0600 GMT 01 DECEMBER 2010	SIG WEATHER	1200 GMT 01 DECEMBER 2010	SIG WEATHER	<p><b>Summary of UK Weather for Wednesday 01 December 2010.</b></p> <p>It was another bitterly cold day across the U.K., with snow for many parts, especially in the east with bands of snow showers affecting eastern parts of England and Scotland.</p> <p>These snow showers, heaviest in eastern coastal counties, pushed inland across the country throughout the day, reaching as far as the west coast in places.</p> <p>Further heavy snow showers fed into the south-east of England throughout the day, becoming heavier during the afternoon and into the evening. These snow showers pushed westwards to affect southern counties of England.</p> <p>Snow which fell in all parts of the U.K. during the day added to lying snow from previous days, increasing total accumulations further.</p> <p>Strong north-easterly winds added to the bitterly cold feel for most of the country, and also lead to drifting snow in many areas, including the Pennines.</p> <p>Daytime temperatures struggled to rise above freezing for most of the country, with only some coastal areas reaching this.</p> <p>Both daytime maximums and night time minimums were well below average for the beginning of December.</p>
1800 GMT 01 DECEMBER 2010	SIG WEATHER	0000 GMT 02 DECEMBER 2010	SIG WEATHER	<p><b>EXTREMES</b></p> <p><b>Highest Maximum:</b> 3.7 St Marys Airport, Isles Of Scilly</p> <p><b>Lowest Maximum:</b> -7.8 Aviemore, Inverness-Shire</p> <p><b>Lowest Minimum:</b> -16.8 Aviemore, Inverness-Shire</p> <p><b>Lowest Grass Minimum:</b> -16.4 Eskdalemuir, Dumfriesshire</p> <p><b>Most Rain:</b> 6.1 Guernsey Airport, Guernsey</p> <p><b>Most Sun:</b> 6.7 Camborne, Cornwall</p>

0600 GMT 02 DECEMBER 2010	SIG WEATHER	1200 GMT 02 DECEMBER 2010	SIG WEATHER	<p><b>Summary of UK Weather for Thursday 02 December 2010.</b></p> <p>During the early hours, snow fell across many parts of the U.K. The east coast also retained significant accumulations, but even across southern counties there was as much as 25 cm in parts of Surrey and Sussex.</p> <p>During the day, snow showers continued to feed into the east coast of the U.K., giving further fresh accumulations, but snow gradually died out in southern parts. The exception was for far western parts of Cornwall, where a band of snow showers continued to affect the area, accumulating locally.</p> <p>Elsewhere further west, it was a much drier and brighter day, but still very cold with only a handful of locations rising above freezing.</p> <p>North to north-east winds were quite brisk, making things feel bitter, more so towards the south.</p>
1800 GMT 02 DECEMBER 2010	SIG WEATHER	0000 GMT 03 DECEMBER 2010	SIG WEATHER	<p><b>EXTREMES</b></p> <p><b>Highest Maximum:</b> 5.0 Tiree, Argyll</p> <p><b>Lowest Maximum:</b> -3.4 Lossiemouth, Moray</p> <p><b>Lowest Minimum:</b> -16.7 Loch Glascarnoch, Ross &amp; Cromarty</p> <p><b>Lowest Grass Minimum:</b> -14.2 South Uist, Western Isles</p> <p><b>Most Rain:</b> 14.4 Stornoway Airport, Western Isles</p> <p><b>Most Sun:</b> 5.6 Tiree, Argyll</p>

SIGNIFICANT WEATHER

0600 GMT 03 DECEMBER 2010	SIG WEATHER	1200 GMT 03 DECEMBER 2010	SIG WEATHER	<p><b>Summary of UK Weather for Friday 03 December 2010.</b></p> <p>A few snow showers continued along the east coast of England overnight, but otherwise most places saw a dry night.</p> <p>It was very cold, however, with record minimum temperatures being recorded in a number of locations.</p> <p>Later in the night, a mixed band of rain, sleet and snow moved into north-western parts of Scotland and Northern Ireland and continued eastwards across the U.K. during the day. Much of the time, this was fairly fragmented but it did become more persistent in south-west England, south Wales and parts of the Midlands in the evening.</p> <p>Wintry showers followed in the wake of this system, whilst south-east England fared best overall, staying mostly dry but very cold throughout.</p> <p>It was another very cold day across the country, with eastern England seeing the greatest departures from the seasonal average.</p>
1800 GMT 03 DECEMBER 2010	SIG WEATHER	0000 GMT 04 DECEMBER 2010	SIG WEATHER

SIGNIFICANT WEATHER

0600 GMT 05 DECEMBER 2010	SIG WEATHER	1200 GMT 05 DECEMBER 2010	SIG WEATHER	<p><b>Summary of UK Weather for Sunday 05 December 2010.</b></p> <p>During the early hours, southern coastal counties were rather cloudy with outbreaks of rain, but this slowly cleared away into the English Channel by dawn.</p> <p>Elsewhere, it was a generally dry day with a widespread frost at first, severe in some places with snow cover.</p> <p>There was also patchy dense freezing fog at first, especially in the Midlands and central southern England. This only slowly cleared during the morning, with some places remaining in fog all day.</p> <p>Wintry showers affected some northern areas through the day, especially coastal areas exposed to the northerly wind.</p> <p>Parts of western Wales had fairly frequent showers during the morning, with these falling as snow over the higher ground, and as rain at lower levels, leading to a risk of icy surfaces during the morning.</p> <p>Through the day, many areas enjoyed a good deal of sunshine with temperatures rising to a couple of degrees above freezing.</p> <p>However, the showers over northern Scotland became more frequent and prolonged during the evening, with freezing fog readily reforming in many southern areas.</p>

0600 GMT 06 DECEMBER 2010	SIG WEATHER	1200 GMT 06 DECEMBER 2010	SIG WEATHER	<p><b>Summary of UK Weather for Monday 06 December 2010.</b></p> <p>A very cold day across the whole of the country, with many inland southern areas remaining below freezing.</p> <p>There was a severe overnight frost, with patchy dense freezing fog in parts of England and Wales. The freezing fog lifted into low cloud in places, although many inland parts of southern Britain remained misty or foggy all day.</p> <p>Some areas did see some sunshine, especially in west Wales, Devon, Cornwall, and parts of northern England.</p> <p>Further north, a band of snow pushed south across Scotland and Northern Ireland, giving further accumulations in many places. The band of snow became fairly slow moving across the central lowlands giving disruption to transport as over 10 centimetres of fresh snow fell in places. This band began to fragment as it moved into parts of northern England during the afternoon and evening.</p> <p>Snow showers followed to parts of northern Scotland and later to Northern Ireland.</p> <p>Over southern parts of England and parts of east Wales the freezing fog reformed and thickened during the evening. It was a bitterly cold day, with temperatures widely remaining below freezing and falling sharply during the evening.</p>

SIGNIFICANT WEATHER

0600 GMT 07 DECEMBER 2010	SIG WEATHER	1200 GMT 07 DECEMBER 2010	SIG WEATHER	<p><b>Summary of UK Weather for Tuesday 07 December 2010.</b></p> <p>It was another extremely cold day across the vast majority of the U.K., with many places remaining well below freezing.</p> <p>There was a very severe and widespread frost at first, with numerous inland locations recording minimum temperatures below minus 10 degrees Celsius.</p> <p>Freezing fog patches and low cloud were again a problem, particularly in southern parts of the country. The freezing fog lead to a thick hoar frost and rime ice accretion in some areas.</p> <p>Many parts however, enjoyed long sunny periods, especially through the afternoon.</p> <p>Some central parts of the U.K., from north-west Wales to northern England had some light outbreaks of sleet or snow during the morning, leading to a slight covering of fresh snow in places, although on some coasts this was a mixture of rain and sleet.</p> <p>Wintry showers fed onto some coasts through the day, Especially in northern Scotland and Northern Ireland, but some eastern coastal counties of England also saw wintry showers later in the day, giving a fresh covering of snow to some areas, such as the North York Moors.</p> <p>After the very cold conditions in the morning, temperatures struggled to rise, with many places remaining sub-zero and well below average for December.</p>

SIGNIFICANT WEATHER

0600 GMT 25 DECEMBER 2010	SIG WEATHER	1200 GMT 25 DECEMBER 2010	SIG WEATHER	<p><b>Summary of UK Weather for Saturday 25 December 2010.</b> It was another very cold start on Christmas Day, with temperatures starting well below freezing across the U.K., with particularly cold temperatures recorded in parts of Northern Ireland, Wales and western England.</p> <p>Snow showers spread across parts of Scotland and eastern England, meaning a white Christmas was seen in places. Some of these showers later turned to rain, mainly across western Scotland. These fell onto sub-zero roads and pavements, causing ice to form across a fairly wide area and causing some disruption.</p> <p>Also, some parts of south-eastern England were affected by patches of freezing fog during the morning, and these were slow to clear in places, lingering throughout the day locally.</p> <p>Elsewhere it was a fine winter's day with good spells of almost unbroken sunshine for many. Despite the sunshine, most places failed to see temperatures rise above freezing. However, parts of the far south-west of England and the north-west of Scotland did see temperatures rise some way above zero.</p> <p>Winds were generally light and variable in direction.</p>

0600 GMT 28 DECEMBER 2010	SIG WEATHER	1200 GMT 28 DECEMBER 2010	SIG WEATHER	<p><b>Summary of UK Weather for Tuesday 28 December 2010.</b>  It was a relatively mild night, with only a handful of places dipping below freezing.</p> <p>A band of rain and sleet that had earlier spread in from the south-west continued to push north-eastwards from the north of the U.K. into the North Sea during the morning. This briefly turned to snow across south-western Scotland and north-eastern England, though giving relatively slight accumulations.</p> <p>Much of the U.K. then saw a dull and overcast day with occasional spells of light rain and drizzle. Large amounts of fog accompanied this, even at low levels, and lingered through the day in many parts, particularly south-eastern England.</p> <p>By contrast, some parts of the country, notably north Wales and northern Scotland, saw more broken cloud and some sunny intervals as the south-easterly breeze helped disperse the cloud to the lee of higher ground.</p> <p>For the majority though, the misty conditions persisted into the evening, with thicker fog readily re-forming across many parts of the country.</p> <p>Maximum temperatures were close to the average in most areas, and above average in the south-west.</p>
1800 GMT 28 DECEMBER 2010	SIG WEATHER	0000 GMT 29 DECEMBER 2010	SIG WEATHER	<p><b>EXTREMES</b>  <b>Highest Maximum:</b>  11.5 St Marys Airport, Isles Of Scilly  <b>Lowest Maximum:</b>  1.7 Dishforth Airfield, North Yorkshire  <b>Lowest Minimum:</b>  -6.0 Tain Range, Ross &amp; Cromarty  <b>Lowest Grass Minimum:</b>  -7.7 Tain Range, Ross &amp; Cromarty  <b>Most Rain:</b>  11.8 Charterhall, Berwickshire  <b>Most Sun:</b>  0.5 Shawbury, Shropshire</p>
