

Forecast For The United Kingdom
Issued by Met Office Exeter
at 1945 on Tuesday 08 Apr 2014

++ Valid for broadcast at 2159

Here is the forecast for the United Kingdom for daytime tomorrow:
Patchy low cloud and isolated fog patches in the south will clear to reveal some sunshine, but increasing cloud will bring isolated showers to western parts. Cloudier and breezy in the north with some rain, persistent and heavy in northwest Scotland.

Outlook for Thursday and Friday:

Cloud and occasional rain will move slowly south on Thursday with drier, brighter and cooler conditions following to northern parts; but with isolated showers too. To the south of the rain, there will be variable cloud and some sunny spells. On Friday, patchy rain will clear southern parts leaving a bright and mostly dry day, bar the odd shower.
