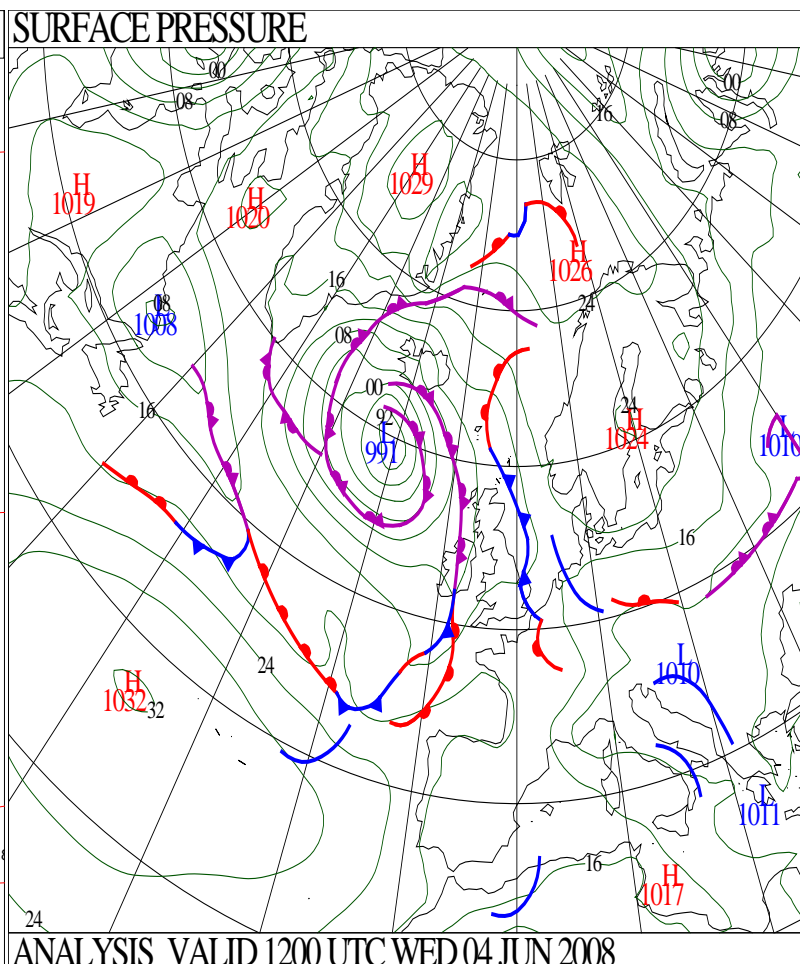

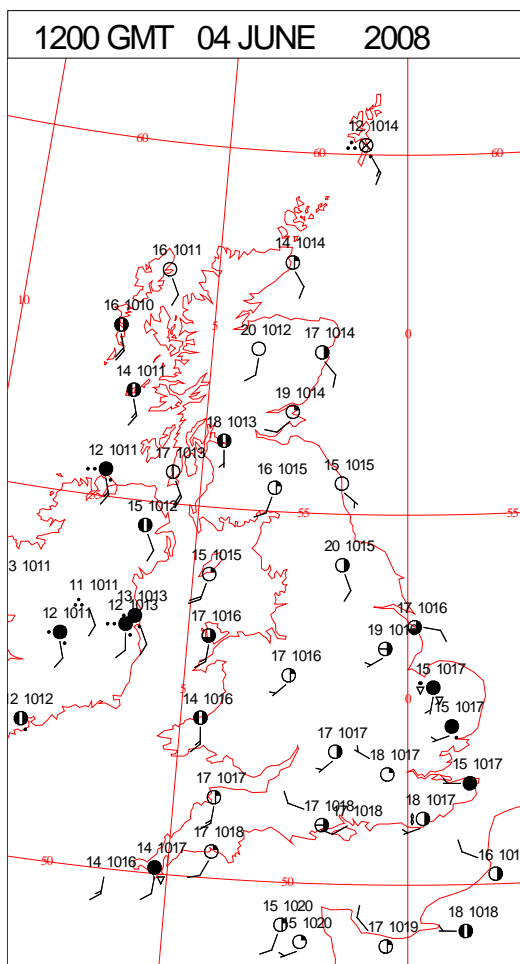

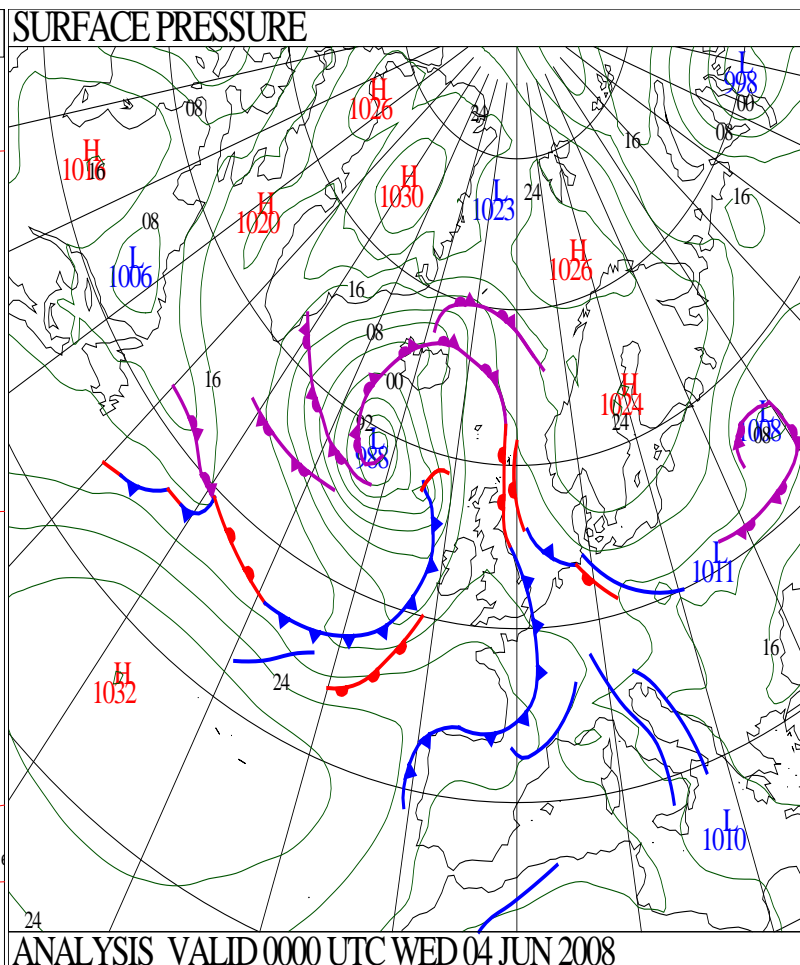

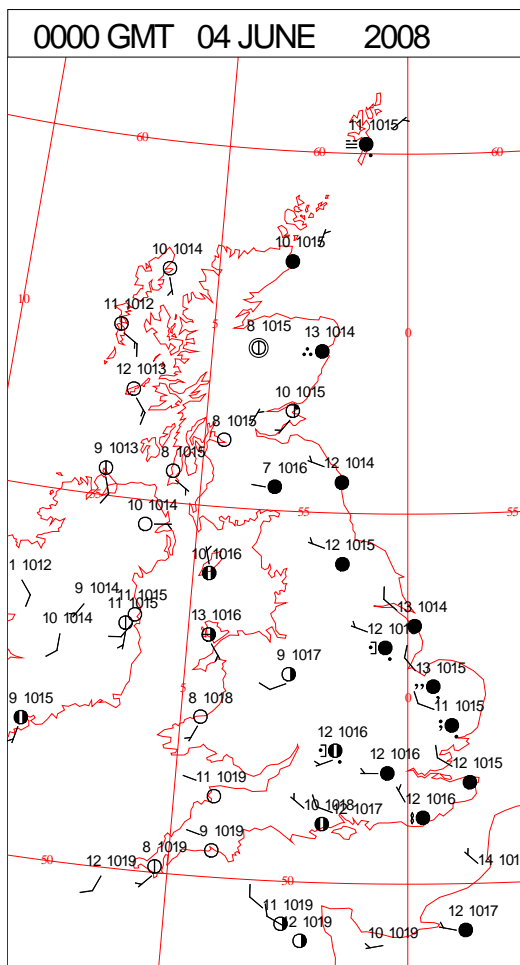

SIGNIFICANT WEATHER

0600 GMT 03 JUNE 2008	SIG WEATHER	1200 GMT 03 JUNE 2008	SIG WEATHER	<p>Summary of UK Weather for Tuesday 03 June 2008.</p> <p>A band of heavy rain from central southern England to eastern Scotland in the morning became heavier, especially in the south and then persisted through much of the day bringing 30–40mm over much of central southern England. Further thundery showers broke out over Kent later after some sunshine raised temperatures there. Much of Northern Ireland, western Wales and the far west of England were drier and brighter with much less rain. Through the afternoon, this drier and brighter weather slowly pushed westwards to affect more of the UK, but it remained cloudy further east, with further outbreaks of rain through the evening, heavy at times across north-east England.</p>
1800 GMT 03 JUNE 2008	SIG WEATHER	0000 GMT 04 JUNE 2008	SIG WEATHER

SURFACE REPORTS

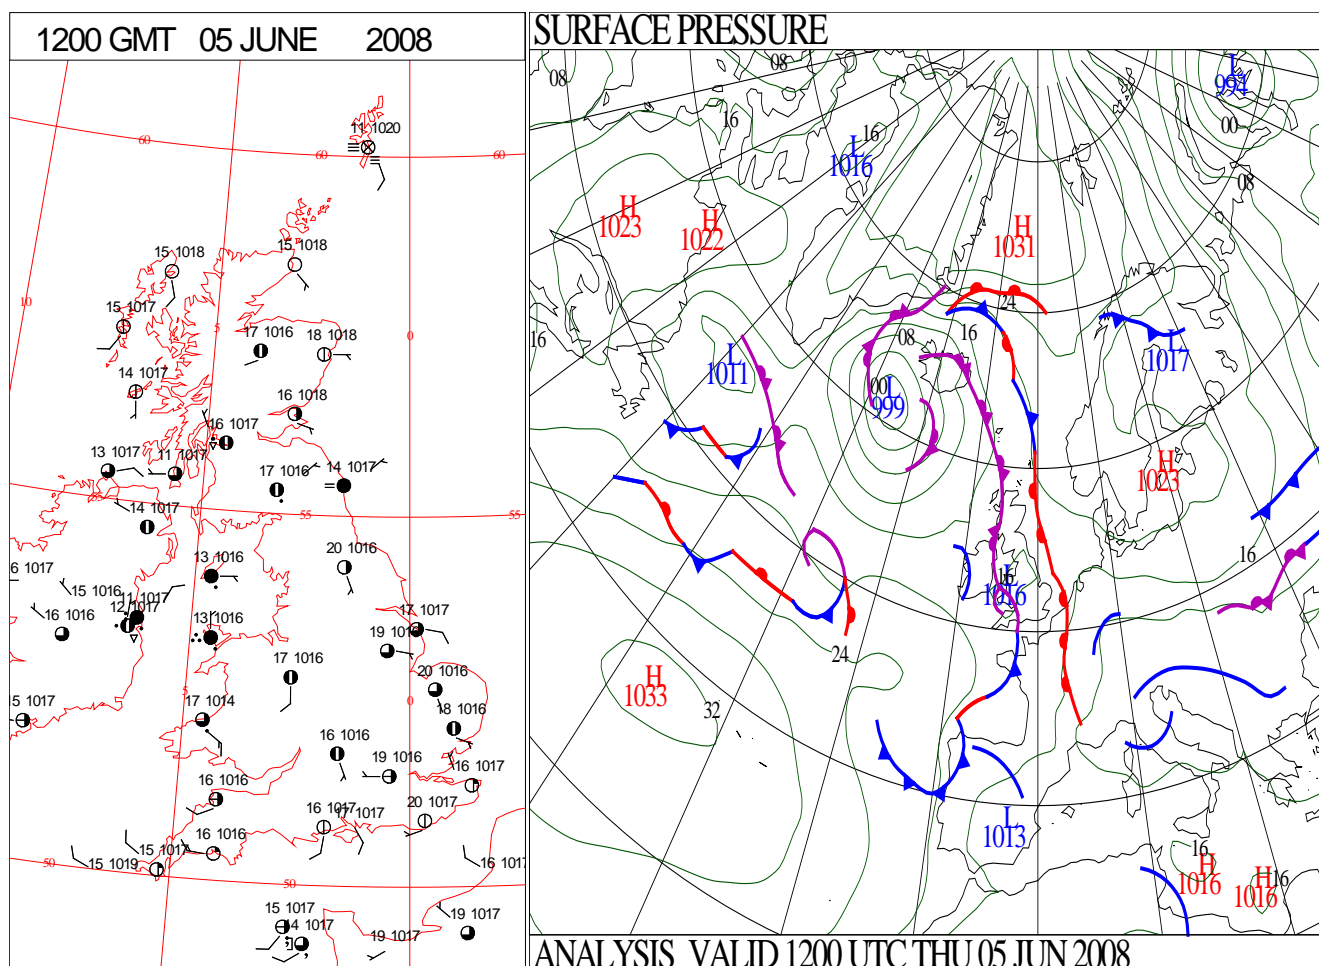

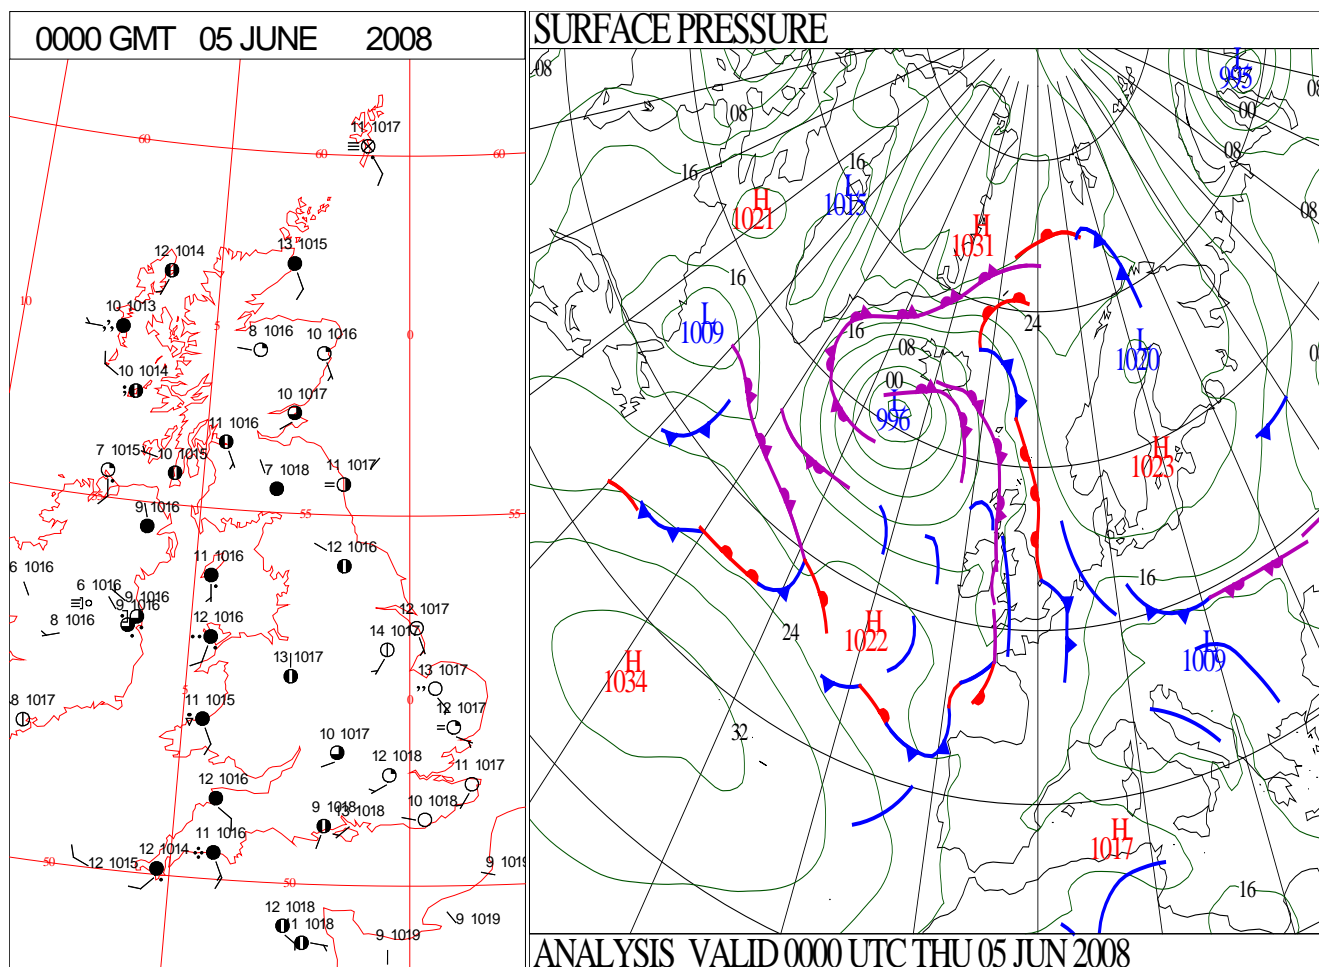

SIGNIFICANT WEATHER

0600 GMT 04 JUNE 2008	SIG WEATHER	1200 GMT 04 JUNE 2008	SIG WEATHER	<p>Summary of UK Weather for Wednesday 04 June 2008.</p> <p>The west and the east were cloudy and the northern and central regions of England and Scotland were mostly clear and dry with good levels of sunshine. In the morning eastern parts of Scotland had the last of the rain from yesterday's band of rain, with some thundery downpours over the Orkney Islands. Patchy rain also held on until the afternoon in the south of England. Heading eastwards the new weather system brought a band of rain over Northern Ireland in the morning, gradually reducing in the evening to become patchier; the rain slowly expanded to affect Wales and Cornwall in the afternoon, this was mostly patchy rain. Some of the highest winds were observed in the North Channel with fresh breezes and strong gusts affecting some exposed coastal regions. Strong gusts were also observed on the western tip of Cornwall.</p> <p>The north of England and Scotland had some warm temperatures for the time of year but warmest temperatures occurred in the south of England. East Anglia was cooler but still above average, coolest temperatures occurred in Northern Ireland.</p>
1800 GMT 04 JUNE 2008	SIG WEATHER	0000 GMT 05 JUNE 2008	SIG WEATHER

SURFACE REPORTS

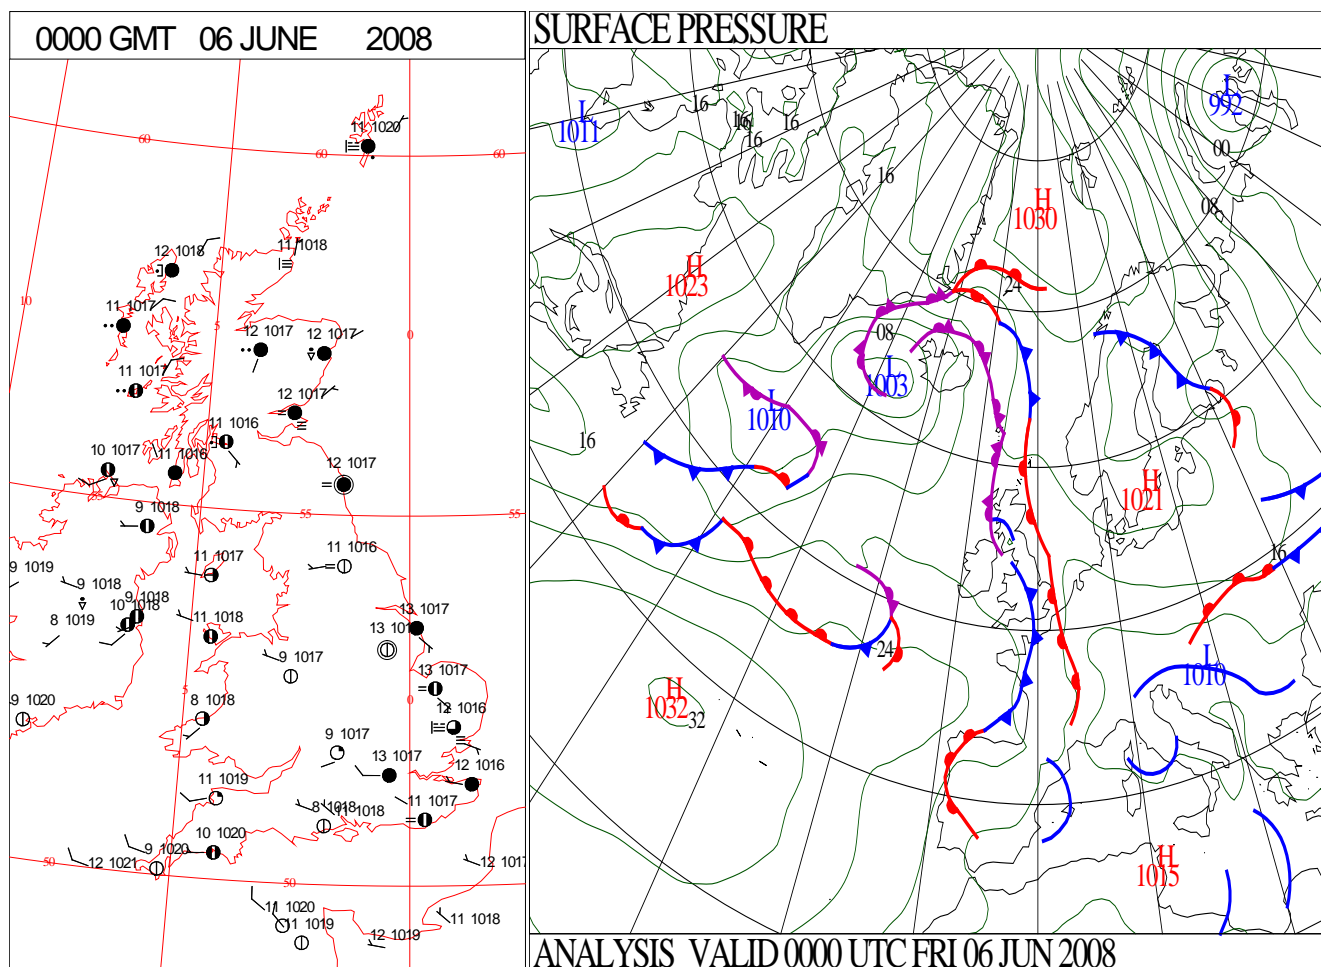

SIGNIFICANT WEATHER

0600 GMT 05 JUNE 2008	SIG WEATHER	1200 GMT 05 JUNE 2008	SIG WEATHER	<p>Summary of UK Weather for Thursday 05 June 2008.</p> <p>The UK lay in the middle of two weather systems on the east and west. The effect of this 'squeeze' was cloud in the eastern and western regions, with sunshine developing in the south-west and the Midlands. A band of rain moved from the southeast in the morning up through Wales and then on to Northern Ireland in the afternoon. Following the band of rain Wales had some thundery showers in the afternoon whereas the south-west cleared up and became bright and sunny. Some heavier thundery showers occurred in southern Scotland and Northern England. In the afternoon East Anglia had some patchy rain from the other weather system coming back in from the east. The north of England had some warm temperatures, Scotland and south Wales had average temperatures. The south had some of the warmest temperatures with average and slightly above average temperatures for the season. Northern Ireland had some of the coolest temperatures being average and just below average.</p>
1800 GMT 05 JUNE 2008	SIG WEATHER	0000 GMT 06 JUNE 2008	SIG WEATHER	<p>EXTREMES</p> <p>Highest Maximum: 21.5 Linton On Ouse, North Yorkshire</p> <p>Lowest Maximum: 21.5 Leeming, North Yorkshire</p> <p>Lowest Minimum: 12.6 Lerwick, Shetland</p> <p>Lowest Minimum: 2.5 Aboyne No 2, Aberdeenshire</p> <p>Lowest Grass Minimum: -1.5 Aboyne No 2, Aberdeenshire</p> <p>Most Rain: 7.4 Warcop Range, Cumbria 7.4 Valley, Gwynedd</p> <p>Most Sun: 10.9 Brize Norton, Oxfordshire</p>

SURFACE REPORTS

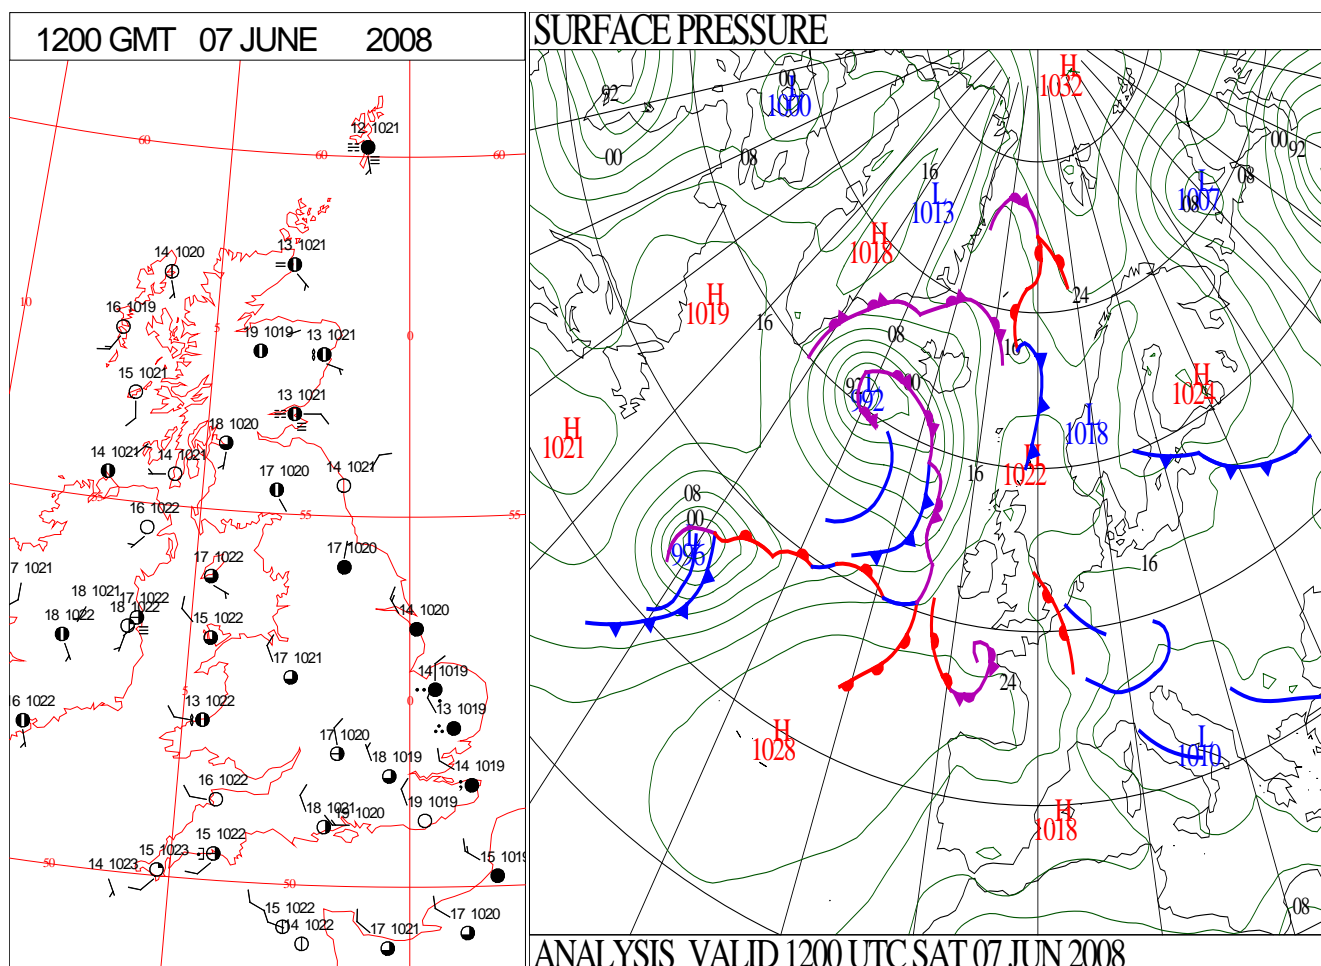

SIGNIFICANT WEATHER

0600 GMT 07 JUNE 2008	SIG WEATHER	1200 GMT 07 JUNE 2008	SIG WEATHER	<p>Summary of UK Weather for Saturday 07 June 2008.</p> <p>It was a fairly quiet day for most of the UK although quite cool for areas of eastern England. An area of rain moving north-west over eastern England became fragmented by the morning leaving the north-east coast of England dry and cloudy. However, the rain stagnated over East Anglia and the far south-east of England to give a murky, drizzly day.</p> <p>Elsewhere, some sharp showers developed over south-west England, especially over Exeter and Plymouth. The remainder of England, Scotland, Wales and Northern Ireland saw a largely dry and cloudy day with some patchy spells of sunshine. The brightest areas were the far south-west of Wales and England.</p> <p>Under the cloud and rain, parts of southern and eastern England struggled with temperatures that were average or below average for the time of year. Northern England's temperatures were slightly above average, however. Wales, Scotland and Northern Ireland also had average or slightly above average temperatures, this was most noticeable in southern Scotland.</p> <p>All areas had light winds — from the south-west in Northern Ireland and Scotland, and from the north-west in England and Wales.</p>
1800 GMT 07 JUNE 2008	SIG WEATHER	0000 GMT 08 JUNE 2008	SIG WEATHER	<p>EXTREMES</p> <p>Highest Maximum: 22.5 Aviemore, Inverness-Shire</p> <p>Lowest Maximum: 12.7 Fair Isle, Shetland</p> <p>Lowest Minimum: 3.6 Pembrey Sands, Dyfed</p> <p>Lowest Grass Minimum: -2.3 Shawbury, Shropshire</p> <p>Most Rain: 5.8 Wattisham, Suffolk</p> <p>Most Sun: 15.0 Jersey: Airport, Jersey 15.0 St Mawgan, Cornwall</p>

SURFACE REPORTS

SIGNIFICANT WEATHER

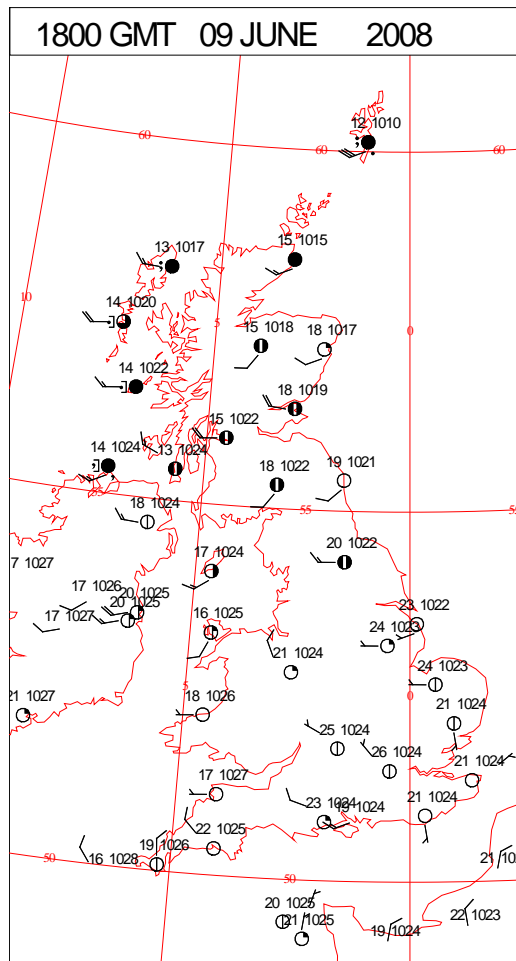

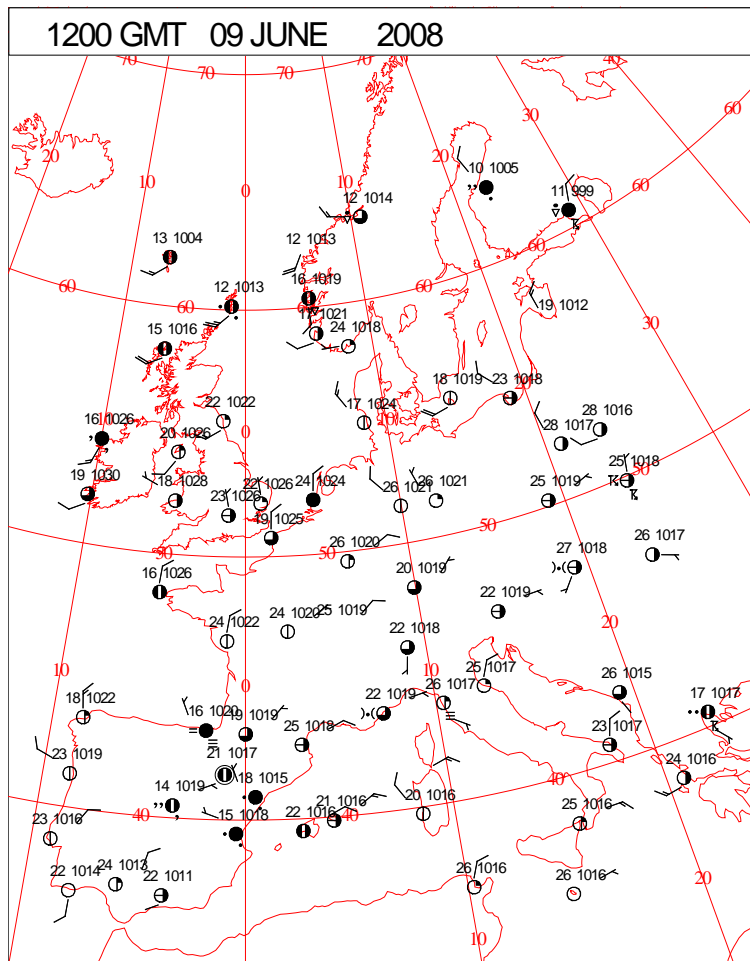

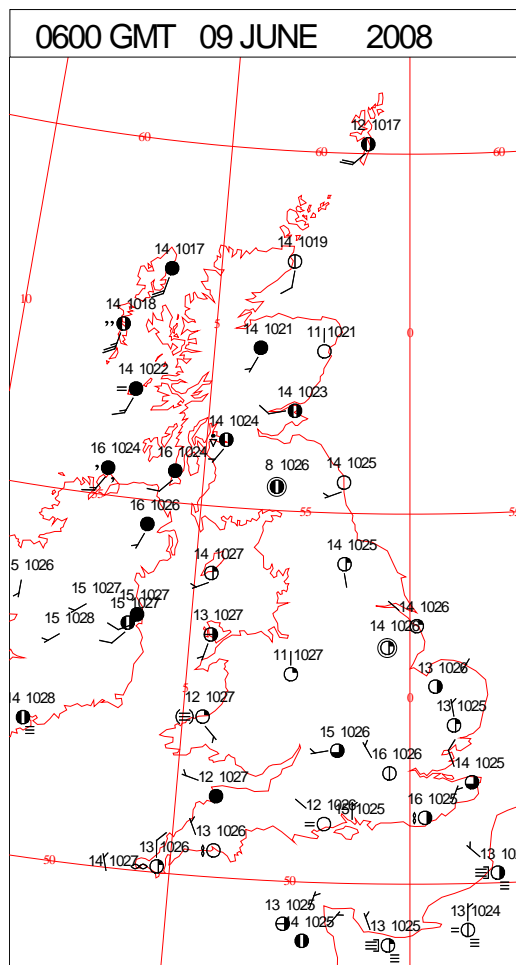

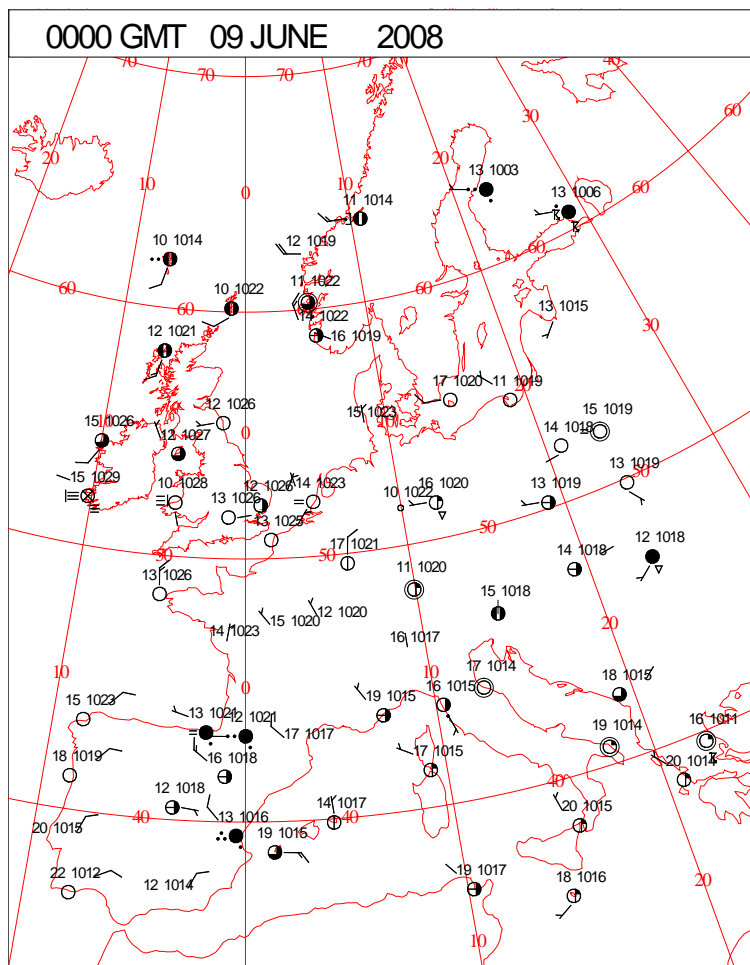

0600 GMT 08 JUNE 2008	SIG WEATHER	1200 GMT 08 JUNE 2008	SIG WEATHER	<p>Summary of UK Weather for Sunday 08 June 2008.</p> <p>It was a bright and sunny day for the majority of the UK as a ridge of high pressure continued to make its presence felt. Overnight and into the early morning, parts of south-east England, East Anglia and the east coast of England were affected by low cloud, mist and fog. This soon cleared to leave a warm and sunny day for England and Wales, although some 'fair-weather' cloud did bubble up in the Midlands and the south during the afternoon.</p> <p>It was a rather cloudy start to the day in Scotland and Northern Ireland, and the cloud was thick enough in places to produce isolated spots of rain during the morning. As it moved south, the cloud thinned to give an increasingly sunny afternoon. Much of the UK had a bright evening, with just some high cloud over England making the evening sunshine hazy in places. However, some thicker cloud moved into Northern Ireland during the evening.</p> <p>Temperatures responded well to the afternoon sunshine, and most places were warmer than average for the time of year.</p>

SIGNIFICANT WEATHER

0600 GMT 09 JUNE 2008	SIG WEATHER	1200 GMT 09 JUNE 2008	SIG WEATHER	<p>Summary of UK Weather for Monday 09 June 2008.</p> <p>There was a two-way split in the UK's weather, with the south and east enjoying more warm sunshine whilst the north and north-west had a cooler and cloudier day.</p> <p>Once coastal fog and low cloud had cleared the south-west, it was a mostly clear day for England and Wales, with only scattered cloud affecting some parts of the south during the afternoon. Temperatures were similar to the previous day, with the highest values to be found in the south and south-east.</p> <p>In contrast, Northern Ireland and much of Scotland had a cloudy start to the day, with drizzly light rain in places but most persistent over the Highlands and Western Isles. There were some breaks in the cloud cover, especially over Northern Ireland and to the lee of high ground in Scotland, and this allowed for some sunny spells during the late morning and afternoon. The cloud spread southwards eventually reaching northern England by the evening.</p> <p>Temperatures in the sunshine were generally very warm, but under the cloud were around normal for the time of year.</p>
1800 GMT 09 JUNE 2008	SIG WEATHER	0000 GMT 10 JUNE 2008	SIG WEATHER	<p>EXTREMES</p> <p>Highest Maximum: 26.4 Heathrow, Greater London</p> <p>Lowest Maximum: 13.8 Fair Isle, Shetland</p> <p>Lowest Minimum: 3.5 Aboyne No 2, Aberdeenshire</p> <p>Lowest Grass Minimum: -0.8 Aboyne No 2, Aberdeenshire</p> <p>Most Rain: 2.2 Lerwick, Shetland</p> <p>Most Sun: 15.3 Lyneham, Wiltshire</p>

SURFACE REPORTS

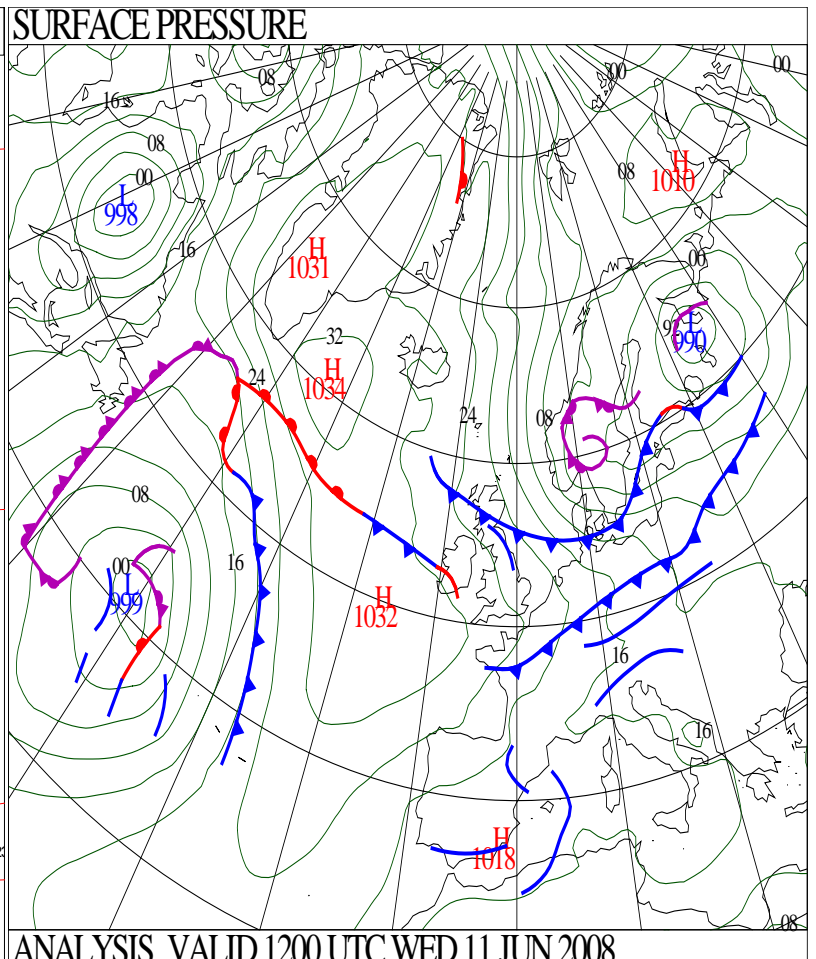

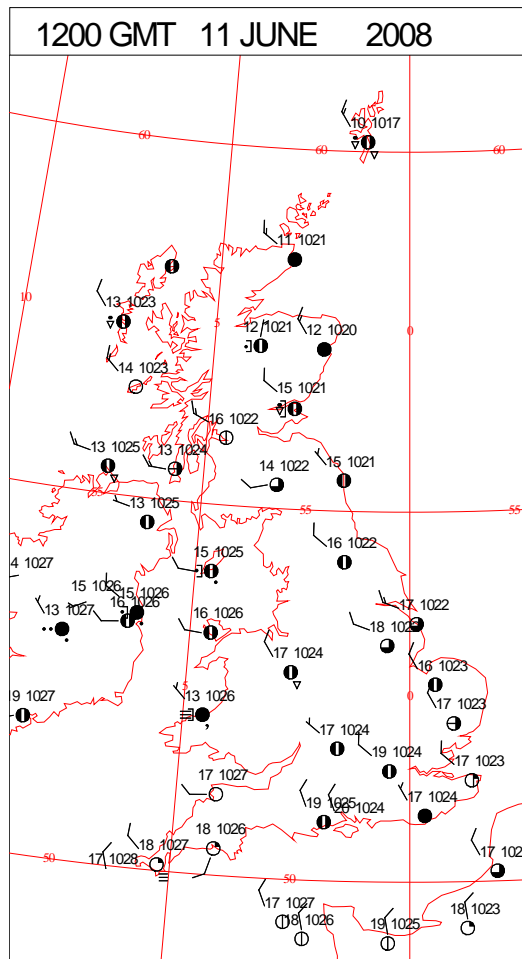

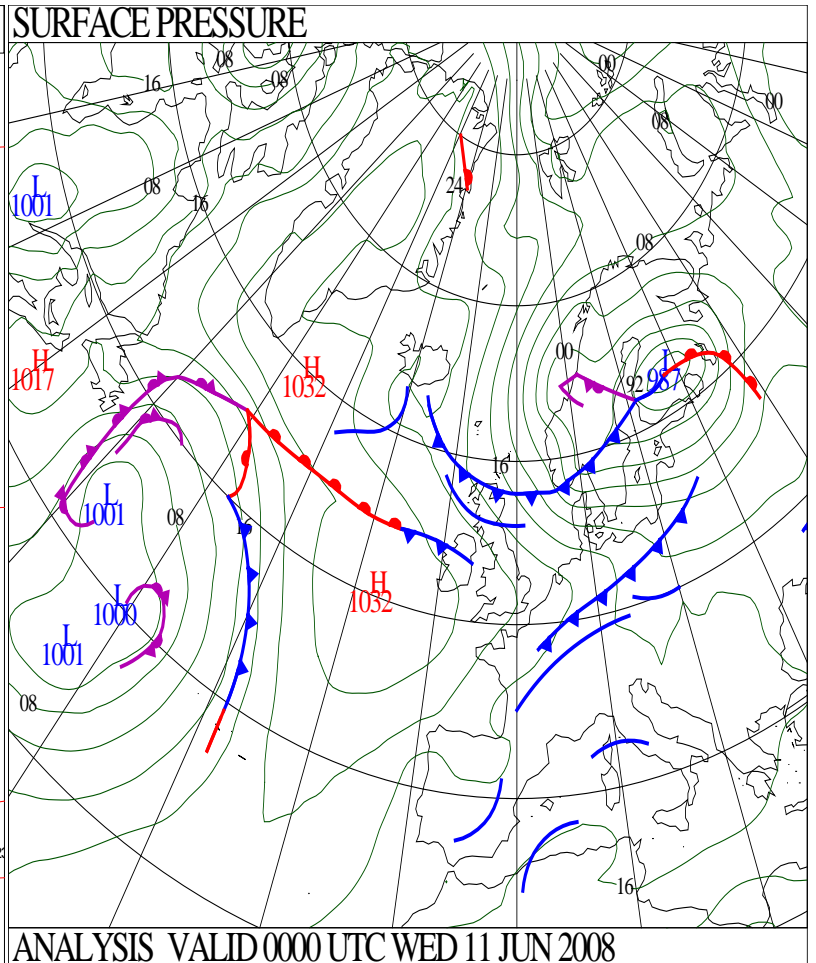

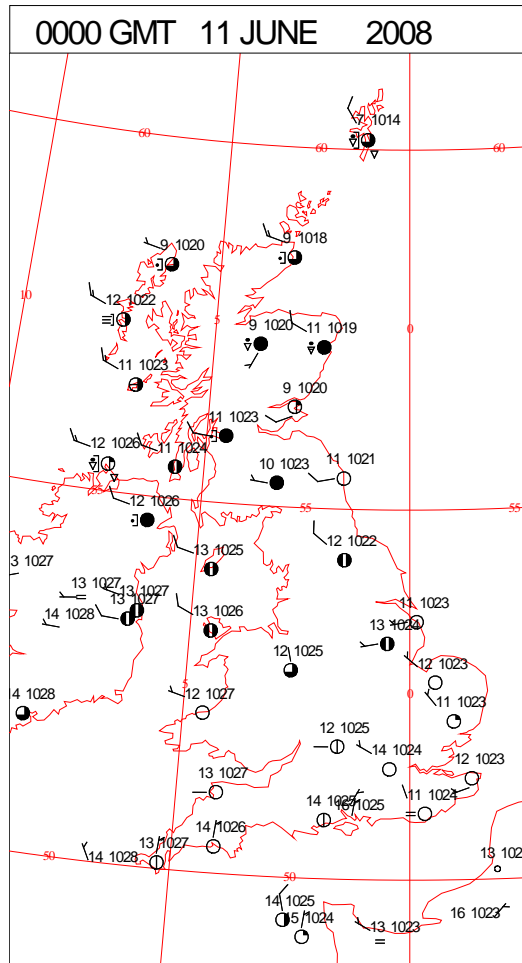

SIGNIFICANT WEATHER

0600 GMT 10 JUNE 2008	SIG WEATHER	1200 GMT 10 JUNE 2008	SIG WEATHER	<p>Summary of UK Weather for Tuesday 10 June 2008.</p> <p>Overnight showers were seen in the north of Scotland, with some thick cloud gradually moving south over the north-east. Much of the south remained clear for most of the night.</p> <p>During the day the UK was divided into two areas of weather. The south saw warm sunshine, whilst the north was cooler, cloudier and, in places, windier. Coastal fog and low cloud was seen early in the south-west and, once this cleared, it left a pleasant sunny day. This was similar to much of the rest of the south and most of the Midlands, which had prolonged sunny spells.</p> <p>This was in contrast to the north and Northern Ireland which saw a much cloudier day with showers in places, particularly over the Highlands and northern Scotland. Some areas of the north-east and Eastern Scotland had moderate to fresh winds, sometimes gusting to near gale force and, occasionally, gale force. The highest observed gust was 53 knots at Sella Ness at 1000 UTC.</p> <p>Temperatures were generally very warm in sunnier parts but nearer normal for the time of year in cloudier areas.</p>
1800 GMT 10 JUNE 2008	SIG WEATHER	0000 GMT 11 JUNE 2008	SIG WEATHER	<p>EXTREMES</p> <p>Highest Maximum: 24.1 Herstmonceux, East Sussex</p> <p>Lowest Maximum: 11.9 Fair Isle, Shetland 11.9 Lerwick, Shetland</p> <p>Lowest Minimum: 8.5 Loch Glascarnoch, Ross & Cromarty</p> <p>Lowest Grass Minimum: 5.5 Aviemore, Inverness-Shire</p> <p>Most Rain: 10.0 Loch Glascarnoch, Ross & Cromarty</p> <p>Most Sun: 14.9 Isle Of Portland, Dorset</p>

SIGNIFICANT WEATHER

0600 GMT 11 JUNE 2008	SIG WEATHER	1200 GMT 11 JUNE 2008	SIG WEATHER	<p>Summary of UK Weather for Wednesday 11 June 2008.</p> <p>Showers remained over northern Scotland overnight, whilst much of the rest of the UK stayed dry. However, a band of rain was pushing into western Northern Ireland by morning.</p> <p>During the day the rain continued slowly eastward, becoming heavier from lunchtime onwards. Eventually it reached the west coast of Wales in the late afternoon, continuing south-eastward across the UK. In Scotland, the overnight showers continued into the morning before spreading further south, through the afternoon. In the south, the day started fairly clear, before cloud started to thicken from the west. However, daylight hours remained dry for the majority of the south and Midlands, and any rain that did occur was often light and patchy. By late afternoon, the showers over Scotland were mainly towards the east, and they had also drifted across north-east England.</p> <p>More widespread heavier rain arrived over southern England towards midnight. Winds were generally light to moderate over the whole country.</p> <p>Temperatures were widely cooler than in previous days and were generally close to average.</p>

SIGNIFICANT WEATHER

0600 GMT 15 JUNE 2008	SIG WEATHER	1200 GMT 15 JUNE 2008	SIG WEATHER	<p>Summary of UK Weather for Sunday 15 June 2008.</p> <p>Overnight, showers continued across some north-eastern areas with a few running across western coasts. Most places, however, were dry with clear periods and in places it became very chilly for mid June. Minimum temperatures dipped to around 4 °C or 5 °C widely, although they were lower across parts of Scotland. There was a touch of grass frost in sheltered rural parts of northern England, Wales and Scotland but much milder in the south-east. After a largely clear and dry start to the day, cloud soon bubbled up through the morning, with showers breaking out particularly across north-east England, the south-west and East Anglia, where there were some locally heavy showers and occasional thunderstorms reported during the afternoon. Funnel clouds were also reported around the Humberside area at lunchtime. Wales and central England saw the best of the sunshine, but central Scotland had showers for much of the day, although these remained generally light. Winds remained mostly a light northerly but with sea-breezes developing along the south and east coasts of England, with a moderate to fresh breeze in the north of Scotland.</p>

SIGNIFICANT WEATHER

0600 GMT 16 JUNE 2008	SIG WEATHER	1200 GMT 16 JUNE 2008	SIG WEATHER	<p>Summary of UK Weather for Monday 16 June 2008.</p> <p>It was a mainly fine but unseasonably chilly night especially in the early few hours. Fairly widespread areas of grass frost across rural parts of the central and northern UK were seen, with air temperatures touching just below freezing in some central Welsh areas. A warm front moving in from the north-west brought thickening cloud and rain to the north and west of Scotland during the day, moving into northern tip of Northern Ireland in the late afternoon. Scattered showers affected eastern England again during the day, dying out as the evening approached. The showers were locally heavy and thundery in the far south-east. Elsewhere, it was a dry and fair day, if not quite cloudy. Winds were mostly light beginning north-westerly and then becoming south-westerly in Scotland and westerly elsewhere as the afternoon progressed. Sea-breezes again developed across eastern and southern coastal areas in the afternoon. Maximum temperatures across the UK were around normal.</p>

SIGNIFICANT WEATHER

0600 GMT 17 JUNE 2008	SIG WEATHER	1200 GMT 17 JUNE 2008	SIG WEATHER	<p>Summary of UK Weather for Tuesday 17 June 2008.</p> <p>It was another chilly night across central and southern England and Wales, with temperatures in some central Welsh areas staying just above freezing. However, with a good deal of cloud in Scotland and Northern Ireland, temperatures stayed warmer compared to those of the previous few nights.</p> <p>A frontal system spread a good deal of cloud from the north-west during the day and brought showery bursts of rain to Scotland and Northern Ireland. A scattering of lighter showers affected parts of north and west England and Wales during the afternoon and evening.</p> <p>Narrow bands of heavy rain moved eastwards behind the showery weather into north-west Scotland and Northern Ireland through the afternoon. The rain was thundery across Northern Ireland.</p> <p>Winds increased across the UK during the day, becoming moderate to fresh in a mainly west to south-westerly direction. Temperatures were warmer in the south-east than of late and remained around normal elsewhere.</p>
1800 GMT 17 JUNE 2008	SIG WEATHER	0000 GMT 18 JUNE 2008	SIG WEATHER	<p>EXTREMES</p> <p>Highest Maximum: 20.8 Heathrow, Greater London</p> <p>Lowest Maximum: 11.9 Fair Isle, Shetland 11.9 Lerwick, Shetland</p> <p>Lowest Minimum: 2.5 Trawsgoed, Dyfed</p> <p>Lowest Grass Minimum: -2.1 Shawbury, Shropshire -2.1 Dishforth Airfield, North Yorkshire</p> <p>Most Rain: 42.0 Capel Curig No 3, Gwynedd</p> <p>Most Sun: 15.2 Guernsey: Airport, Guernsey</p>

SIGNIFICANT WEATHER

0600 GMT 18 JUNE 2008	SIG WEATHER	1200 GMT 18 JUNE 2008	SIG WEATHER	<p>Summary of UK Weather for Wednesday 18 June 2008.</p> <p>It was a rather unsettled, wet and windy day as an area of low pressure situated to the west of Scotland moved eastwards, and drove a complex frontal system in from the west.</p> <p>A band of thick cloud and persistent rain affected much of Wales and central/western England in the morning. The rain spread north to affect northern England and southern Scotland during the afternoon. There were some heavy outbursts at times, particularly for northern and western Wales and northern England. During the evening, the rain continued its progression north and east, spreading into more of southern and eastern England and eastern Scotland.</p> <p>Northern Ireland and Scotland experienced somewhat more pleasant conditions, with a clearer, fresher feel to the weather. There were numerous sunny spells, but also scattered showers, which were heavy and thundery occasionally.</p> <p>Winds generally strengthened throughout the day, with strong and gusty south-westerly winds for England and Wales, and moderate southerly or variable winds for Northern Ireland and Scotland.</p> <p>Temperatures were rather cool for the time of year and it felt chilly in the wind and rain.</p>

SIGNIFICANT WEATHER

0600 GMT 19 JUNE 2008	SIG WEATHER	1200 GMT 19 JUNE 2008	SIG WEATHER	<p>Summary of UK Weather for Thursday 19 June 2008.</p> <p>The rain which affected much of UK on the previous day eased south-eastwards overnight, continuing to affect the south-east of England during the early hours whilst clearer conditions followed in across more western areas. Showers continued across northern and western Scotland and Northern Ireland through the night. Much of England and Wales saw a dry start to daylight hours, with some good sunny spells developing, if not sunny from the word go. It was slightly more unsettled across the north-western half of the UK; exposed western areas of Northern Ireland, Scotland and the far north of England saw plenty of showers through the day. Some thunder was also reported across eastern parts of Northern Ireland and eastern Scotland. Further south it continued to be a generally dry and fine day with sunny spells, although the odd isolated light shower was reported near the south coast. It was quite breezy, with gusty west to south-westerly winds across much of the UK. Temperatures were near normal for the time of year in most places, slightly below normal in the locations that saw the most frequent showers.</p>
1800 GMT 19 JUNE 2008	SIG WEATHER	0000 GMT 20 JUNE 2008	SIG WEATHER	<p>EXTREMES</p> <p>Highest Maximum: 21.6 Heathrow, Greater London</p> <p>Lowest Maximum: 10.5 Lerwick, Shetland</p> <p>Lowest Minimum: 1.7 Loch Glascarnoch, Ross & Cromarty</p> <p>Lowest Grass Minimum: -0.3 Loch Glascarnoch, Ross & Cromarty</p> <p>Most Rain: 30.6 Baltasound No 2, Shetland</p> <p>Most Sun: 14.9 Lyneham, Wiltshire</p>

SURFACE REPORTS

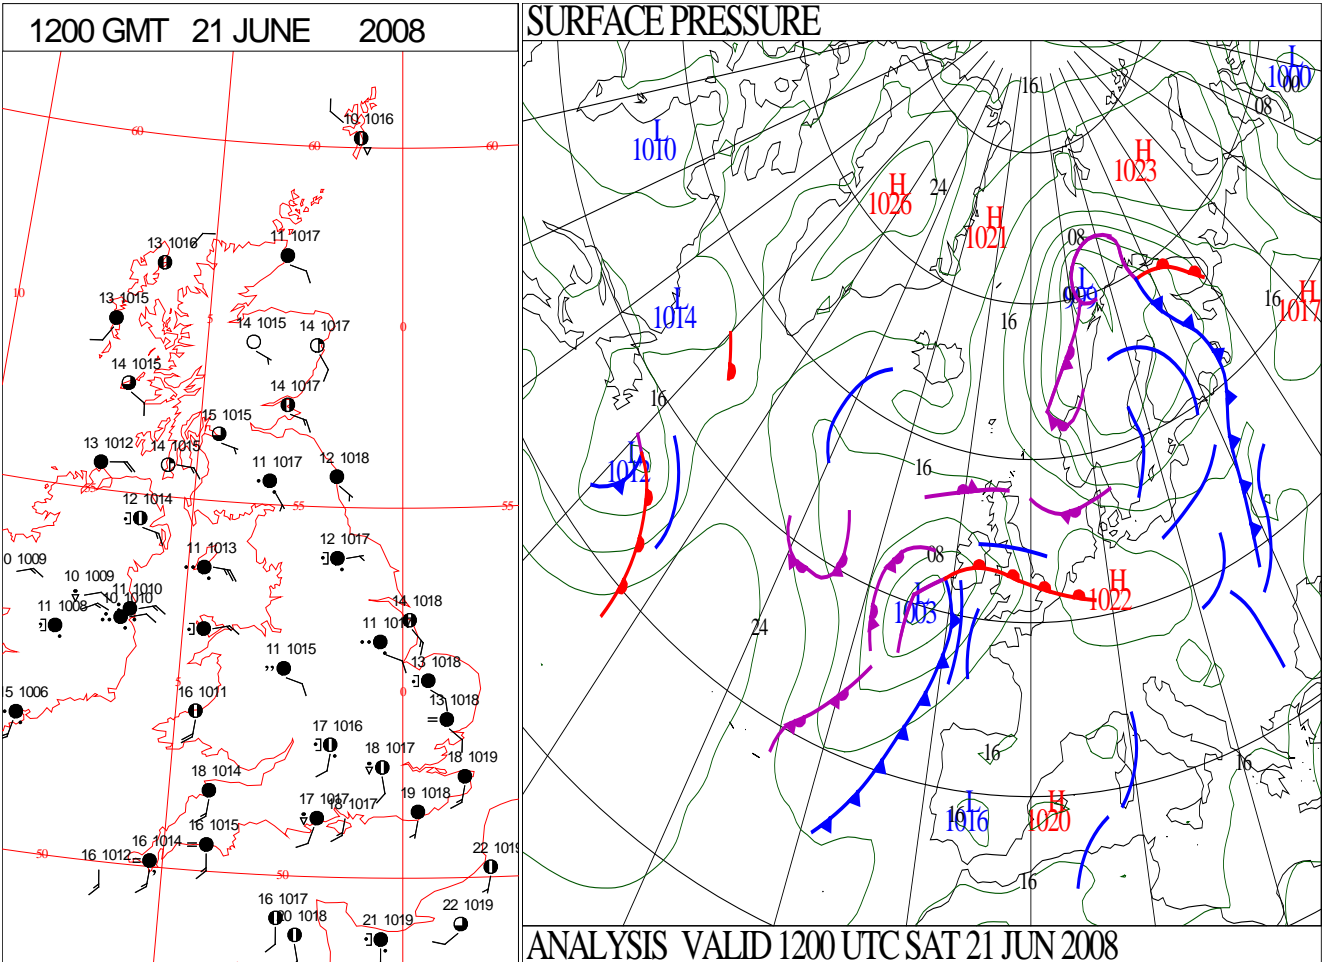

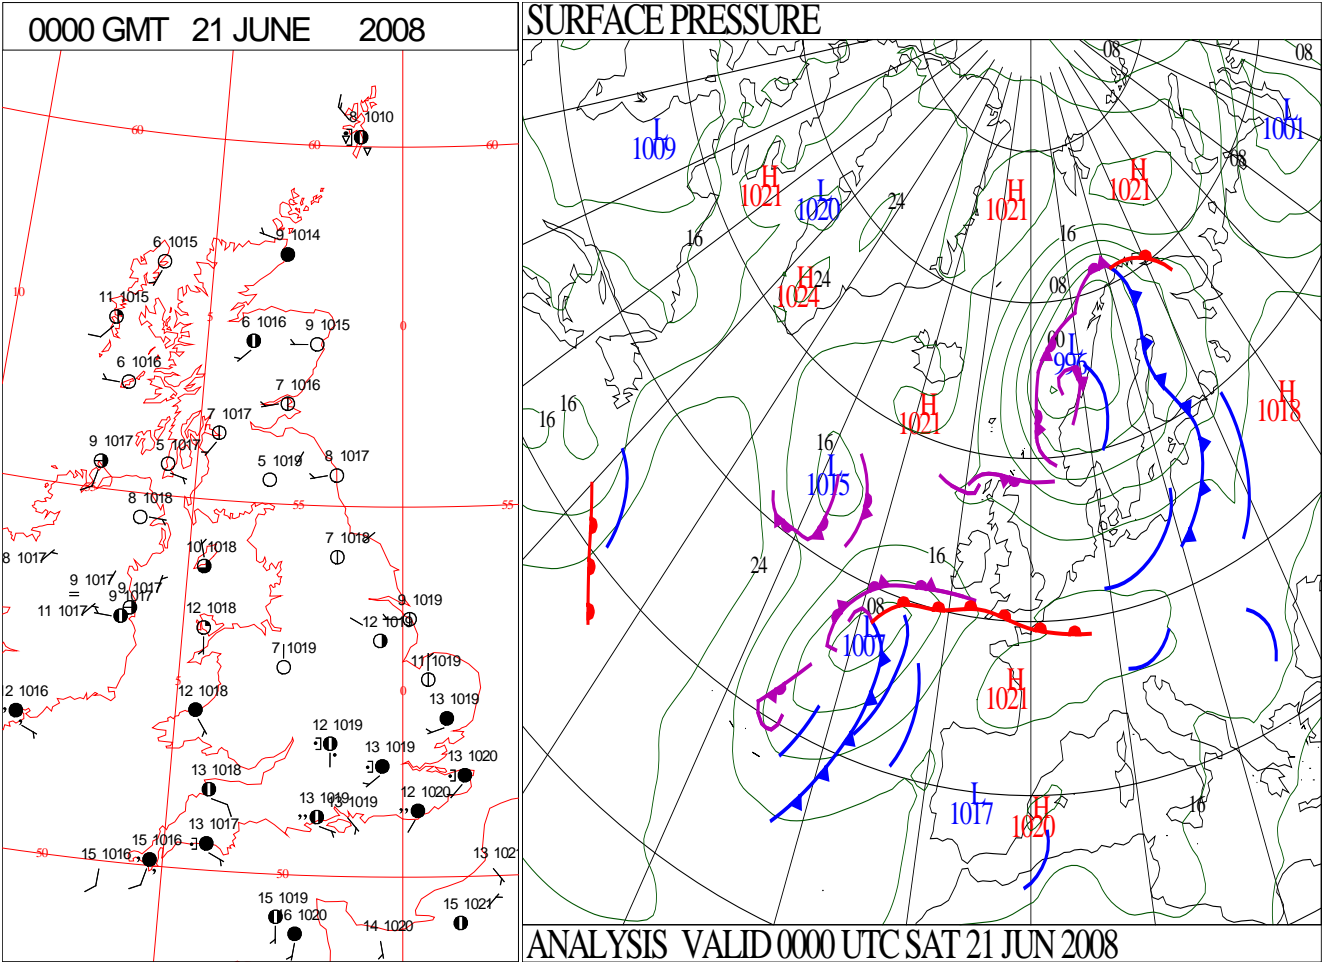

SIGNIFICANT WEATHER

0600 GMT 20 JUNE 2008	SIG WEATHER	1200 GMT 20 JUNE 2008	SIG WEATHER	<p>Summary of UK Weather for Friday 20 June 2008.</p> <p>For most of the UK, it was a cloudy day with patchy rain or showers in the west and north. The south-east and northern areas of England experienced some drier and brighter conditions at first, with the best of the sunshine reserved for northern England. In the early hours Scotland had some showers and, later on in the morning, there was even the odd rumble of thunder. The showers continued into the afternoon when they also affected Northern Ireland. During the morning a band of rain from the west pushed into the south-west of England with some notably heavy outbreaks of rain in Cornwall. By the afternoon the rain had reached Devon and Somerset. Even in areas without rain the moisture brought a muggy feel. The rain continued to spread eastwards and became patchier as it reached parts of London during the evening. It was rather breezy with some strong gusts reported in Scotland and to the lee of the Pennines. For the time of year, temperatures were below normal in the south and near normal in the north.</p>

SURFACE REPORTS

SIGNIFICANT WEATHER

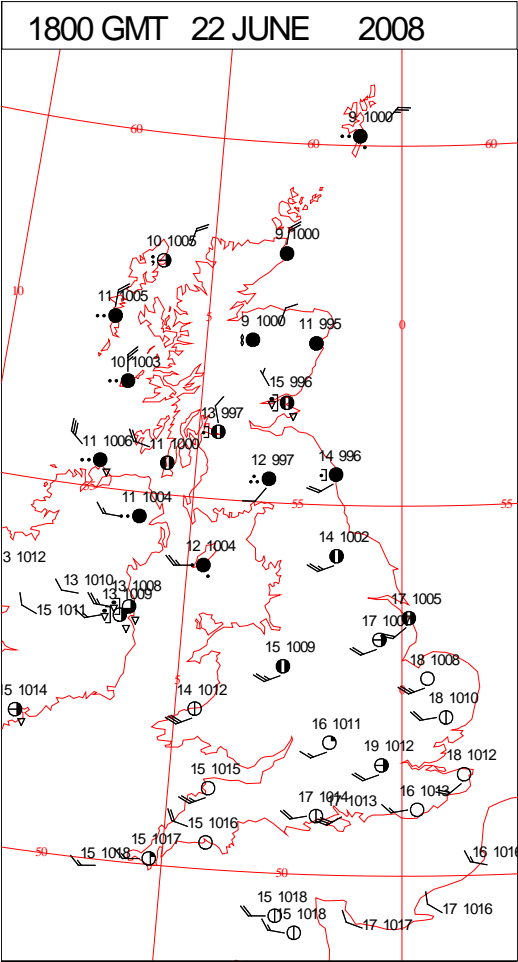

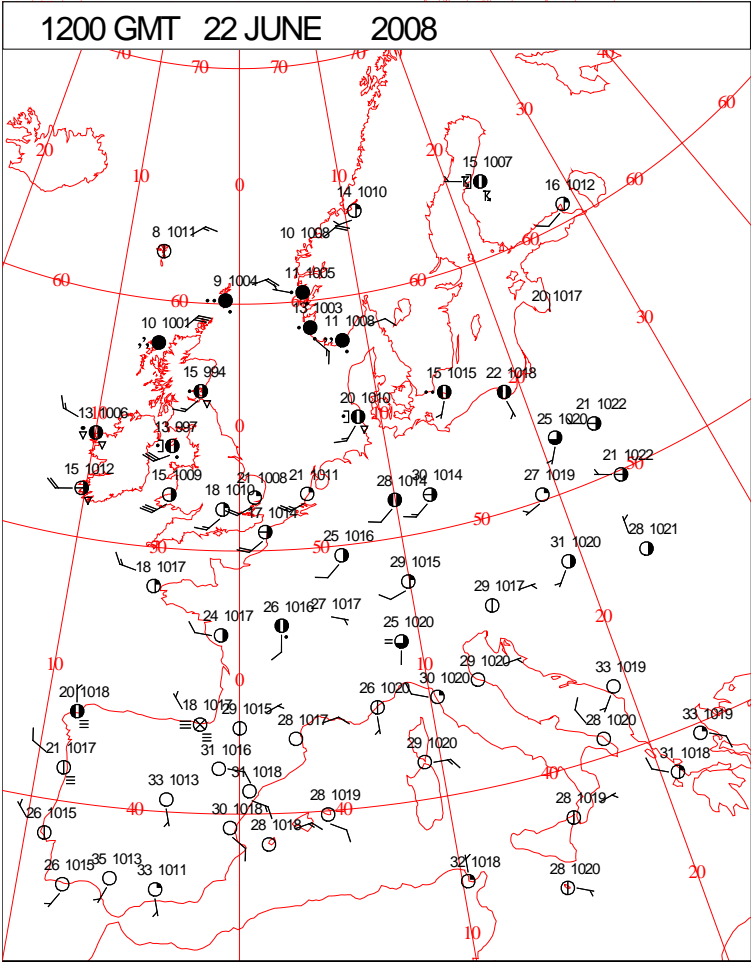

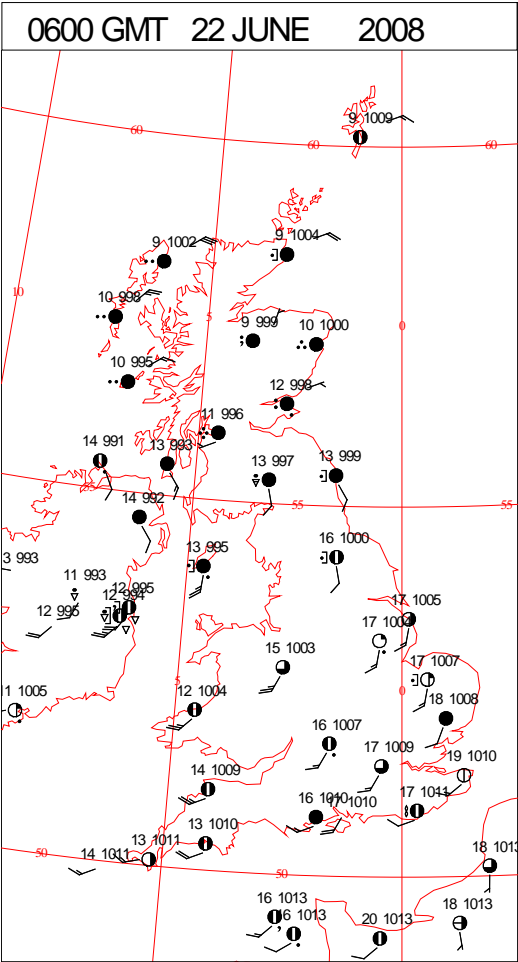

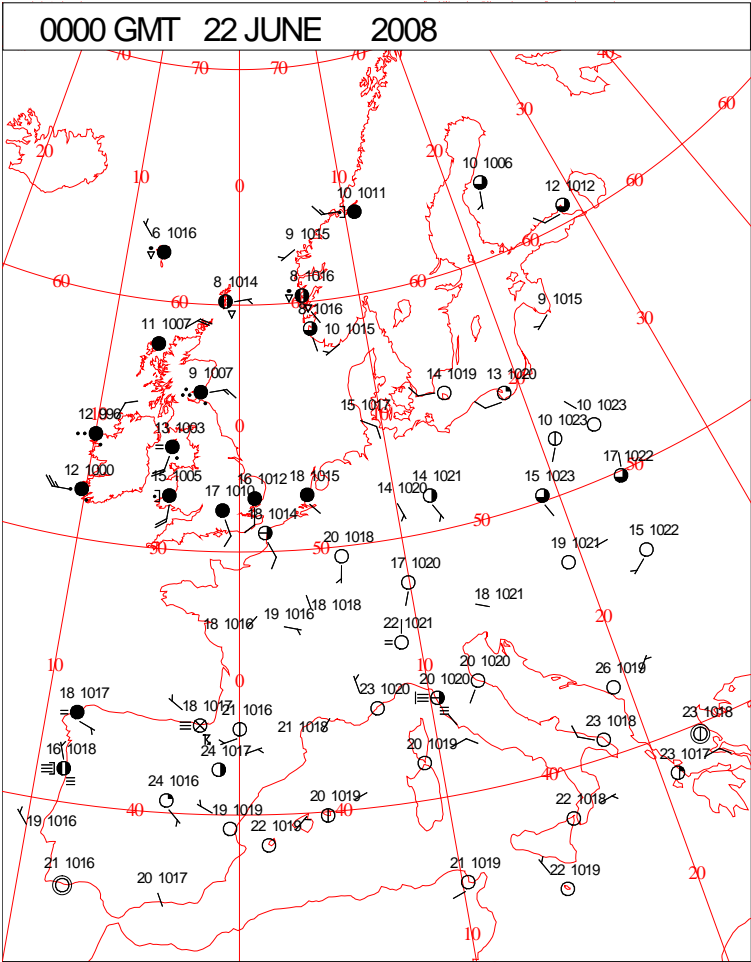

0600 GMT 21 JUNE 2008	SIG WEATHER	1200 GMT 21 JUNE 2008	SIG WEATHER	<p>Summary of UK Weather for Saturday 21 June 2008.</p> <p>The day started cloudy in Northern Ireland, Wales, the Midlands and the south of England. The north of England and Scotland had a clearer and brighter start, though cloud spread from the south to most areas later. A band of patchy rain spread across Northern Ireland, Wales and the Midlands during the morning. In the afternoon, heavy rain spread to Northern Ireland, Wales and north-west England.</p> <p>The rain continued northwards across much of southern and central Scotland during the evening, as another pulse of persistent and locally heavy rain moved into south-western England. The heavy rain and muggy air triggered a number of thunderstorms, most notably over parts of Wales and Northern Ireland.</p> <p>Winds were generally southerly to south-westerly and moderate to fresh, strengthening in exposed western areas. The strongest gusts during the evening were reported near windward coasts and hills of south-west England and west Wales. Temperatures were close to the average for the time of year in most of England and Wales, however, the persistent rainfall kept temperatures rather cool in Northern Ireland and Scotland.</p>

SURFACE REPORTS

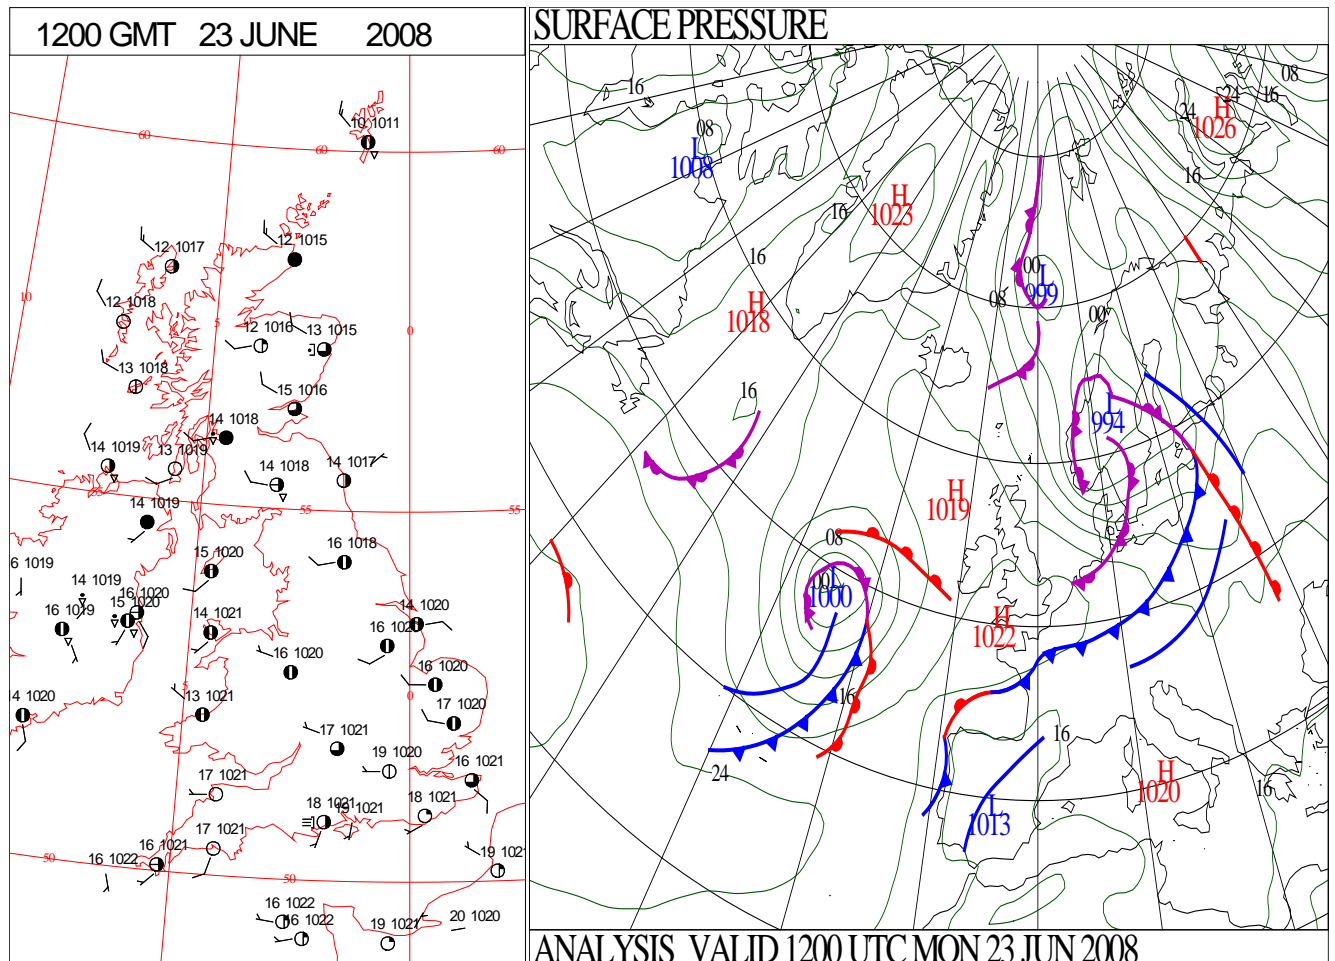

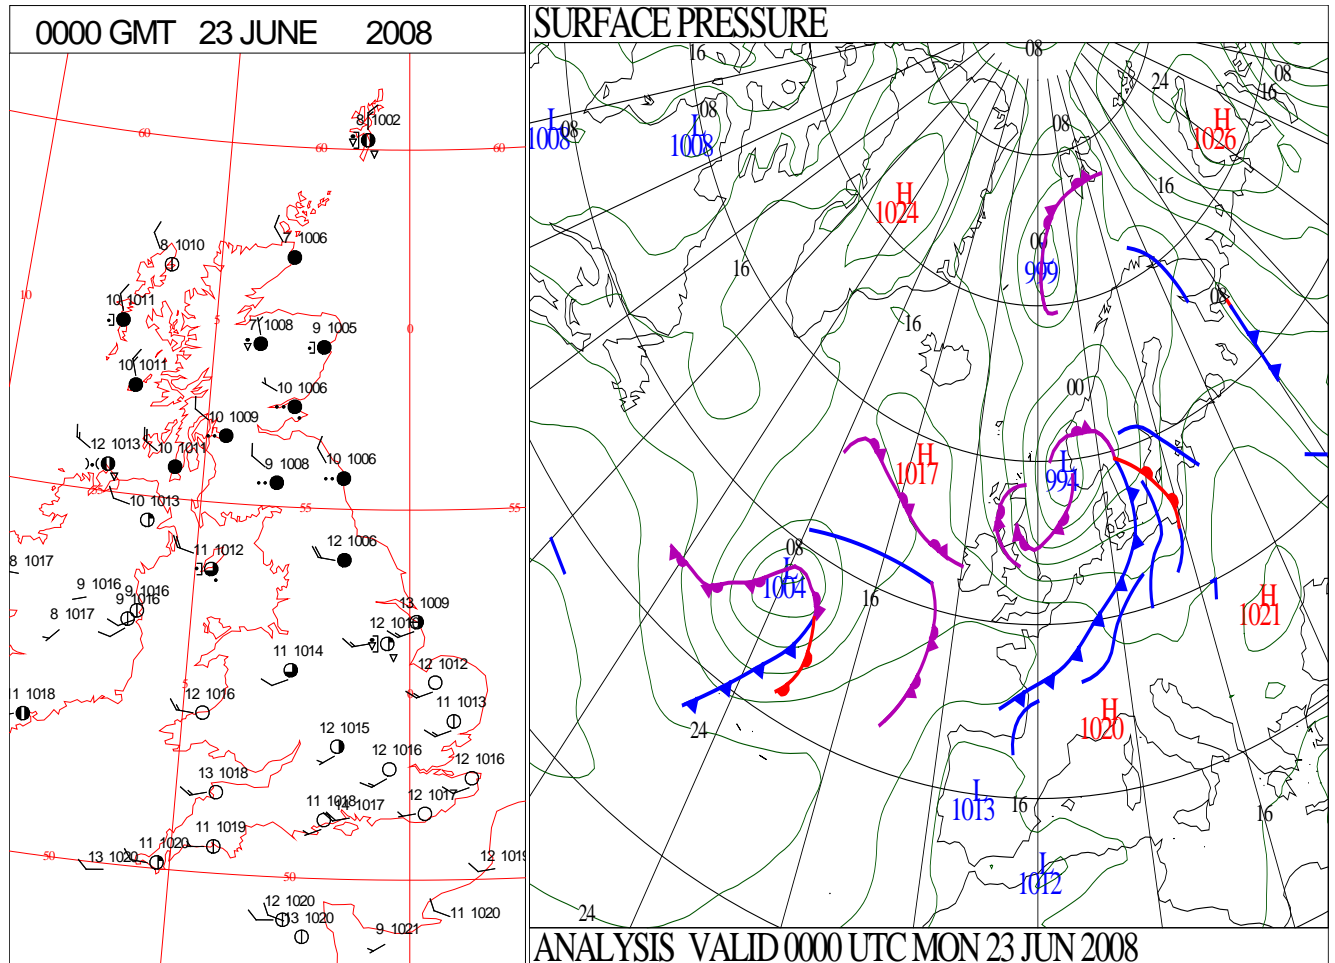

SIGNIFICANT WEATHER

0600 GMT 22 JUNE 2008	SIG WEATHER	1200 GMT 22 JUNE 2008	SIG WEATHER	<p>Summary of UK Weather for Sunday 22 June 2008.</p> <p>Light, patchy rain moved away from the south of England in the early hours to leave a largely dry, fine but blustery day. The south-east of England had some of the longest spells of sunshine but it was still windy at times. Cloud was thicker in North Wales, the north of England, Scotland, and Northern Ireland and there was some heavy rain at times. The heaviest occurred in parts of Western Scotland and north-eastern Northern Ireland.</p> <p>The main focus of the day was the unseasonably strong winds across the Midlands and northern England for much of the day. The strongest recorded gust was 55 knots at Blackpool at around midday, and Shawbury recorded a gust of 53 knots.</p> <p>Temperatures in Wales and Scotland were normal for the time of year, but under the cloud and rain, Northern Ireland was slightly cooler than their average June temperature. Southern England had near normal or slightly below average temperatures and the north of England was slightly warmer than the June average.</p>

SIGNIFICANT WEATHER

0600 GMT 23 JUNE 2008	SIG WEATHER	1200 GMT 23 JUNE 2008	SIG WEATHER	<p>Summary of UK Weather for Monday 23 June 2008.</p> <p>It was a much more settled day compared to the weekend. England and Wales had the best of the weather, staying largely dry and settled for the whole day. There was some patchy cloud at times and some long sunny spells along the south coast and far south-east of England. A few showers were still evident over the Pennines in the morning but they quickly died out leaving a dry day for Northern England and some sunny periods from the late afternoon. Wales stayed dry with variable amounts of cloud and some good sunny spells too.</p> <p>Further north, however, there were a few scattered showers in the afternoon for Northern Ireland and Scotland. Northern Ireland had some sunny spells in the morning but turned cloudy in the afternoon. Scotland had more in the way of sunshine and showers and the whole of the UK had light south-west or westerly winds.</p> <p>Temperatures were average for the time of year in England, Wales and Scotland, but were slightly below average in Northern Ireland.</p>
1800 GMT 23 JUNE 2008	SIG WEATHER	0000 GMT 24 JUNE 2008	SIG WEATHER	<p>EXTREMES</p> <p>Highest Maximum: 21.5 Heathrow, Greater London</p> <p>Lowest Maximum: 10.8 Fair Isle, Shetland</p> <p>Lowest Minimum: 5.2 Lough Fea, Londonderry</p> <p>Lowest Grass Minimum: -0.2 Portglenone, Antrim</p> <p>Most Rain: 3.8 Portglenone, Antrim</p> <p>Most Sun: 14.0 Isle Of Portland, Dorset</p>

SIGNIFICANT WEATHER

0600 GMT 24 JUNE 2008	SIG WEATHER	1200 GMT 24 JUNE 2008	SIG WEATHER	<p>Summary of UK Weather for Tuesday 24 June 2008.</p> <p>It was dry throughout the early hours of the day across the UK. Clear spells and light winds allowed temperatures to fall to cold values for the time of year in places. In some parts of the Highlands there was a localised air frost, with a minimum temperature of -2.3°C recorded. During the course of the day outbreaks of rain spread across Northern Ireland and moved into Scotland, Wales and western parts of England. Central and eastern parts of England, along with much of the north of Scotland, remained dry and there were sunny intervals in many areas.</p> <p>Winds were light to moderate throughout in a mainly south-easterly to southerly direction. Maximum temperatures were warm in central and southern England and remained normal elsewhere.</p>
1800 GMT 24 JUNE 2008	SIG WEATHER	0000 GMT 25 JUNE 2008	SIG WEATHER	<p>EXTREMES</p> <p>Highest Maximum: 23.5 Northolt, Greater London</p> <p>Lowest Maximum: 11.4 Lerwick, Shetland</p> <p>Lowest Minimum: -2.3 Tulloch Bridge, Inverness-Shire</p> <p>Lowest Grass Minimum: -5.2 Tulloch Bridge, Inverness-Shire</p> <p>Most Rain: 17.6 South Uist, Western Isles</p> <p>Most Sun: 13.9 Fair Isle, Shetland</p>

SIGNIFICANT WEATHER

0600 GMT 25 JUNE 2008	SIG WEATHER	1200 GMT 25 JUNE 2008	SIG WEATHER	<p>Summary of UK Weather for Wednesday 25 June 2008.</p> <p>It was a mainly cloudy start across Scotland and Northern Ireland with outbreaks of rain. There were also some showery outbreaks of rain across parts of Wales and England, although the bulk of southern and south-eastern England remained dry. Cloud cover ensured that temperatures during the night were warmer than those experienced on the previous night. As the day progressed, Scotland continued to be affected by further spells of rain, some of which were quite heavy although, as the day went on, the rain became confined to northern areas increasingly.</p> <p>Early rain across Northern Ireland and northern England, heavy in places, cleared away eastwards during the day leaving sunny intervals and a scattering of showers across these areas in the afternoon. Wales and the southern half of England had a mixture of sunny intervals and scattered showers, although much of southern England remained dry. The best of the sunshine developed later in the day.</p> <p>For most of the day it was generally breezy across the UK, especially across exposed northern and western areas. Maximum temperatures were just above normal in the south and near normal elsewhere.</p>

SIGNIFICANT WEATHER

0600 GMT 26 JUNE 2008	SIG WEATHER	1200 GMT 26 JUNE 2008	SIG WEATHER	<p>Summary of UK Weather for Thursday 26 June 2008.</p> <p>Overnight, much of England and Scotland remained dry, but during the early hours of the morning, outbreaks of rain moved from Northern Ireland into north-west England and western Scotland. By morning, these had spread further east into north-east England and parts of eastern Scotland.</p> <p>Through the day the rain became more widespread and persistent, covering much of England, with only the south coast of England and the south-east escaping. Here, it remained dry until late evening with some pleasant spells of hazy sunshine.</p> <p>Scotland also had showers through the day, but Northern Ireland remained largely dry. The greatest problem in southern England was the wind, as this was strong throughout the day, with gale-force gusts at times, particularly along the exposed south coasts of Wales and southern England.</p> <p>The rain continued into the evening over much of England and Scotland, with particularly heavy outbreaks over north-west England and North Wales. Much of southern England and Wales remained blustery, still with gale-force gusts in places.</p> <p>The temperature over much of the country was close to normal for the time of year.</p>

0600 GMT 27 JUNE 2008	SIG WEATHER	1200 GMT 27 JUNE 2008	SIG WEATHER	<p>Summary of UK Weather for Friday 27 June 2008.</p> <p>Overnight, rain continued to clear with only western Scotland receiving any prolonged spells of rain and the blustery winds in the south of England eased.</p> <p>Another band of persistent rain moved eastwards to lie across Northern Ireland, Wales and central, southern England by mid-morning. This continued to spread slowly east through the day, becoming more patchy as it did so, with showery rain over both Glastonbury and Wimbledon. By late afternoon north-eastern Scotland was one of the few areas to have escaped the rain entirely. In the south the winds picked up again to give a blustery day with gusts reaching gale force at times, particularly along the exposed south coasts of England and Wales. However, amongst all this there were some sunny spells, particularly in the south-east.</p> <p>During the evening much of the Midlands and southern England remained dry with the last of the rain mainly confined to Scotland and parts of the north-west of England. The blustery winds also started to ease through the evening.</p> <p>Temperatures over much of the UK were close to normal.</p>

SIGNIFICANT WEATHER

0600 GMT 29 JUNE 2008	SIG WEATHER	1200 GMT 29 JUNE 2008	SIG WEATHER	<p>Summary of UK Weather for Sunday 29 June 2008.</p> <p>Overnight was largely dry for most of the UK, although the far north-western part of Scotland experienced some moderate rainfall in the early hours of the morning as did parts of Wales and north-western regions in England. During the late morning and into the afternoon a band of locally heavy rain moved fairly quickly from north Wales eastwards towards the north midlands and moved out to the North Sea by late afternoon. Accompanying this heavy rain were some very strong gusts — with 45 knots recorded at Manchester Airport during the afternoon. The rest of the UK, although cloudy at times, remained dry and received some long sunny spells during the afternoon and into the evening. Temperatures were near normal for Scotland except the far north-east where temperatures were slightly above normal. Temperatures for parts of England particularly East Anglia and the south-east counties were slightly above normal. Elsewhere in the UK temperatures remained around normal for the time of year.</p>

SIGNIFICANT WEATHER

0600 GMT 30 JUNE 2008	SIG WEATHER	1200 GMT 30 JUNE 2008	SIG WEATHER	<p>Summary of UK Weather for Monday 30 June 2008.</p> <p>A dry and bright day for much of the UK, with just 'fair-weather' cloud bubbling up across England, Wales and southern Scotland. For the rest of Scotland and Northern Ireland drizzly showers first thing gave way to brighter conditions for a time, before thicker cloud spread from the west bringing outbreaks of rain during the afternoon and evening. This rain was generally fairly light, but gave some moderate bursts at times, particularly for parts of Northern Ireland, and over the higher ground of Scotland. Winds were generally gentle south-westerlies, but strengthened across western parts as the cloud and rain spread in. Maximum temperatures ranged from the mid- to high 'teens in the north and west, generally below average for the time of year. In the south-east it was a pleasantly warm day with temperatures up to 23 °C, just a little above average for the time of year.</p>
