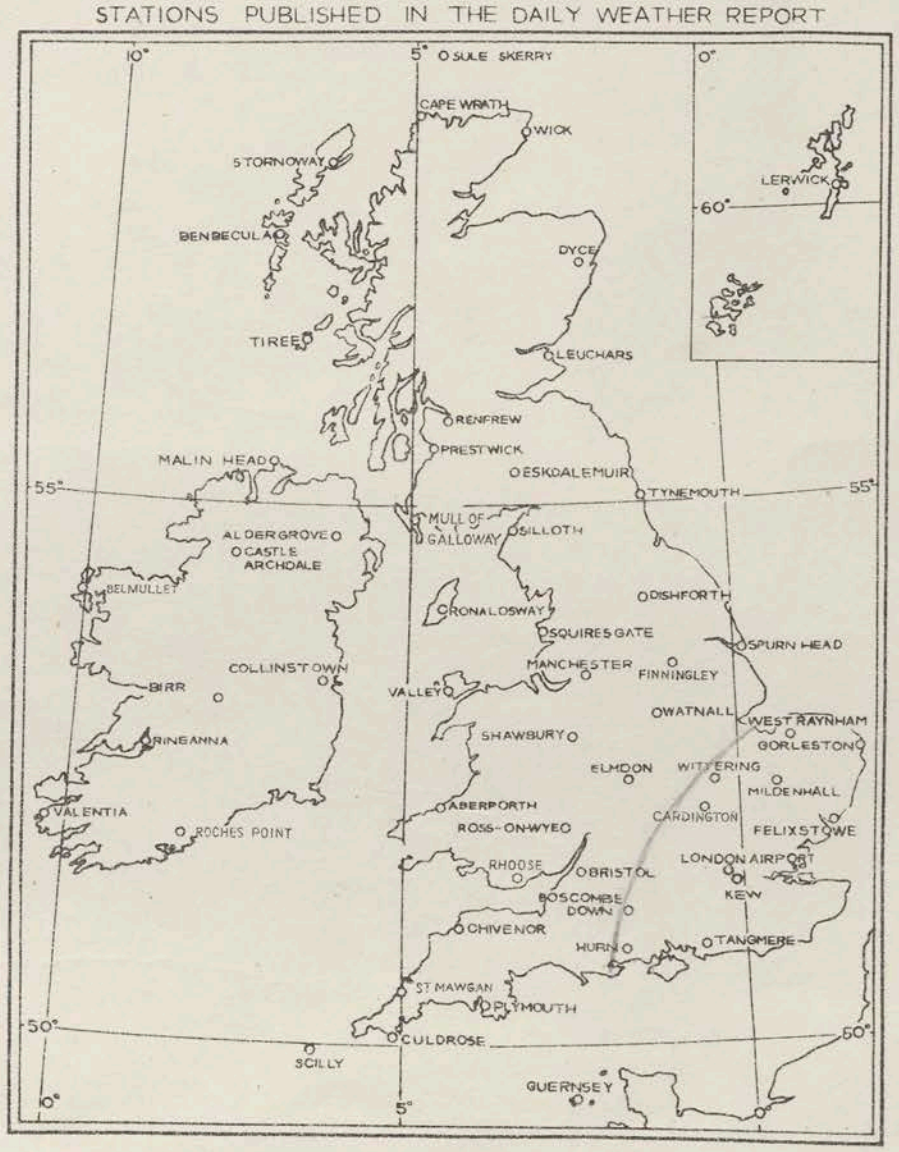
THE DAILY WEATHER REPORT

(INTRODUCTION)

1st April to 30th June

1958

STATIONS PUBLISHED IN THE DAILY WEATHER REPORT



METEOROLOGICAL OFFICE

LONDON, W.C.2

1. HISTORY

A brief history of changes in contents and format between 1st April, 1919, and December, 1949, will be found in the introduction to the British Section for 1st October to 31st December, 1949. On 1st January, 1950, the British and International Sections of the former Report, which had been issued in three sections since 1919, were combined in a single publication, the present Daily Weather Report. At the same time, the third section was published separately with the title of Daily Aerological Record. A number of changes in meteorological codes and specifications were introduced on 1st January, 1955, and incorporated in the Report. Changes in format introduced on 1st July, 1955, provided for the elements of station and ships' observations to be given in the order of the appropriate meteorological code and for some modification of the scales and projections of charts.

2. FORM OF PRESENTATION

(i) **Observations.**—Pages 1 and 4 of the Daily Weather Report contain reports for the four main hours of observation from a representative number of stations in Great Britain and Ireland which provide full reports together with a selection of ships' reports for the same hours. In addition, Beaufort letters, (Table 18), mainly describing precipitation, are given for each of the four six-hourly periods, together with reports of maximum and minimum temperature, sunshine, rainfall and state of ground (Table 13), in respect of the land stations listed. Explanations of the codes and specifications used are given below.

(ii) **Charts.**—Page 2 contains a chart of the weather in a large part of the northern hemisphere for mid-day of the previous day. Incorporated in this chart is a line joining the approximate locations of civil twilight (i.e., Sun 6° below horizon) at 1200 h. G.M.T. for the mid point of the month indicated. Page 3 contains charts of slightly larger scale, for the British Isles and Western Europe, for 1800 h. of the previous day and for 0000 h. and 0600 h. on the day of issue.

(iii) **General Synoptic Development, Forecast and Further Outlook.**—Below the weather charts on page 3 will be found a statement which describes the main features in the evolution of the synoptic situation over the British Isles during the preceding 24 hours together with an indication of the manner in which it is expected to develop during the succeeding 24 hours. On the right of this statement is a forecast of the weather expected during a period of 24 hours from noon on the day of issue, followed by an outlook for a further period, the duration of which is normally 24 hours but may be longer in certain weather situations.

3. NOTES

(i) **Standard of Time.**—Greenwich Mean Time is exclusively used throughout the Report.

(ii) **Rainfall.**—Tr : = There has been precipitation, but amount less than 0·05 mm.

(iii) **Temperature.**—Temperature is specified in degrees Fahrenheit and is shown on the charts by means of figures alongside the positions of the stations.

(iv) **Dew Point.**—The values of Dew Point are derived from the original readings of dry-bulb and wet-bulb temperature and are correct to 1° F. Prior to 1st January, 1949, values below 32° F. gave the "Hoar Frost Point" that is to say, the temperature for which the actual vapour pressure is equal to the saturation pressure over ice. Since January, 1949, the true Dew Point and not the Hoar Frost Point has been included in synoptic reports in circumstances where the actual vapour pressure is lower than the saturated water vapour pressure of 32° F.

(v) **Elevations of stations.**—The elevations of British stations are given below. These refer in each case to the cistern of the barometer.

	ft.		ft.		ft.		ft.

(vi) **Adjusted Readings.**—Where an instrumental reading is found to be in error and some adjustment is necessary, the adjusted reading is published in brackets thus (59).

4. EXPLANATION OF CODES AND SPECIFICATIONS

CODE F.M.11A—Land Stations					
N dd ff	VV ww W	PPP TT	$N_h C_L h C_M C_H$	T_dT_d a pp	N_s C h_sh_s
N = Total amount of cloud in eighths (Table 1). dd = Wind direction on scale 01–36 (see also Table 2). ff = Wind speed in knots.	VV = Visibility (Table 3). ww = Present weather (Table 5). W = Past weather (Table 4).	PPP = Last three figures of pressure (reduced to M.S.L.) in millibars and tenths. TT = Temperature in whole degrees Fahrenheit.	N_h = Amount of cloud the height of which is given by h (Table 1). C_L = Form of low cloud (Table 6). h = Height above ground of base of cloud (Table 9). C_M = Form of Medium Cloud (Table 7). C_H = Form of high cloud (Table 8).	T_dT_d = Dew point temperature in whole degrees Fahrenheit. a = Characteristic of barometric tendency (Table 10). pp = Barometric tendency (change of pressure in last three hours in tenths of millibars).	N_s = Amount in eighths of individual cloud layer or mass (Table 1). C = Type of cloud (Table 11). h_sh_s = Height of base of cloud (Table 12).
CODE F.M.21A—Ships					
$L_aL_aL_a$	$L_oL_oL_o$	Followed by first four groups as in F.M.11A above	D_s v_s a pp	T_sT_s T_dT_d	d_wd_w P_w H_w
$L_aL_aL_a$ = Latitude in degrees and tenths.	$L_oL_oL_o$ = Longitude in degrees and tenths (West unless otherwise stated).		D_s = Direction of movement of ship (Table 14). v_s = Speed of ship in knots (Table 15). a = Characteristic of barometric tendency (Table 10). pp = Barometric tendency (change of pressure in last three hours in tenths of millibars).	T_sT_s = Difference between air temperature and sea temperature in degrees Fahrenheit. (If the air temperature is less than the sea temperature, 50 is added). T_dT_d = Dew point temperature in whole degrees Fahrenheit.	d_wd_w = Direction of waves to tens of degrees (Table 2). P_w = Period of waves (Table 16). H_w = Mean maximum height of waves (Table 17).

Table 1—Code for Cloud Amount (N, N_h, N_s)

0 = None.

1 = 1 eighth of sky covered or less, but not zero.

2 = 2 eighths of sky covered.

3 = 3 eighths of sky covered.

4 = 4 eighths of sky covered.

5 = 5 eighths of sky covered.

6 = 6 eighths of sky covered.

7 = 7 eighths of sky covered or more, but not 8 eighths.

8 = 8 eighths (sky completely covered).

9 = Sky obscured or cloud amount cannot be estimated.

Note.—"Trace" would be included under Figure 1, which should be used for amounts up to 1/8th (i.e., not up to 3/16ths). "Overcast but with openings" would be included under Figure 7, which should be used for amounts down to 7/8ths (i.e., not down to 13/16ths).

Table 2.—Table of Conversion of Wind Direction read in Compass Points into Code Figures (dd and d_wd_w)

In the range 01–50 the figures give actual visibility in tenths of kilometres, or half furlongs. This table gives the meanings of higher code figures. The decade F.0—F.9 is used, in this publication only, to give visibilities of less than 110 yards.

† Values not given may be obtained by interpolation.

* Code figures not used.

‡ Decade 90–99 is used when visibility cannot be determined with sufficient accuracy to justify lower code figures.

Table 4.—Code for Past Weather (W)

0 = Cloud covering ½ or less of the sky throughout the appropriate period.

1 = Cloud covering more than ½ of the sky during part of the appropriate period and covering half or less during part of the period.

2 = Cloud covering more than ½ of the sky throughout the appropriate period.

3 = Sandstorm, duststorm or drifting snow.

4 = Fog or thick haze.

5 = Drizzle.

6 = Rain.

7 = Snow, or rain and snow mixed.

8 = Shower(s).

9 = Thunderstorm(s) with or without precipitation.

Table 5.—Code for Present Weather (ww)

00–19 No precipitation at time of observation.	00	Cloud development not observed.
	01	Clouds generally dissolving or becoming less developed.
	02	State of sky on the whole unchanged.
	03	Clouds generally forming or developing.
		(00–03: Characteristic change of the state of sky during the past hour.)
	04	Visibility reduced by smoke, e.g. veldt or forest fire, industrial smoke or volcanic ashes.
	05	Haze.
	06	Widespread dust in suspension in the air, not raised by wind, at or near the station at the time of observation.
	07	Dust or sand raised by wind at or near the station at the time of observation, but no well-developed dust devil(s), and no dust-storm or sand-storm seen.
	08	Well developed dust devil(s) seen at or near the station within last hour, but no dust-storm or sand-storm.
	09	Dust-storm or sand-storm within sight of the station or at the station during the last hour.
	10	Mist.††
	11	Shallow fog in patches.
	12	Shallow fog, more or less continuous. (11–12: Fog not deeper than about 2 metres on land or 10 metres at sea.)
	13	Lightning visible, no thunder heard.
	14	Precipitation within sight, not reaching the ground or the surface of the sea.
	15	Precipitation within sight, reaching the ground or the surface of the sea but distant (estimated to be more than 5 km.) from the station.
	16	Precipitation within sight reaching the ground or the surface of the sea near to but not at the station.
	17	Thunder heard but no precipitation at the station.
	18	Squall(s).
	19	Funnel cloud(s).† (18–19: during the past hour.)
20–29 Precipitation, fog or thunderstorm at station in past hour but not at time of observation.	20	Drizzle (not freezing).
	21	Rain (not freezing).
	22	Snow.
	23	Rain and snow.
	24	Freezing drizzle or freezing rain. (20–24: Not falling as shower(s).)
	25	Shower(s) of rain.
	26	Shower(s) of snow, or of rain and snow.
	27	Shower(s) of hail, or of hail and rain.
	28	Fog.
	29	Thunderstorm (with or without precipitation).
30–39 Duststorms, sandstorms or drifting snow.	30	Slight or moderate dust-storm or sand-storm, has decreased during preceding hour.
	31	Slight or moderate dust-storm or sand-storm, no appreciable change during preceding hour.
	32	Slight or moderate dust-storm or sand-storm, has increased during preceding hour.
	33	Severe dust-storm or sand-storm, has decreased during preceding hour.
	34	Severe dust-storm or sand-storm, no appreciable change during preceding hour.
	35	Severe dust-storm or sand-storm, has increased during preceding hour.
	36	Slight or moderate drifting snow.
	37	Heavy drifting snow. (36–37: generally low.)
	38	Slight or moderate drifting snow.
	39	Heavy drifting snow. (38–39: generally high.)
40–49 Fog at time of observation.	40	Fog at a distance at the time of observation, but not at the station during the last hour, the fog extending to a level above that of the observer.
	41	Fog in patches.
	42	Fog, sky discernible.
	43	Fog, sky not discernible. (42–43: has become thinner during the preceding hour.)
	44	Fog, sky discernible.
	45	Fog, sky not discernible. (44–45: no appreciable change during the preceding hour.)
	46	Fog, sky discernible.
	47	Fog, sky not discernible. (46–47: has begun, or has become thicker during the preceding hour.)
	48	Fog, depositing hard rime, sky discernible.
	49	Fog, depositing hard rime, sky not discernible.
50–59 Drizzle at time of observation.	50	Drizzle, not freezing, intermittent.
	51	Drizzle, not freezing, continuous. (50–51: slight at time of observation.)
	52	Drizzle, not freezing, intermittent.
	53	Drizzle, not freezing, continuous. (52–53: moderate at time of observation.)
	54	Drizzle, not freezing, intermittent.
	55	Drizzle, not freezing, continuous. (54–55: thick at time of observation.)
	56	Drizzle, freezing, slight.
	57	Drizzle, freezing, moderate or thick.
	58	Drizzle and rain, slight.
	59	Drizzle and rain, moderate or heavy.
60–69 Rain at time of observation.	60	Rain, not freezing, intermittent.
	61	Rain, not freezing, continuous. (60–61: slight at time of observation.)
	62	Rain, not freezing, intermittent.
	63	Rain, not freezing, continuous. (62–63: moderate at time of observation.)
	64	Rain, not freezing, intermittent.
	65	Rain, not freezing, continuous. (64–65: heavy at time of observation.)
	66	Rain, freezing, slight.
	67	Rain, freezing, moderate or heavy.
	68	Rain or drizzle, and snow, slight.
	69	Rain or drizzle and snow, moderate or heavy.
70–79 Solid precipitation not in showers.	70	Intermittent fall of snow flakes.
	71	Continuous fall of snow flakes. (70–71: slight at time of observation.)
	72	Intermittent fall of snow flakes.
	73	Continuous fall of snow flakes. (72–73: moderate at time of observation.)
	74	Intermittent fall of snow flakes.
	75	Continuous fall of snow flakes. (74–75: heavy at time of observation.)
	76	Ice needles (with or without fog).
	77	Granular snow (with or without fog).
	78	Isolated starlike snow crystals (with or without fog).
	79	Ice pellets.
80–90 Showery precipitation.	80	Rain shower(s), slight.
	81	Rain shower(s), moderate or heavy.
	82	Rain shower(s), violent.
	83	Shower(s) of rain and snow, slight.
	84	Shower(s) of rain and snow, moderate or heavy.
	85	Snow shower(s), slight.
	86	Snow shower(s), moderate or heavy.
	87	Shower(s) of soft or small hail with or without rain or rain and snow-mixed, slight.
	88	Shower(s) of soft or small hail with or without rain or rain and snow-mixed, moderate or heavy.
	89	Shower(s) of hail, with or without rain or rain and snow mixed, not associated with thunder, slight.
	90	Shower(s) of hail, with or without rain or rain and snow mixed, not associated with thunder, moderate or heavy.
91–99 Precipitation with current or recent thunderstorm.	91	Slight rain at time of observation.
	92	Moderate or heavy rain at time of observation.
	93	Slight snow, or rain and snow mixed at time of observation.
	94	Moderate or heavy snow, rain and snow mixed or hail at time of observation. (91–94: thunderstorm during the preceding hour, but not at time of observation.)
	95	Thunderstorm, slight or moderate, without hail but with rain and/or snow at time of observation.
	96	Thunderstorm, slight or moderate, with hail at time of observation.
	97	Thunderstorm, heavy, without hail, but with rain and/or snow at time of observation.
	98	Thunderstorm combined with duststorm or sandstorm at time of observation.
	99	Thunderstorm, heavy, with hail at time of observation. (95–99: thunderstorm at time of observation.)

The expression " at the station " refers to a land station or a ship.

† Tornado cloud or water spout.

†† Will be used only when visibility is reported as 10 or more and obscuration is due to water particles.

Table 6.—Code for Form of Low Cloud* (C_L)

0 No low cloud.

1 Cumulus with little vertical development.

2 Cumulus of considerable development with or without other cumulus or stratocumulus.

3 Cumulonimbus, tops not cirriform or anvil-shaped ; with or without other forms of low cloud.

4 Stratocumulus formed by spreading out of cumulus : cumulus may also be present.

5 Stratocumulus not formed by the spreading out of cumulus.

6 Stratus and/or stratus fractus but not of bad weather.

7 Stratus fractus or cumulus fractus of bad weather (" scud ") usually under altostratus or nimbostratus. By " bad weather " is meant the conditions which generally exist before, during or after precipitation.

8 Cumulus together with stratocumulus not formed by the spreading out of cumulus.

9 Cumulonimbus, with cirriform top, often anvil-shaped. Other types of low cloud may be present.

/ or — Low clouds not visible owing to darkness, fog, sandstorm or other phenomena.

Table 7.—Code for Form of Medium Cloud* (C_M)

0 No medium cloud.

1 Mainly semi-transparent altostratus through part of which sun or moon are visible.

2 Altostratus, the greatest part of which is sufficiently dense to hide the sun (or moon), or nimbostratus.

3 Mainly semi-transparent altocumulus of unchanging elements ; at a single level.

4 Semi-transparent altocumulus in patches ; elements continually changing ; possibly at more than one level.

5 Semi-transparent altocumulus in bands or in an increasing layer.

6 Altocumulus formed by spreading out of cumulus.

7 Any of the following :—
(*a*) Altocumulus in two or more layers not increasing.
(*b*) Opaque layer of altocululus not increasing.
(*c*) Altocumulus with altostratus or nimbostratus or with both.

8 Altocumulus tufted or turreted.

9 Altocumulus at different levels, giving chaotic appearance to the sky. (Dense cirrus usually present.)

/ or — Medium cloud not visible owing to darkness, fog, sandstorm, etc., or owing to existence of a complete layer of lower cloud.

Table 8.—Code for Form of High Cloud* (C_H)

0 No cirriform cloud.

1 Scattered cirrus not increasing.

2 Dense cirrus in patches ; usually not increasing.

3 Cirrus often anvil-shaped ; usually associated with cumulonimbus.

4 Tufted cirrus increasing and thickening.

5 Cirrus and/or cirrostratus increasing but the continuous layer not reaching above 45° altitude.

6 Cirrus and/or cirrostratus increasing with the continuous layer reaching above 45° altitude.

7 Complete layer of cirrostratus covering whole sky.

8 Cirrostratus not increasing and not a complete layer covering whole sky.

9 Cirrocumulus alone or with cirrus or cirrostratus where the cirrocumulus predominates.

/ or — High cloud not visible owing to darkness, fog, sandstorm, etc., or owing to the existence of a complete layer of lower cloud.

* *Abbreviated definitions. For full text see "Handbook of Weather Messages," Part II M.O.510(b).*

Table 9.—Code for Cloud Height (h)

Code figure	Height of base of cloud: metres	Height of base of cloud: feet
0	0–50	0–150
1	50–100	150–300
2	100–200	300–600
3	200–300	600–1,000
4	300–600	1,000–2,000
5	600–1,000	2,000–3,000
6	1,000–1,500	3,000–5,000
7	1,500–2,000	5,000–6,500
8	2,000–2,500	6,500–8,000
9	Above 2,500	Above 8,000

Note 1.—If there is no cloud at all code figure 9 is reported. If the sky is not discernible owing to fog or other surface phenomena, figure 0 is reported.

Note 2.—If there is fog, and the sky is discernible through the fog, the cloud form, height and amount are reported as if no fog were present. If the sky is not discernible through the fog the height of the base of the cloud is reckoned as 0.

Note 3.—Height above ground of the base of cloud. If there is cloud of Form C_L reported, h refers to this cloud. If, however, there is no cloud of Form C_L and there is cloud of Form C_M h refers to this cloud.

When there is cloud at several levels below 8,000 ft., N_h and h refer to the lowest layer covering more than $\frac{1}{2}$ of the sky. If, however, there is no layer of more than $\frac{1}{2}$ then N_h and h refer to the lowest layer which is not exceeded by any other layer present. When the same form of cloud C_L is present at more than one level, N_h refers to the total amount of the cloud form reported for C_L at all levels, while h refers to the height of cloud form C_L at the lowest level.

Table 10.—Code for Characteristic of Barometric Tendency (a)

0 = Increasing, then decreasing ; atmospheric pressure the same as or higher than 3 hr. ago.

1 = Increasing, then steady ; or increasing, then increasing more slowly. } atmospheric pressure now higher than 3 hr. ago.

2 = Increasing (steadily or unsteadily). } atmospheric pressure now higher than 3 hr. ago.

3 = Decreasing or steady, then increasing ; or increasing, then increasing more rapidly. } atmospheric pressure now higher than 3 hr. ago.

4 = Steady, atmospheric pressure the same as 3 hr. ago.

5 = Decreasing, then increasing ; atmospheric pressure the same as or lower than 3 hr. ago.

6 = Decreasing, then steady ; or decreasing, then decreasing more slowly. } atmospheric pressure now lower than 3 hr. ago.

7 = Decreasing (steadily or unsteadily). } atmospheric pressure now lower than 3 hr. ago.

8 = Steady or increasing, then decreasing ; or decreasing, then decreasing more rapidly. } atmospheric pressure now lower than 3 hr. ago.

Table 11.—Code for Type of Cloud (C)

0 = Cirrus (Ci).

1 = Cirrocumulus (Cc).

2 = Cirrostratus (Cs).

3 = Altocumulus (Ac).

4 = Altostratus (As).

5 = Nimbostratus (Ns).

6 = Stratocumulus (Sc).

7 = Stratus (St).

8 = Cumulus (Cu).

9 = Cumulonimbus (Cb).

x = Cloud not visible owing to darkness, fog, sandstorm or other analogous phenomena.

Table 12.—Code for Height of Cloud (h_sh_s)

Code figures 01–50 = cloud height in 100s of feet. Code figures 56–80, subtract 50 for cloud height in 1,000s of feet.

CODE FIGURES 81–89		CODE FIGURES 90–99*	
81	35,000 feet	90	less than 150 feet
82	40,000 ,,	91	150–300 ,,
83	45,000 ,,	92	300–600 ,,
84	50,000 ,,	93	600–1,000 ,,
85	55,000 ,,	94	1,000–2,000 ,,
86	60,000 ,,	95	2,000–3,000 ,,
87	65,000 ,,	96	3,000–5,000 ,,
88	70,000 ,,	97	5,000–6,500 ,,
89	above 70,000 feet	98	6,500–8,000 ,,
		99	8,000 feet or higher or no low clouds.

* Only used when cloud height cannot be determined with greater accuracy.

Table 13.—Code for State of Ground (E)

0 ... Ground dry.
1 ... ,, moist.
2 ... ,, wet.
3 ... ,, frozen.
4 ... Glaze on ground but no snow or melting snow.
5 ... Ice, snow or melting snow covering less than one-half of ground.
6 ... Ice, snow or melting snow covering more than one-half of ground (but not completely).
7 ... Ice, snow or melting snow covering ground completely.
8 ... Loose dry snow covering more than one half of ground (but not completely).
9 ... Loose dry snow covering ground completely.

Table 14.—Code for Direction in which Ship has moved (D_s)

0 = Stationary.
1 = North-east.
2 = East.
3 = South-east.
4 = South.
5 = South-west.
6 = West
7 = North-west.
8 = North.
9 = No definite direction or unknown.

Table 15.—Code for Speed of Ship (v_s)

7 =	13–15
8 =	15–17
9 =	17–19
0 =	19–21
1 =	>21
x =	Calm or period of waves not determinable.

Table 17.—Code for Mean Maximum Height of Waves (H_w)

	m.	ft.
0 =	<¼	<1
1 =	½	1½
2 =	1	3
3 =	1½	5
4 =	2	6½
5 =	2½	8
6 =	3	9½
7 =	3½	11
8 =	4	13
9 =	4½	14
x =	Height not determined.	

50 added to d_wd_w

	m.	ft.
0 =	5	16
1 =	5½	17½
2 =	6	19
3 =	6½	21
4 =	7	22½
5 =	7½	24
6 =	8	25½
7 =	8½	27
8 =	9	29
9 =	9½	30½

Notes :—

(i) The range of heights covered by a number is half a metre, e.g., number 3 applies to waves whose heights are between 1¼ m. and 1¾ m. (4 ft. and 5¾ ft.).

(ii) Waves whose heights are greater than 9¾ m. (31 ft.) are reported by coding H_w as 9 and adding after the code group the word WAVE and the actual height in metres or feet ; e.g., Wave 40 ft.

(iii) If a wave height comes exactly midway between the heights corresponding to two code figures, the lower code figure is reported.

(iv) Code figures 49 or 99 for d_wd_w mean "waves confused, direction indeterminate."

TABLE 18.—Explanation of Beaufort letters used for hydrometeors (Col. 51–52 pages 1 and 4)

d = drizzle.
f = fog, visibility 220–1100 yards.
F = thick fog, visibility less than 220 yards.
f_g = low fog over land or sea.
h = hail.
ks = storm of drifting snow.
l = lightning.
p = shower(s).
r = rain.
s = snow.
rs = sleet.
t = thunder.

Intensity is shown by capital letters ("heavy" or "thick") or suffix "o" ("slight"). Continuous precipitation is shown by repeating the letter and intermittent precipitation by the prefix "i". The prefix "j" indicates weather near but not at the station.

5. EXPLANATION OF CHARTS

BAROMETER. Isobars are drawn for intervals of four millibars.

WIND. Arrows fly with wind. A full length feather represents 10 Kt. and a short feather 5 Kt. A solid pennant represents 50 Kt. Calm is indicated by circle outside weather symbol.

TEMPERATURE is given in degrees F.

CLOUD SYMBOLS

Clear sky. Sky ⅛ covered. Sky ⅜ covered. Sky ⅝ covered. Sky ¼ covered.
Sky ⅝ covered. Sky ⅞ covered. Sky 7/8 Covered Sky ⅛ covered. Sky obscured.

WEATHER SYMBOLS

Rain. Drizzle. Snow. Sleet. Hail.
Shower. Thunderstorm. Thunder. Fog. Mist.

FRONTS or boundaries between masses of air of different origin are indicated, wherever their characteristics are well pronounced, in the following way—

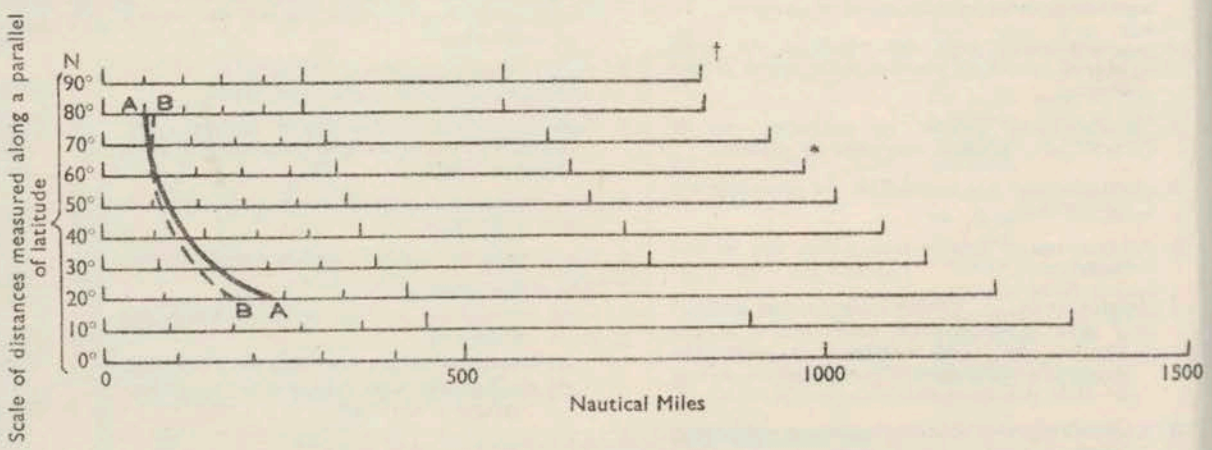
= Warm Front on the surface.
= Warm Front above the ground.
= Cold Front on the surface.
= Cold Front above the ground.
= Occluded Front (or Occlusion).
= Warm Occlusion.
= Cold Occlusion.
= Lines of Frontogenesis.
Short strokes across the frontal line indicate Frontolysis.

Note.—The symbols are placed on the side of the line towards which the front is moving. When the front is stationary the symbols are placed alternately on both sides of the line. Identification letters are inserted on fronts and in systems.

N.B.—Readers of the Report who are unacquainted with the method of construction and the use of weather charts are recommended to read "The Weather Map. An Introduction to Weather Forecasting" (4th Edition 1956), which may be purchased from H.M. Stationery Office, York House, Kingsway, W.C.2, price 11s. 4d. post free.

6. COMBINED DISTANCE AND GEOSTROPHIC WIND SCALE

Equidistant azimuthal projection on the plane of 60°N. Scale 1 : 30,000,000



† Scale of distances measured along a meridian in latitude 80°–90° N.

* Scale of meridian in latitude 0°–80° N. (1 : 30,000,000).

For geostrophic wind speed of 20 knots, with surface pressure 1013·2 mb and temperature 59° F., the distance between consecutive 4 mb isobars is measured from the left hand extremity of the scale to AA for E–W motion and to BB for N–S motion.

MONTHLY SUMMARY OF

THE DAILY WEATHER REPORT

OF THE METEOROLOGICAL OFFICE, LONDON

FOR MAY 1958

No. 29

Persistently rather cool, with more than average rainfall.

The situation was markedly unsettled throughout the month, with an almost uninterrupted sequence of depression approaching the British Isles from the west. On nearly every day a front lay over some part of the country.

On 1st an anticyclone was centred over the North Sea and most of the country was sunny, with temperatures above 70° at many places, though it was much cooler along parts of the east coast. The following day was still warmer over England and Wales, 77° being reached at London Airport and Cardington, but temperatures over Scotland and Northern Ireland fell about 10° with the onset of northerly winds. For the next week or more the boundary between the colder and warmer air lay roughly east-west across the British Isles.

On 5th, after night thunderstorms in parts of southern England, cloudy weather and rain spread across the whole country. The rain was slight in England and Wales but over 10 mm. fell in parts of Scotland during the following night.

A deepening depression crossed Scotland during 7th and 8th; Benbecula reported 32 mm. of rain in 24 hours. The night of 7th/8th was very mild, with temperatures in the upper fifties in southeastern England. Cool northwesterly winds spread in behind the depression and, although there was some weak frontal activity, the next few days were fairly sunny over most of the country, though with showers and occasional thunderstorms.

On 14th a weak depression moved eastwards across England, but 36 hours later a more vigorous system, with winds of gale force, passed over south Wales and on to Holland. Over 15 mm of rain fell in southern districts of England and a gust of 75 knots was recorded at the Lizard. The fresh northerly winds behind the depression backed and weakened during 16th with the approach of a warm sector, and on 18th temperatures reached the middle sixties in places after being below average for a week.

There were showers and sunny periods in the mainly westerly winds from 20th to 22nd. During the night of 22nd/23rd a depression deepened off the mouth of the Bristol Channel and became as intense as the depression of 15th/16th. Its subsequent movement was northwards to Scotland and there was substantial rainfall over western districts of England and Wales and over much of Scotland, with outbreaks of thunderstorms.

From 25th to the end of the month the situation was weakly cyclonic over the British Isles. Weather was rather cool, with rain or showers and some thunderstorms. Fronts moved southeast in the direction of the Bay of Biscay and then turned slowly across the British Isles to give prolonged rain in many areas during the last three days of the month.

The month was a uniformly cool one apart from the first two days, though there was little air frost over England and Wales. Sunshine totals were about average and rainfall above average in nearly all areas. Both Valley and Stornoway had their wettest May for over 10 years.

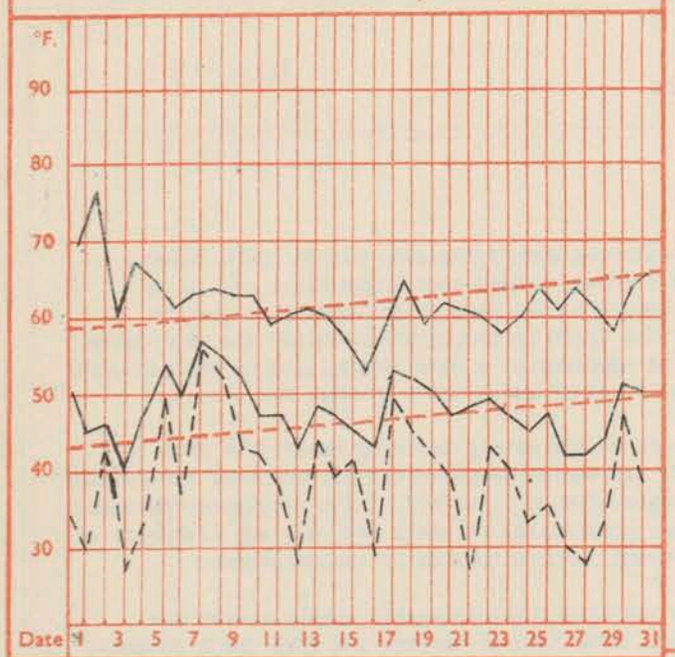
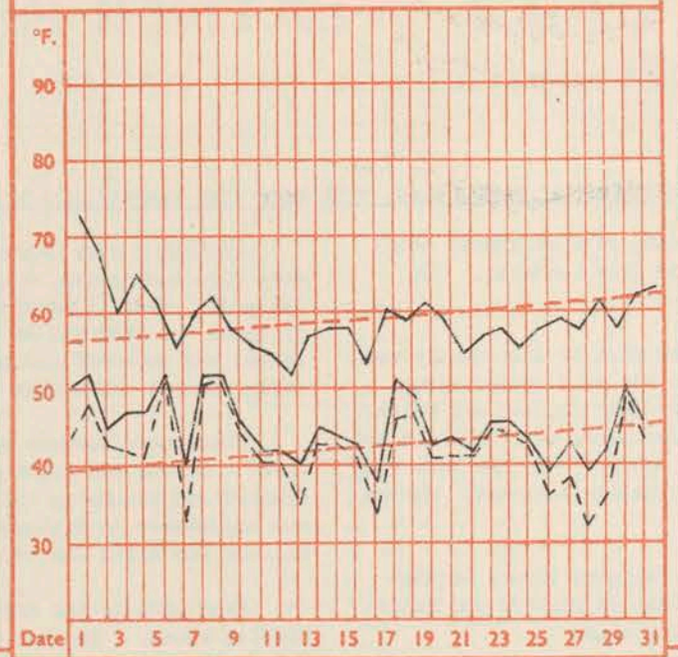
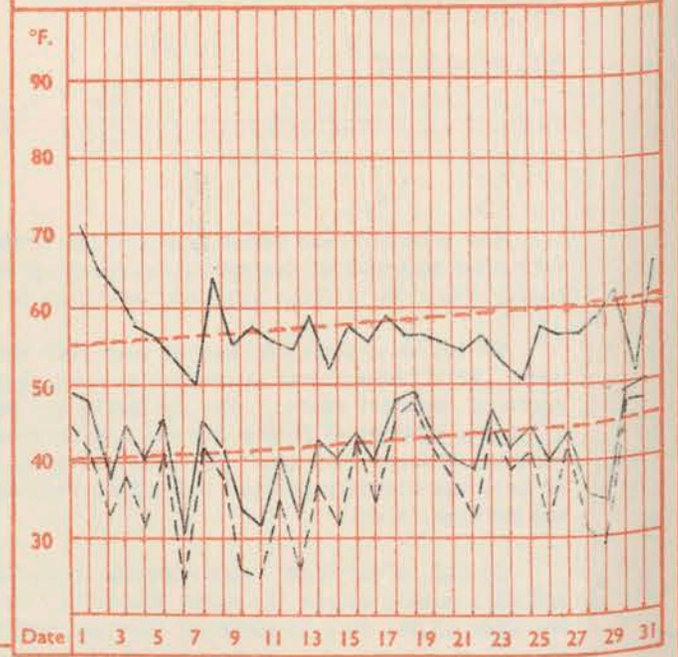
LONDON (KEW)



MANCHESTER (AIRPORT)

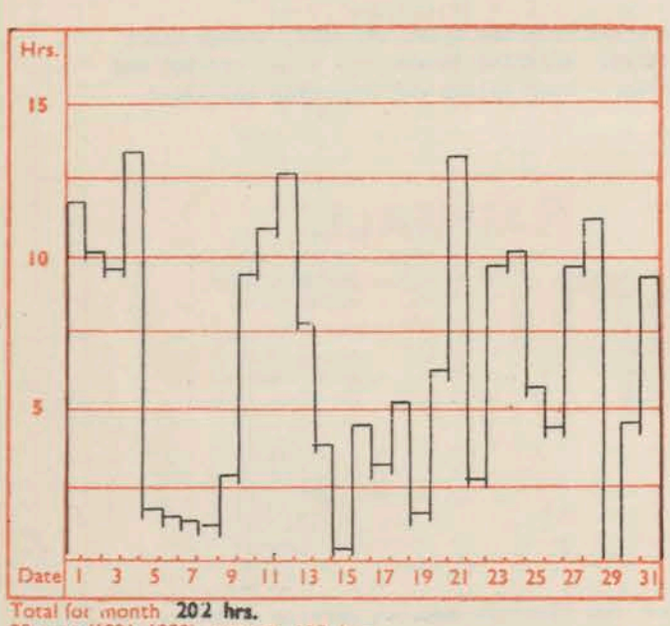


GLASGOW (RENFREW)

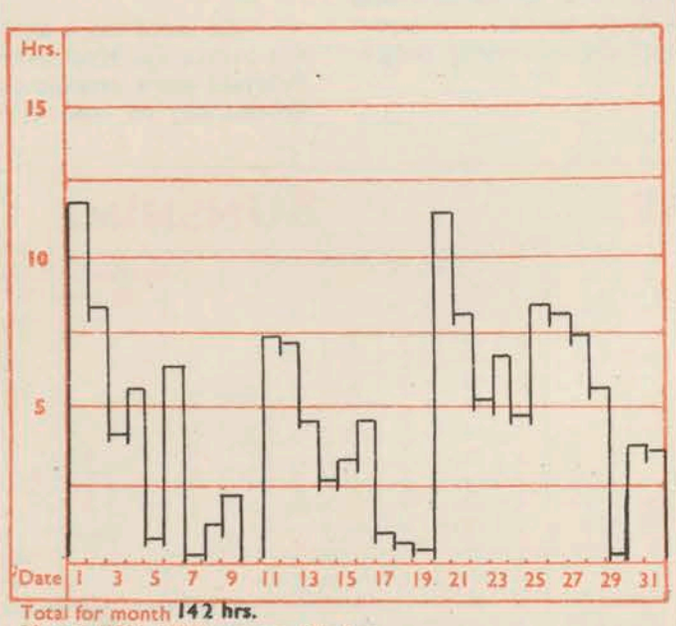


Maximum temperatures read at 21 h. G.M.T. daily, and minimum temperatures, read at 09 h. G.M.T. daily, are shown in full lines. Grass minimum temperatures, read at 09 h. G.M.T. daily, are shown by a dotted line. Pecked lines in red show normal values.

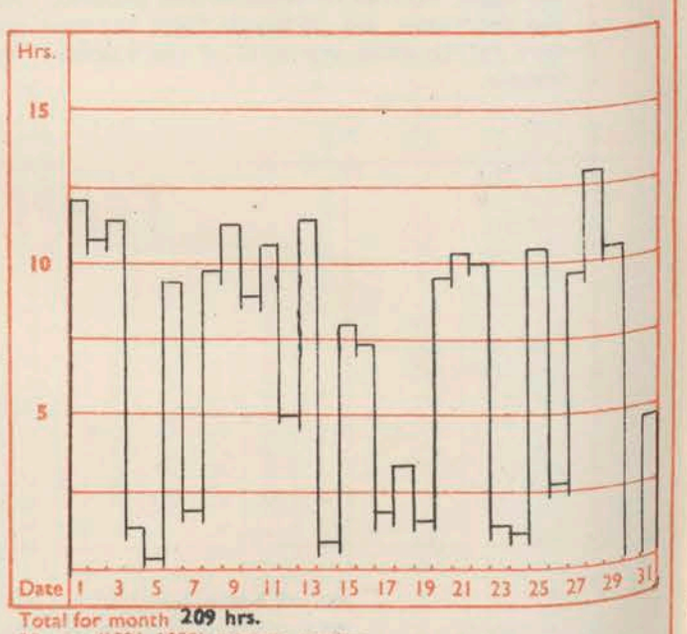
SUNSHINE



Total for month **202 hrs.**
30 year (1921–1950) average 192 hrs.



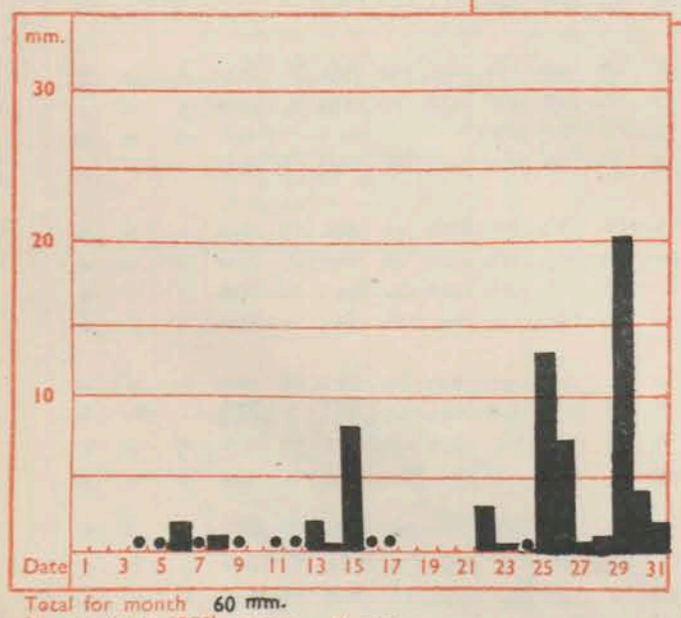
Total for month **142 hrs.**
30 year (1921–1950) average 174 hrs.



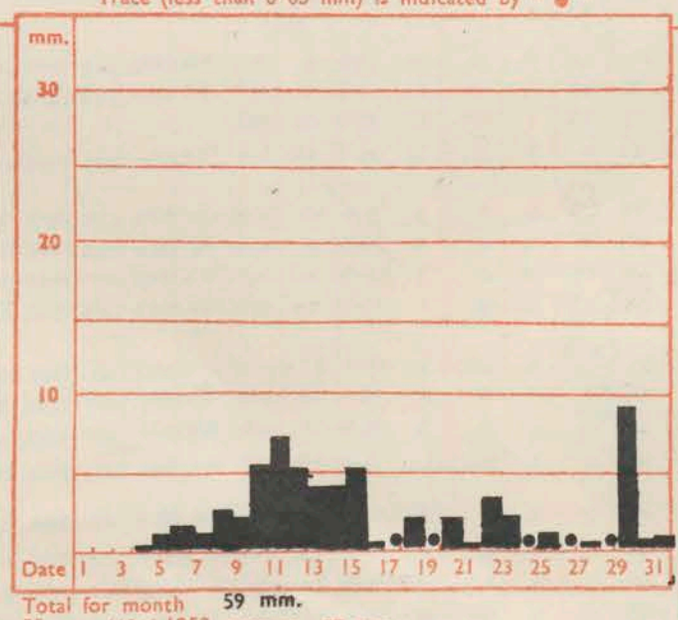
Total for month **209 hrs.**
30 year (1921–1950) average 172 hrs.

The rainfall entry made for each day represents the total fall for the 24-hour period beginning at 09 h. G.M.T. on that day.
Trace (less than 0·05 mm) is indicated by " • "

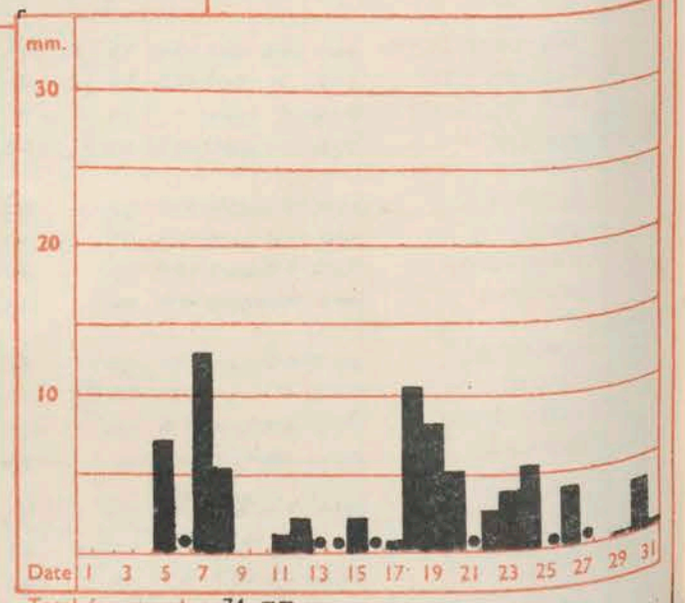
RAINFALL



Total for month **60 mm.**
35 year (1916-1950) average 46 mm.



Total for month **59 mm.**
35 year (1916-1950) average 57 mm.



Total for month **74 mm**
35 year (1916 1950) average 67 mm.

Corrections to Monthly Summary for April, No 28 :— Cardington - Rainfall - Maximum fall in 24 hours 8mm on 5th: Elmdon — Temperature — Mean Maximum 52.8° — Difference from Average -1.1.
Additional correction to Monthly Summary for March, No27:- Gorleston — Temperature — Highest minimum 42° on 29th.

SIR GRAHAM SUTTON, C.B.E., D.Sc., F.R.S., Director General. Meteorological Office, Air Ministry, Kingsway, London, W.C.2.

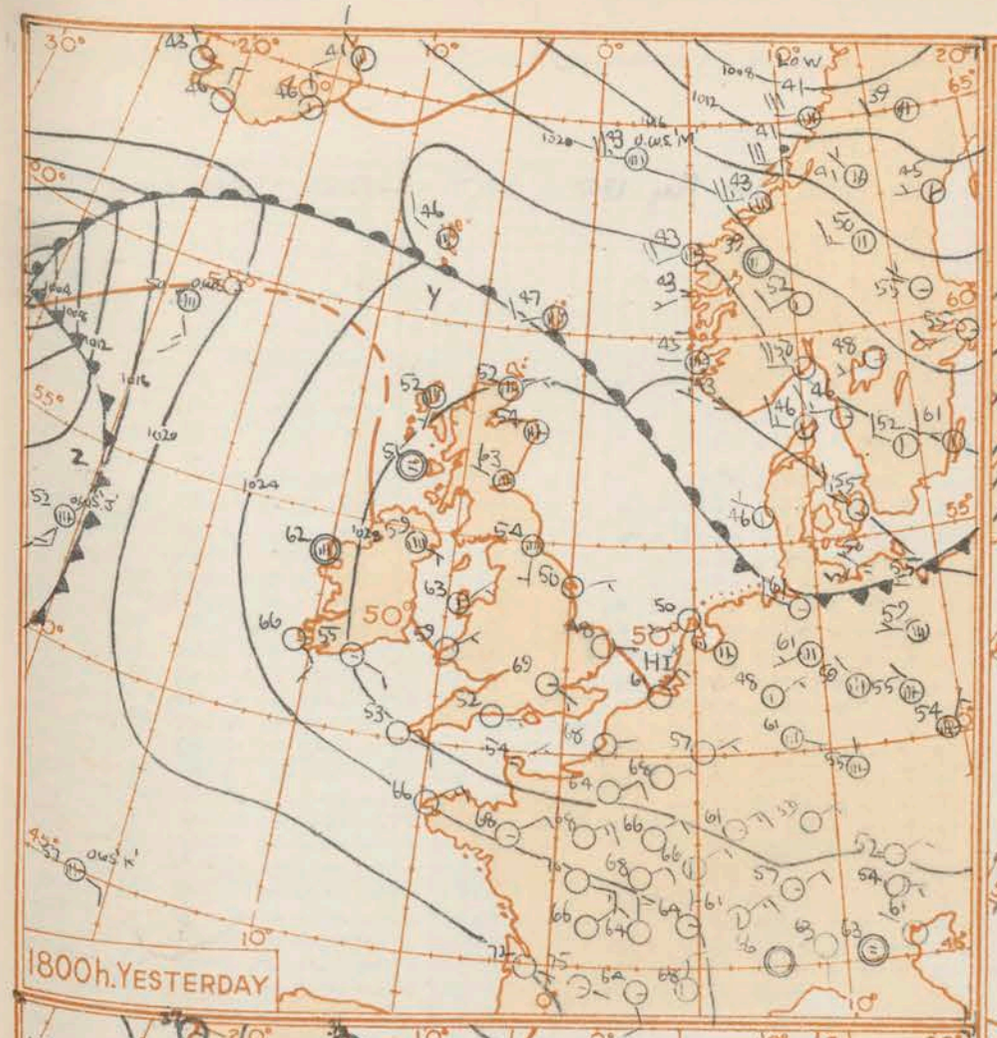
CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

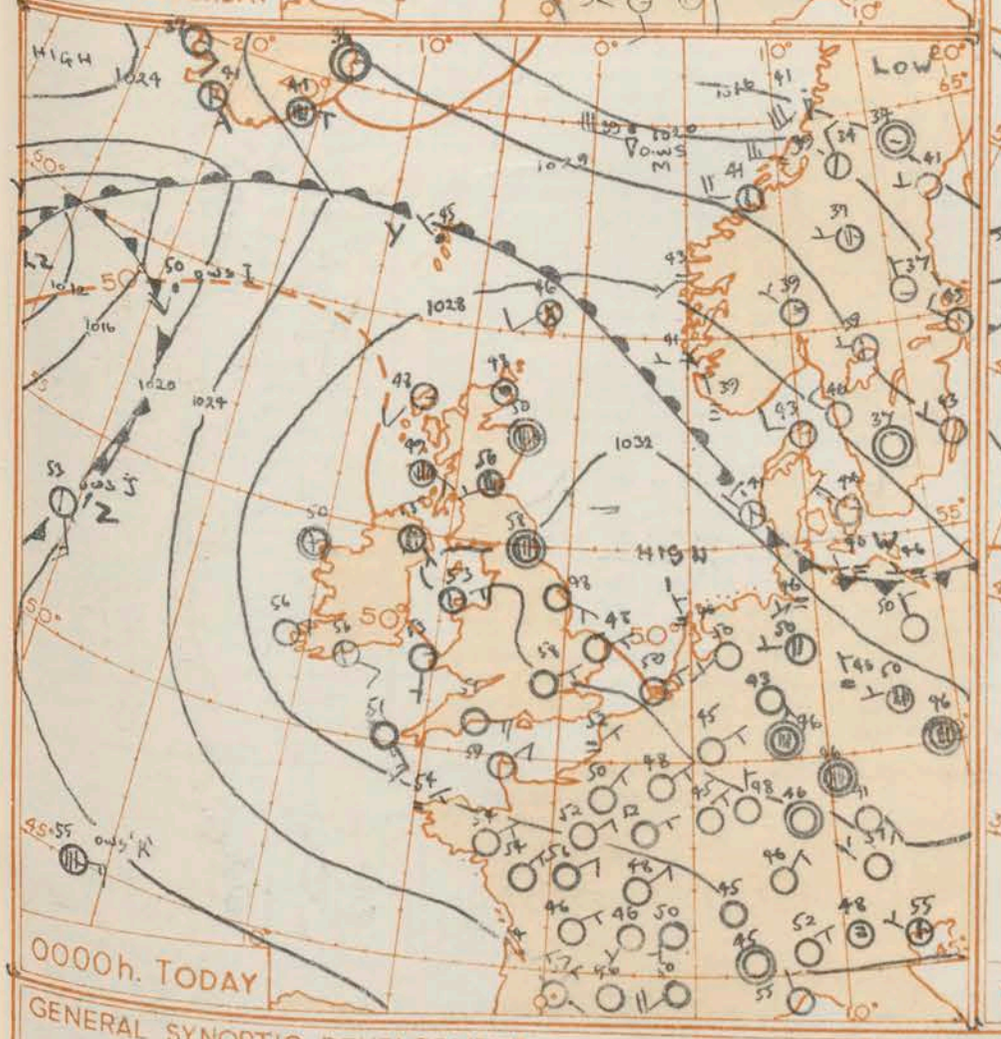
Mid-day (12h) of Wednesday 30th April 1958

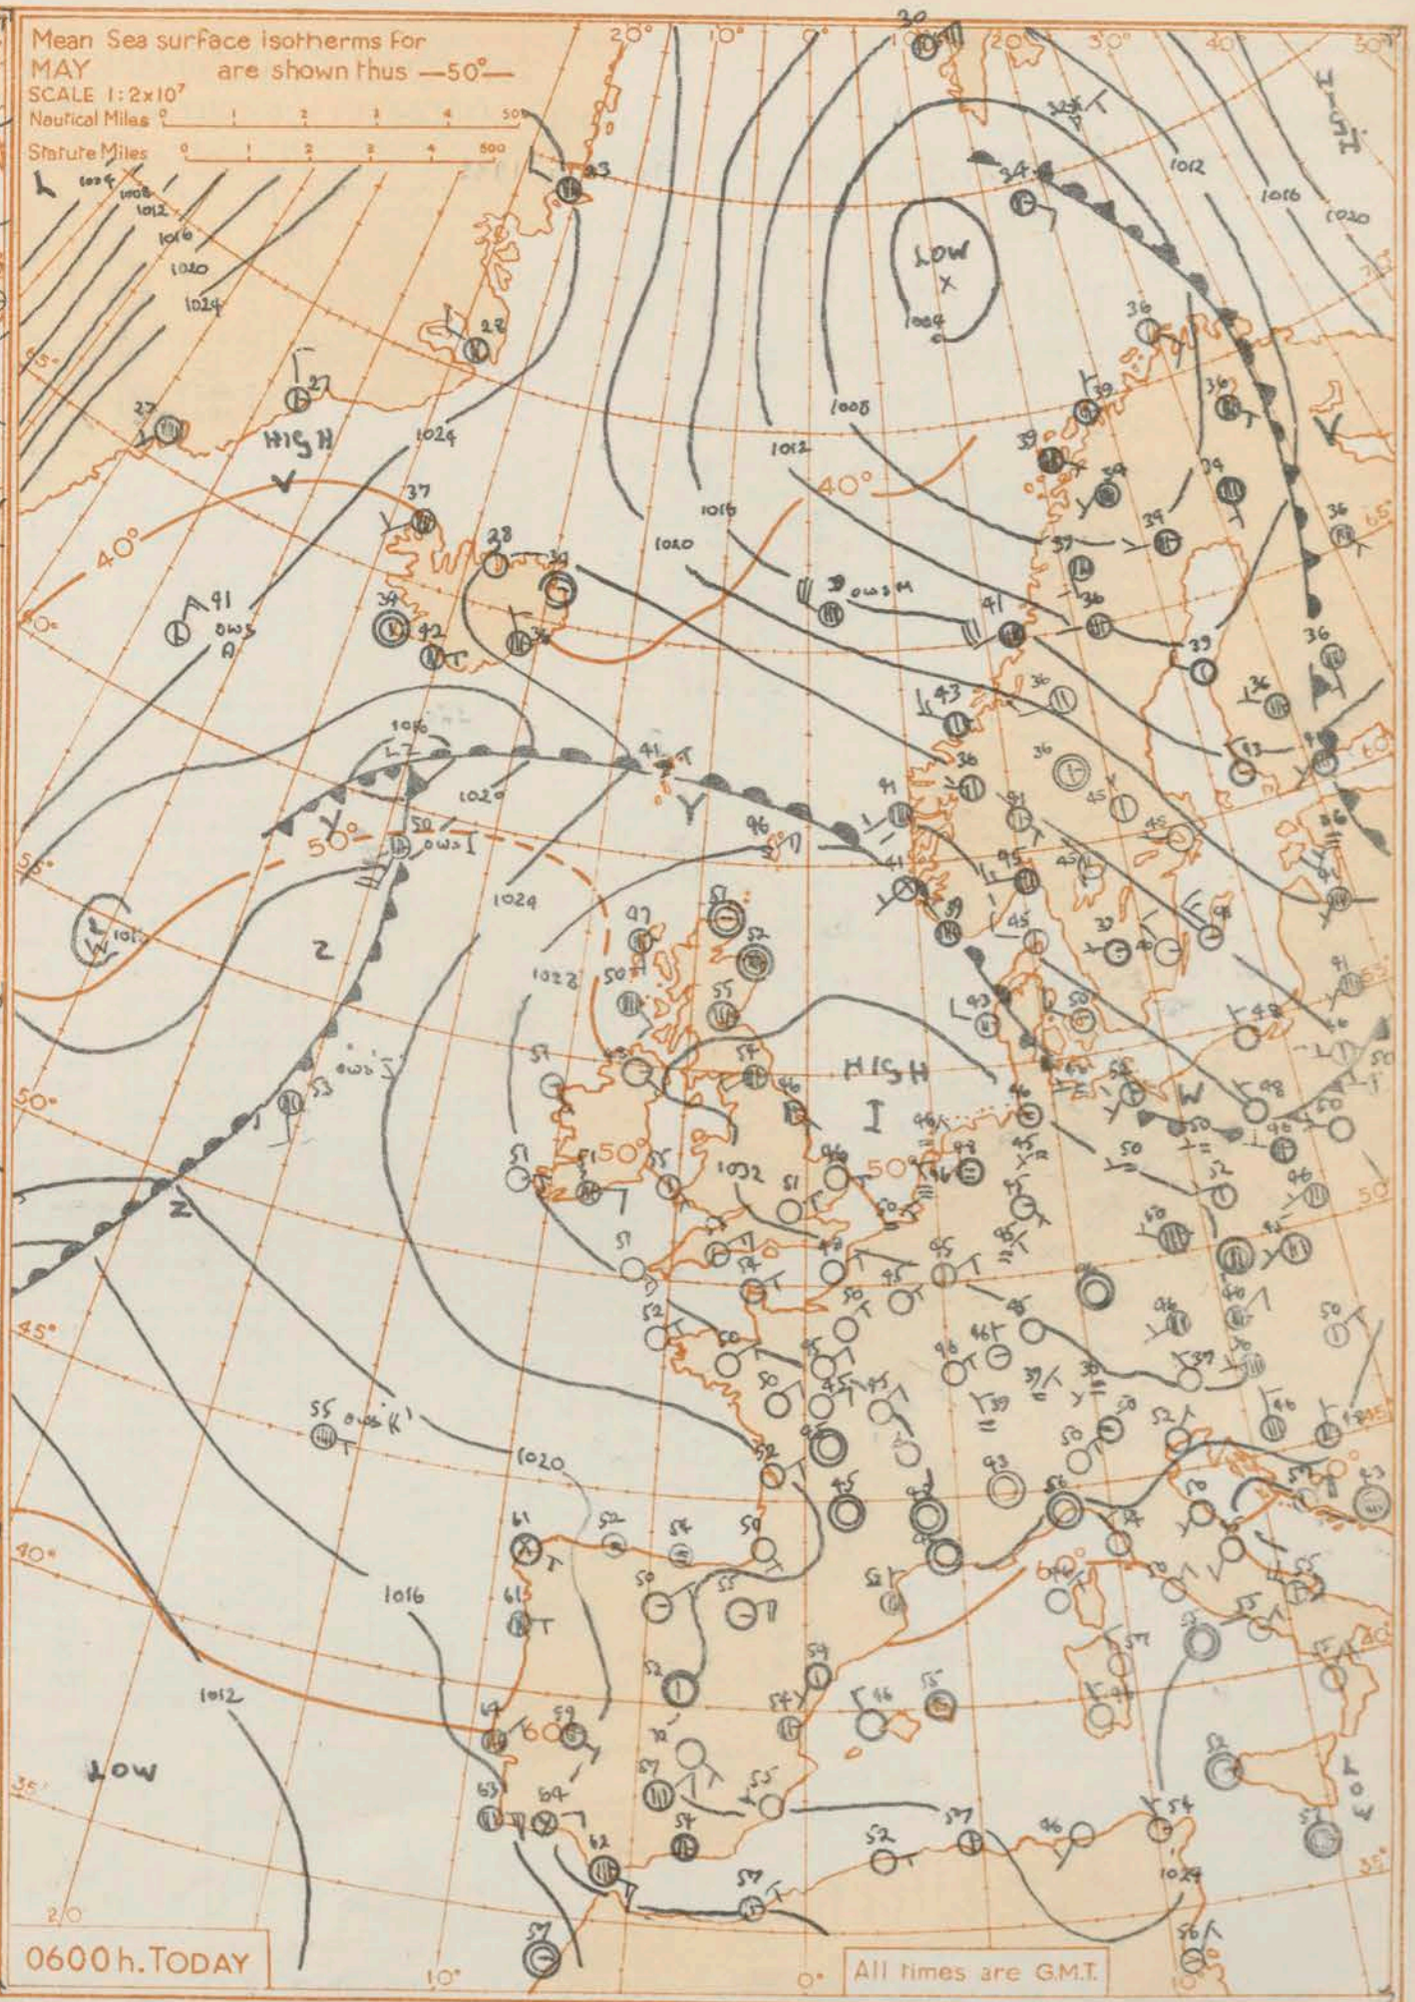
Equidistant azimuthal projection 1:3×10⁷ on the plane of 60°N.

NAUTICAL MILES.

0 500 1,000 1,500







GENERAL SYNOPTIC DEVELOPMENT

Issued at midday today Thursday 1st May 1958

The anticyclone has intensified still further and now covers much of western Europe as well as the British Isles. Little change is expected in the pressure distribution over England and Wales, but a shallow depression is expected to pass between Scotland and Iceland on an east-northeast track and its cold front will probably move into Scotland later today or tonight.

FORECAST FOR BRITISH ISLES until noon tomorrow

Cloudy, cooler weather with further rain, possibly only slight, will spread across north Scotland tonight and possibly spread into central Scotland tomorrow morning. Otherwise the weather will be fine, sunny and very warm over the British Isles today and tomorrow.

OUTLOOK FOR the following 24 hours

Probably dry in most places, though becoming cooler, except probably in the south where it will continue warm.

SIR GRAHAM SUTTON, C.B.E., D.Sc., F.R.S., Director General, Meteorological Office, Air Ministry, Kingsway, London, W.C.2.

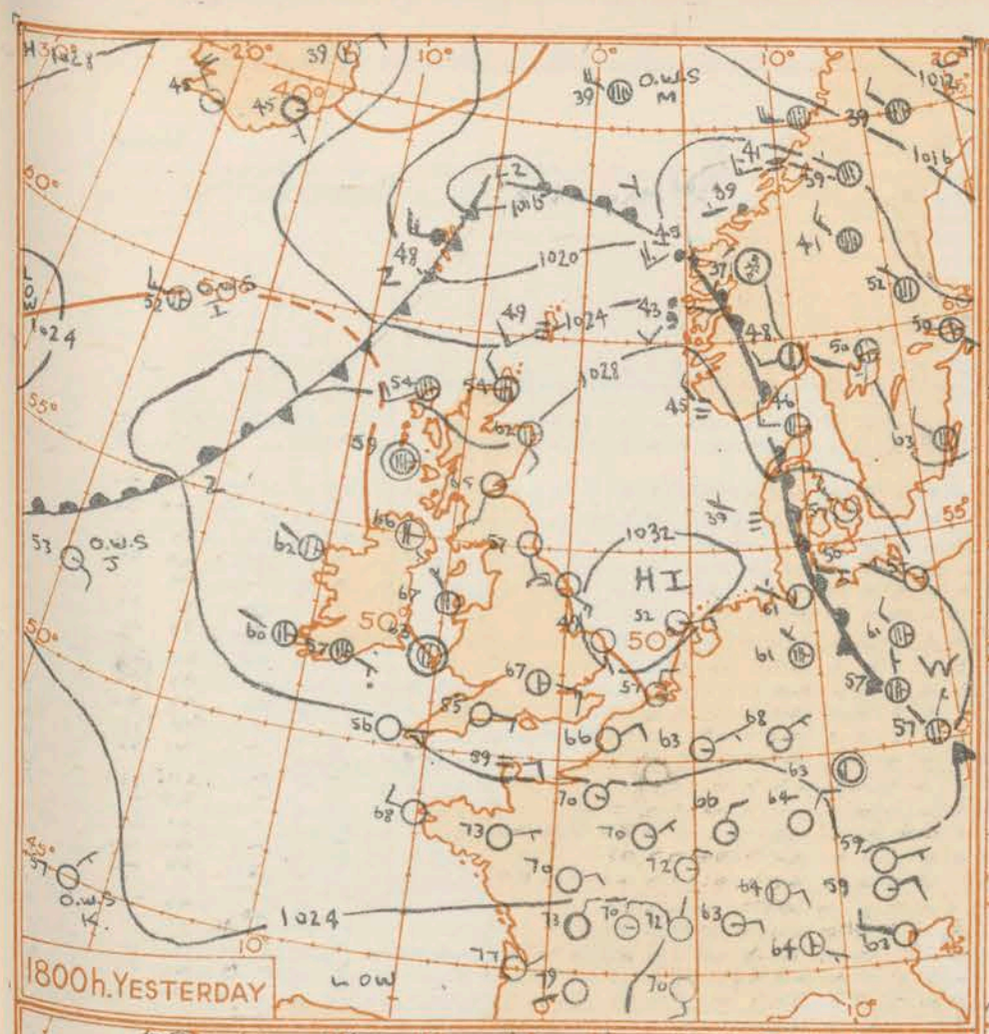
CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

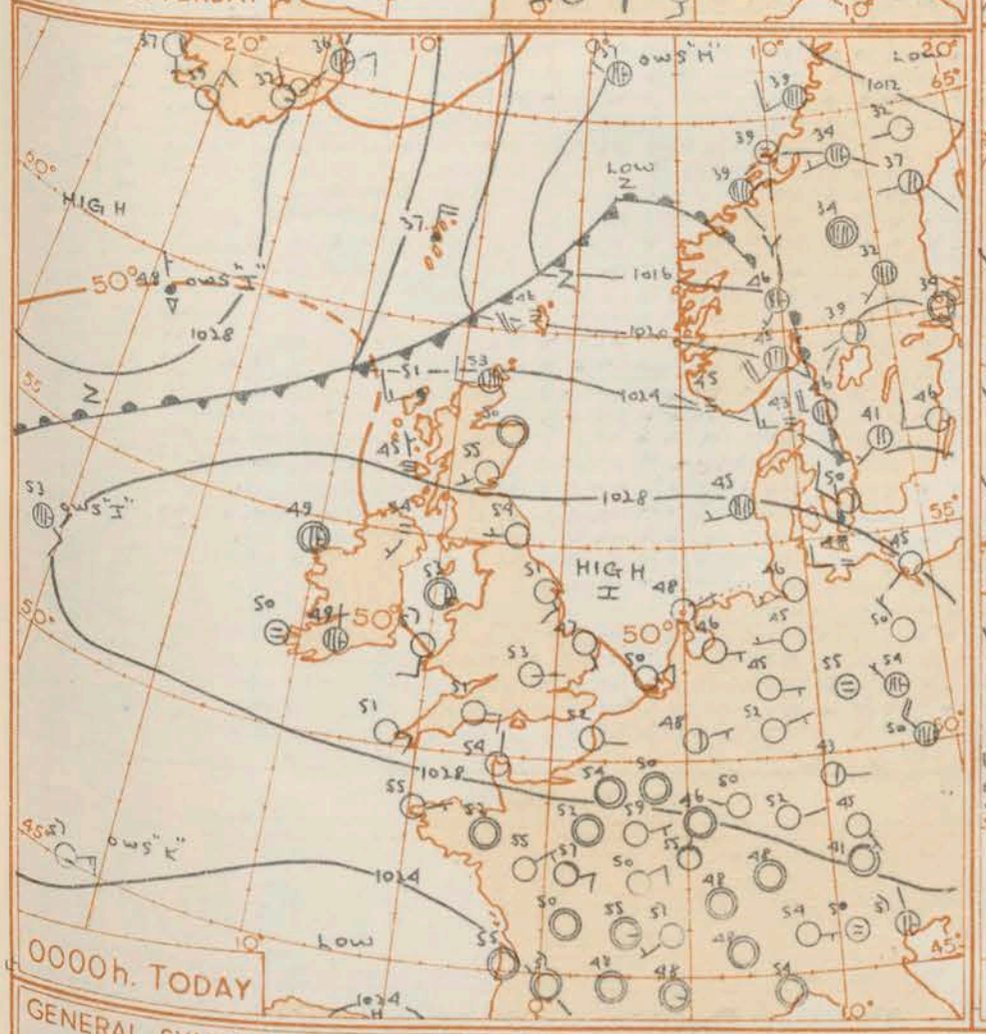
Mid-day (12h)
of
Thursday 1st May
1958

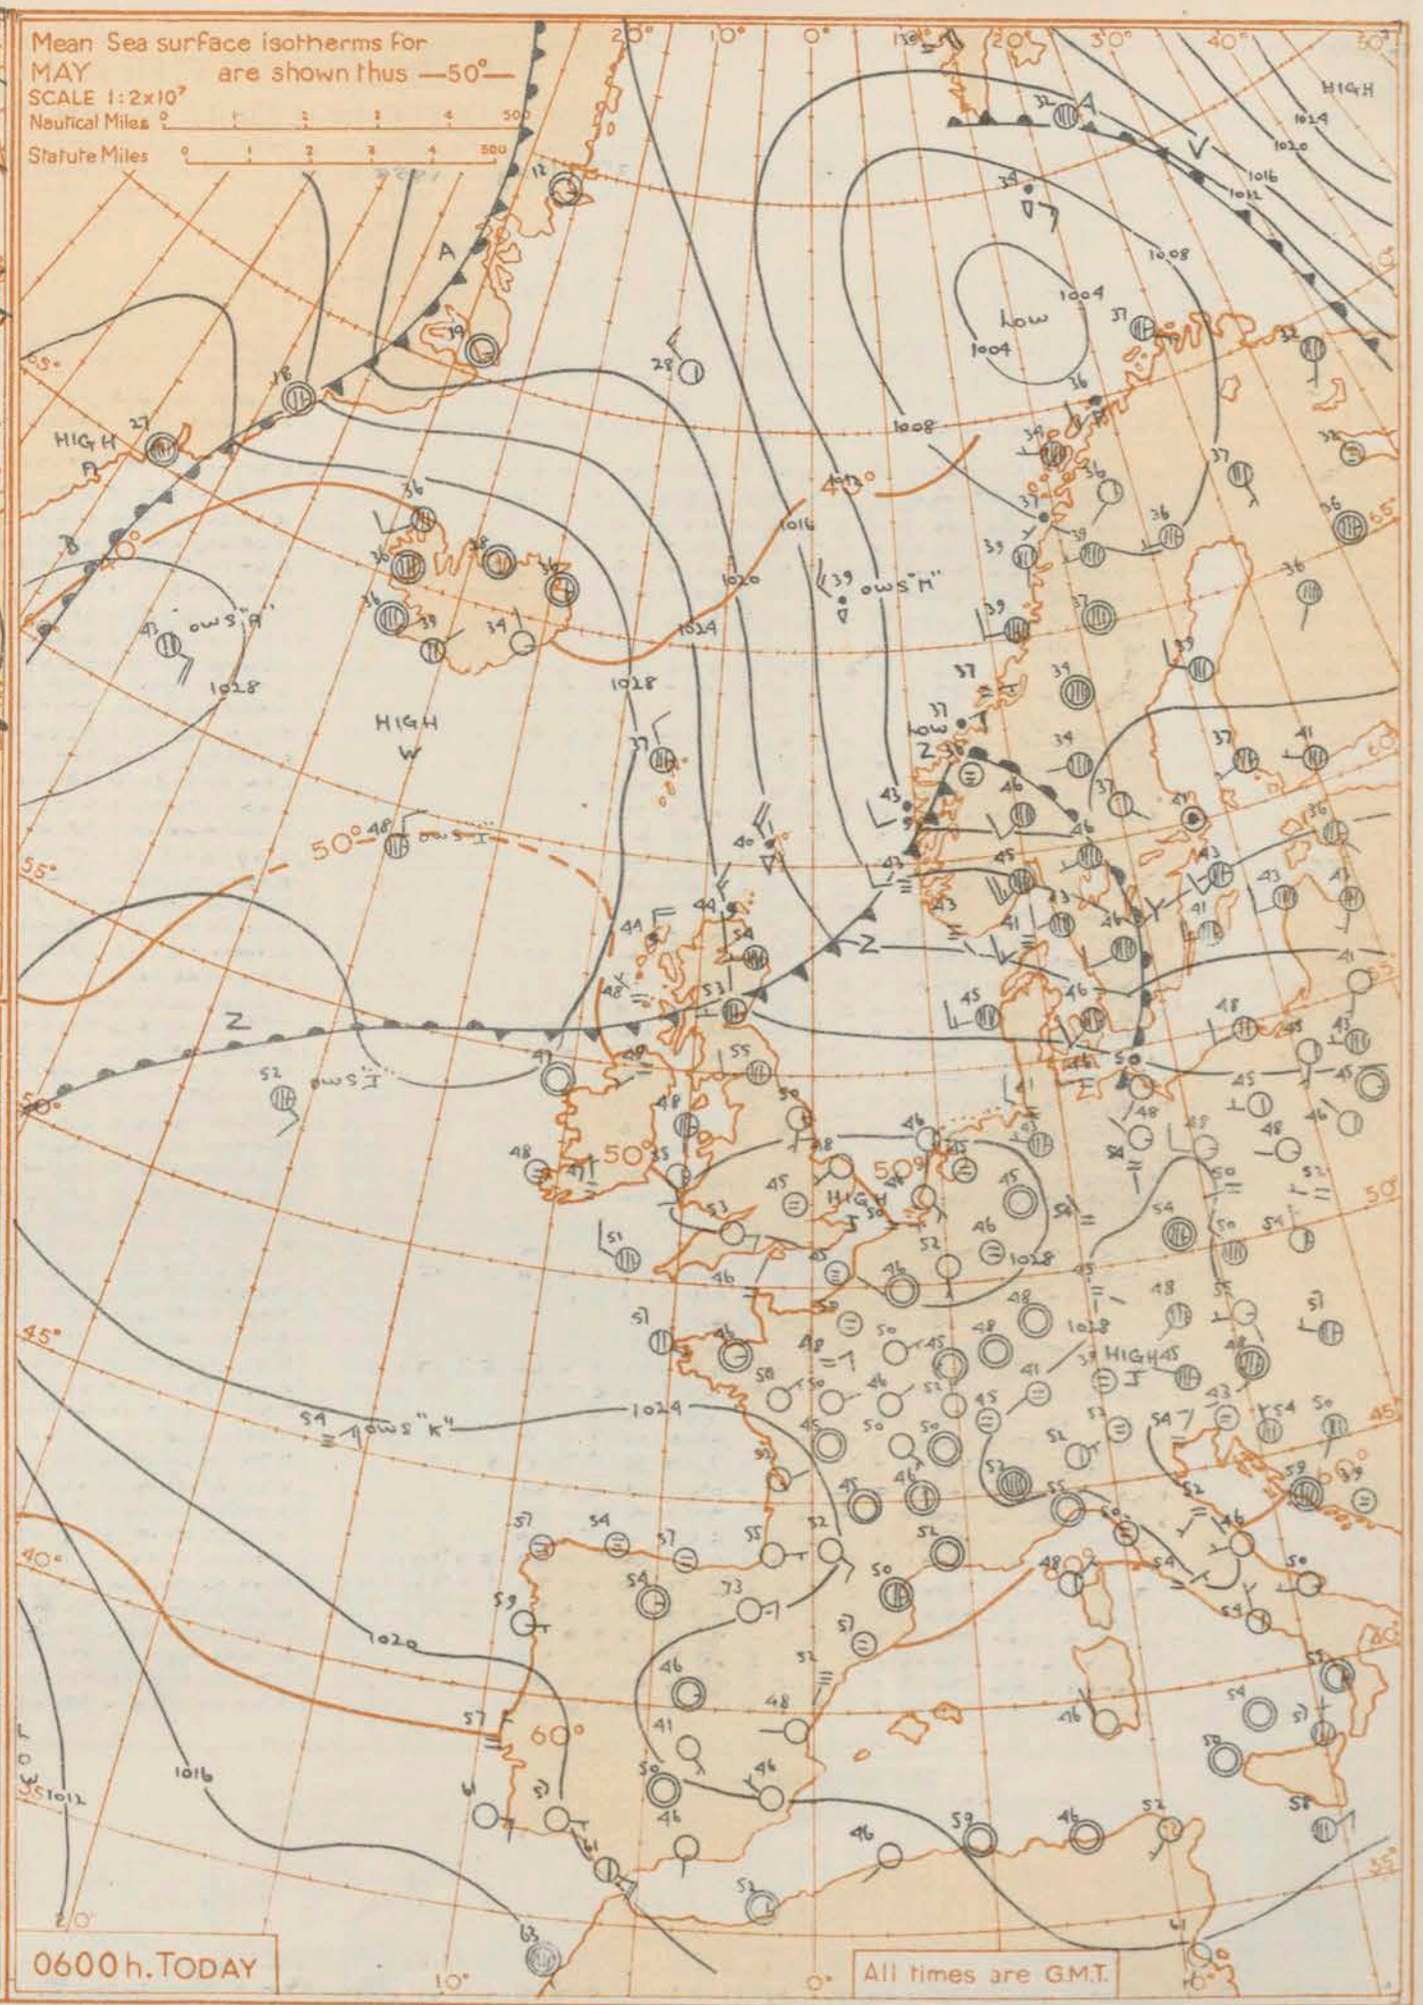
Equidistant azimuthal projection 1: 3×10^7 on the plane of 60°N.

NAUTICAL MILES.

0 500 1,000 1,500







GENERAL SYNOPTIC DEVELOPMENT

The anticyclone over Western Europe yesterday is receding southeast and weakening. A deepening depression is now crossing south Norway and its associated cold front now moving southward over Scotland will clear most of the British Isles during the next 24 hours: another anticyclone is moving towards the British Isles from the Iceland area, behind the cold front.

Issued at midday today Friday 2nd May 1958

FORECAST FOR BRITISH ISLES until noon tomorrow

England and Wales will have a fine, sunny and very warm afternoon. The cooler, mainly dry, weather with bright periods, which is now spreading over Scotland will gradually spread across remaining districts of the British Isles during the next 24 hours, preceded by a short period of rain or drizzle in places. Frost may occur in Scotland, Northern Ireland and Northern England tonight

OUTLOOK FOR the following 24 hours

Probably mainly dry with bright periods: slightly cooler than of late.

SIR GRAHAM SUTTON, C.B.E., D.Sc., F.R.S., Director General. Meteorological Office, Air Ministry, Kingsway, London, W.C.2.

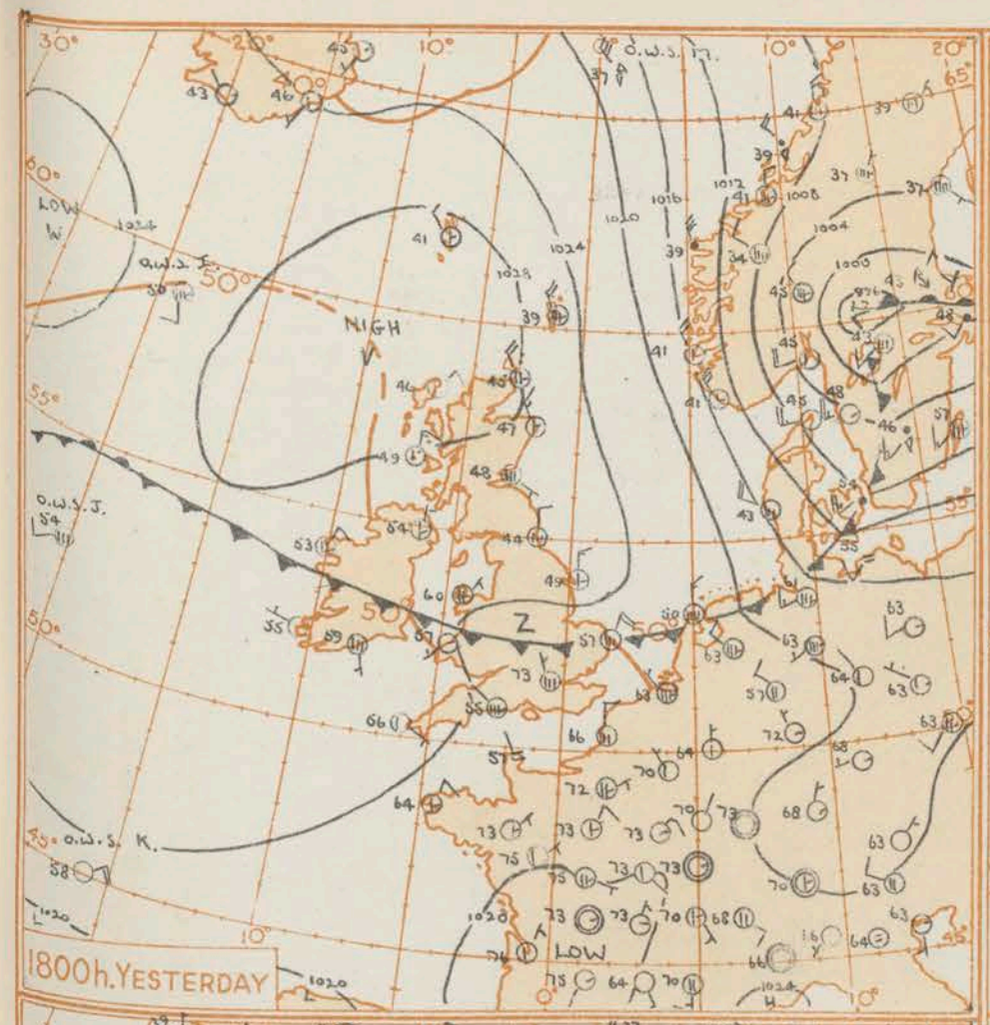
CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE.

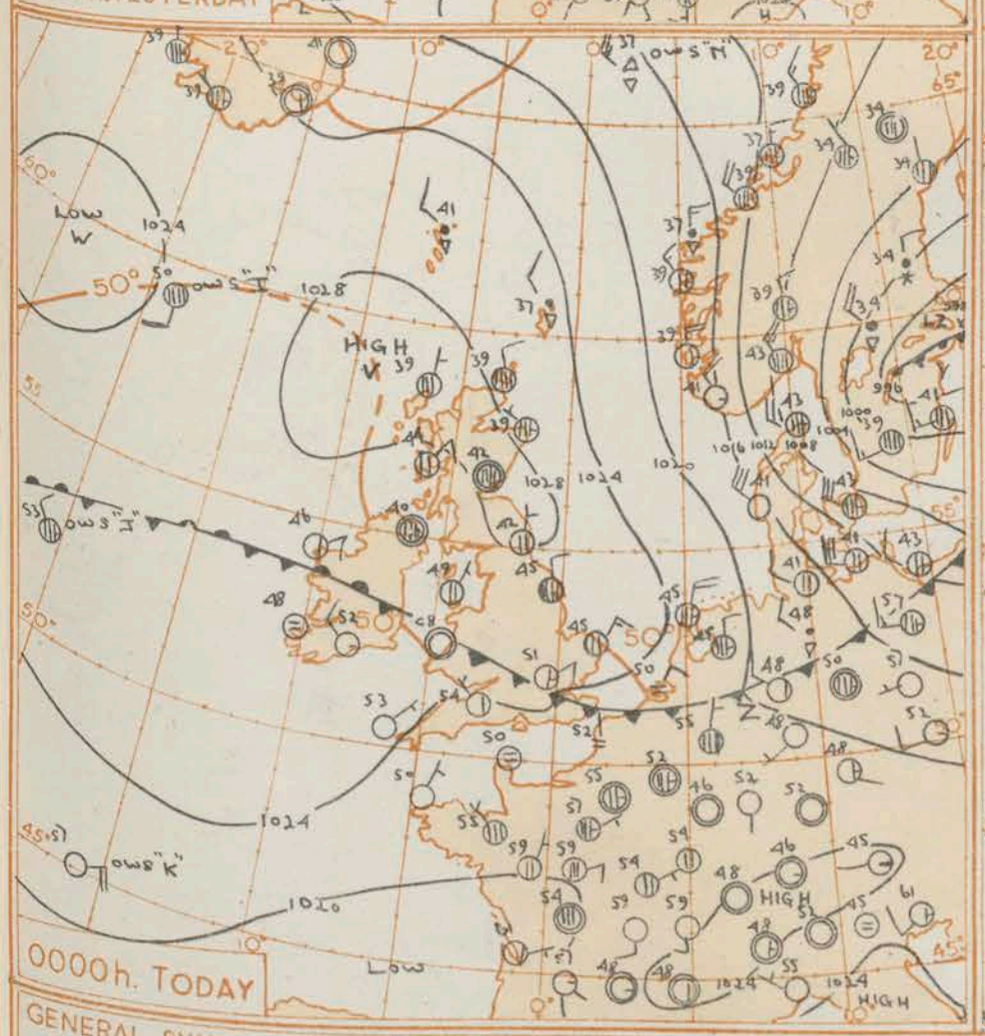
Mid-day (12h)
of
Friday 2nd May
1958

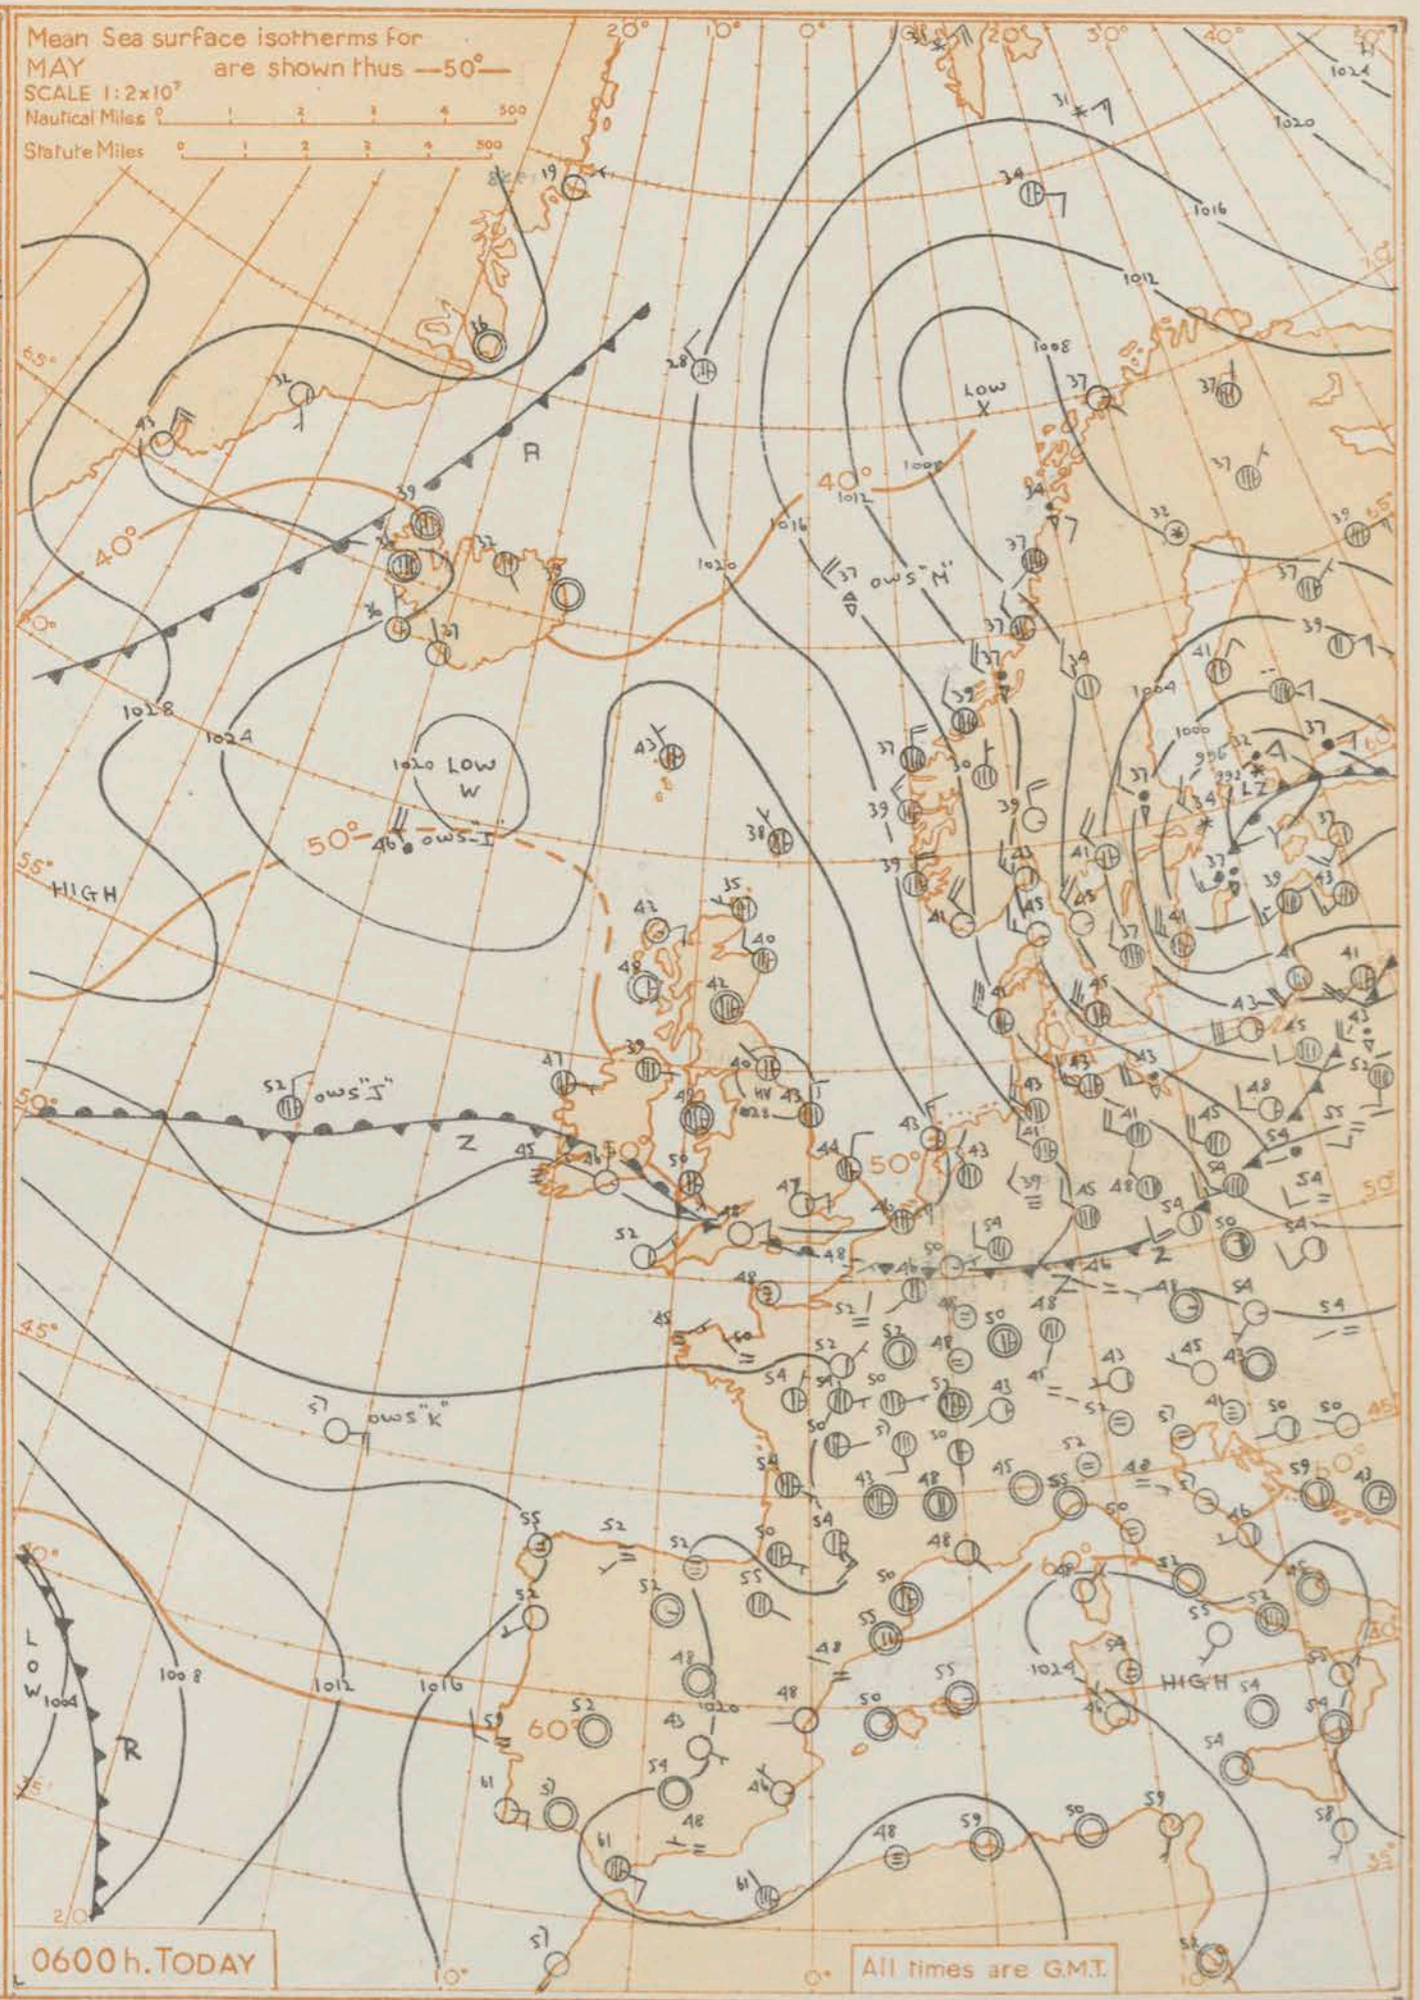
Equidistant azimuthal projection 1: 3×10⁷ on the plane of 60°N.

NAUTICAL MILES.

0 500 1,000 1,500







GENERAL SYNOPTIC DEVELOPMENT

A cold front moved southwards over England and Wales as a depression moved eastwards to the Baltic. An anticyclone to the northwest of Scotland moved slowly southeast and weakened though pressure remained relatively high to the west of the British Isles. A rather weak area of low pressure is expected to move to the north of Scotland with a trough to the south moving slowly eastwards across the British Isles.

Issued at midday today Saturday 3rd May 1958

FORECAST FOR BRITISH ISLES until noon tomorrow

The weather is expected to remain mostly dry though in western districts it will become cloudy and there may be rain or drizzle in places tonight. This will move eastwards tomorrow morning and be followed by brighter weather. Temperatures will be mostly about average.

OUTLOOK FOR the following 24 hours

Mainly dry with average temperatures.

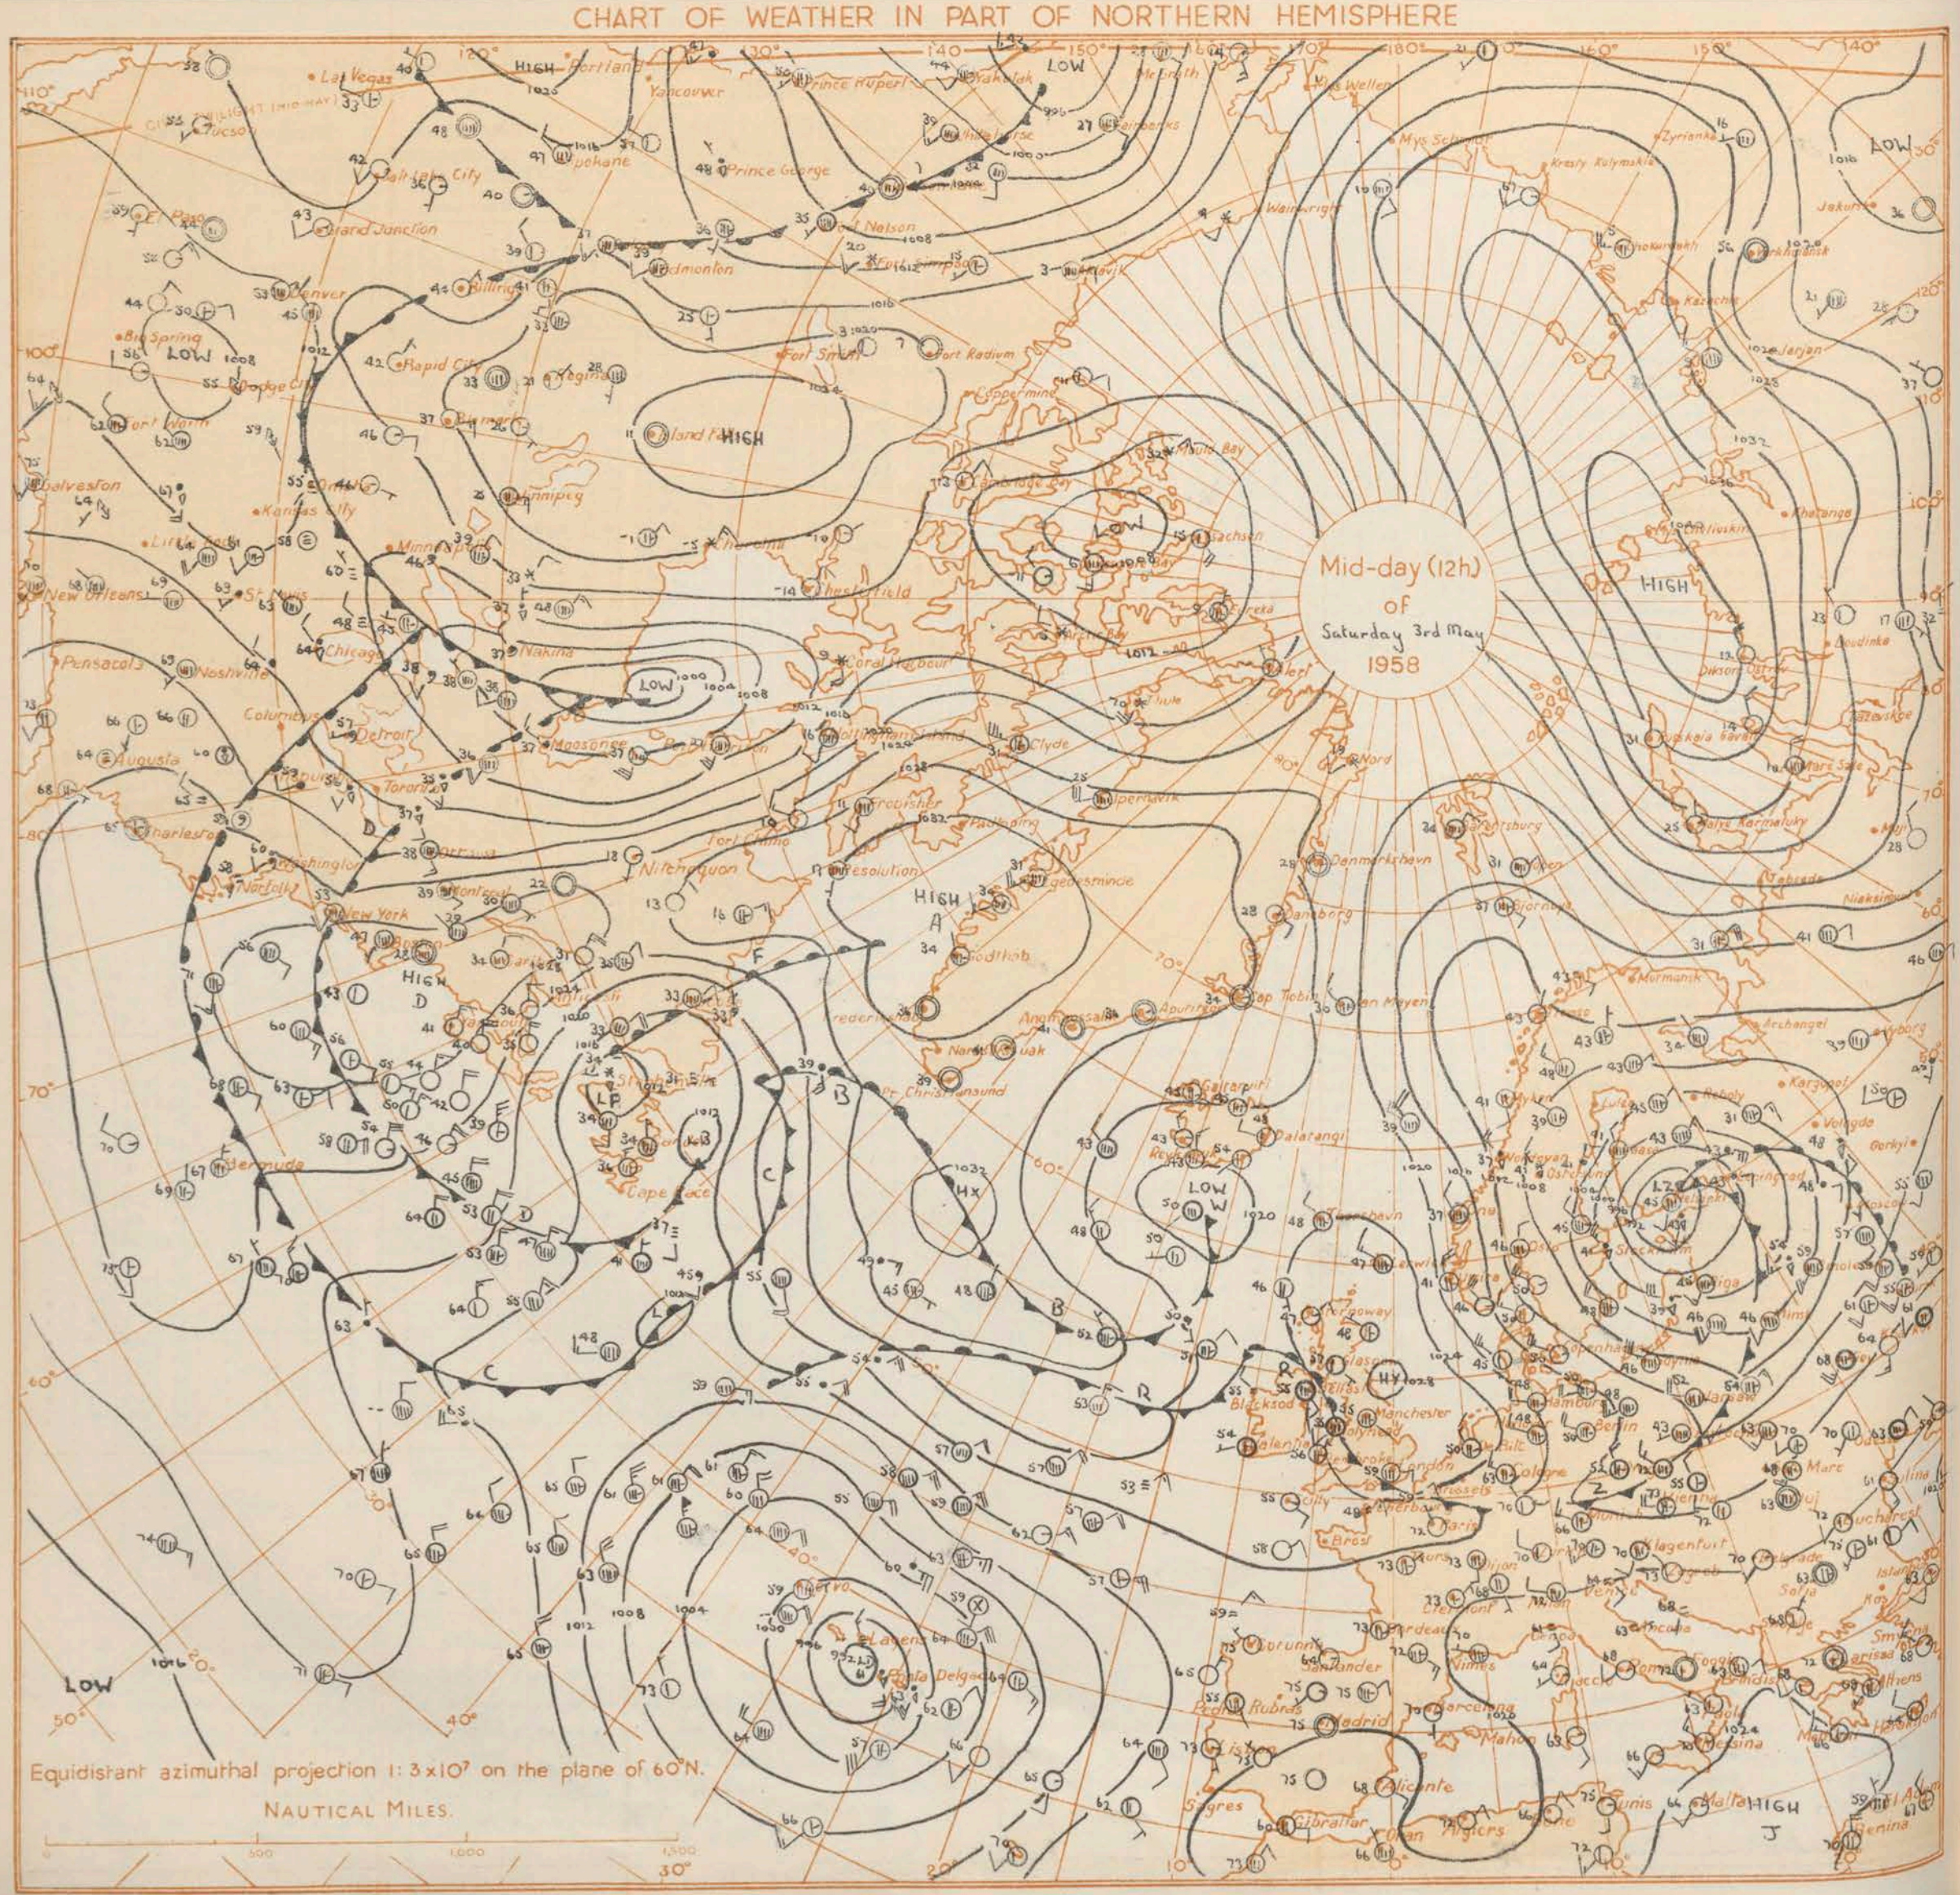
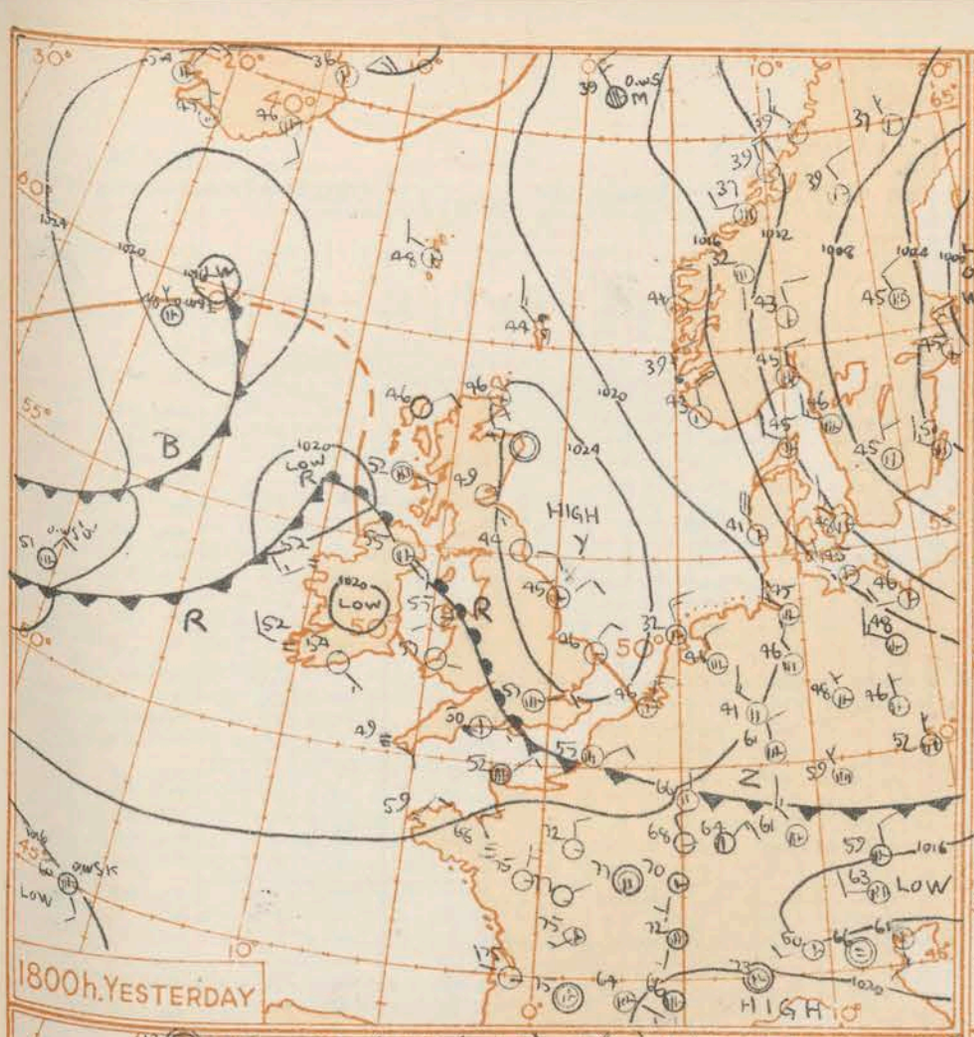
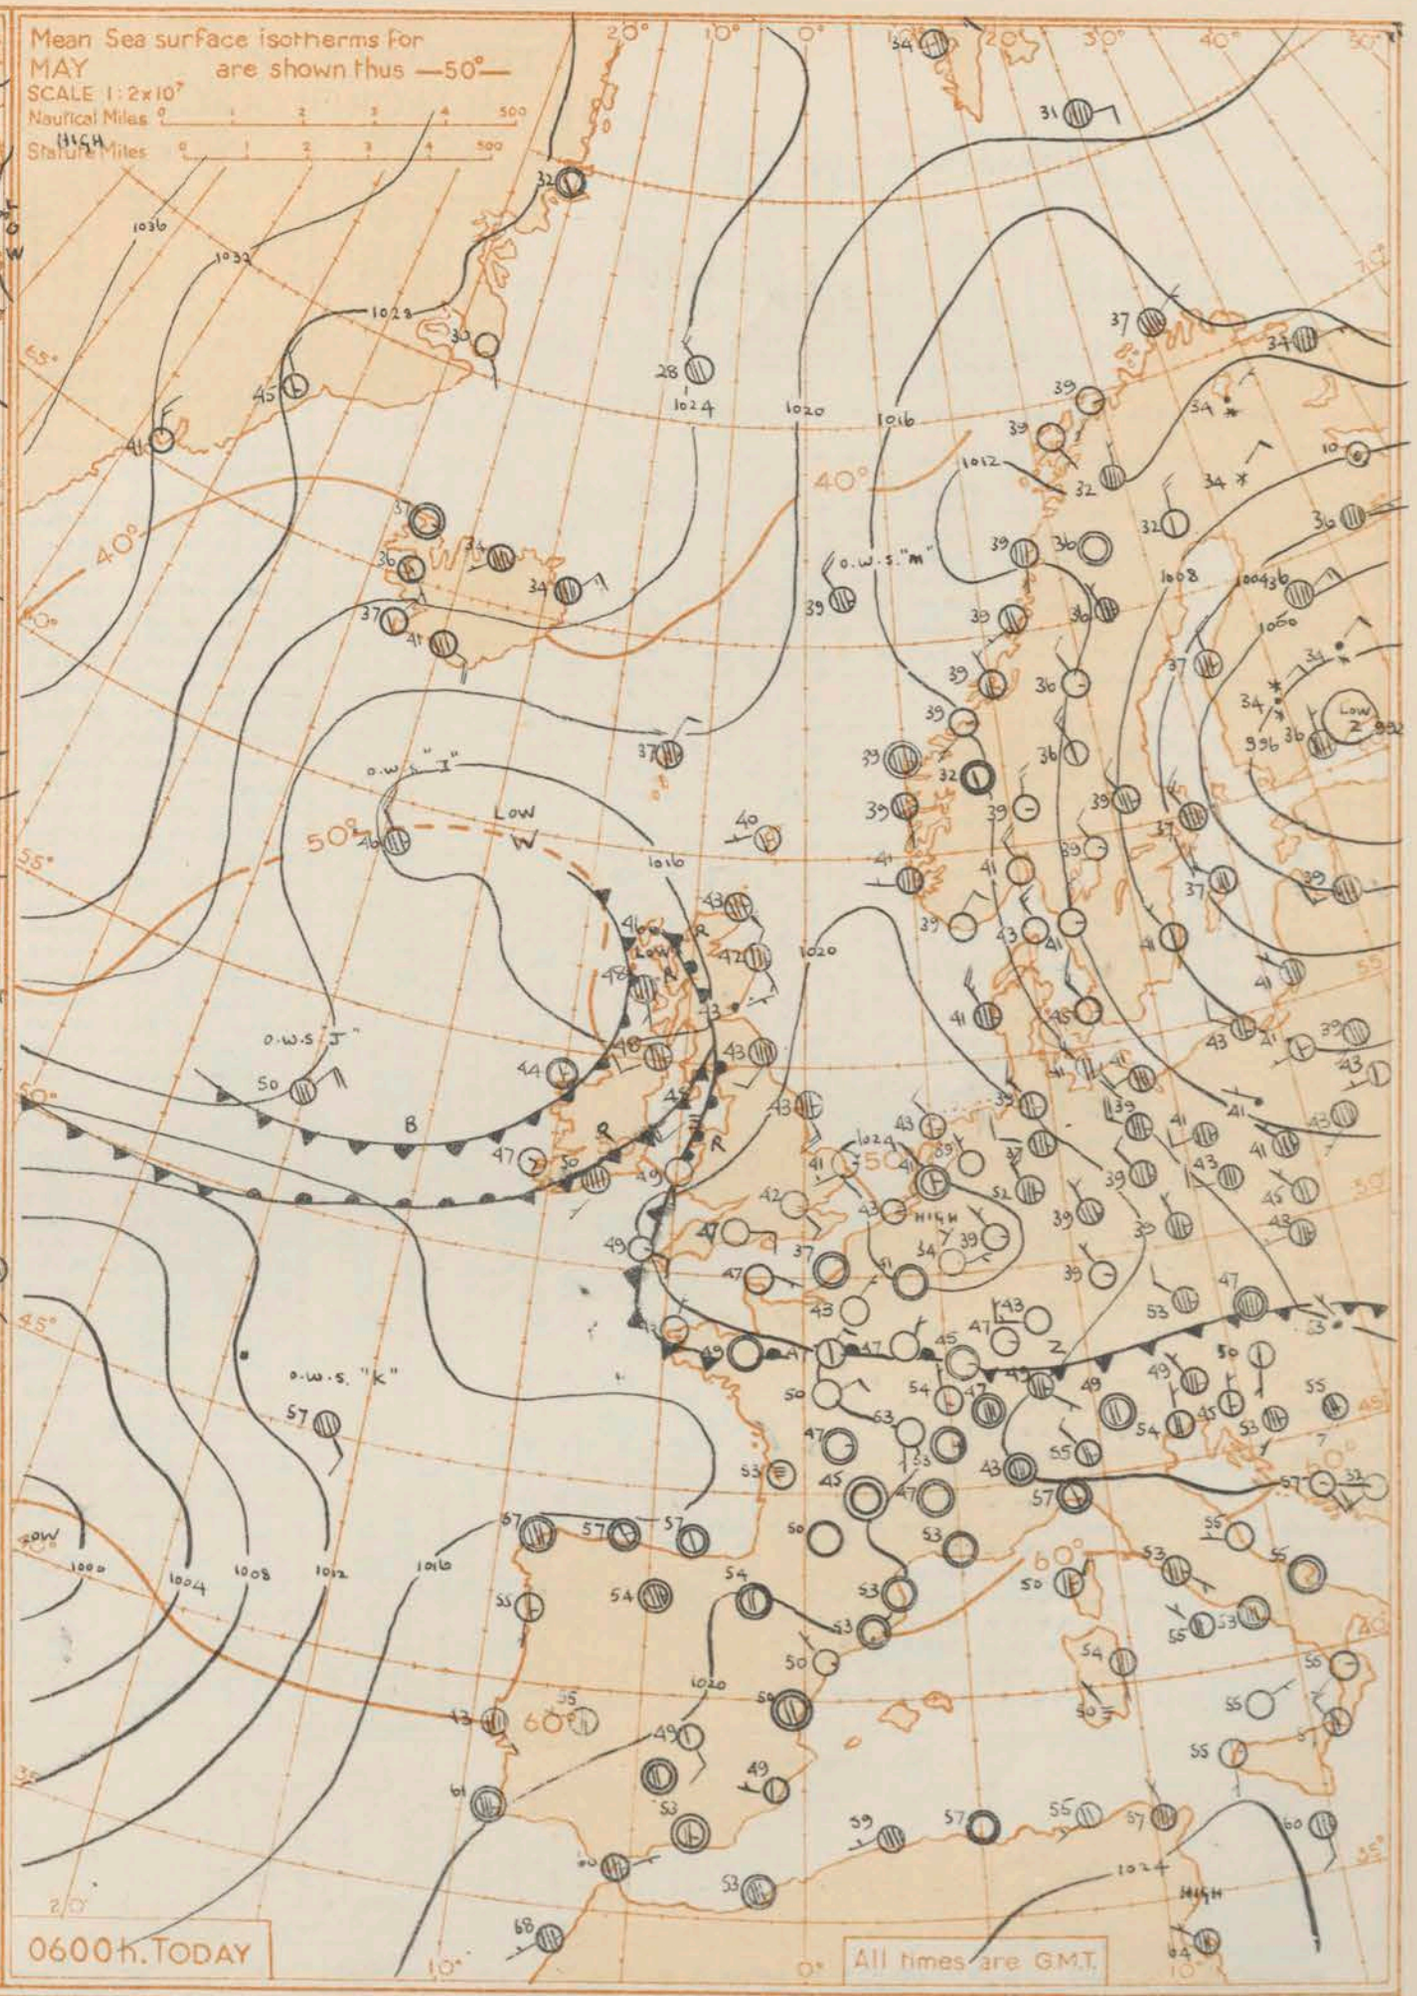
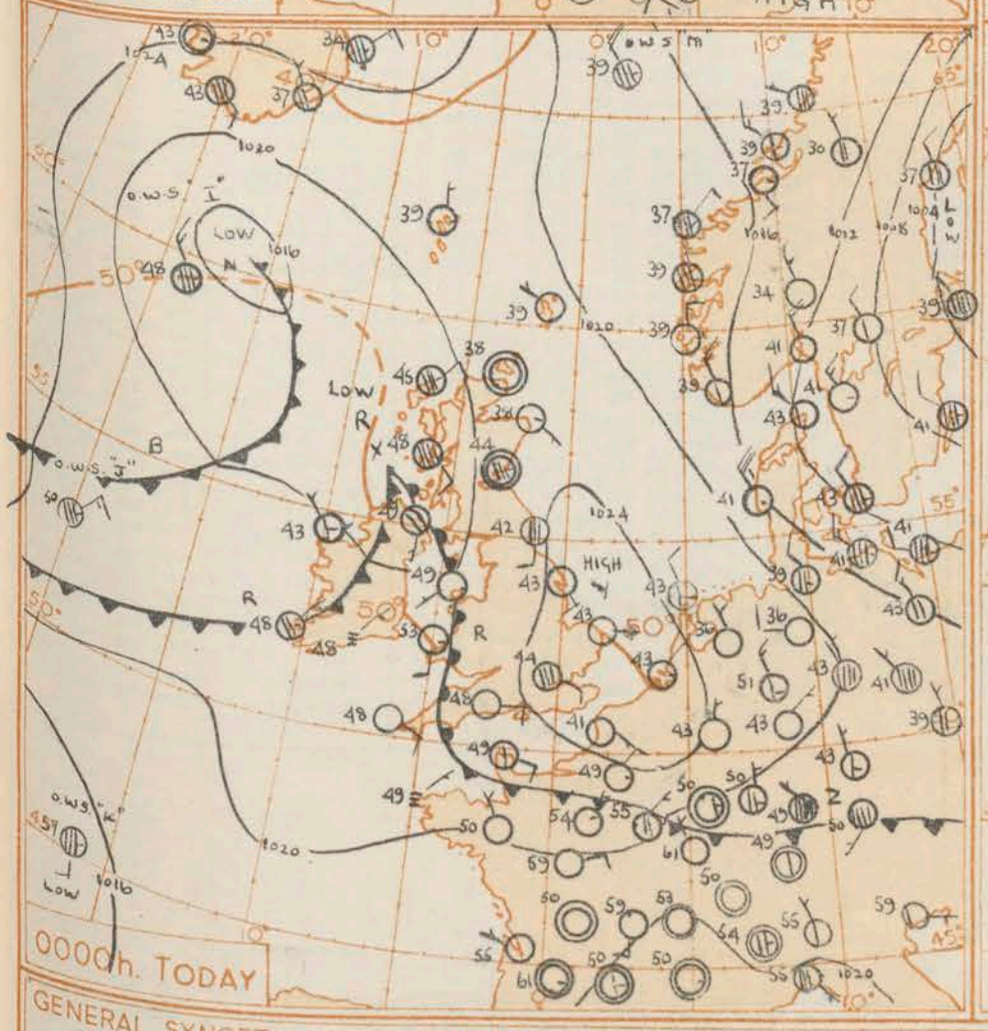
SIR GRAHAM SUTTON, C.B.E., D.Sc., F.R.S., Director General. Meteorological Office, Air Ministry, Kingsway, London, W.C.2.

CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE









GENERAL SYNOPTIC DEVELOPMENT

An anticyclone moved south-eastwards across the British Isles and a depression to the south of Iceland also moved slowly south-eastwards with rather weak frontal systems crossing western districts. Pressure is expected to continue falling over the British Isles with lowest pressure being transferred eastwards or south-eastwards to the North Sea. Weak fronts will move south-eastwards across much of the British Isles but will become slow moving near southern districts.

Issued at midday today Sunday 4th May 1958

FORECAST FOR BRITISH ISLES until noon tomorrow

After bright periods in some eastern areas at first it will become generally cloudy with a little rain in places and this will be followed in north-western districts by bright periods and showers. Temperatures will be mostly about average.

OUTLOOK FOR the following 24 hours

Brighter and slightly cooler weather spreading south-eastwards with scattered showers chiefly in the north.

SIR GRAHAM SUTTON, C.B.E., D.Sc., F.R.S., Director General Meteorological Office, Air Ministry, Kingsway, London, W.C.2.

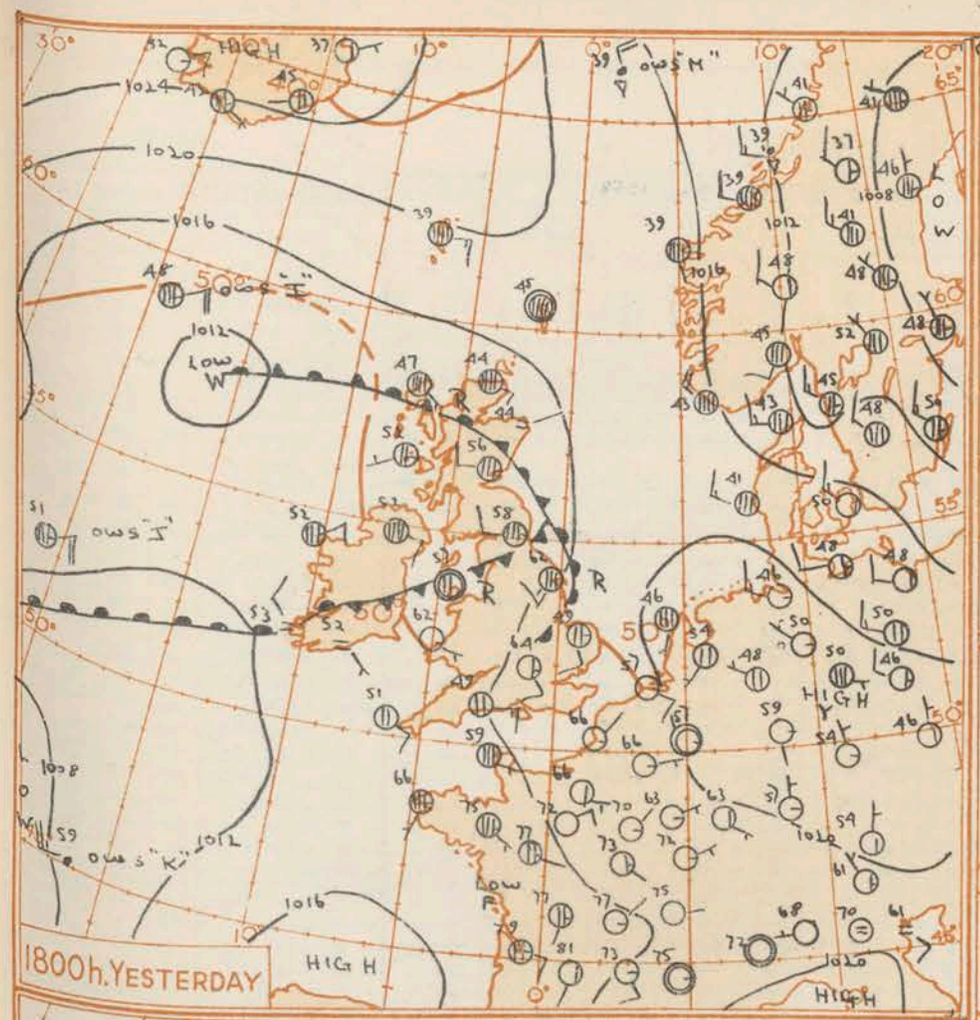
CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

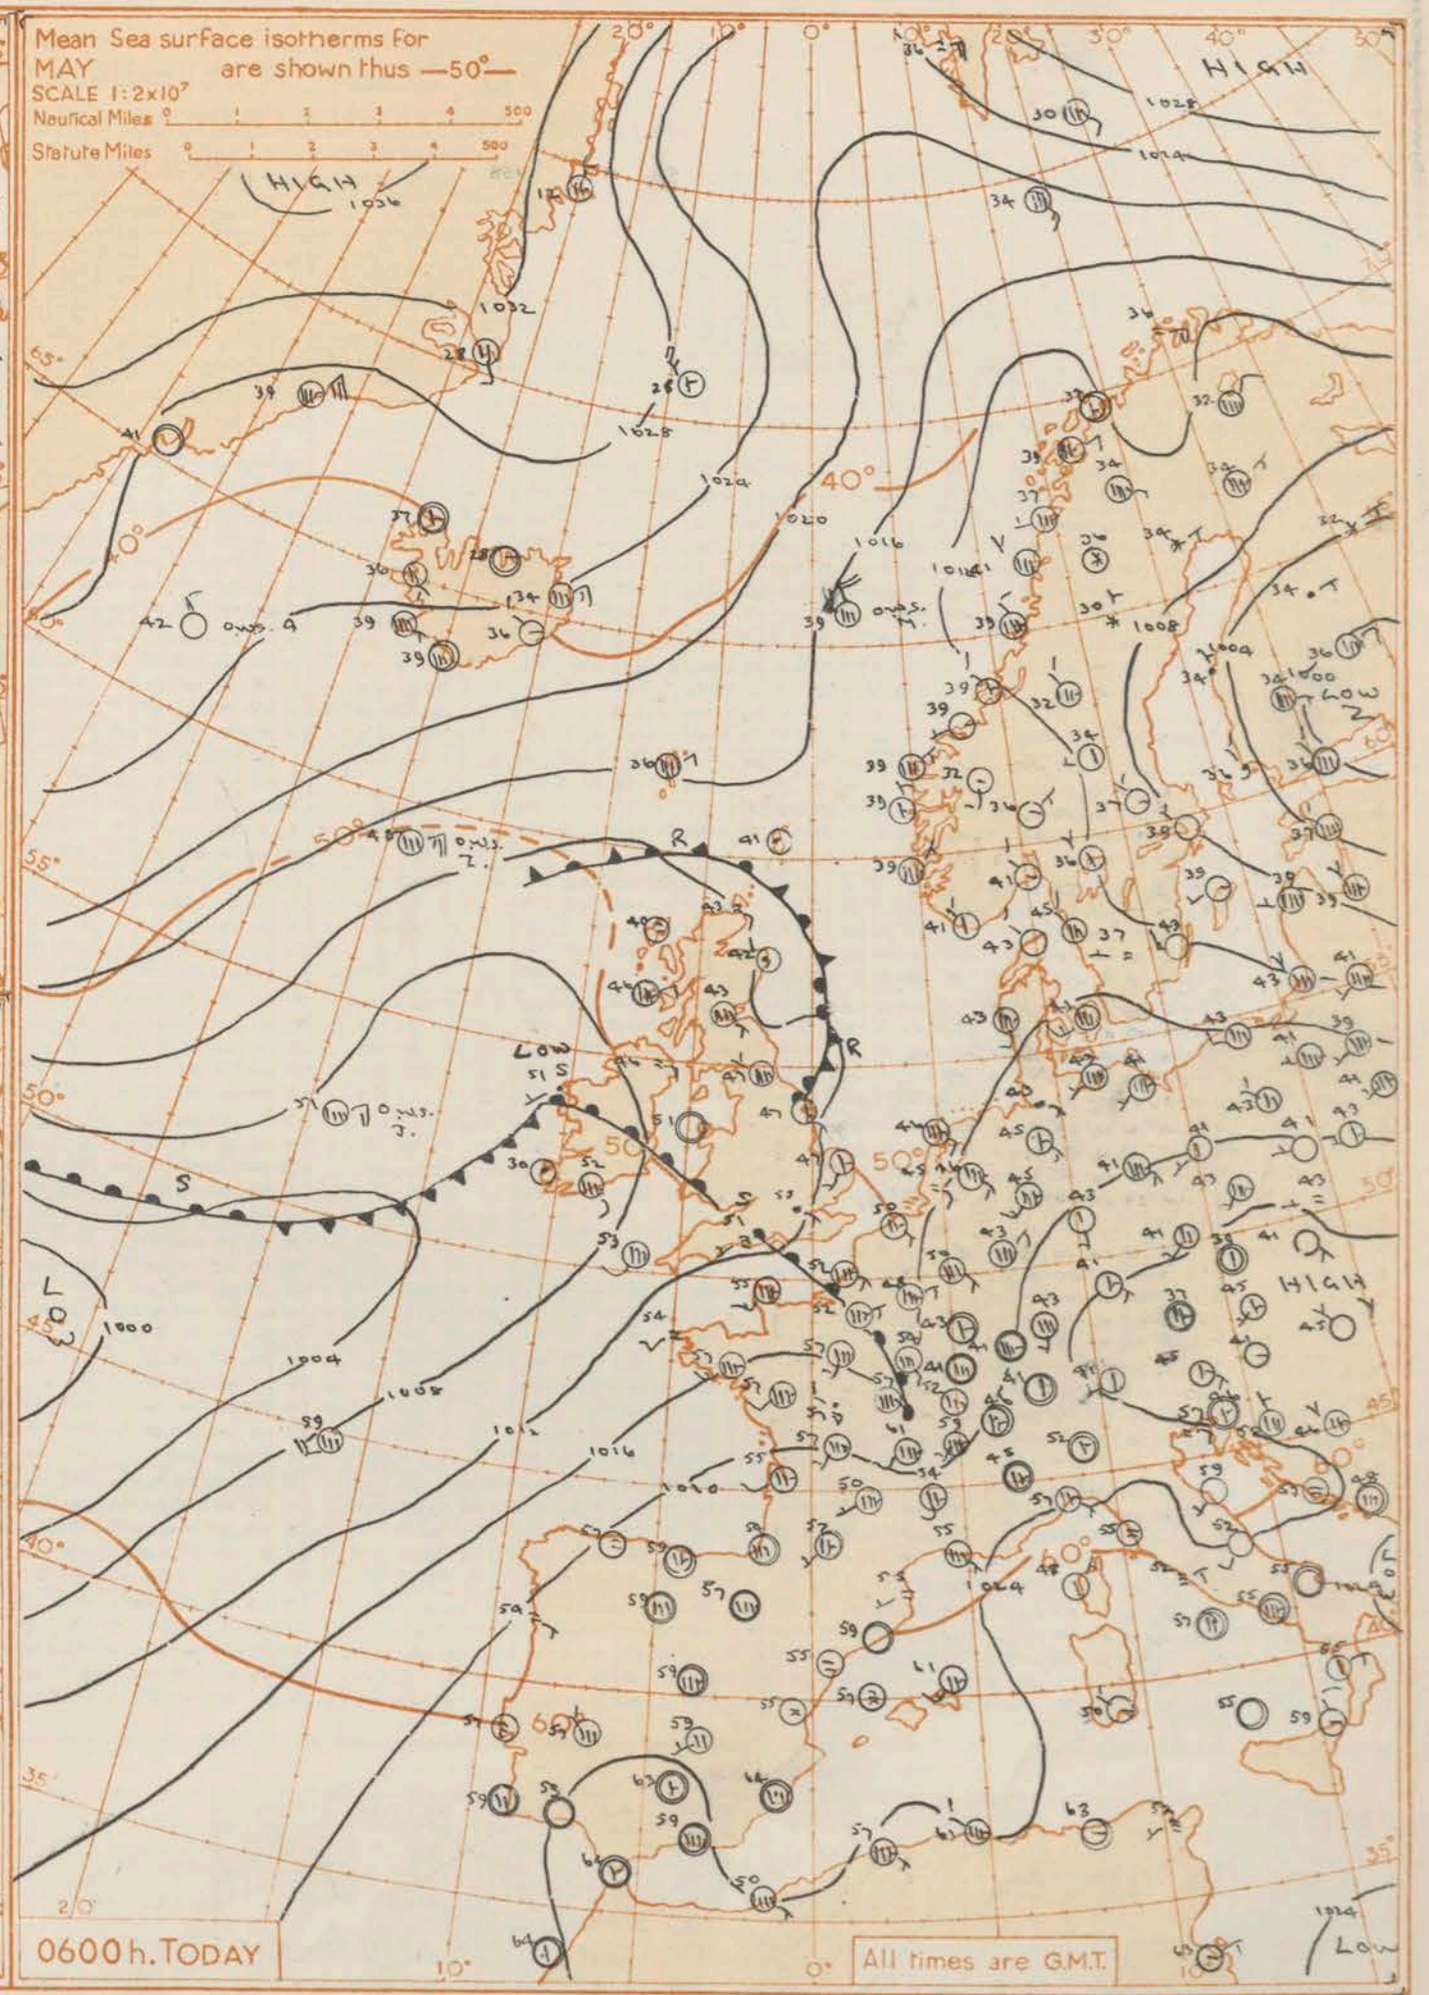
Mid-day (12h)
of
Sunday 4th May
1958

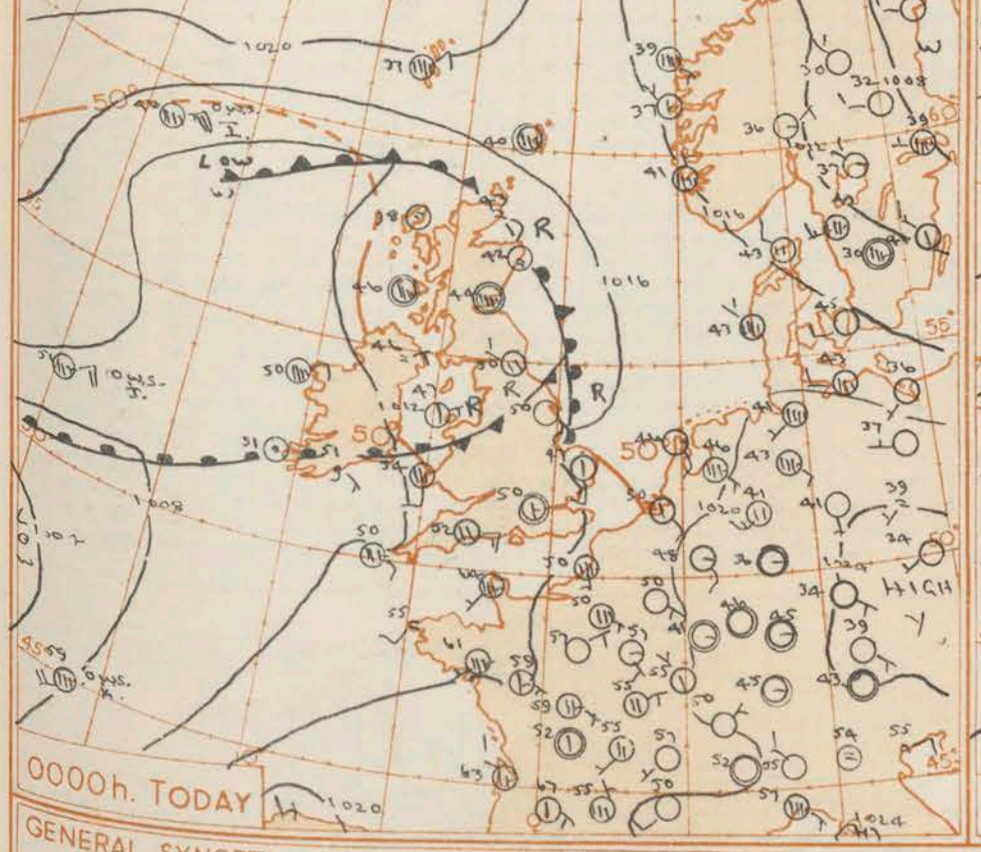
Equidistant azimuthal projection 1: 3×10^7 on the plane of 60°N.

NAUTICAL MILES.

0 500 1,000 1,500







GENERAL SYNOPTIC DEVELOPMENT

A depression centred over the northeast Baltic continues to move little while gradually filling. The anticyclone centred yesterday over the Low Countries moved away southeast, and depressions northwest and southwest of the British Isles are continuing to extend towards the British Isles. A deepening depression is expected to be centred near Northern Ireland tomorrow.

Issued at midday today Monday 5th May 1958

FORECAST FOR BRITISH ISLES until noon tomorrow

Most areas will be cloudy with rain at times. Southern and western coasts and hills will have patches of fog. In Wales and much of England thunderstorms are likely, and these may spread to northern England and southern Scotland tomorrow. Wales and most of England will be warm, but northern England, Northern Ireland and Scotland will have temperatures nearer average.

OUTLOOK FOR the following 24 hours

Changeable with showers or rain at times in most areas.

THE DAILY WEATHER REPORT
OF THE METEOROLOGICAL OFFICE, LONDON

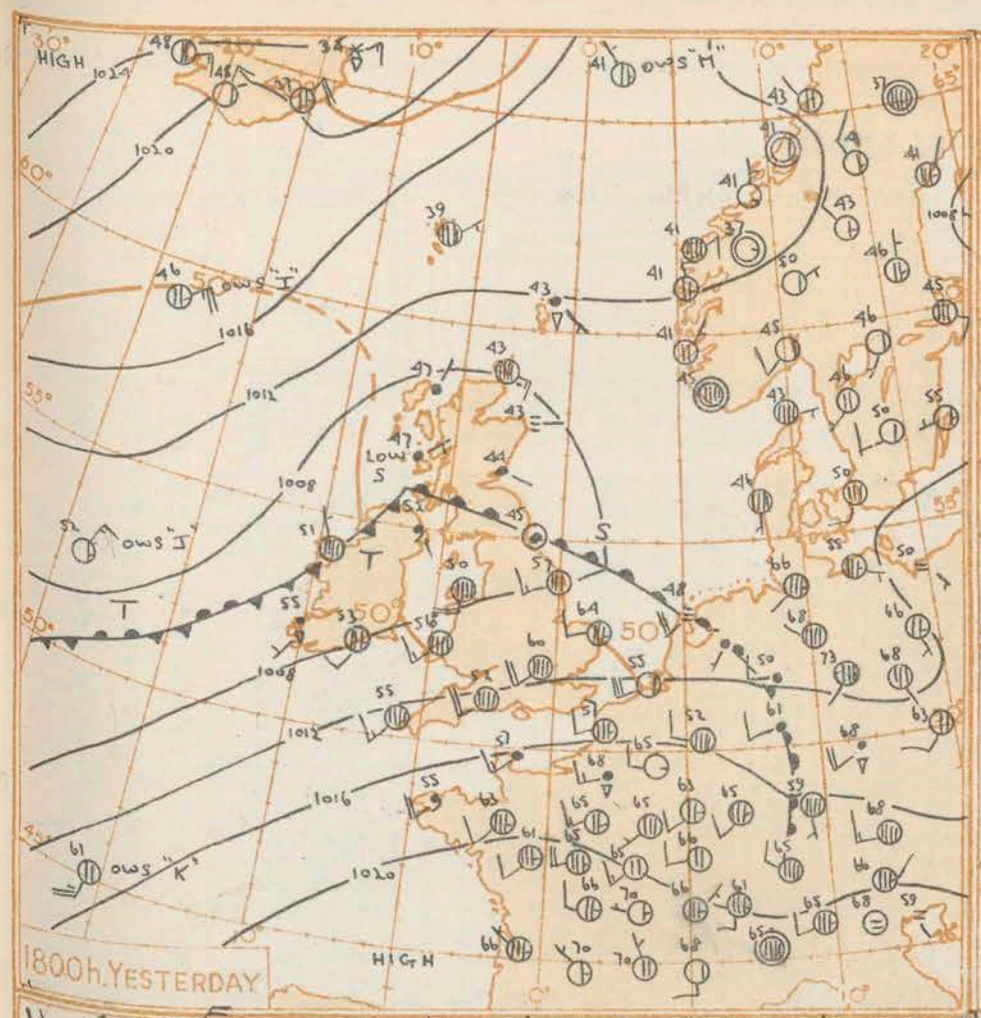
SIR GRAHAM SUTTON, C.B.E., D.Sc., F.R.S., Director General. Meteorological Office, Air Ministry, Kingsway, London, W.C.2.

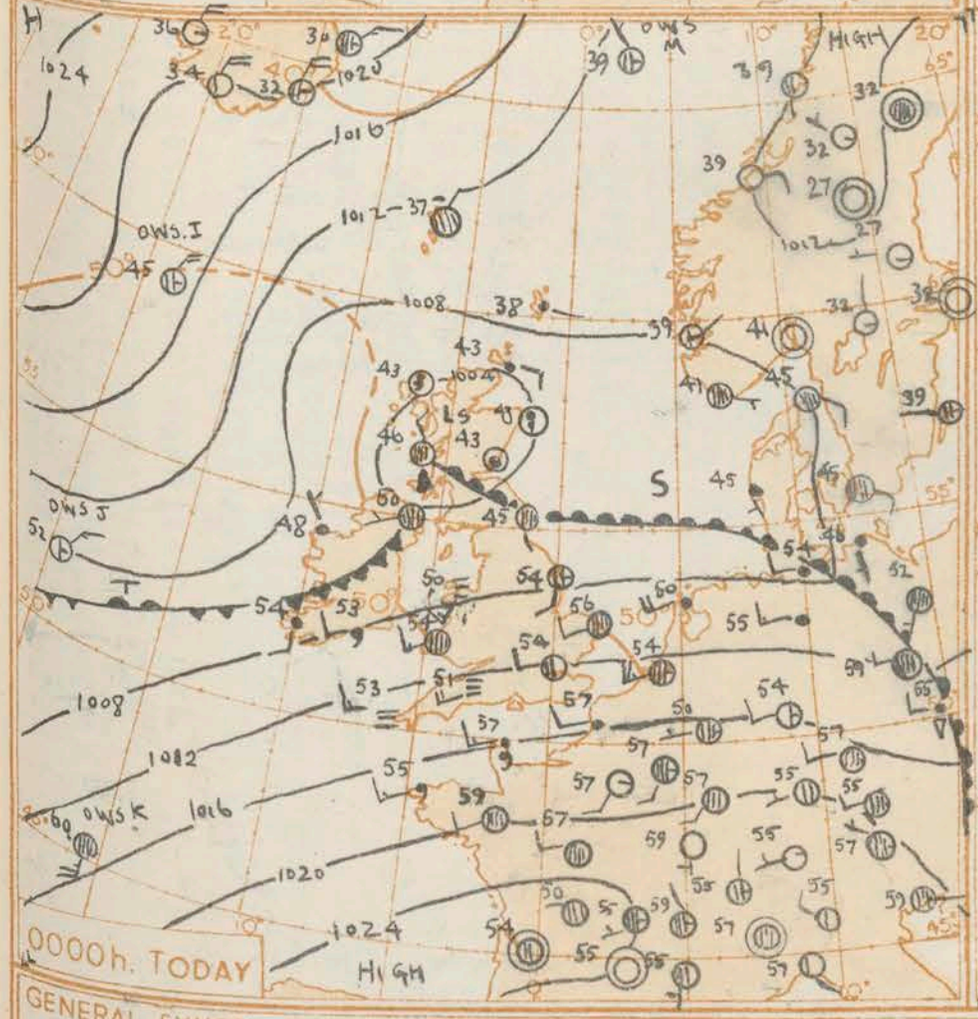
CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

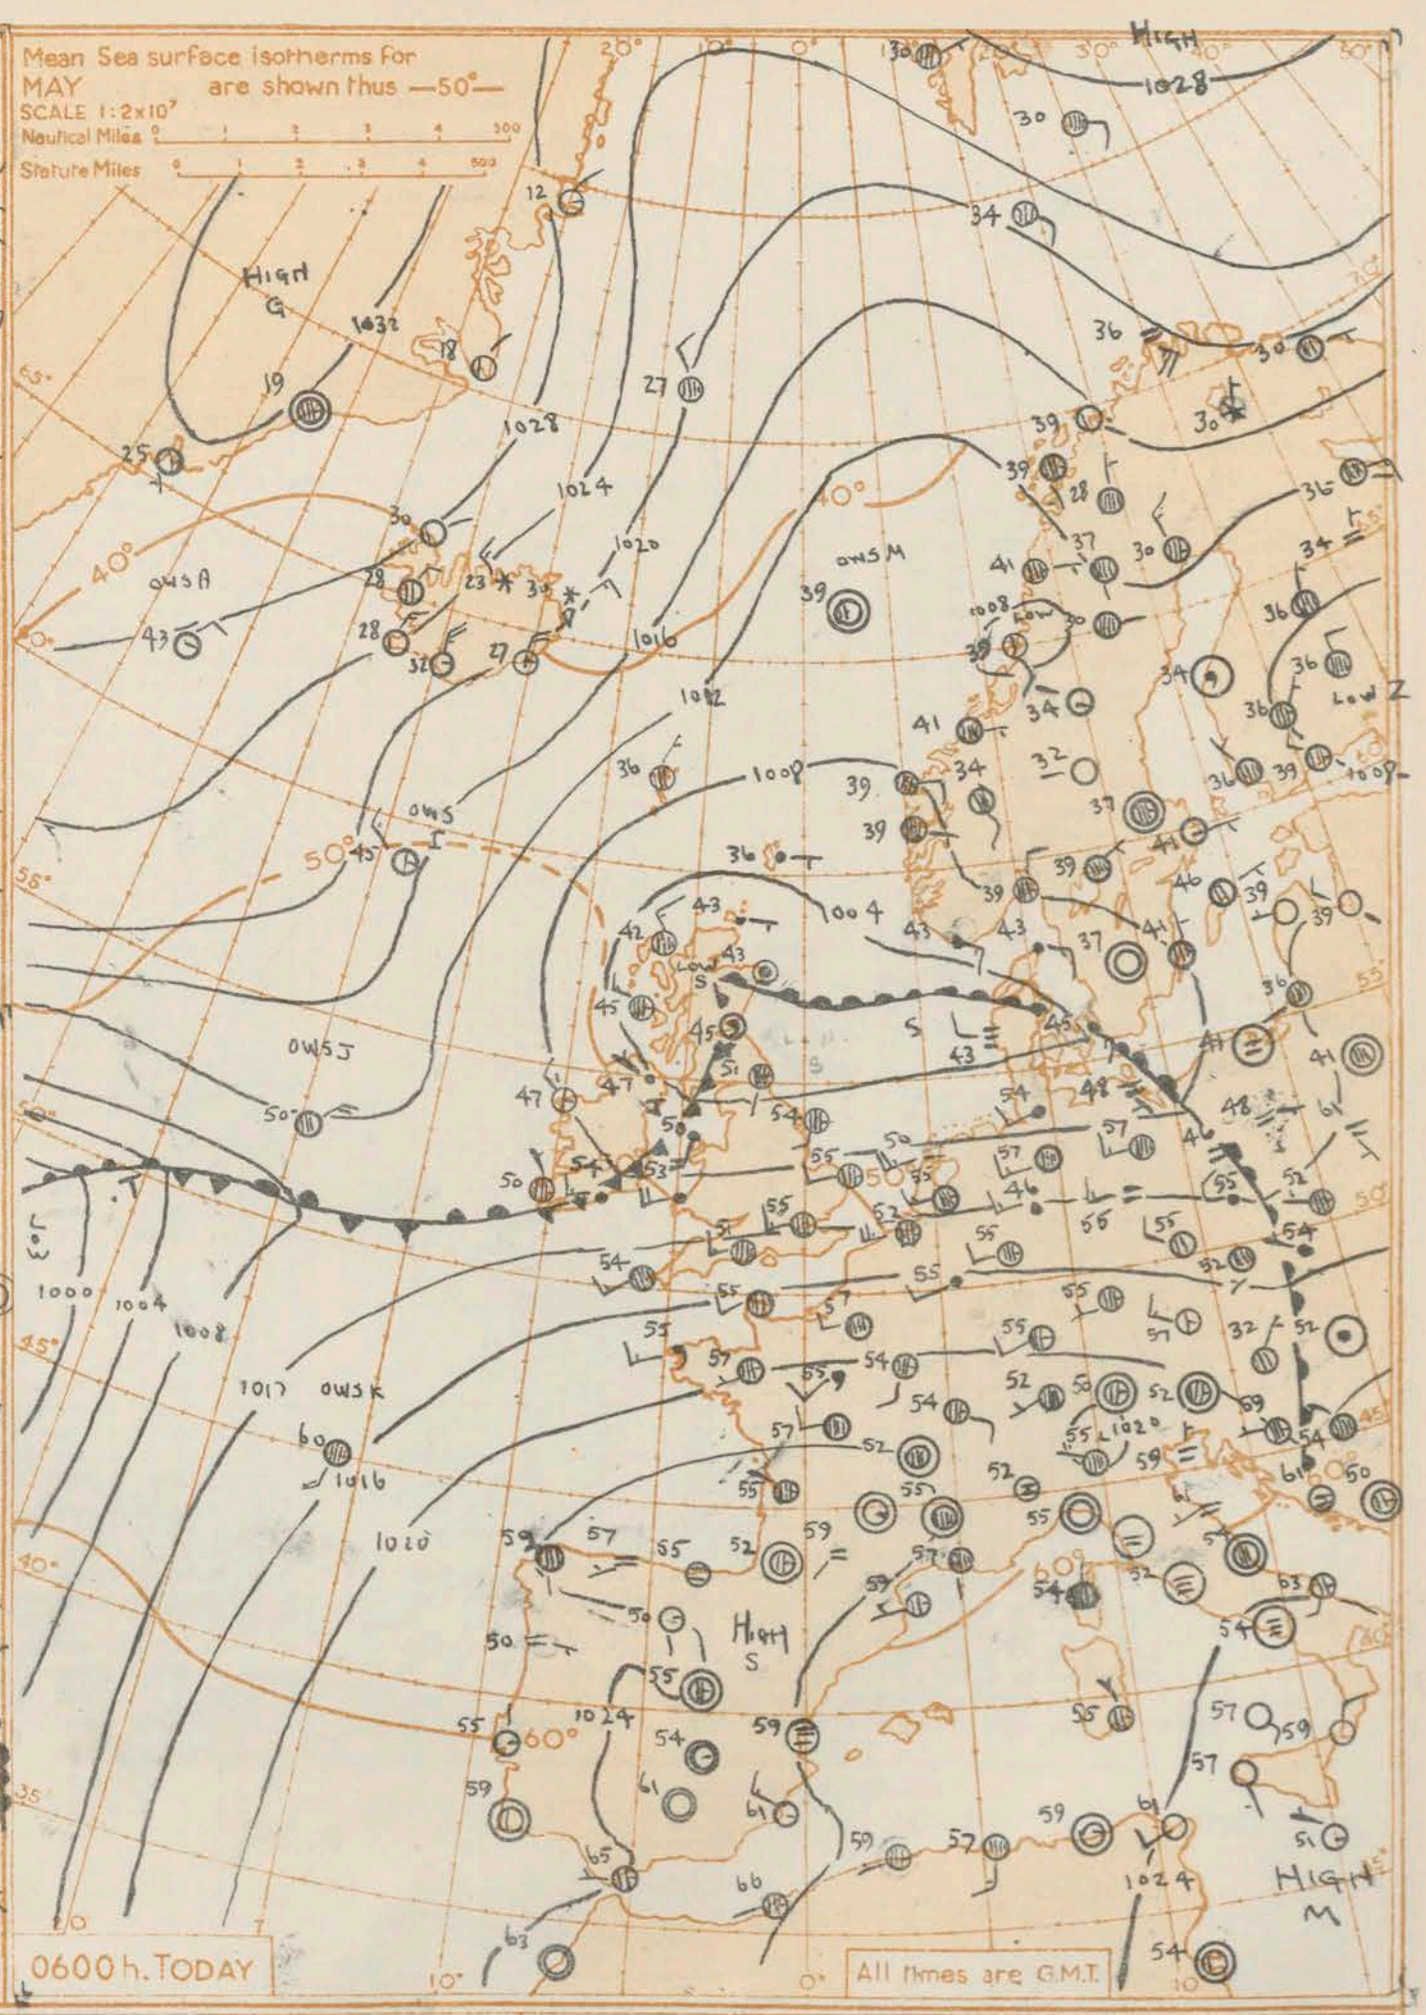
Mid-day (12h)
of
Monday 5th May
1958

Equidistant azimuthal projection 1:3×10⁷ on the plane of 60°N.

NAUTICAL MILES.







GENERAL SYNOPTIC DEVELOPMENT

Issued at midday today Tuesday 6th May 1958

The ridge of high pressure in the Greenland area is moving slowly east. A depression centred west of the Azores yesterday morning has moved southeast with developement of a seperate centre to north, and this complex is expected to move eastwards. The depression centred near the eastern Baltic continues to move slowly east and fill, while a wave developement on the associated cold front transfers the system still further east. The depression yesterday morning off northwest Ireland has moved east-northeast and is expected to be near southwest Norway tomorrow morning with the associated cold front having crossed all or most of the British Isles.

FORECAST FOR BRITISH ISLES until noon tomorrow

Today and tonight east Scotland will be cloudy with rain or showers, and a belt of rain will move east across England and Wales, followed by brighter cooler, showery weather which has already reached Northern Ireland and west Scotland, and which will extend to all or most of Britain by tomorrow morning. Temperatures will be mainly near average today, but rather above in the south.

OUTLOOK FOR the following 24 hours

Changeable with rain or showers at times in most areas. Temperatures mostly near average, but it will be rather cold in the north.

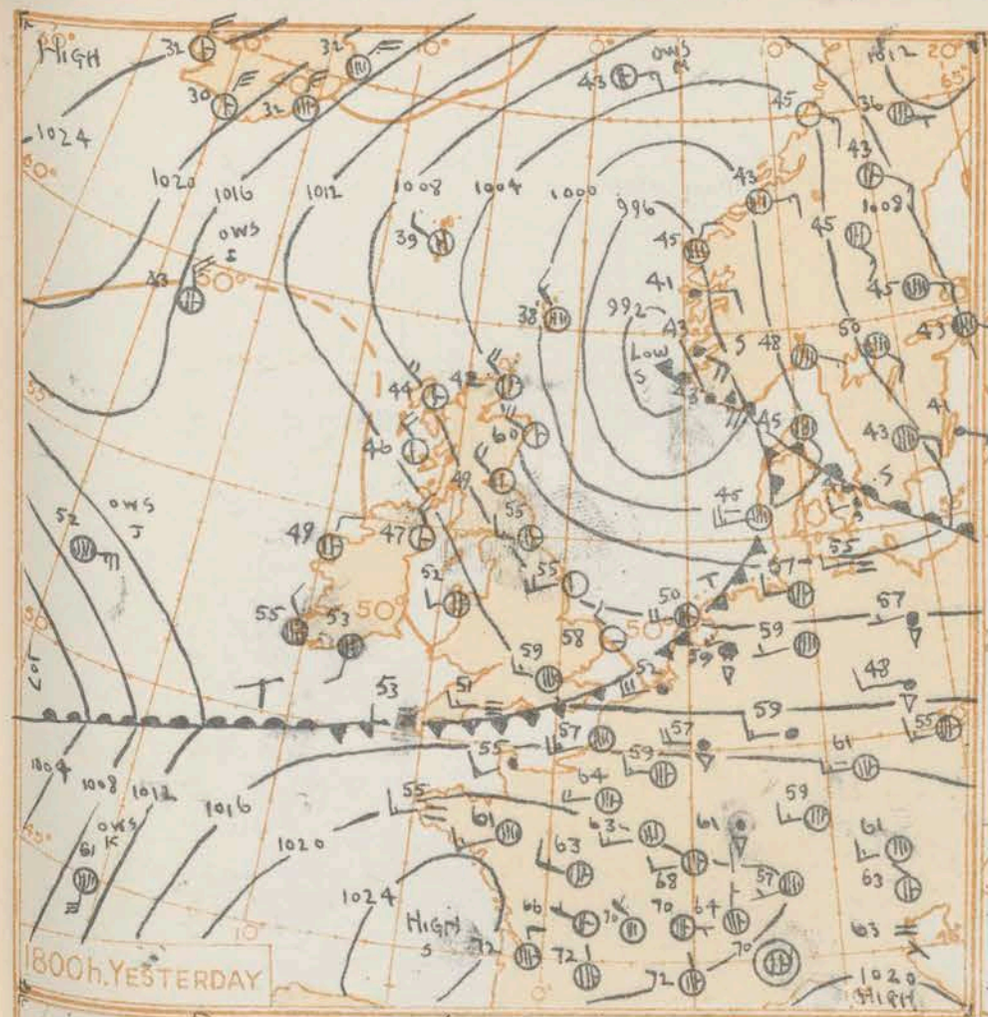
SIR GRAHAM SUTTON, C.B.E., D.Sc., F.R.S., Director General. Meteorological Office, Air Ministry, Kingsway, London, W.C.2.

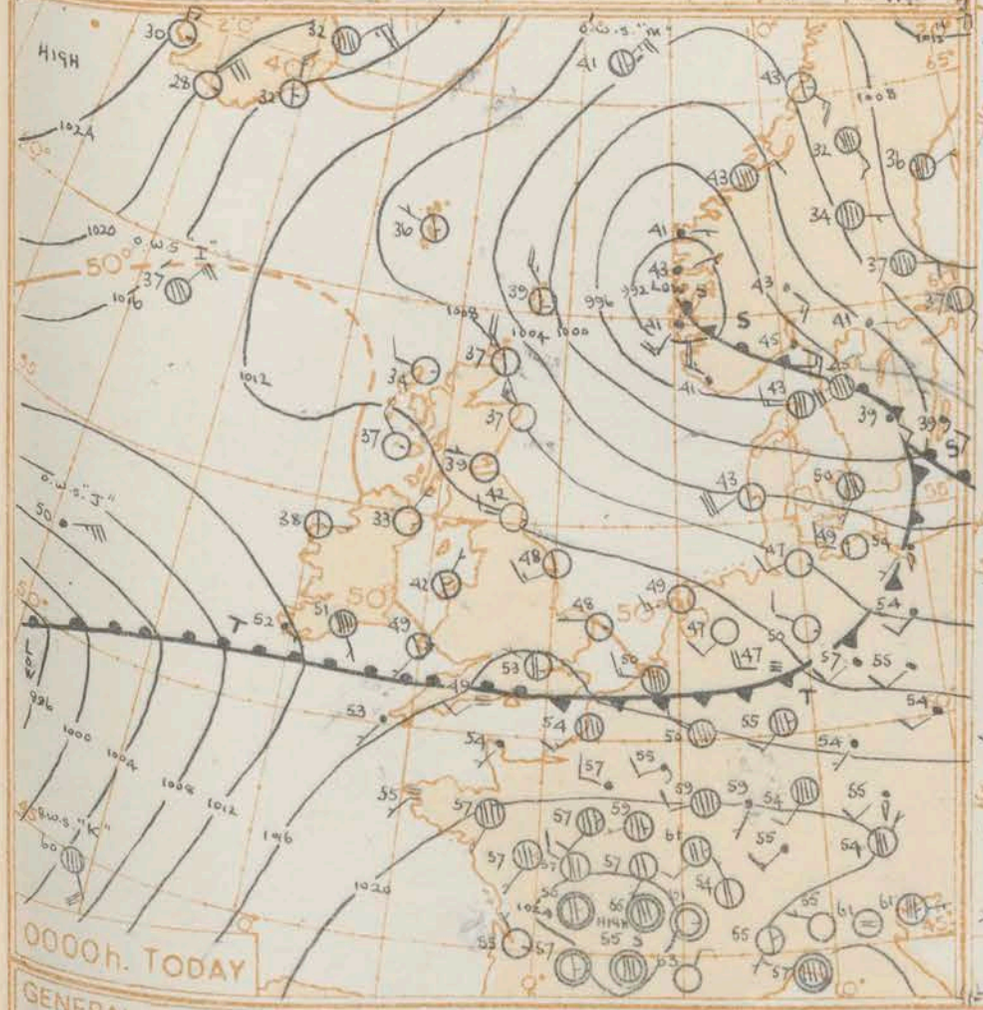
CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

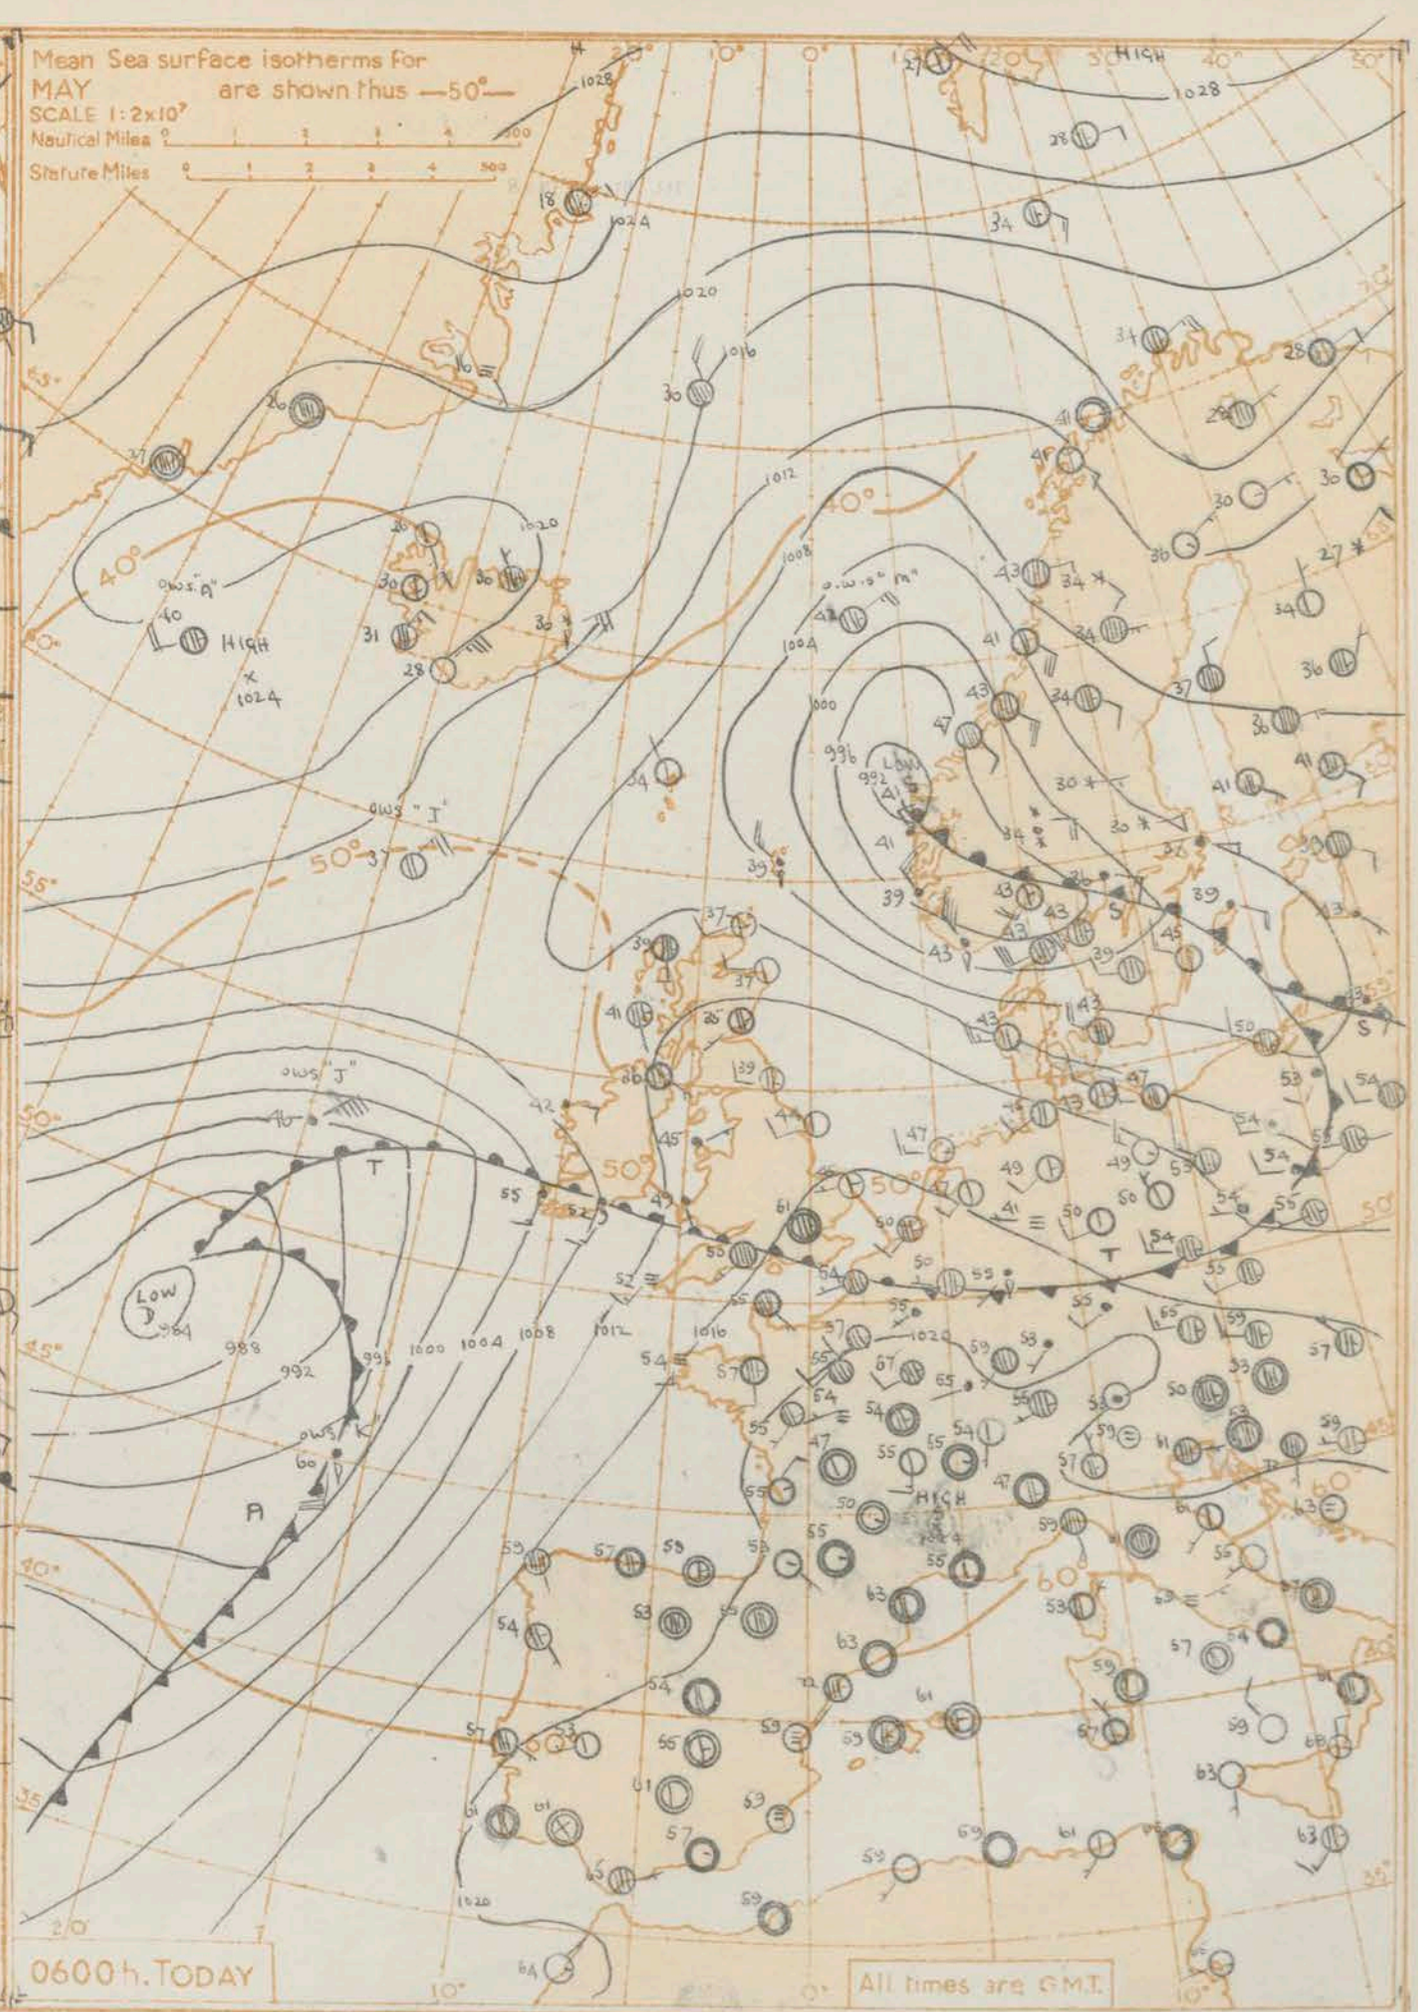
Mid-day (12h)
of
Tuesday 6th May
1958

Equidistant azimuthal projection 1:3×10⁷ on the plane of 60°N.

NAUTICAL MILES.







GENERAL SYNOPTIC DEVELOPMENT

The depression over Northeast Scotland yesterday morning moved away to the northeast and deepened, and the associated cold front moved southeast across the country to become stationary over southern coastal districts of England in the evening. This morning the front is returning northwards over southern districts as a warm front, as a depression moves northwards on the Atlantic. This front should reach North Scotland tomorrow morning, and a cold front is expected to move eastwards across Ireland tonight.

Issued at midday today Wednesday, 7th May 1958

FORECAST FOR BRITISH ISLES until noon tomorrow

Weather will be bright at first in Scotland and extreme North England, but rain or drizzle now affecting most other districts will move to northern areas tonight. Southern and western districts will have hill and coast fog. Renewed rain is expected in the west tomorrow. Temperatures will be near average

OUTLOOK FOR the following 24 hours — Cloudy in most districts, with rain or drizzle at times. Becoming warmer.

THE DAILY WEATHER REPORT
OF THE METEOROLOGICAL OFFICE, LONDON

OBSERVATIONS at 00h. G.M.T. 7th May 1958

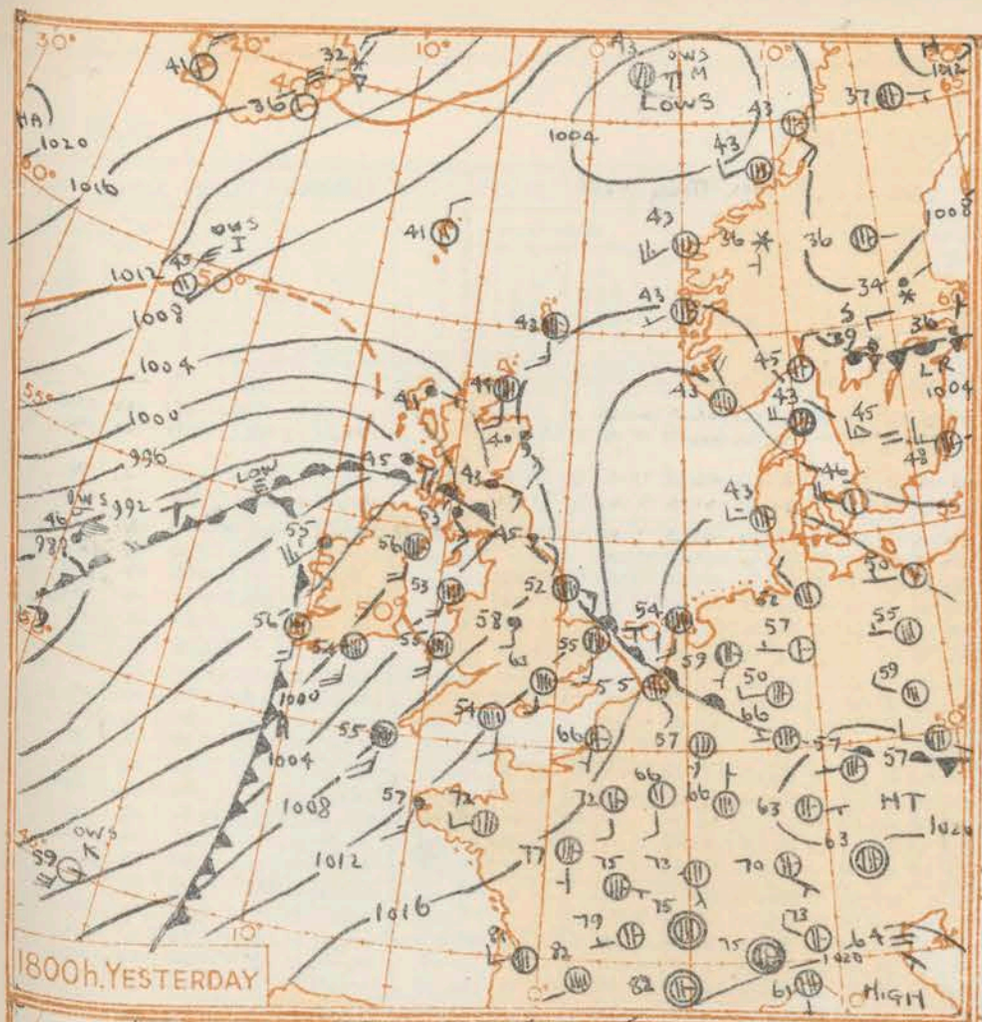
SIR GRAHAM SUTTON, C.B.E., D.Sc., F.R.S., Director General. Meteorological Office, Air Ministry, Kingsway, London, W.C.2.

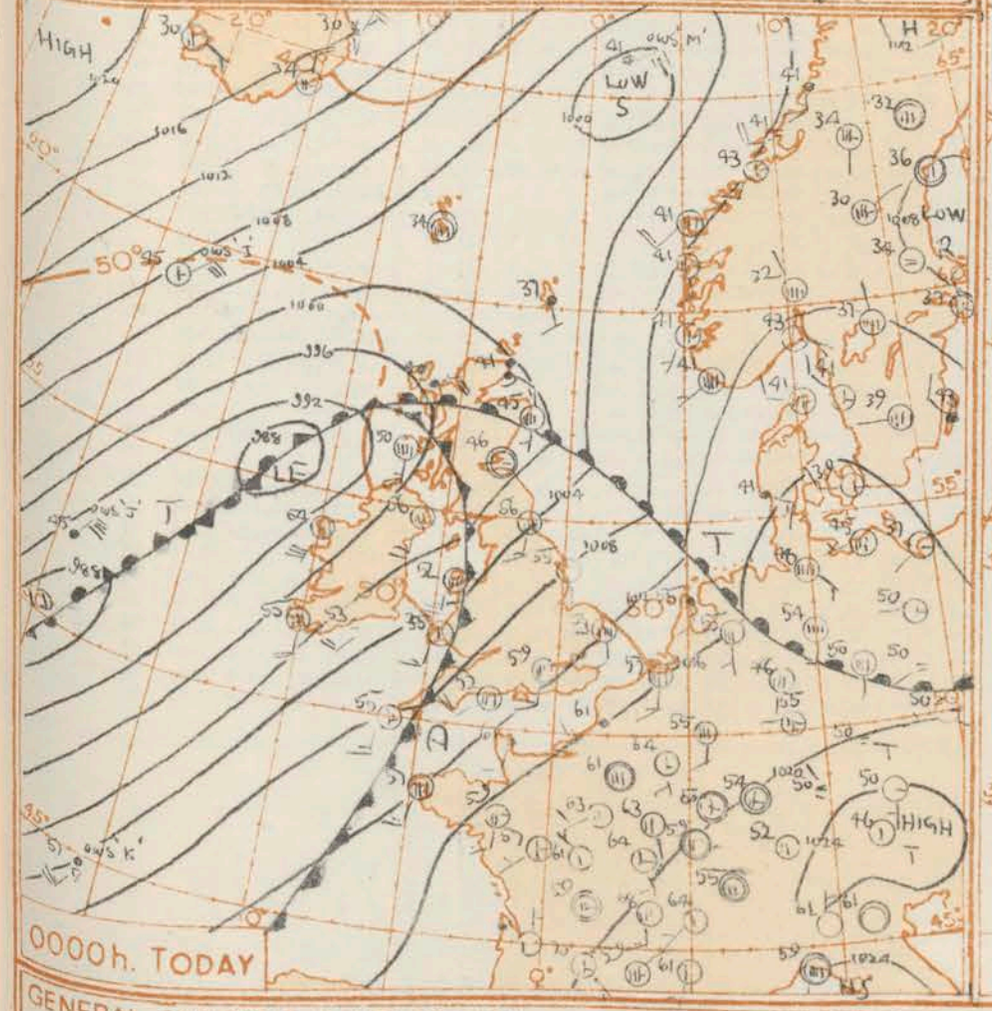
CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

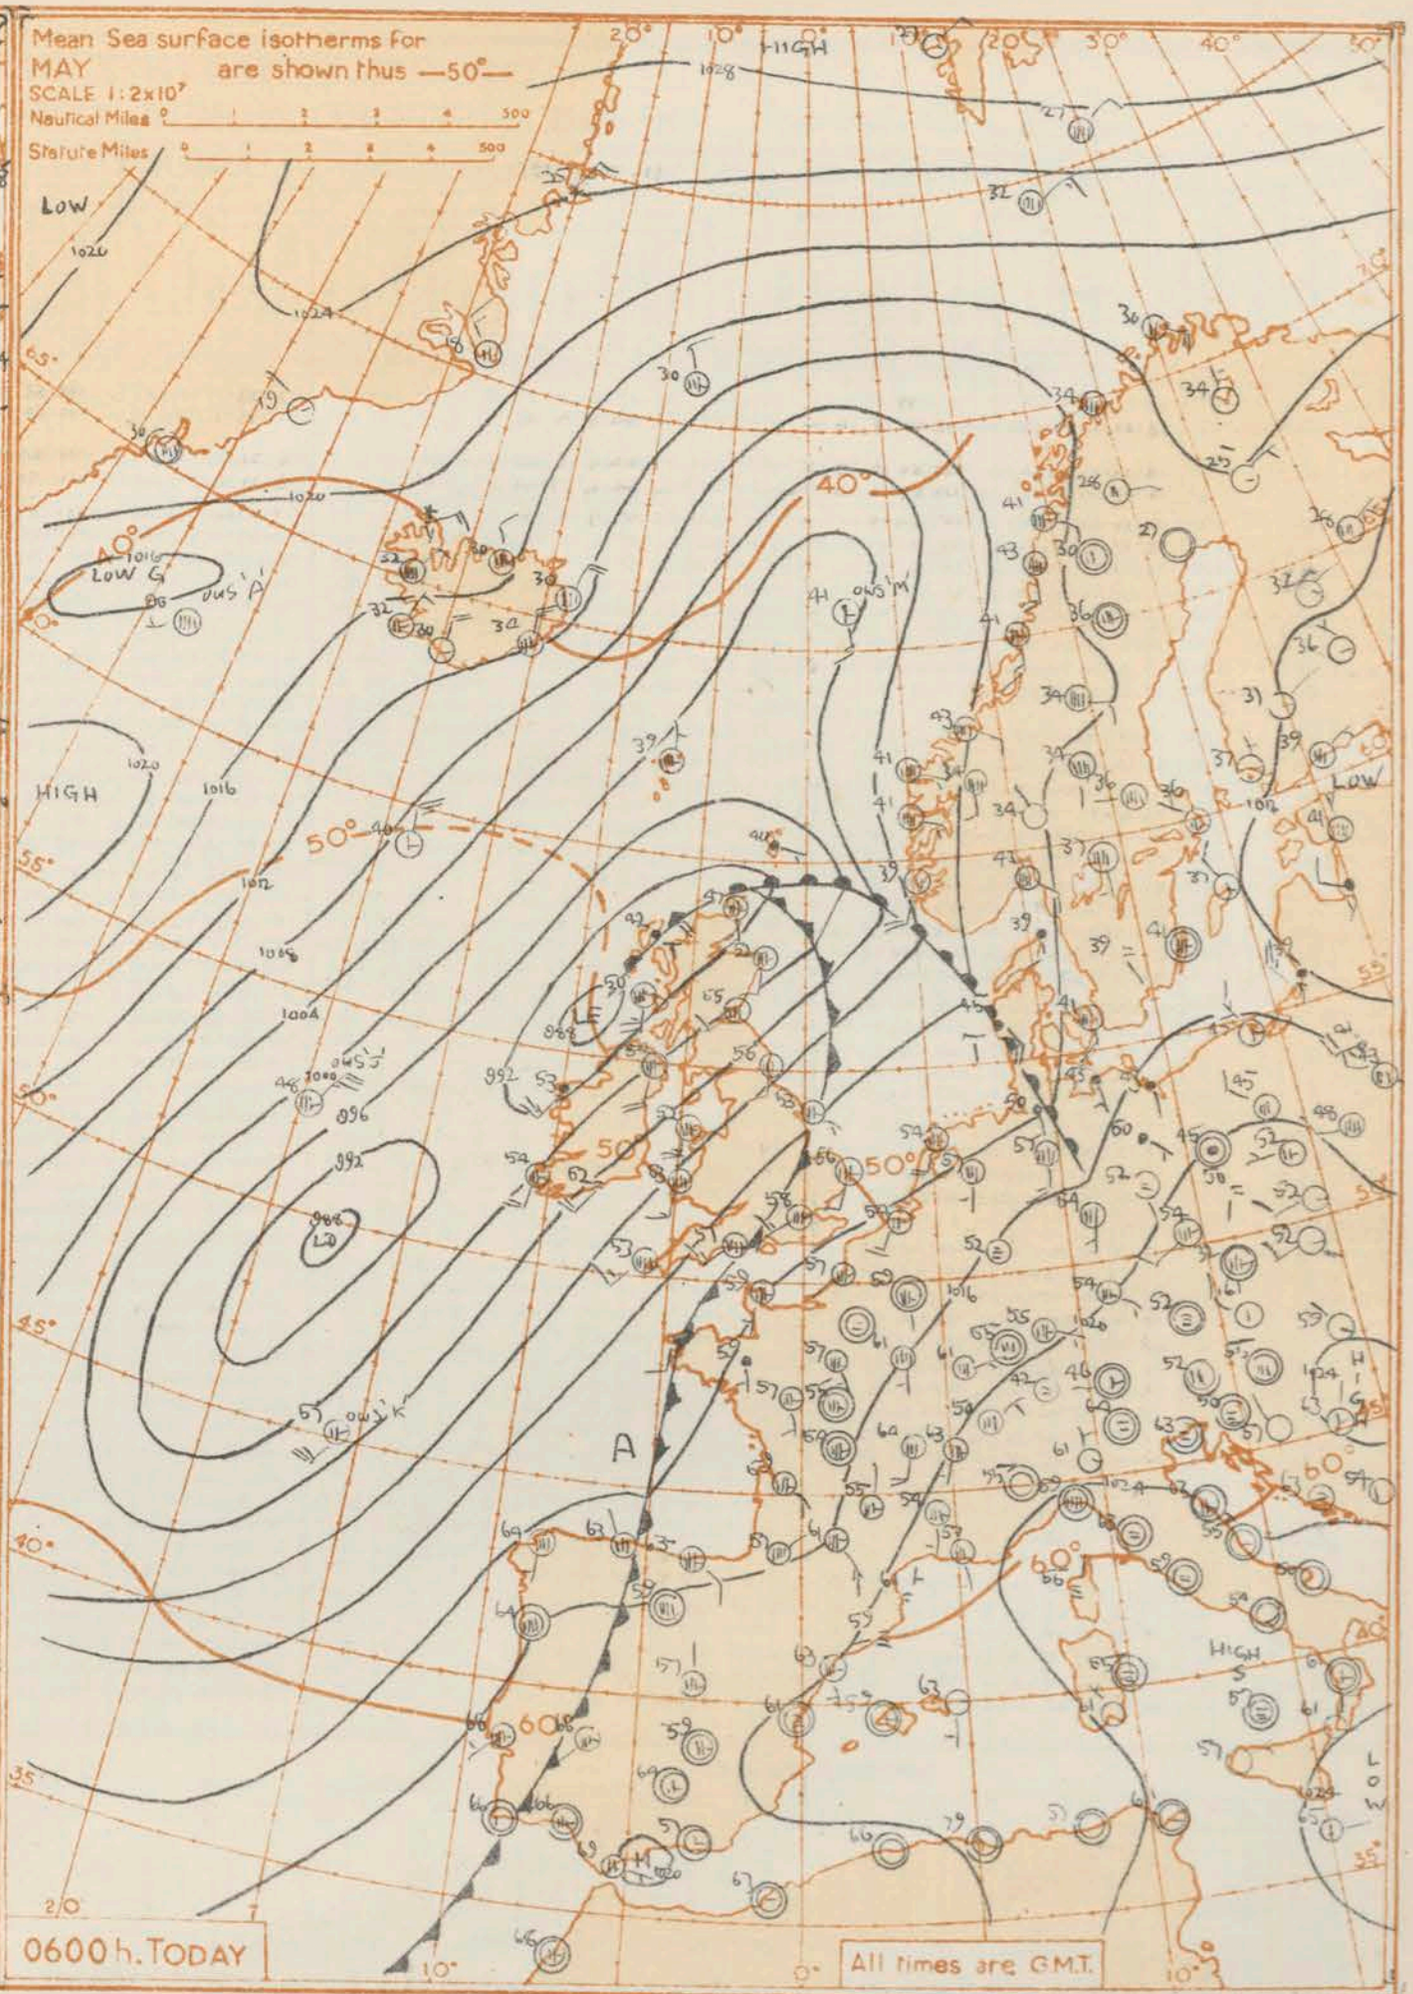
Mid-day (12h)
of
Wednesday 7th May
1958

Equidistant azimuthal projection 1·3×10⁷ on the plane of 60°N.

NAUTICAL MILES







GENERAL SYNOPTIC DEVELOPMENT

The depression to the southwest of the British Isles yesterday has moved rather slowly northeastwards and a new depression developed ahead of it, moving to northwest Scotland this morning. The associated main front moved northeastwards across all districts and a weak cold front moved east across northern and western districts during the night. The new depression will continue to move northeastwards and the old centre is expected over the Southwest Approaches tomorrow morning. A small wave over northwest France this morning will move quickly northeastwards and retard the cold front over southeast England for a time today.

Issued at midday today Thursday 8th May 1958

FORECAST FOR BRITISH ISLES until noon tomorrow

Most areas will be mainly cloudy and rather warm today with rain or drizzle at times nearly everywhere. During tonight and tomorrow morning colder, more showery weather will spread south over Scotland and Northern Ireland

OUTLOOK FOR the following 24 hours

Rain at times over England and Wales with near average temperatures. Rather cold and showery over Scotland and Northern Ireland

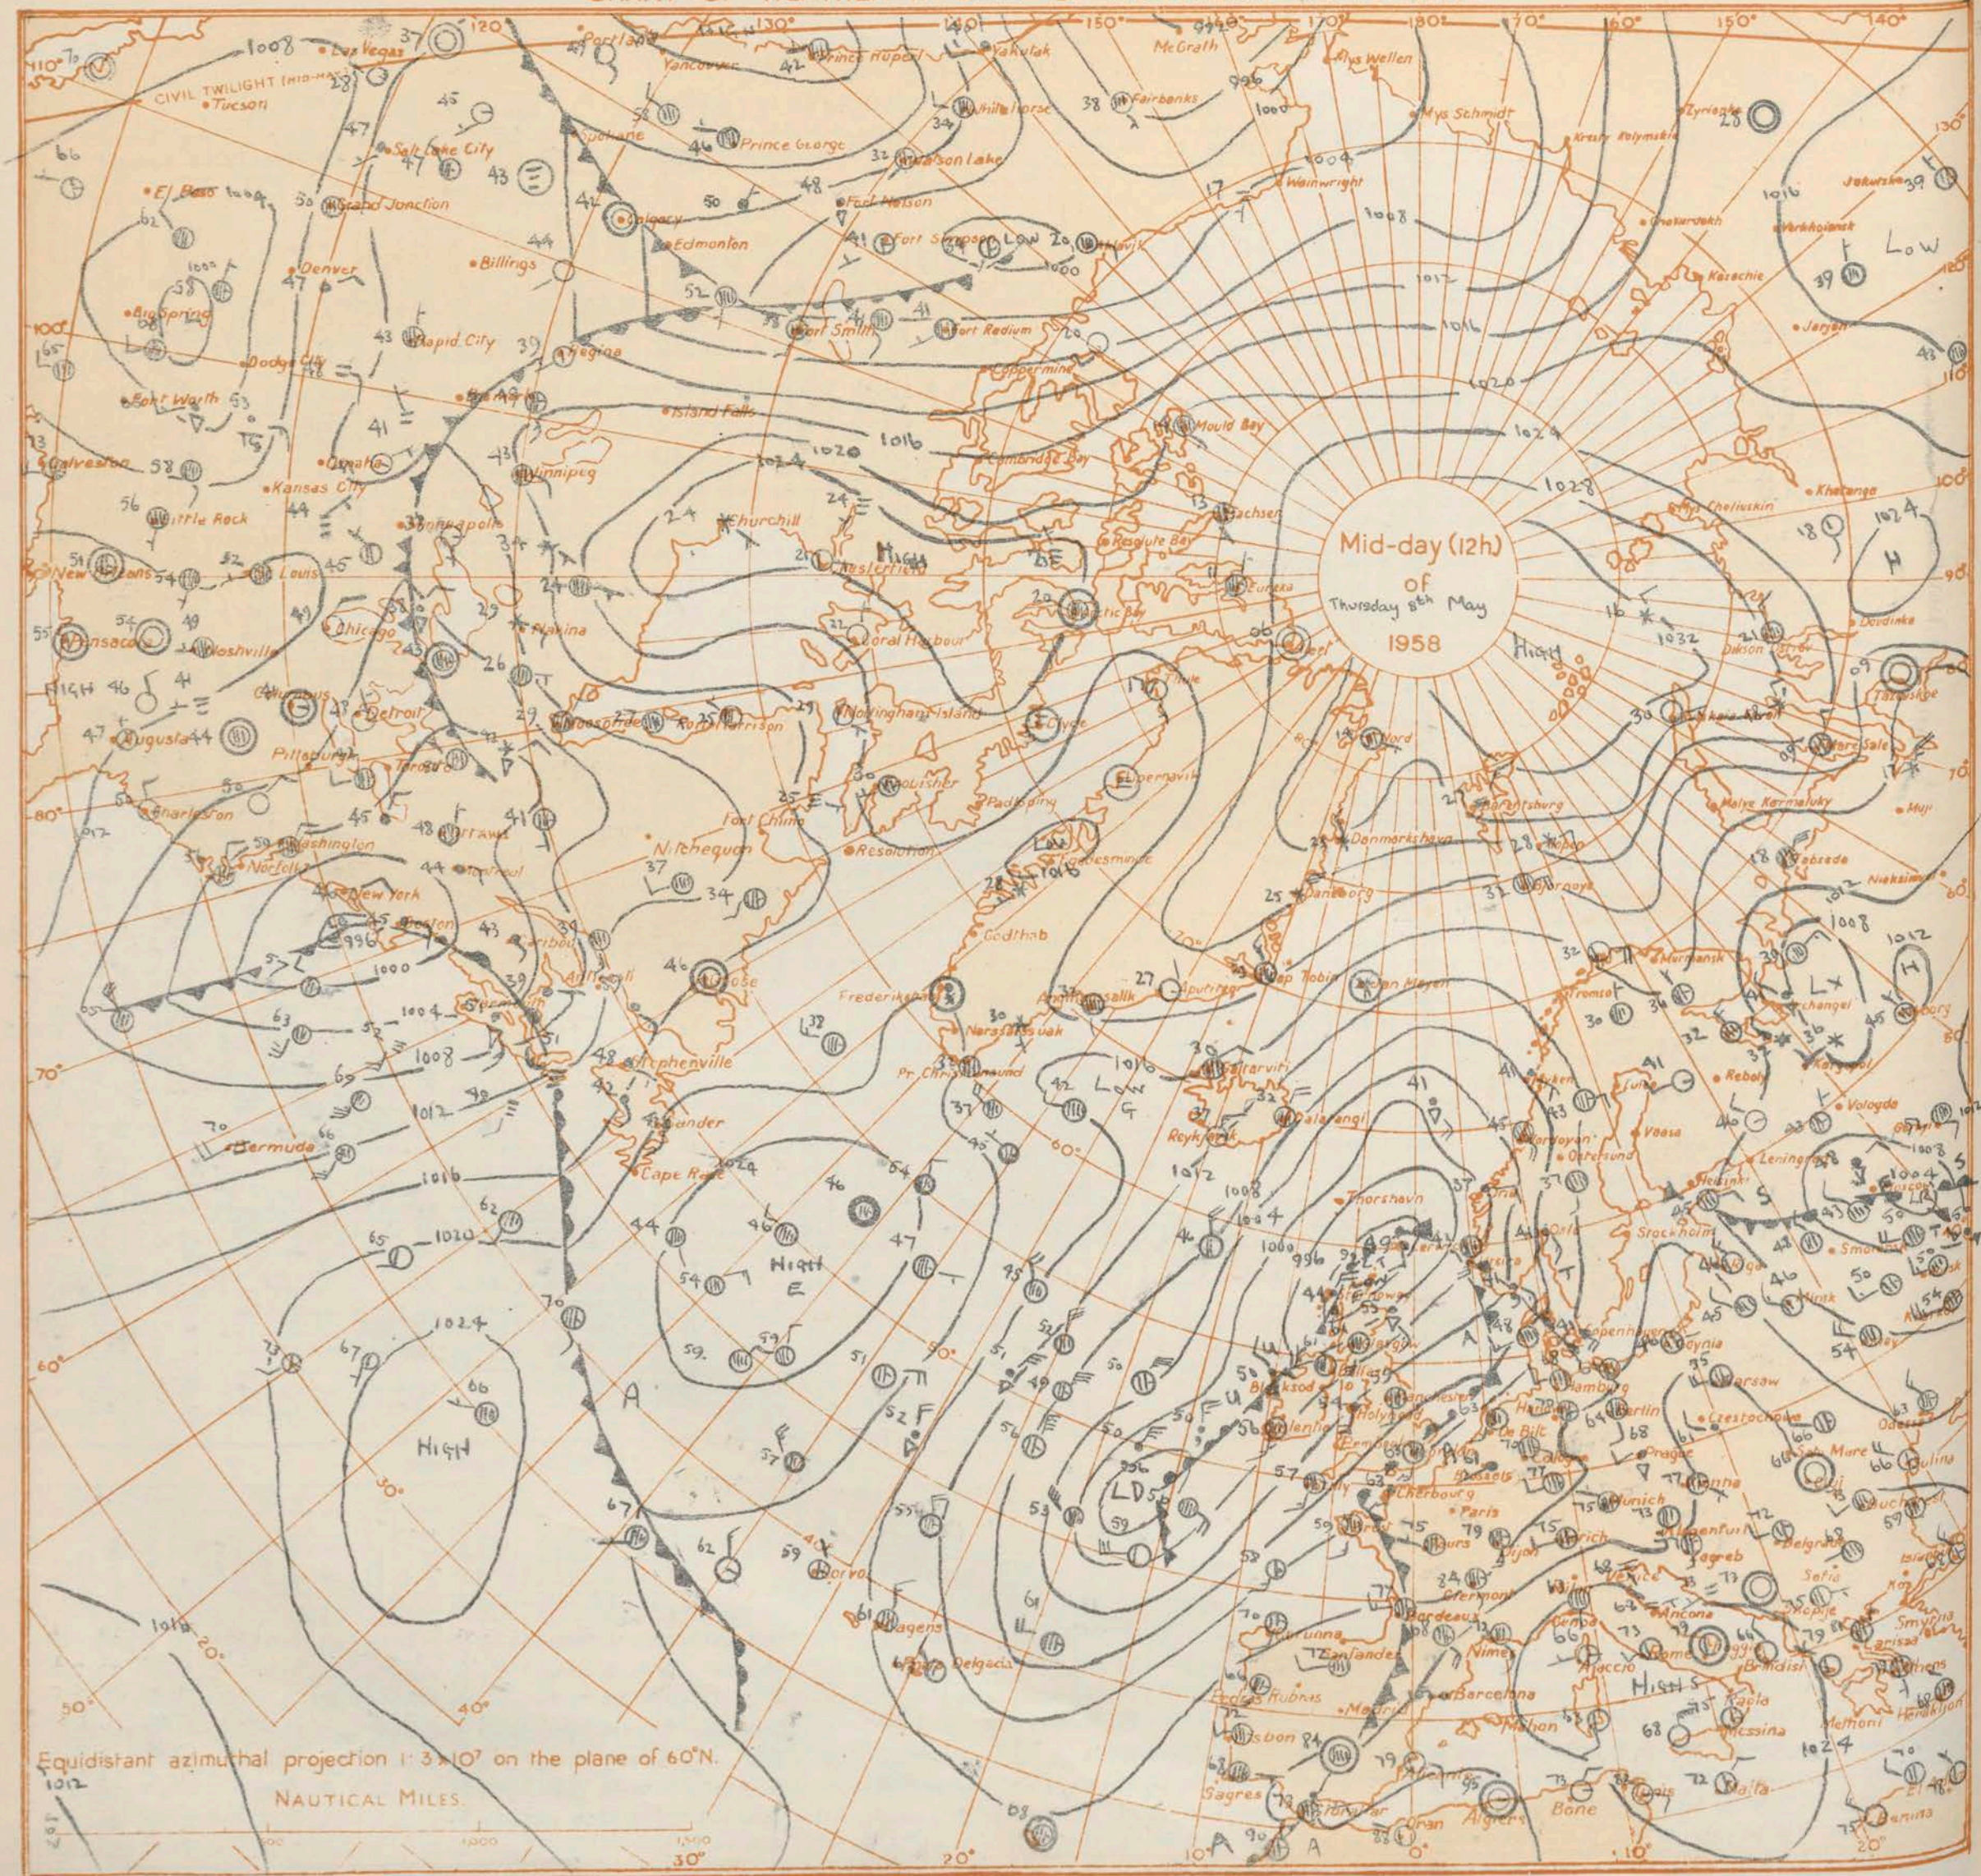
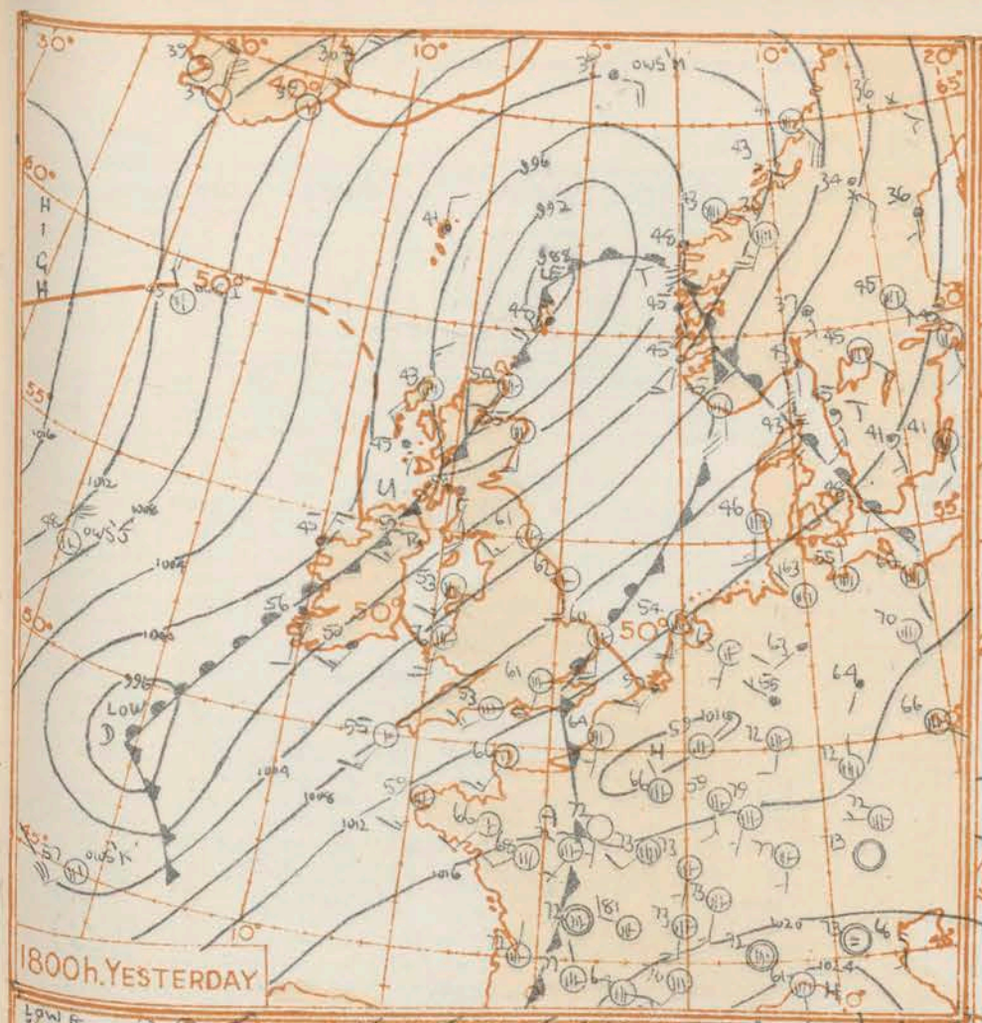
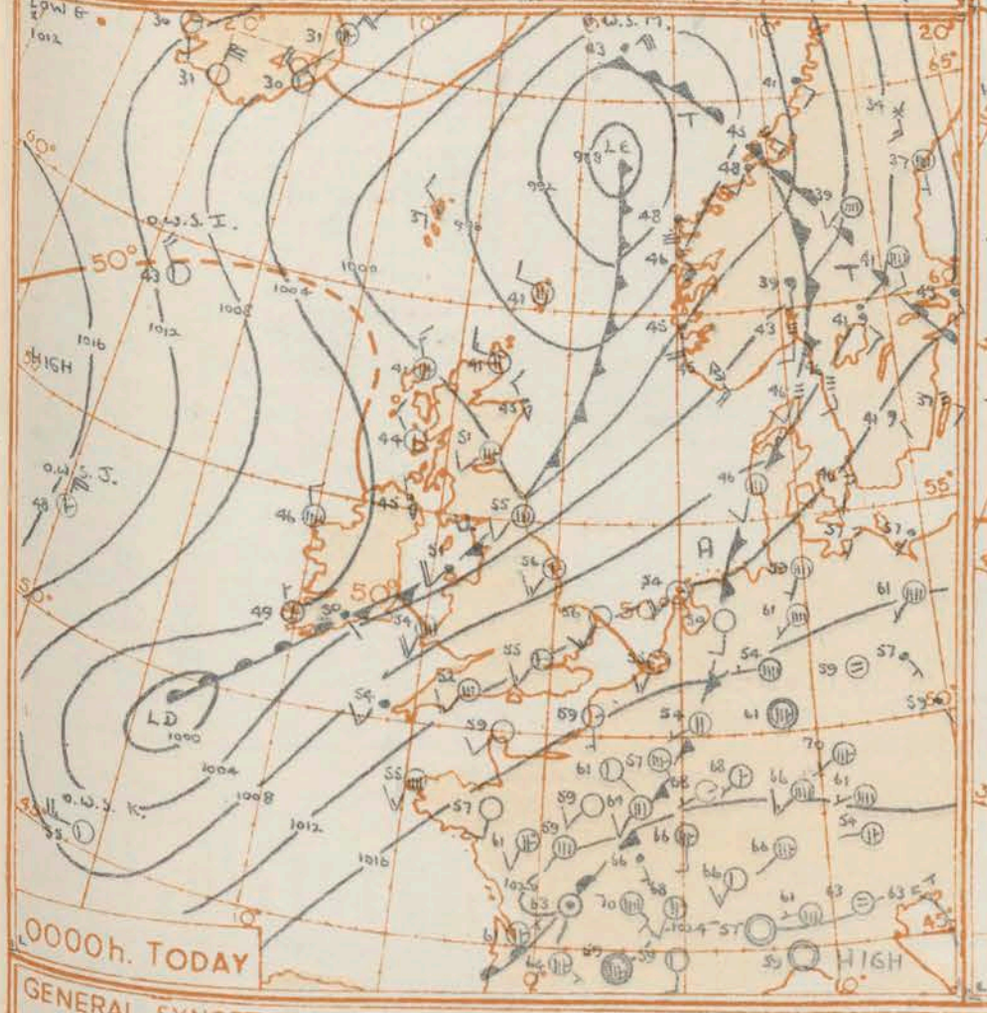
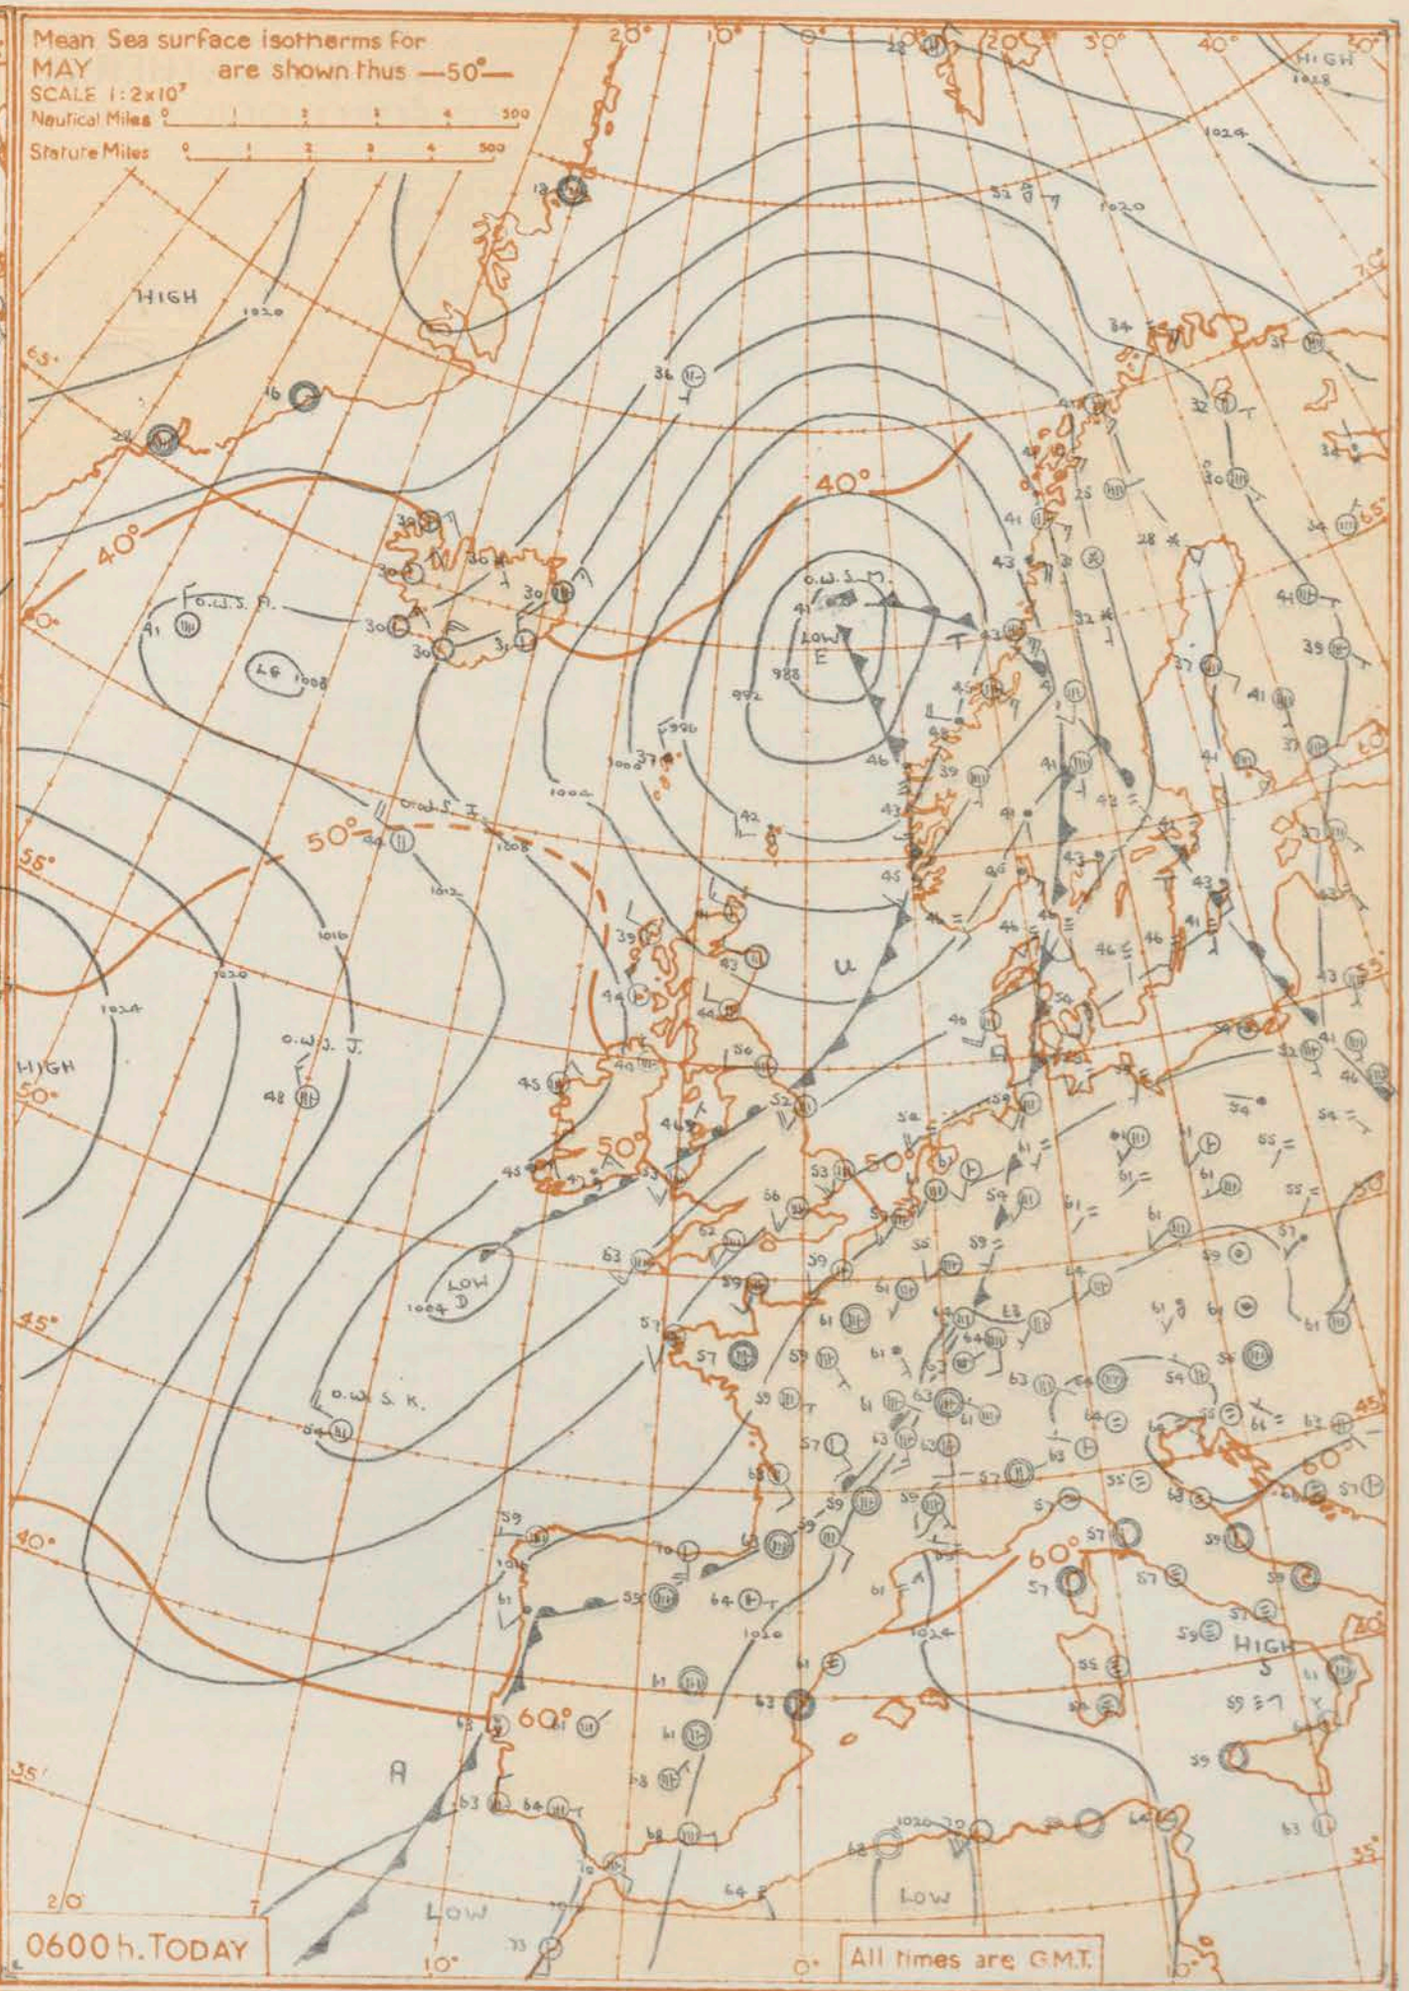
SIR GRAHAM SUTTON, C.B.E., D.Sc., F.R.S., Director General. Meteorological Office, Air Ministry, Kingsway, London, W.C.2.

CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE









GENERAL SYNOPTIC DEVELOPMENT

The depression over northwest Scotland yesterday morning has moved away to the north-northeast and deepened, and an associated cold front has moved south-eastwards across Scotland, Ireland and northern England. The depression which was centred southwest of Ireland moved rather slowly eastwards towards the southwest approaches. The cold front will continue to move southeastwards, but only slowly and is expected to lie across East Anglia and Central Southern England at noon tomorrow. A ridge will move slowly southeastwards across northern and western districts. Low pressure will be transferred to Biscay.

Issued at midday today Friday 9th May 1958

FORECAST FOR BRITISH ISLES until noon tomorrow

Bright periods over Scotland and Northern Ireland, scattered showers, chiefly in north Scotland, with snow showers over the hills. Rather cloudy over England and Wales with a belt of rain over northern England and North Wales moving southeast slowly. To affect southern districts of England and Wales later. Ground frost with slight air frost tonight in Scotland, Northern Ireland and northern England.

OUTLOOK FOR the following 24 hours

Some rain in southern England at first, elsewhere bright and dry at first but further rain spreading in from the Atlantic later

THE DAILY WEATHER REPORT

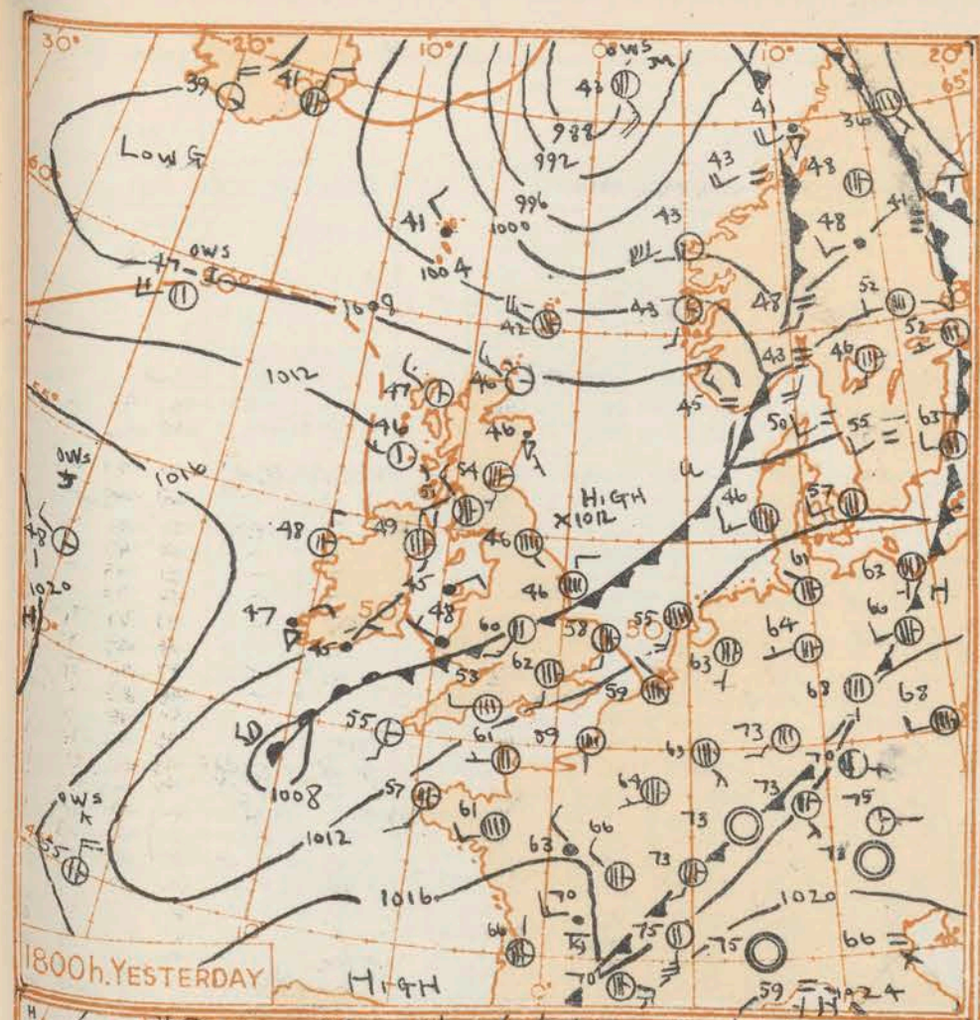
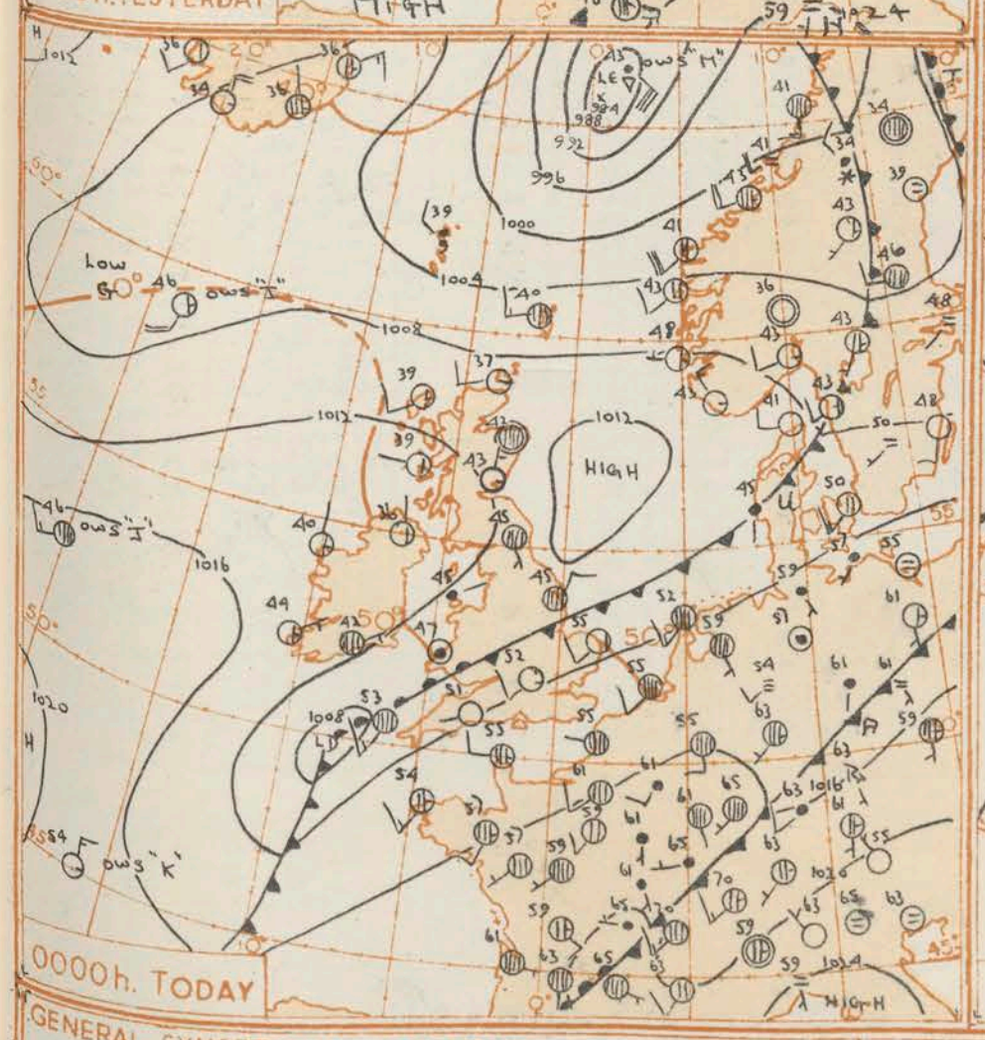
CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

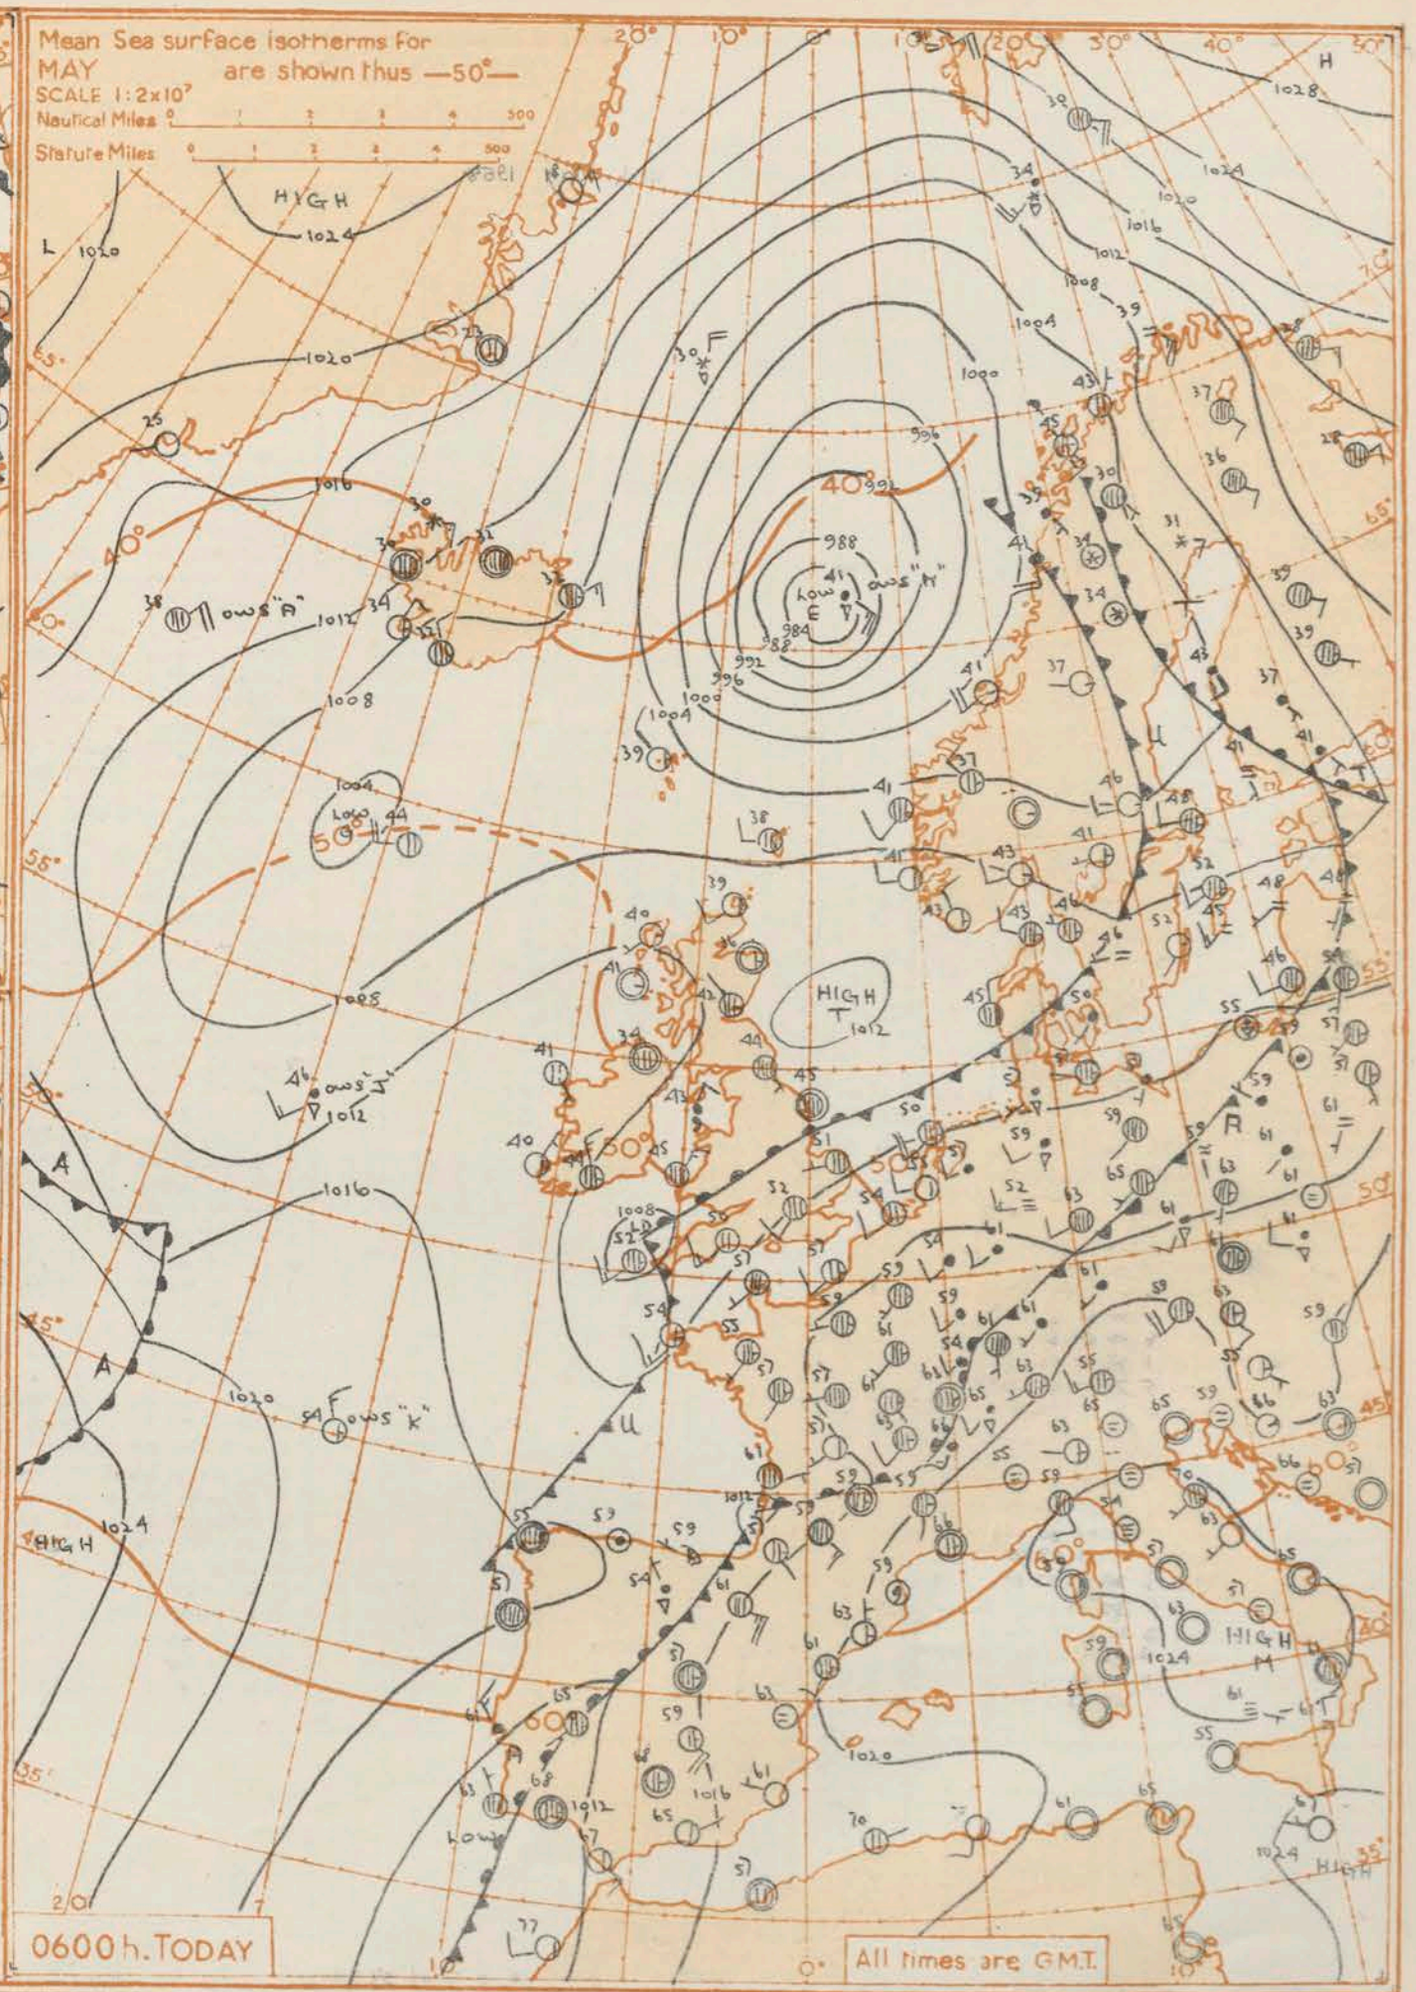
Mid-day (12h) of Friday 9th May 1958

Equidistant azimuthal projection 1·3×10⁷ on the plane of 60°N.

NAUTICAL MILES







GENERAL SYNOPTIC DEVELOPMENT

The depression over the South West approaches yesterday has moved slowly East North East and is now expected to cross England on a North Easterly track from Cornwall to Lincolnshire. The cold front over North England yesterday has since remained almost stationary, but will clear Wales and later the whole of England as the associated depression moves over the North Sea.

Another depression is developing about 400 miles West of Ireland and an associated trough will move into Ireland early tomorrow.

Issued at midday today Saturday 10th May 1958

FORECAST FOR BRITISH ISLES until noon tomorrow

Scotland and Northern Ireland today will be mostly dry with bright periods, but rain spreading across from West later tonight and tomorrow with freshening winds. Most parts of England and Wales will have outbreaks of rain or thunderstorms today, and the rain may be prolonged in North England: by midnight however most of the rain will have ceased, and tomorrow morning will be mostly dry.

OUTLOOK FOR the following 24 hours: Further rain or thunderstorms in most areas: in some parts however there will be sunny intervals and it will become rather warm in the afternoon.

All times of observation printed in this publication are GREENWICH MEAN TIME. | * Information not usually received. | SIR GRAHAM SUTTON, C.B.E., D.Sc., F.R.S., Director General. Meteorological Office, Air Ministry, Kingsway, London, W.C.2.

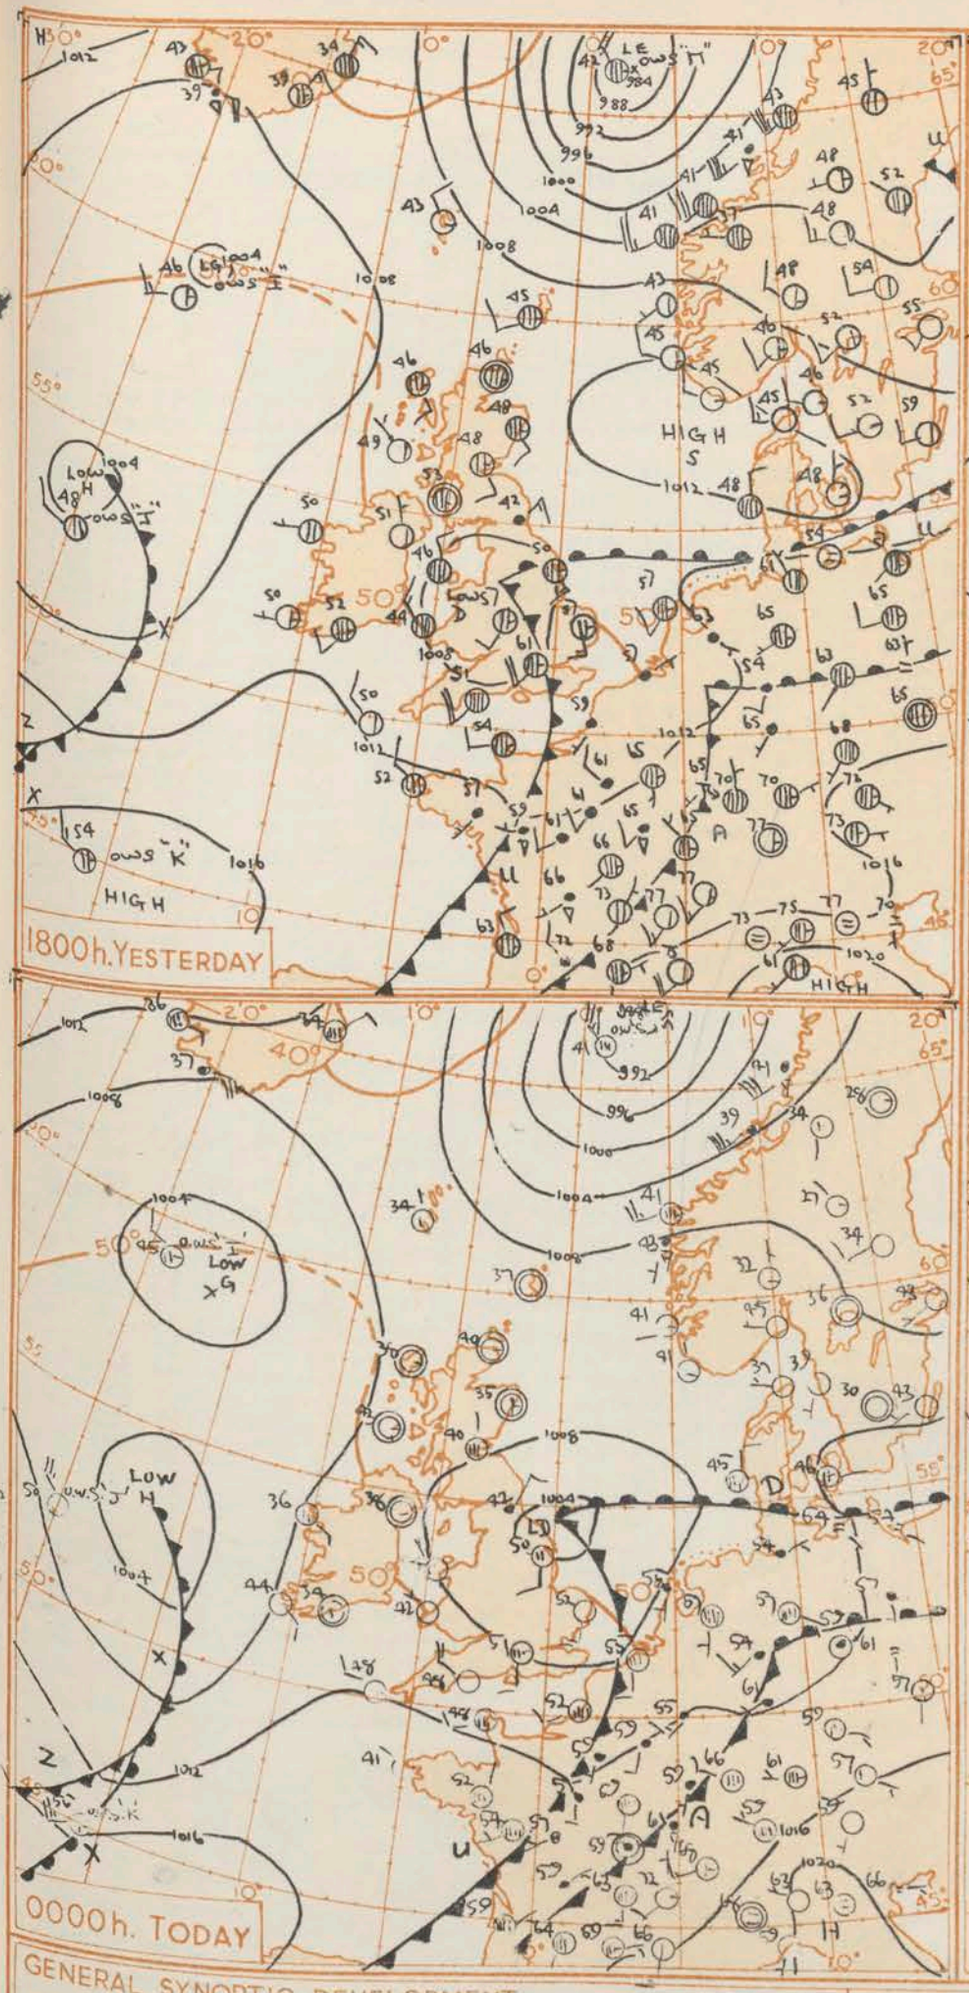
CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

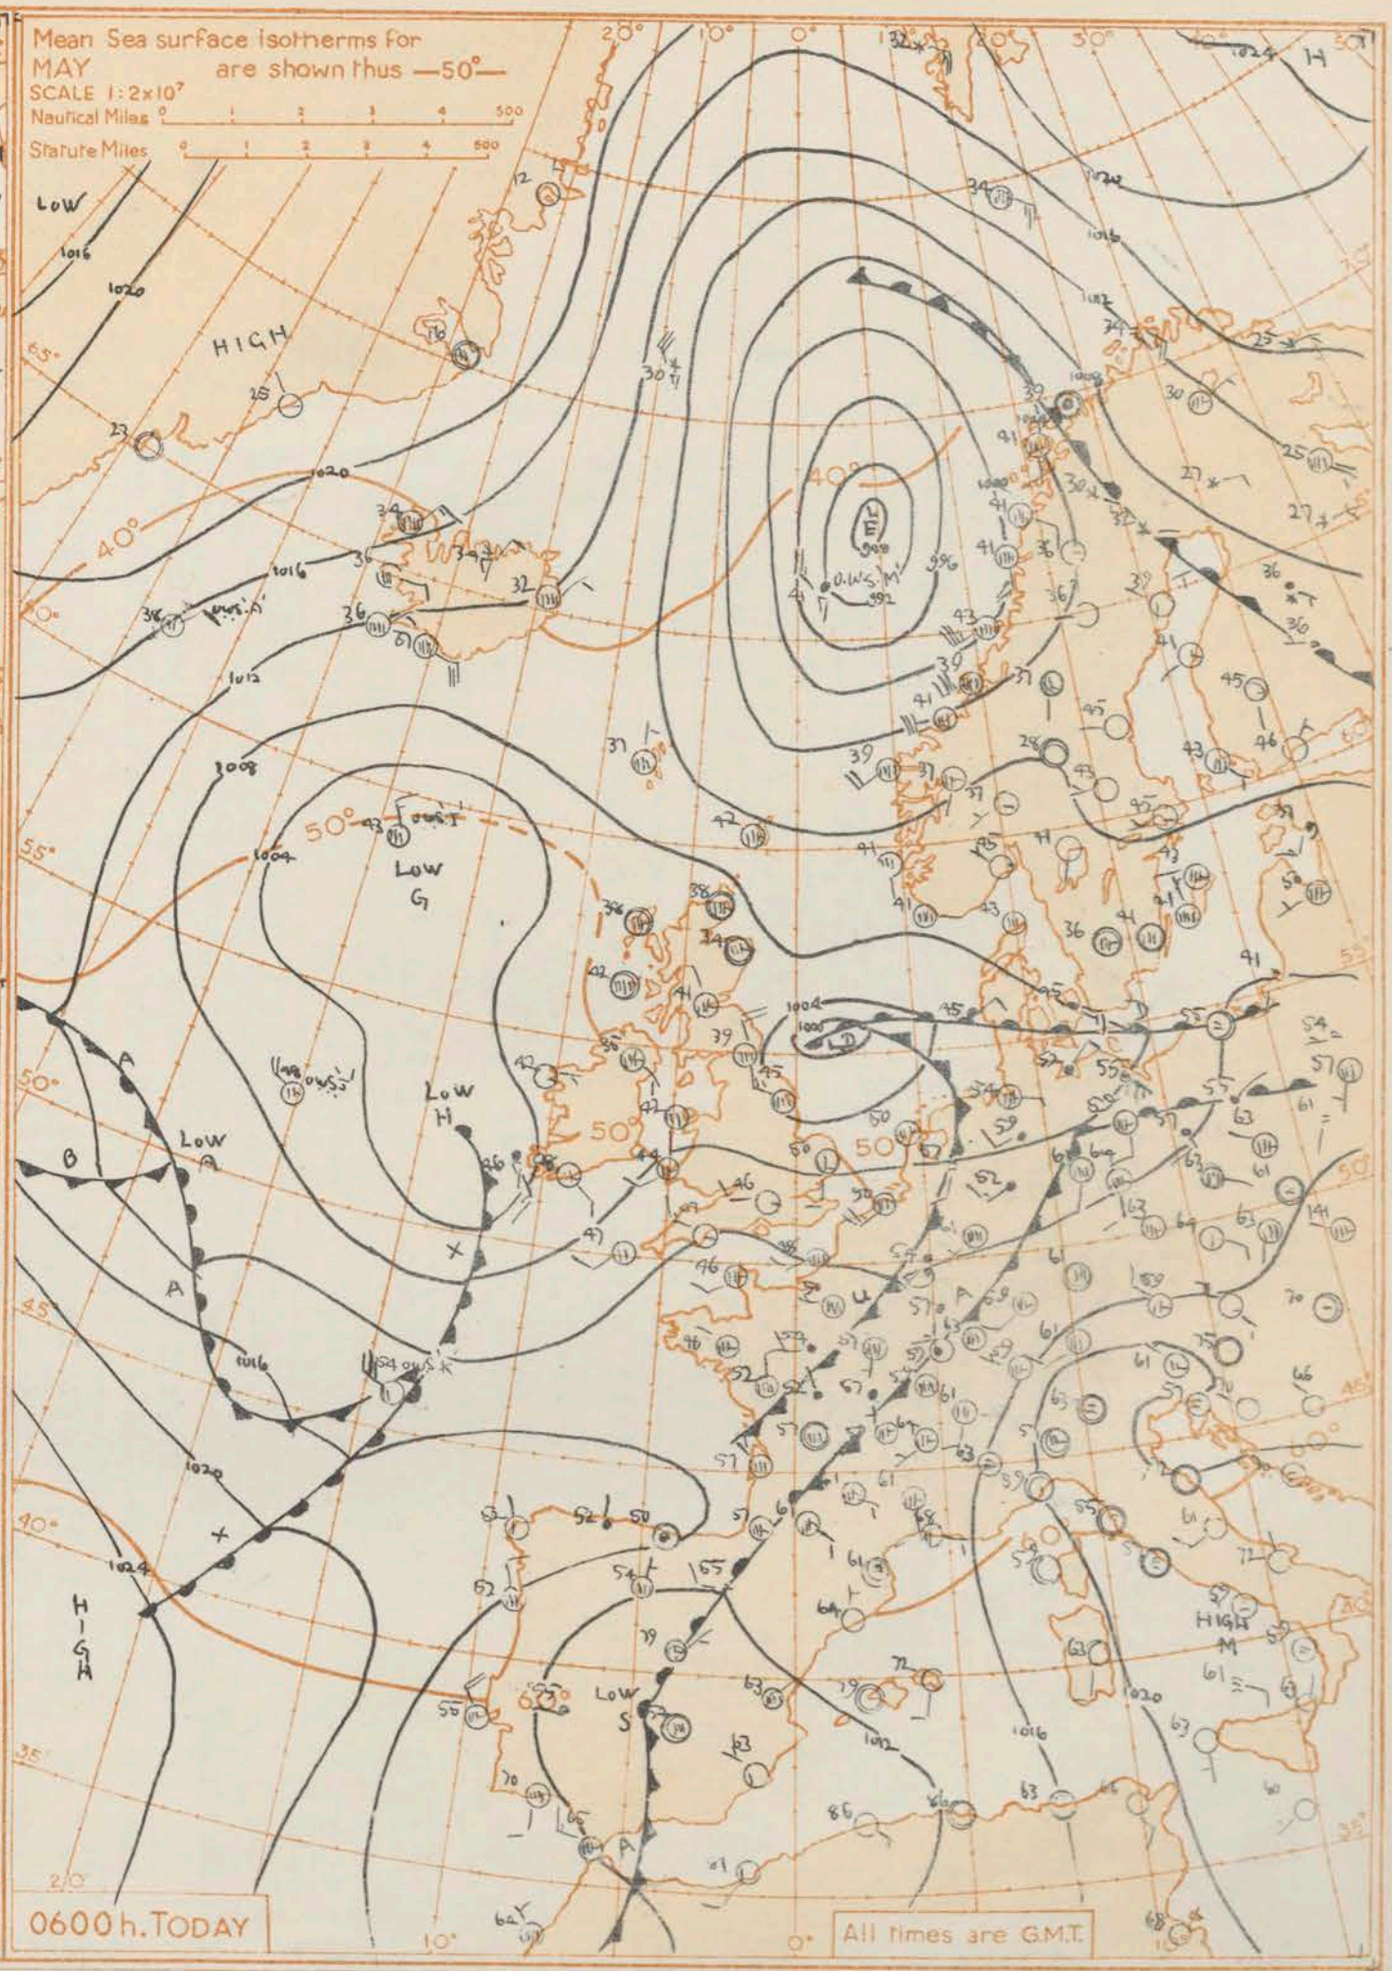
Mid-day (12h)
of
Saturday 10th May
1958

Equidistant azimuthal projection 1: 3×10^7 on the plane of 60°N.

NAUTICAL MILES.

0 500 1,000 1,500





All times are G.M.T.

GENERAL SYNOPTIC DEVELOPMENT

A depression which moved across England into the North Sea is expected to continue its eastward movement but a complex trough of low pressure west of Ireland will move slowly into the British Isles though the main centre will probably be off northwest Scotland.

Issued at midday today Sunday 11th May 1958

FORECAST FOR BRITISH ISLES until noon tomorrow

Bright periods and scattered showers in most districts with more general rain or drizzle in southern districts later. Temperatures will be near the seasonal average.

OUTLOOK FOR the following 24 hours

Changeable with showers and bright periods. Probably a little colder.

THE DAILY WEATHER REPORT

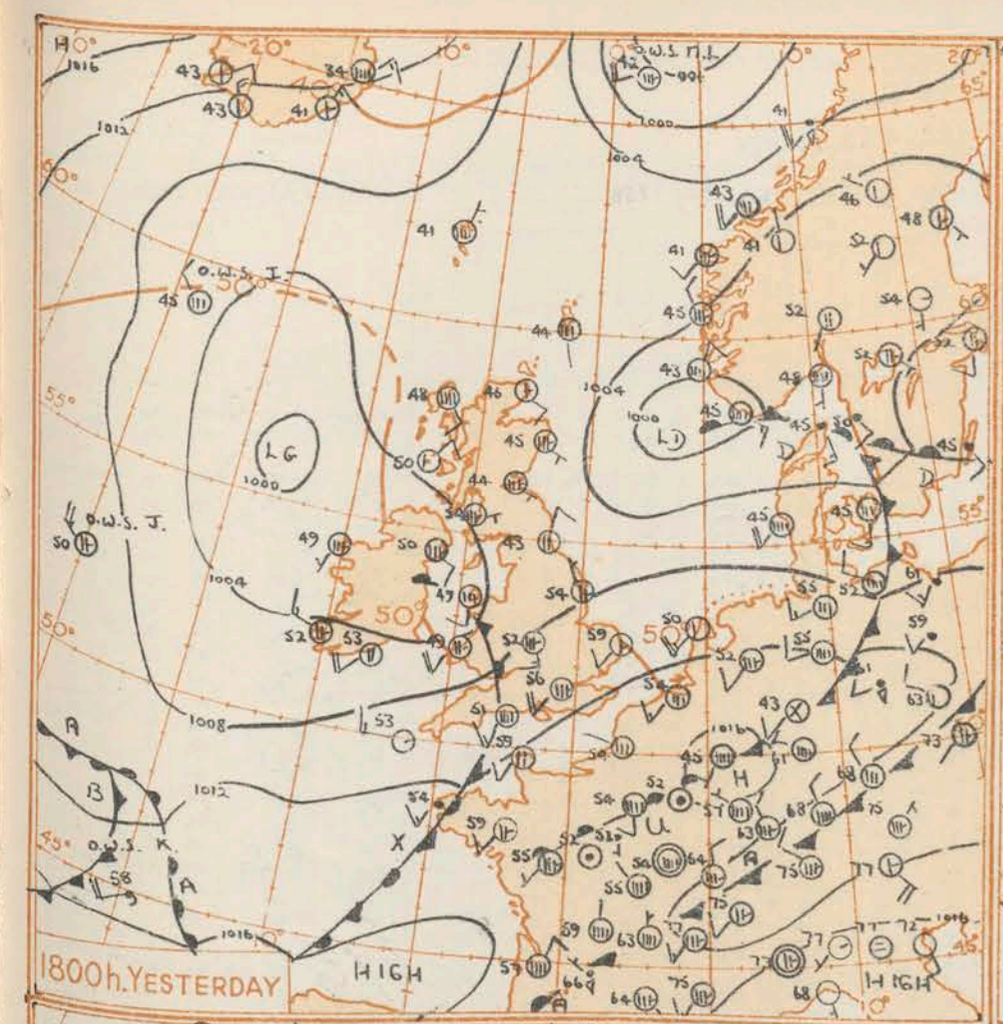
CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

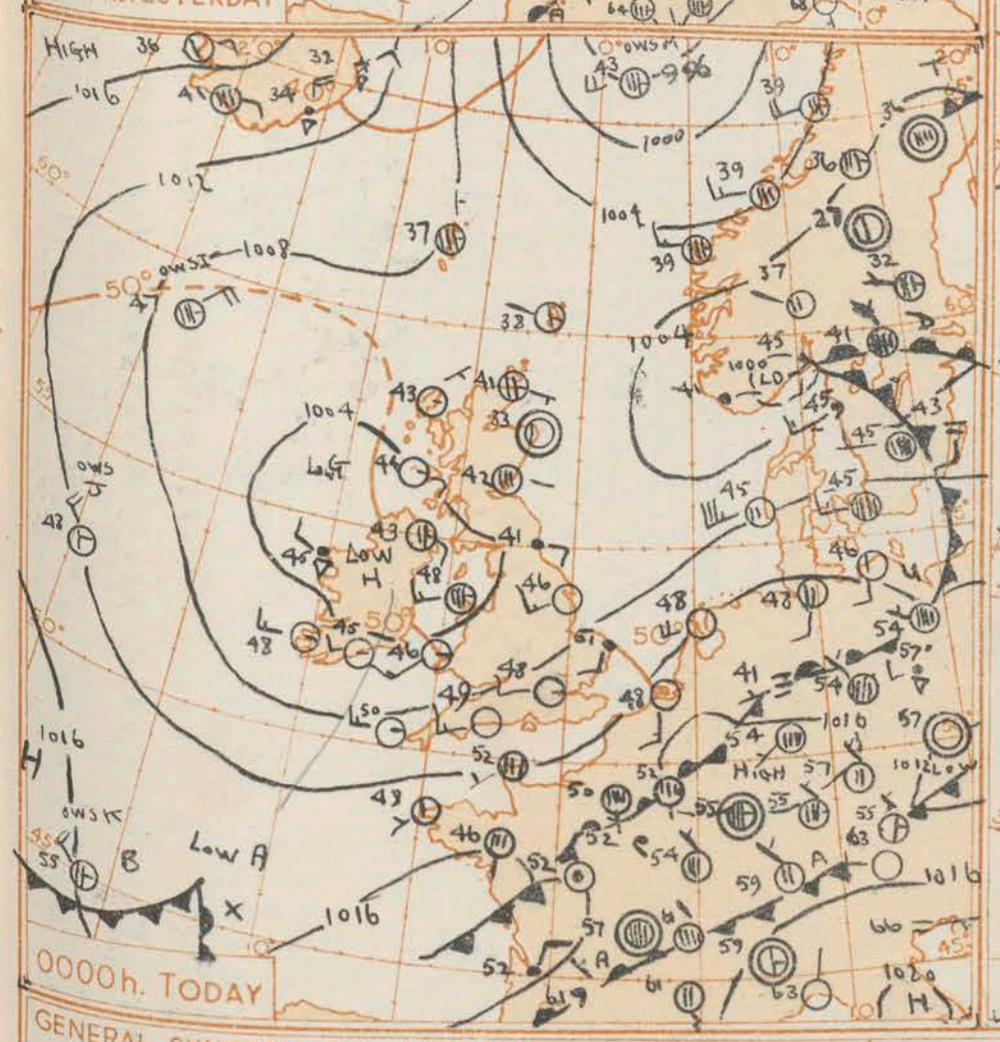
Mid-day (12h)
of
Sunday 11th May
1958

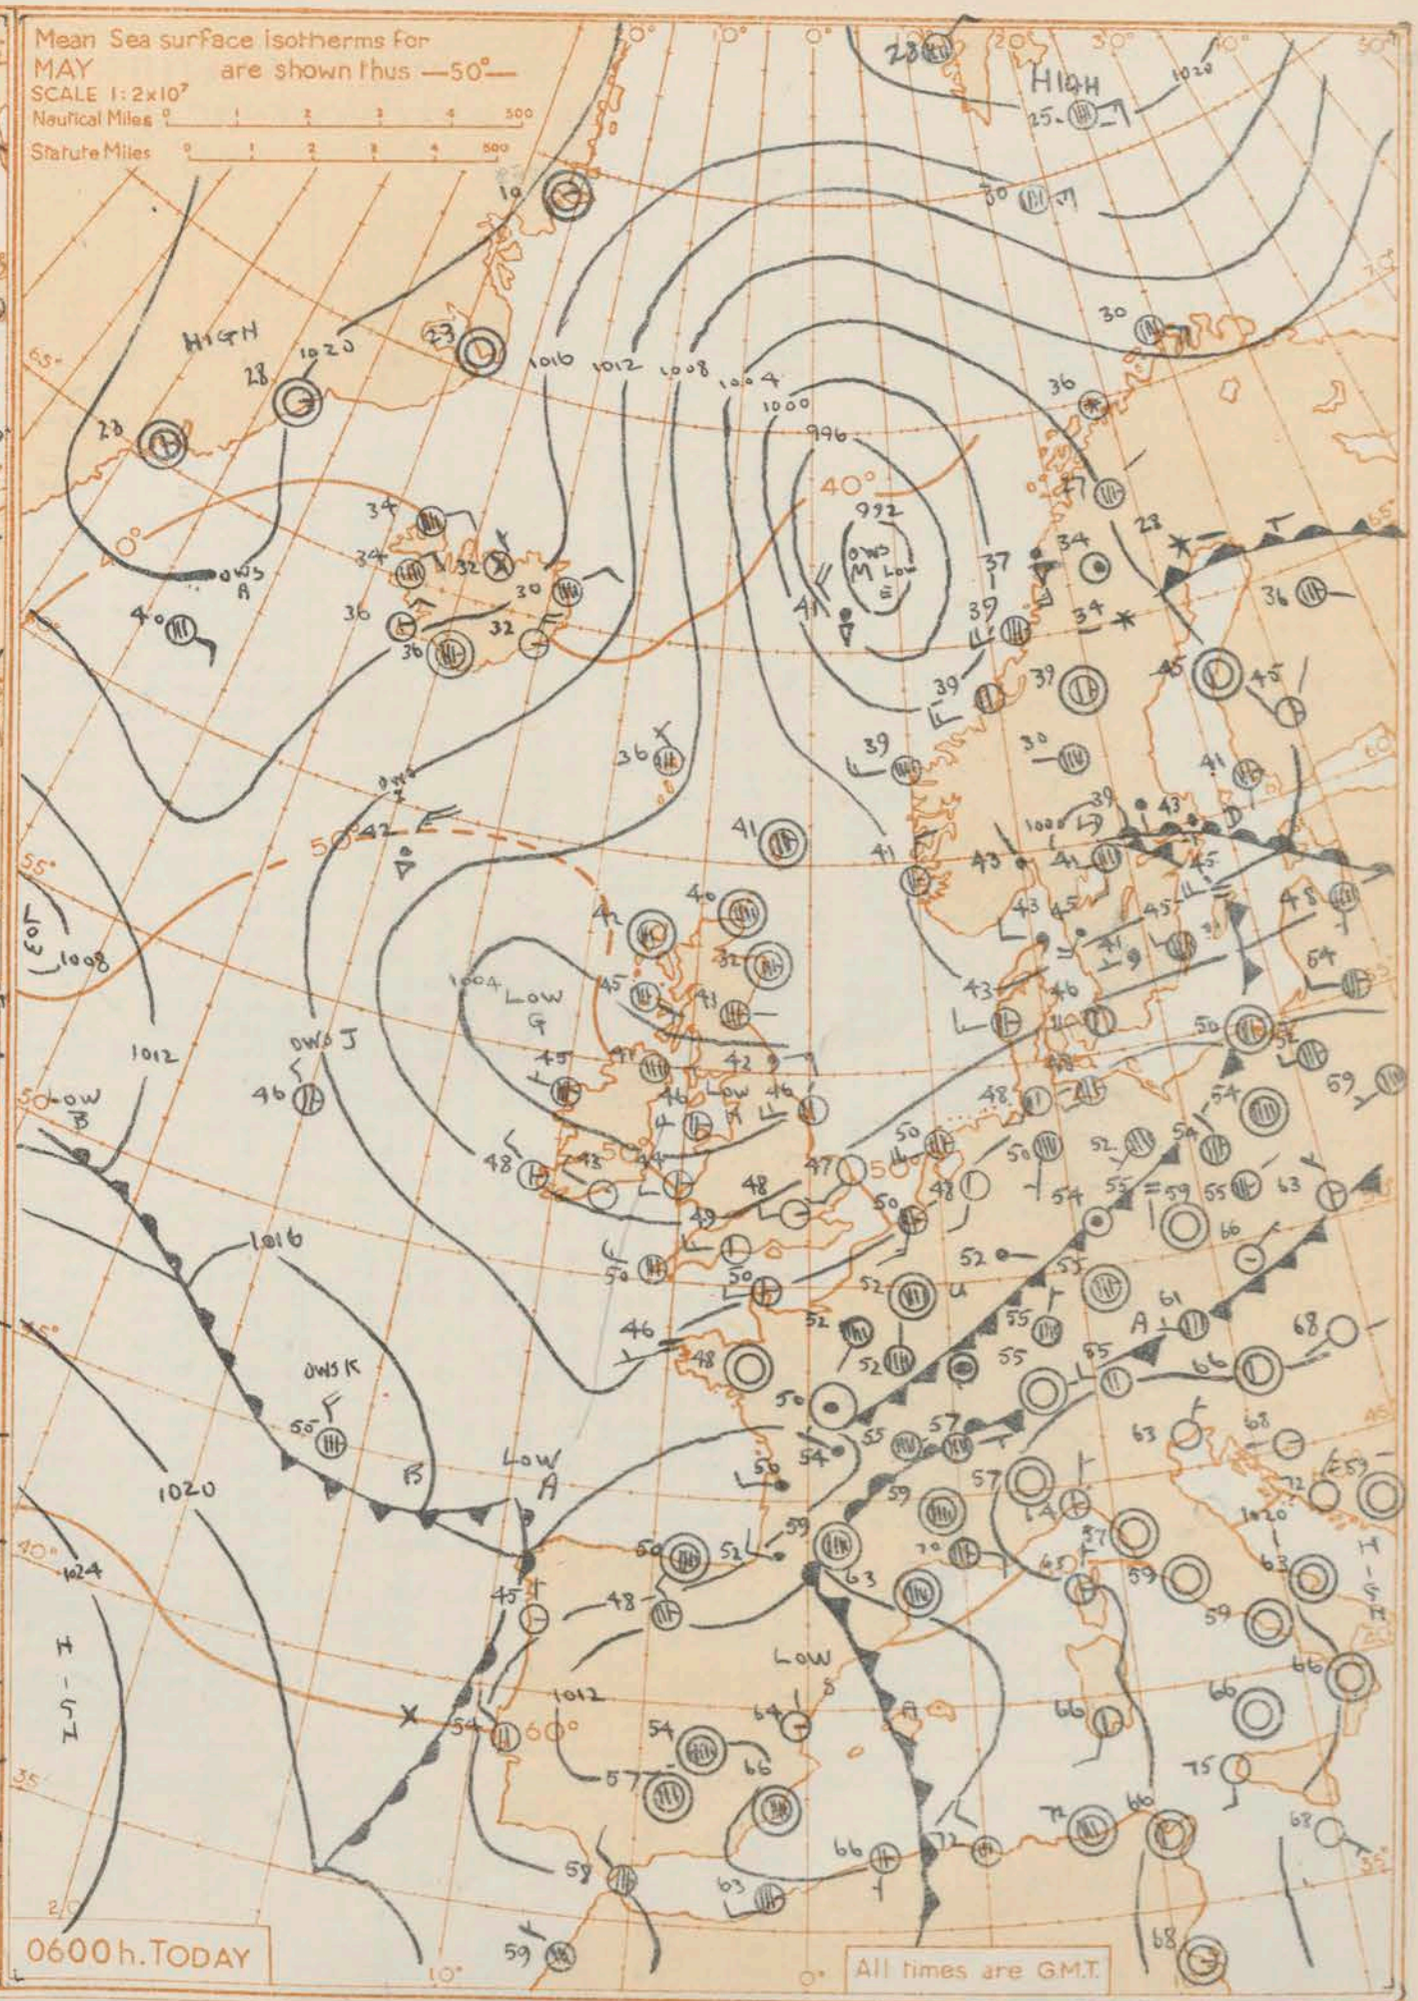
Equidistant azimuthal projection 1: 3 x 10⁷ on the plane of 60°N.

NAUTICAL MILES.

0 500 1,000 1,500







GENERAL SYNOPTIC DEVELOPMENT

A trough of Low pressure from the Atlantic has moved steadily into the British Isles and is expected to continue moving east into the North Sea while another disturbance from the Atlantic moves towards north France and southwest England.

Issued at midday today Monday 12th May 1958

FORECAST FOR BRITISH ISLES until noon tomorrow

Weather will be showery and rather cold but with sunny intervals. Showers will be heavy in some northern districts with thunderstorms and there may be snow or sleet showers on high ground in north Scotland. Ground frost is likely in many western and central districts with slight air frost in a few places in the north west.

OUTLOOK FOR the following 24 hours.

Probably continuing rather cold with showers and bright periods but perhaps becoming cloudy with a period of rain in the south.

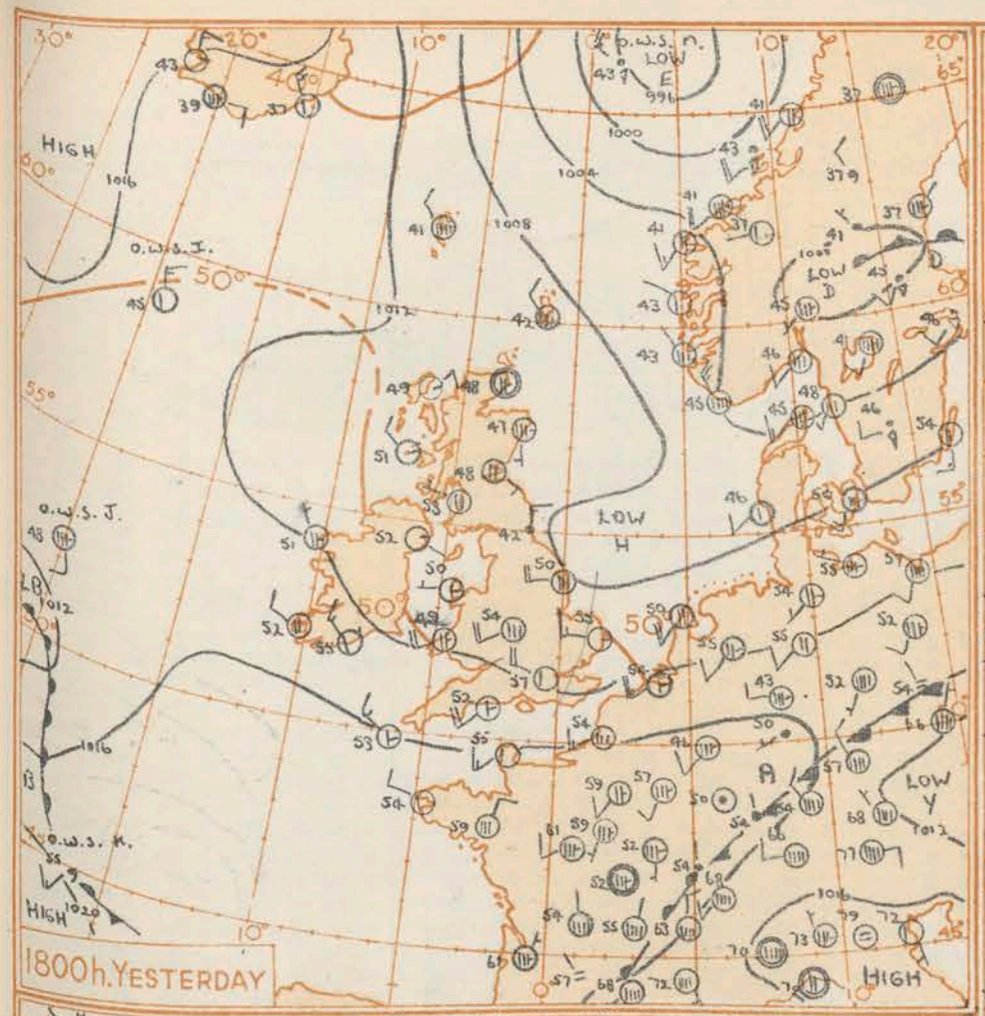
CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

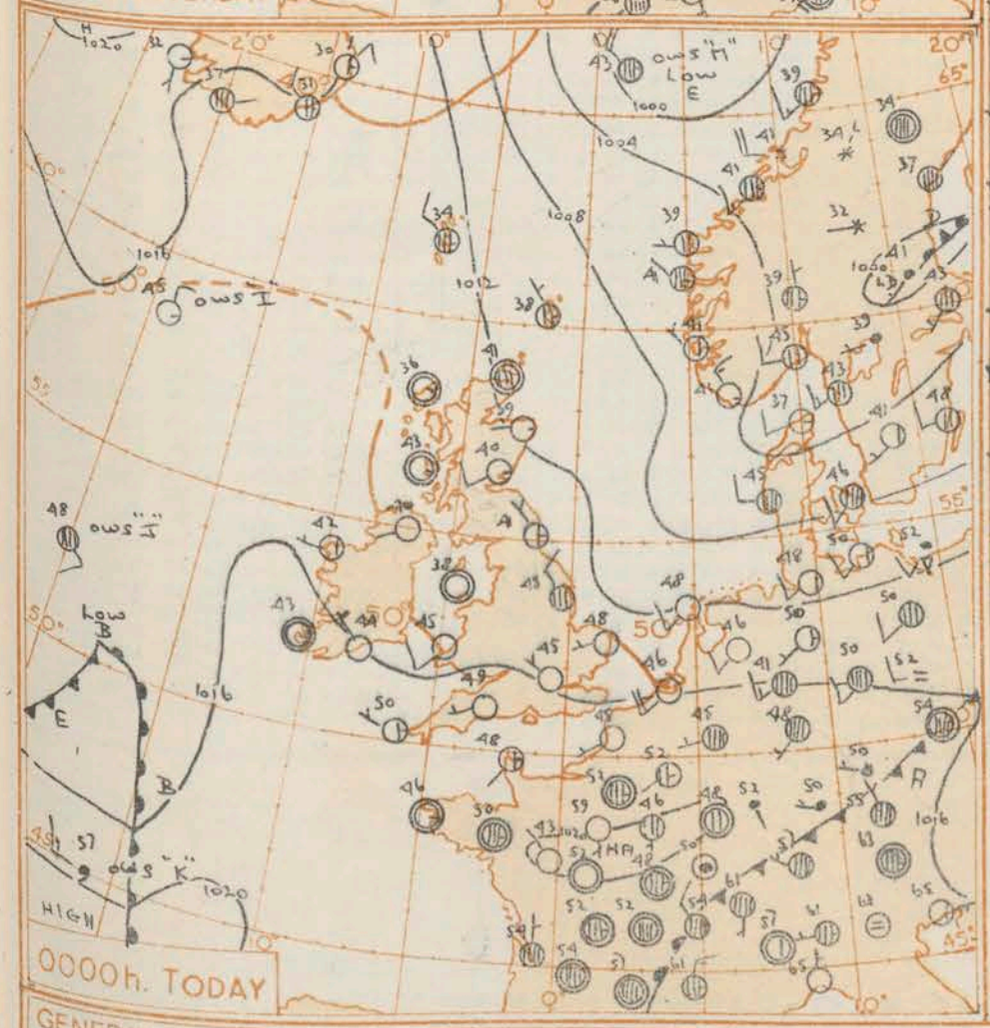
Mid-day (12h) of Monday 12th May 1958

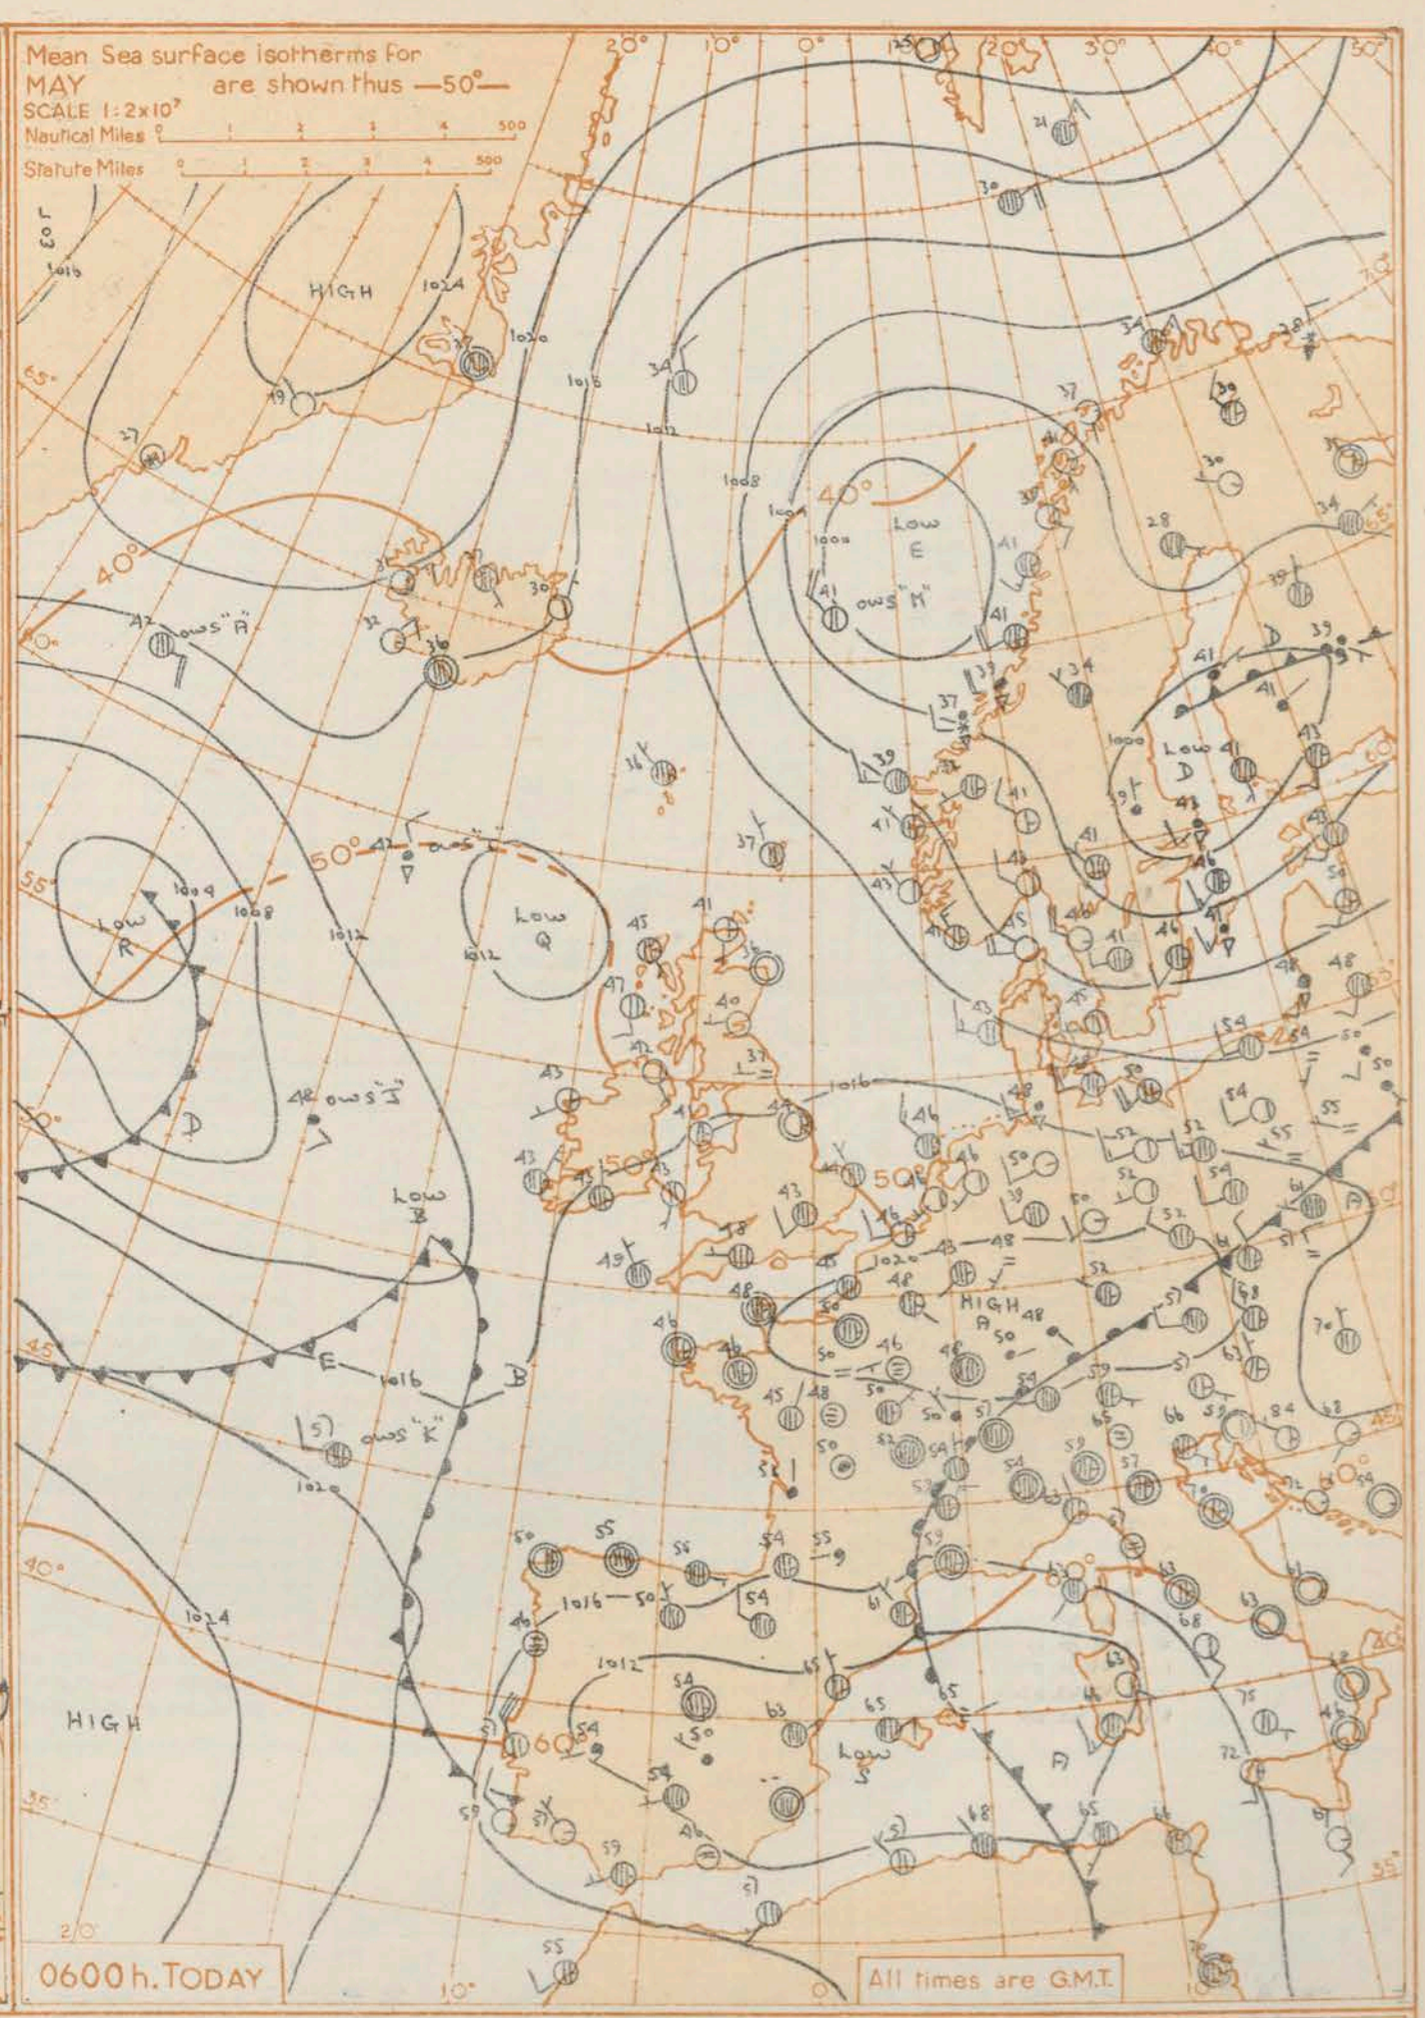
Equidistant azimuthal projection 1:3×10⁷ on the plane of 60°N.

NAUTICAL MILES.

0 500 1,000 1,500







GENERAL SYNOPTIC DEVELOPMENT

Issued at midday today Tuesday 13th May 1958

Depressions in high latitudes over the Norwegian Sea and south west of Greenland are filling, without much movement. Depressions in middle latitudes are moving east without much change of pressure. A large anticyclone is almost stationary south west of the Azores. A weak depression over the western Mediterranean is filling slowly.

FORECAST FOR BRITISH ISLES until noon tomorrow

Most areas will have sunny periods, but scattered showers are likely, chiefly this afternoon. Over west Scotland and Northern Ireland isolated thunderstorms may occur. Cloudy weather with rain in places will probably spread across some south west districts. Temperatures will be generally near the seasonal average.

OUTLOOK FOR the following 24 hours.

Probably continuing mainly bright with scattered showers, and little change in temperature levels.

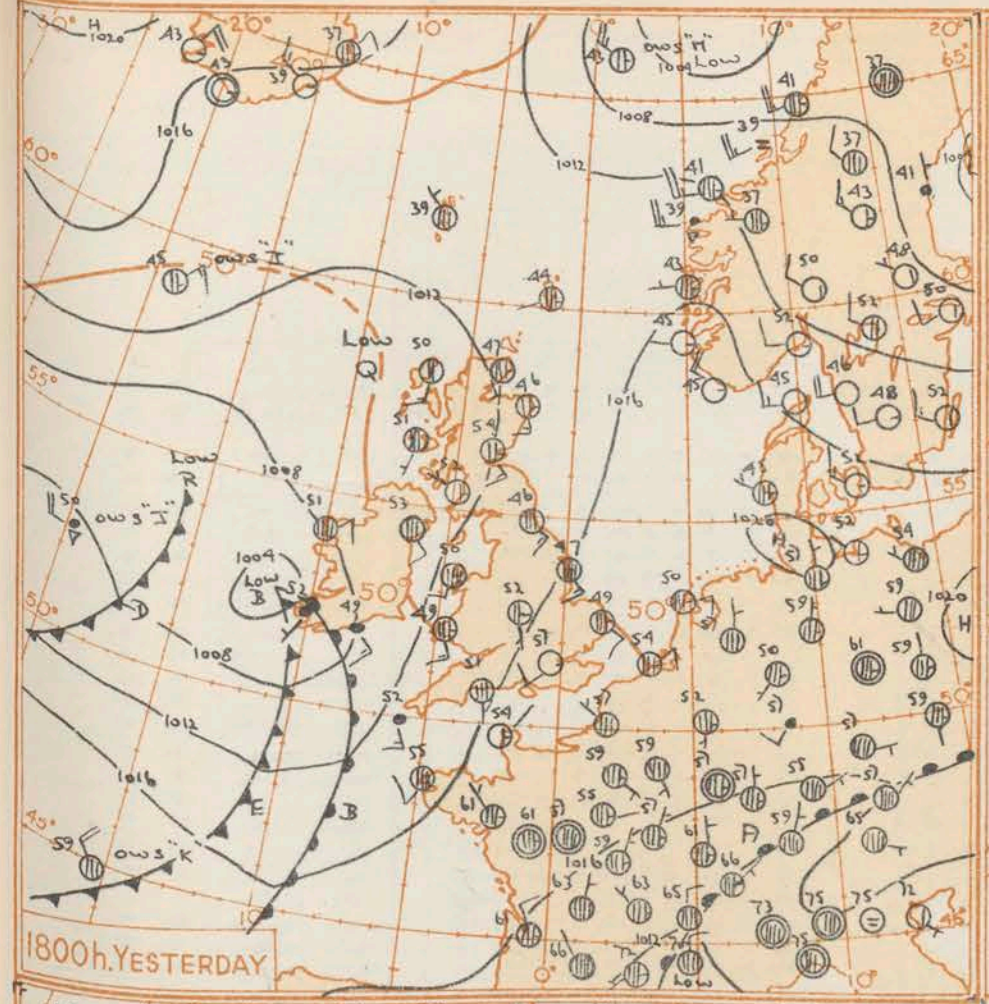
CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

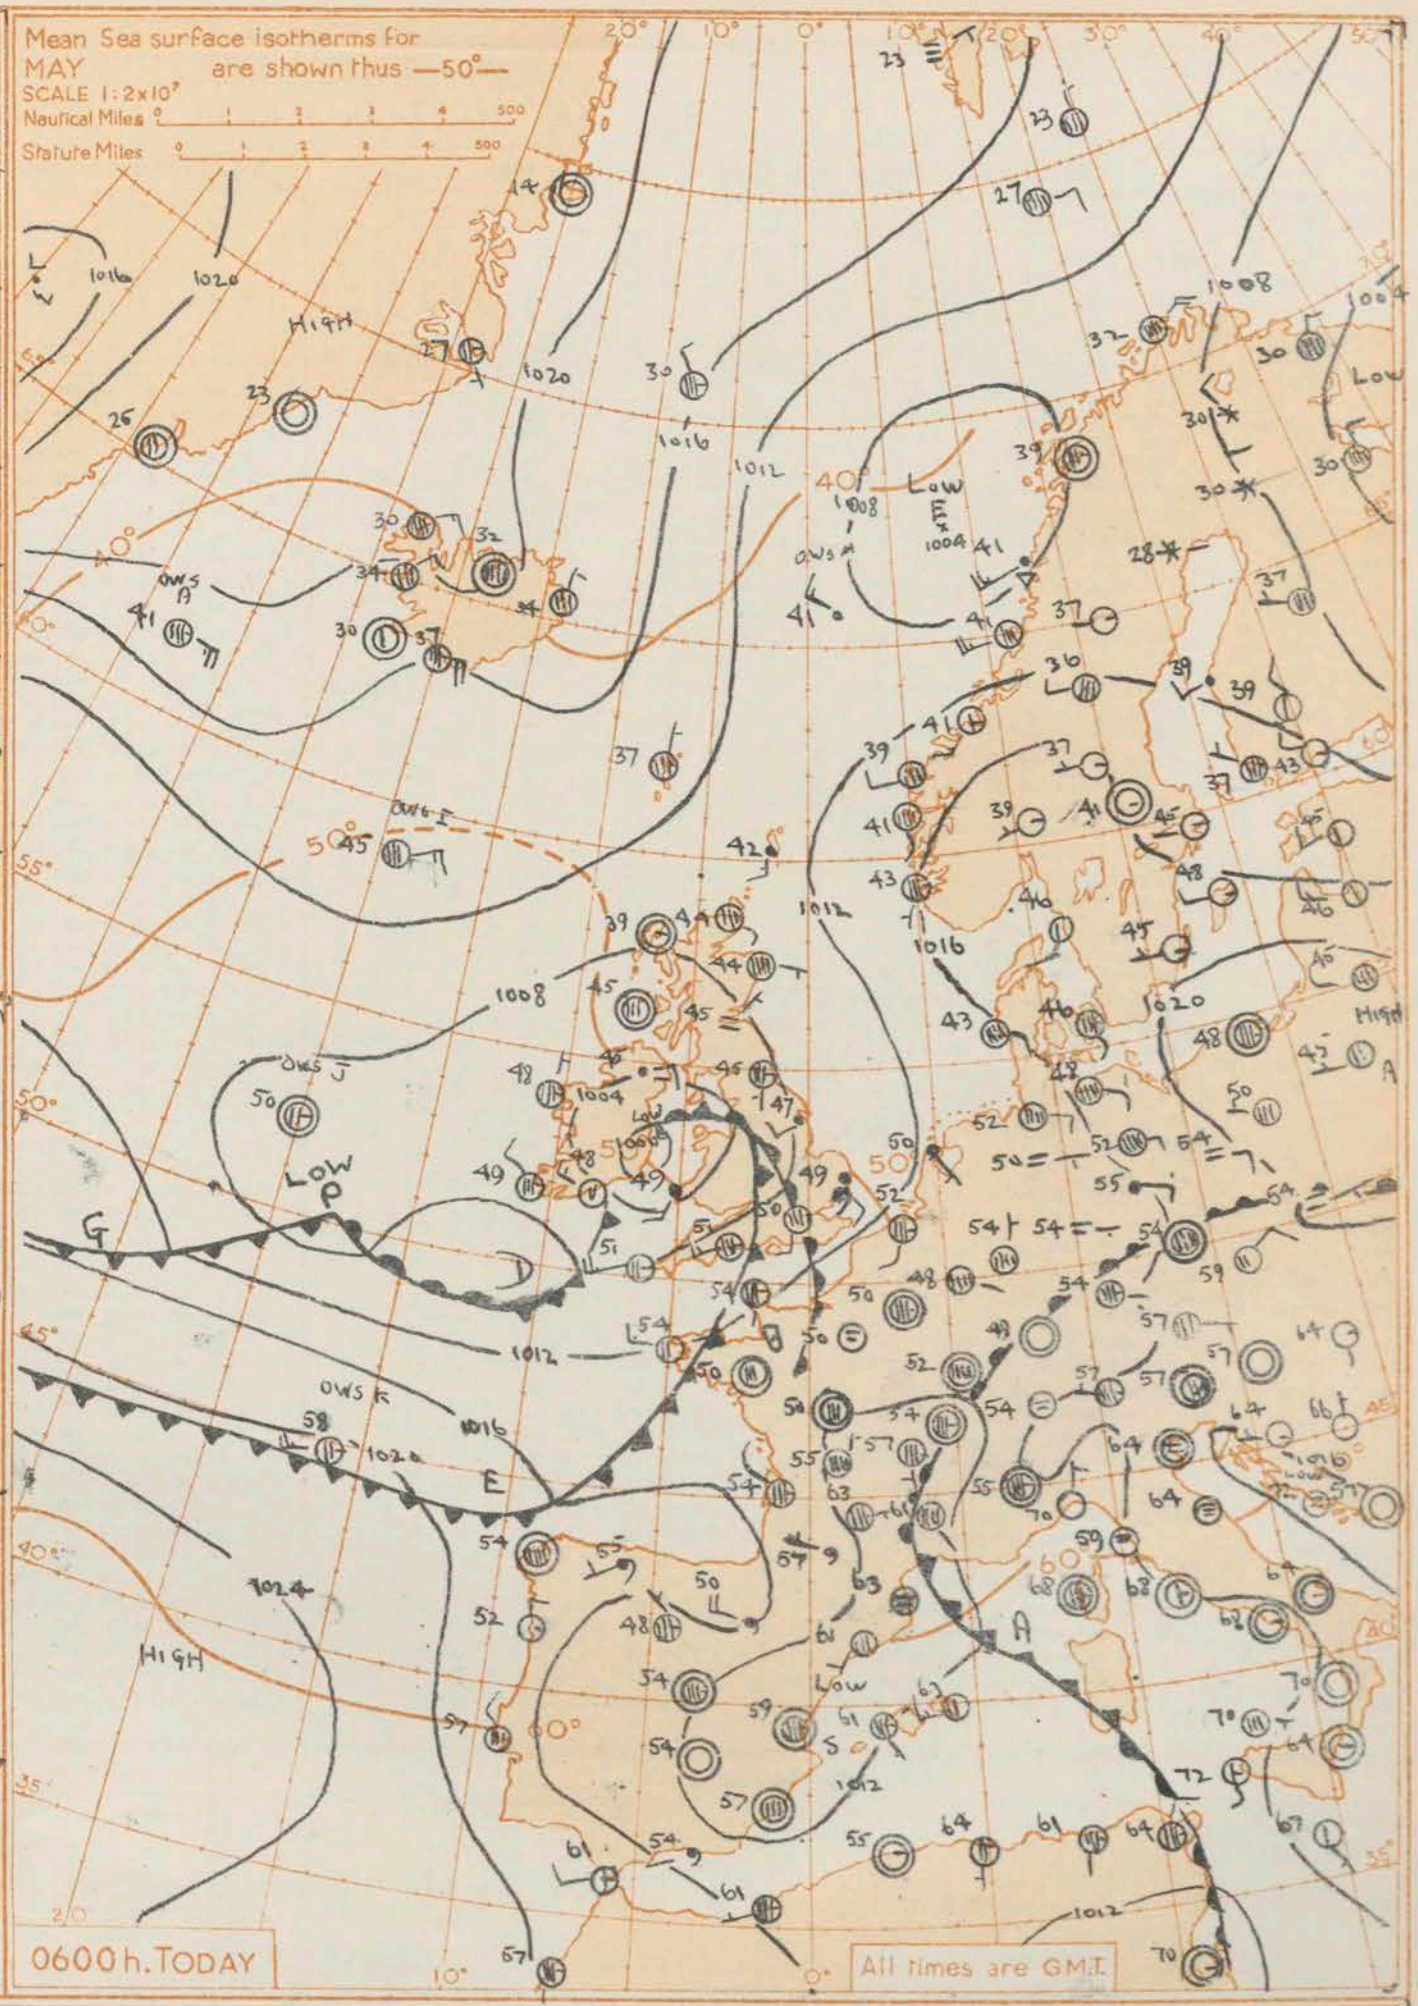
Mid-day (12h) of Tuesday 13th May 1958

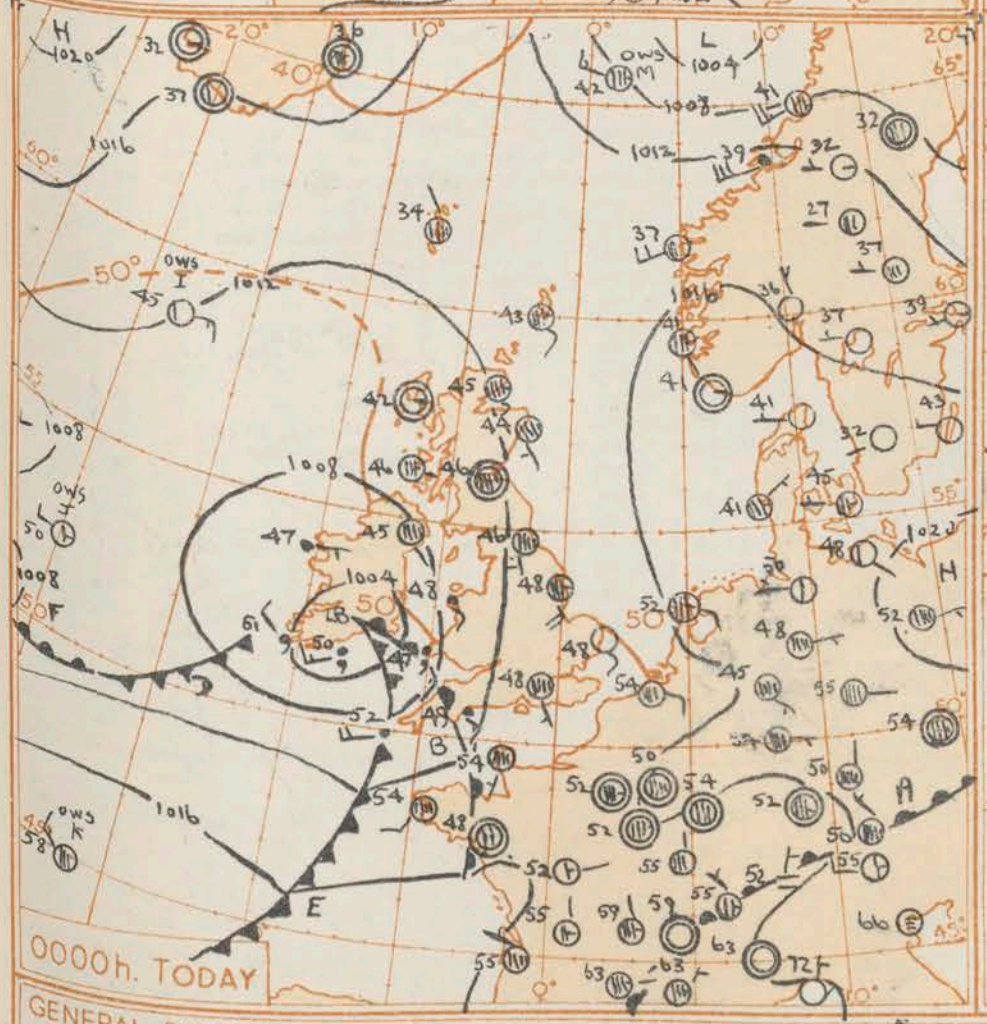
Equidistant azimuthal projection 1: 3×10^7 on the plane of 60°N.

NAUTICAL MILES.

0 500 1,000 1,500







GENERAL SYNOPTIC DEVELOPMENT

A large area of low pressure extending yesterday from north Russia across Scandinavia to south of Iceland and south of Greenland persists, with some southeastward movement. An anticyclone centred yesterday over northeast France continues to move east, while a depression over the western Mediterranean is slow to change. A large anticyclone near the Azores is expected to persist.

Issued at midday Today Wednesday 14th May 1958

FORECAST FOR BRITISH ISLES until noon tomorrow

Northern Ireland, northern England and the southern half of Scotland will have cloudy, rainy weather today, probably brightening, though with showers, tomorrow. Most other areas of the British Isles will have some bright periods today, but later, cloudy, rainy weather may return, particularly to southern districts. Temperatures will be on the cold side.

OUTLOOK FOR

the following 24 hours
Probably rather cold, with showers and bright intervals.

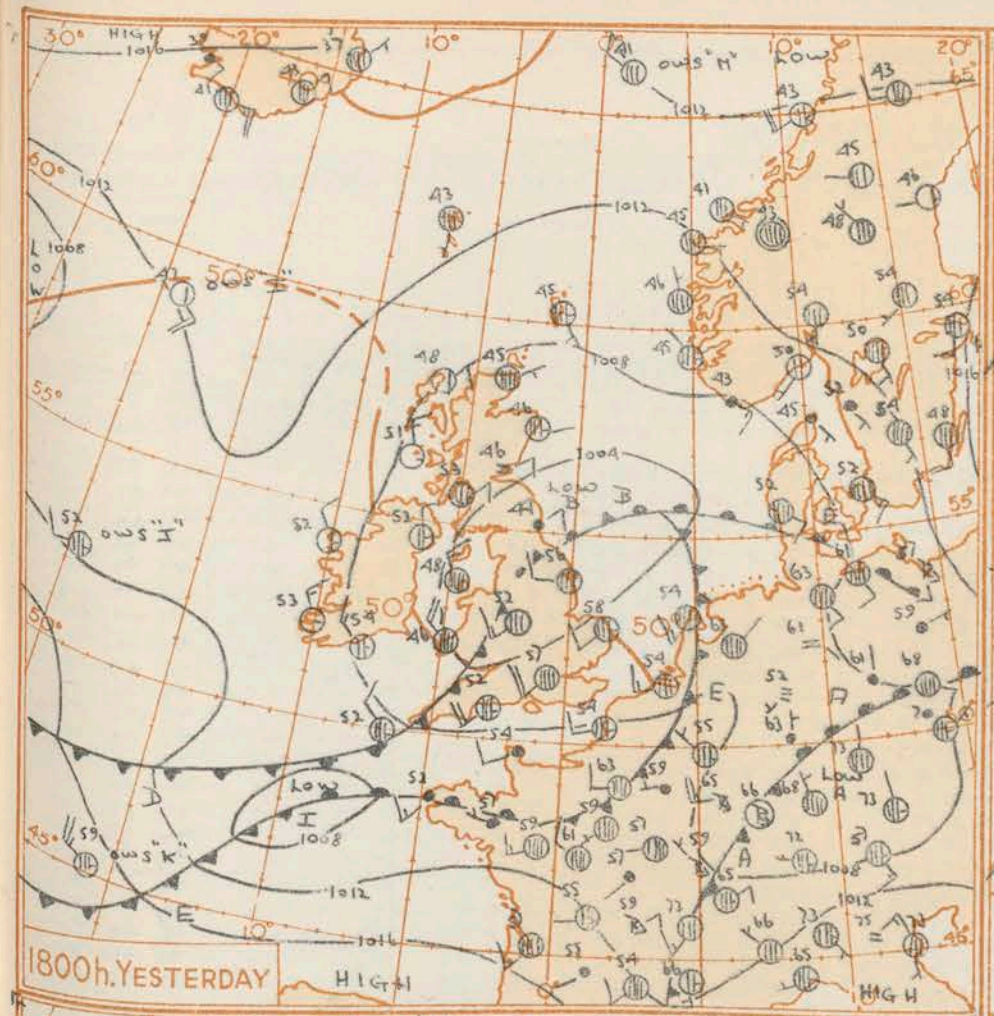
CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

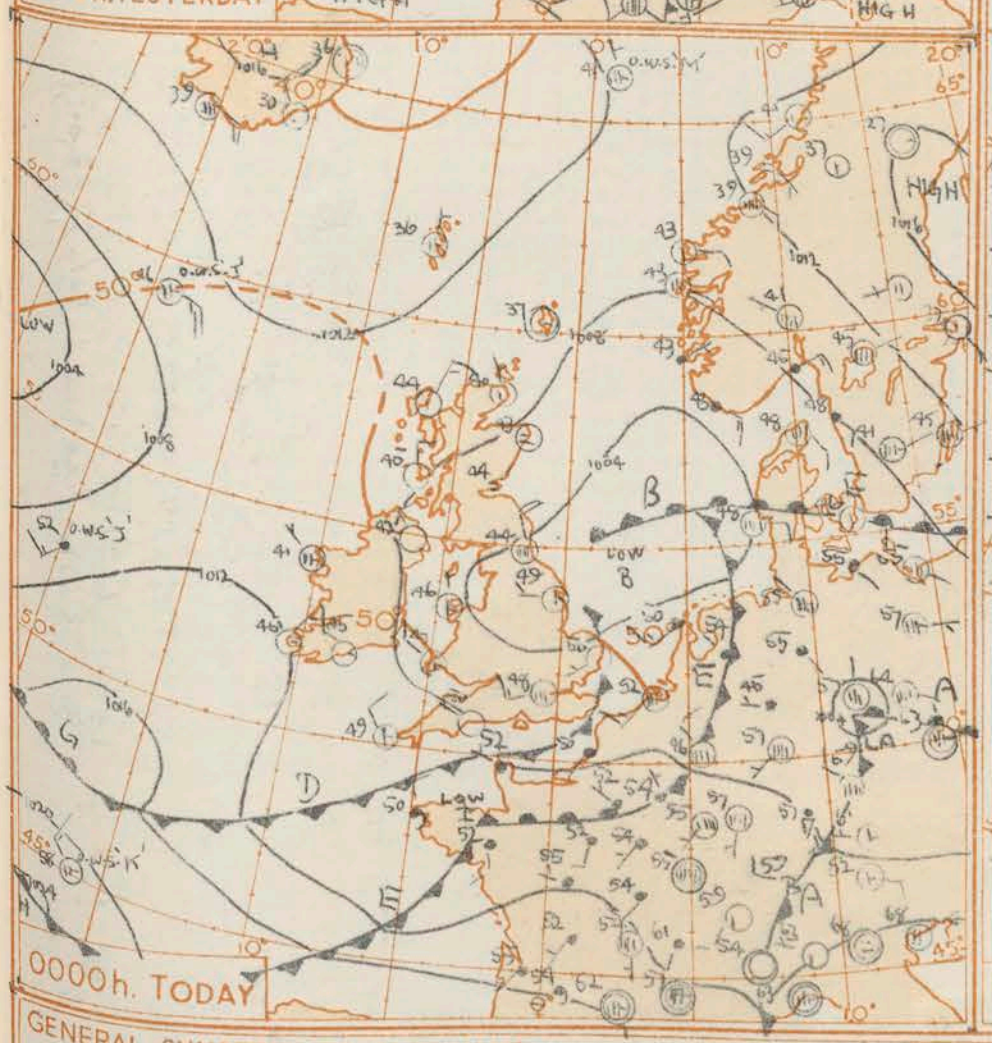
Mid-day (12h)
of
Wednesday 14th May
1958

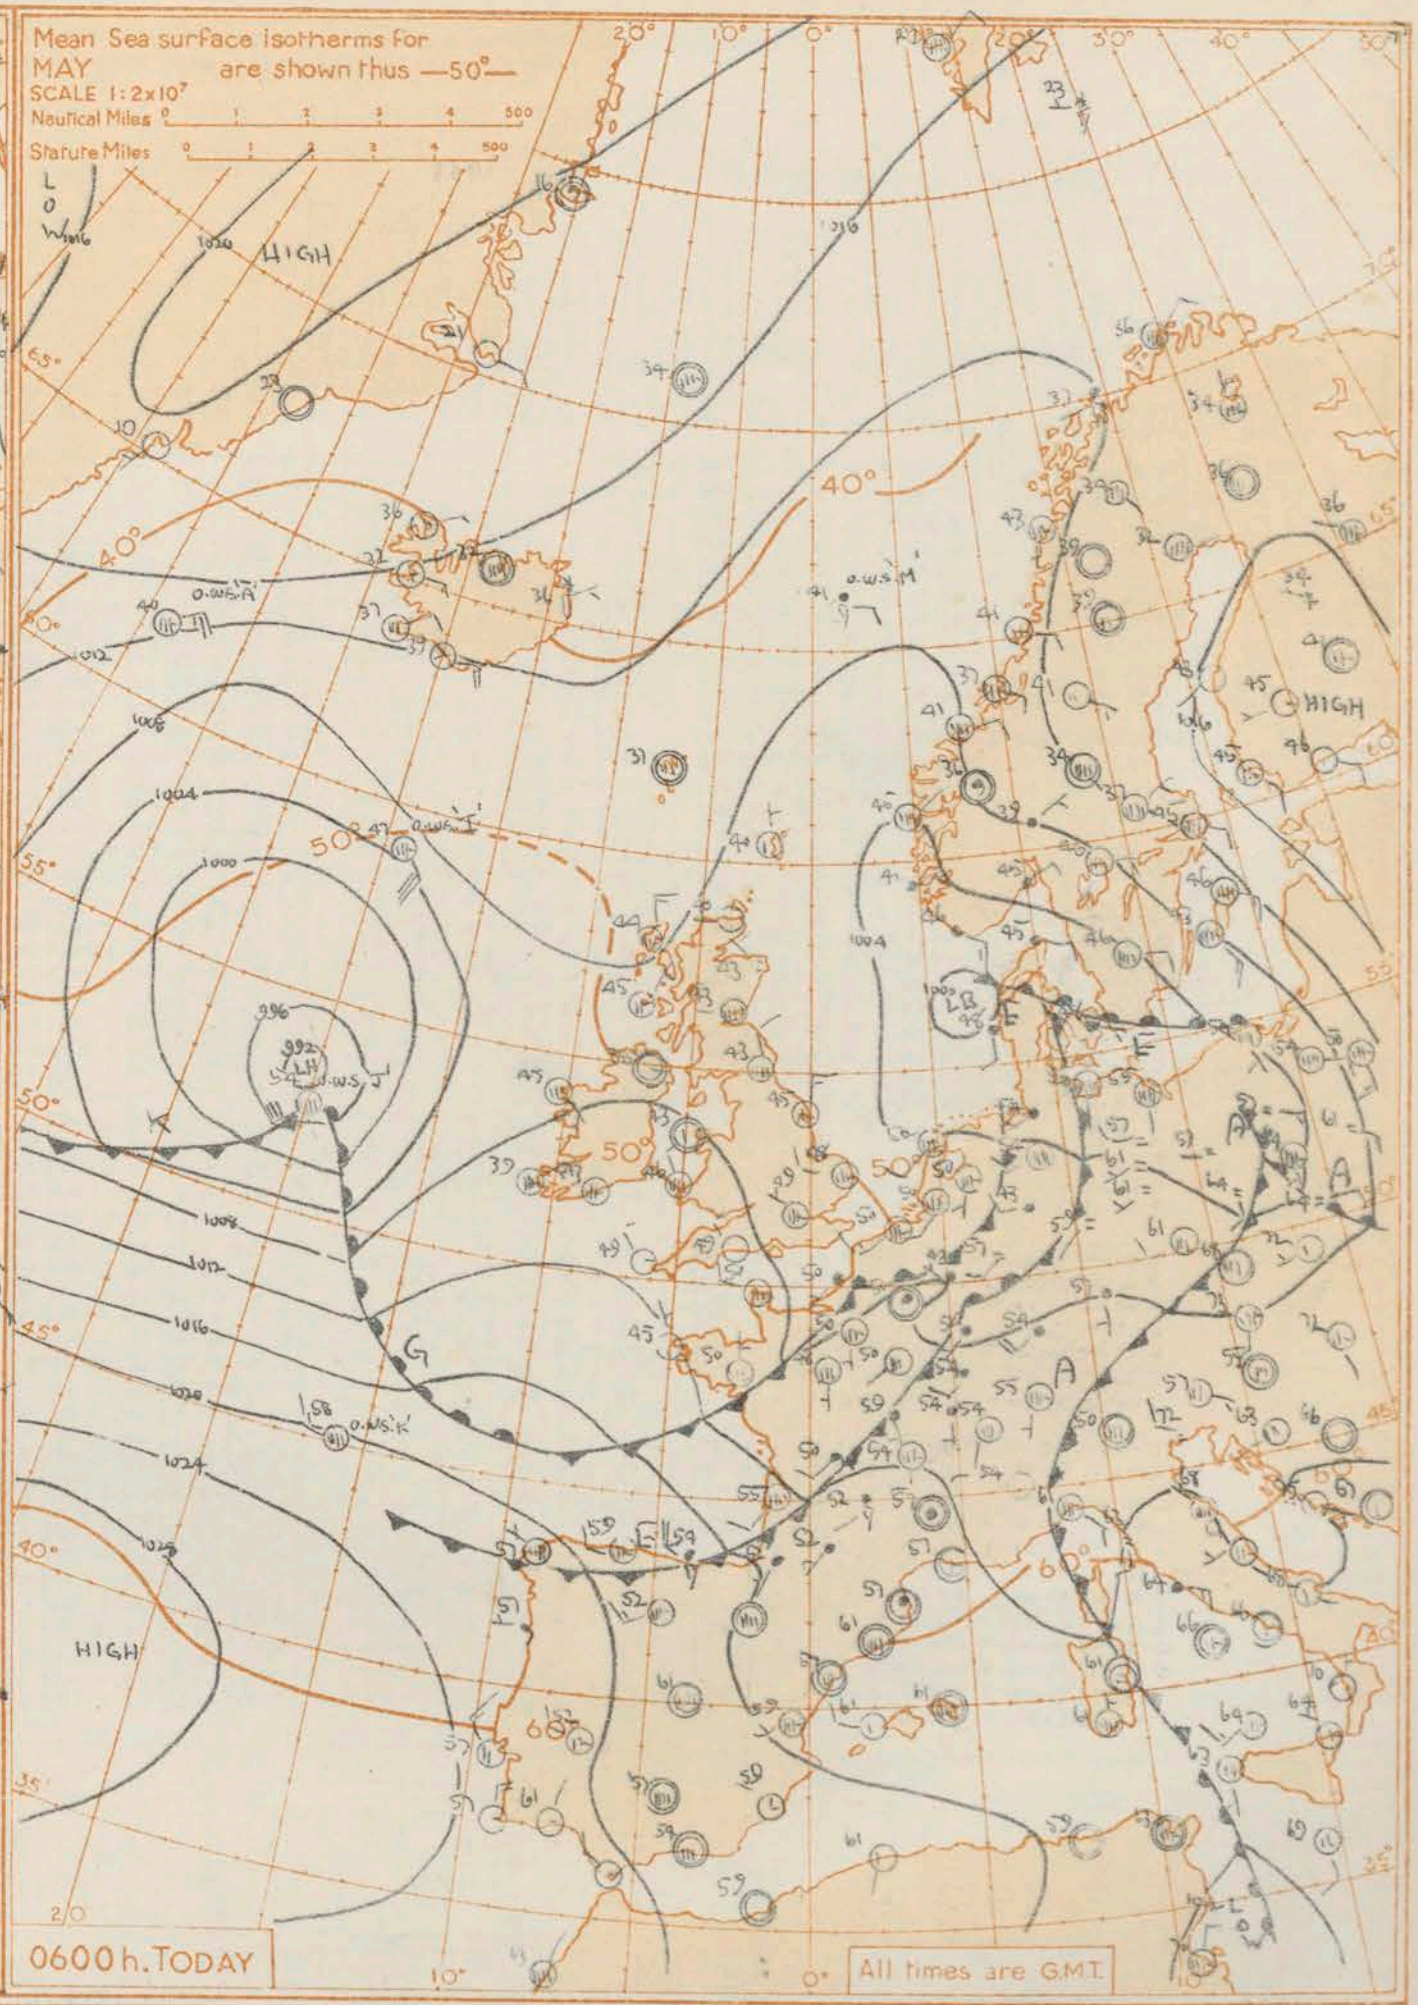
Equidistant azimuthal projection 1: 3×10^7 on the plane of 60°N.

NAUTICAL MILES.

0 500 1,000 1,500







All times are G.M.T.

GENERAL SYNOPTIC DEVELOPMENT

Issued at midday today Thursday 15th May 1958

A depression moved east-northeast across northern England and the North Sea with cold fronts swinging eastwards to south of the depression centre. A weak ridge followed, but further west over the Atlantic a deepening depression moved towards the British Isles. This depression is expected to move northeastwards across Scotland with its frontal systems clearing the British Isles in the next 24 hours.

FORECAST FOR BRITISH ISLES until noon tomorrow

Dull wet weather with gales in places will soon reach western districts and spread eastwards across the British Isles. The rain will clear from the west, probably during the night and will be followed tomorrow morning by showery weather with sunny periods. Temperatures will be mostly a little below average.

OUTLOOK FOR the following 24 hours

Continuing changeable.

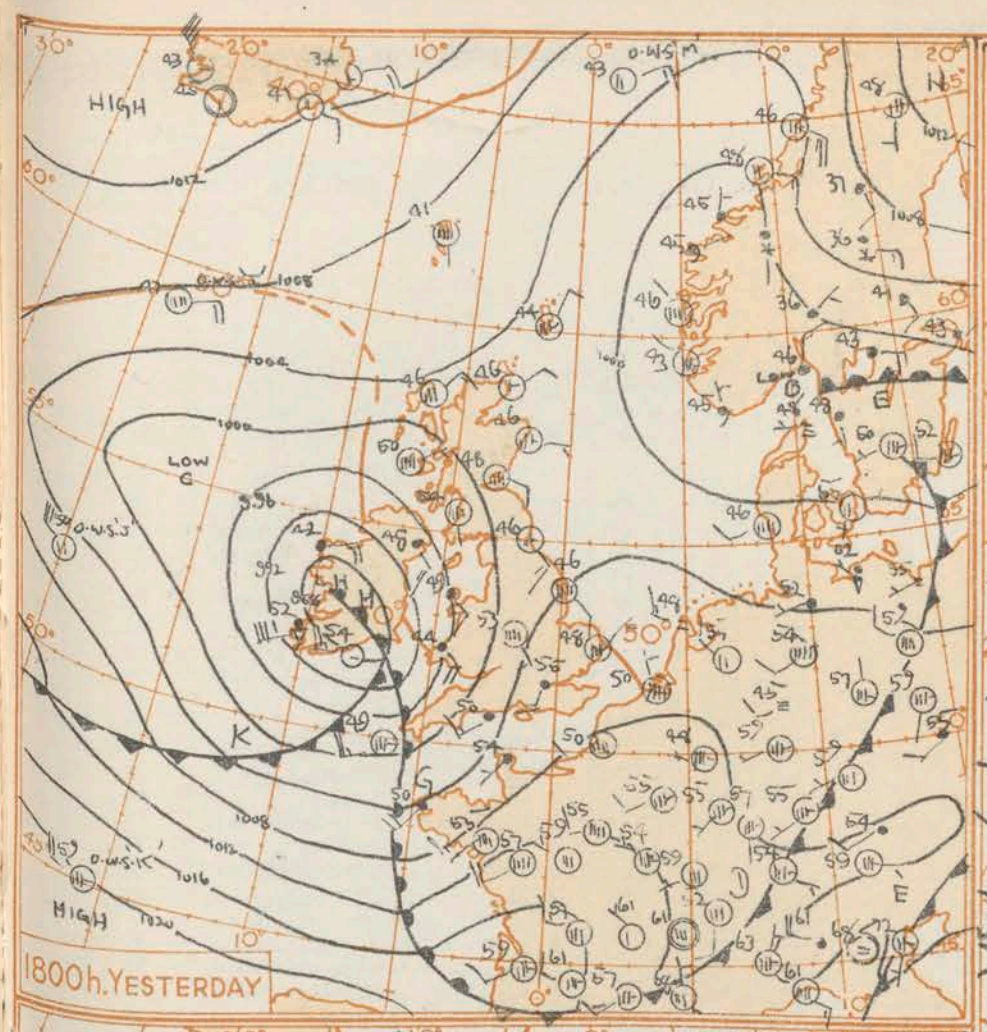
CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

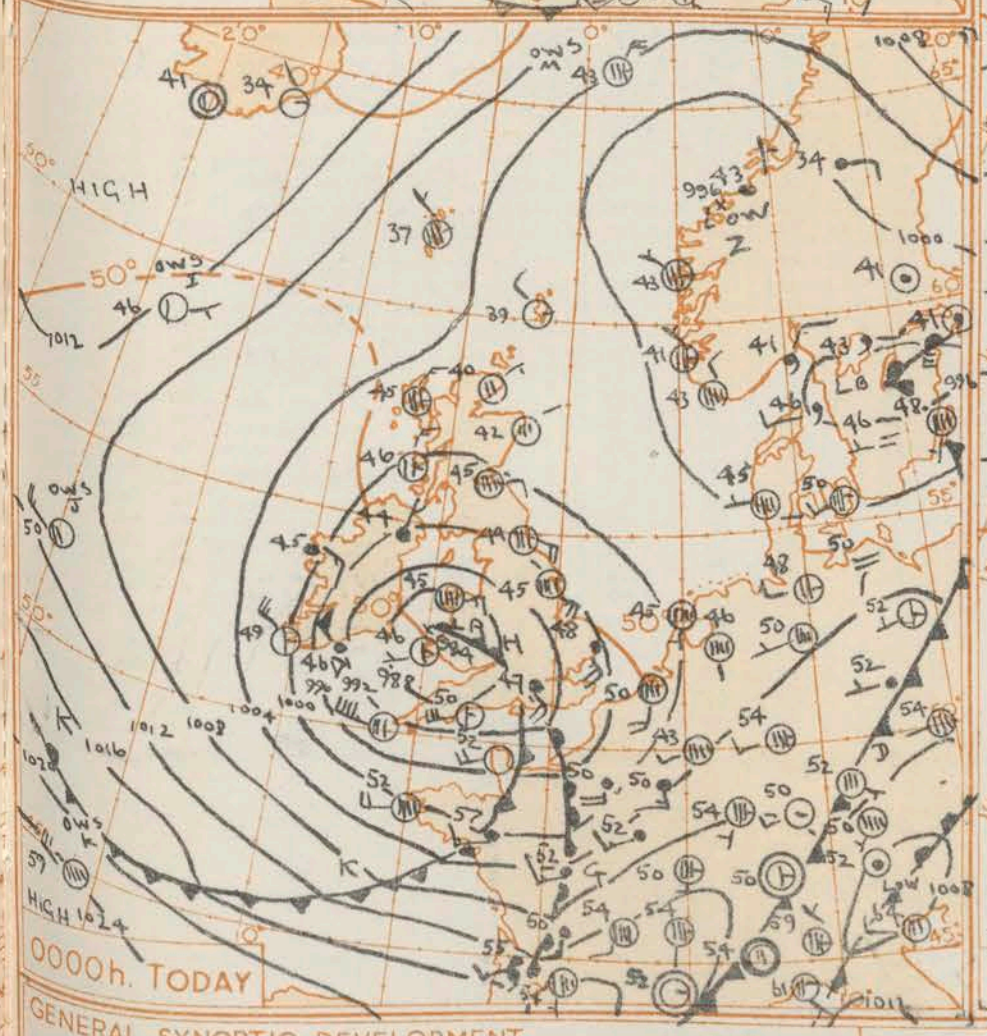
Mid-day (12h)
of
Thursday 15th May
1958

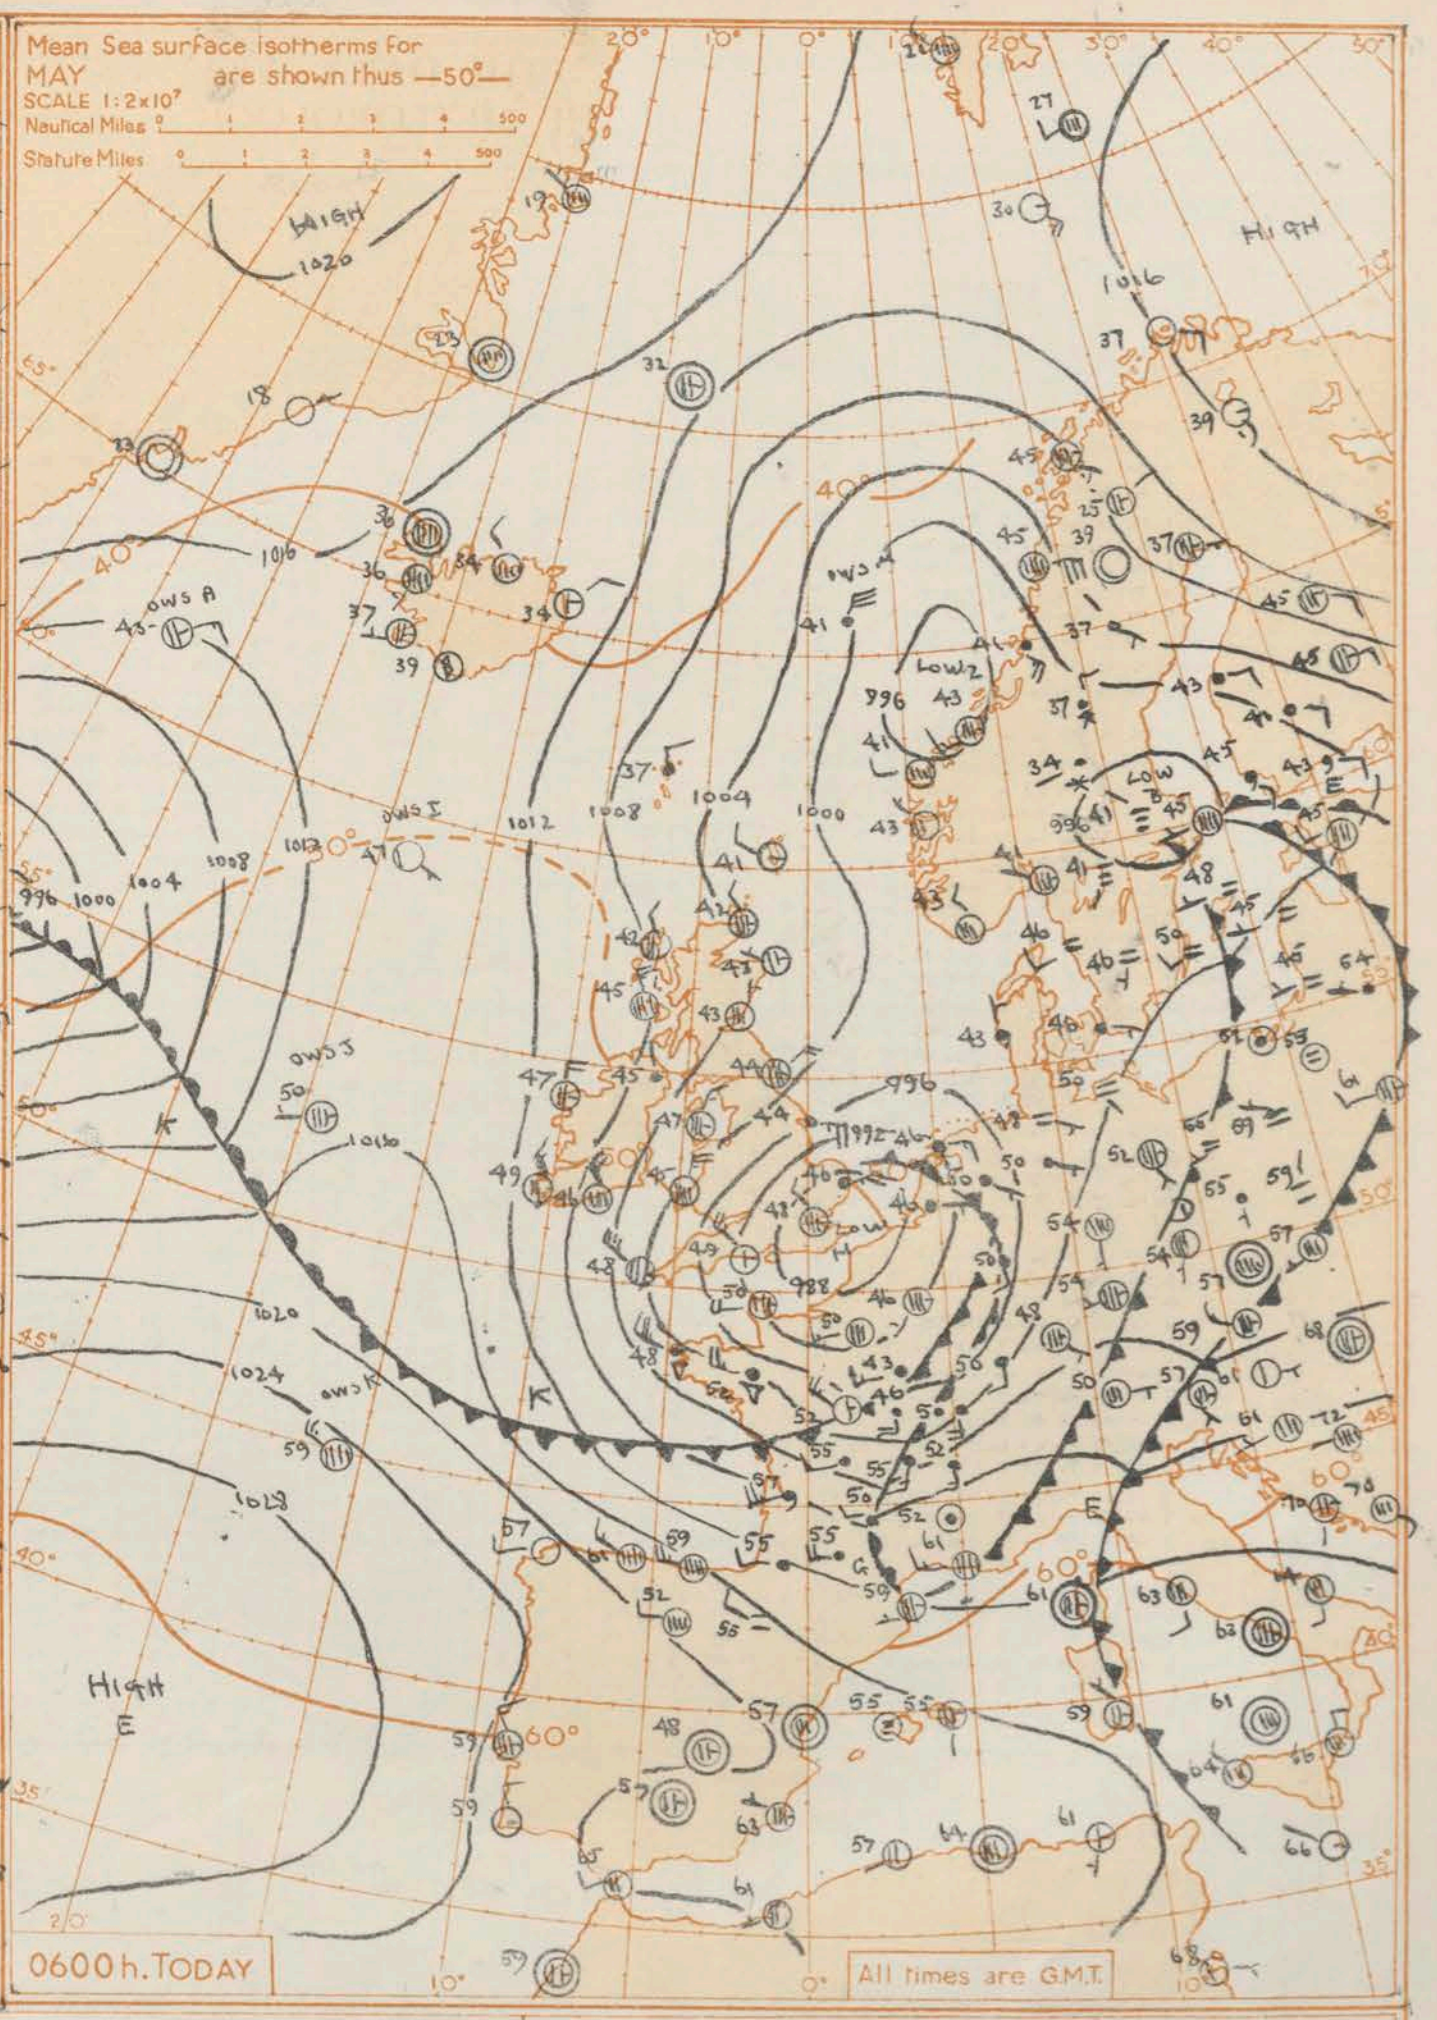
Equidistant azimuthal projection 1: 3×10^7 on the plane of 60°N.

NAUTICAL MILES.

0 500 1,000 1,500







GENERAL SYNOPTIC DEVELOPMENT

A deepening depression to the west of Ireland moved east-southeast across Wales and England followed by a developing ridge of high pressure. The depression will move eastwards over the continent later turning northeast towards the Baltic. The ridge will weaken as it comes eastwards and will be followed by another depression now well out on the Atlantic.

Issued at midday today Friday 16th May 1958

FORECAST FOR BRITISH ISLES until noon tomorrow

Rain in the east and southeast will clear slowly as brighter, but showery weather, spreads to all districts. The night will be mainly fine and it will continue fine in the east tomorrow, but cloudy weather with rain in places will spread into western districts.

OUTLOOK FOR the following 24 hours

Rain spreading eastwards over most districts followed by rather cold showery weather.

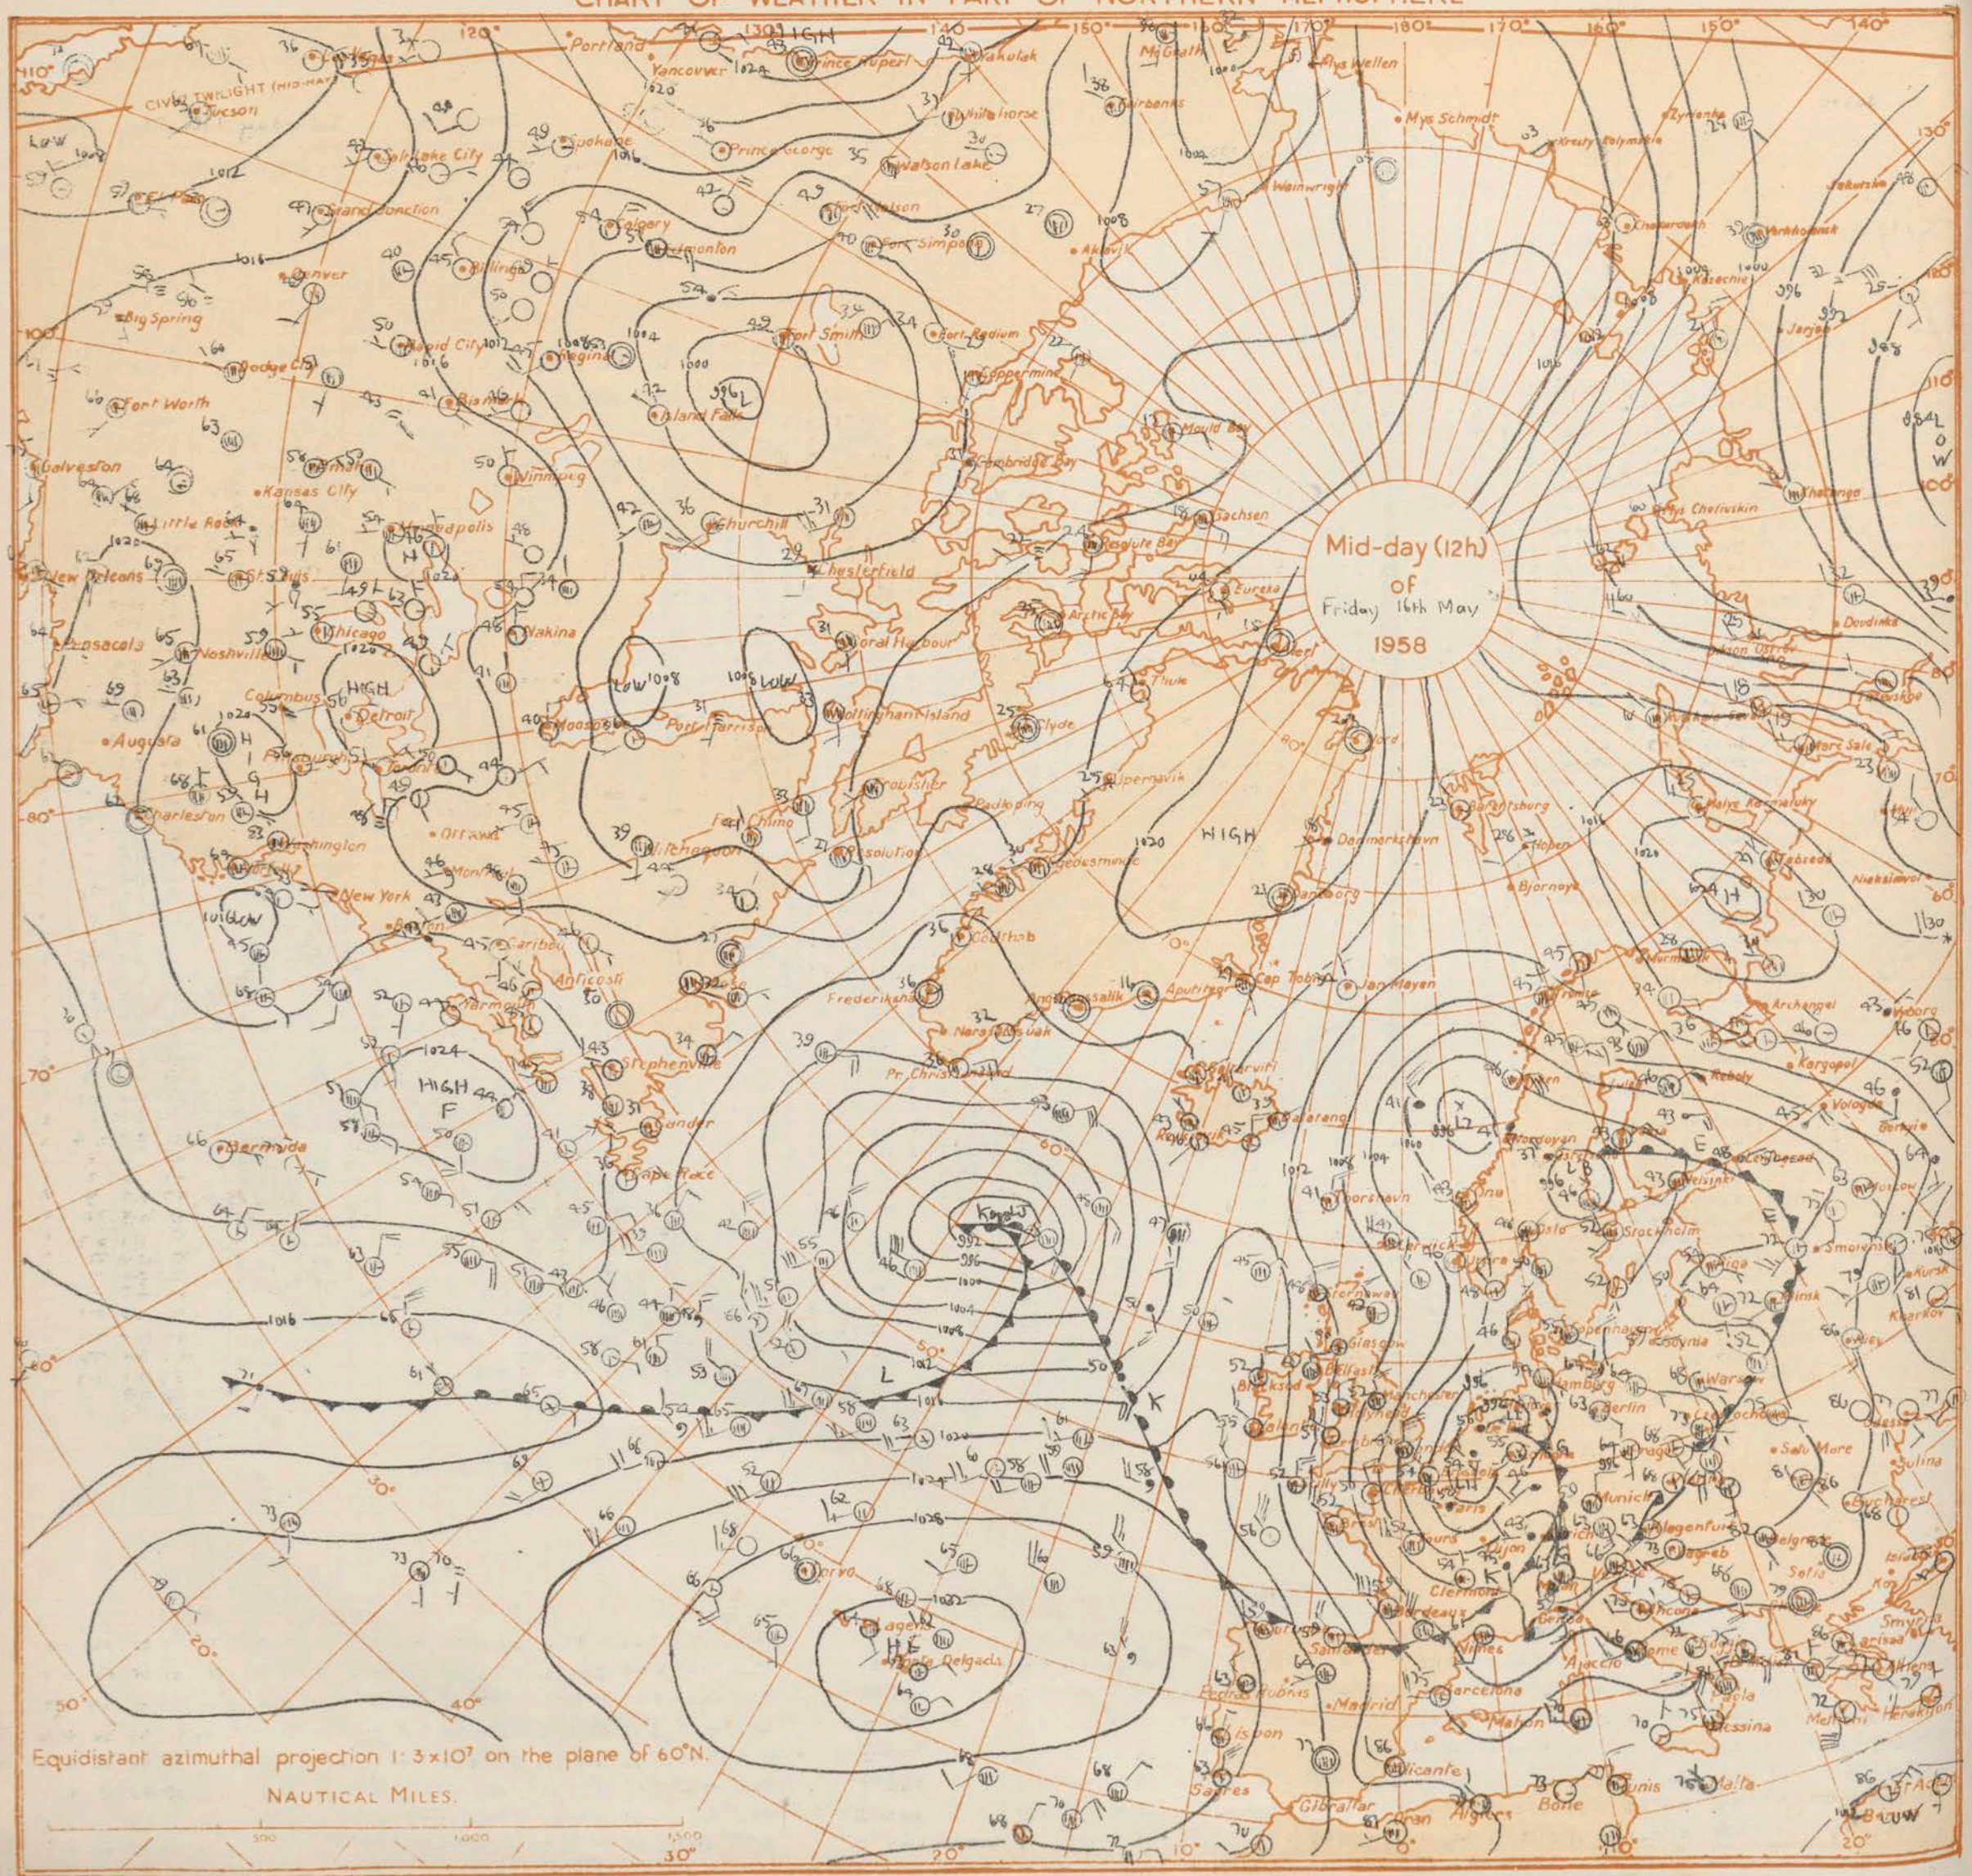
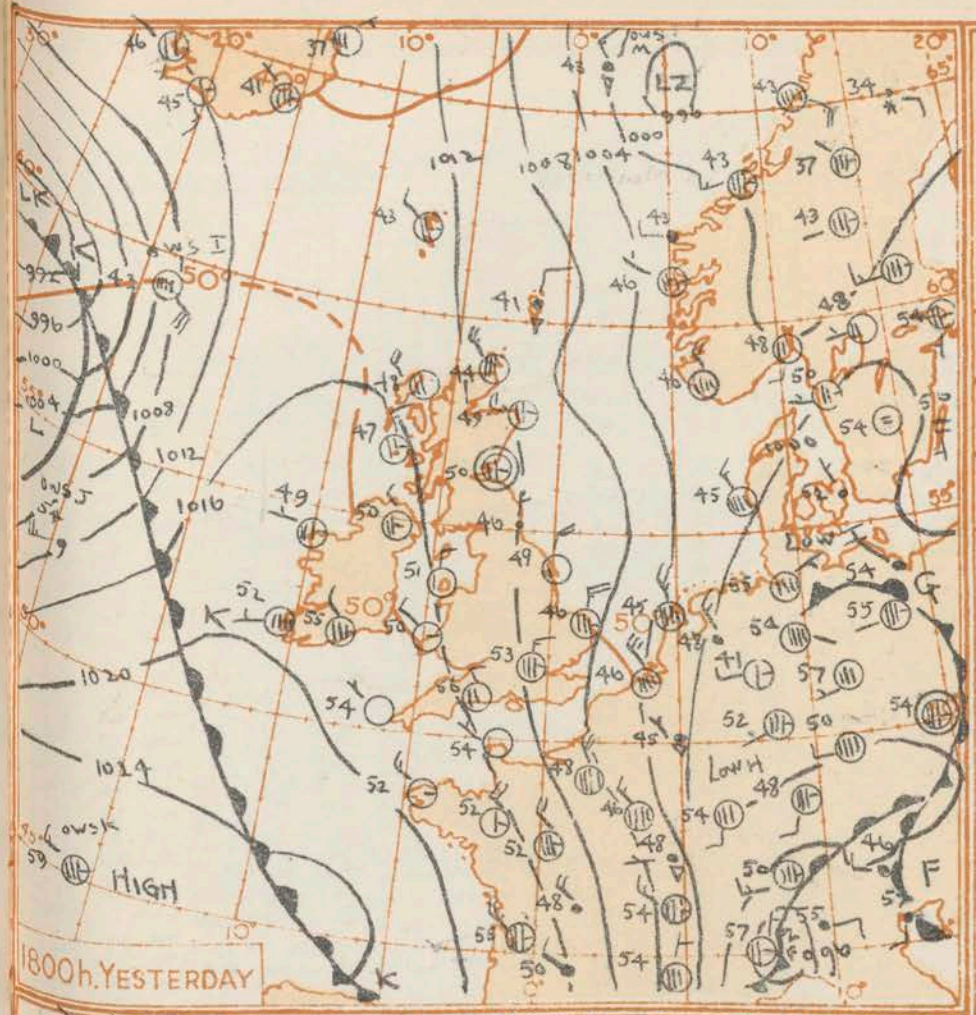
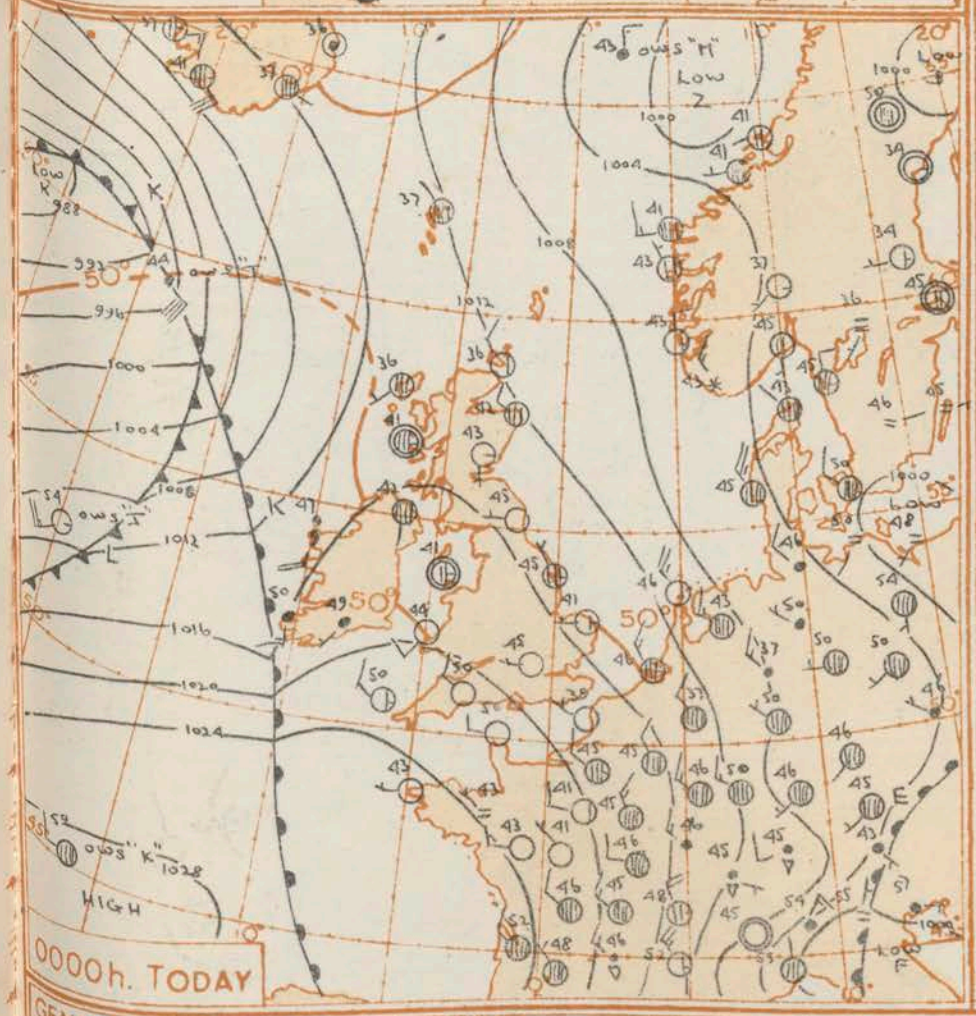
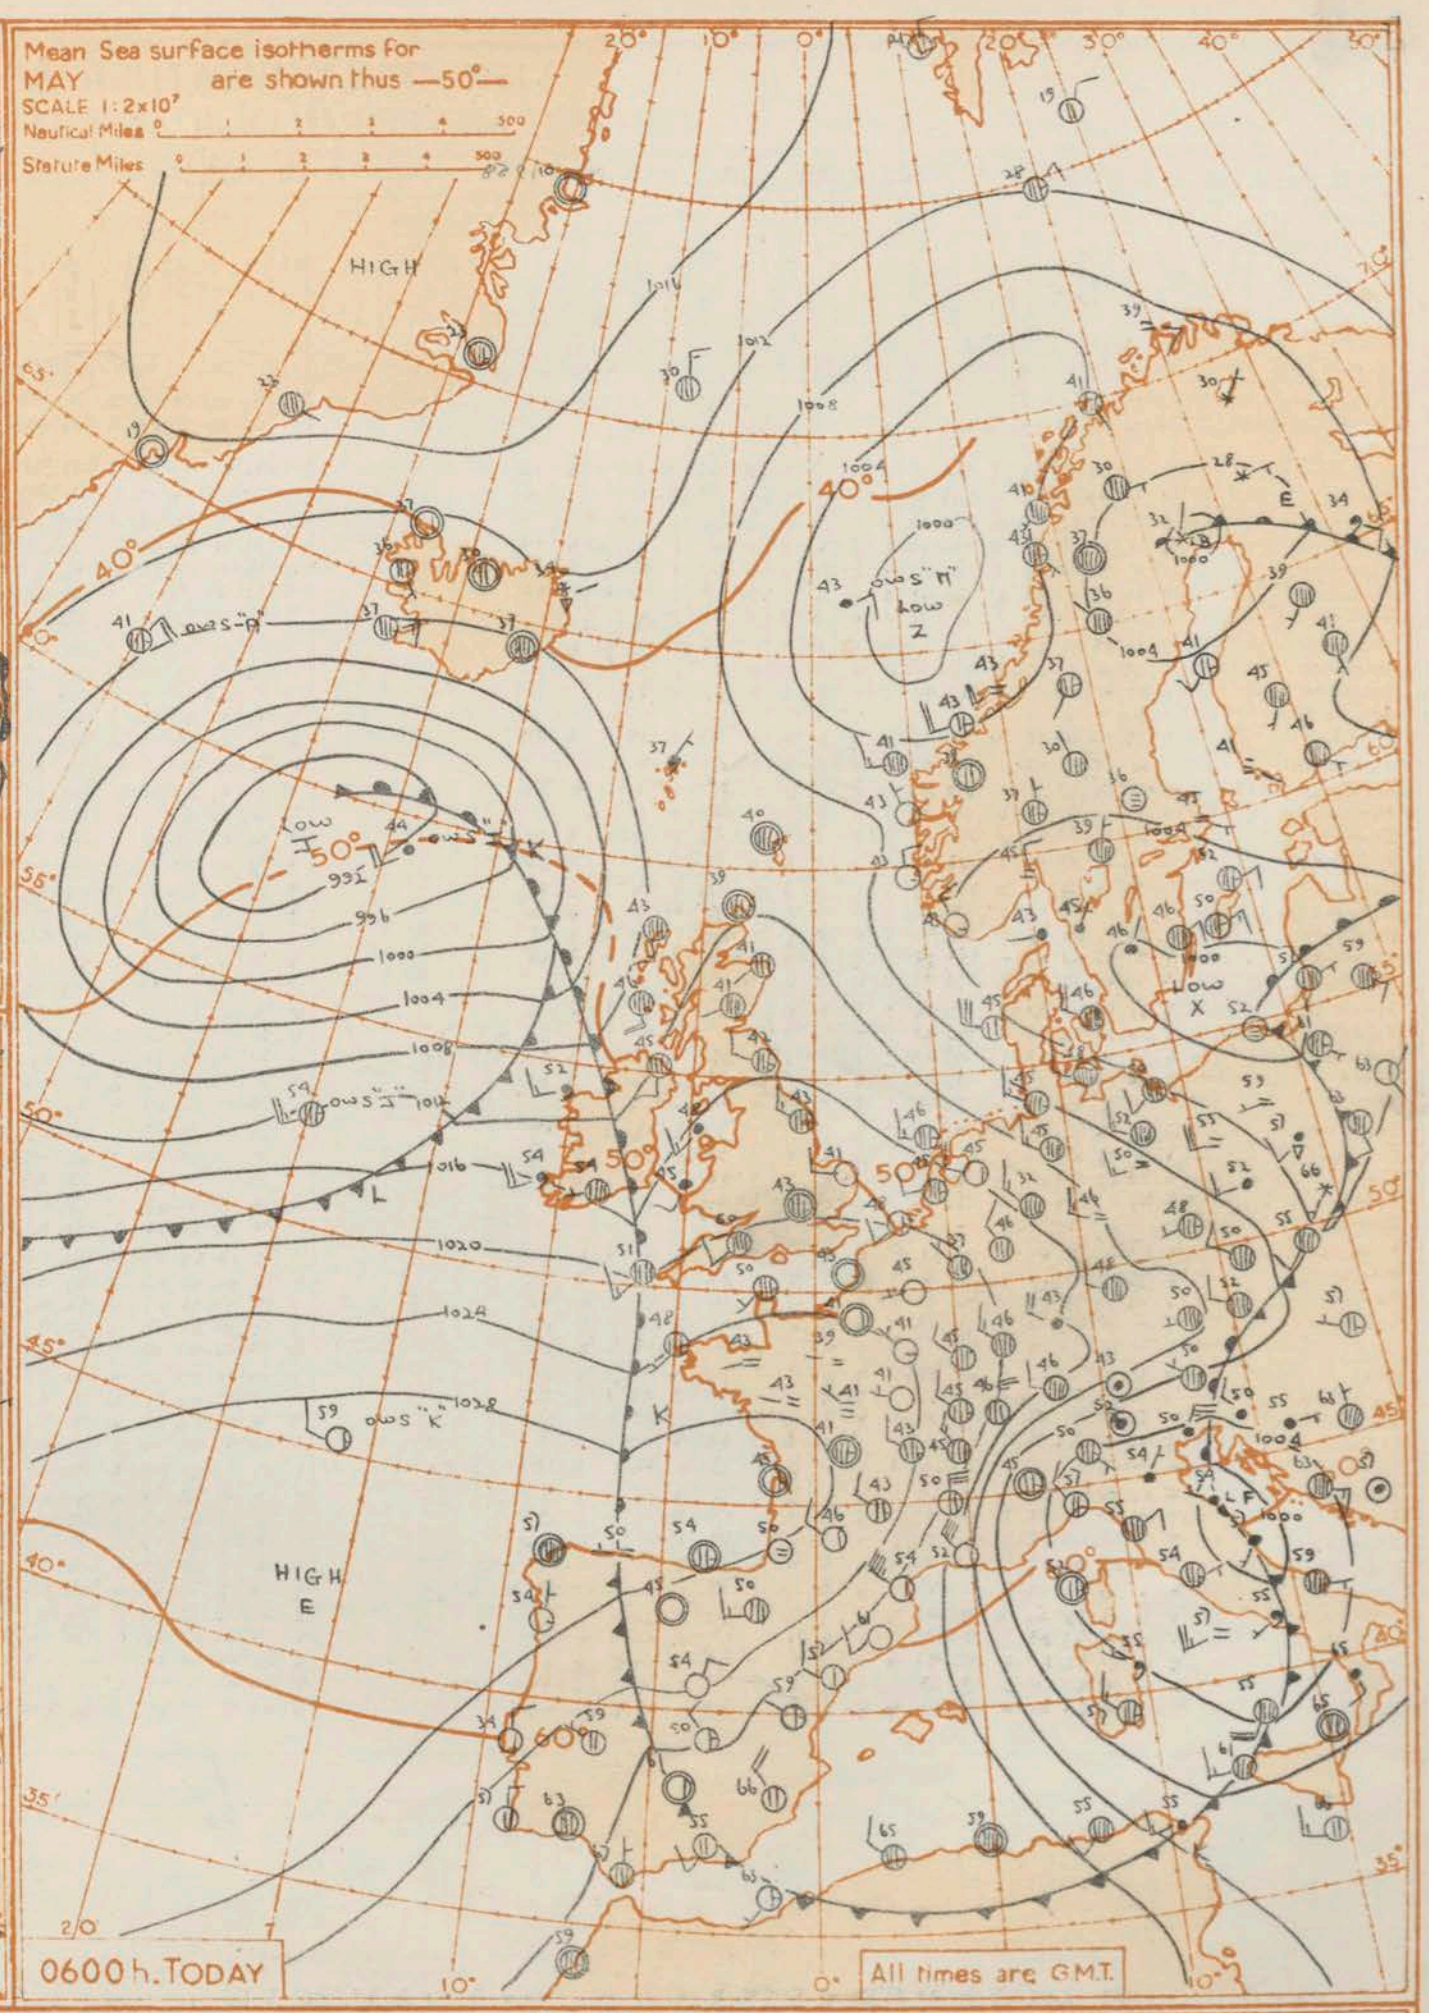
CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE









GENERAL SYNOPTIC DEVELOPMENT

The intense depression centred over Kent yesterday morning moves into the Continent and fillers up as pressure builds rapidly from the West. Another depression in Mid-Atlantic is moved east-northeast and is likely to pass between Scotland and Iceland with a developing wave on its associated cold front moving into the British Isles.

Issued at Midday today 17th May 1958

FORECAST FOR BRITISH ISLES until noon tomorrow

Cloudy weather with rain or drizzle over western districts will move east across most areas of the British Isles followed by bright intervals and scattered showers. Southern areas will probably continue cloudy with slight rain or drizzle and further rain may move into west coast area tomorrow. Temperatures near average

OUTLOOK FOR the following 24 hours:

Continuing changeable with occasional rain or drizzle especially in west and north. Temperatures average or above.

THE DAILY WEATHER REPORT
OF THE METEOROLOGICAL OFFICE, LONDON

OBSERVATIONS at 00h. G.M.T. 17th May 1958

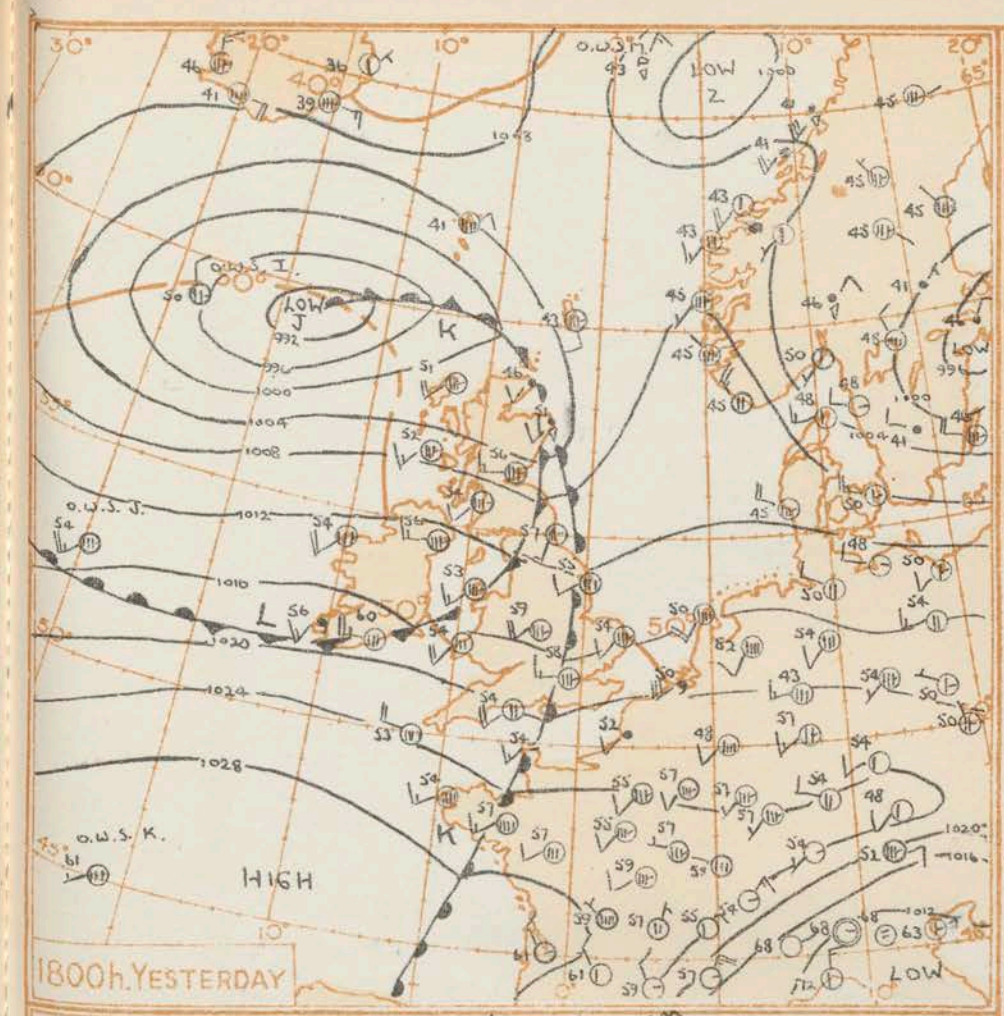
SIR GRAHAM SUTTON, C.B.E., D.Sc., F.R.S., Director General. Meteorological Office, Air Ministry, Kingsway, London, W.C.2.

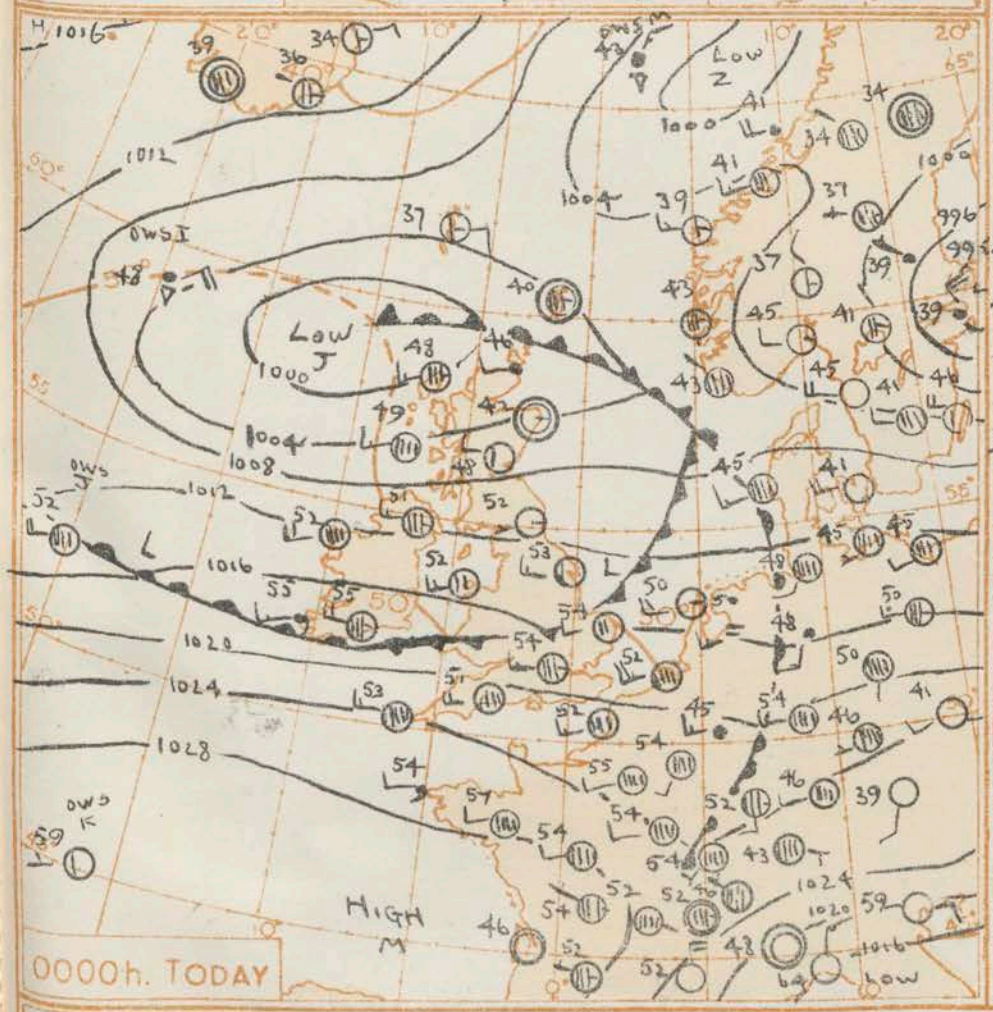
CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

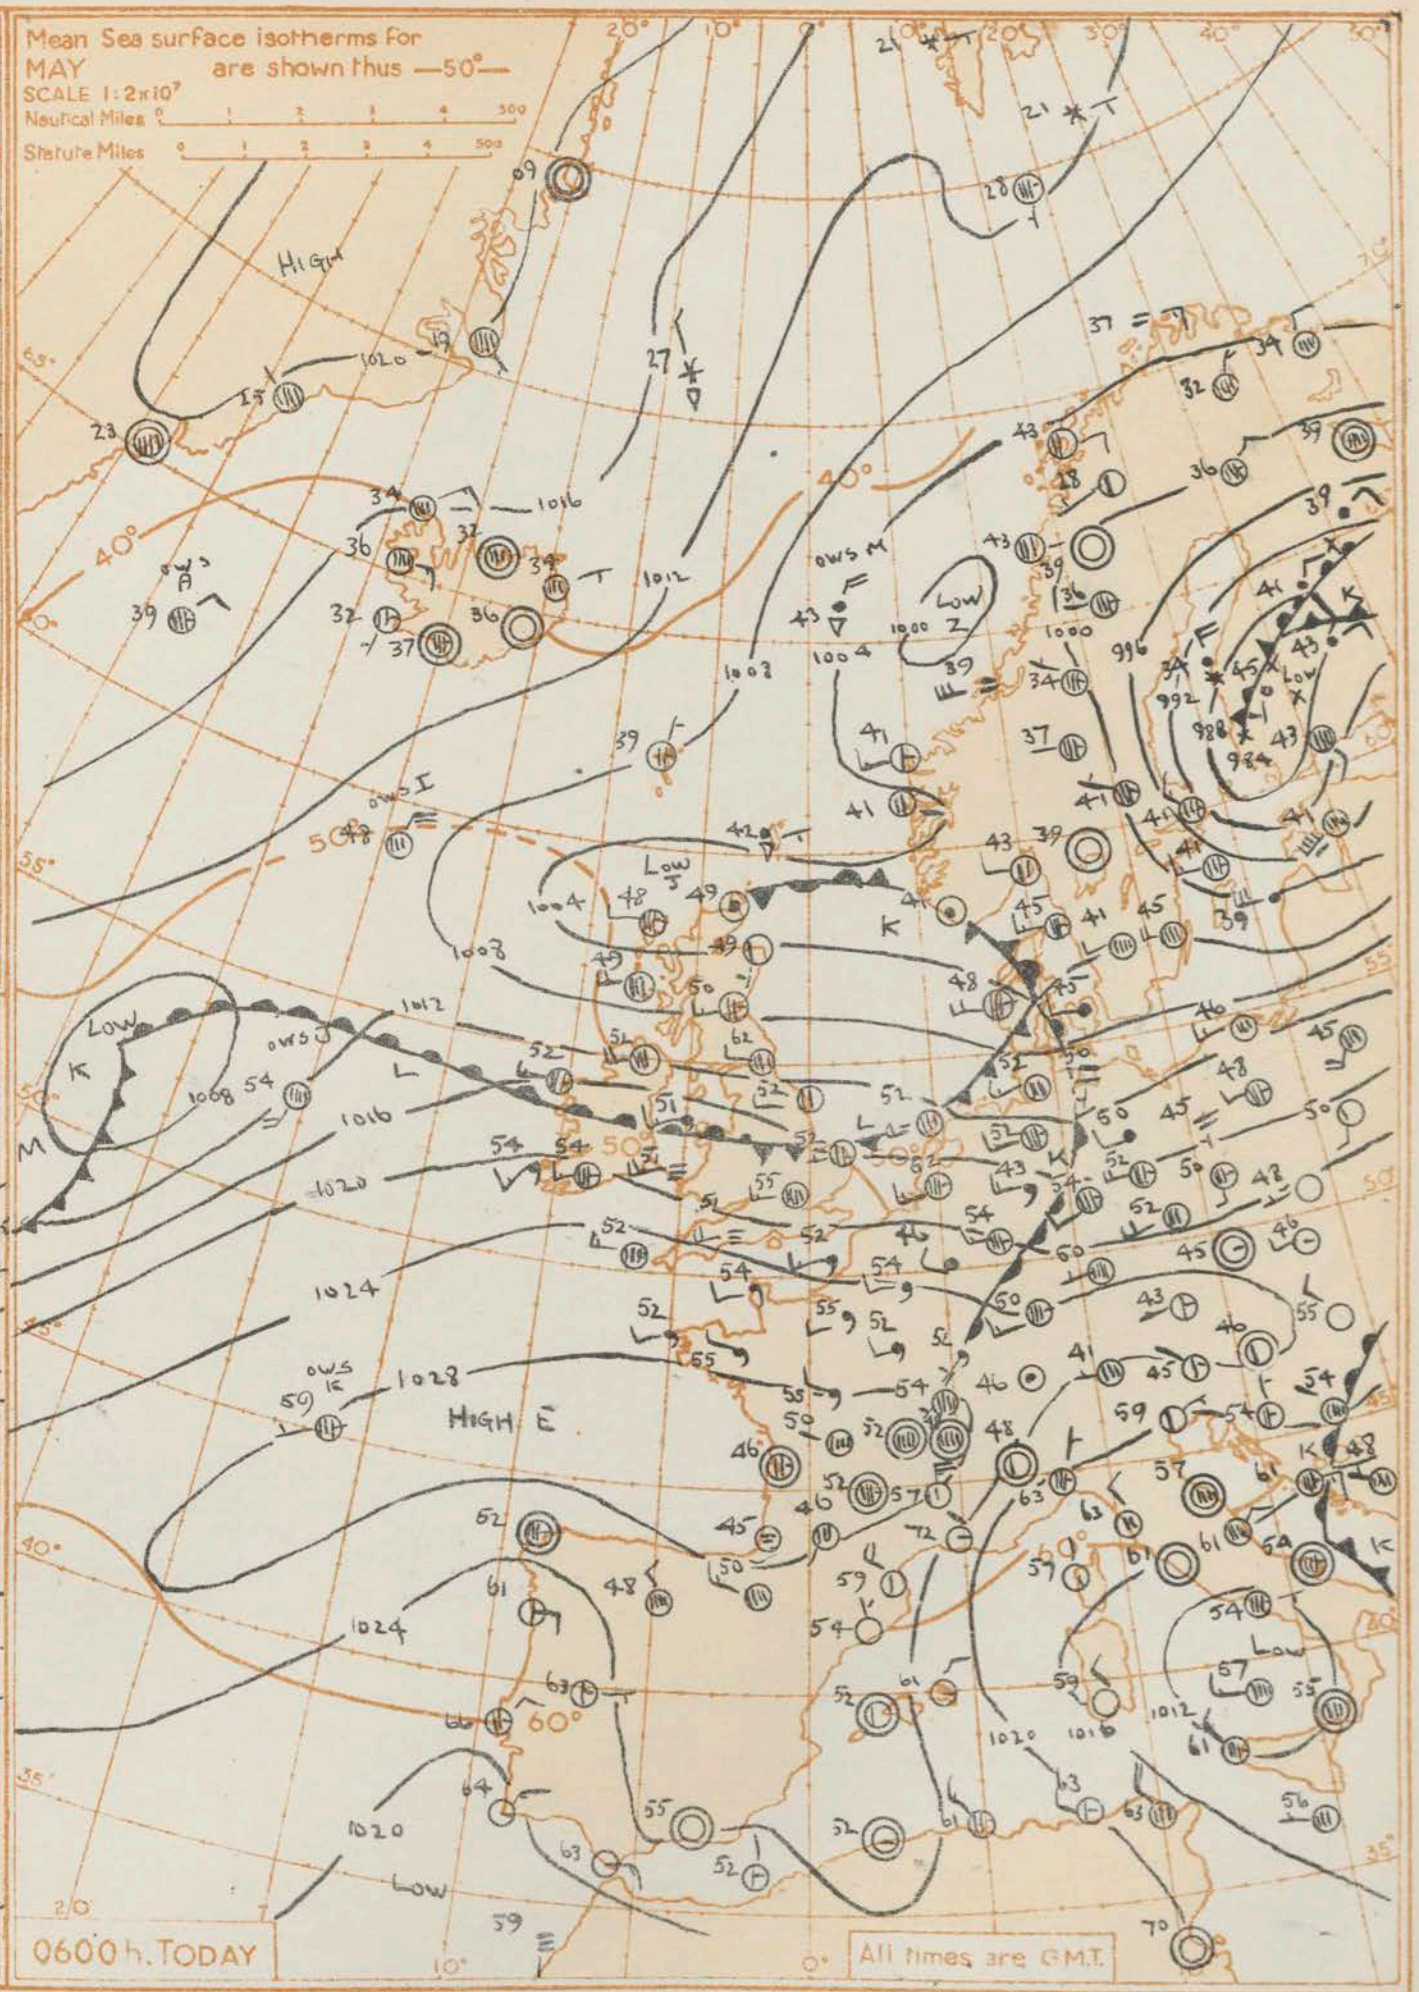
Mid-day (12h) of Saturday 17th May 1958

Equidistant azimuthal projection 1: 3×10^7 on the plane of 60°N.

NAUTICAL MILES







GENERAL SYNOPTIC DEVELOPMENT

The depression to the west of Scotland yesterday moved rather slowly east across north Scotland and filled steadily. A wave developed on its associated cold front in mid-Atlantic and steered at moderate speed northeastwards. This system will probably deepen a little and move to a position near north Scotland but its cold front will be a slow moving feature off western Britain later tomorrow.

Issued at midday today Sunday 18th May 1958

FORECAST FOR BRITISH ISLES until noon tomorrow

Mainly rather warm over England and Wales with sunny intervals today and late morning tomorrow but persistently cloudy with average temperatures and some drizzle and fog on west and south coasts and over high ground exposed to southwest winds.

Scattered showers and sunny periods over Northern Ireland and Scotland will give way to cloudy weather and occasional slight rain and somewhat higher temperatures

OUTLOOK FOR the following 24 hours.

Mainly rather warm with occasional rain or showers chiefly in the west and north. Some hill and coast fog in the west and south.

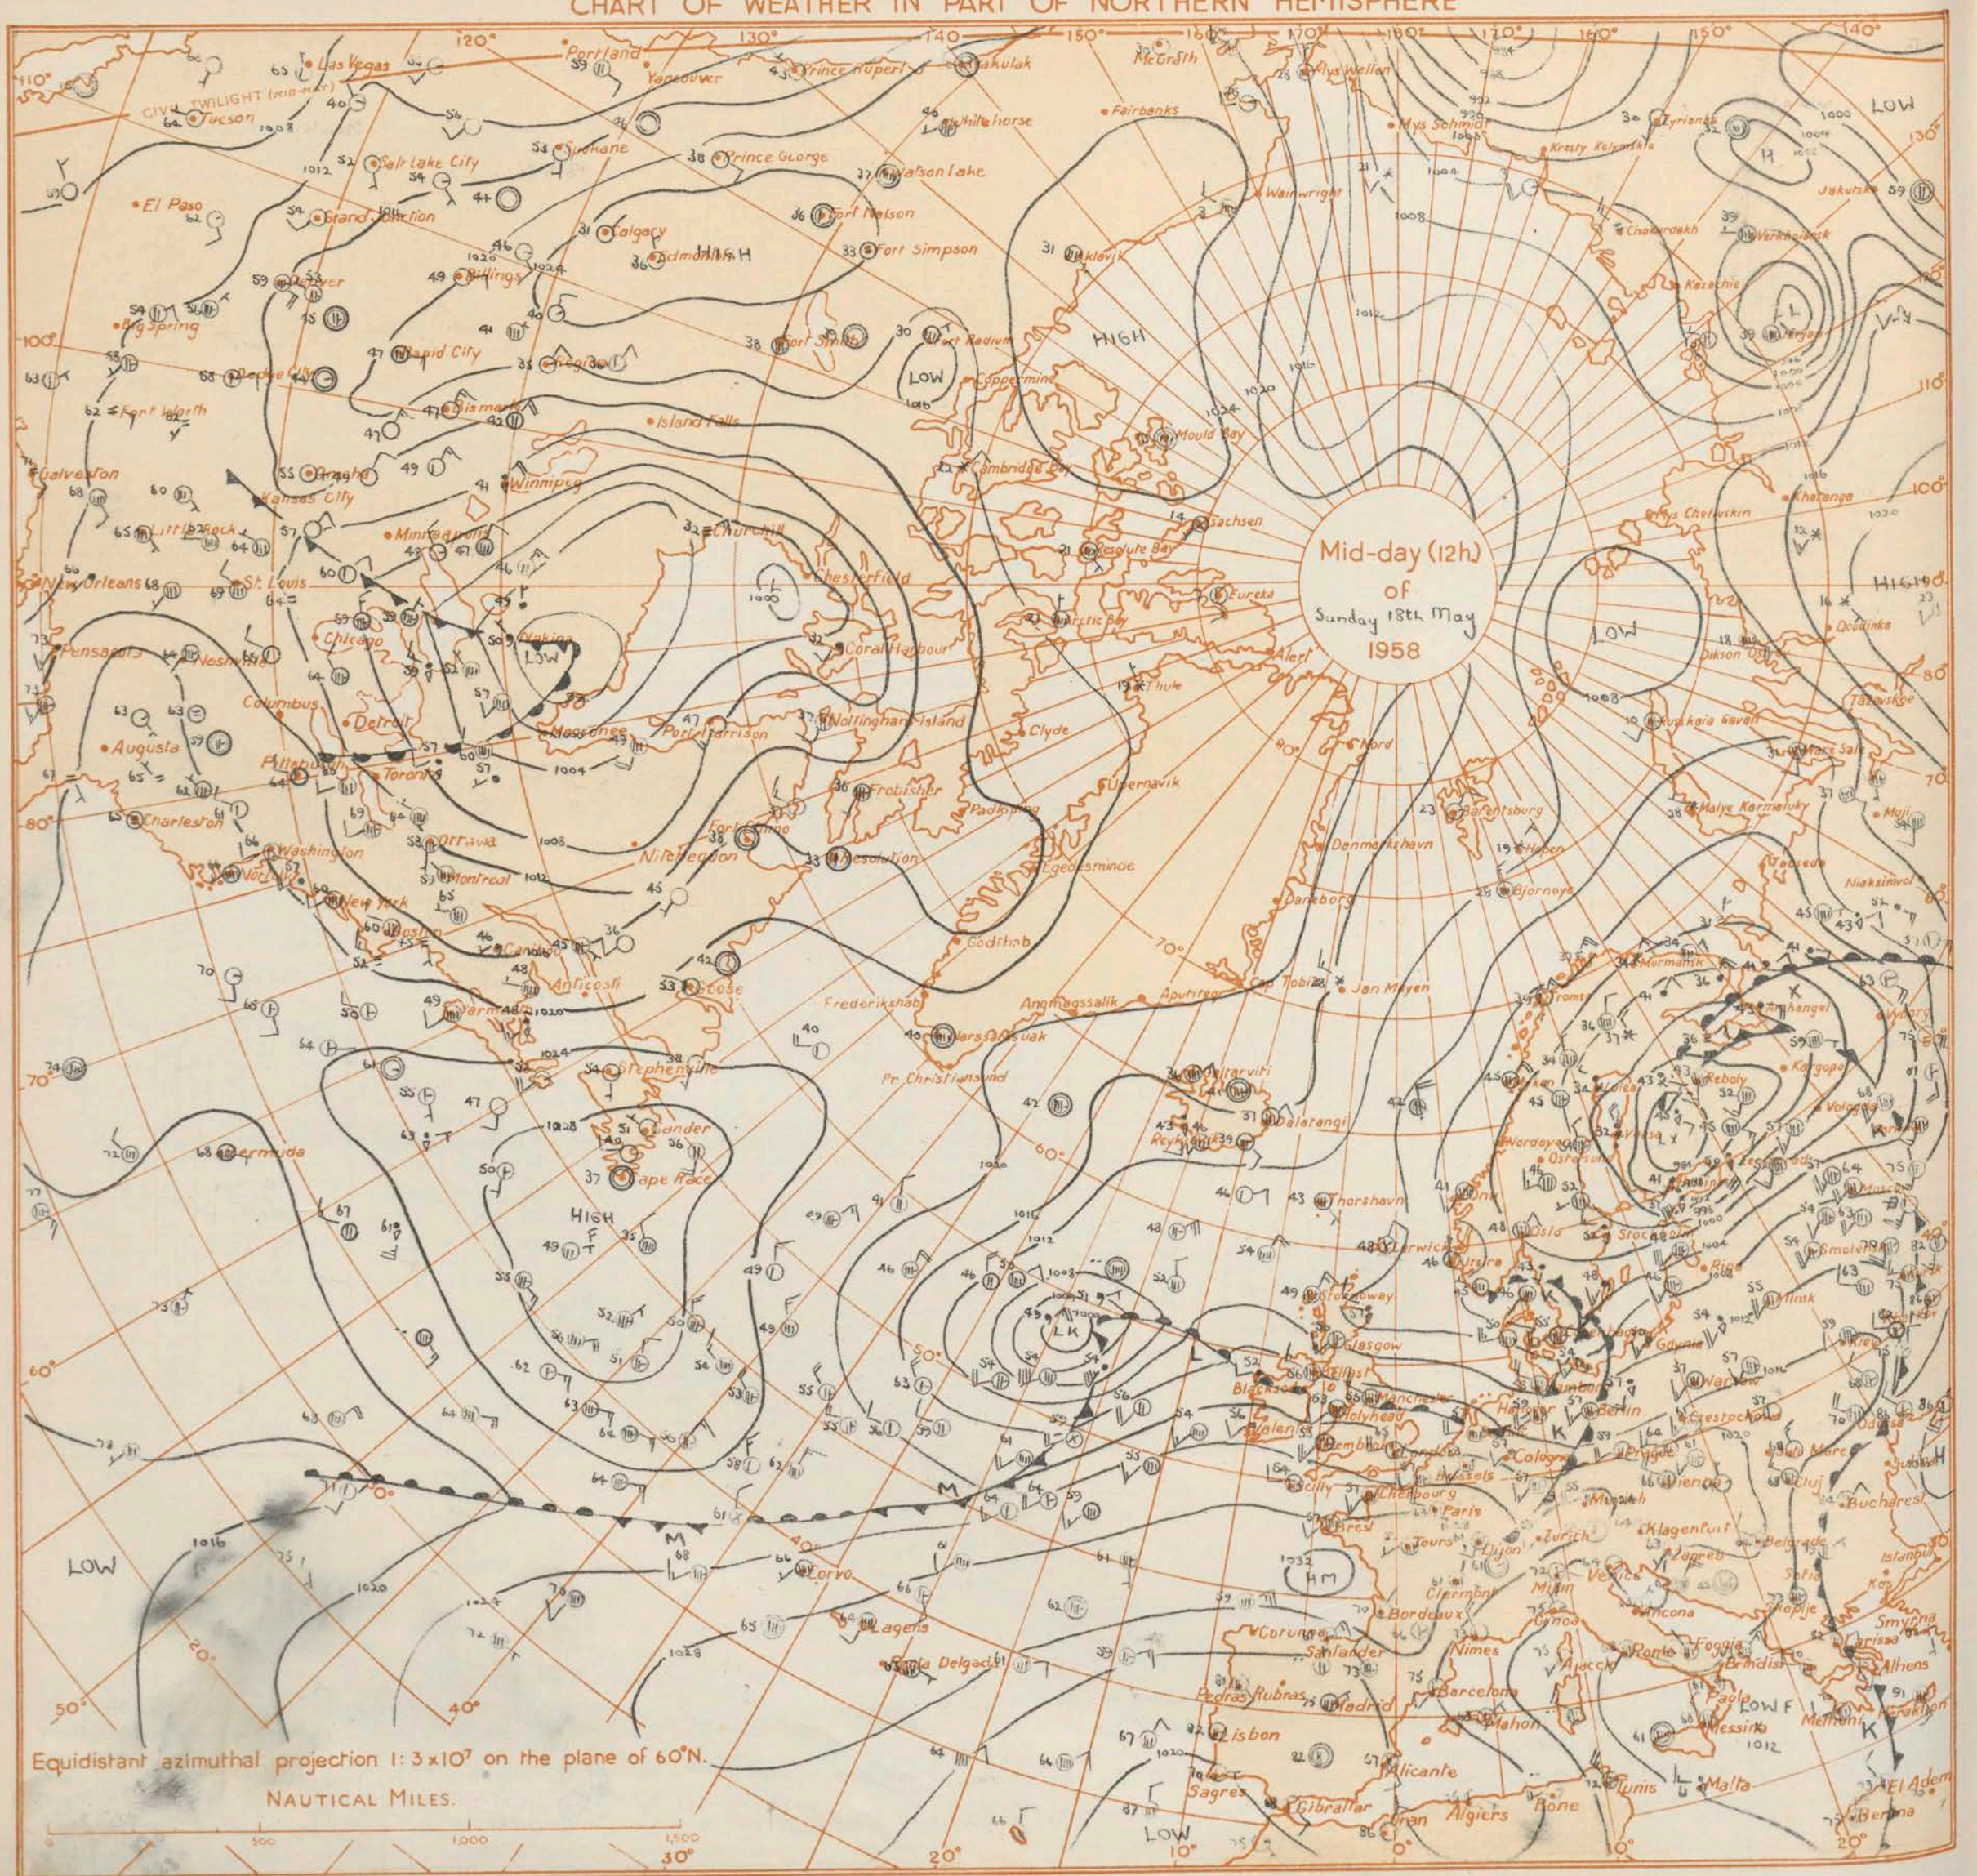
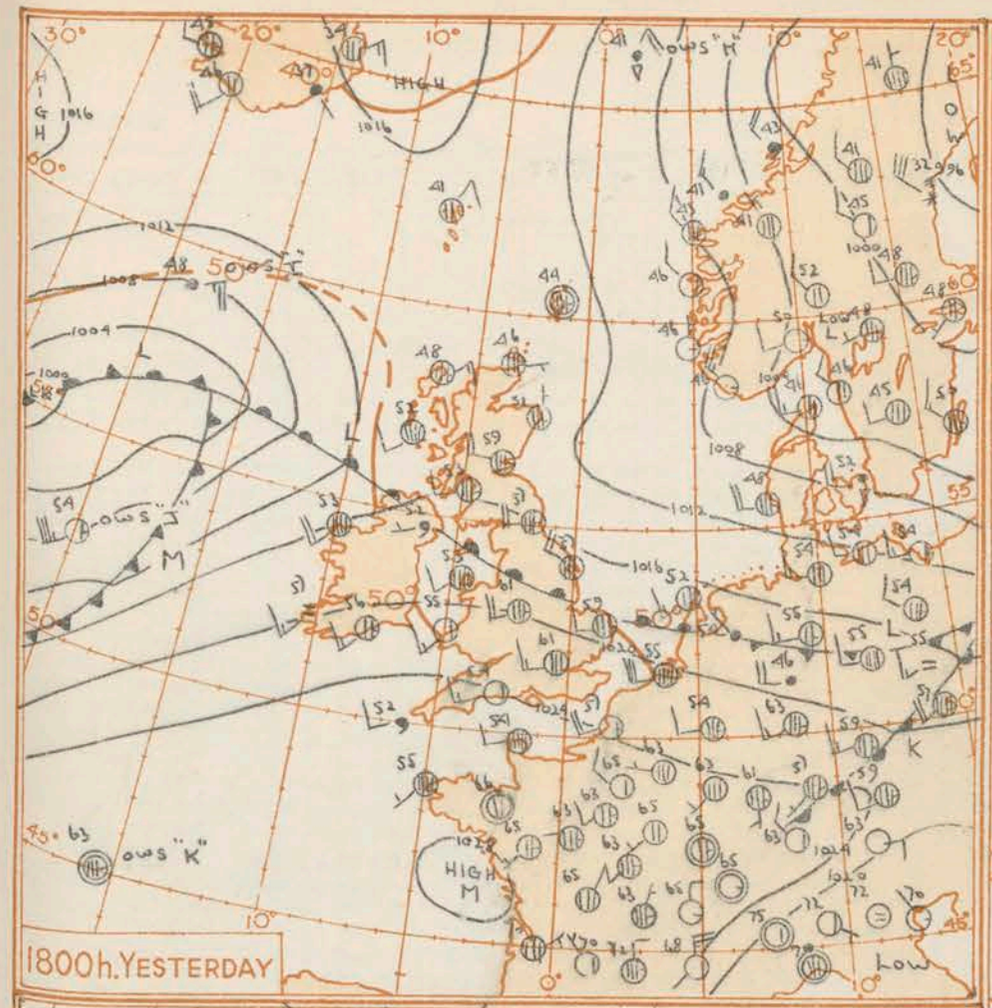
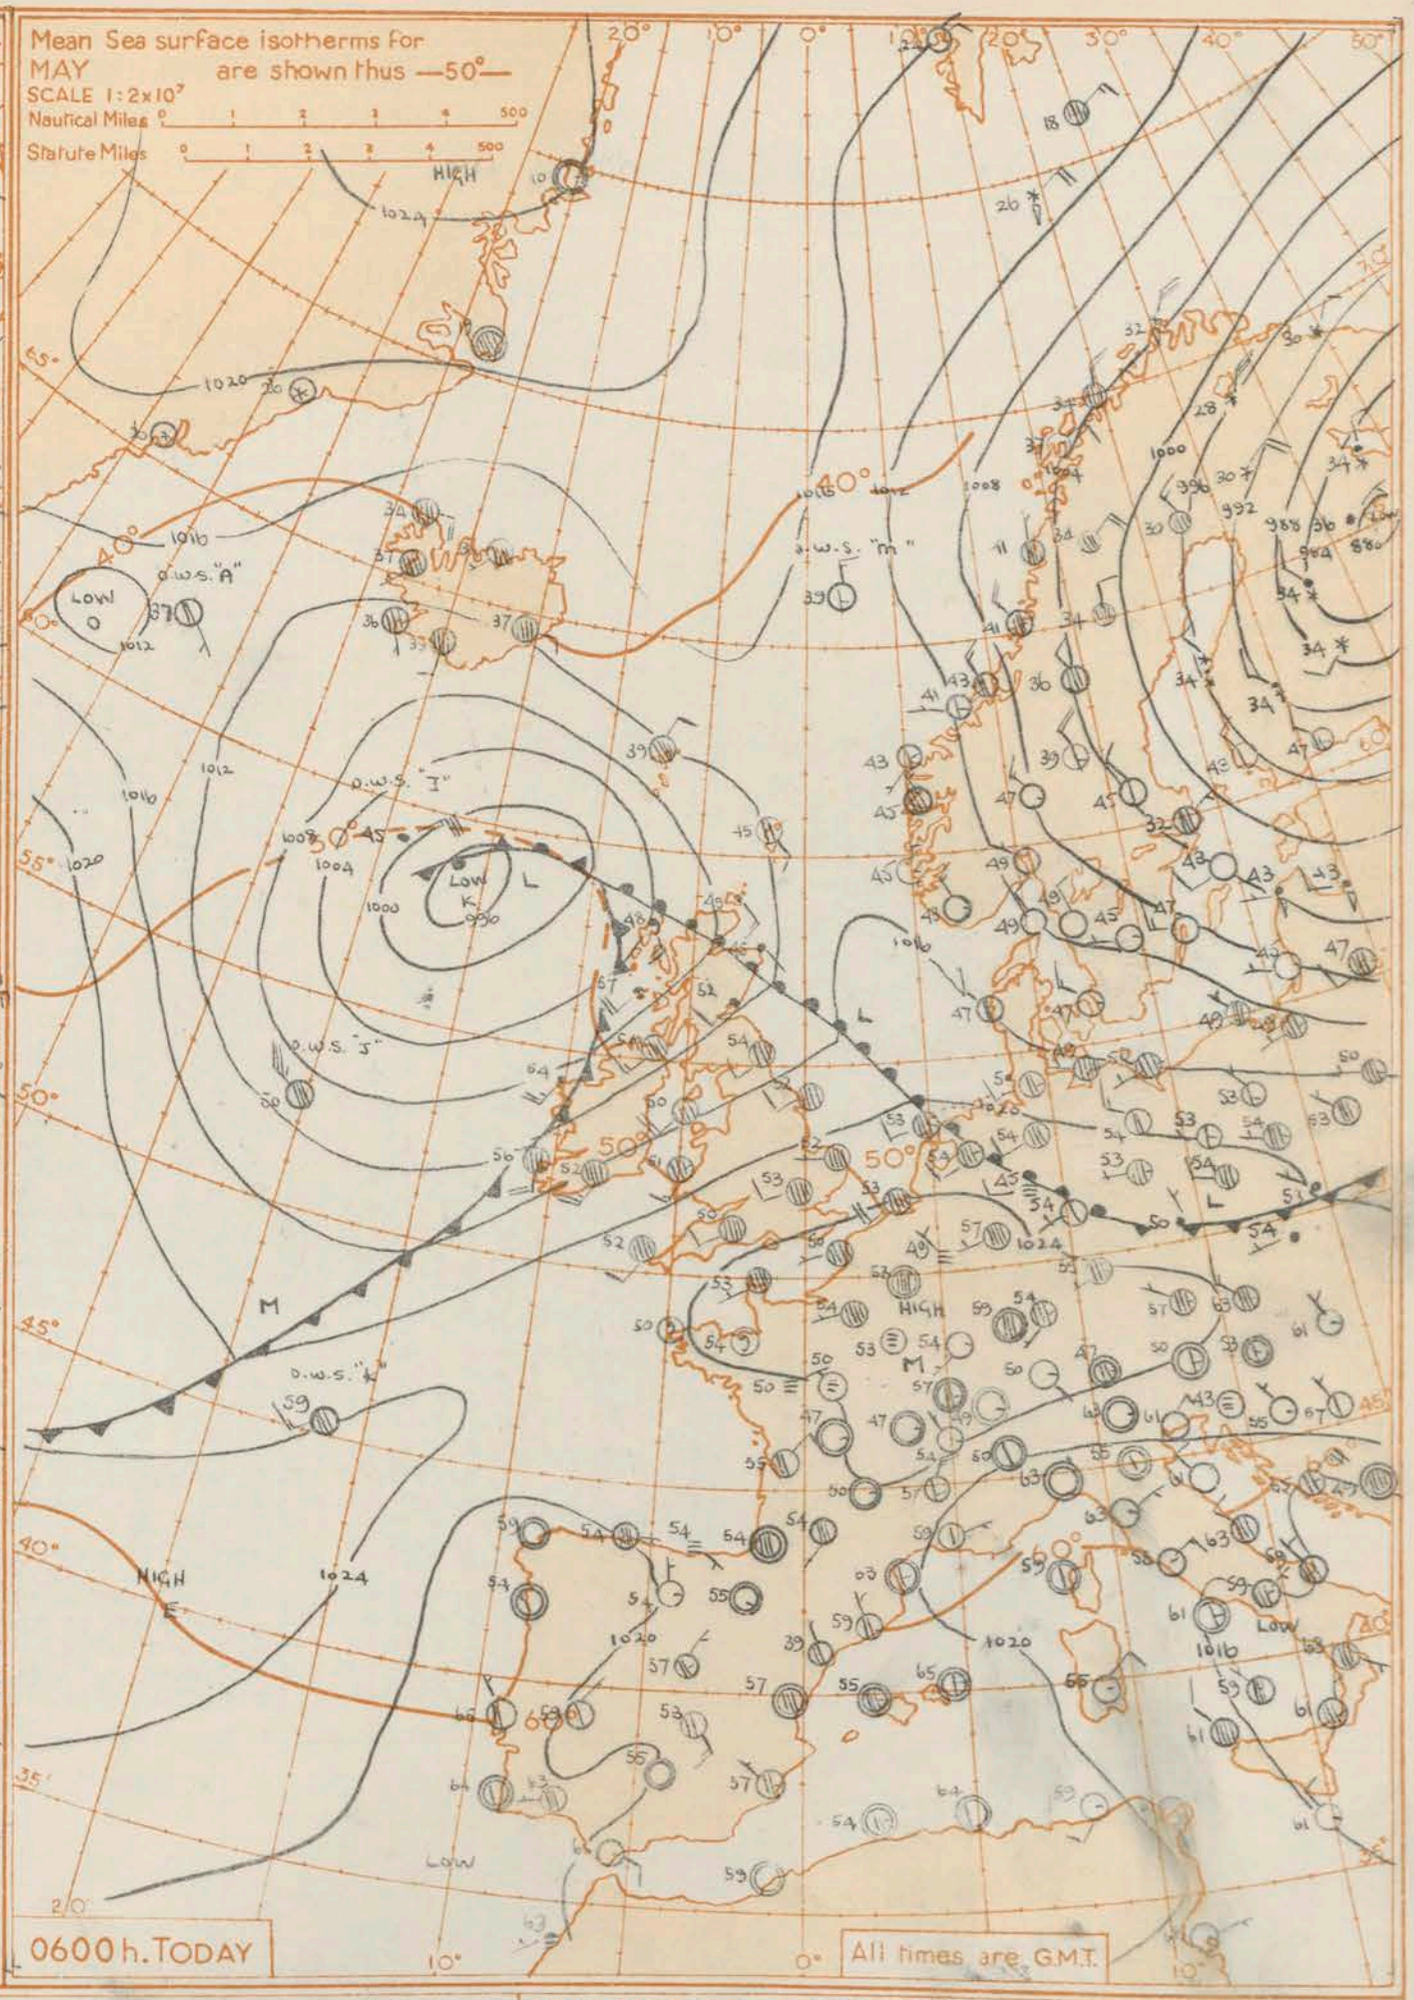
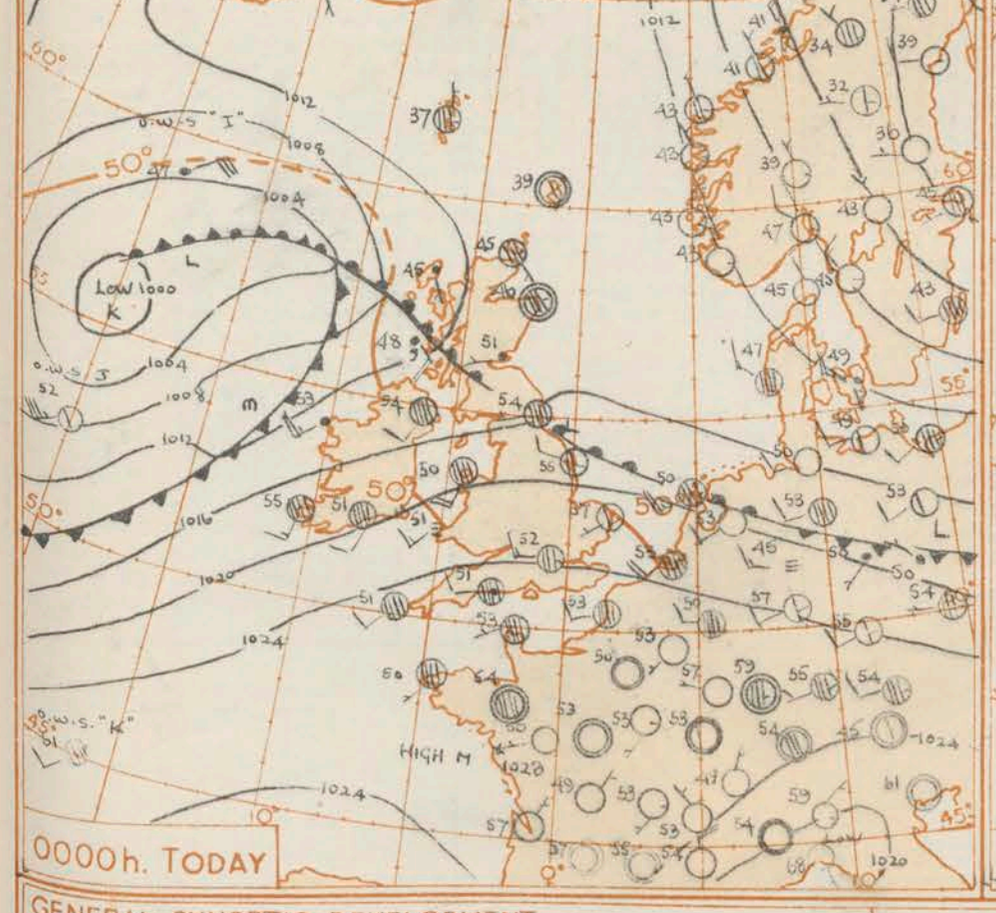
CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE









All times are G.M.T.

GENERAL SYNOPTIC DEVELOPMENT

Issued at midday today Tuesday 19th May 1958

The depression which developed over mid-Atlantic has continued to deepen as it has moved northeast. The centre of this depression is expected to skirt north Scotland during the night and the associated cold front will move southeast over most of the British Isles during today and tonight followed by a ridge of high pressure.

FORECAST FOR BRITISH ISLES until noon tomorrow

The rather warm cloudy weather now covering most of the British Isles and giving rain or drizzle in north and west and hill and coastal fog in exposed coastal districts, will give way to brighter, slightly cooler weather as a cold front now approaching west Scotland and Northern Ireland moves southeast over the British Isles. Showers will occur in the west tomorrow.

OUTLOOK FOR the following 24 hours.

Showers and bright periods in most places: rather cool in places exposed to the fresh west to northwest winds, average temperatures elsewhere.

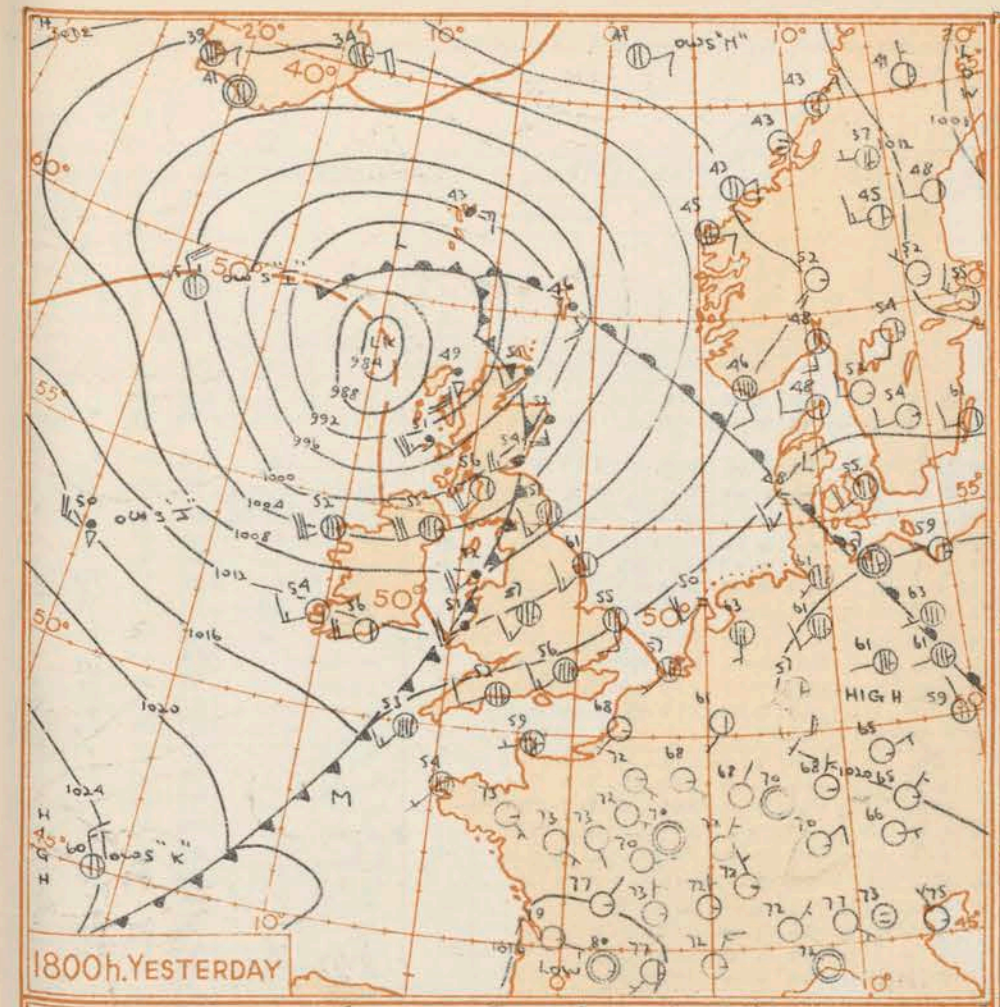
CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

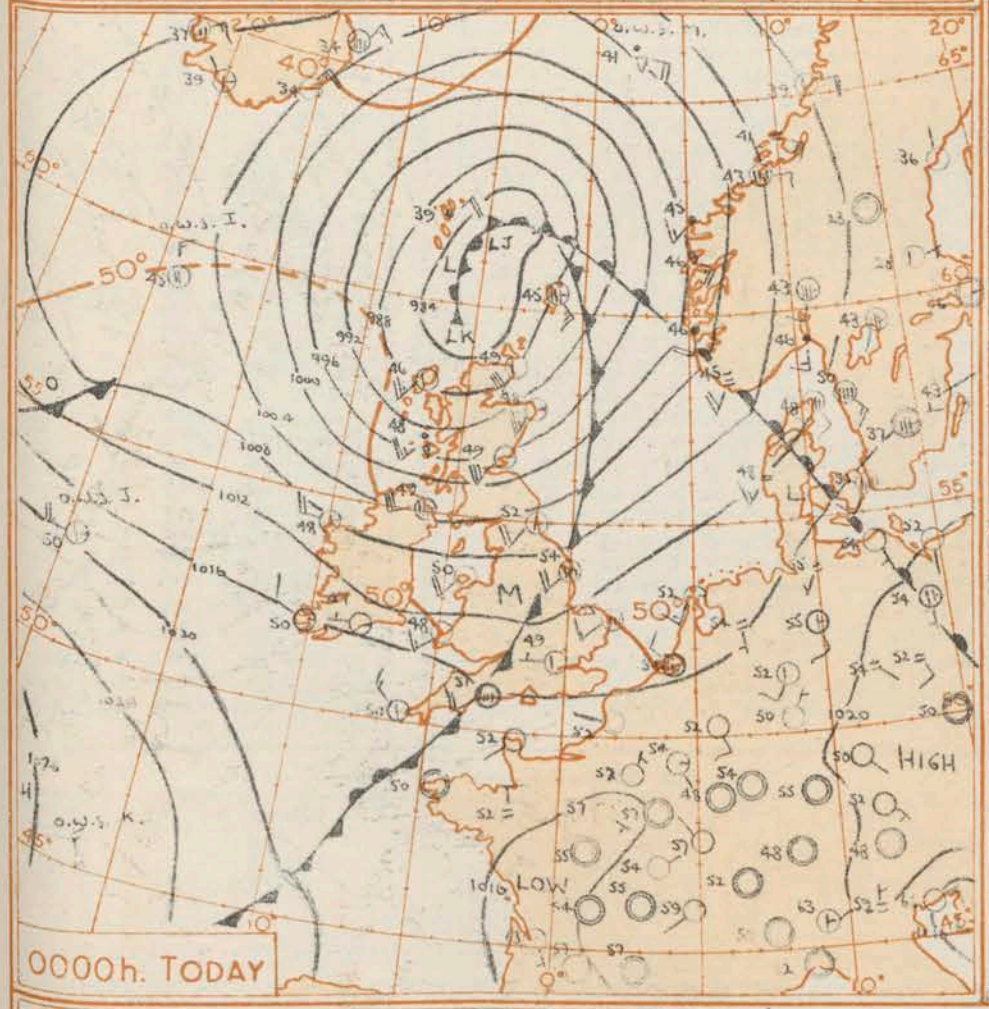
Mid-day (12h) of Monday 19th May 1958

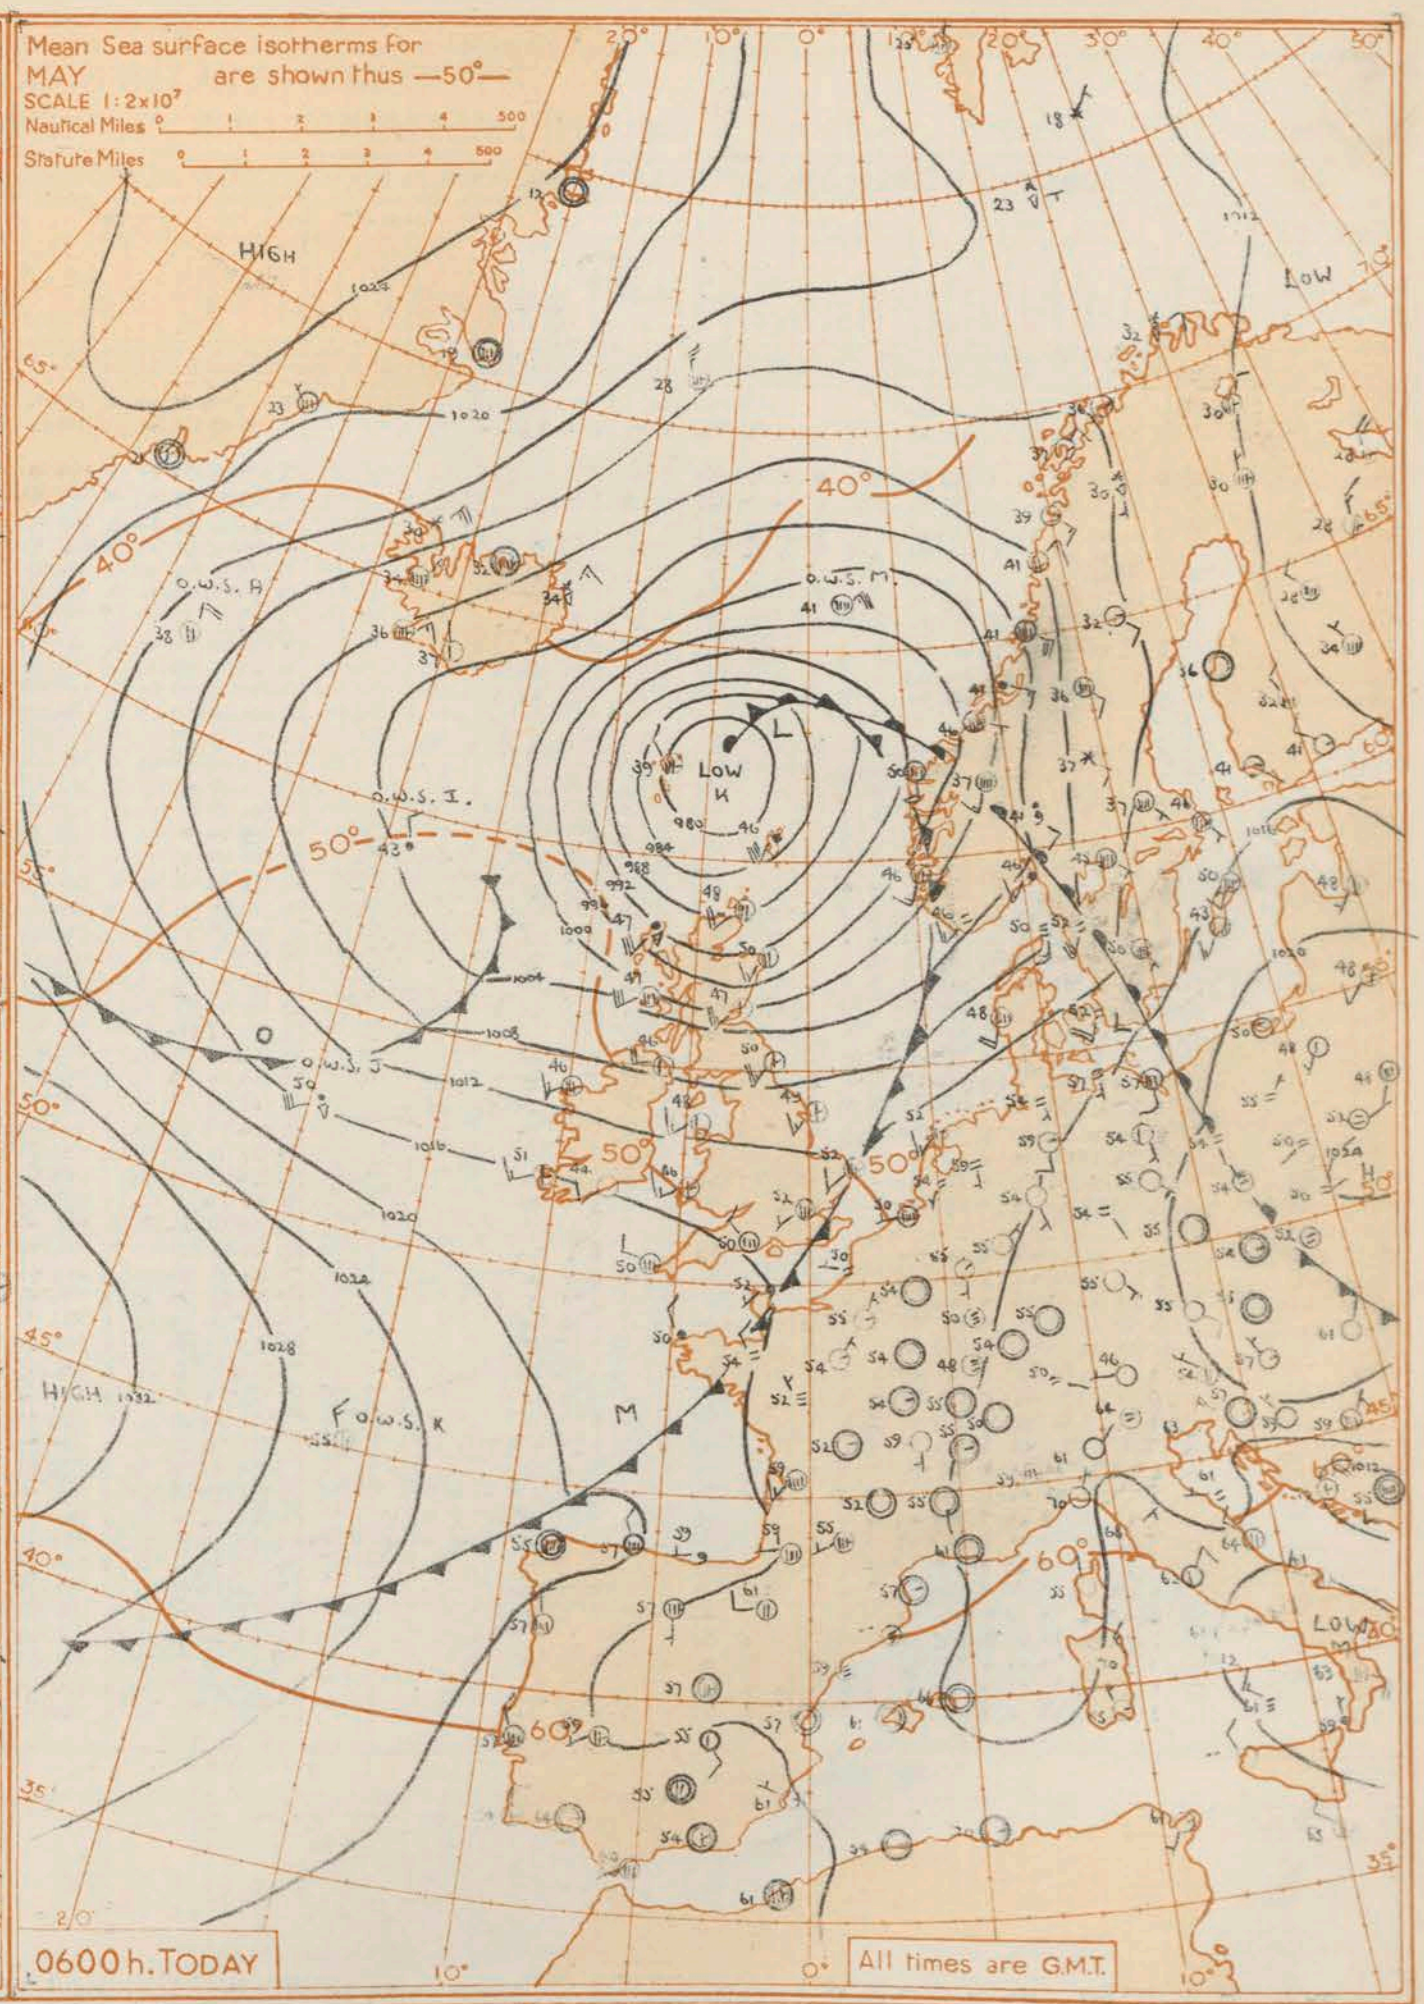
Equidistant azimuthal projection 1: 3x10⁷ on the plane of 60°N.

NAUTICAL MILES.

0 500 1,000 1,500







GENERAL SYNOPTIC DEVELOPMENT

The depression centred to the west of Scotland yesterday morning has dispersed and moved northeastwards to just east of the Faroes. The associated warm front has moved away to the northeast and the cold front, although delayed by a small wave over western districts, has crossed most of the British Isles. The depression will continue to move away to the northeast and a trough of low pressure on the Atlantic will move eastwards across the British Isles later today, tonight and tomorrow morning.

Issued at midday today Tuesday 20th May 1958

FORECAST FOR BRITISH ISLES until noon tomorrow

Over South Wales and the southern half of England weather will be mainly dry with bright periods and only a few scattered showers. Elsewhere it will be rather cloudy with showers in many places, and scattered thunderstorms. Rather cool in all districts.

OUTLOOK FOR following 24 hours.

Sunny periods and showers, with showers chiefly in the west and north. Near average temperatures in the southeast, and rather cool elsewhere.

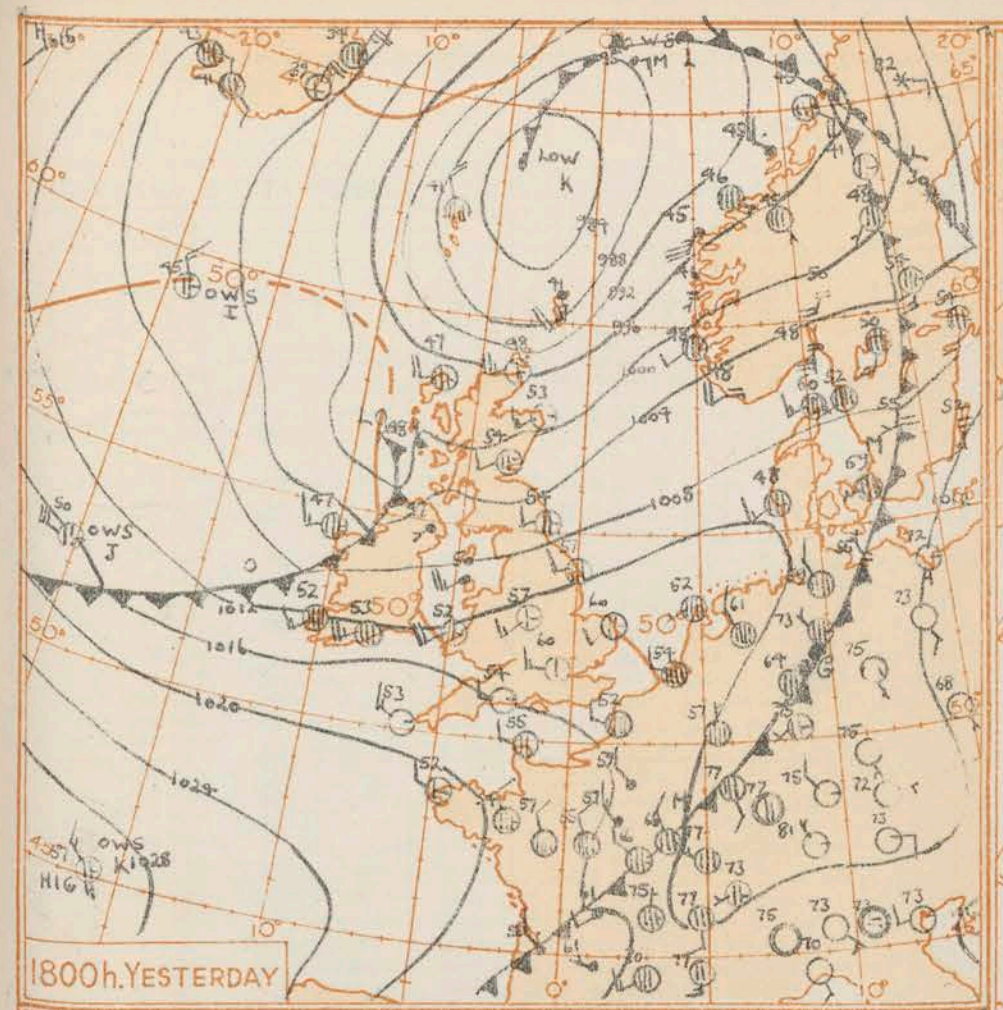
CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

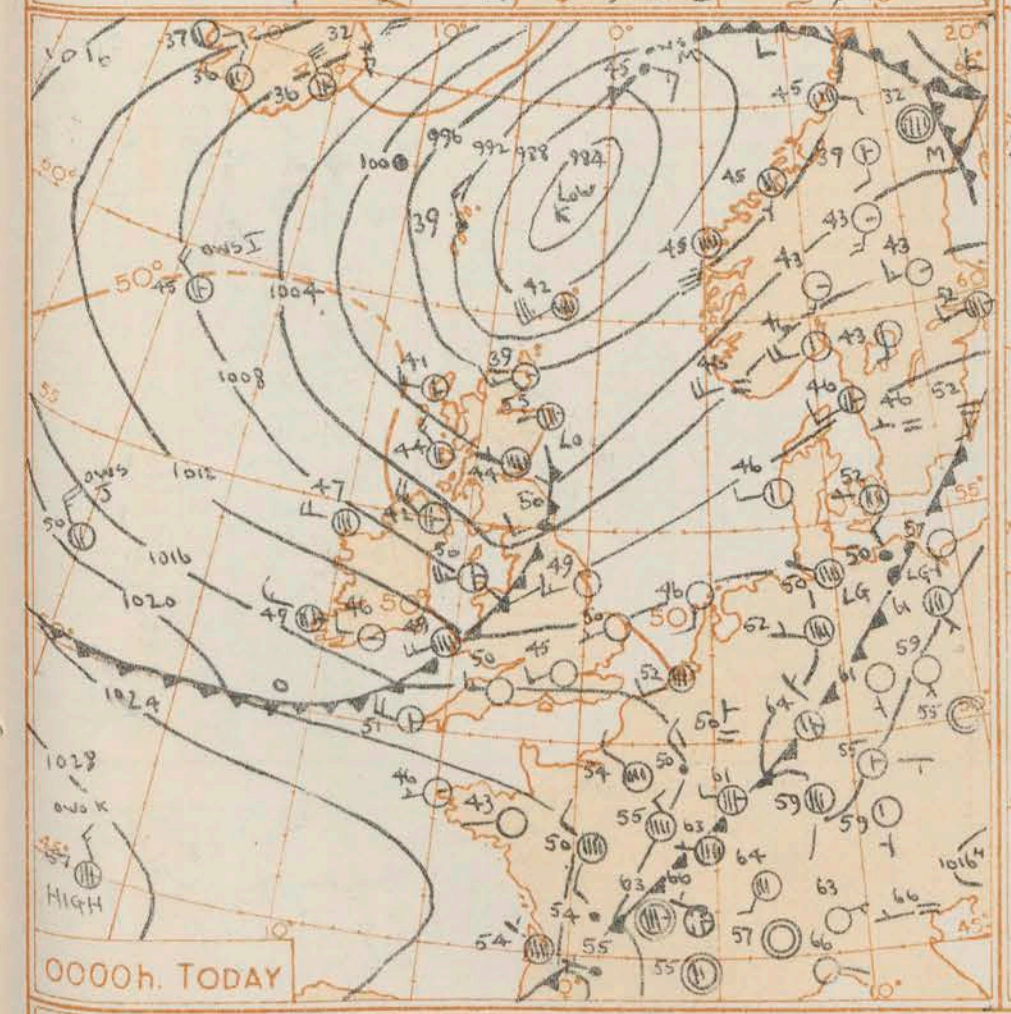
Mid-day (12h.) of Tuesday 20th May 1958

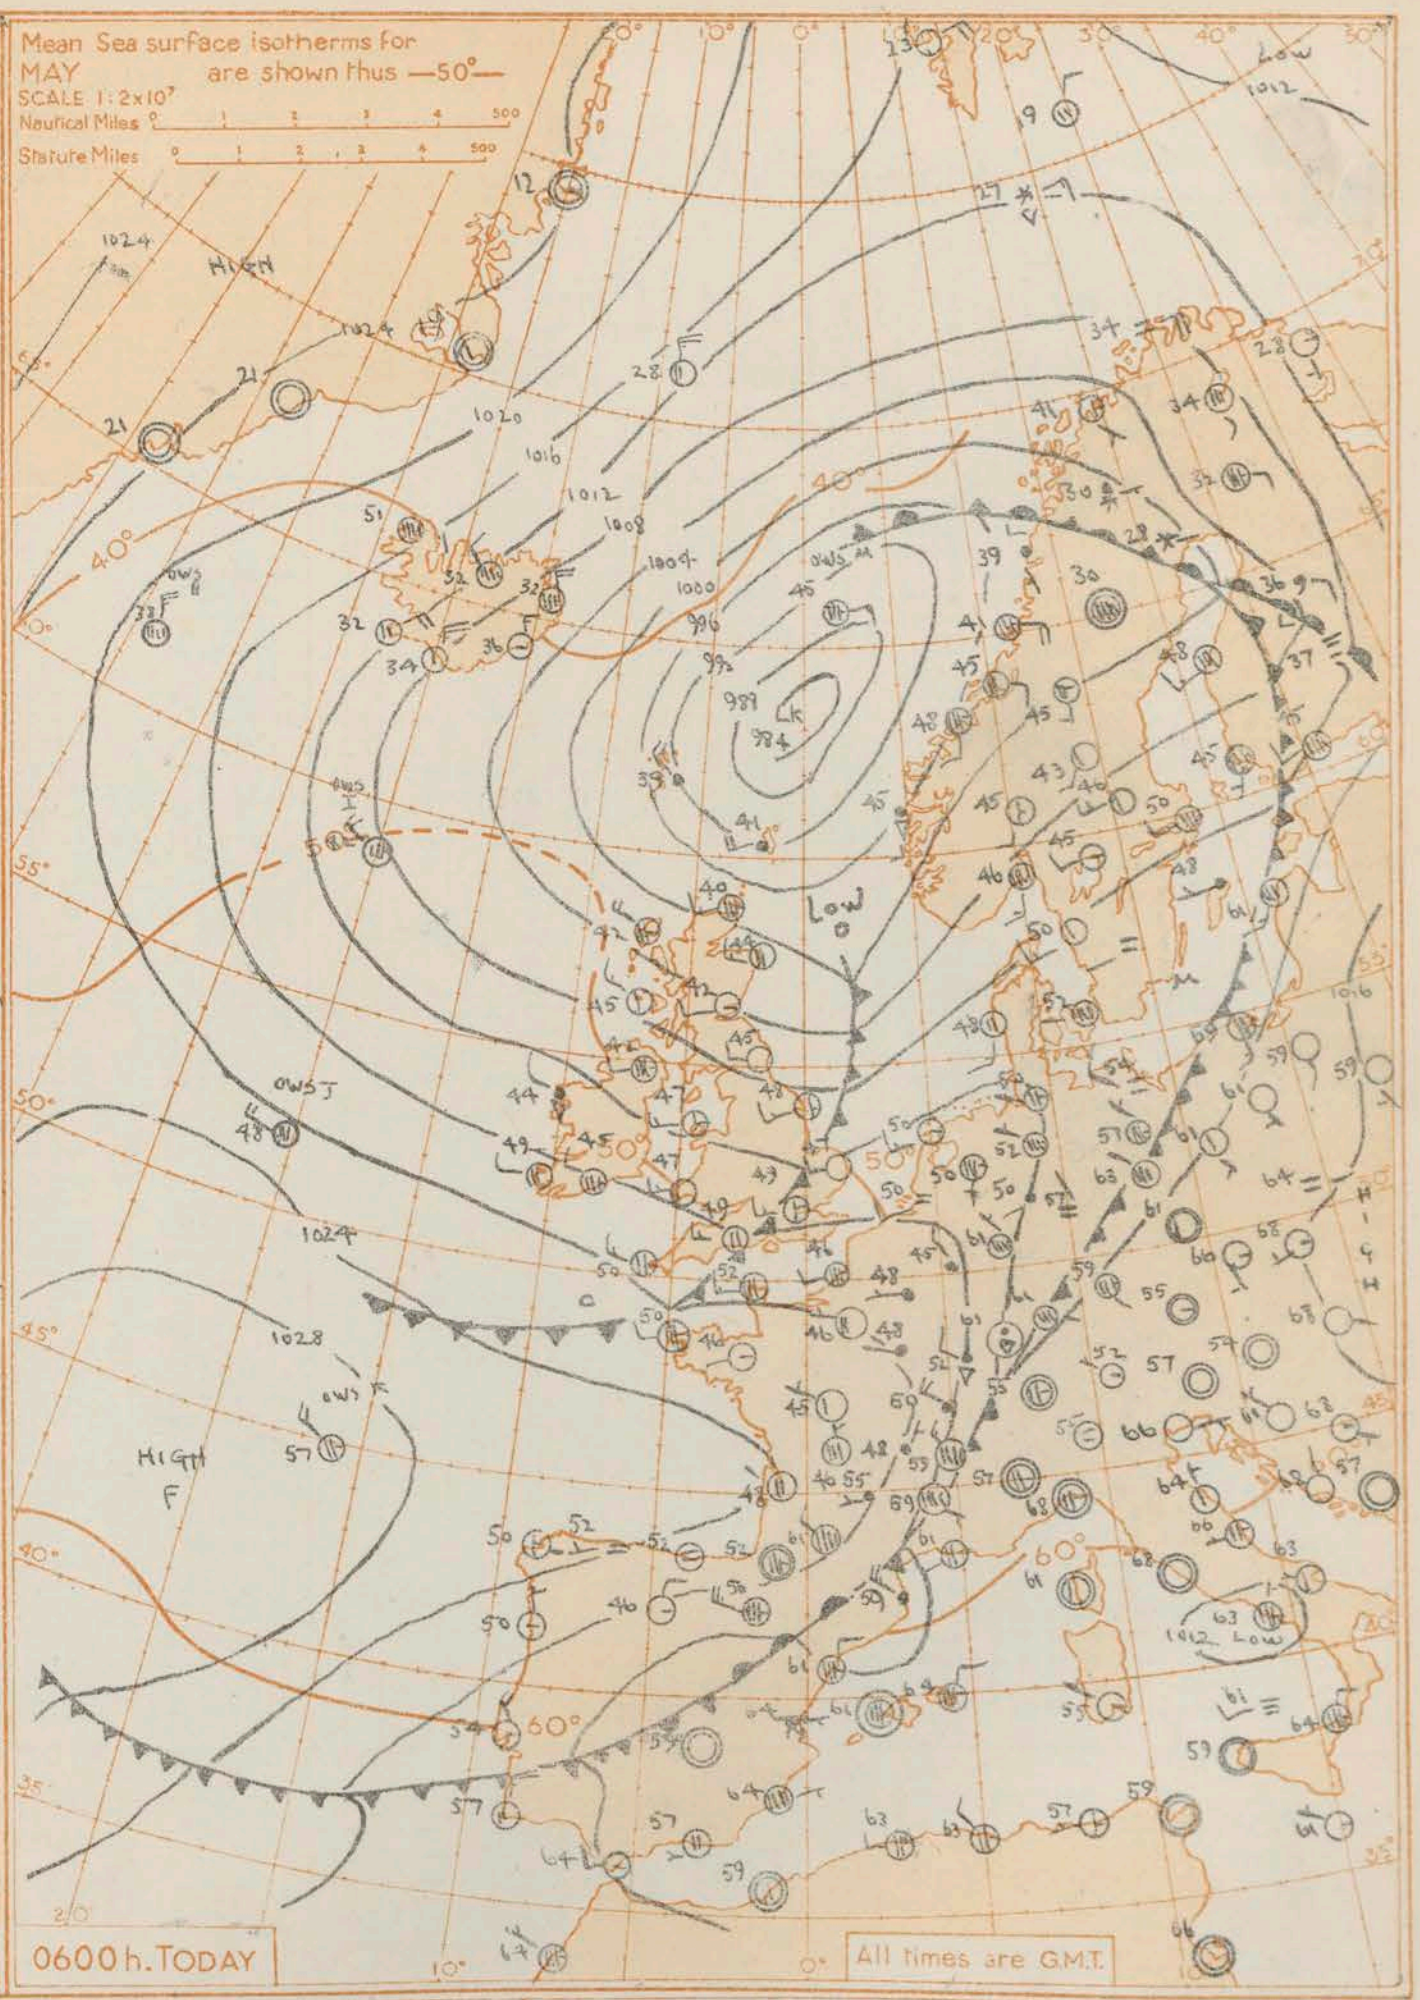
Equidistant azimuthal projection 1: 3 x 10⁷ on the plane of 60°N.

NAUTICAL MILES.

0 500 1000 1500







GENERAL SYNOPTIC DEVELOPMENT

A deep depression which yesterday was centred north of Scotland continues to move slowly northeast and to fill slowly. An anticyclone continues to move eastwards north of the Black Sea, and another anticyclone north of the Azores is moving towards Spain. On the western flank of the Azores anticyclone warm air is spreading north and northeast, and a warm front is expected to approach western Ireland tonight

Issued at midday today Wednesday 21st May 1958

FORECAST FOR BRITISH ISLES until noon tomorrow

There will be sunny intervals, but the day will be cool and showery. Some of the showers will be heavy, and there is a chance of scattered thunderstorms, particularly in the north. Tonight the showers will mostly die out, particularly from eastern and central districts. Tomorrow any showers will be well scattered, but rain may reach some western districts during the morning

OUTLOOK FOR the following 24 hours

In north Scotland there may be bright periods and scattered showers but rain is likely in many other areas, followed by somewhat warmer, cloudy weather.

SIR GRAHAM SUTTON, C.B.E., D.Sc., F.R.S., Director General. Meteorological Office, Air Ministry, Kingsway, London, W.C.2.

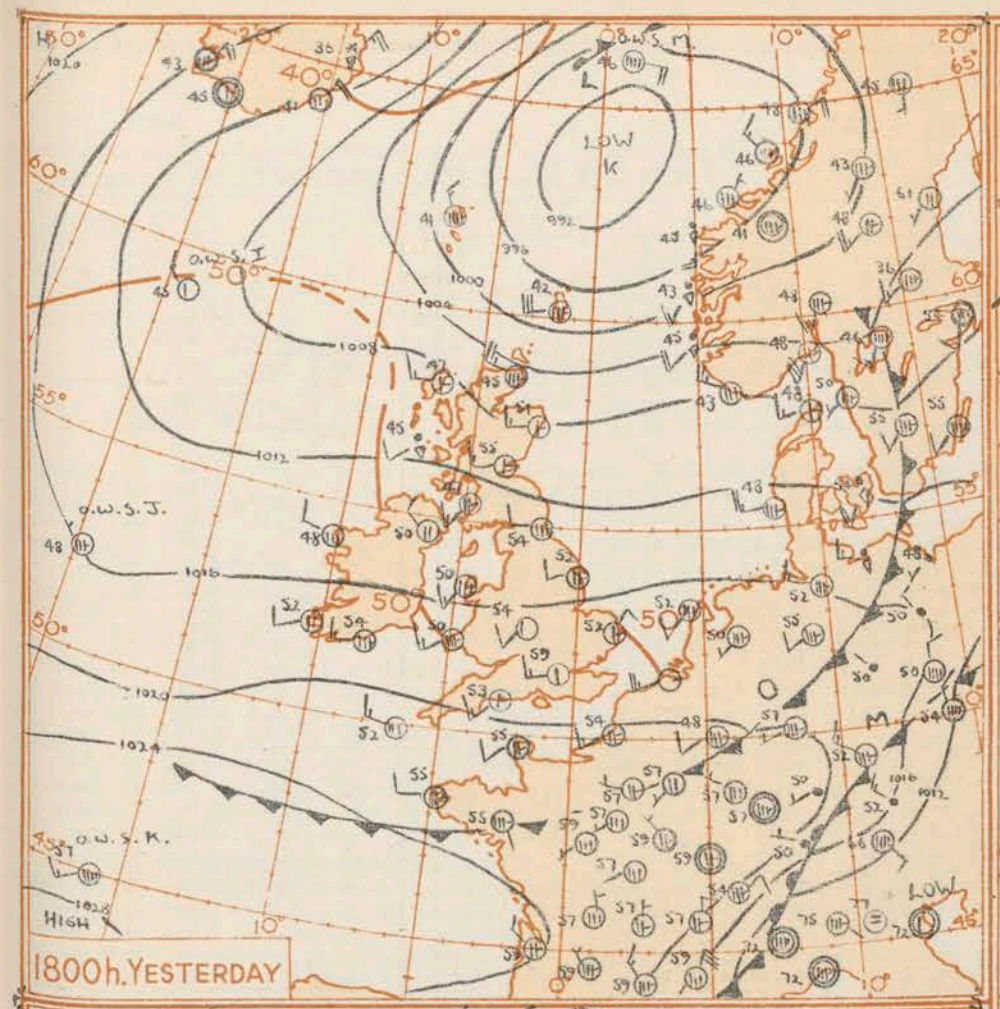
CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

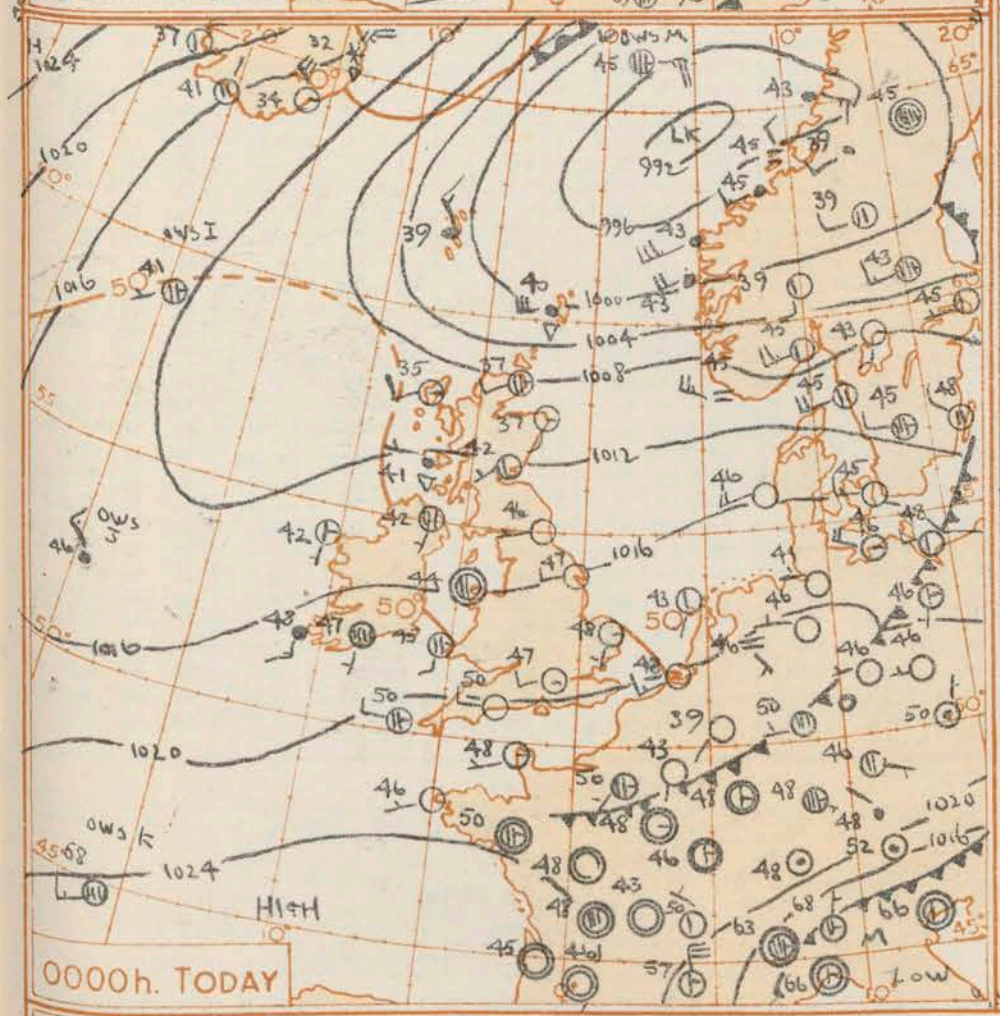
Mid-day (12h) of Wednesday 21st May 1958

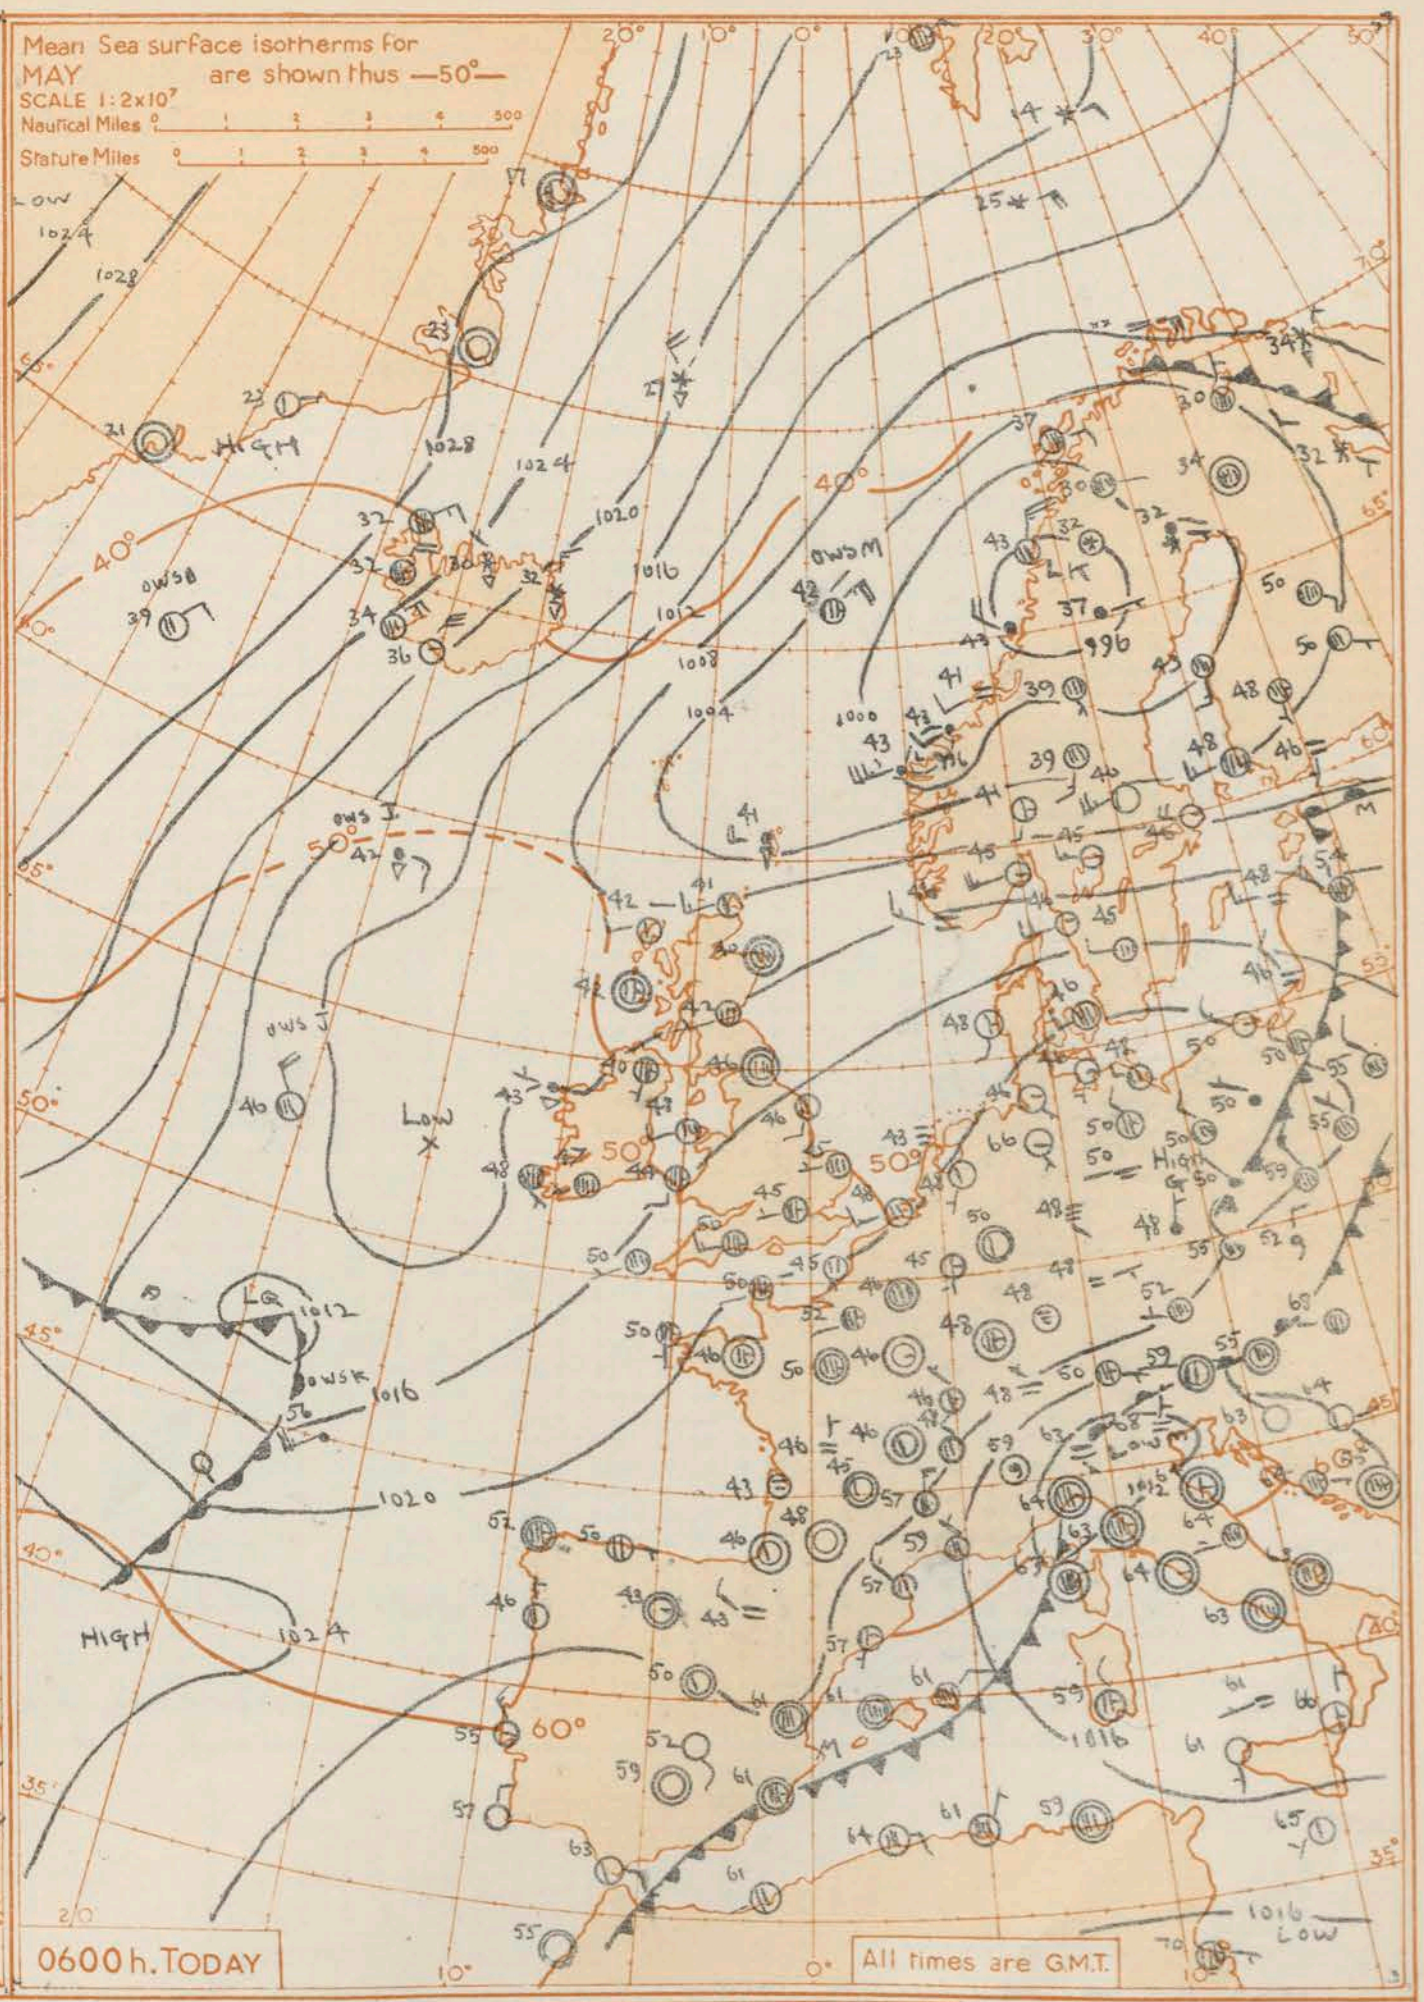
Equidistant azimuthal projection 1: 3×10^7 on the plane of 60°N.

NAUTICAL MILES.

0 500 1,000 1,500







GENERAL SYNOPTIC DEVELOPMENT

Issued at midday today Thursday 22nd May 1958

The depression centred to the northeast of Scotland yesterday morning has continued to move away to the northeast and become less deep. The unstable westerly airstream over the British Isles has backed slowly and become more stable as a trough of low pressure approaches from the Atlantic. The trough is expected to continue its eastward movement into and across the British Isles, and there will probably be a depression centred over or near southeast England tomorrow morning.

FORECAST FOR BRITISH ISLES until noon tomorrow

Scattered outbreaks of rain in southwest England and Wales will spread into the midlands today and more general rain will spread eastwards across England and Wales later today and tonight. The rain will persist in eastern districts tomorrow morning, but it will become showery in the west. Weather will be mainly cloudy in Scotland and Northern Ireland with scattered showers. Average temperatures in the southeast. Rather cool elsewhere.

OUTLOOK FOR the following 24 hours.

Rather cool with occasional rain or showers and bright periods.

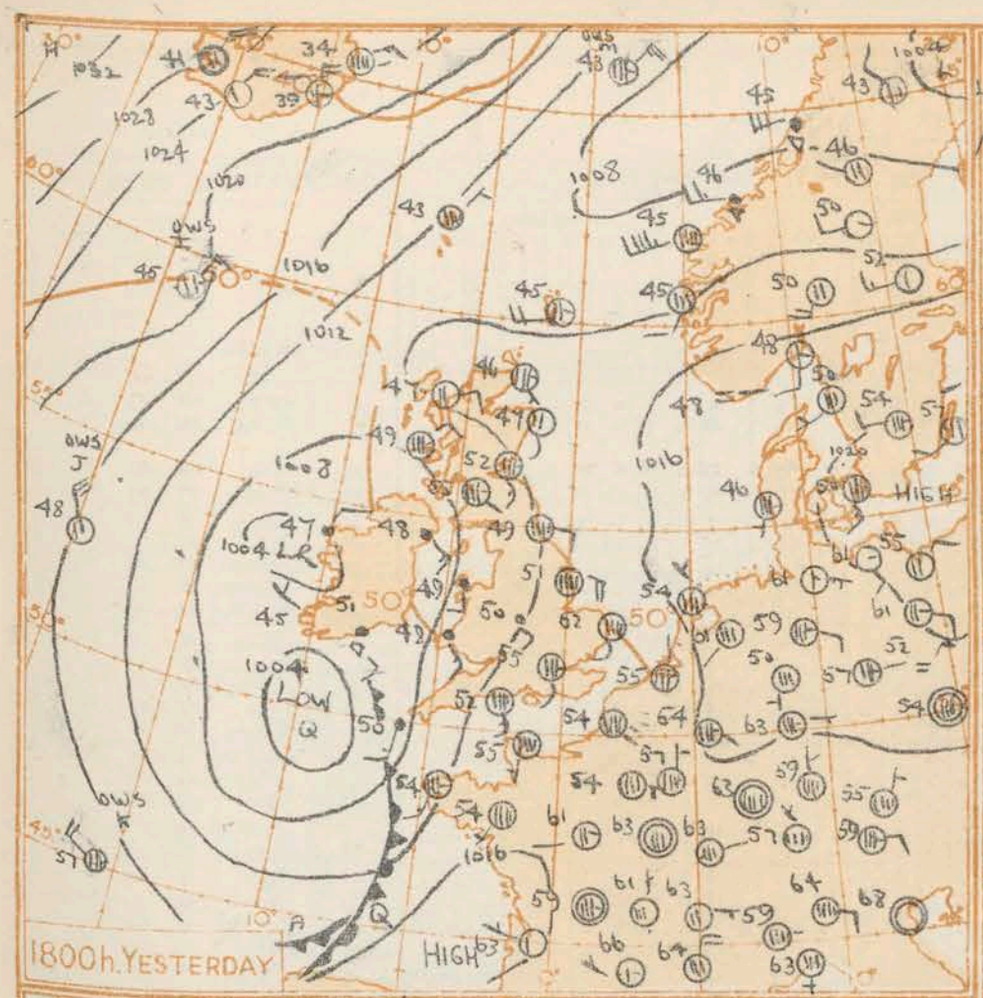
SIR GRAHAM SUTTON, C.B.E., D.Sc., F

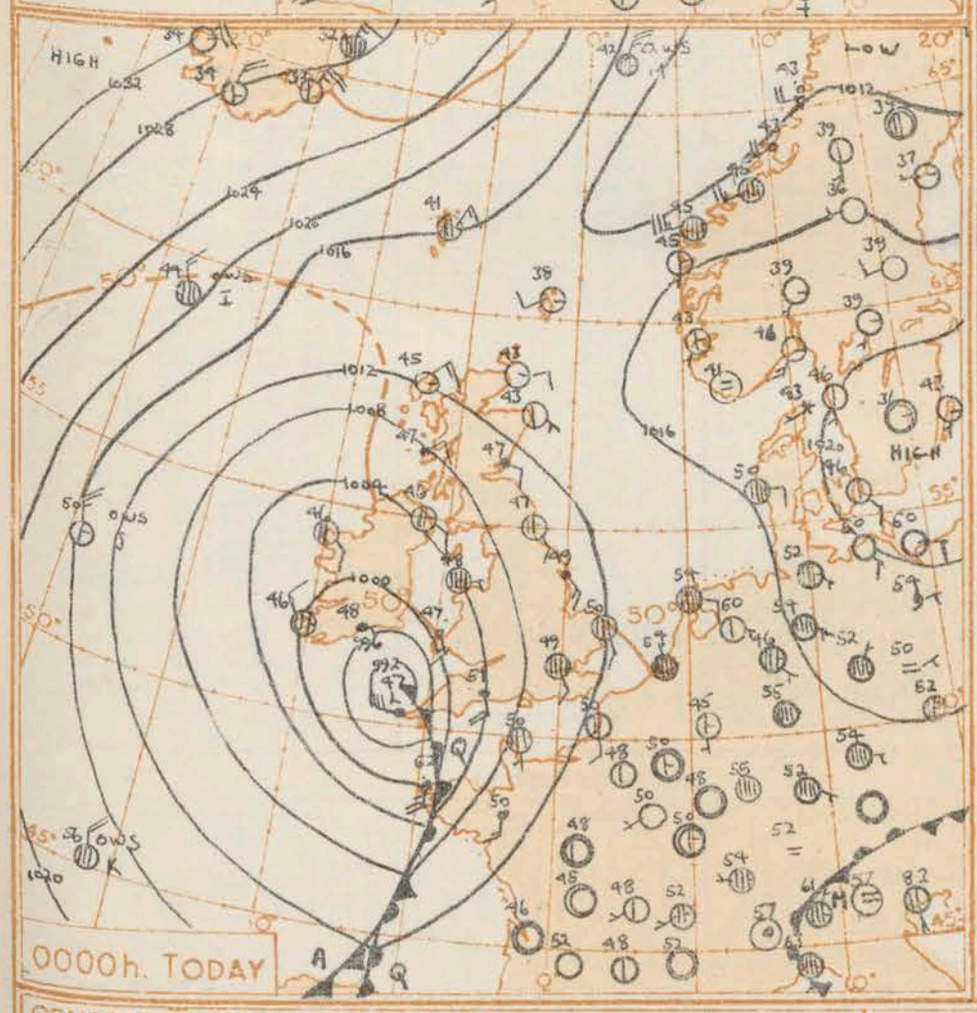
CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

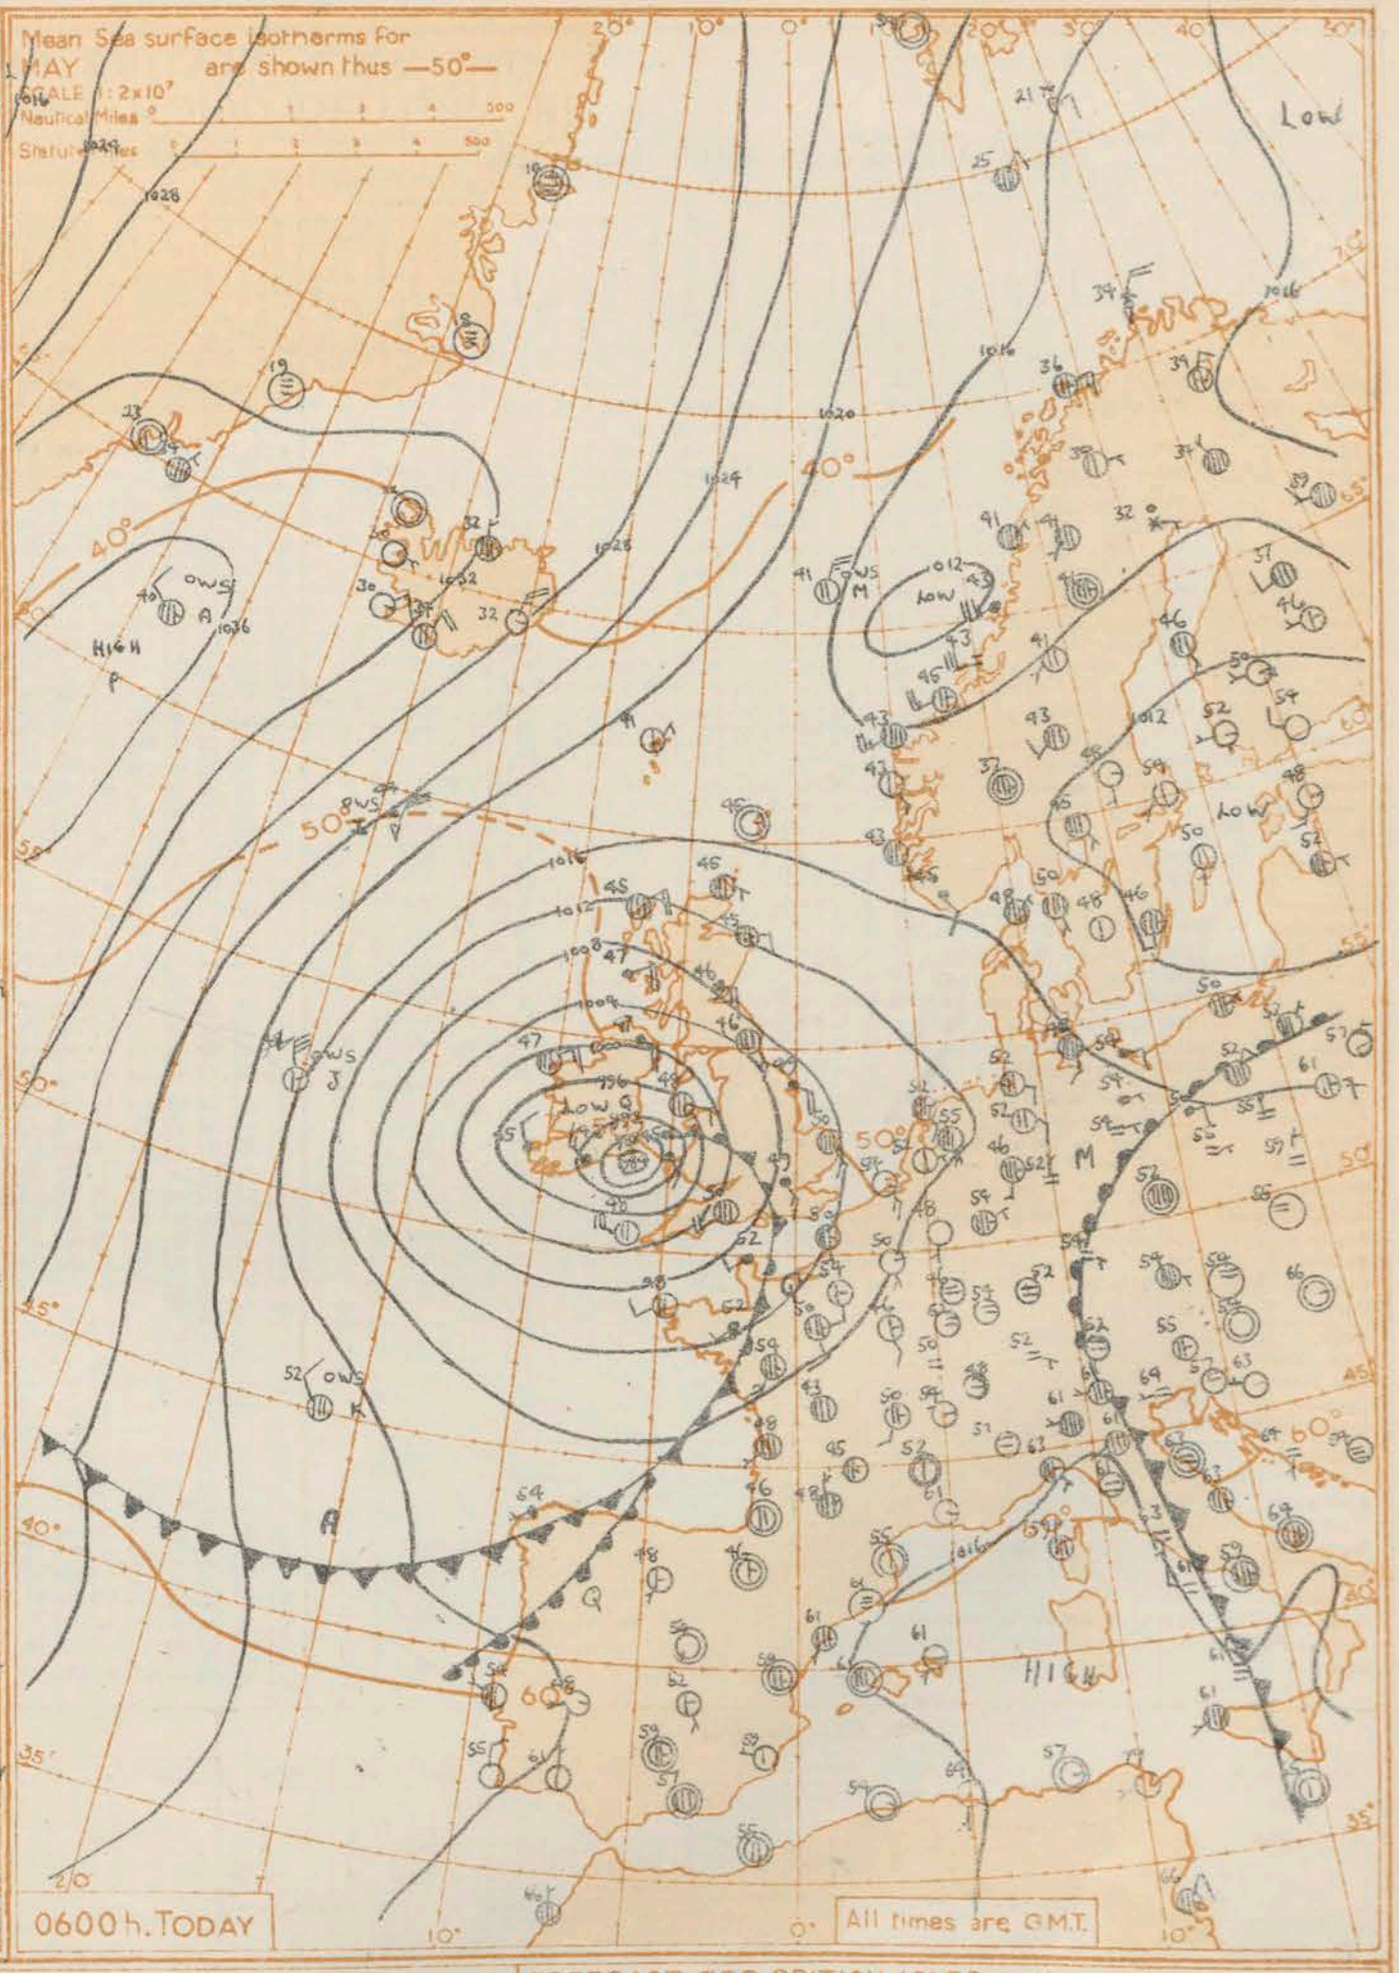
Mid-day (12h)
of
Thursday 22nd May
1958

Equidistant azimuthal projection 1·3×10⁷ on the plane of 60°N.

NAUTICAL MILES







GENERAL SYNOPTIC DEVELOPMENT

The complex low pressure system off Southern Ireland yesterday morning deepened as it moved into the British Isles and an intense depression is now centred over St. Georges Channel. The depression is expected to move rather slowly northwards.

Issued at midday today Friday 23rd May 1958

FORECAST FOR BRITISH ISLES until noon tomorrow

All areas will have showers or periods of rain and thunderstorms will occur in places. There will also be bright intervals in most districts. Wales and central and southern districts of England will be rather cool. Other areas will be cool.

OUTLOOK FOR the following 24 hours.

Continuing changeable and rather cool in most areas.

THE DAILY WEATHER REPORT
OF THE METEOROLOGICAL OFFICE, LONDON

OBSERVATIONS at 00h. G.M.T. 23rd May 1958

Code F M 11.A

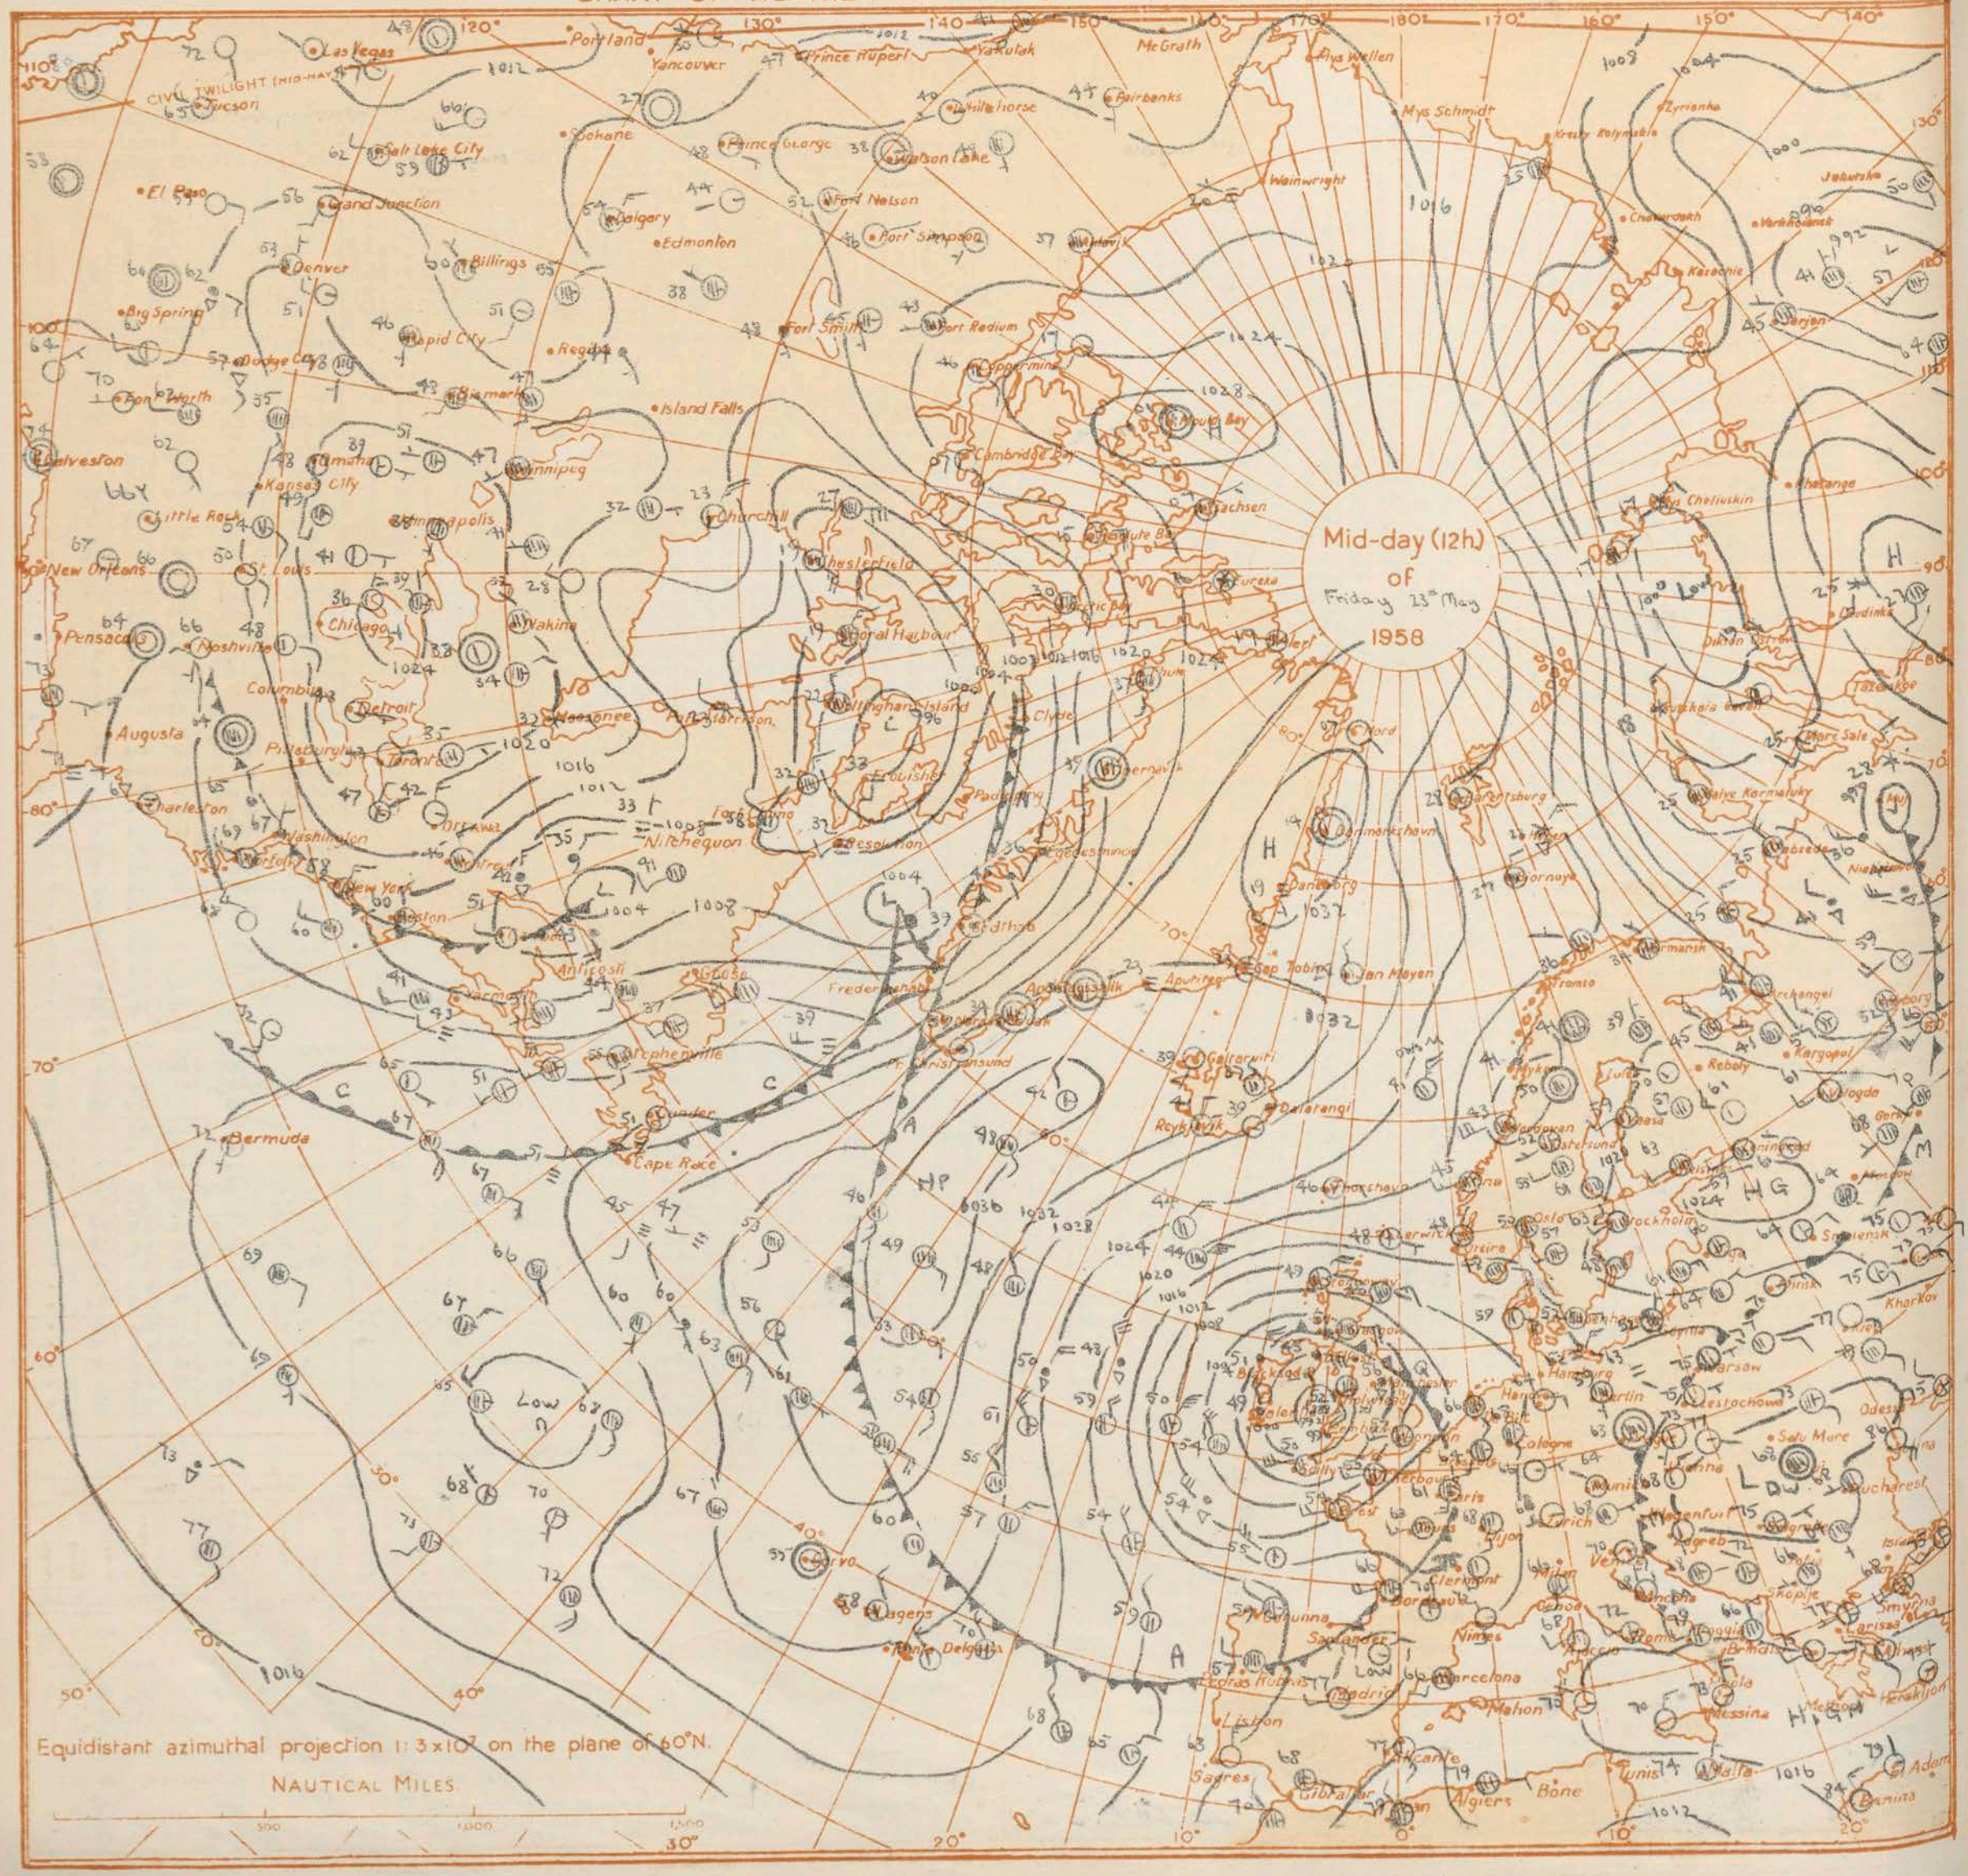
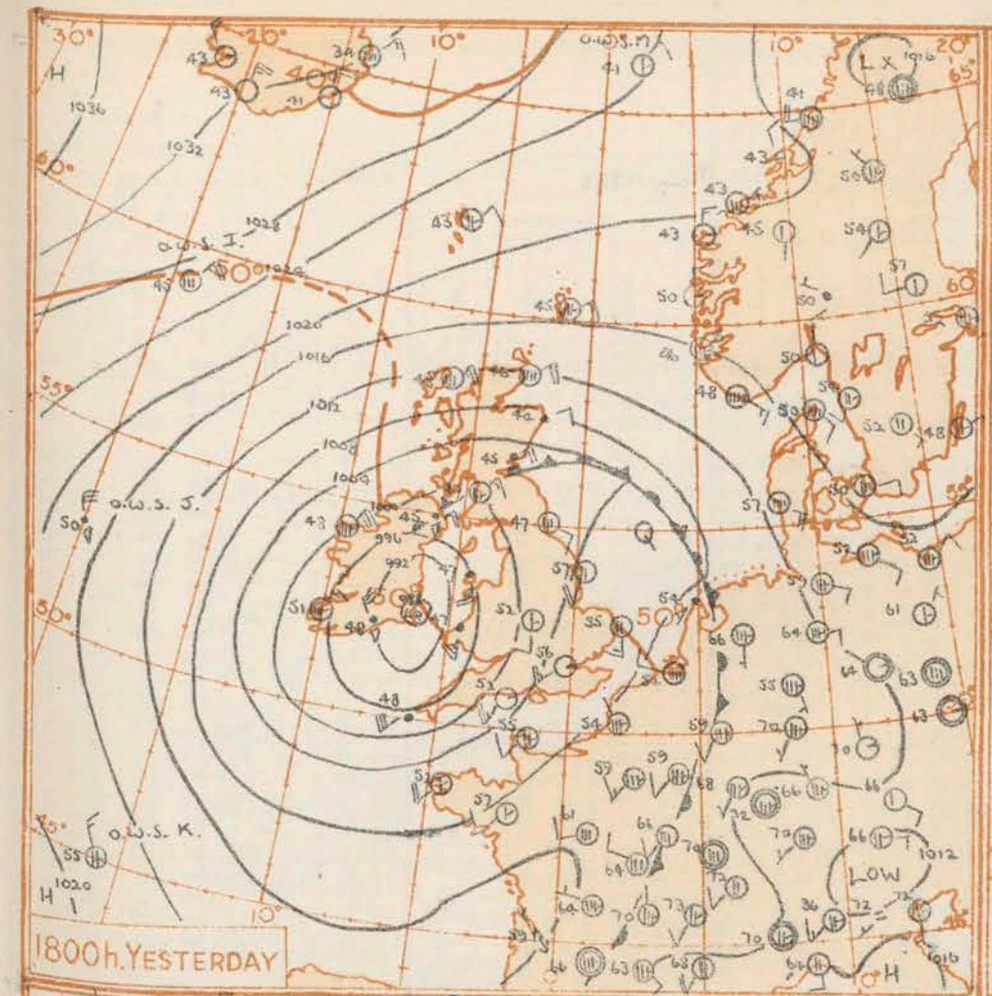
All times of observation printed in this publication are GREENWICH MEAN TIME.

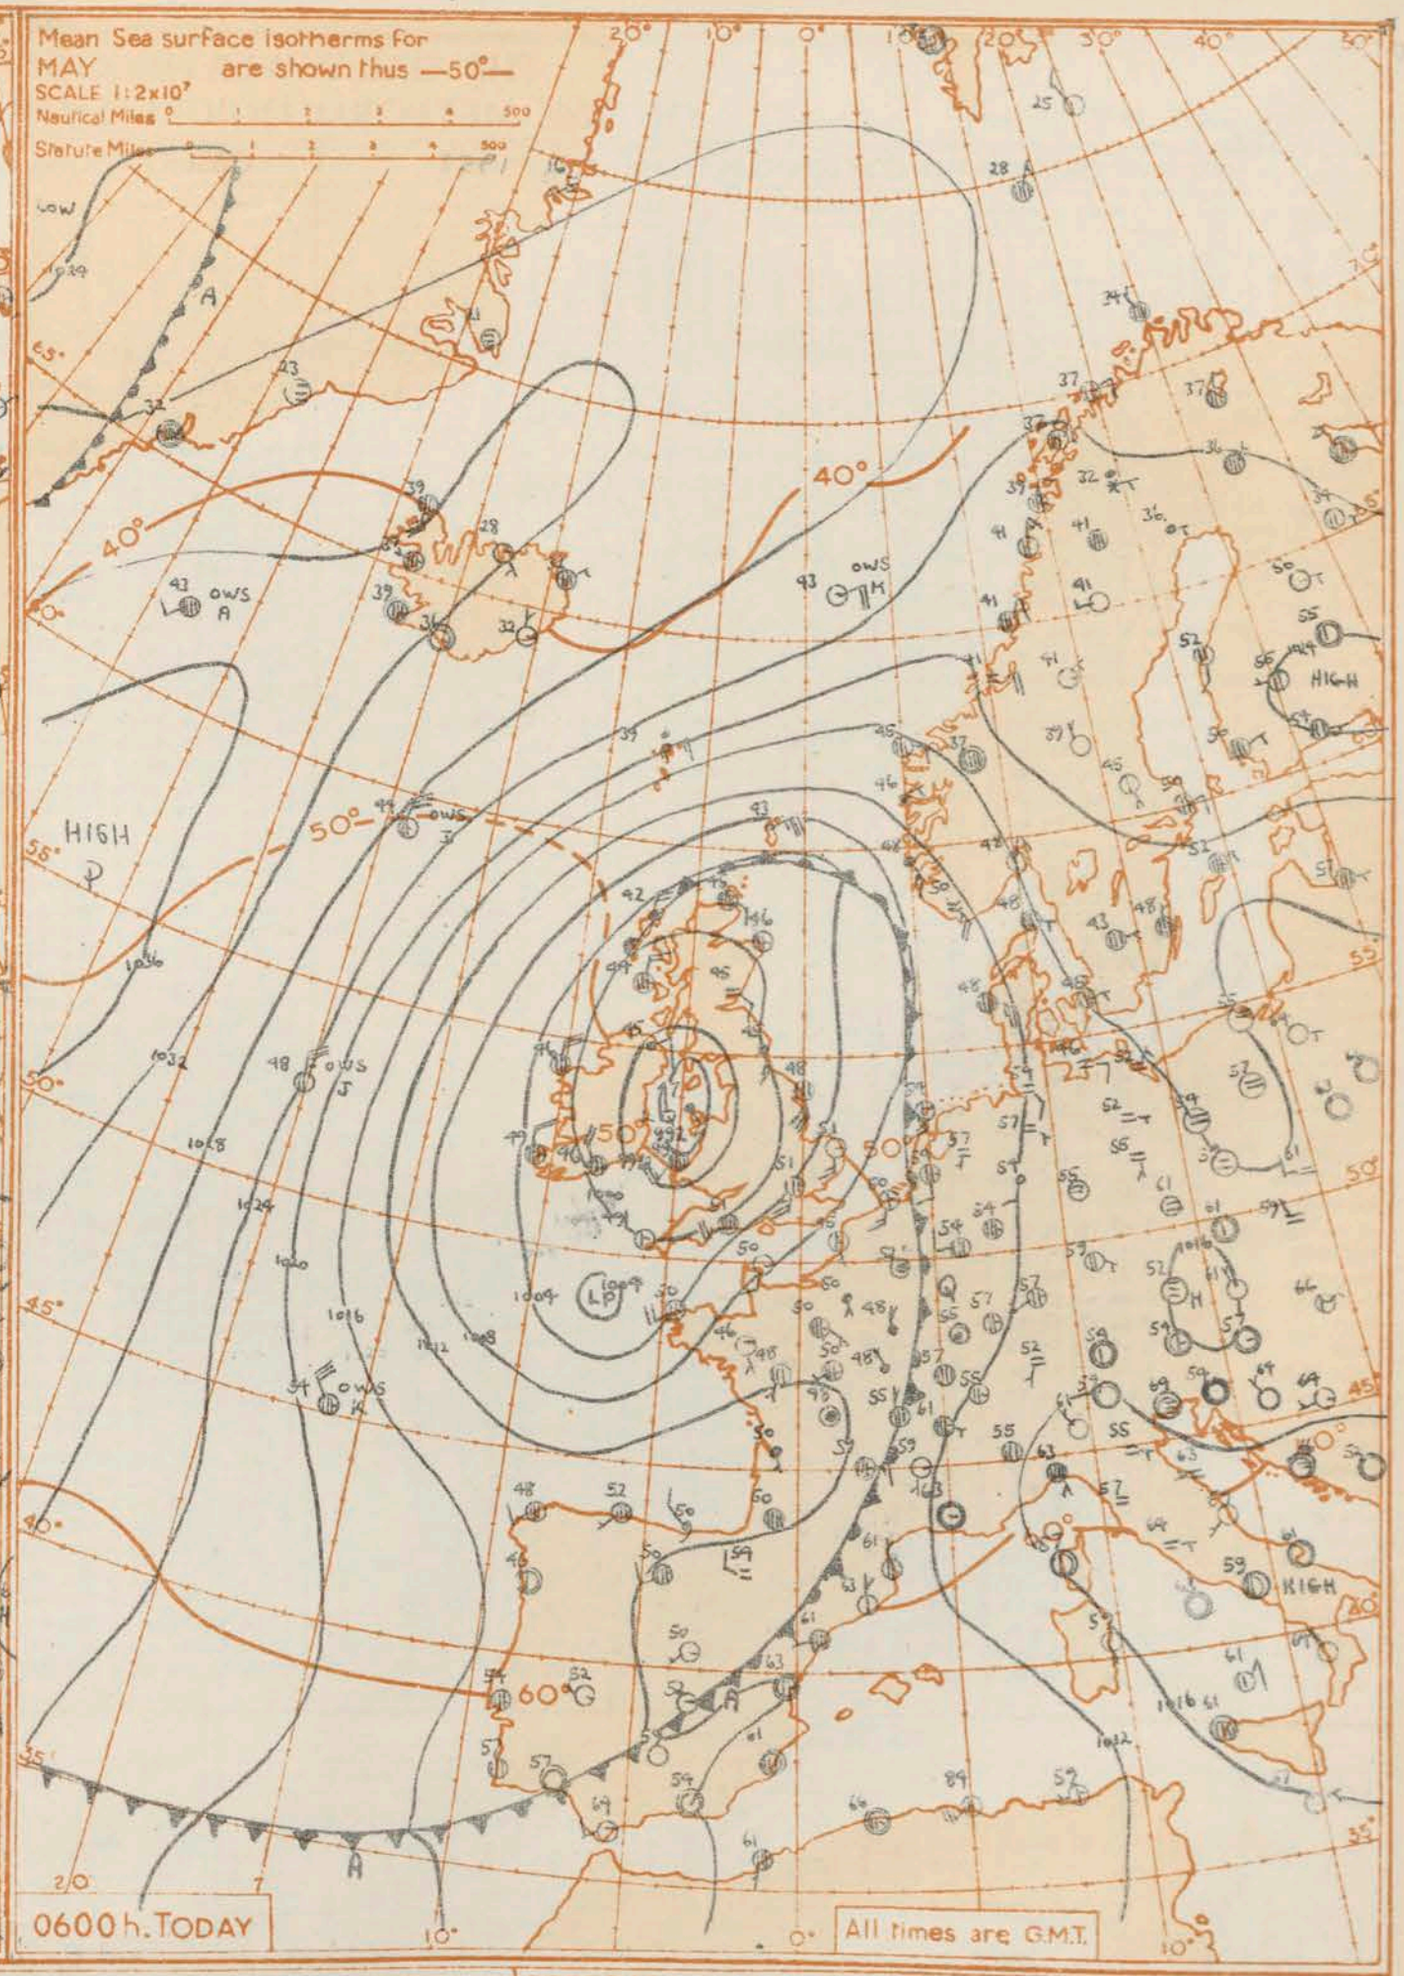
* Information not usually received.

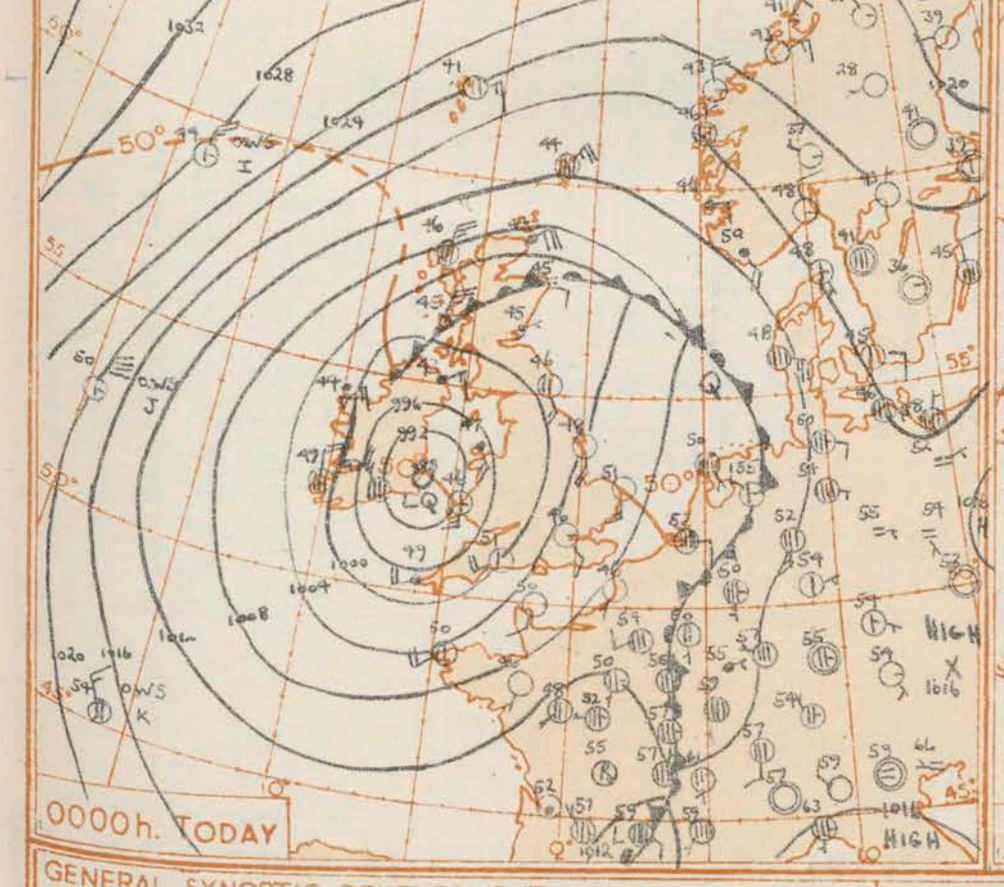
SIR GRAHAM SUTTON, C.B.E., D.Sc., F.R.S., Director General. Meteorological Office, Air Ministry, Kingsway, London, W.C.2.

CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE









GENERAL SYNOPTIC DEVELOPMENT

An intense depression near southeast Ireland yesterday morning remained almost stationary for some hours, then moved towards the central Irish Sea, filling slowly. It is now centred near Anglesey and is expected to move to central Scotland by tomorrow morning. Another depression is developing to the southwest of the British Isles and will move slowly east.

Issued at midday today Saturday 24th May 1958

FORECAST FOR BRITISH ISLES until noon tomorrow

It will be rather cool with showers or periods of thundery rain in most places, though there will be some bright intervals also.

OUTLOOK FOR the following 24 hours.

Probably little change.

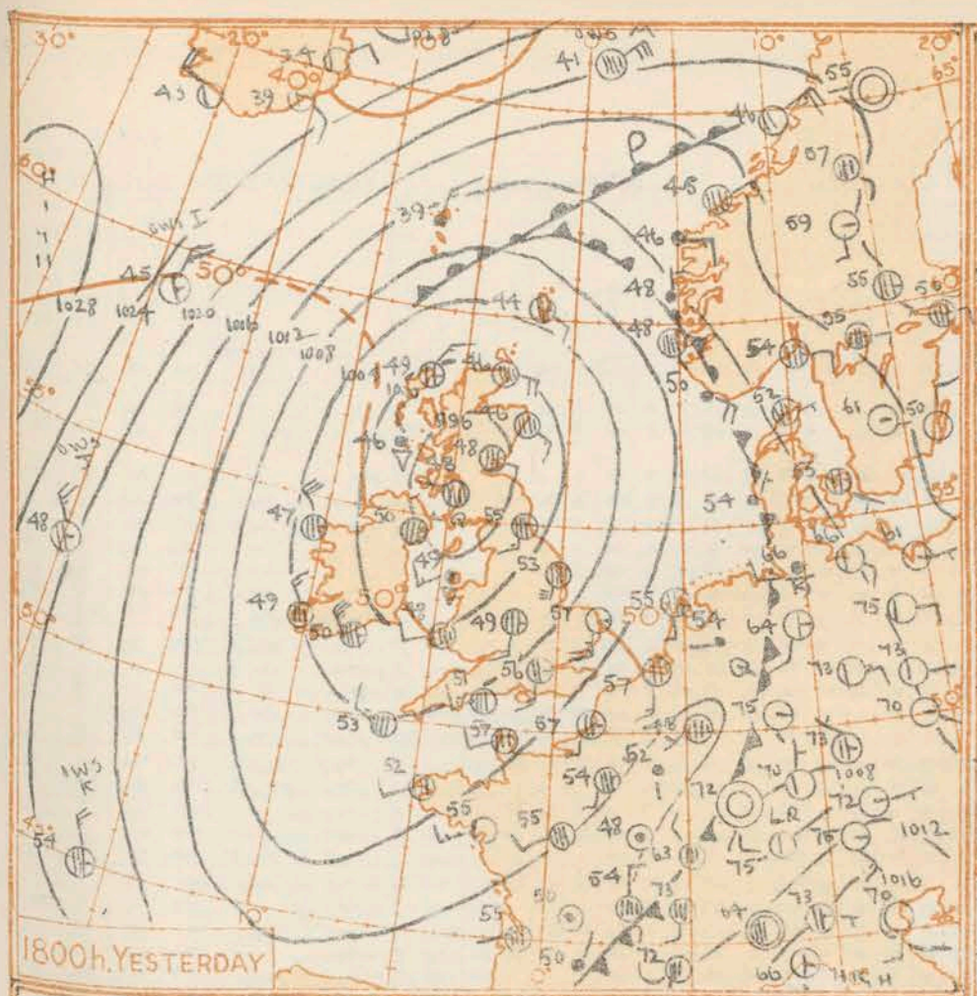
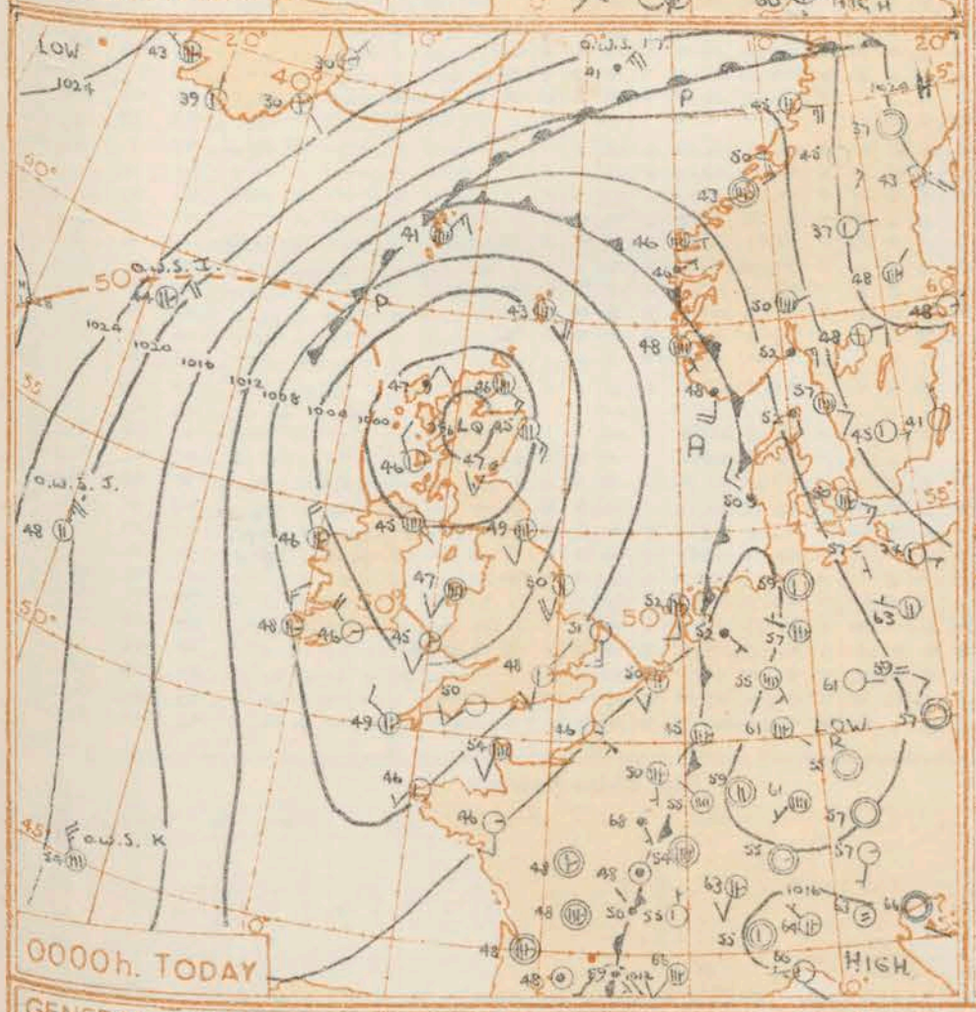
CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

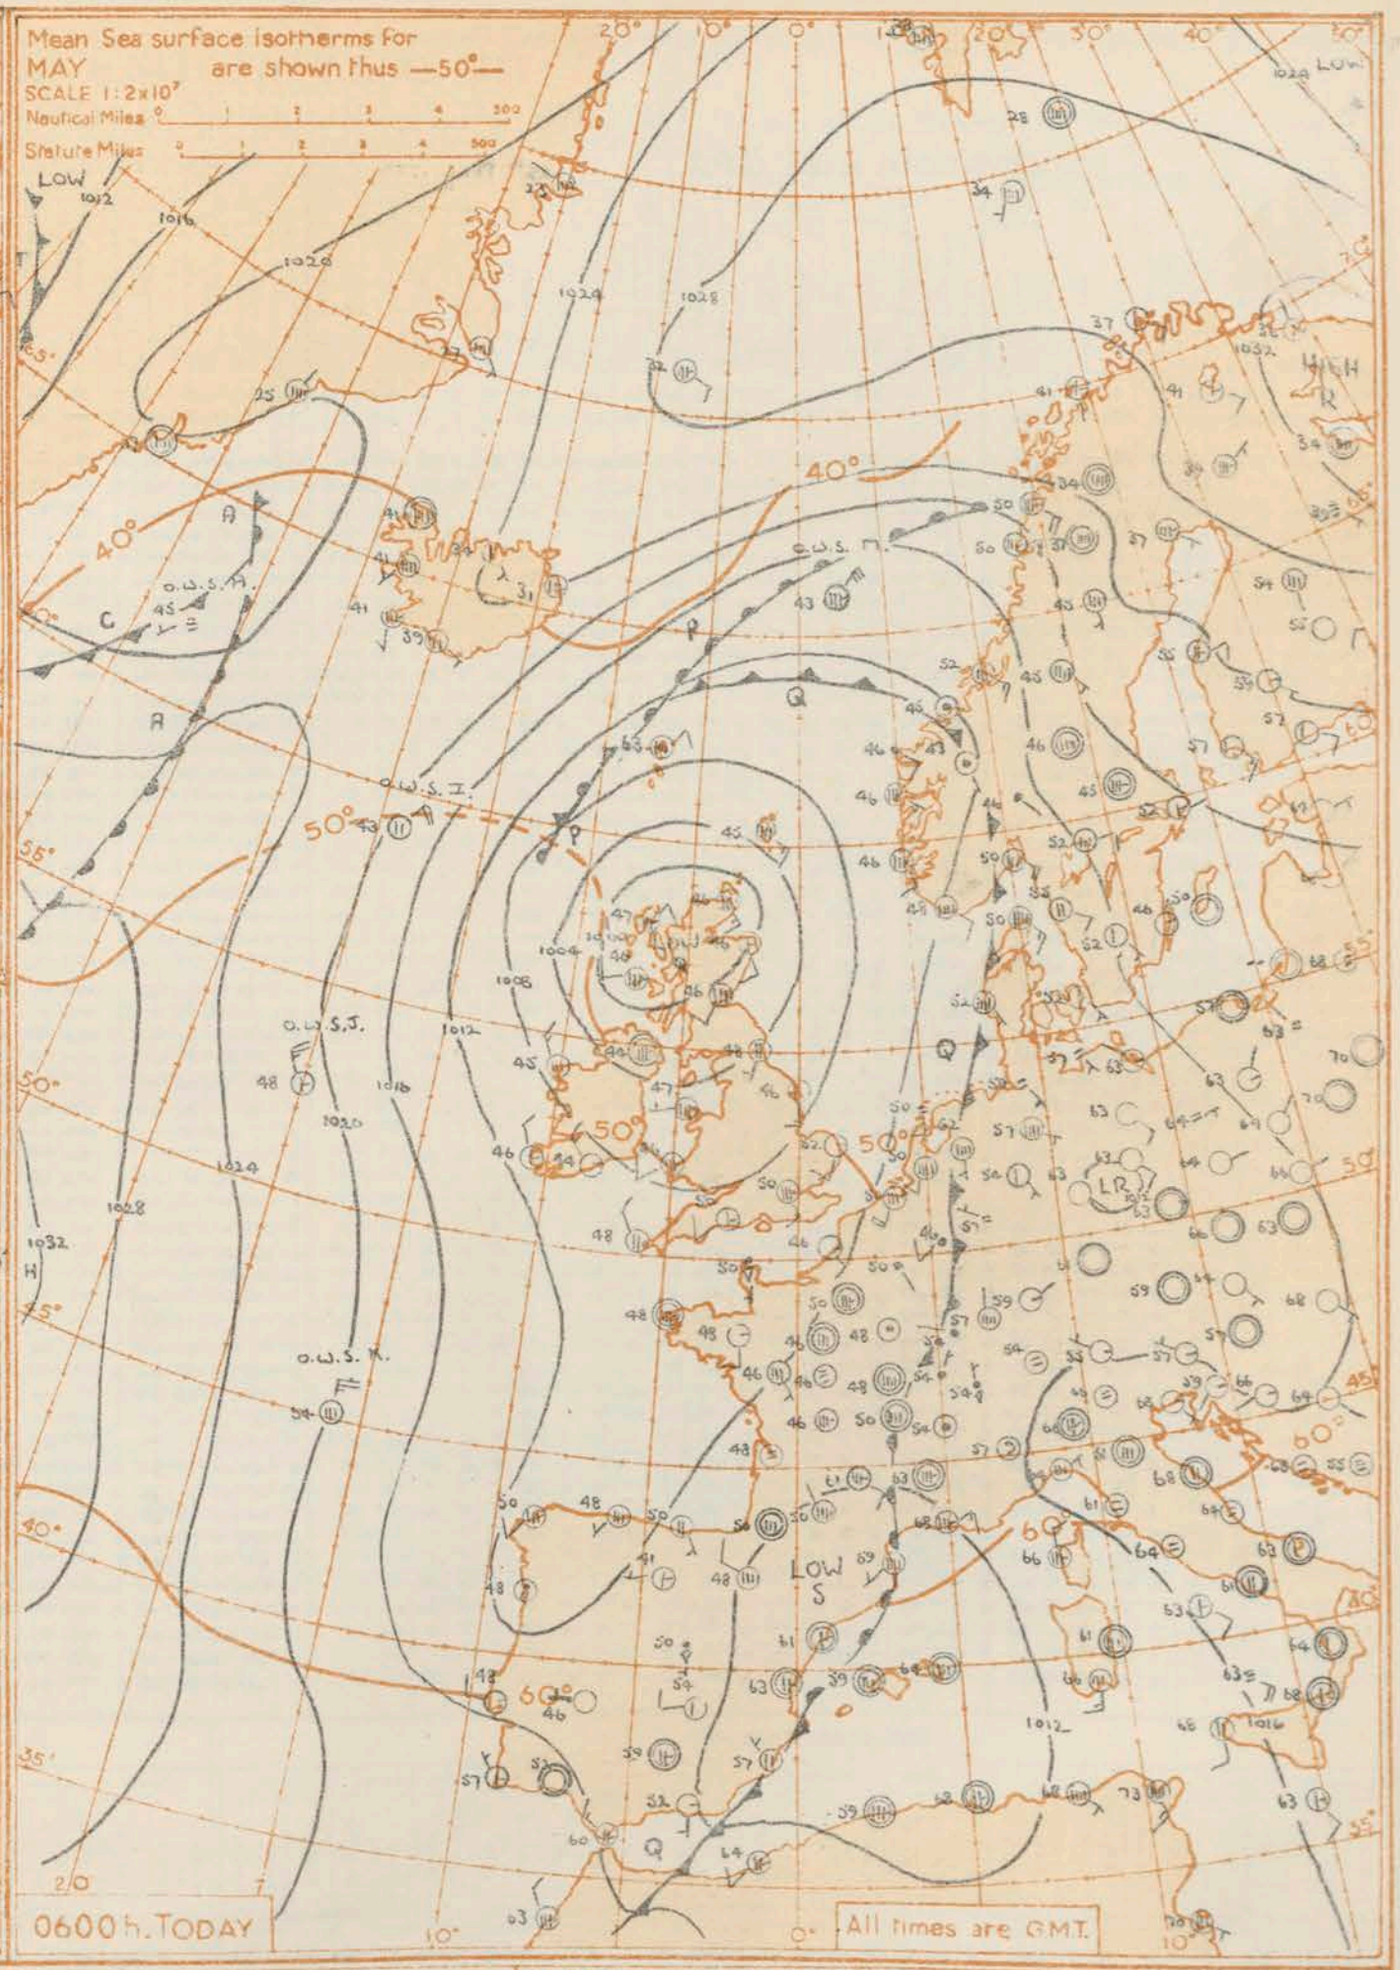
Mid-day (12h)
of
Saturday 24th May
1958

Equidistant azimuthal projection 1:3×10⁷ on the plane of 60°N.

NAUTICAL MILES.







GENERAL SYNOPTIC DEVELOPMENT

A depression near the Isle of Man moved northwards to Northern Scotland while a trough extending southwards across the Bay of Biscay swung very slowly eastwards. The depression is expected to continue moving slowly northwards as it fills and it is likely that a new depression will form near Spain and move northeastwards.

Issued at midday today Sunday 25th May 1958

FORECAST FOR BRITISH ISLES until noon tomorrow

Over Northern Scotland the weather will be mostly cloudy with occasional rain. Elsewhere in the British Isles there will be sunny periods and showers. The showers may be heavy at times with thunder in places, but in southern England only light and scattered showers are expected. Temperatures will be mostly near average

OUTLOOK FOR the following 24 hours:-

Sunny periods and scattered showers chiefly in the north.

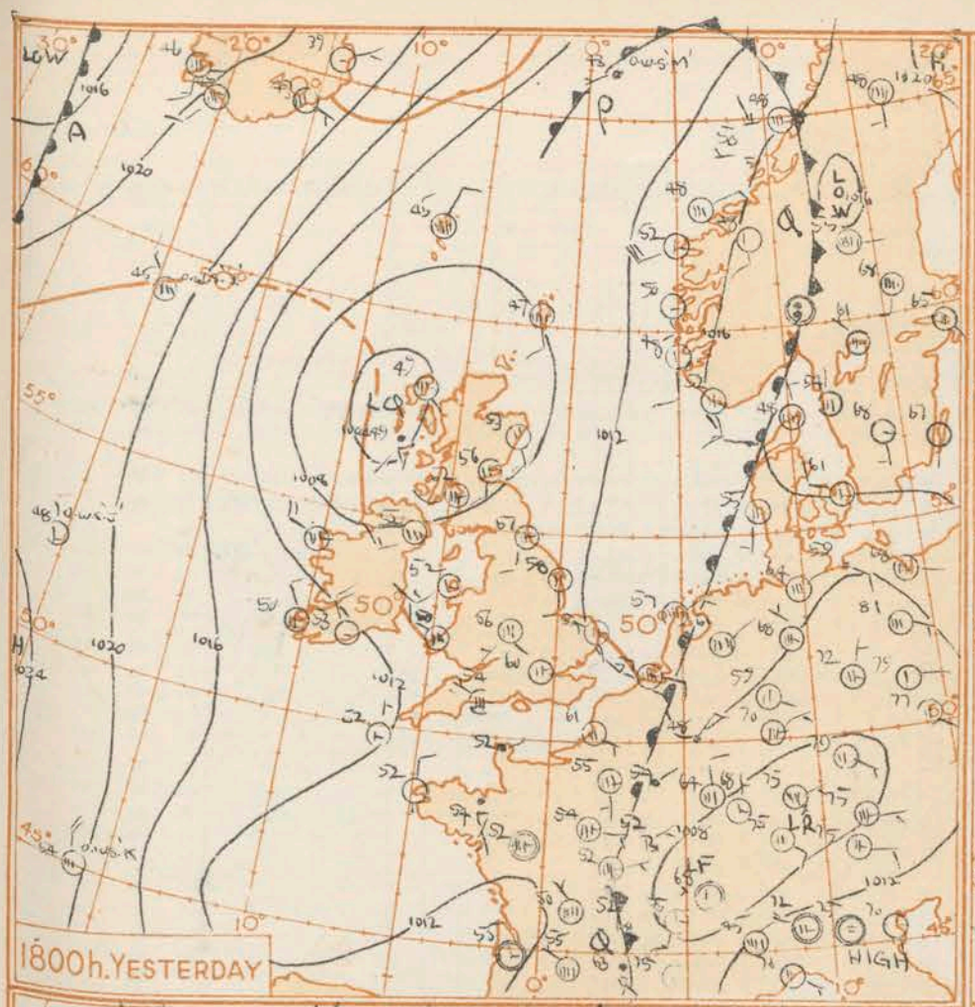
CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

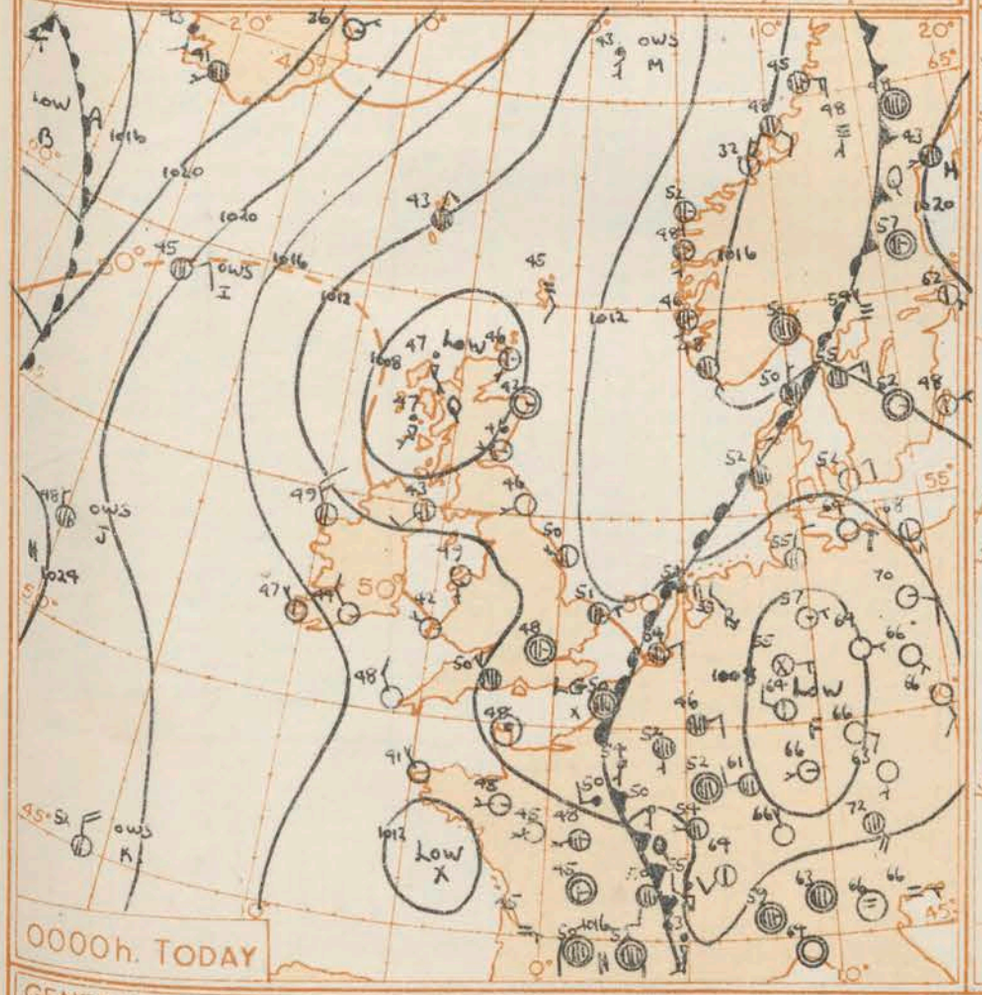
Mid-day (12h)
of
Sunday 25th May
1958

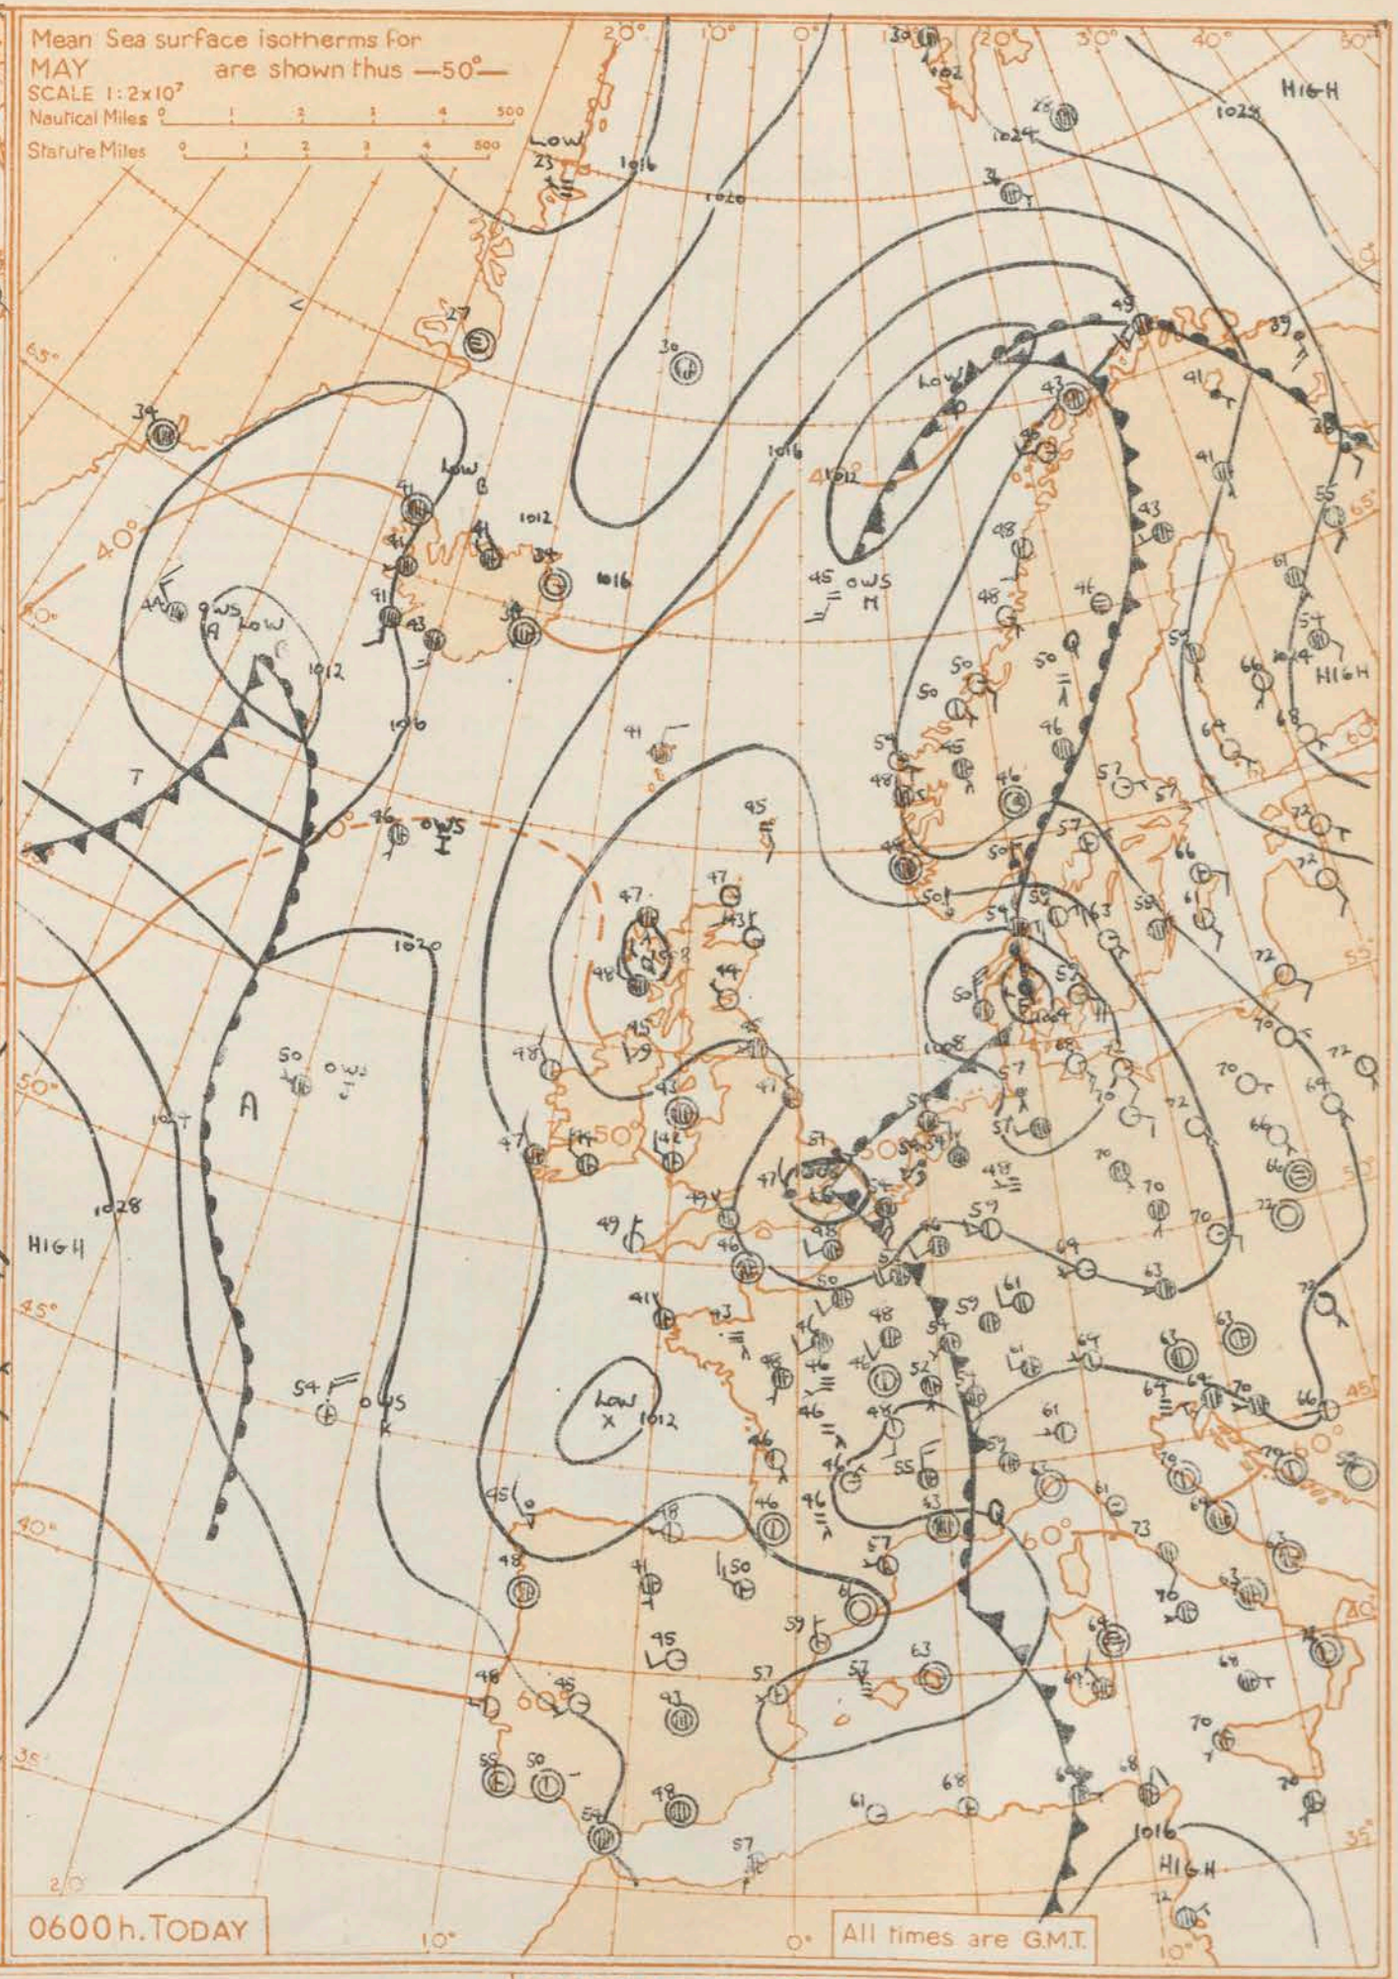
Equidistant azimuthal projection 1: 3×10⁷ on the plane of 60°N.

NAUTICAL MILES.

0 500 1,000 1,500







GENERAL SYNOPTIC DEVELOPMENT

A depression over northwest Scotland remained almost stationary, while another which formed to the north of Shetland, moved away northeastwards. A third depression which developed over the Pyrenees moved north-northeastwards as a complex area of low pressure. This depression is expected to continue moving northeastwards over the North Sea. The depression over northwest Scotland will fill, but another near Iceland will move southeastwards towards the British Isles

Issued at midday Today Monday 26th May 1958

FORECAST FOR BRITISH ISLES until noon tomorrow

Rain in southeastern districts of England will clear from the southwest as showery weather, but with bright periods, extends to all areas. During the night cloudy weather with rain will reach Northern Ireland and western Scotland and spread slowly southeastwards tomorrow morning. It will be mostly rather cool.

OUTLOOK FOR the following 24 hours

Rain at times in most districts but also some bright intervals. Rather cool.

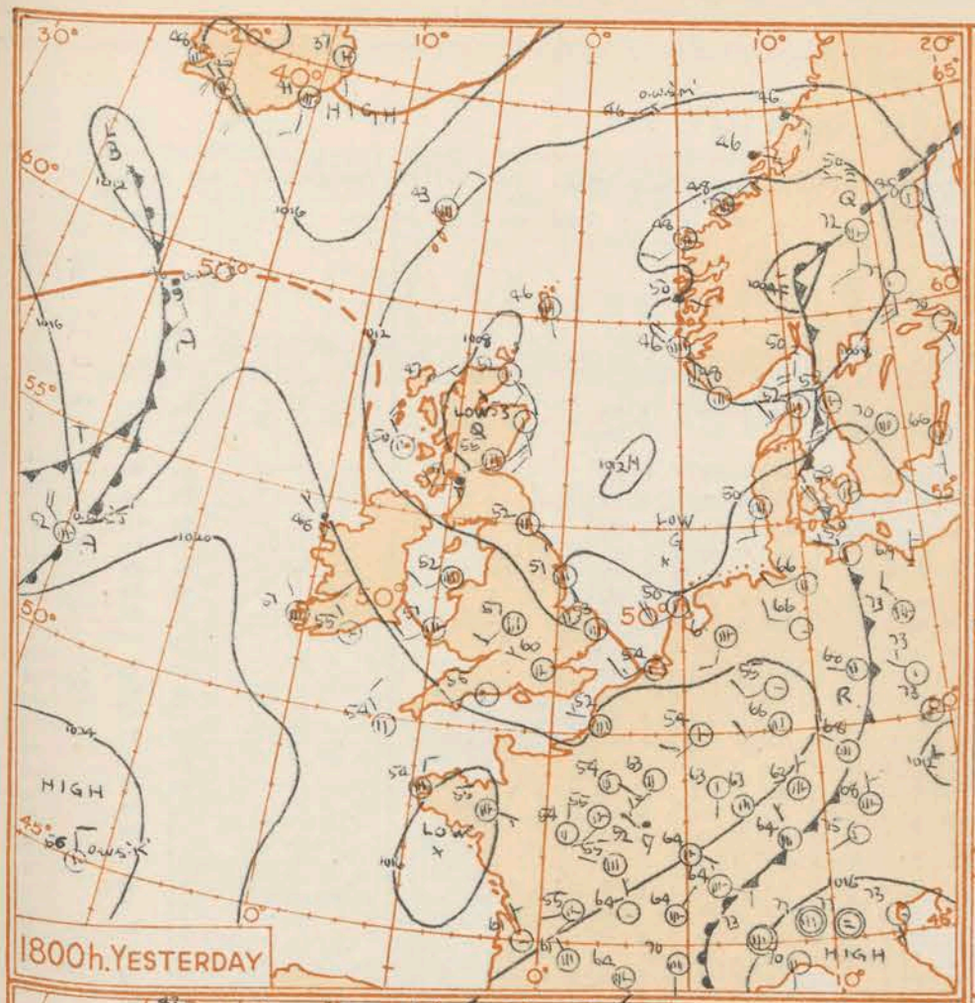
CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

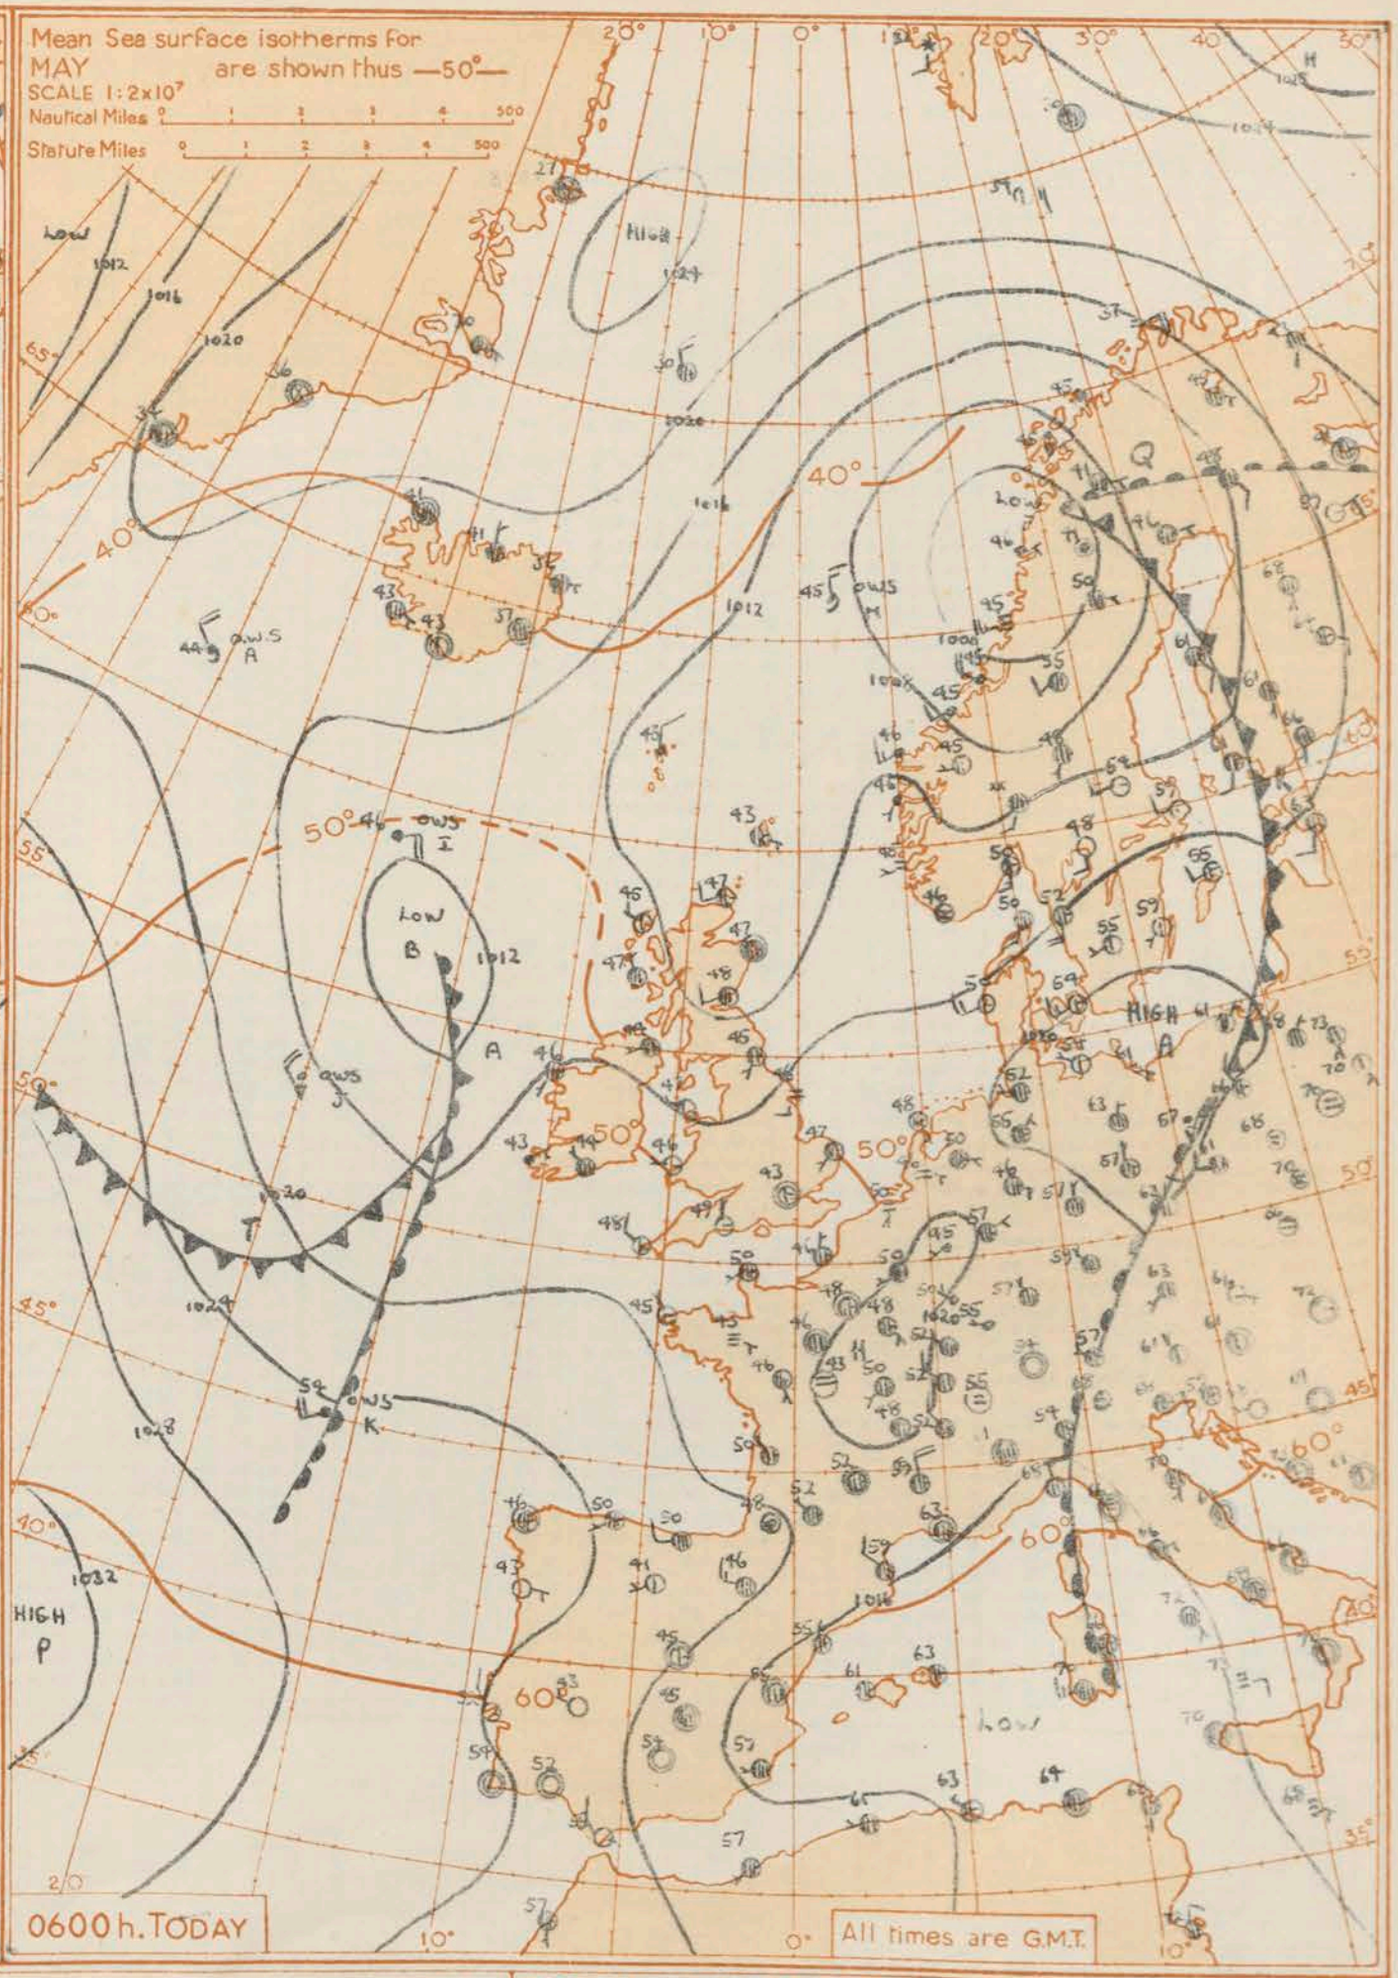
Mid-day (12h)
of
Monday 26th May
1958

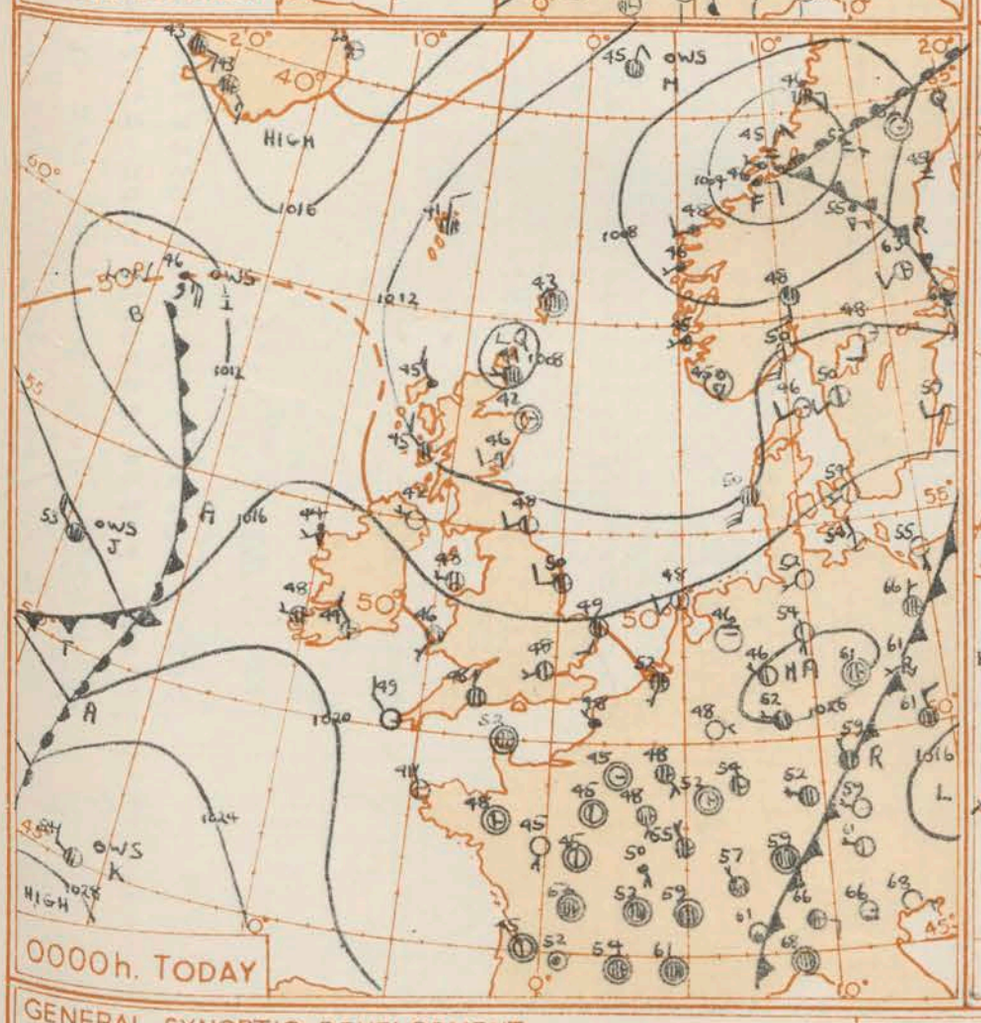
Equidistant azimuthal projection 1: 3×10^7 on the plane of 60°N.

NAUTICAL MILES.

0 500 1,000 1,500







GENERAL SYNOPTIC DEVELOPMENT

Issued at midday today Tuesday 27th May 1958

A small shallow disturbance over southeast England moved into the North Sea and filled behind a more vigorous depression moving north from Denmark to west Norway. Another shallow low in the Hebrides moved slowly northeast to Orkney. A weak depression near Iceland yesterday has moved south-southeast and is now expected to move via Biscay to France, while a weak ridge crosses England and Wales.

FORECAST FOR BRITISH ISLES until noon tomorrow

Scotland and northern England will have scattered showers and sunny intervals but it will be mainly fine tonight. Most other parts of England and Wales will have bright weather with showers here and there but parts of Wales and southwest England will become cloudy and slight rain may occur over the Cornish Peninsula tonight. Northern Ireland will be temporarily cloudy but skies will become brighter with scattered showers. Temperatures near or below average.

OUTLOOK FOR the following 24 hours

Chance of occasional rain in extreme southern districts otherwise mainly bright with scattered showers.

All times are G.M.T.

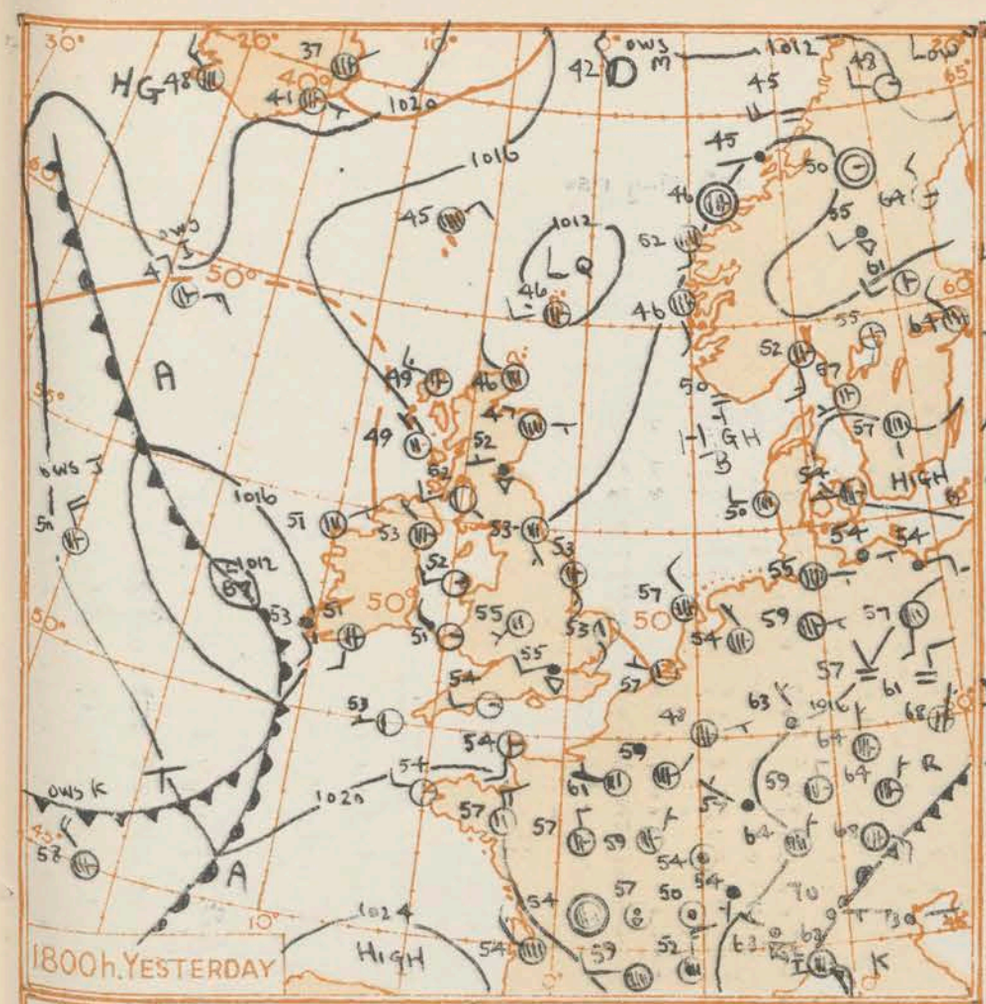
SIR GRAHAM SUTTON, C.B.E., D.Sc., F.R.S., Director General. Meteorological Office, Air Ministry, Kingsway, London, W.C.2.

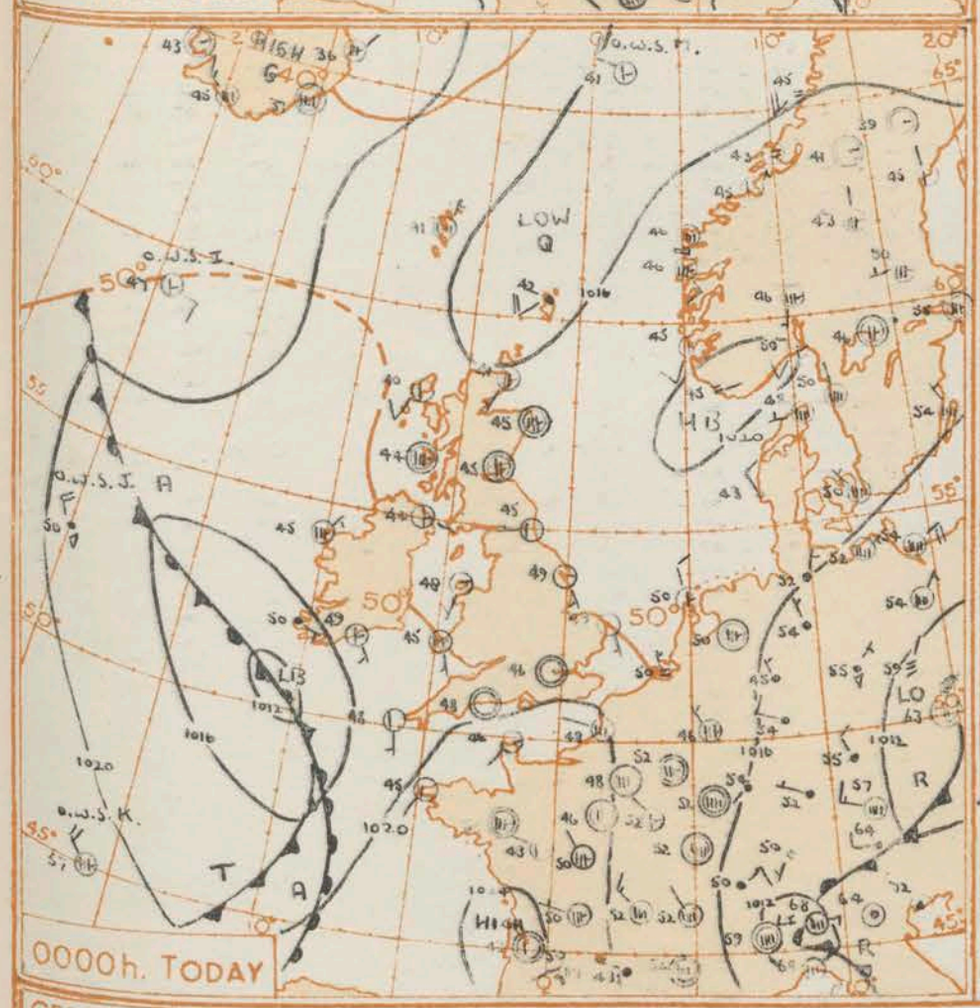
CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

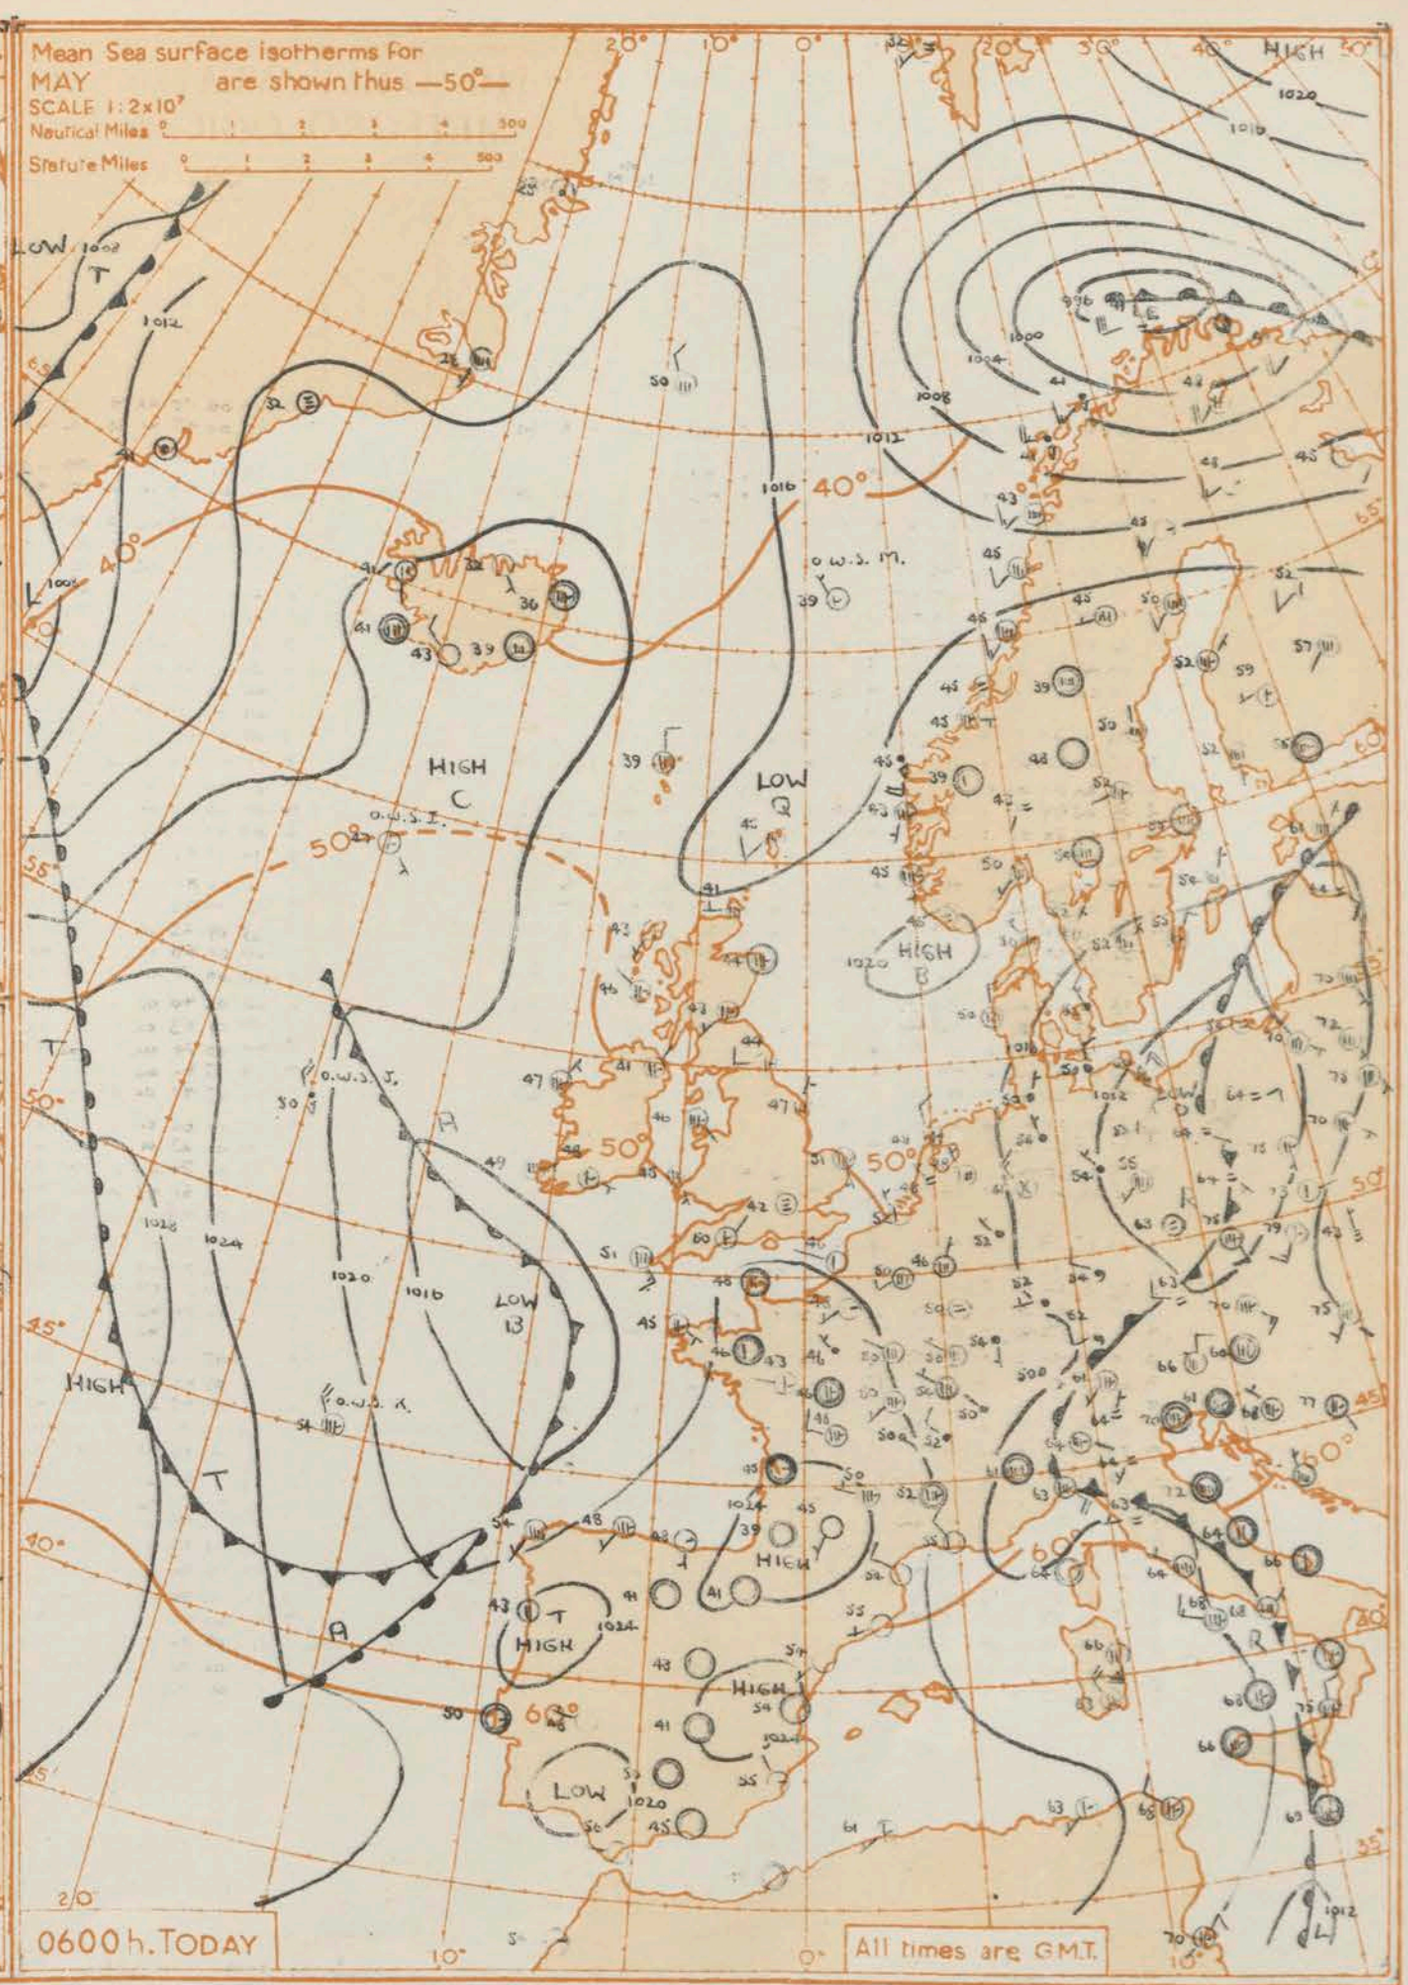
Mid-day (12h.)
of
Tuesday 27th May
1958

Equidistant azimuthal projection 1·3×10⁷ on the plane of 60°N.

NAUTICAL MILES







GENERAL SYNOPTIC DEVELOPMENT

A shallow low over north Scotland early yesterday has drifted south-north while a depression to the west of Scotland moved steadily south-southeast to a position west of Scilly. This latter depression will move into France and begin to deepen and turn northeast. A ridge of high pressure near Iceland will now move into northern areas of the British Isles from the northwest.

Issued at Midday today Wednesday 21st May 1958

FORECAST FOR BRITISH ISLES until noon tomorrow

Sunny periods are expected in all areas today and tonight but probably recurring in places in England and Wales tomorrow. There will probably be more general cloud in parts of the southwest today and one southeast later tonight or tomorrow with slight rain in places. Patches of mist and local ground frost will occur tonight.

OUTLOOK FOR the following 24 hours:-

Probably fine in most areas but becoming cloudy with occasional rain in the west and north.

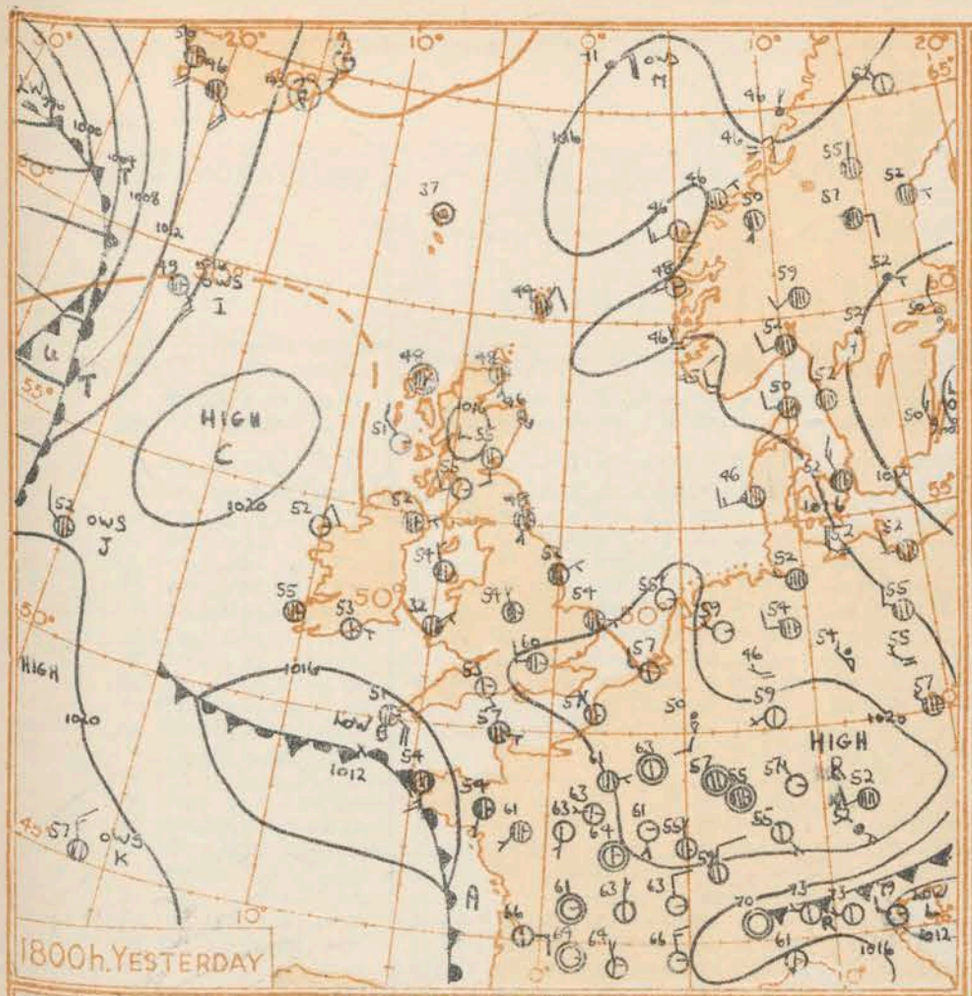
SIR GRAHAM SUTTON, C.B.E., D.Sc., F.R.S., Director General. Meteorological Office, Air Ministry, Kingsway, London, W.C.2.

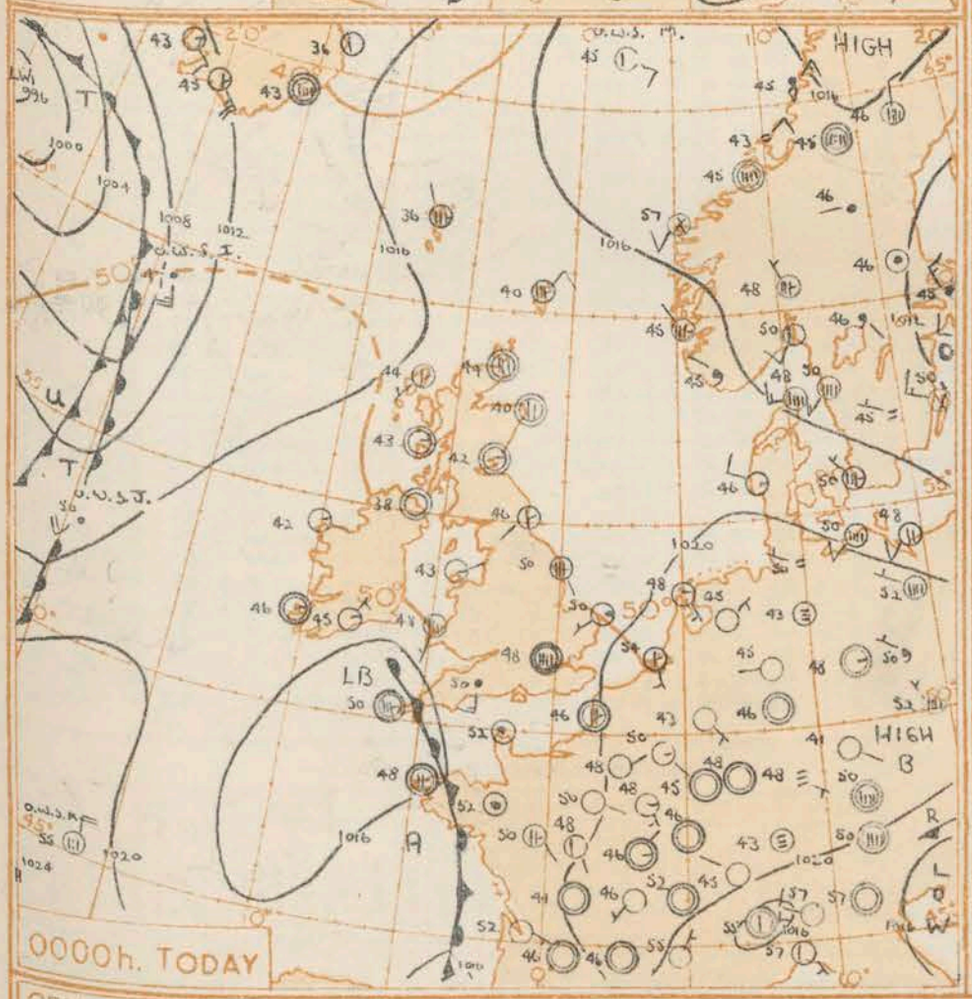
CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

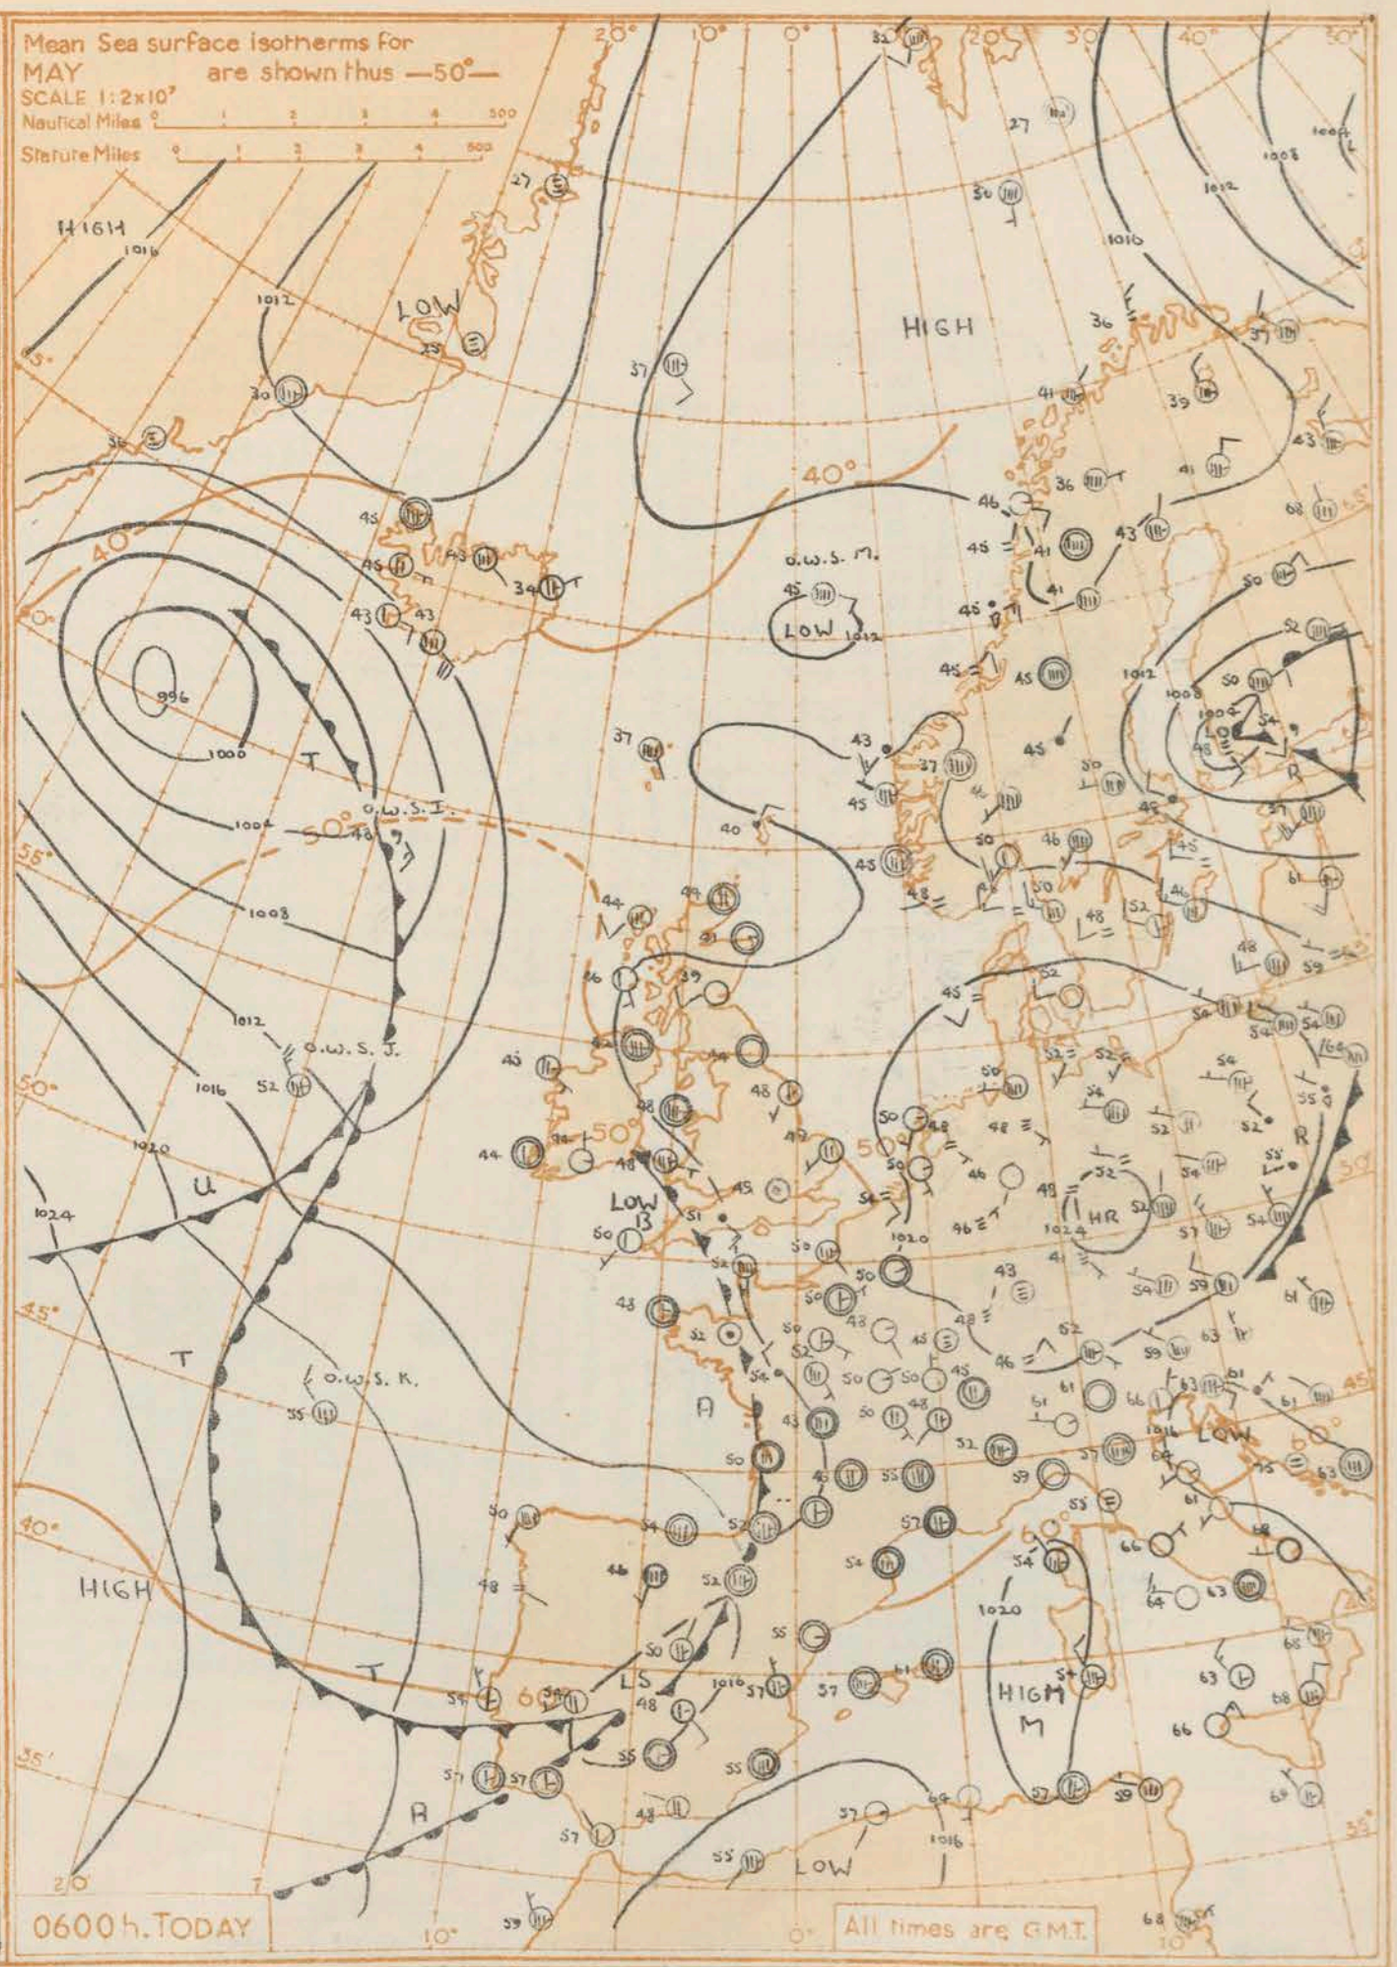
Mid-day (12h)
of
Wednesday 28th May
1958

Equidistant azimuthal projection 1·3×10⁷ on the plane of 60°N.

NAUTICAL MILES.







GENERAL SYNOPTIC DEVELOPMENT

The depression which was centred to the west of Scot... yesterday morning has moved slowly eastwards to Cornwall. A shallow depression has persisted to the north of Scotland. The Cornish depression is expected to move slowly into the Irish Sea and an associated trough will move slowly northeastwards across England and Wales. Pressure will remain low to the north-northeast of Scotland. a trough of low pressure is approaching the British Isles slowly from the Atlantic.

Issued at midday today Thursday 29th May 1958

FORECAST FOR BRITISH ISLES until noon tomorrow

Weather will be cloudy over much of En... Lanc and Wales with occasional rain, which may be heavy at times, but brighter weather with only scattered showers now over the Cornish Peninsula will spread slowly northeastwards across Wales, the Midlands, Central Southern and parts of Southeast England. Scotland and Northern Ireland will have scattered showers today, but rain will reach South and east Scotland tonight. Rather cool generally

OUTLOOK FOR the following 24 hours

Changeable weather continuing

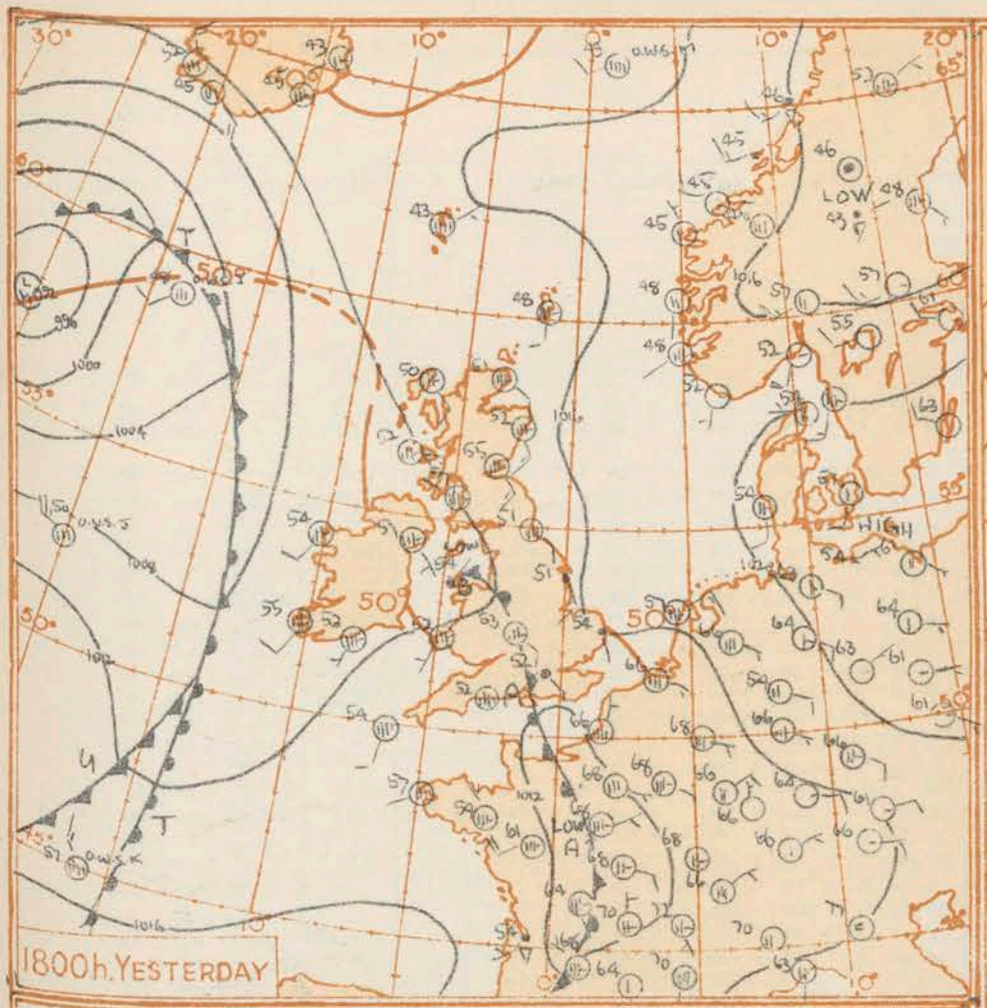
CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

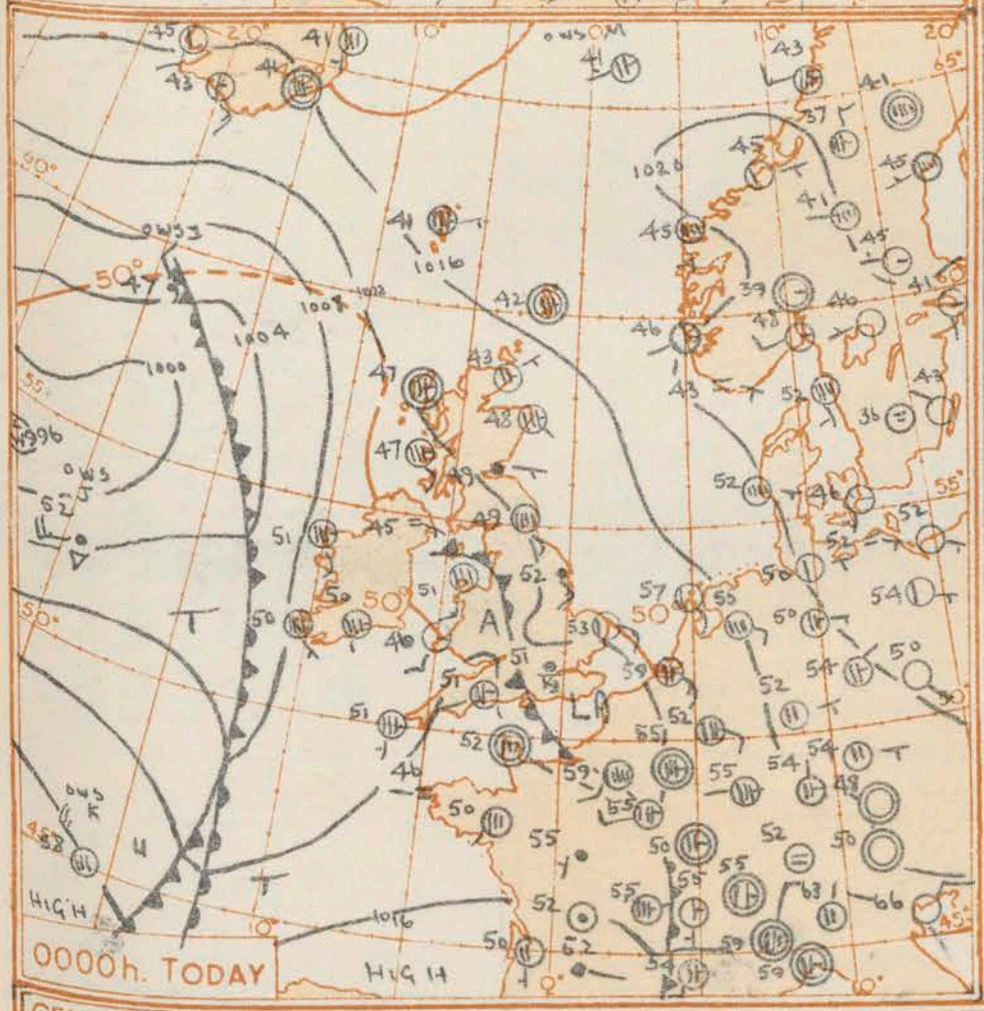
Mid-day (12h)
Thursday 29th May
1958

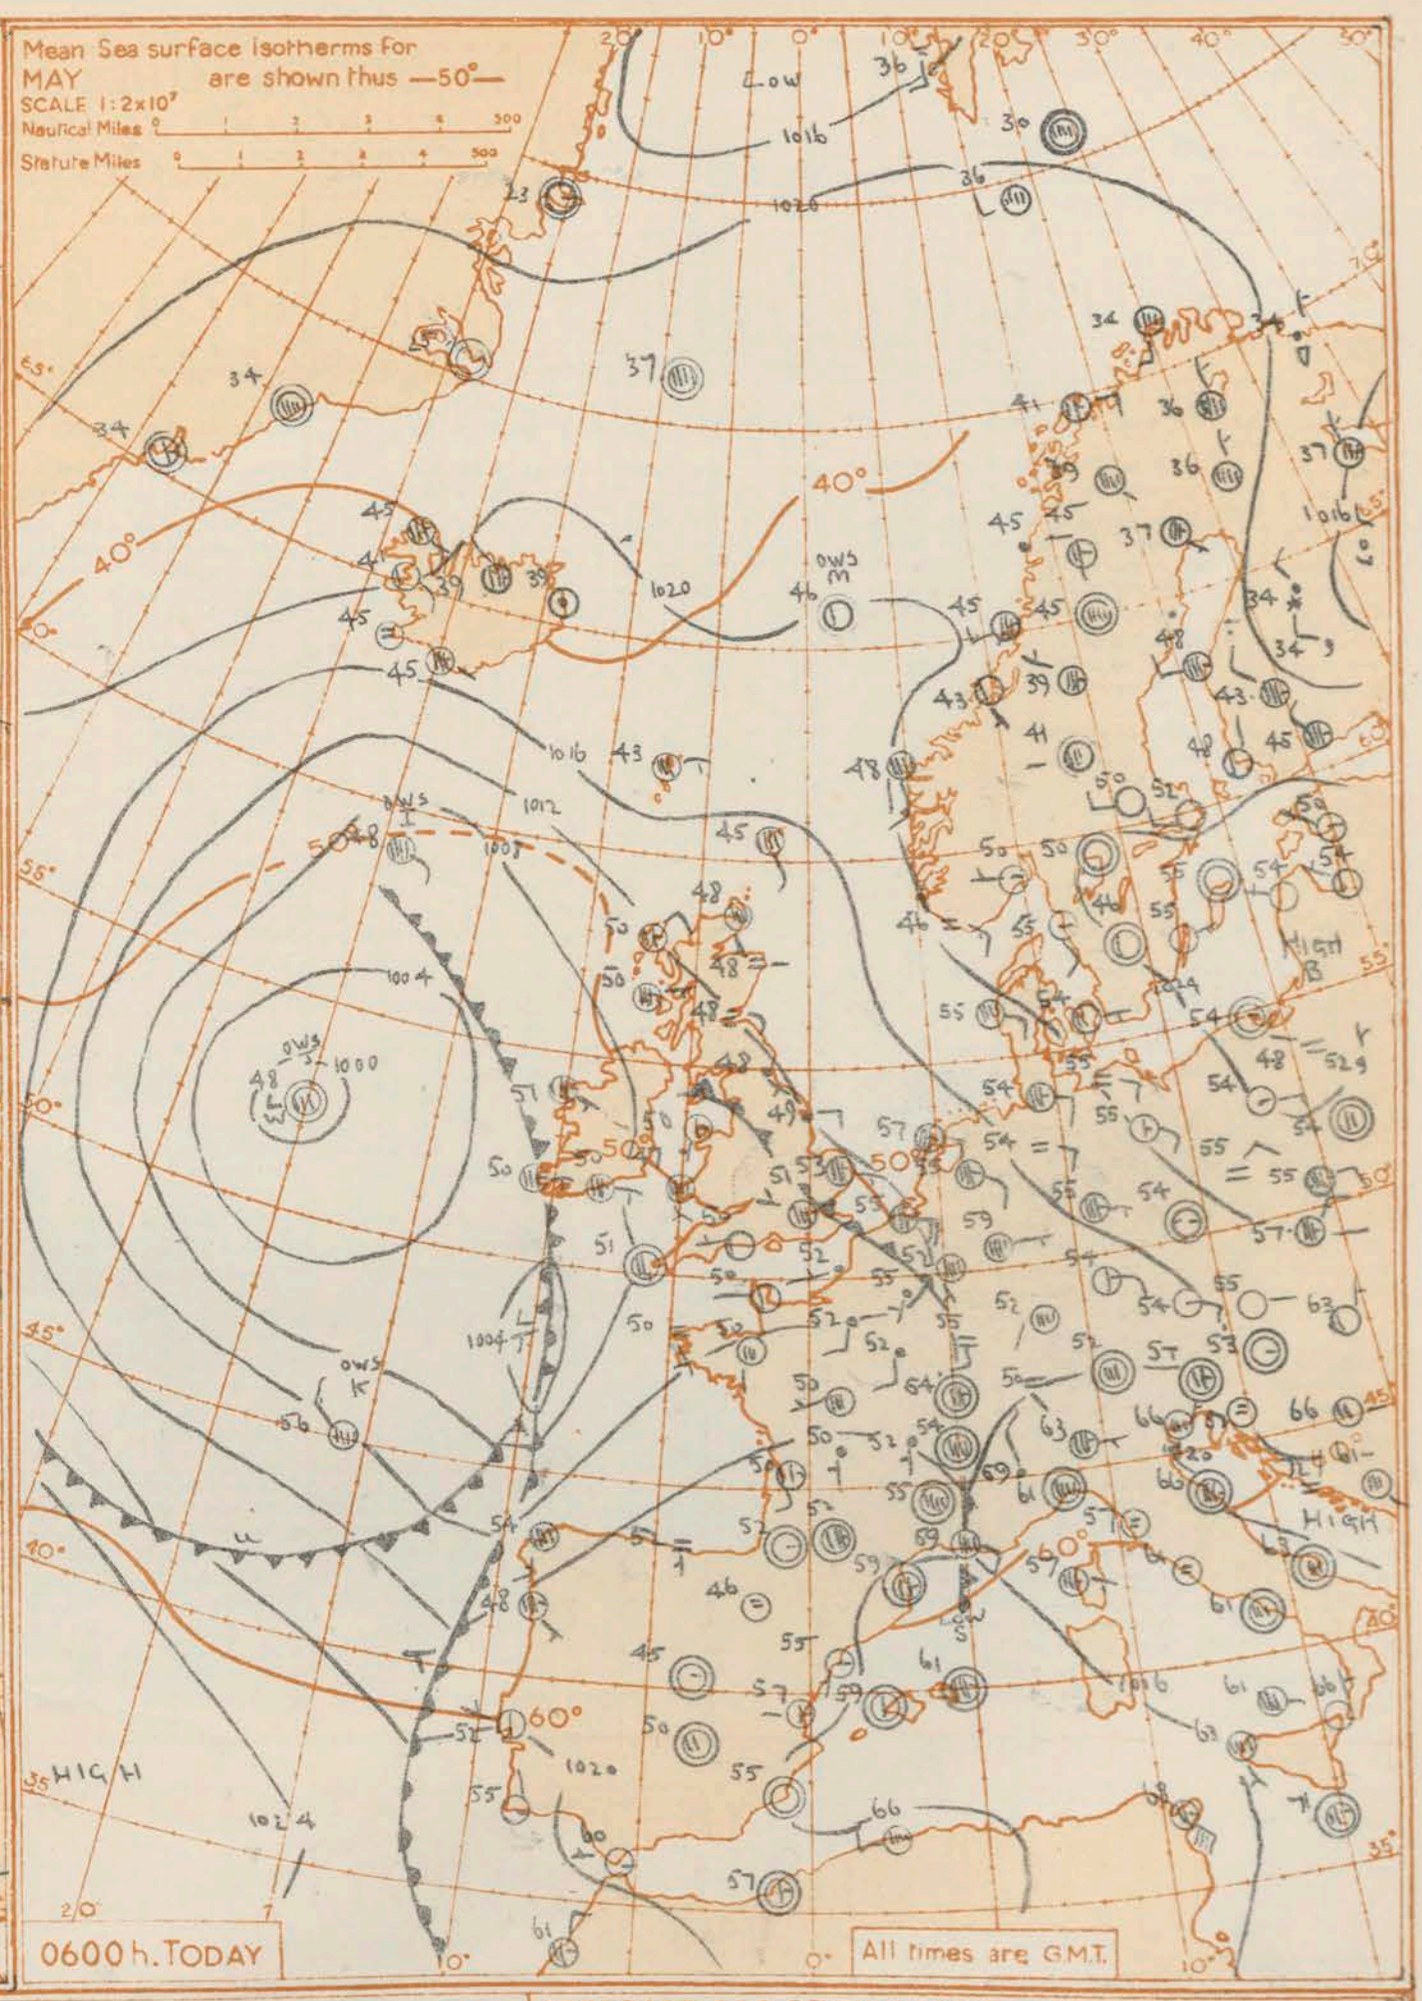
Equidistant azimuthal projection 1: 3×10^7 on the plane of 60°N.

NAUTICAL MILES

500 1,000 1,500







GENERAL SYNOPTIC DEVELOPMENT

Issued at midday today Friday 30th May 1958

The small depression near Cornwall yesterday morning moved northwards to the Irish Sea and the associated trough of low pressure moved northeast across Wales and parts of England. Small thundery depressions moved north wards across southeast England. Another trough has approached our southwestern districts from the Atlantic. The trough now over England will move into Scotland and the Atlantic trough is expected to move into Wales and southwest England. A depression to the west of Ireland will move to the southwest approaches.

FORECAST FOR BRITISH ISLES until noon tomorrow

East and north England will have some rain today followed by a dry night and local fog. The Midlands, southern England and Wales will have bright periods and scattered showers today, but cloudy weather and some rain will spread from the southwest this evening and tonight. Much of Scotland will have considerable rain and Northern Ireland occasional rain. Rather cool in rain areas. Near average temperatures in the south.

OUTLOOK FOR the following 24 hours

Further rain or showers probably in most areas.

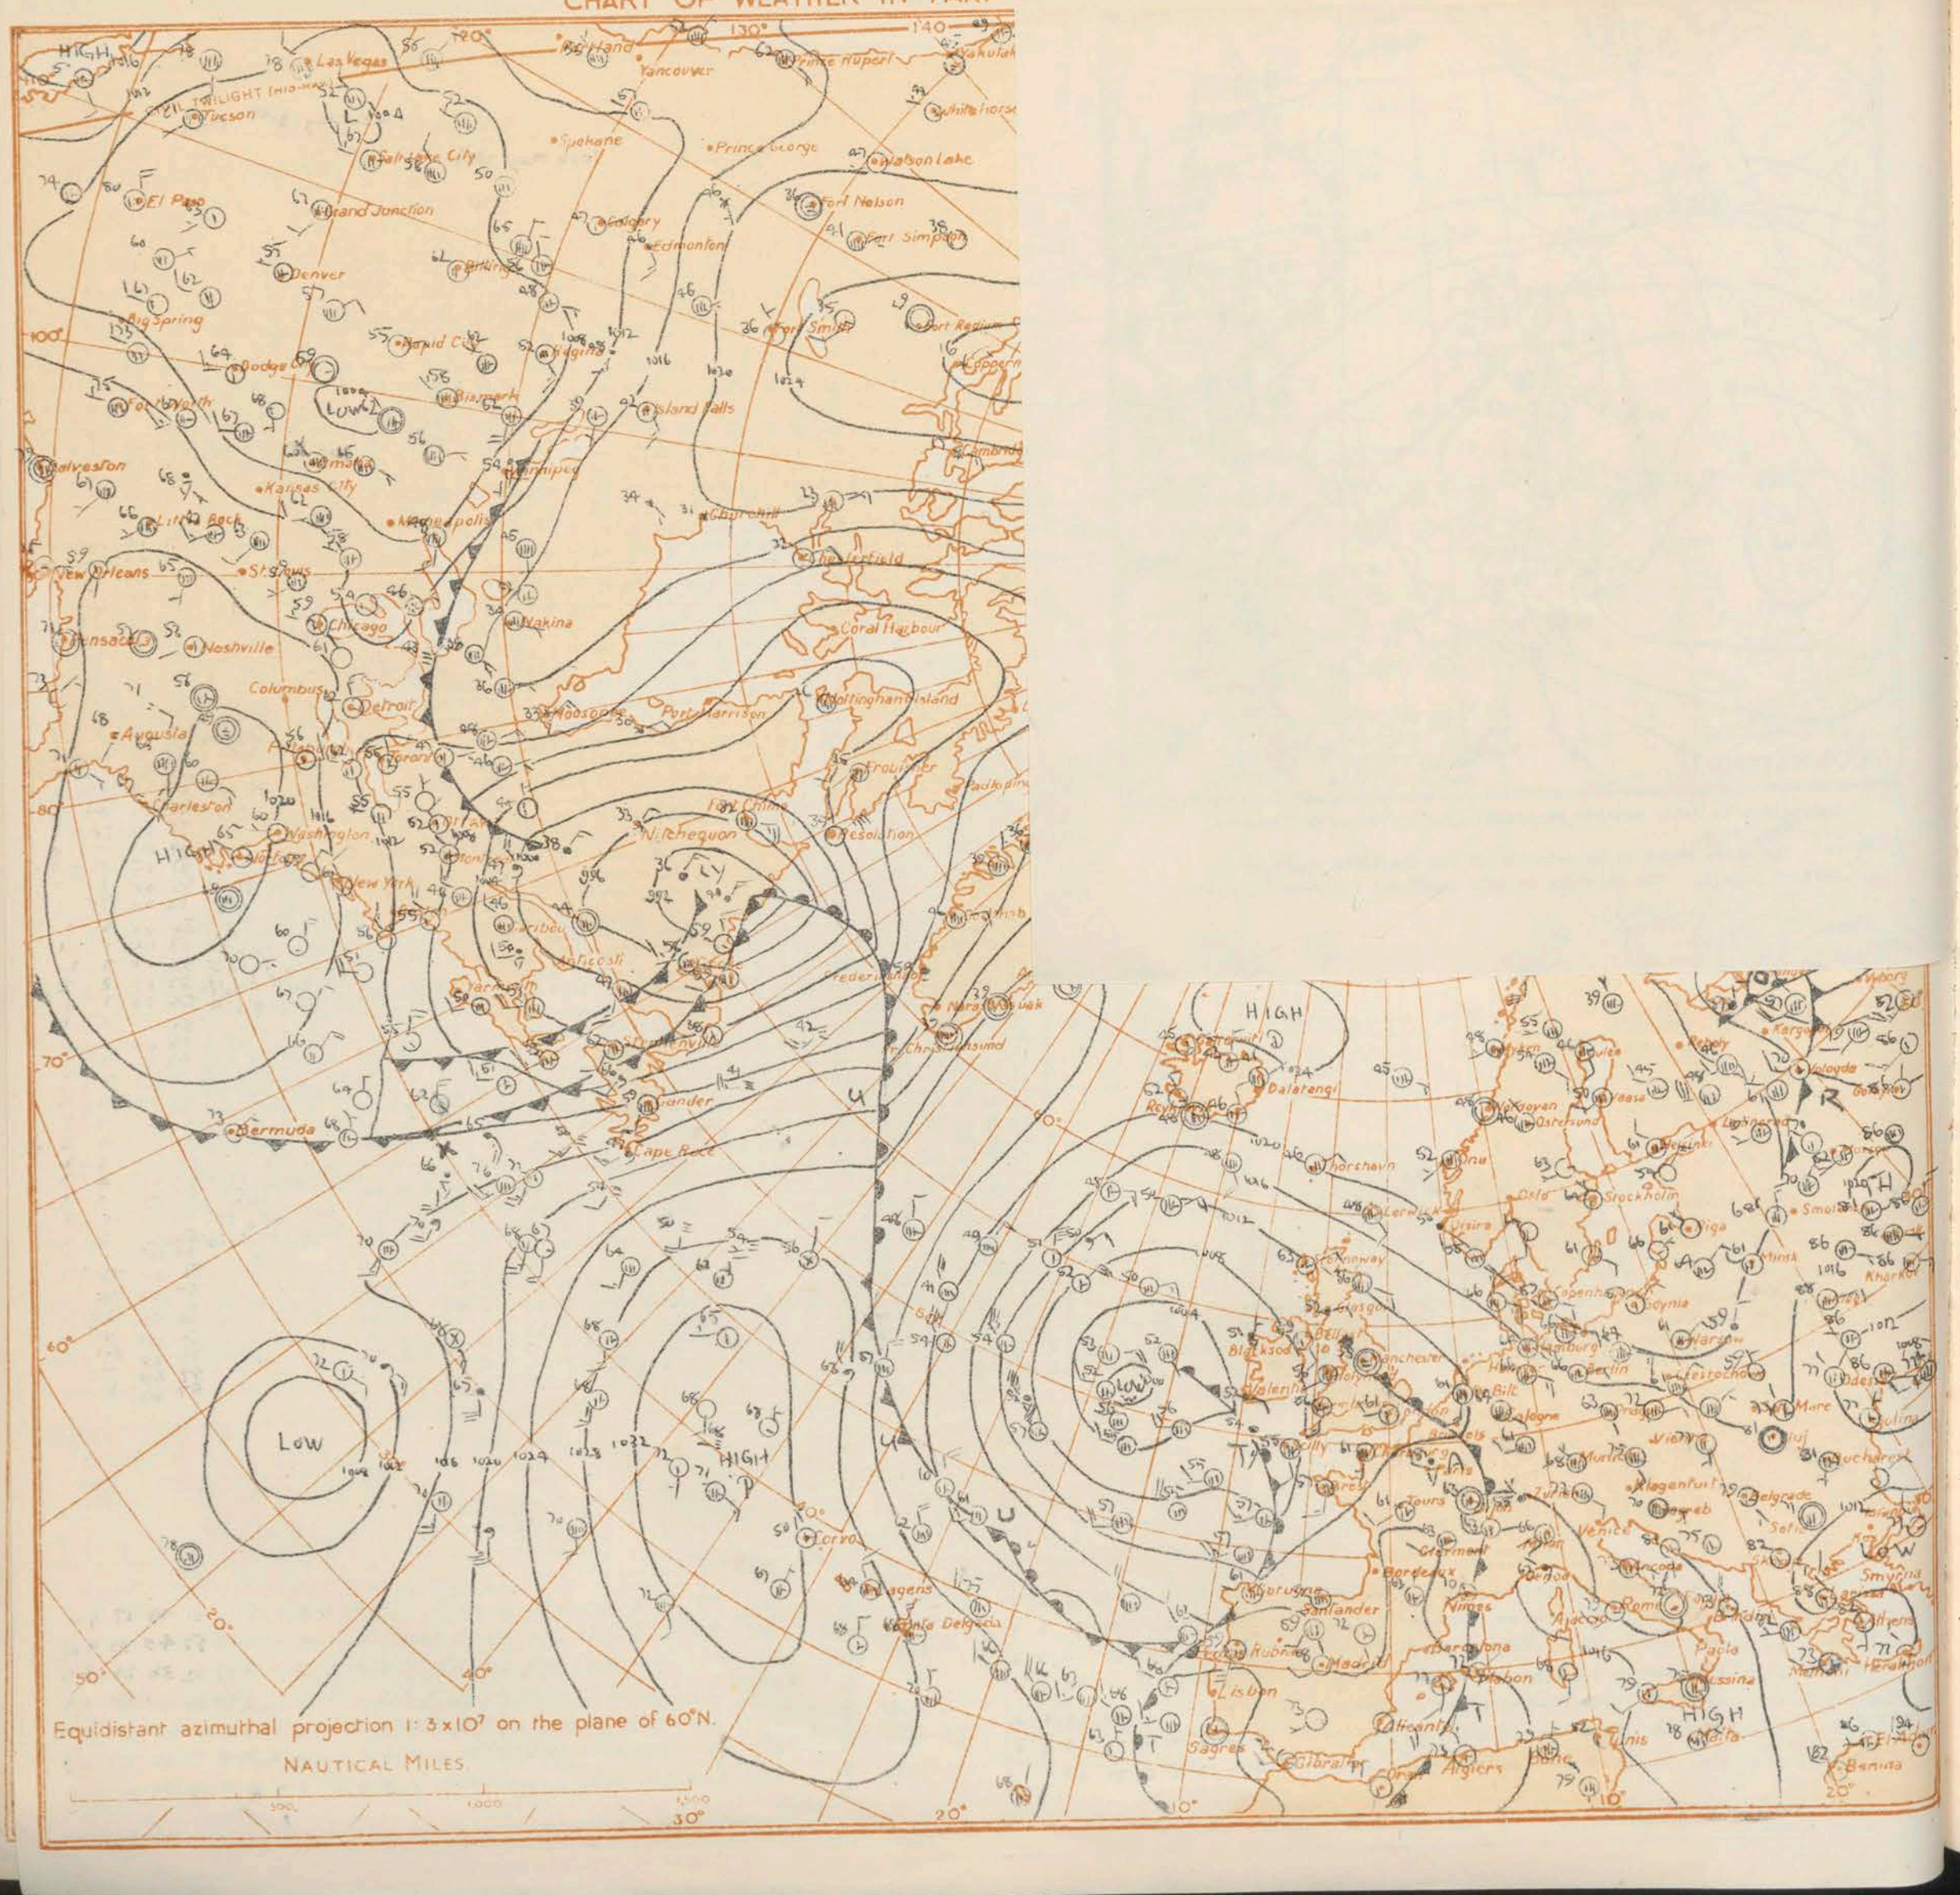
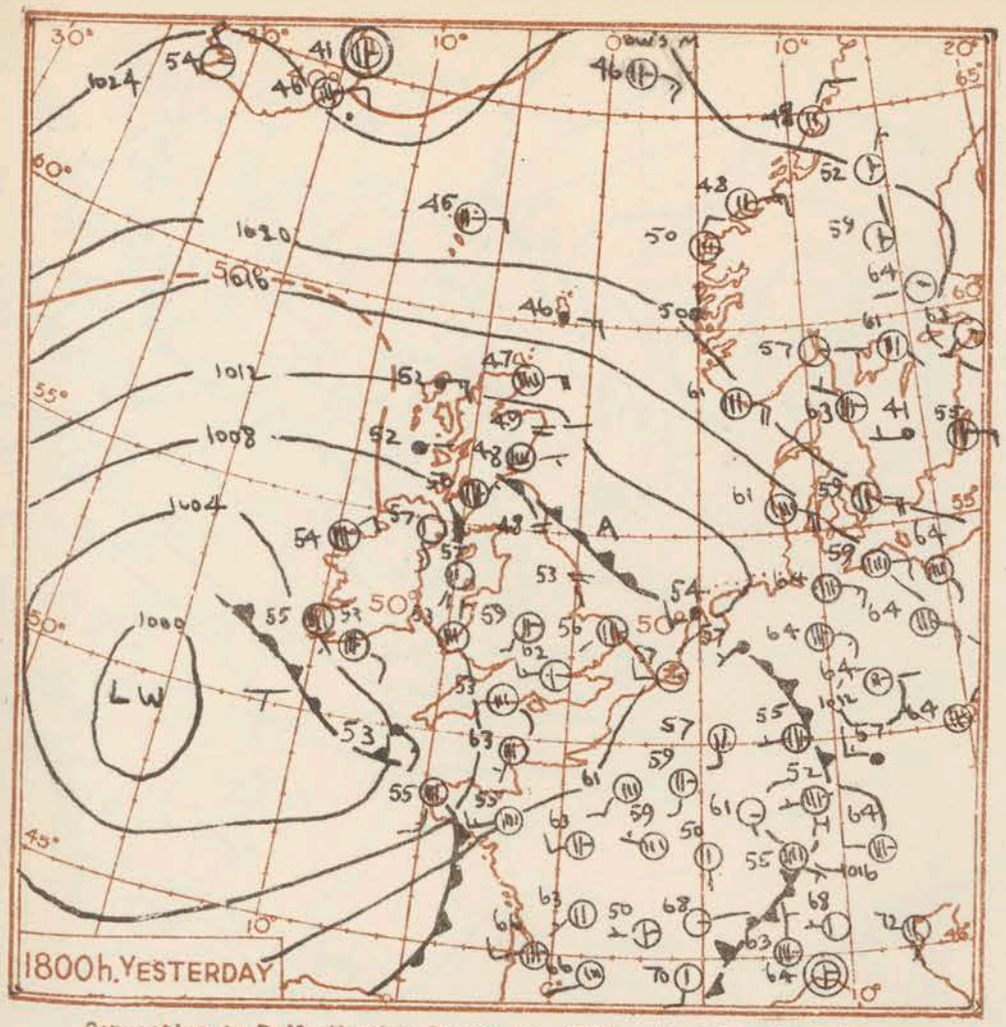
SIR GRAHAM SUTTON, C.B.E., D.Sc., F.R.S., Director General. Meteorological Office, Air Ministry, Kingsway, London, W.C.2.

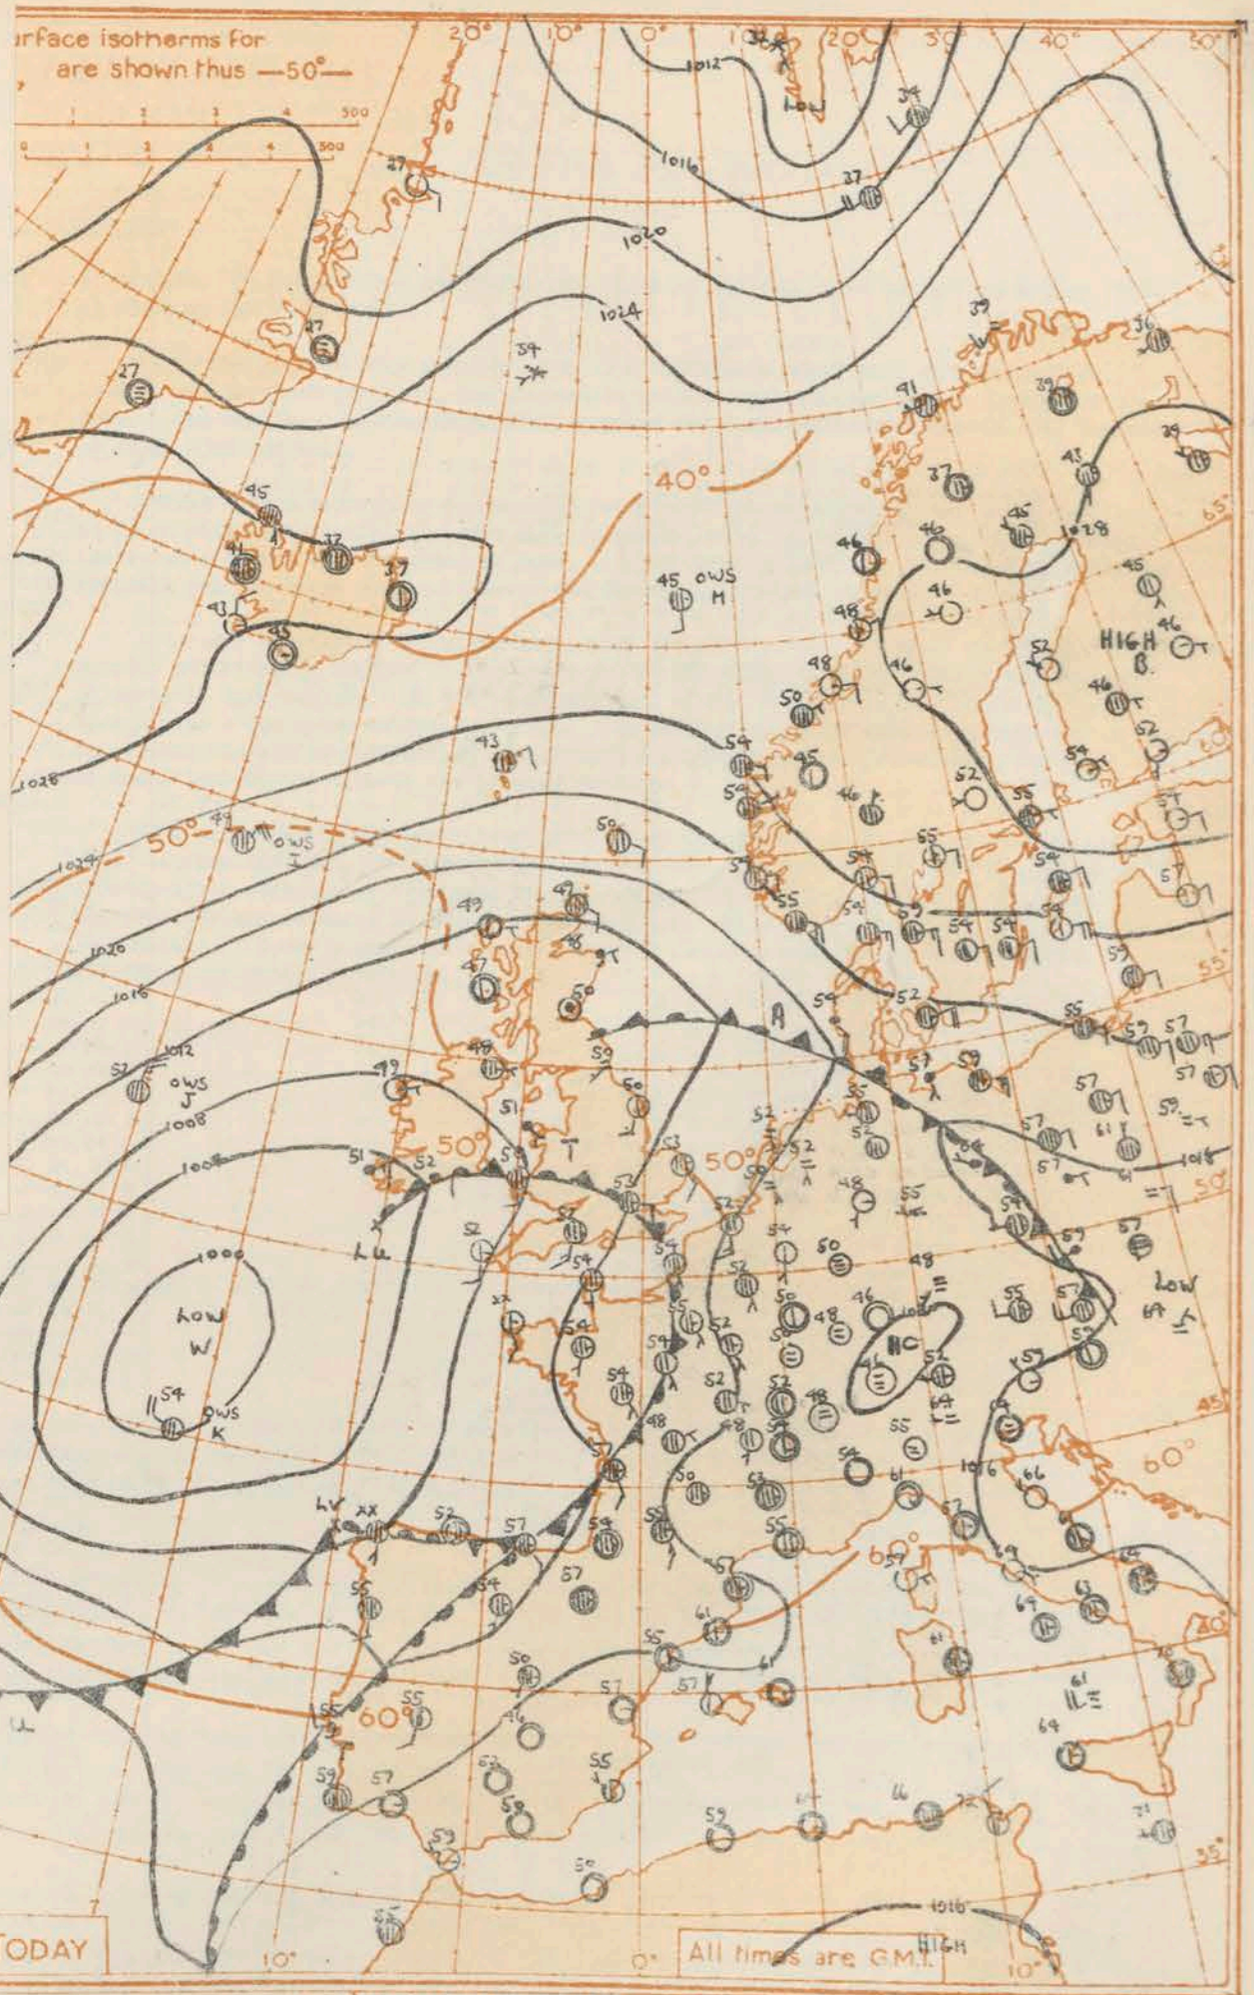
CHART OF WEATHER IN PART





Correction to Daily Weather Report No. 35254 issued on Saturday, 31st May, 1958.

The above chart to be substituted for the 1800h chart at top left of page 3. The printing on this chart was reversed in error.



GENERAL SYNOPTIC DEVELOPMENT

The depression west of Ireland yesterday morning has continued moving southeast and is now about 300 miles south-southwest of Ireland. By tomorrow morning this depression will probably have moved to the Bay of Biscay. Further troughs of low pressure will move northwards to cross the British Isles, though these troughs will probably become slowmoving near north Scotland.

Issued at midday today Saturday 31st May 1958

FORECAST FOR BRITISH ISLES until noon tomorrow

Most places will have a good deal of cloud and outbreaks of rain or thundery showers: there will be some sunny intervals in many areas today and tomorrow, except probably in northeast Scotland, where the weather will be predominantly cloudy. Temperatures will be about the seasonal average.

OUTLOOK FOR the following 24 hours

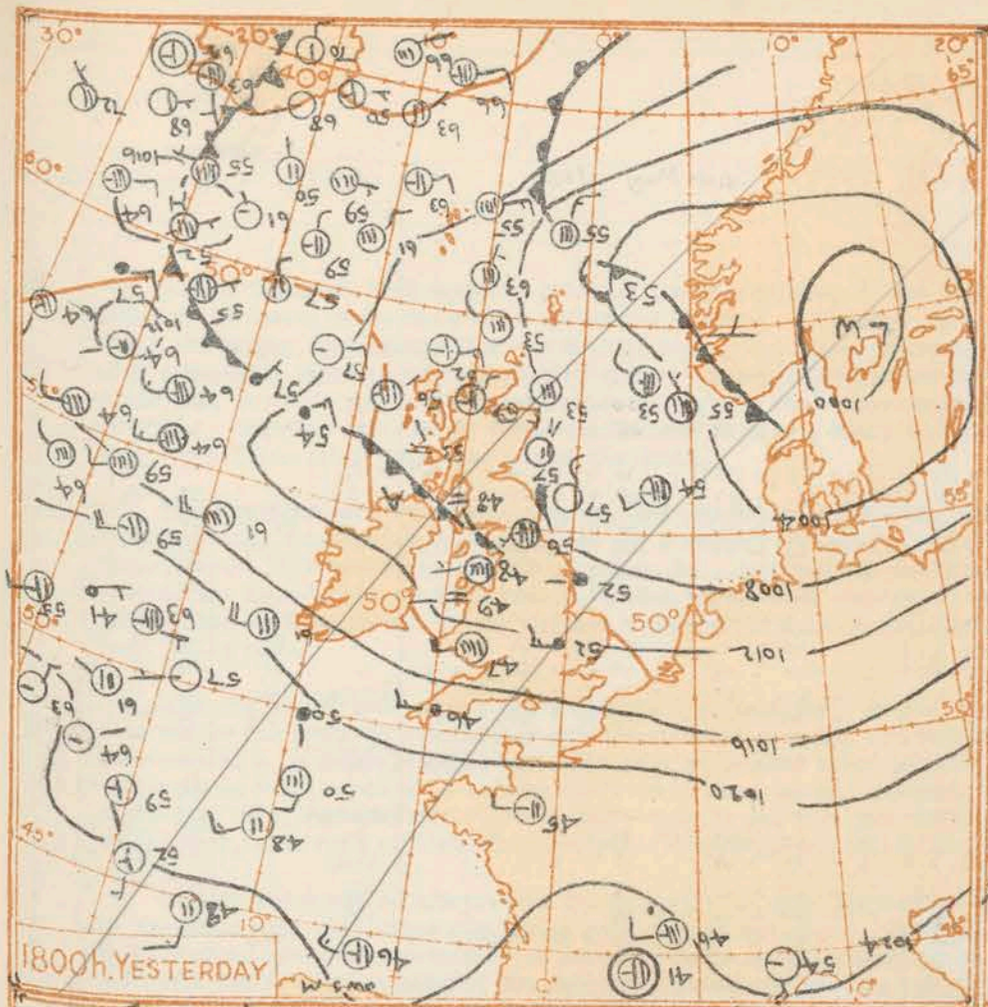
Little change.

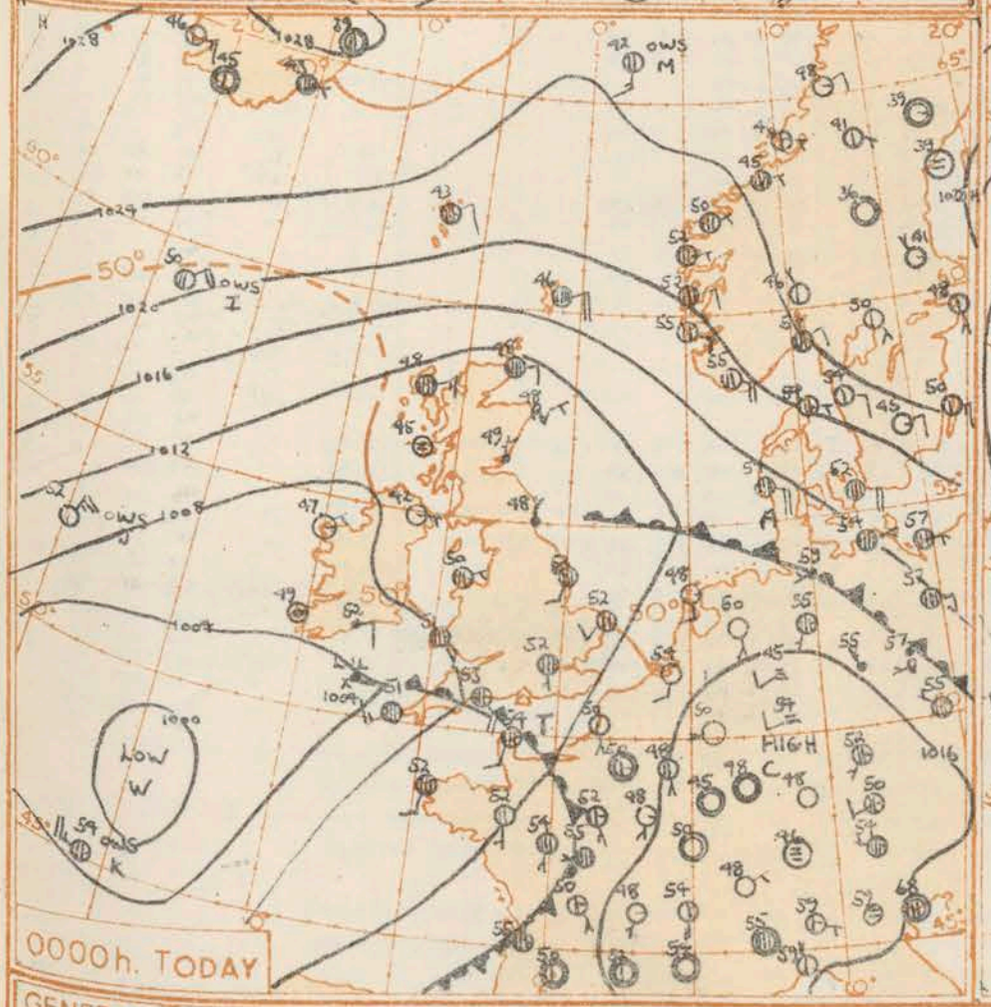
CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

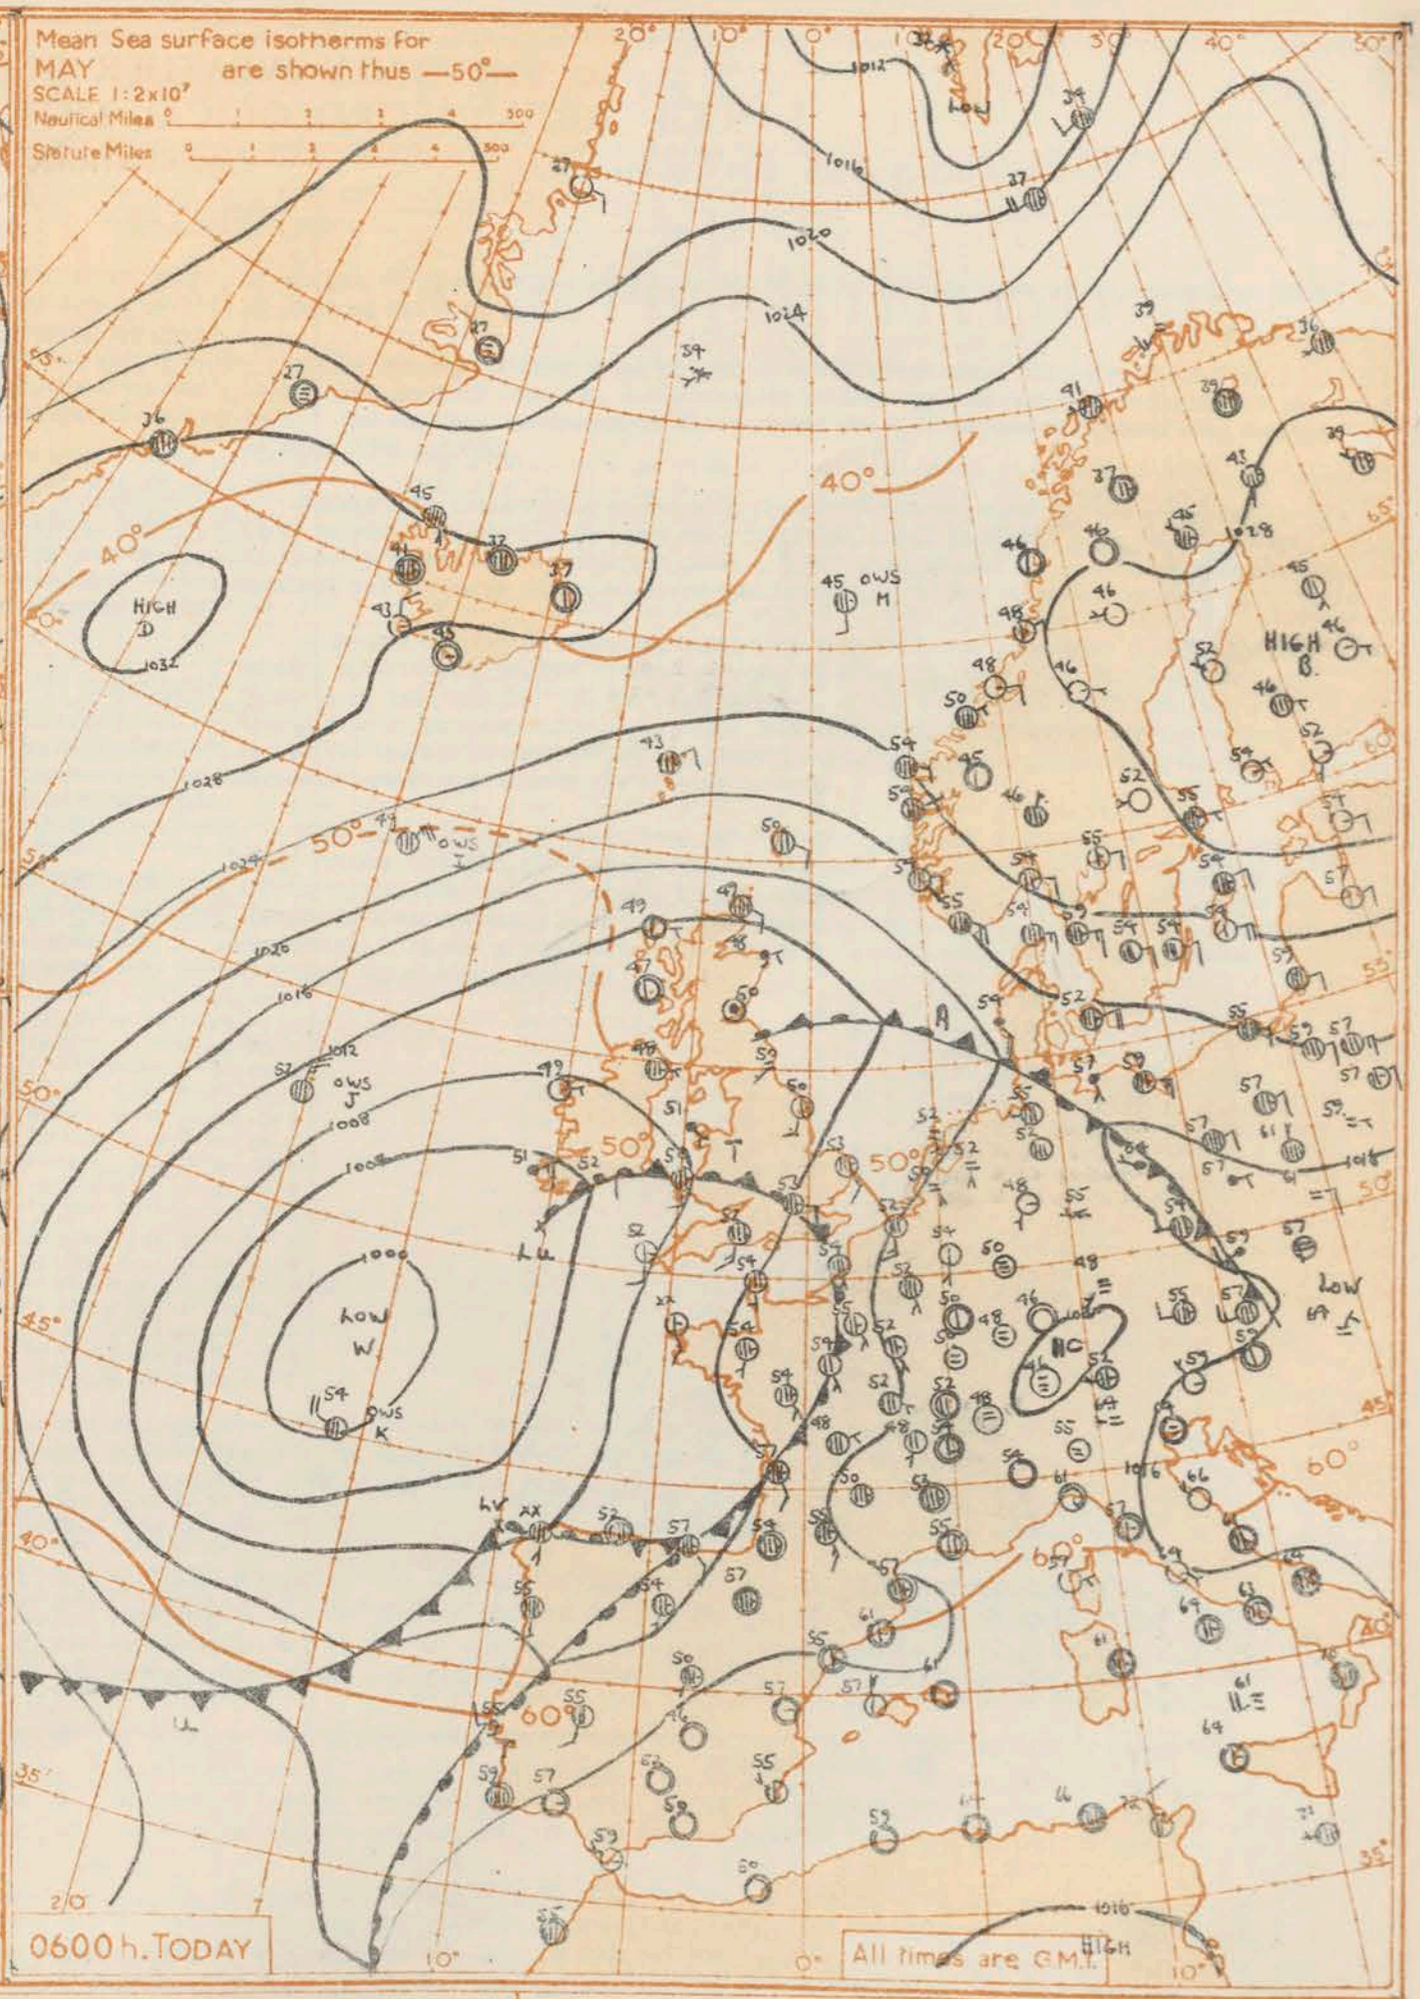
Mid-day (12h)
of
Friday 30th May
1958

Equidistant azimuthal projection 1: 3×10^7 on the plane of 60°N.

NAUTICAL MILES.







GENERAL SYNOPTIC DEVELOPMENT

The depression west of Ireland yesterday morning has continued moving southeast and is now about 300 miles south-southwest of Ireland. By tomorrow morning this depression will probably have moved to the Bay of Biscay. Further troughs of low pressure will move northwards to cross the British Isles, though these troughs will probably become slow-moving near north Scotland.

Issued at midday today Saturday 31st May 1958

FORECAST FOR BRITISH ISLES until noon tomorrow

Most places will have a good deal of cloud and outbreaks of rain or thundery showers: there will be some sunny intervals on many areas today and tomorrow, except probably in northeast Scotland, where the weather will be predominantly cloudy. Temperatures will be about the seasonal average.

OUTLOOK FOR the following 24 hours

Little change.
