

THE DAILY WEATHER REPORT

(INTRODUCTION)

84

1st July to 30th September, 1978

Stations published in the Daily Weather Report

METEOROLOGICAL OFFICE
Bracknell, Berkshire

I. HISTORY

A brief history of changes in contents and format between 1st April, 1919, and December, 1949, will be found in the introduction to the British Section for 1st October to 31st December, 1949. On 1st January, 1950, the British and International Sections of the former Report, which had been issued in three sections since 1919, were combined in a single publication, the present Daily Weather Report. At the same time, the third section was published separately with the title of Daily Aerological Record. A number of changes in meteorological codes and specifications were introduced on 1st January, 1955, and incorporated in the Report. Changes in format introduced on 1st July, 1955, provided for the elements of station and ships' observations to be given in the order of the appropriate meteorological code and for some modification of the scales and projections of charts. On 1st January, 1961, the Celsius scale was adopted for reporting surface temperatures. On 1st January, 1967, the metric system was adopted for all references to heights and distances. Certain changes relating to position and wave groups in the Ship-Code were introduced on 1st January, 1968.

2. FORM OF PRESENTATION

(i) **Observations.**—Pages 1 and 4 of the Daily Weather Report contain reports for the four main hours of observation from a representative number of stations in Great Britain and Ireland which provide full reports together with a selection of reports from ocean weather stations for the same hours. In addition, Beaufort letters (Table 20), mainly describing precipitation, are given for each of the four six-hourly periods, together with reports of maximum and minimum temperature, sunshine, rainfall and state of ground (Table 13), in respect of the land stations listed. Explanations of the codes and specifications used are given below.

(ii) **Charts.**—Page 2 contains a chart of the weather in a large part of the northern hemisphere for mid-day of the previous day. Page 3 contains charts of slightly larger scale, for the British Isles and Western Europe, for 1800 h. of the previous day and for 0000 h and 0600 h on the day of issue.

4. EXPLANATION OF CODES AND SPECIFICATIONS

CODE FM 1IV—Land Stations	VV ww W	PPP TT	Nh CL h CM CH	Td Td a pp	8Ns C hshs	RRTxTx E RRTnTn E	sss Tg Tg
N = Total amount of cloud in eighths (Table 1). dd = Wind direction on scale 01-36 (see also Table 2). ff = Wind speed in knots.	VV = Visibility (Table 3). ww = Present weather (Table 5). W = Past weather (Table 4).	PPP = Last three figures of pressure (reduced to M.S.L.) in millibars and tenths. TT = Temperature in whole degrees Celsius. Note.—In reports from ocean weather stations (FM 2IV) only the tens and units figure of air temperature are reported. The tenths figure is reported by t _T .	Nh = Fraction of celestial dome covered by CL (or CM if no CL). CL = Form of low cloud (Table 6). h = Height above ground of base of lowest cloud (Table 9). CM = Form of Medium Cloud (Table 7). CH = Form of high cloud (Table 8).	T _d T _d = Dew point temperature in whole degrees Celsius. a = Characteristic of barometric tendency (Table 10). pp = Barometric tendency (change of pressure in last three hours in tenths of millibars).	8 = Indicator figure. Ns = Amount in eighths of individual cloud layer or mass (Table 1). C = Type of cloud (Table 11). hshs = Height of base of cloud (Table 12).	RR = Rainfall (Table 19) (Code 3577) (09h-21h) (21h-09h). TxTx = Maximum temperature in whole degrees Celsius (09h-21h). TnTn = Minimum temperature in whole degrees Celsius (21h-09h).	T _g T _g = Minimum temperature on grass in whole degrees Celsius (21h-09h). sss = Duration of sunshine (in hours and tenths). E = State of ground (Table 13) (Code 0900) (at 21h and 09h).
CODE FM 2IV—Ships	QcLoLoLoLo	YYGGi _w	D _s v _s a pp	O T _s T _s T _d T _d	IT _w T _w T _w t _T	3P _w P _w H _w H _w	d _w d _w P _w H _w H _w
99=Indicator group. L _a L _a L _a =Latitude in tenths of a degree.	Q _c =Quadrant of the globe (Table 17). L _o L _o L _o =Longitude in tenths of a degree.	YY=Day of the month. GG=Actual time to the nearest whole hour G.M.T. i _w =Wind indicator (Table 18).	D _s =Direction of movement of ship (Table 14). v _s =Speed of ship in knots (Table 15). a = Characteristic of barometric tendency (Table 10). pp = Barometric tendency (change of pressure in last three hours in tenths of millibars).	O = Indicator figure. T _s T _s =Difference between air temperature and sea temperature in $\frac{1}{2}$ degree Celsius. (If the air temperature is less than the sea temperature, 50 is added to the difference.) T _d T _d =Dew point temperature in whole degrees Celsius.	I = Indicator figure. T _w T _w T _w =Sea surface temperature in tenths of a degree Celsius. For negative temperatures 500 is added. t _T =The tenths figure of the air temperature.	3=Indicator figure. P _w P _w =Period of waves in seconds. H _w H _w =Height of the waves in units of 0.5 metre. This group refers to wind waves. If there is a swell with no wind waves this group is reported as 3/00.	d _w d _w =Direction (in tens of degrees) from which waves come. P _w Period of waves (Table 16). H _w H _w Height of the waves in units of 0.5 metre. This group is used to report swell when it is possible to make a clear distinction between swell and wind waves.

Table 1.—Code for Cloud Amount (N, Nh, Ns)

- 0 = None.
- 1 = 1 eighth of sky covered or less, but not zero.
- 2 = 2 eighths of sky covered.
- 3 = 3 eighths of sky covered.
- 4 = 4 eighths of sky covered.
- 5 = 5 eighths of sky covered.
- 6 = 6 eighths of sky covered.
- 7 = 7 eighths of sky covered or more, but not 8 eighths.
- 8 = 8 eighths (sky completely covered).
- 9 = Sky obscured or cloud amount cannot be estimated.

Note.—"Trace" would be included under Figure 1, which should be used for amounts up to 1/8th (i.e., not up to 3/16ths). "Overcast but with openings" would be included under Figure 7, which should be used for amounts down to 7/8ths (i.e., not down to 13/16ths).

Variable, or all directions, or unknown, or waves confused, direction indeterminate 99

Note.—The direction to be observed is "true" not "magnetic"

2. FORM OF PRESENTATION (continued)

(iii) **General Synoptic Development.**—Below the weather charts on page 3 will be found a statement which describes the main features in the evolution of the synoptic situation over the United Kingdom during the preceding 24 hours together with an indication of the manner in which it is expected to develop.

3. NOTES

- (i) **Standard of Time.**—Greenwich Mean Time is exclusively used throughout the Report.
- (ii) **Temperature.**—On pages 1 and 4 temperature is specified in whole degrees Celsius, negative temperatures being coded by removing the minus sign and adding 50. Equivalent values in degrees Fahrenheit can be obtained by reference to the table printed between these pages. See also note under PPP TT in para. 4 below.
- (iii) **Adjusted Readings.**—Where an instrumental reading is found to be in error and some adjustment is necessary, the adjusted reading is published in brackets thus (59).
- (iv) **Rainfall Readings in Eire.**—The rainfall totals for stations in Eire are for the periods 18h-06h, reported at 0900h.
06h-18h, reported at 2100h.
- (v) Readers of the Report who are unacquainted with the method of construction and the use of weather charts are recommended to read "The Practice of Weather Forecasting" which may be purchased from H.M. Stationery Office, 49 High Holborn.
- (vi) Correction sheets will be issued weekly. These will contain corrected observations, where appropriate, for all stations with the exception of the following:—stations in Eire, Cape Wrath, Sule Skerry, Mull of Galloway, Kilnsea, Guernsey, Scilly, Hartland Point.

Table 3.—Code for Visibility—(VV) (Code 4377)

Table 4.—Code for Past Weather (W) (Code 4500)

0 = Cloud covering $\frac{1}{2}$ or less of the sky throughout the appropriate period.	3 = Sandstorm, duststorm or blowing snow.
1 = Cloud covering more than $\frac{1}{2}$ of the sky during part of the appropriate period and covering half or less during part of the period.	4 = Fog, ice fog or thick haze (visibility less than 1000 m.).
2 = Cloud covering more than $\frac{1}{2}$ of the sky throughout the appropriate period.	5 = Drizzle.
	6 = Rain.
	7 = Snow, or rain and snow mixed.
	8 = Shower(s).
	9 = Thunderstorm(s) with or without precipitation.

The code for W covers the weather occurring during the last six hours.

In the range 01-50 the figures give actual visibility in tenths of kilometres. This table gives the meanings of higher code figures.

* Values not given may be obtained by interpolation.

† Code figures not used.

‡ Decade 90-99 is used when visibility cannot be determined with sufficient accuracy to justify lower code figures.

Table 5.—Code for Present Weather (ww) (Code 4677)

00-19	00	Cloud development not observed.	Characteristic change of the state of the sky during the past hour.	30-39	30	Duststorms, Sandstorms, drifting or blowing snow.	31	Slight or moderate duststorm or sand-storm.	has decreased during preceding hour.	70-79	70	Intermittent fall of snow flakes.	slight at time of observation.
No precipitation at the station at the time of observation.	01	Clouds generally dissolving or becoming less developed.		32	33	Severe duststorm or sandstorm.	34	no appreciable change during preceding hour.	has begun or has increased during preceding hour.	71	Continuous fall of snow flakes.	moderate at time of observation.	
	02	State of sky on the whole unchanged.		35	36	Slight or moderate drifting snow.	37	no appreciable change during preceding hour.	has decreased during preceding hour.	72	Intermittent fall of snow flakes.	heavy at time of observation.	
	03	Clouds generally forming or developing.		38	39	Heavy drifting snow.	generally low.	has begun or has increased during preceding hour.	73	Continuous fall of snow flakes.	observation.		
	04	Visibility reduced by smoke, e.g., veldt or forest fire, industrial smoke or volcanic ashes.		generally high.	74	Intermittent fall of snow flakes.	generally high.						
	05	Haze		75	76	Continuous fall of snow flakes.	generally high.						
	06	Widespread dust in suspension in the air, not raised by wind at or near the station at the time of observation.		77	78	Ice prisms (with or without fog).	generally high.						
	07	Dust or sand raised by wind at or near the station at the time of observation, but no well-developed dust whirl(s) or sand whirl(s), and no duststorm or sandstorm seen; or in the case of ships, blowing spray at the station.		79	79	Snow grains (with or without fog).	generally high.						
	08	Well developed dust whirl(s) or sand whirl(s) seen at or near the station during the preceding hour, but no duststorm or sandstorm.		80-90	80	Isolated starlike snow crystals (with or without fog).	generally high.						
	09	Duststorm or sandstorm within sight of the station or at the station during the preceding hour.		81	81	Ice pellets type (a).	generally high.						
	10	Mist.		82	82	Rain shower(s), slight.	generally high.						
	11	Shallow fog or ice fog, in patches.		83	83	Rain shower(s), moderate or heavy.	generally high.						
	12	Shallow fog or ice fog, land or 10 metres at sea.		84	84	Rain shower(s), violent.	generally high.						
	13	Lightning visible, no thunder heard.		85	85	Shower(s) of rain and snow, slight.	generally high.						
	14	Precipitation within sight, not reaching the ground or the surface of the sea.		86	86	Shower(s) of rain and snow, moderate or heavy.	generally high.						
	15	Precipitation within sight, reaching the ground or the surface of the sea but distant (estimated to be more than 5 km) from the station.		87	87	Shower(s), or snow pellets or ice	generally high.						
	16	Precipitation within sight reaching the ground or the surface of the sea near to but not at the station.		88	88	pellets type (b) with or without rain or rain and snow mixed.	generally high.						
	17	Thunderstorm, but no precipitation at time of observation.		89	89	Shower(s) of hail, with or without rain or rain and snow mixed, not associated with thunder.	generally high.						
	18	Squalls.		90	90	Shower(s) of hail, with or without rain or rain and snow mixed, not associated with thunder.	generally high.						
	19	Funnel cloud(s)† during the preceding hour or at the time of observation.		91-99	91	Slight rain at time of observation.	generally high.						
20-29	20	Drizzle (not freezing), or snow grains.	Not falling as shower(s).	92	92	Moderate or heavy rain at time of observation.	generally high.						
Precipitation, fog or thunderstorm at station during the last hour but not at time of observation.	21	Rain (not freezing).		93	93	Slight snow, rain and snow mixed, or hail* at time of observation.	generally high.						
	22	Snow.		94	94	Moderate or heavy snow, rain and snow mixed or hail* at time of observation.	generally high.						
	23	Rain and snow or ice pellets type (a).		95	95	Thunderstorm, slight or moderate, without hail* but with rain and/or snow at time of observation.	generally high.						
	24	Freezing drizzle or freezing rain.		96	96	Thunderstorm, slight or moderate, with hail* at time of observation.	generally high.						
	25	Shower(s) of rain.		97	97	Thunderstorm, heavy, without hail*, but with rain and/or snow at time of observation.	generally high.						
	26	Shower(s) of snow, or of rain and snow.		98	98	Thunderstorm combined with duststorm or sandstorm at time of observation.	generally high.						
	27	Shower(s) of hail*, or of hail and rain.		99	99	Thunderstorm, heavy, with hail* at time of observation.	generally high.						
	28	Fog or ice fog.		The expression "at the station" refers to a land station or a ship at the point from which observations are normally taken.									
	29	Thunderstorm (with or without precipitation).		† Tornado cloud or water spout.									

Table 6.—Code for form of Low Cloud (CL) (Code 0513)

0 = No stratocumulus, stratus, cumulus or cumulonimbus.
 1 = Ragged cumulus other than of bad weather, or cumulus with little vertical extent and seemingly flattened, or both.
 2 = Cumulus of moderate or strong vertical extent, generally with protuberances in the form of domes or towers, either accompanied or not by other cumulus or by stratocumulus: all having their bases at the same level.
 3 = Cumulonimbus, the summits of which, at least partially, lack sharp outlines, but are neither clearly fibrous (cirriform) nor in the form of an anvil: cumulus, stratocumulus or stratus may also be present.
 4 = Stratocumulus formed by the spreading out of cumulus: cumulus may also be present.
 5 = Stratocumulus not resulting from the spreading out of cumulus.
 6 = Stratus in a more or less continuous sheet or layer, or in ragged shreds, or both, but no stratus fractus of bad weather.
 7 = Stratus fractus of bad weather or cumulus fractus of bad weather (pannus), or both; usually below altostratus or nimbostratus. By "bad weather" is meant the conditions which generally exist before, during or after precipitation.
 8 = Cumulus and stratocumulus, other than those formed from the spreading out of cumulus: the base of cumulus is at a different level from that of stratocumulus.
 9 = Cumulonimbus, the upper part of which is clearly fibrous (cirriform), often in the form of an anvil; either accompanied or not by cumulus, stratocumulus, stratus or pannus.
 / = Stratocumulus, stratus, cumulus and cumulonimbus are invisible owing to darkness, fog, blowing dust or sand, or other similar phenomena.

Table 7.—Code for form of Medium Cloud (CM) (Code 0515)

0 = No altocumulus, altostratus or nimbostratus.
 1 = Altostratus, the greater part of which is semi-transparent; through this part the sun or moon may be weakly visible as through ground glass.
 2 = Altostratus, the greater part of which is sufficiently dense to hide the sun (or moon), or nimbostratus.
 3 = Altocumulus, the greater part of which is semi-transparent, and no part of which is crenelated or in cumuliform tufts: the various elements of the cloud change only slowly and are all at a single level.
 4 = Patches (often in the form of almonds or fishes) of altocumulus, the greater part of which is semi-transparent; the clouds are at one or more levels and the elements are continually changing in appearance.
 5 = Semi-transparent altocumulus in bands or altocumulus in one more or less continuous layer progressively invading the sky: these altocumulus clouds generally are growing denser as a whole. The layer may be opaque or may consist of two or more sheets.
 6 = Altocumulus resulting from the spreading out of cumulus.
 7 = Any one of the following cases:
 (a) Altocumulus in two or more layers, usually opaque in places and not progressively invading the sky.
 (b) Opaque layer of altocumulus not progressively invading the sky.
 (c) Altocumulus together with altostratus or nimbostratus or both.
 8 = Altocumulus with sprouts in the form of small towers or battlements, or altocumulus having the appearance of cumuliform tufts.
 9 = Altocumulus, generally at several levels, in a chaotic sky: dense cirrus is usually also present.
 / = Altocumulus, altostratus and nimbostratus are invisible owing to darkness, fog, blowing dust or sand, or other similar phenomena, or more often because of the presence of a continuous layer of lower clouds.

Table 8.—Code for form of High Cloud (CH) (Code 0509)

0 = No cirrus, cirrocumulus or cirrostratus.
 1 = Cirrus in the form of filaments, strands or hooks, not progressively invading the sky (often called "mares' tails").
 2 = Dense cirrus, in patches or entangled sheaves, which usually do not increase and sometimes seem to be the remains of the upper part of a cumulonimbus: or cirrus with sprouts in the form of towers or battlements, or having the appearance of cumuliform tufts.
 3 = Dense cirrus, often in the form of an anvil; either the remains of the upper parts of a cumulonimbus or parts of distant cumulonimbus, the cumuliform portions of which cannot be seen.
 4 = Cirrus in the form of hooks or of filaments, or both, progressively invading the sky: they generally become denser as a whole.
 5 = Cirrus, often in bands converging towards one point or two points of the horizon, and cirrostratus, or cirrostratus alone: in either case, they are progressively invading the sky, and generally growing denser as a whole, but the continuous veil does not reach 45 degrees above the horizon.
 6 = Cirrus, often in bands converging towards one point or two points of the horizon, and cirrostratus, or cirrostratus alone: in either case, they are progressively invading the sky, and generally growing denser as a whole, the continuous veil extends more than 45 degrees above the horizon, without the sky being totally covered.
 7 = Veil of cirrostratus completely covering the celestial dome.
 8 = Cirrostratus not progressively invading the sky and not completely covering the celestial dome.
 9 = Cirrocumulus alone or cirrocumulus accompanied by cirrus or cirrostratus, or both, but cirrocumulus is the predominant cirriform cloud.
 / = Cirrus, cirrocumulus and cirrostratus are invisible owing to darkness, fog, blowing dust or sand, or other similar phenomena, or more often because of the presence of a continuous layer of lower clouds.

Table 9.—Code for Cloud Height (h) (Code 1600)

Code figure	Height of base of cloud
0	metres 0-50
1	50-100
2	100-200
3	200-300
4	300-600
5	600-1,000
6	1,000-1,500
7	1,500-2,000
8	2,000-2,500
9	Above 2,500
/	Height of base of cloud not known or base of clouds at a level lower and tops at a level higher than that of the station.

Note 1.—If there is no cloud at all code figure 9 is reported.

Note 2.—If there is fog, and the sky is discernible through the fog, the cloud form, height and amount are reported as if no fog were present. If the sky is not discernible through the fog the height of the base of the cloud is reckoned as 0.

Note 3.—Height above ground of the base of cloud. If there is cloud of Form CL reported, h refers to this cloud. If, however, there is no cloud of Form CL and there is cloud of Form CM h refers to this cloud.

Table 10.—Code for Characteristic of Barometric Tendency (a) (Code 0200)		Table 11.—Code for Type of Cloud (C) (Code 0500)		Table 12.—Code for Height of Cloud (h _h) (Code 1677)	
0 = Increasing, then decreasing; atmospheric pressure the same as or higher than 3 hrs ago.		0 = Cirrus (Ci).		Code figures 01–50: × 30 = height in metres. Code figures 56–80: – 50 × 3 = height in hundreds of metres.	
1 = Increasing, then steady; or increasing, then increasing more slowly.		1 = Cirrocumulus (Cc).		CODE FIGURES 81–89	CODE FIGURES 90–99*
2 = Increasing (steadily or unsteadily).	atmospheric pressure now higher than 3 hrs ago.	2 = Cirrostratus (Cs).		Code figures Metres	Code figures Metres
3 = Decreasing or steady, then increasing; or increasing, then increasing more rapidly.		3 = Altocumulus (Ac).		81 = 10,500	90 = < 50
4 = Steady, atmospheric pressure the same as 3 hrs ago.		4 = Altostratus (As).		82 = 12,000	91 = 50–100
5 = Decreasing, then increasing; atmospheric pressure the same as or lower than 3 hrs ago.		5 = Nimbostratus (Ns).		83 = 13,500	92 = 100–200
6 = Decreasing, then steady; or decreasing, then decreasing more slowly.	atmospheric pressure now lower than 3 hrs ago.	6 = Stratocumulus (Sc).		84 = 15,000	93 = 200–300
7 = Decreasing (steadily or unsteadily).		7 = Stratus (St).		85 = 16,500	94 = 300–600
8 = Steady or increasing, then decreasing; or decreasing, then decreasing more rapidly.		8 = Cumulus (Cu).		86 = 18,000	95 = 600–1,000
		9 = Cumulonimbus (Cb).	/ = Cloud not visible owing to darkness, fog, duststorm, sandstorm or other analogous phenomena.	87 = 19,500	96 = 1,000–1,500
				88 = 21,000	97 = 1,500–2,000
				89 = > 21,000	98 = 2,000–2,500
					99 = 2,500 or more, or no clouds.
					*Only used when cloud height cannot be determined with greater accuracy.

Table 19.—Code for Amount of Precipitation (RR) (Code 3577)		Table 20.—Explanation of Beaufort Letters (pages 1 and 4)		Table 18.—Wind Indicator (i _w) (Code 1855)	
mm 01–55 Amount to the nearest whole millimetre. 56–60 Add 10 mm for each unit above 56 e.g., 73 = 230 mm 57–90 Add 10 mm for each unit above 56 e.g., 73 = 230 mm 91 0·1 92 0·2 93 0·3 94 0·4 95 0·5 96 0·6 97 Trace (There has been precipitation but amount less than 0·05 mm). 98 >400 99 Measurement impossible or inaccurate.		d = drizzle. f = fog, visibility 200 metres, or more but less than 1 kilometre. F = thick fog, visibility less than 200 metres. h = hail, ice prisms or ice pellets types (a) and (b). ks = storm of drifting snow.	l = lightning p = shower(s). r = rain. s = snow. rs = rain and snow. t = thunder.	0 = wind speed estimated 1 = wind speed obtained by anemometer 3 = wind speed estimated 4 = wind speed obtained by anemometer	wind speed in metres per second wind speed in knots
		Intensity is shown by capital letters ("heavy" or "thick") or suffix "o" ("slight"). Continuous precipitation is shown by repeating the letter and intermittent precipitation by the prefix "i". The prefix "j" indicates weather near but not at the station.			
5. EXPLANATION OF CHARTS		FRONTS or boundaries between masses of air of different origin are indicated, wherever their characteristics are well pronounced, in the following way—			
BAROMETER. Isobars are drawn for intervals of four millibars.		Warm Front at the surface.		Occluded Front.	
WIND. Arrows fly with wind. A full length feather represents 10 Kt. and a short feather 5 Kt. A solid pennant represents 50 Kt. Calm is indicated by circle outside Station circle.		Cold Front at the surface.		Cold front frontogenesis.	
TEMPERATURE is given in degrees C., and is shown on the charts by means of figures alongside the Station circle.		Stationary Front.		Cold front frontolysis.	
CLOUD SYMBOLS		Axis of trough.		Warm front frontogenesis.	
○ Clear sky. ○ Sky ½ covered. ○ Sky ¾ covered. ○ Sky ½ covered. ○ Sky ¾ covered. ○ Sky obscured.				Warm front frontolysis.	
○ Sky ½ covered. ○ Sky ¾ covered. ○ Sky ½ covered. ○ Sky ¾ covered. ○ Sky obscured.					
⊗ Missing or doubtful data.					
WEATHER SYMBOLS					
● Rain. ● Drizzle. ● Snow. ● Rain and snow. △ Hail.					
▽ Shower. ▽ Thunderstorm. ▽ Fog. ▽ Mist.					
ALITUDES OF STATIONS.—The altitudes, in metres, of British and Irish stations are given below. These refer in each case to the datum level of the ground beneath or nearly beneath the thermometer screen. Where the official name of the station differs, this is given in brackets.

DAILY WEATHER REPORT OF THE BRITISH METEOROLOGICAL OFFICE

No. 273

MONTHLY SUMMARY

For SEPTEMBER 1978

CHANGEABLE, BUT DRIER IN SOUTH

On 1st September the airflow over the British Isles was mainly northerly. During the 2nd and 3rd an anticyclone drifted eastwards across southern districts whilst wavy fronts affected northern districts. From 5th to 7th fronts moved eastwards across the whole country and established a mainly westerly airflow. A cold front moved southeastwards across the country on 10th/11th followed by a ridge of high pressure on the 12th. Thereafter southern districts were mainly affected by high pressure centred over France or southwest of Ireland, whilst fronts crossed northern districts. On the 27th and afterwards active fronts moved southeastwards across the country as a depression moved from south of Iceland into the North Sea. Winds were mainly strong northwesterly but easterly winds affected parts of Scotland on the 30th.

There was rain in many places on 1st September and in northern districts on 2nd and 3rd, when it was locally heavy in Scotland. Fog occurred in a few places in southern districts on the morning of the 3rd and again in southern and central districts on the morning of the 4th. For the next ten days periods of rain, sometimes heavy with thunderstorms, interspersed with sunny periods, affected all districts; some overnight fog patches also occurred. Thereafter, up to the 26th, it was mainly dry in southern districts with much sunshine and some early morning fog patches, whilst periods of rain

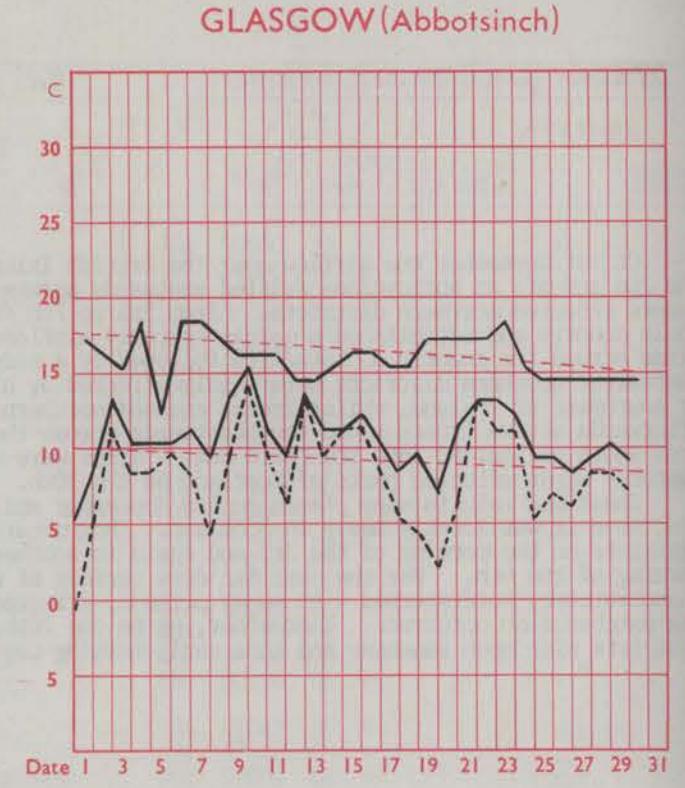

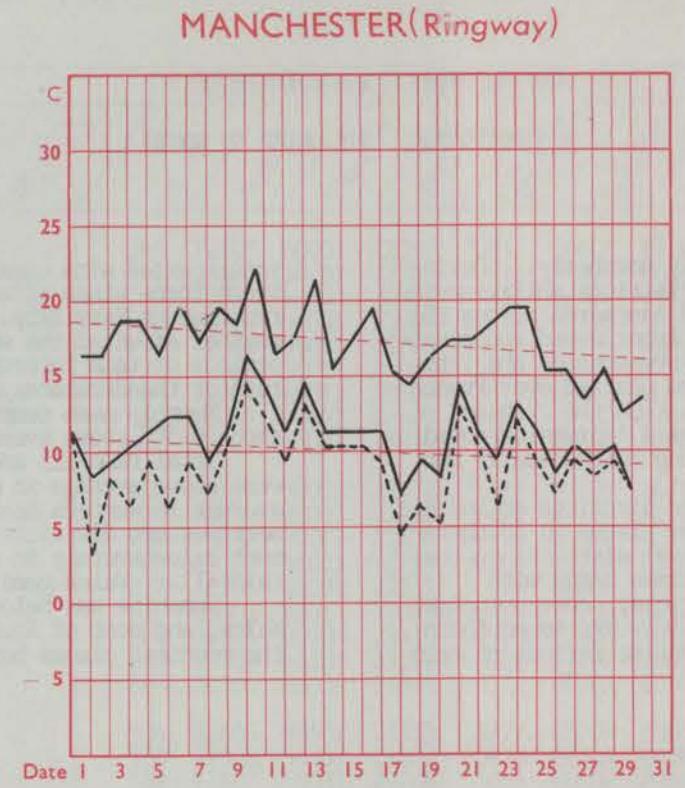

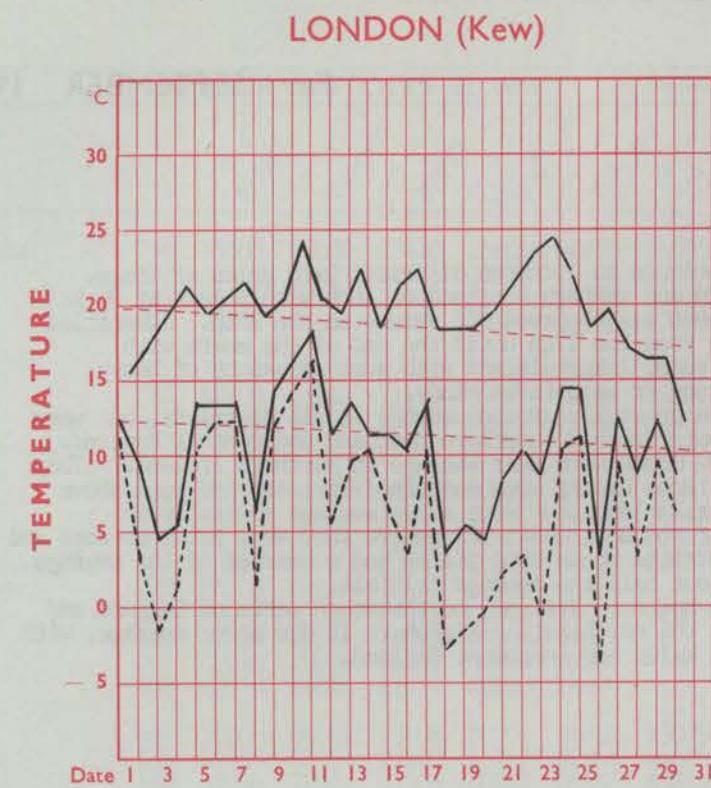

interspersed with clear spells continued in northern districts with gales at times. Storm force winds affected northern and western Scotland on 16th with a gust of 90 kt reported at Fair Isle. A waterspout was observed off Jersey on the 26th. Unsettled weather affected the whole country from the 27th until the end of the month with periods of rain interspersed with sunny intervals, and with some occasions of heavy rain or thunderstorms and some strong or gale force winds.

Monthly mean temperatures were generally around average in all districts, but were about 0.5°C above average in Northern Ireland, southern Scotland and central England.

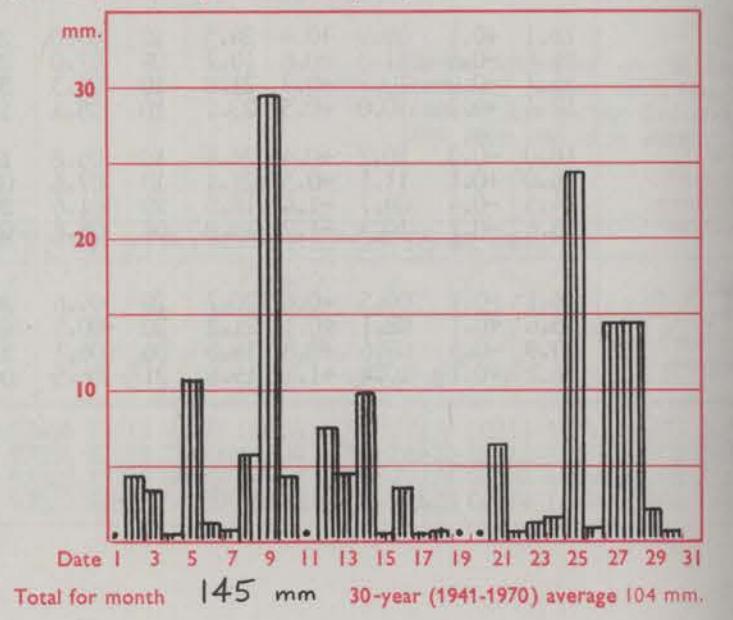

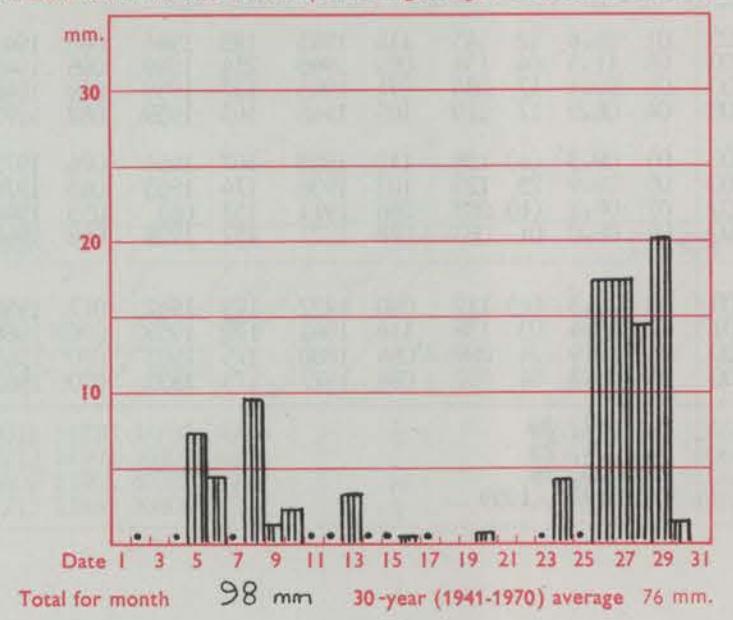

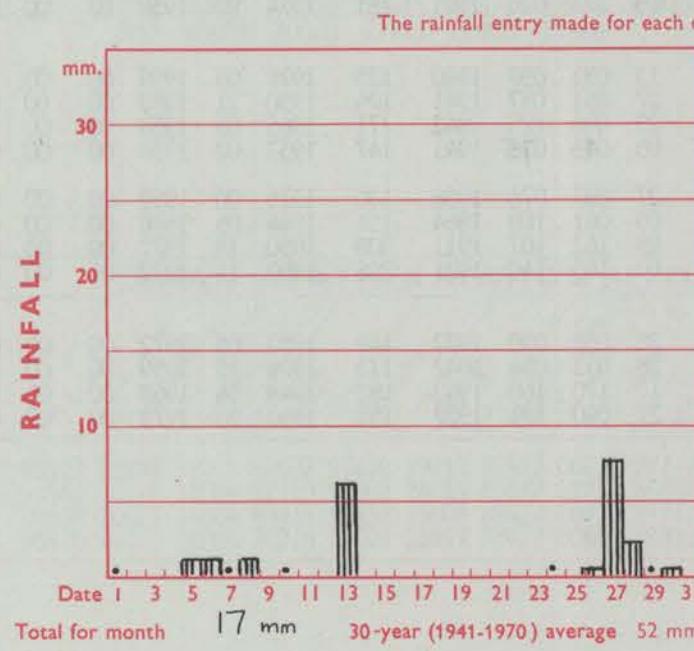

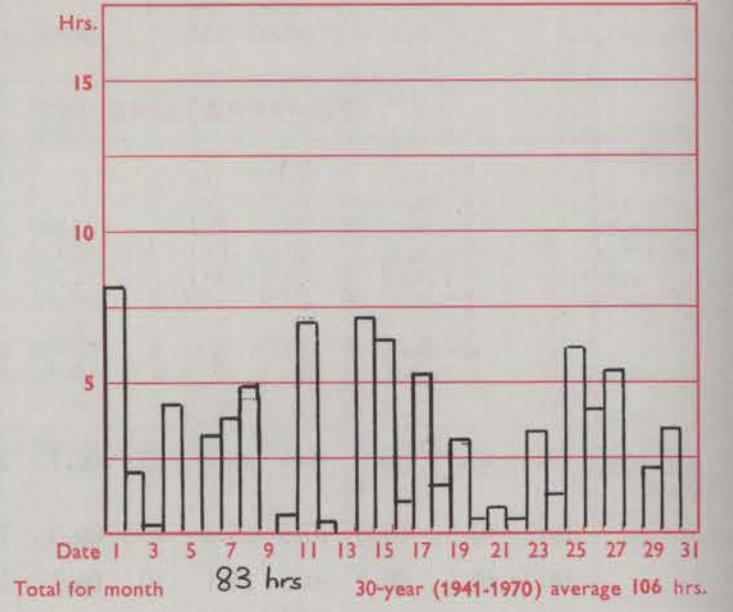

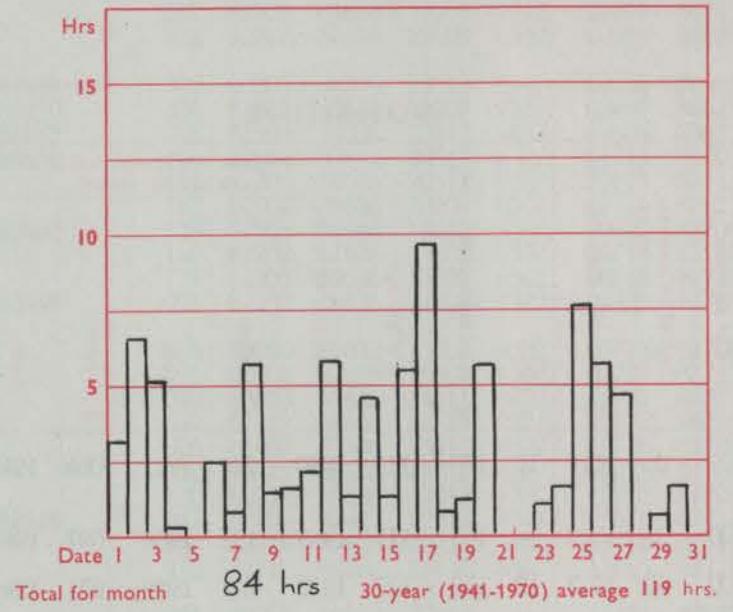

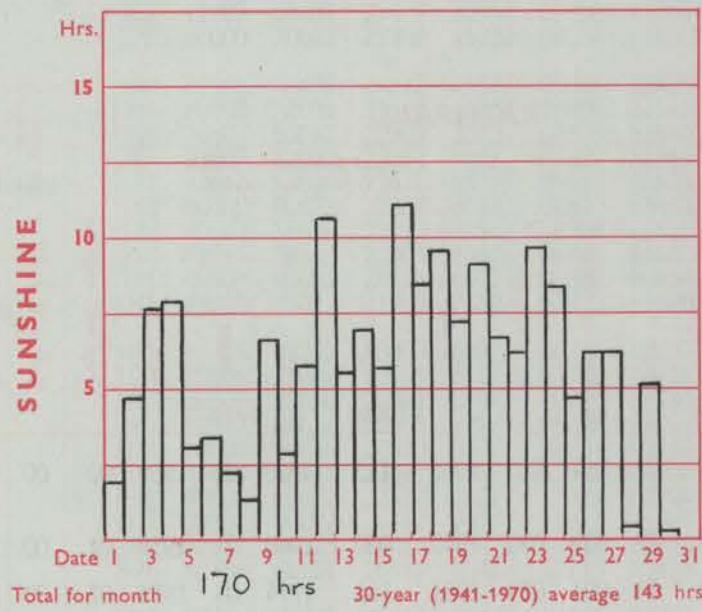

Total rainfall amounts for the month were near average in Northern Ireland. They were above average in most of Scotland, except some eastern districts, and much above average in western Scotland. Over England they were above average generally in northwestern districts and parts of the northeast; elsewhere they were below average and much below average in southern districts where some places had a quarter of the average rainfall. Wales generally had about half the average rainfall.

Sunshine was below average in Northern Ireland, northwestern parts of England and Wales, and most of Scotland except the northeast. Elsewhere it was above average, with the sunniest places being in South Wales and southwest England.

Maximum temperatures read at 21 h. G.M.T. daily, and minimum temperatures, read at 09 h. G.M.T. daily, are shown in full lines.
Grass minimum temperatures, read at 09 h. G.M.T. daily, are shown by a pecked line. Pecked lines in red show normal values. (1941-1970)
Normals for Kew are based on North Wall readings and may not be absolutely comparable with the daily values plotted above which are obtained from psychrometer measurements.

CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

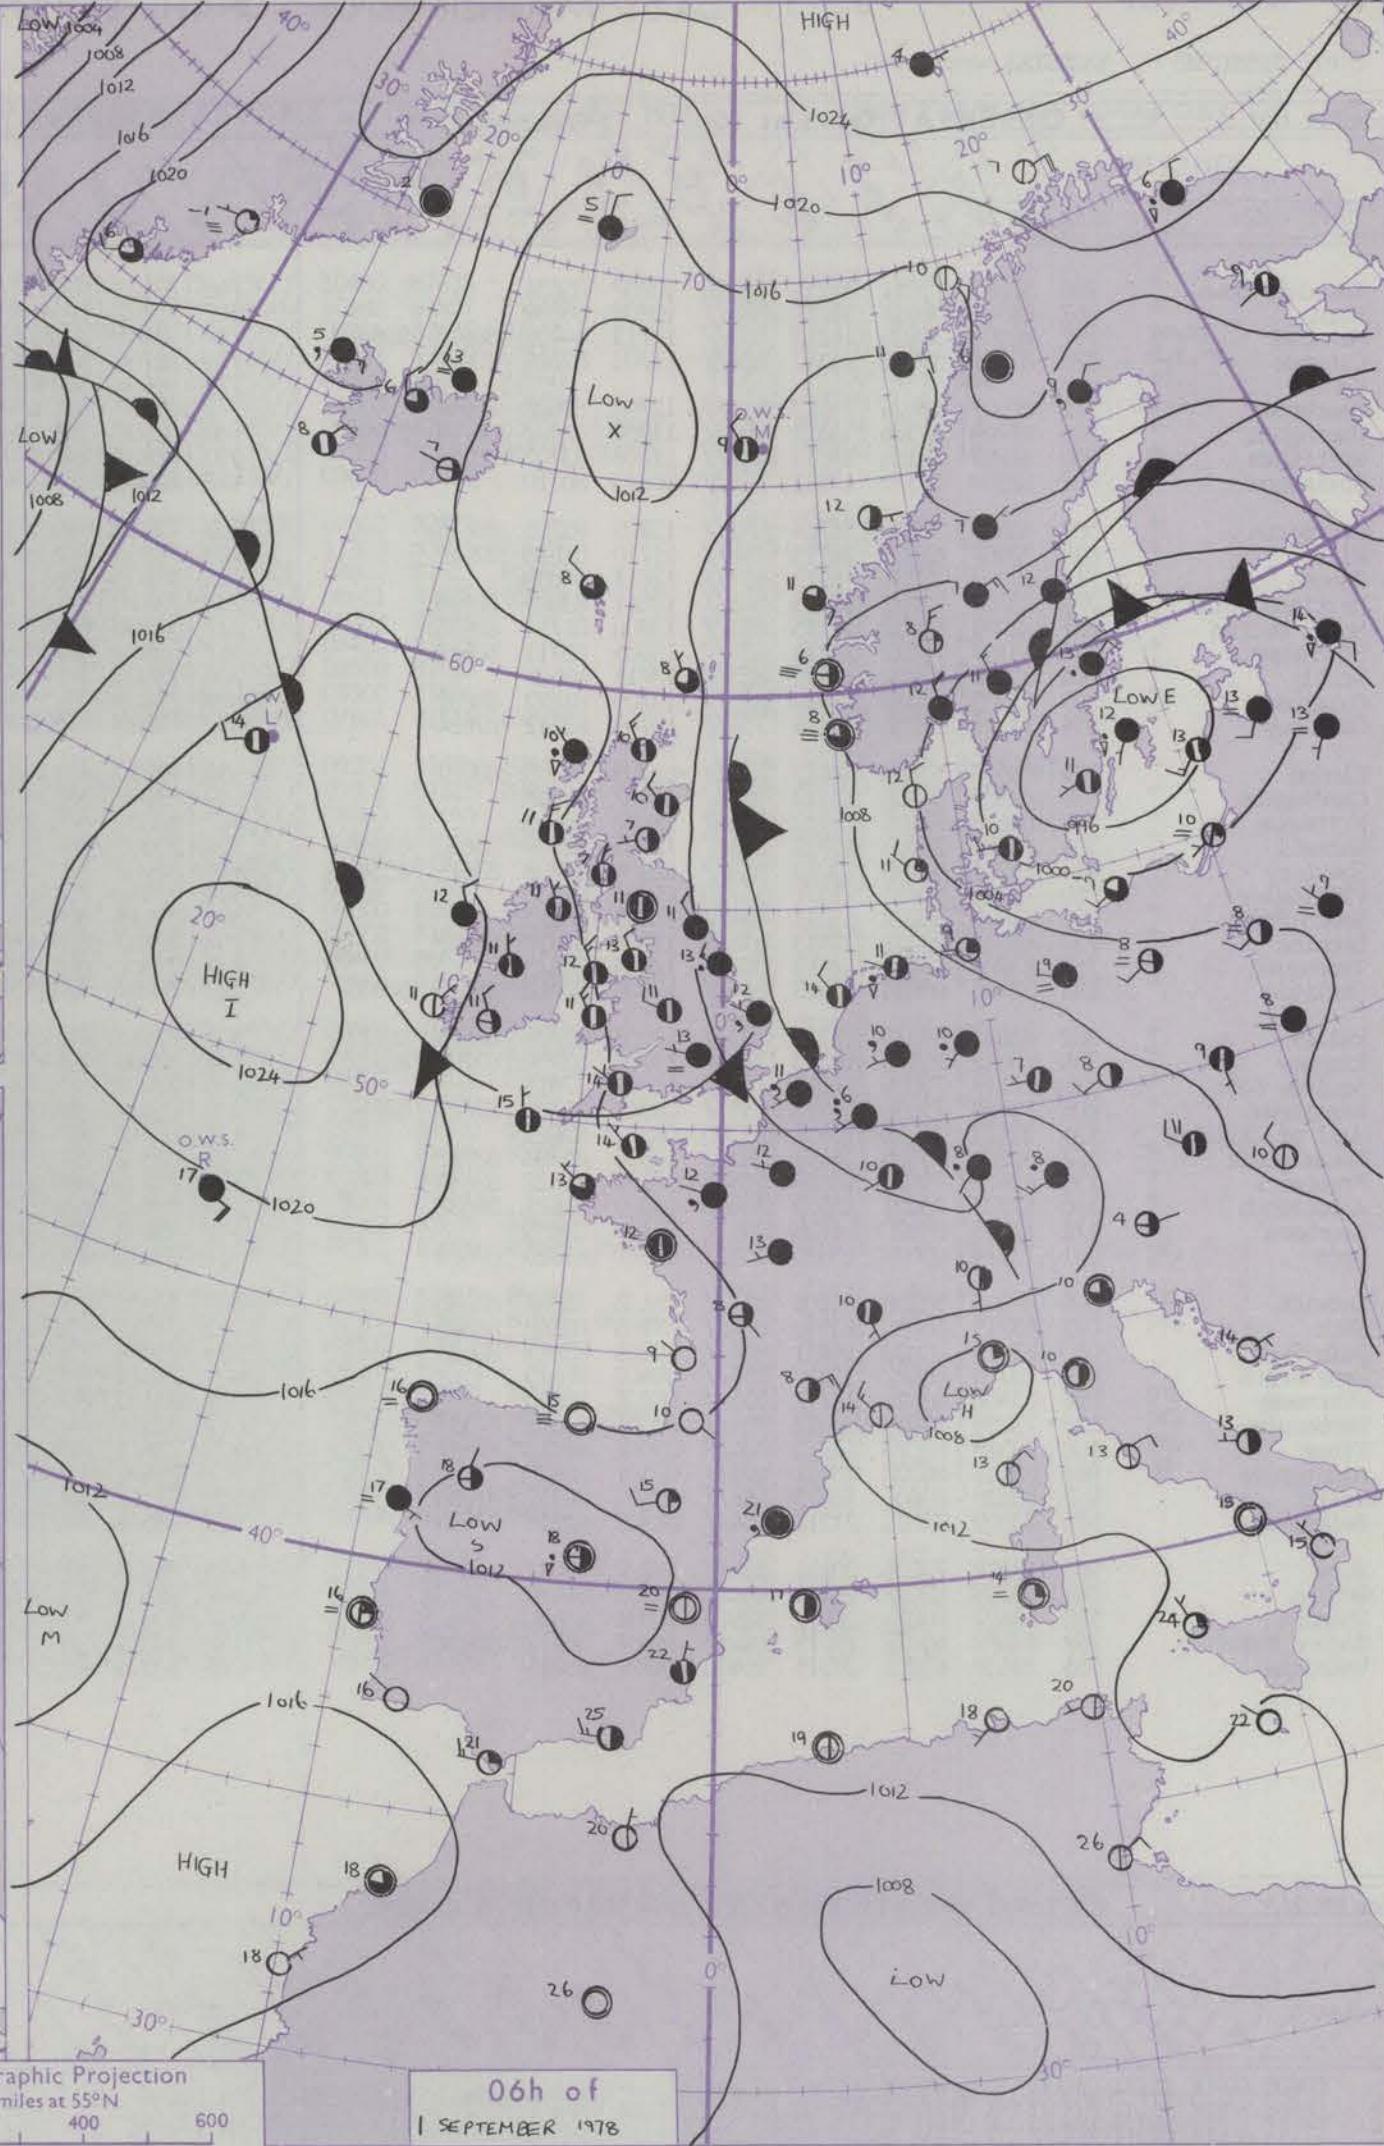

CHARTS OF WEATHER IN WESTERN EUROPE

GENERAL SYNOPTIC DEVELOPMENT

During the past 24 hours an anticyclone remained slow moving to the west of Ireland. A depression to the east of Iceland moved steadily southeastwards, and its frontal troughs crossed all parts of the British Isles during the period.

During the next 24 hours the anticyclone will remain just west of Ireland and with a low pressure complex over the Baltic persisting, a northerly airstream will cover the British Isles.

Issued at midday FRIDAY 1 SEPTEMBER 1978

Polar Stereographic Projection
Statute miles at 55°N
200 400 600
Scale is 1:20,000,000 at 60°N.

CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

CHARTS OF WEATHER IN WESTERN EUROPE

GENERAL SYNOPTIC DEVELOPMENT

During the past 24 hours the anticyclone has remained to the west of Ireland but it has declined a little. Pressure has remained low over the Baltic.

During the next 24 hours the low pressure area over the Baltic will persist. The anticyclone to the west of Ireland will move slowly southeast as troughs of low pressure move slowly east into northwestern parts of the British Isles.

Issued at midday SATURDAY 2 SEPTEMBER 1978

CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

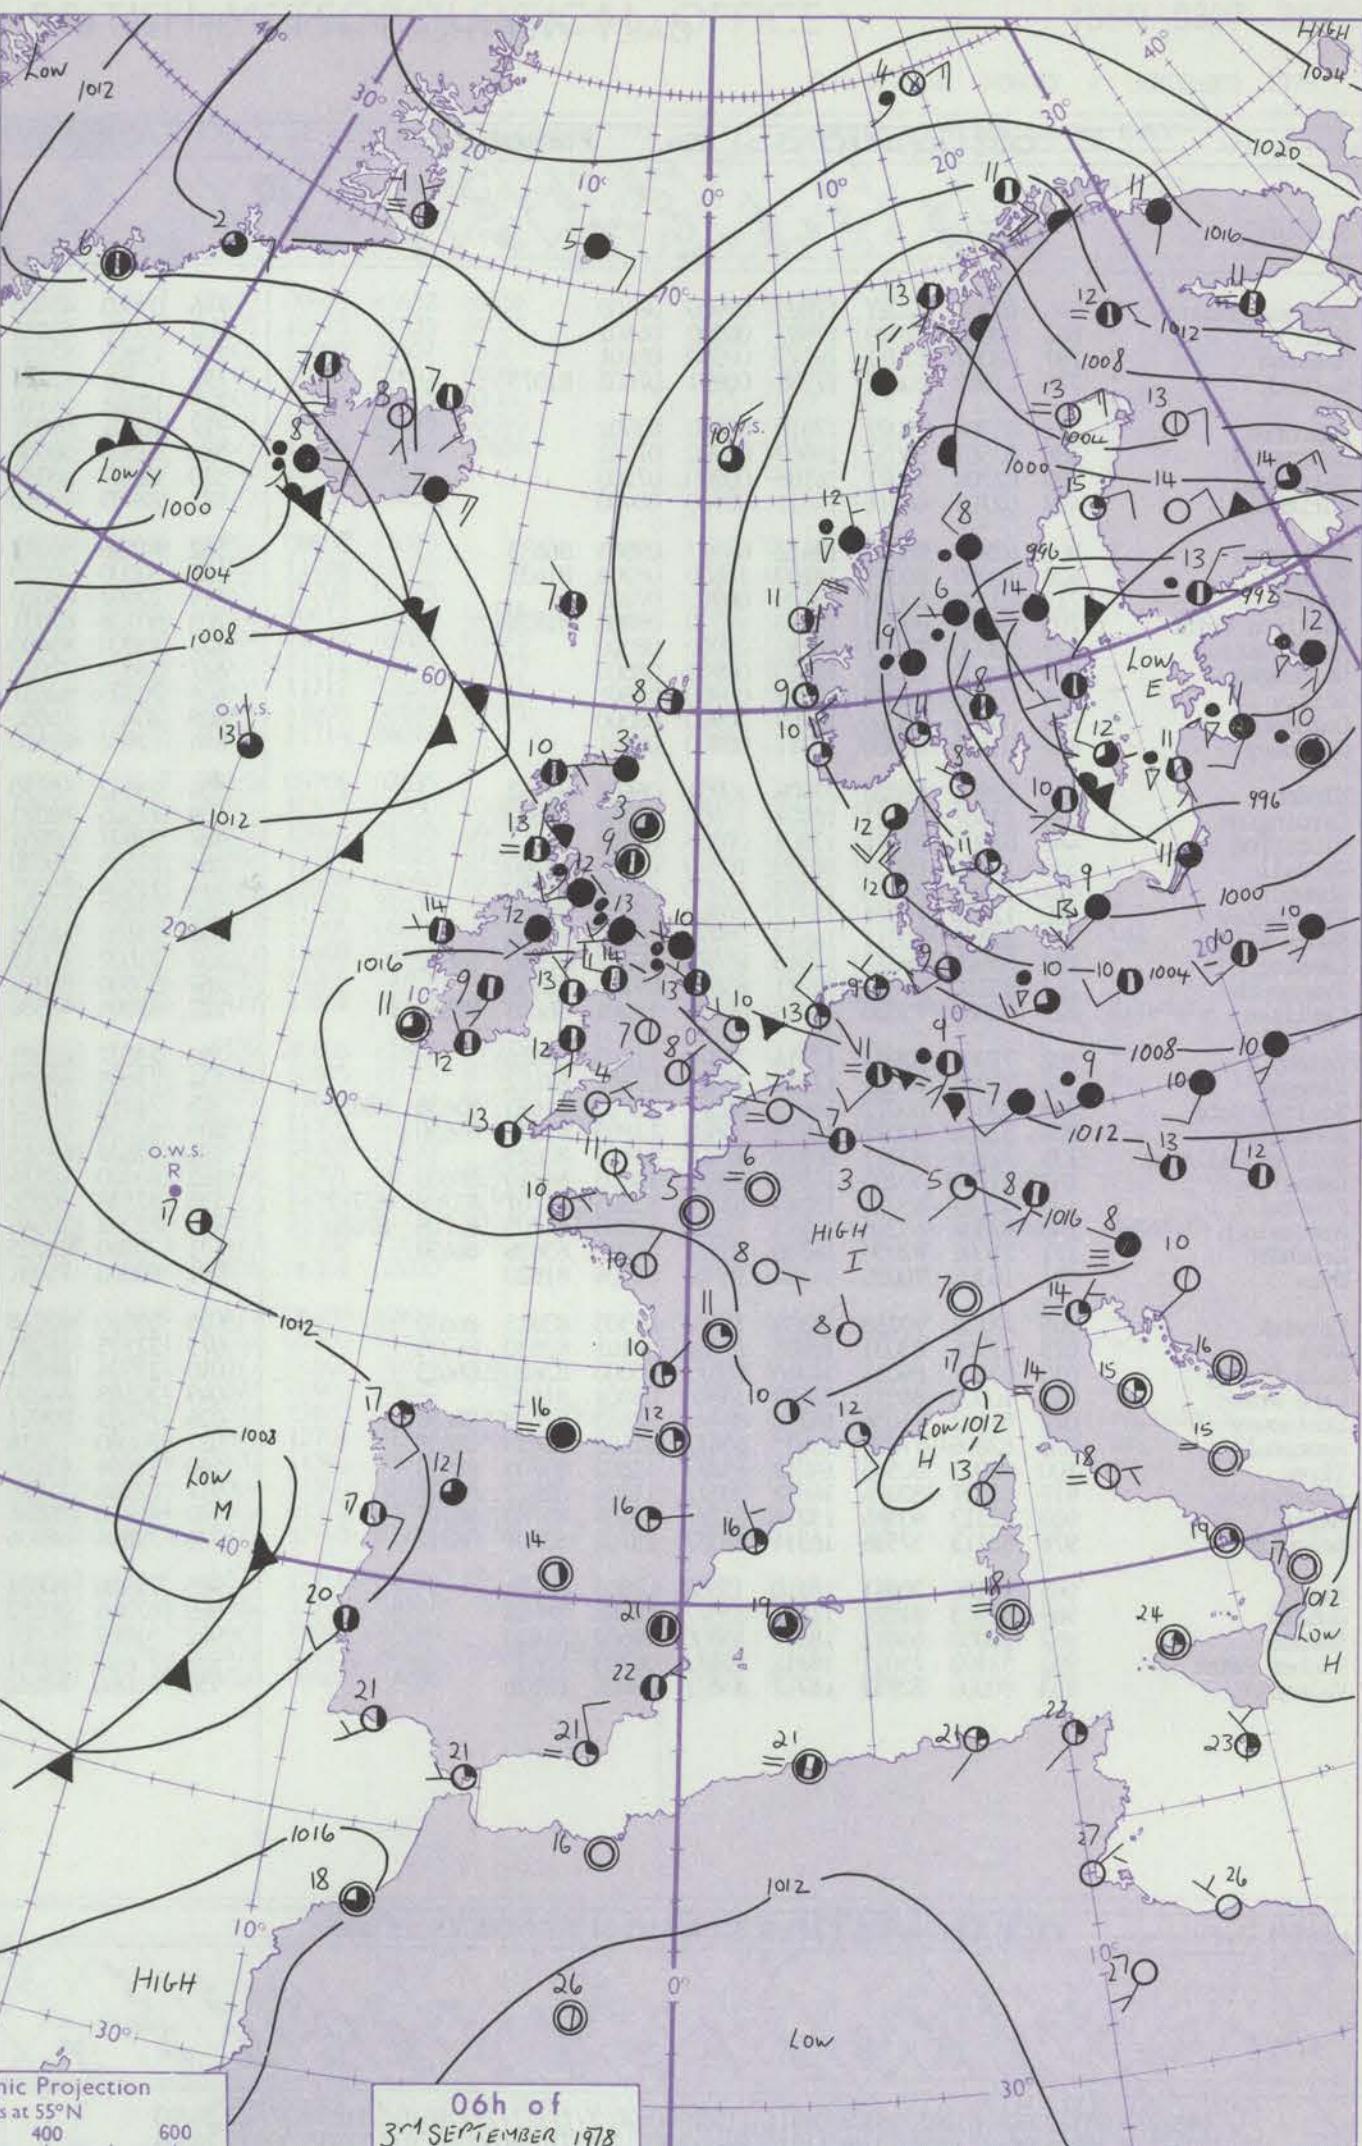

CHARTS OF WEATHER IN WESTERN EUROPE

GENERAL SYNOPTIC DEVELOPMENT

During the past 24 hours an anticyclone centred near southwest Ireland moved slowly southeast while an area of low pressure persisted over Scandinavia. A weak warm front over west Scotland extended southeastwards into southern North Sea.

During the next 24 hours the warm frontal zone is expected to persist over Scotland and near eastern coasts while a cold front moves southeast into west Scotland and Northern Ireland. The anticyclone is expected to continue moving southeast to eastern France.

Issued at midday SUNDAY 3 SEPTEMBER 1978

CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

CHARTS OF WEATHER IN WESTERN EUROPE

GENERAL SYNOPTIC DEVELOPMENT

The deep depression near the Gulf of Finland has moved slowly west to southern Sweden. An anticyclone southern Ireland to Switzerland has moved slowly south-east and has now declined to a ridge of high pressure, linking with that extending southwards between Iceland and Norway. A weakening frontal trough from south Iceland to the Low Countries has moved slowly south-east and has frontolysed.

During the next 24 hours the low over Sweden will slowly fill and move slowly east. A complex cold frontal trough moving slowly east is expected to extend from Iceland to about 200 miles west of Portugal by tomorrow morning.

Issued at midday

MONDAY 4 SEPTEMBER 1978

CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

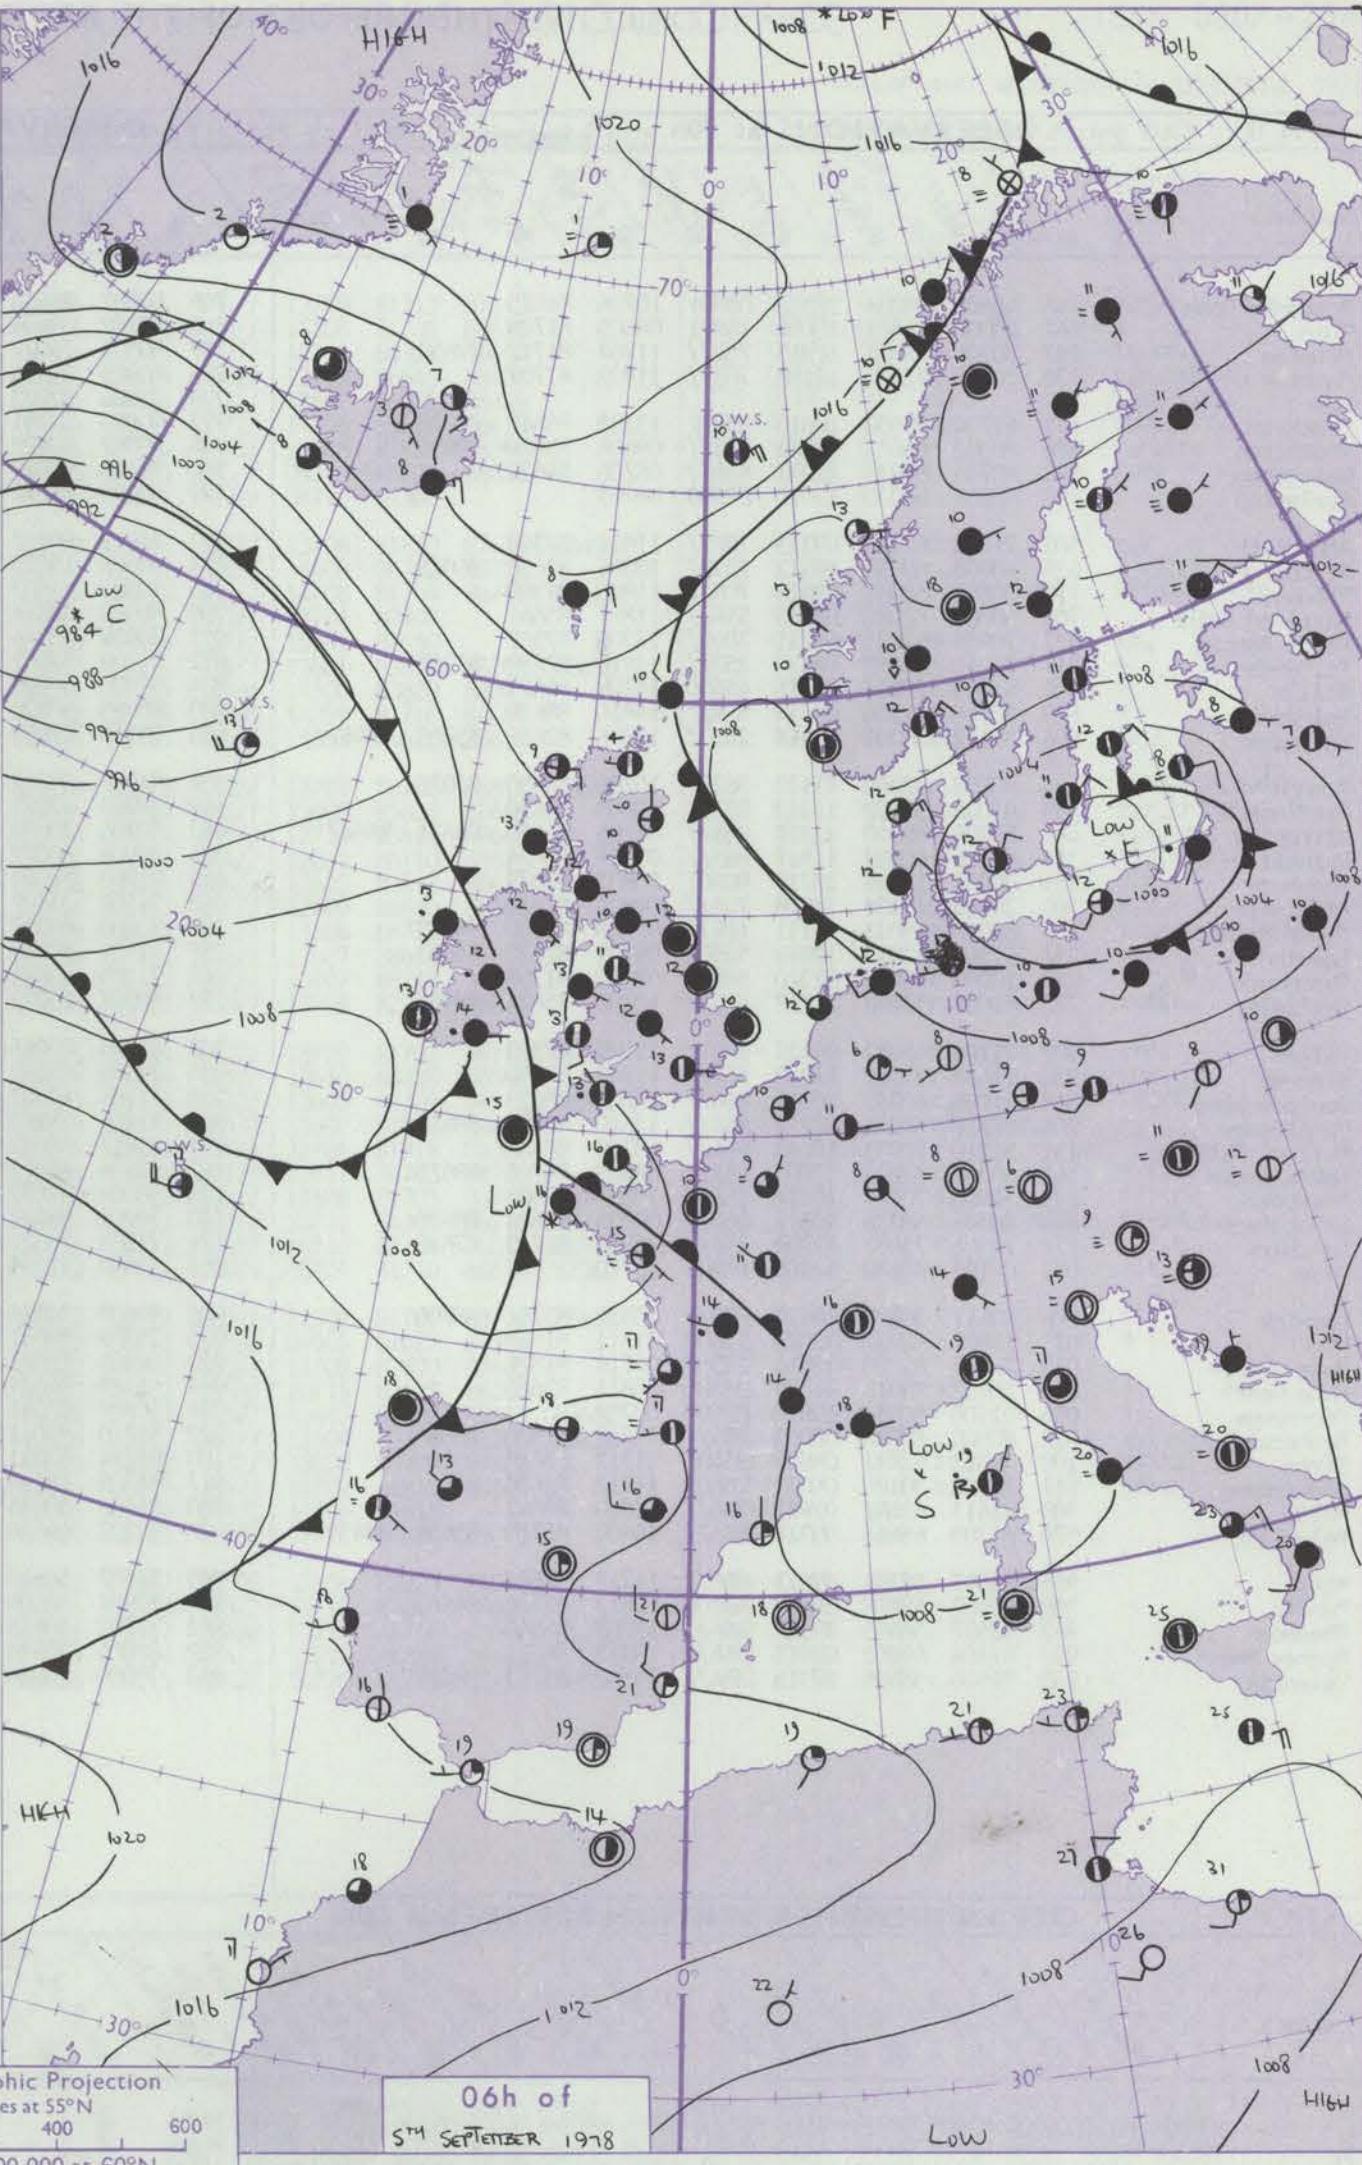

CHARTS OF WEATHER IN WESTERN EUROPE

GENERAL SYNOPTIC DEVELOPMENT

During the past 24 hours a depression over southern Sweden drifted slowly south and a complex low to the southwest of Iceland remained almost stationary maintaining a slack pressure gradient over much of the British Isles.

Polar Stereographic Projection
Statute miles at 55°N
Scale is 1:20,000,000 at 60°N.

06h of
5TH SEPTEMBER 1978

During the next 24 hours the complex depression to the southwest of Iceland is expected to remain almost stationary but an associated frontal trough lying southeast from the centre will move slowly northeast over much of the British Isles.

Issued at midday TUESDAY 5 SEPTEMBER 1978

CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

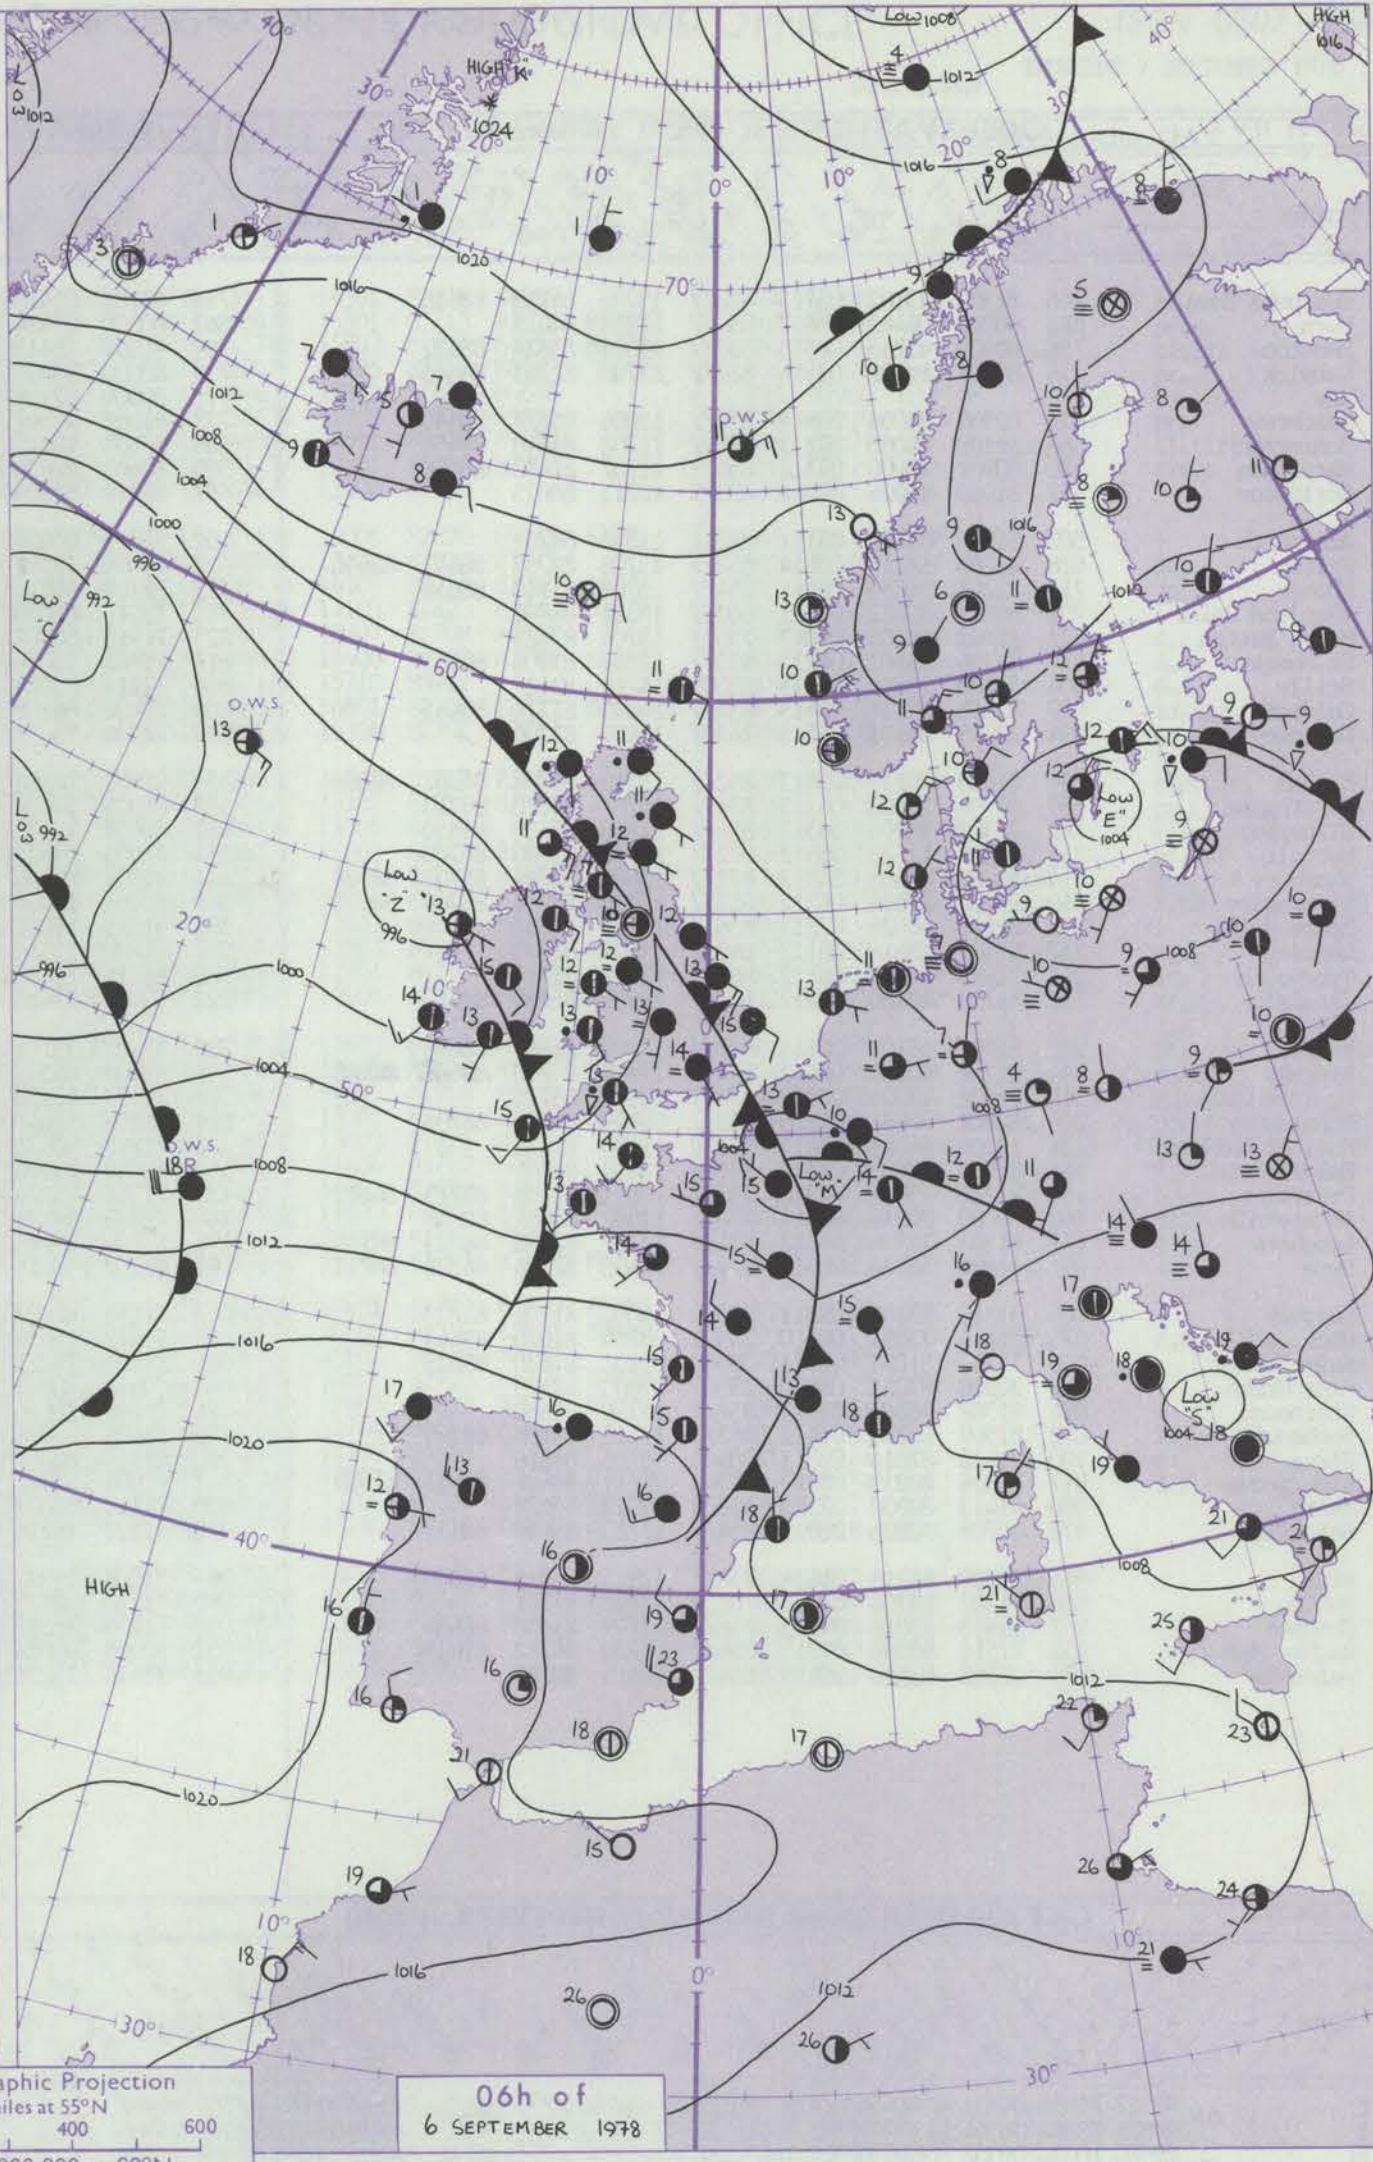

CHARTS OF WEATHER IN WESTERN EUROPE

18h of
5 SEPTEMBER 1978

00h of
6 SEPTEMBER 1978

06h of
6 SEPTEMBER 1978

GENERAL SYNOPTIC DEVELOPMENT

During the past 24 hours troughs of low pressure moved slowly eastwards across the British Isles with a shallow Low centre developing over the Channel and subsequently moving east. Another centre formed just to the northwest of Ireland.

During the next 24 hours further troughs of low pressure are expected to move eastwards across most parts of the British Isles.

Issued at midday WEDNESDAY 6 SEPTEMBER 1978

Polar Stereographic Projection
Statute miles at 55°N

Scale is 1:20,000,000 at 60°N.

CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

12 h of WEDNESDAY
6 SEPTEMBER 1978

Polar Stereographic projection
Scale 1:30,000,000. at Latitude 60°N.

CHARTS OF WEATHER IN WESTERN EUROPE

GENERAL SYNOPTIC DEVELOPMENT

During the past 24 hours an occlusion over Scotland, eastern and southeast England moved slowly northeast but still affected east and north Scotland. Another occlusion moved in from the Atlantic to Northern Ireland, Wales and central southern England.

During the next 24 hours the occlusions are expected to continue moving eastwards clearing eastern areas by midnight and followed by a weak ridge of high pressure. North Scotland however may continue to be affected by the slow-moving occlusions.

Issued at midday THURSDAY 7 SEPTEMBER 1978

CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

CHARTS OF WEATHER IN WESTERN EUROPE

GENERAL SYNOPTIC DEVELOPMENT

During the past 24 hours pressure remained high to the south and low over the north of the British Isles. Occluded fronts moved northeastwards across Scotland and northern and eastern England followed by a weak ridge of high pressure from the west.

During the next 24 hours a deep depression will move northeast towards the Faeroes and the associated fronts will move eastwards across most parts of Britain.

Issued at midday FRIDAY 8 SEPTEMBER 1978

CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

CHARTS OF WEATHER IN WESTERN EUROPE

GENERAL SYNOPTIC DEVELOPMENT

A deep depression about 500 miles southwest of Iceland and a secondary about 200 miles south of Iceland have moved rather quickly northeast with the main centre now just north of the Faeroes. An associated cold frontal trough from the south east of Iceland to the west of Ireland moved east across the British Isles and now extends across southern Norway and west Denmark to northwest France, followed by an unstable southwesterly airstream.

During the next 24 hours a warm front, associated with a depression moving northeast towards Iceland, will move very quickly northeast, crossing most of the British Isles by tomorrow morning, followed by a moist southwesterly airstream.

Polar Stereographic Projection
Statute miles at 55°N
Scale is 1:20,000,000 at 60°N.

OCEAN WEATHER STATION REPORTS at 12h

OCEAN WEATHER STATION REPORTS at 18h.

CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

CHARTS OF WEATHER IN WESTERN EUROPE

GENERAL SYNOPTIC DEVELOPMENT

During the past 24 hours pressure remained low to the north of the British Isles maintaining a westerly airstream over all parts with frontal troughs crossing northern districts.

During the next 24 hours a depression to the north of the British Isles is expected to move east maintaining a west or northwesterly airstream over all parts with a frontal trough moving slowly south to southern England.

Issued at midday SUNDAY 10 SEPTEMBER 1978

CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

CHARTS OF WEATHER IN WESTERN EUROPE

18h of
10 SEPTEMBER 1978

Polar Stereographic Projection
Statute miles at 55°N
Scale is 1:20,000,000 at 60°N.

06h of
11 SEPTEMBER 1978

GENERAL SYNOPTIC DEVELOPMENT

During the past 24 hours pressure remained low to the north and high to the south of the British Isles and a strong to gale force westerly airstream covered most parts.

During the next 24 hours a ridge of high pressure is expected to move into western districts veering the airflow northwesterly, but it will remain strong to gale force over much of Great Britain.

Issued at midday MONDAY 11 SEPTEMBER 1978

CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

CHARTS OF WEATHER IN WESTERN EUROPE

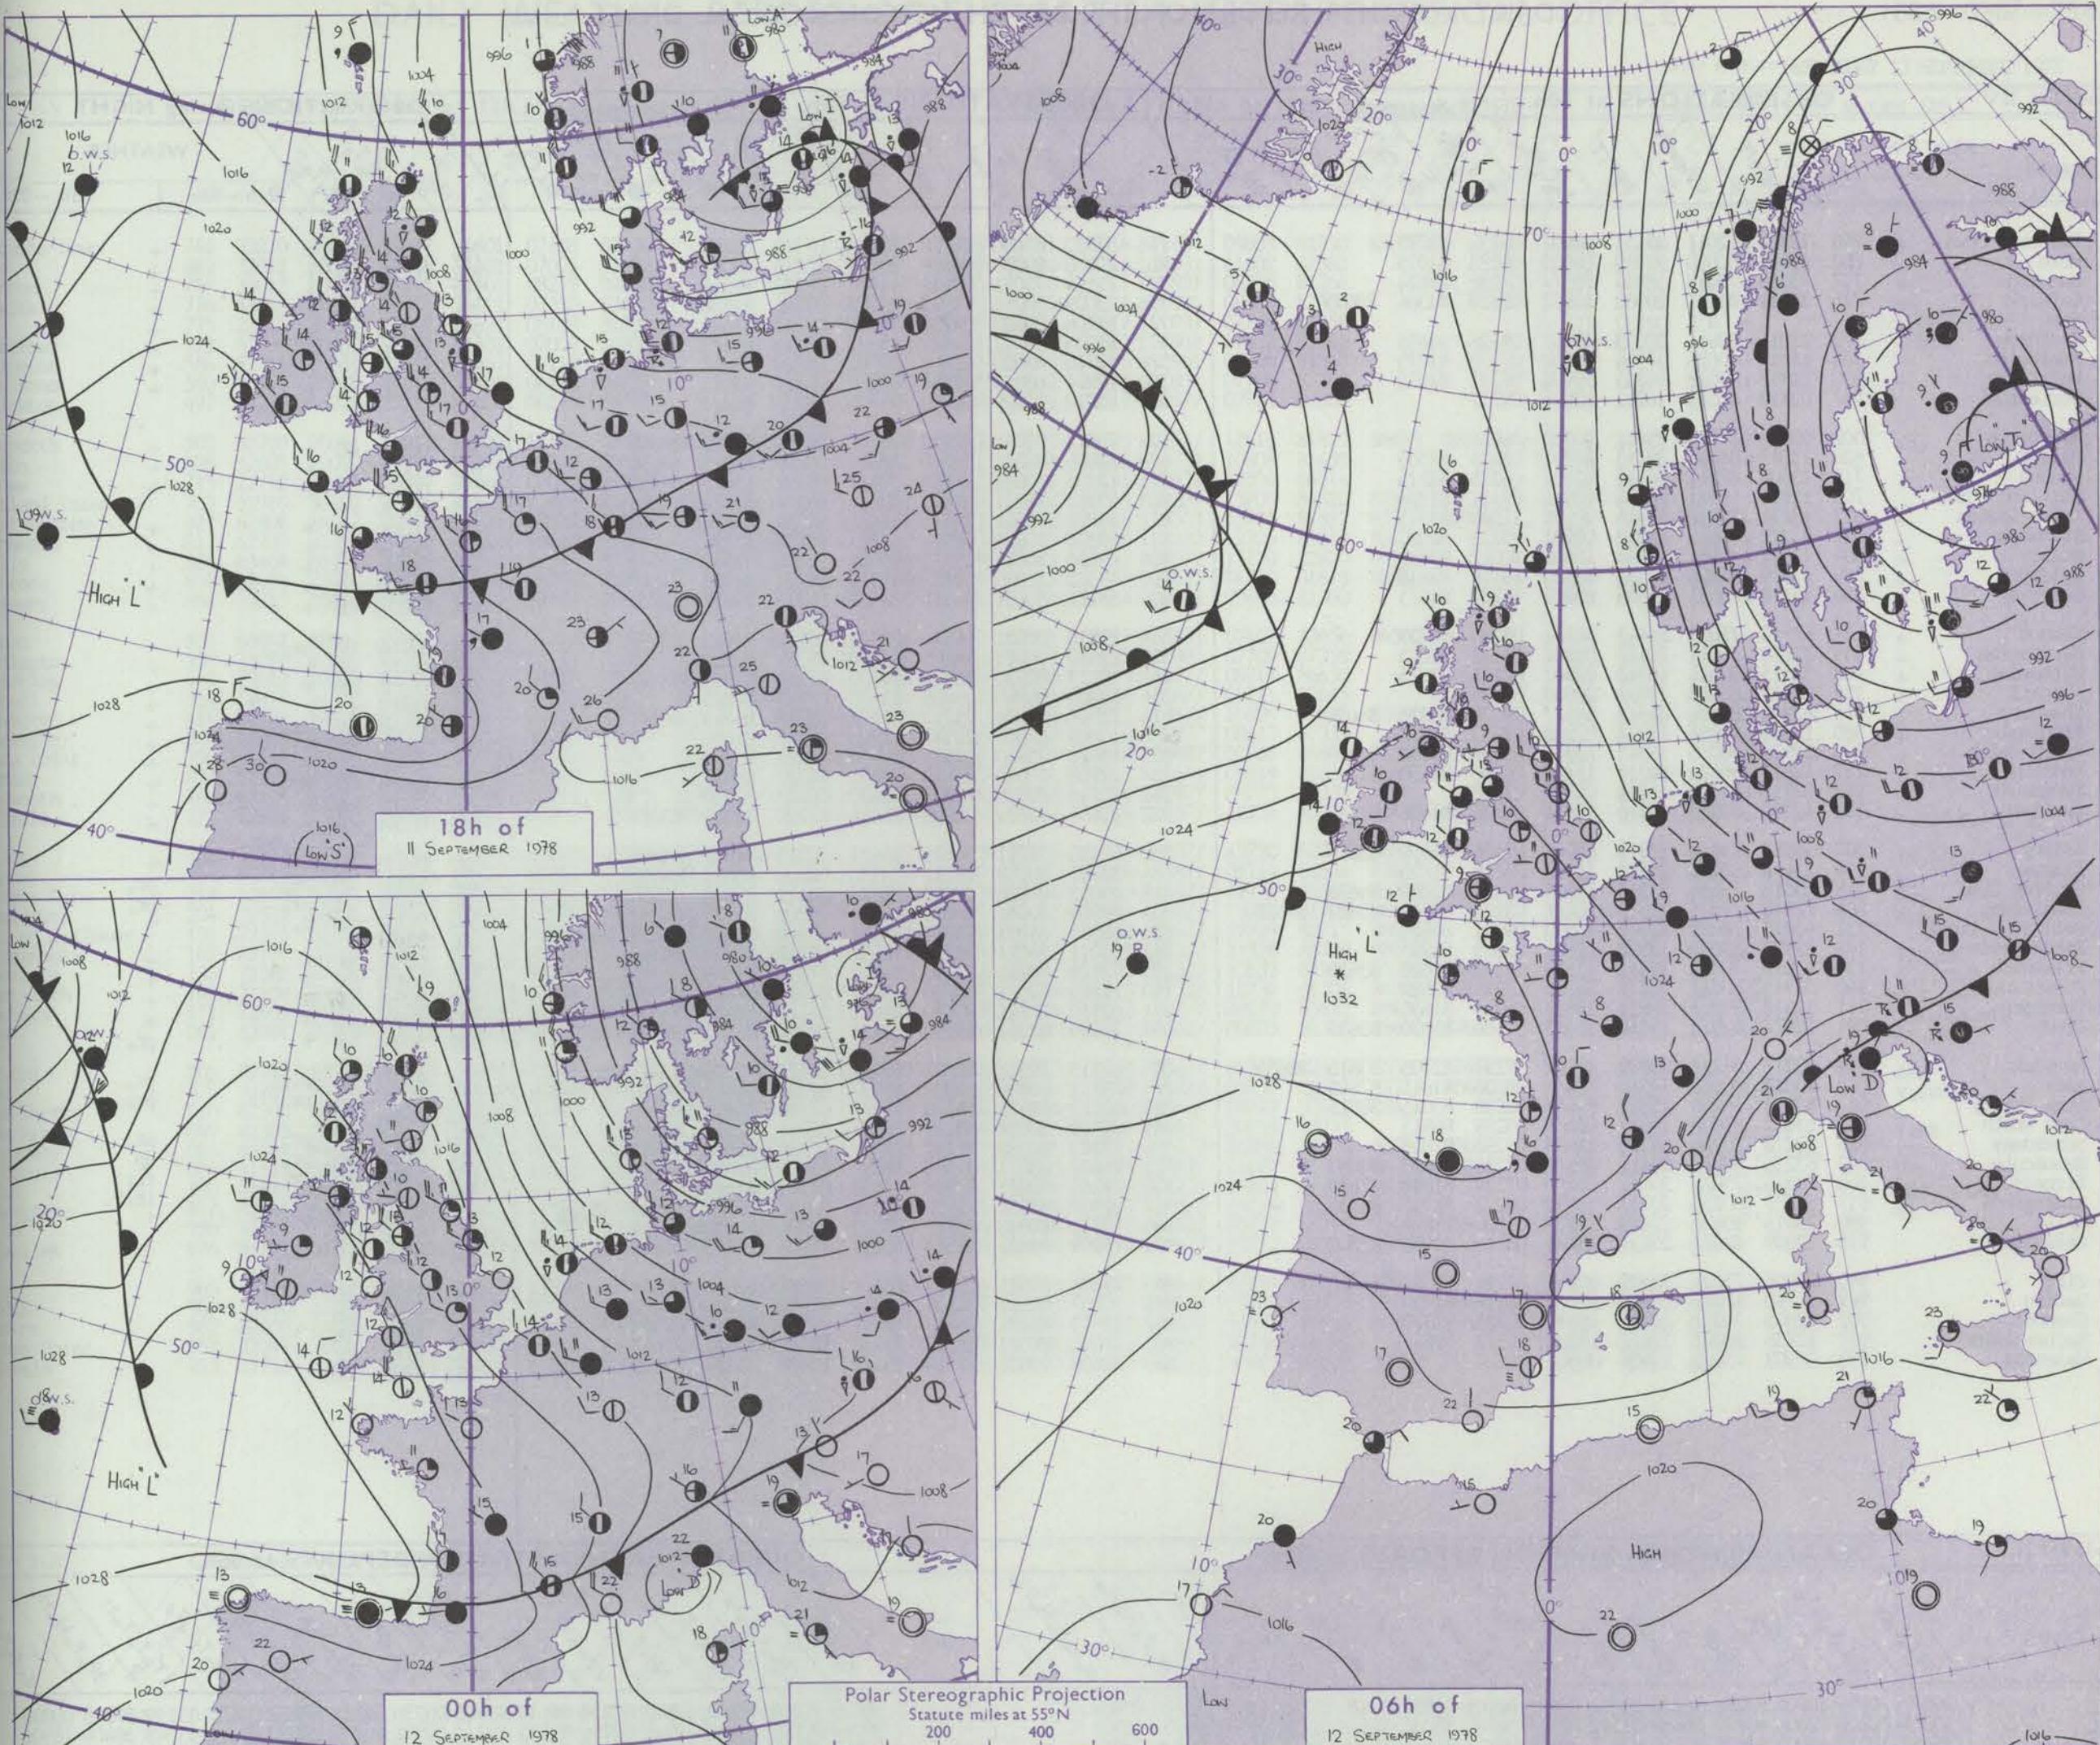

18h of
11 SEPTEMBER 1978

00h of
12 SEPTEMBER 1978

GENERAL SYNOPTIC DEVELOPMENT

During the past 24 hours a cold front over southeast England moved away rapidly southeastwards and a depression near north Scotland transferred rapidly east over the North Sea followed by a ridge of high pressure. Strong to gale force winds gave way to light winds over most parts.

06h of
12 SEPTEMBER 1978

Issued at midday TUESDAY 12 SEPTEMBER 1978

During the next 24 hours the ridge of high pressure is expected to continue moving east with frontal troughs moving across northern areas although in the south pressure is expected to remain fairly high.

CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

CHARTS OF WEATHER IN WESTERN EUROPE

GENERAL SYNOPTIC DEVELOPMENT

Anticyclone off northwest France has moved east to Switzerland. Associated ridge to the Faeroes has also moved east to Norway. Depression about 500 miles southwest of Iceland has moved northeast and is now about 100 miles south of Iceland. Associated warm front off western Ireland has moved to eastern England followed by a slow-moving waving cold front northeast England to Northern Ireland.

During the next 24 hours the depression will move to the east of Iceland and the cold front will move southeast, reaching southeast England by tomorrow morning, followed by an unstable westerly airstream.

Issued at midday WEDNESDAY 13 SEPTEMBER 1978

Polar Stereographic Projection
Statute miles at 55°N

Scale is 1:20,000,000 at 60°N.

CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

CHARTS OF WEATHER IN WESTERN EUROPE

GENERAL SYNOPTIC DEVELOPMENT

During the past 24 hours pressure remained low near Iceland and high over France maintaining a west to northwest airstream over the British Isles with a cold front moving southeast from Scotland to southeast England.

During the next 24 hours pressure is expected to remain low to the north and high to the south of the British Isles. The cold front over southeast England is expected to continue moving southeast as another frontal system moves east over northern districts.

Issued at midday THURSDAY 14 SEPTEMBER 1978

Polar Stereographic Projection
Statute miles at 55°N
Scale is 1:20,000,000 at 60°N.

CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

CHARTS OF WEATHER IN WESTERN EUROPE

GENERAL SYNOPTIC DEVELOPMENT

During the past 24 hours a depression north of Scotland moved slowly east and a weak ridge of high pressure crossed southern areas of England and Wales. Atlantic troughs of low pressure moved towards Scotland and Northern Ireland during the day, and a low which developed, deepened and moved east towards Orkney and Shetland.

During the next 24 hours this low is expected to continue moving east with the associated fronts crossing most areas of the British Isles. A further depression is, however, expected to develop in the East Atlantic and move towards northern Scotland. An anticyclone to the southwest will move east to Biscay, declining a little.

Issued at midday FRIDAY 15 SEPTEMBER 1978

Polar Stereographic Projection
Statute miles at 55°N
Scale is 1:20,000,000 at 60°N.

CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

CHARTS OF WEATHER IN WESTERN EUROPE

GENERAL SYNOPTIC DEVELOPMENT

During the past 24 hours a depression near northeast Scotland moved away rapidly eastwards followed by a temporary ridge of high pressure which in turn gave way as a further depression moved from the Atlantic to off north Scotland. Pressure remained high over Southwest Approaches and France.

During the next 24 hours a depression is expected to move rapidly northeast off the north of Scotland and deepen, with a marked frontal trough moving southeast crossing all parts to reach the English Channel by tomorrow morning followed by a northwesterly flow.

Issued at midday SATURDAY 16 SEPTEMBER 1978

CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

CHARTS OF WEATHER IN WESTERN EUROPE

GENERAL SYNOPTIC DEVELOPMENT

During the past 24 hours a depression to the northwest of Ireland deepened rapidly as it moved rather quickly northeastwards just south of the Faeroes to near the Norwegian coast. The associated cold front moved quickly southeast across the British Isles. An anticyclone in mid-Atlantic moved quickly east to be centred just west of Ireland.

During the next 24 hours the depression off the Norwegian coast will transfer eastwards to the northern Baltic and the anticyclone just west of Ireland will intensify as it moves slow southeast, so maintaining a northwesterly airflow over the British Isles.

Issued at midday SUNDAY 17 SEPTEMBER 1978

Polar Stereographic Projection
Statute miles at 55°N
Scale is 1:20,000,000 at 60°N.

OCEAN WEATHER STATION REPORTS at 18h.

CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

CHARTS OF WEATHER IN WESTERN EUROPE

GENERAL SYNOPTIC DEVELOPMENT

A deep depression off the west coast of Norway has moved east to the Northern Baltic during the past 24 hours, and has filled steadily. The anticyclone about 250 miles west of Shannon has moved slowly east. An unstable northwesterly airstream between these two systems has covered the British Isles.

During the next 24 hours the depression will move slowly east and continue to fill whilst the anticyclone off southwest Ireland will remain almost stationary. The northwesterly airstream over the British Isles will continue but decrease in strength.

Issued at midday MONDAY 18 SEPTEMBER 1978

CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

CHARTS OF WEATHER IN WESTERN EUROPE

GENERAL SYNOPTIC DEVELOPMENT

During the past 24 hours an anticyclone remained stationary just south of Ireland. A shallow wave over Shetland, early in the period, moved rapidly southeastwards, whilst its cold front remained slow moving over Scotland.

During the next 24 hours the anticyclone will persist to the south of Ireland whilst the front over Scotland is expected to move slowly eastwards as a warm front.

Issued at midday TUESDAY 19 SEPTEMBER 1978

CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

CHARTS OF WEATHER IN WESTERN EUROPE

GENERAL SYNOPTIC DEVELOPMENT

During the past 24 hours an anticyclone over southwestern districts moved northeast to centre over South Wales. Shallow frontal troughs over west Scotland and Northern Ireland moved slowly east.

During the next 24 hours the anticyclone is expected to drift southeastwards into France but a ridge of high pressure will persist over most of the British Isles. Frontal troughs are expected to move southeastwards from Scotland into the North Sea.

Issued at midday WEDNESDAY 20 SEPTEMBER 1978

Polar Stereographic Projection
Statute miles at 55°N
200 400 600
Scale is 1:20,000,000 at 60°N.

CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

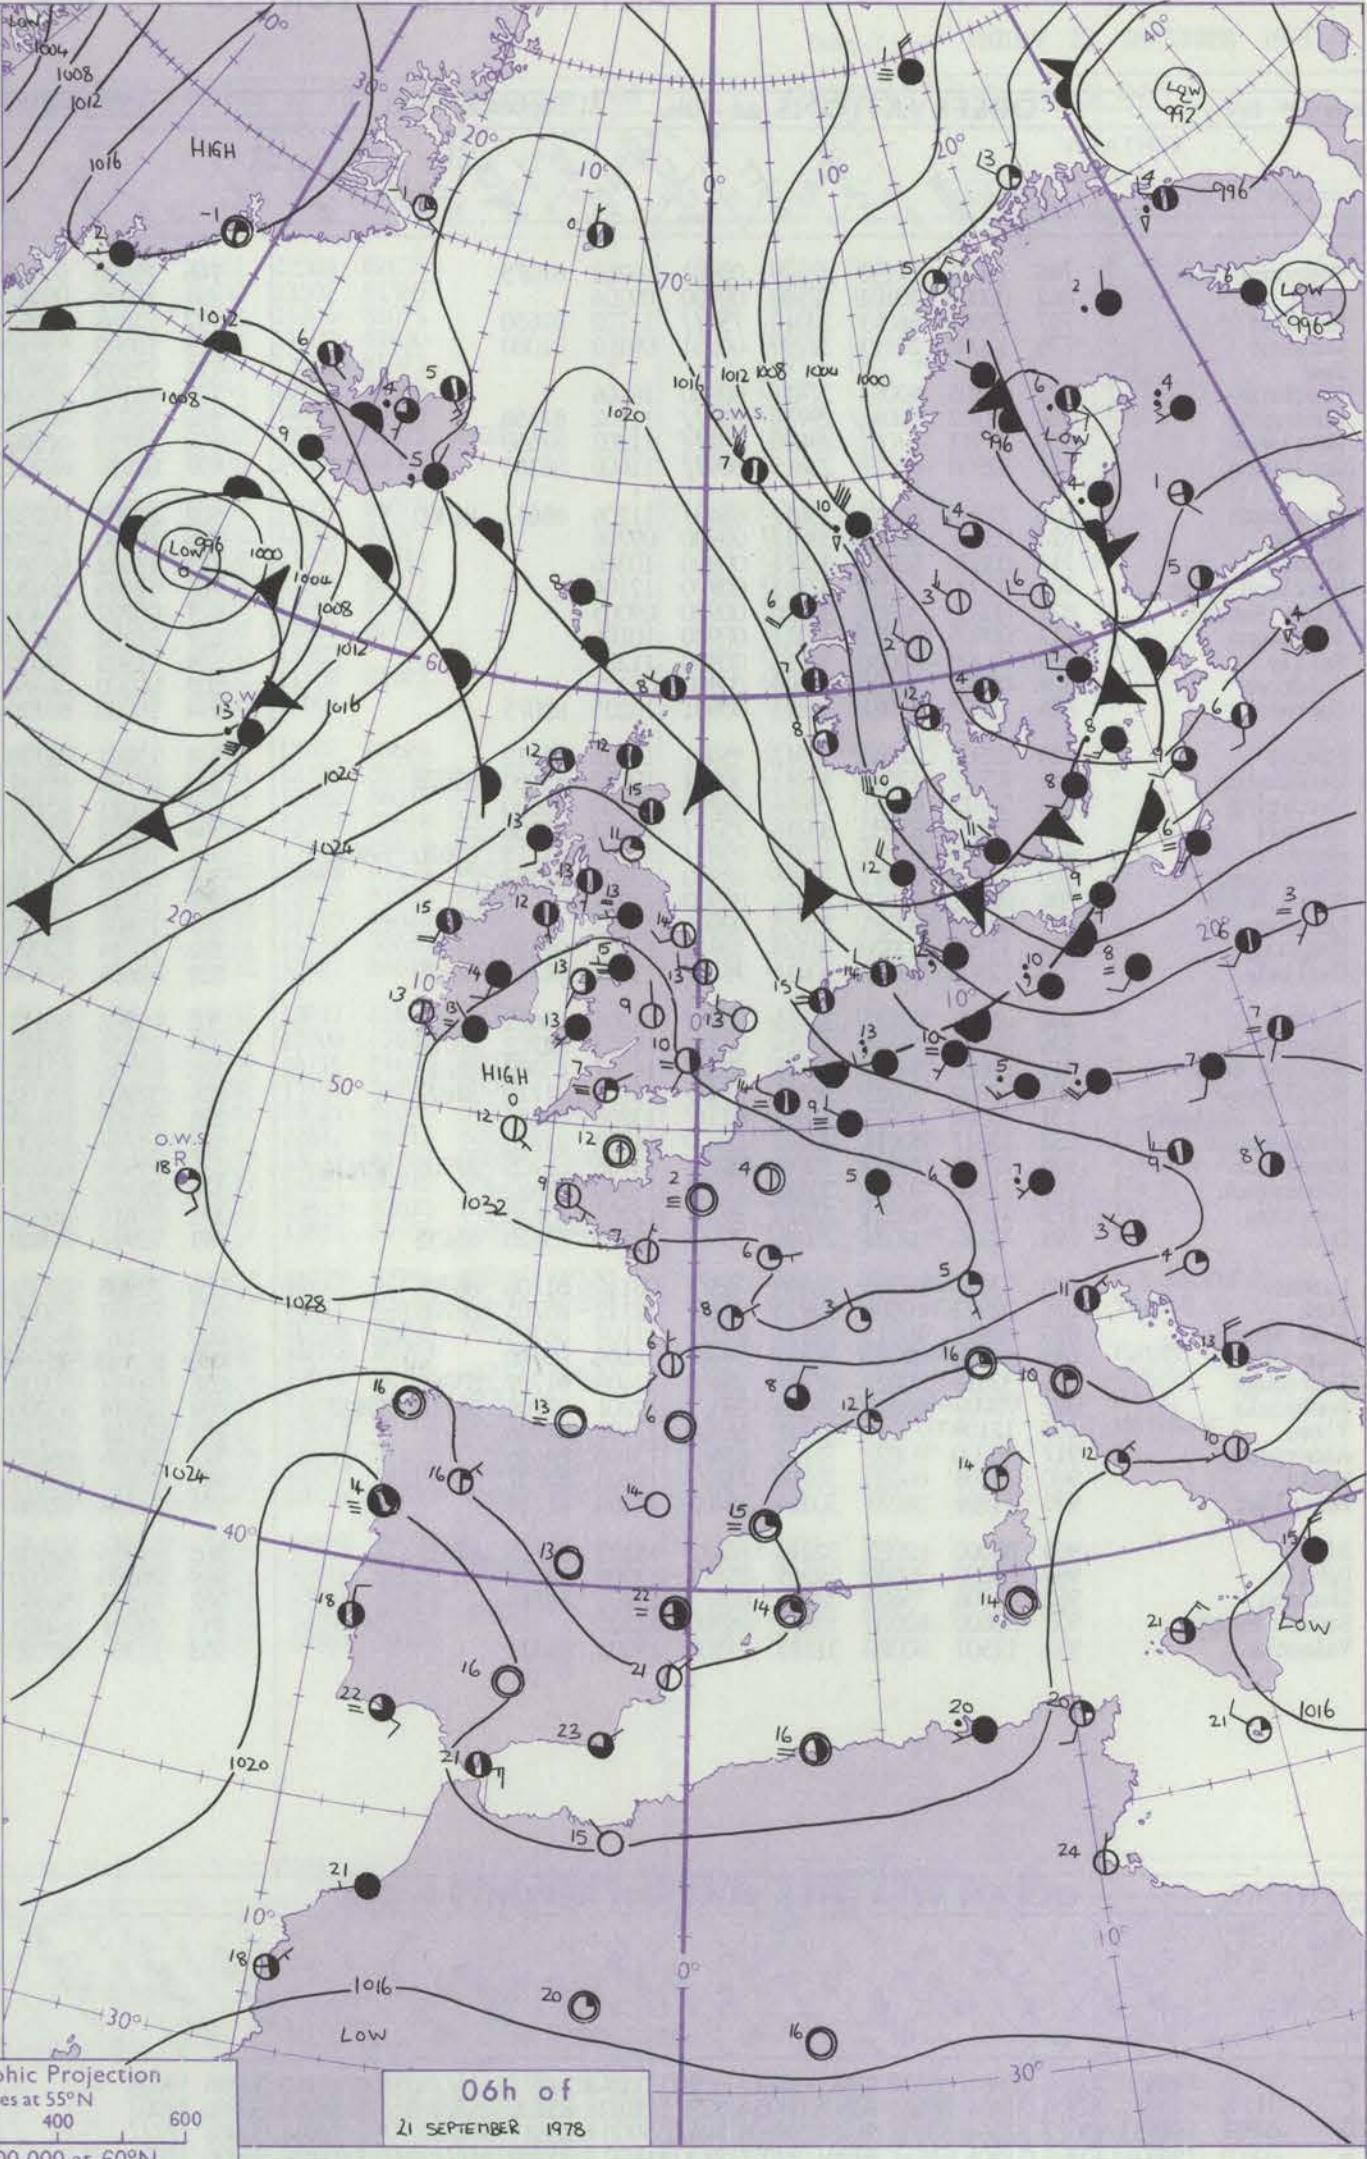

CHARTS OF WEATHER IN WESTERN EUROPE

GENERAL SYNOPTIC DEVELOPMENT

During the past 24 hours the anticyclone has remained almost stationary over southern parts of the British Isles. Weak troughs of low pressure over Scotland moved southeast into Scandinavia and Germany.

Polar Stereographic Projection
Statute miles at 55°N
Scale is 1:20,000,000 at 60°N.

During the next 24 hours pressure is expected to remain high in the south but a trough of low pressure is likely to move east into the Hebrides and northern Scotland.

Issued at midday THURSDAY 21 SEPTEMBER 1978

CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

CHARTS OF WEATHER IN WESTERN EUROPE

GENERAL SYNOPTIC DEVELOPMENT

During the past 24 hours a depression to the southwest of Iceland filled a little as it moved steadily northeast and then east to just east of the Faeroes. Associated frontal troughs moved eastwards across Scotland. An anticyclone remained centred over the western English Channel.

During the next 24 hours the anticyclone over the western English Channel will move slowly southeast into France whilst the depression near the Faeroes moves to the Baltic. A deepening depression in mid-Atlantic will move northeast towards Iceland and the associated fronts will cross Scotland.

Issued at midday FRIDAY 22 SEPTEMBER 1978

CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

CHARTS OF WEATHER IN WESTERN EUROPE

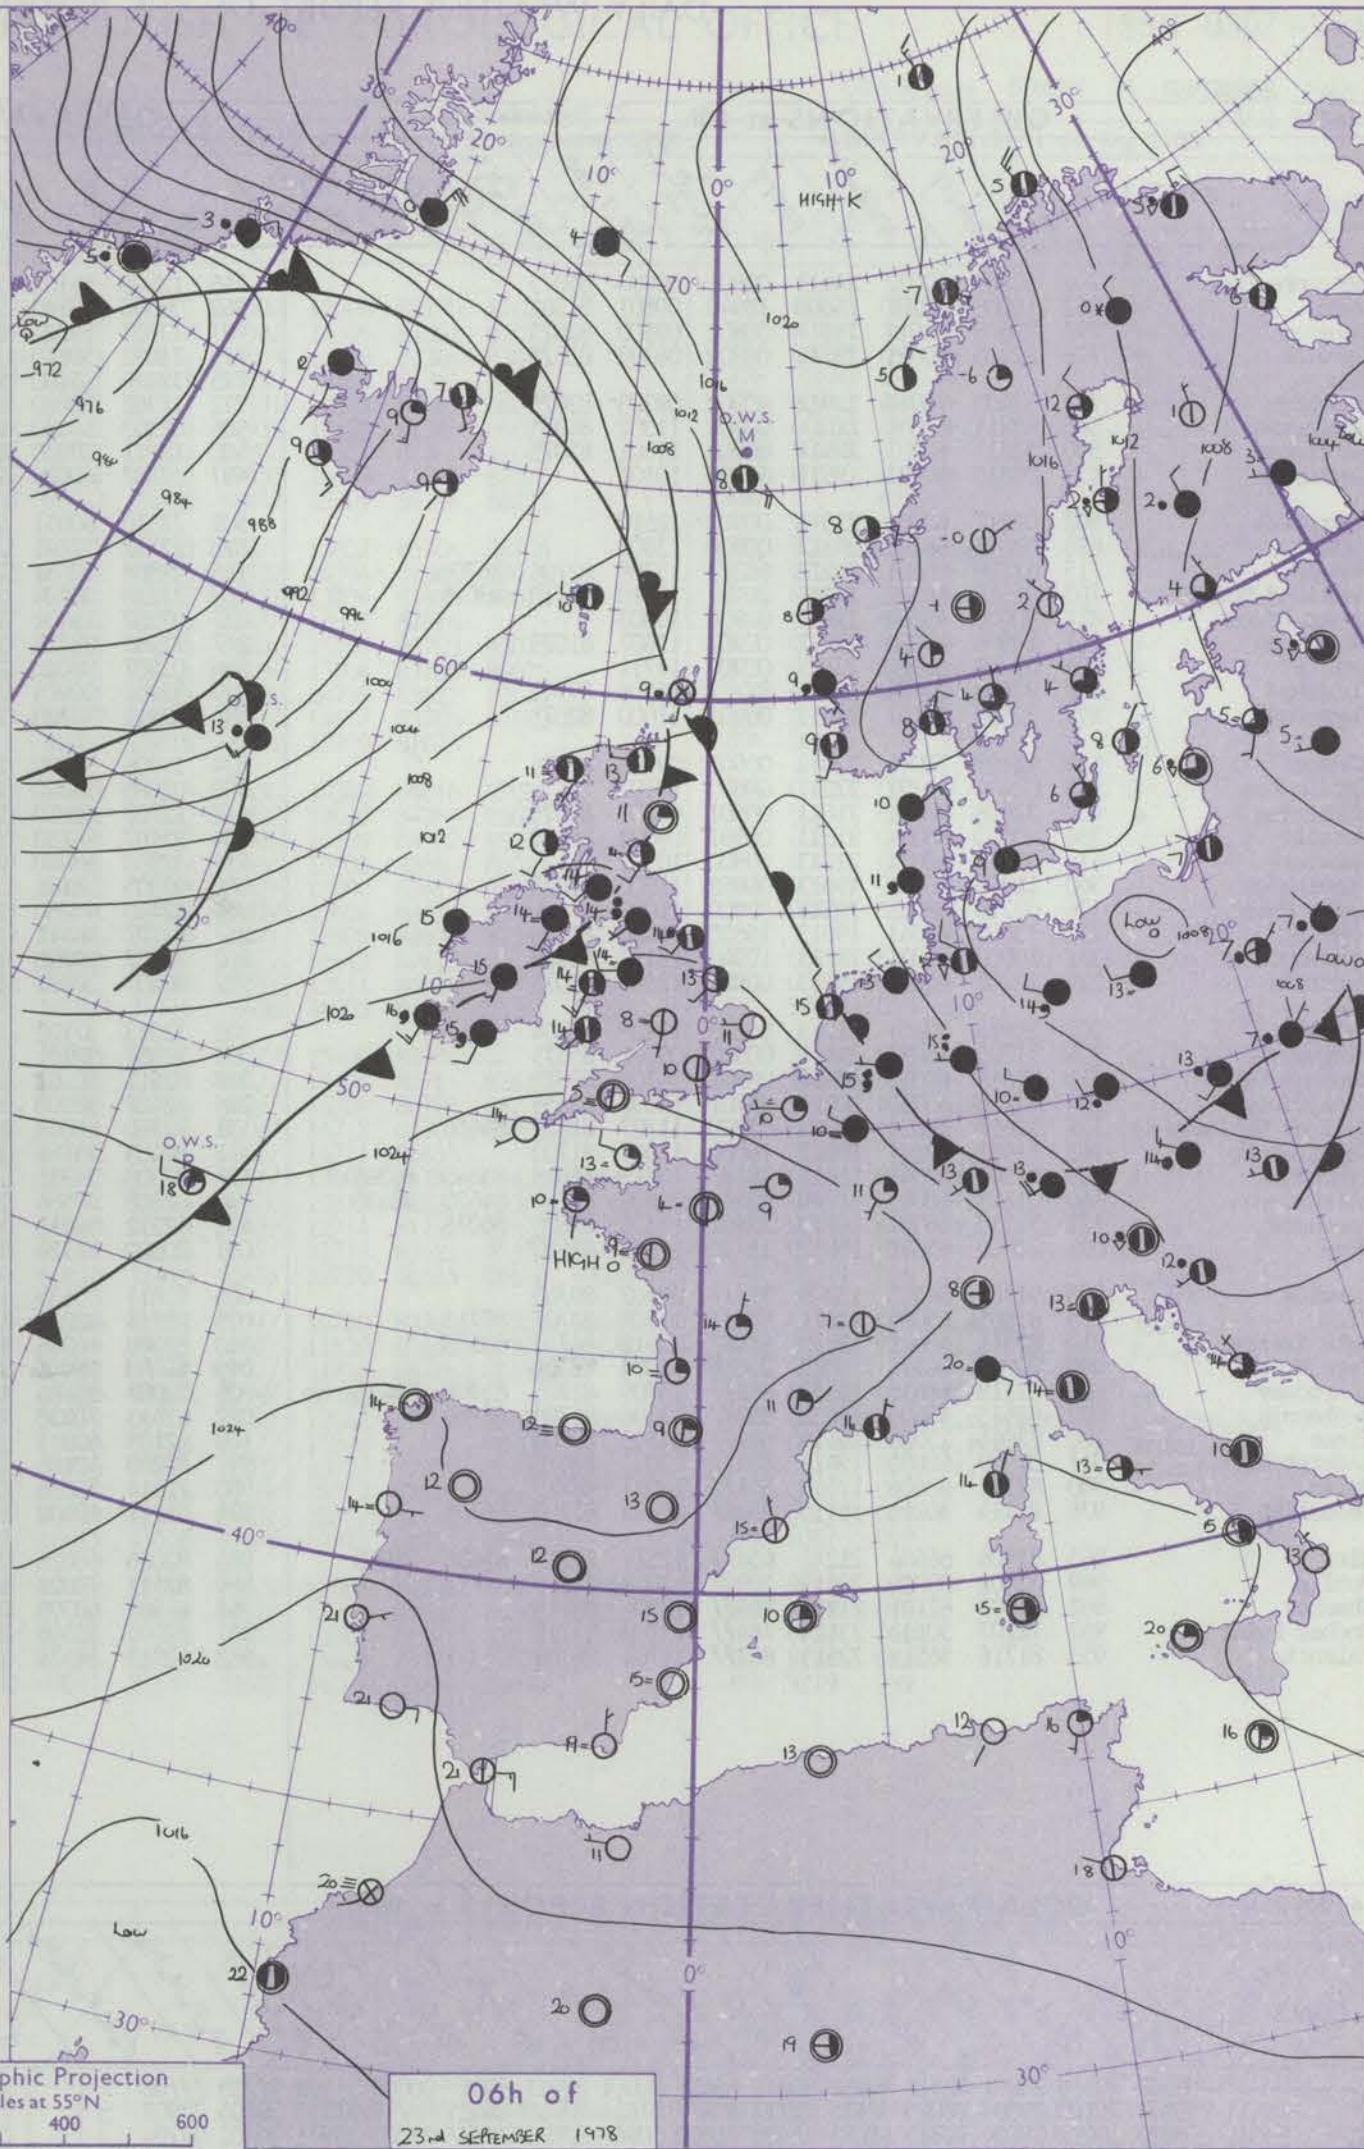

18h of
22nd SEPTEMBER 1978

00h of
23rd SEPTEMBER 1978

GENERAL SYNOPTIC DEVELOPMENT

During the past 24 hours pressure remained high over north France. A depression to the north of the British Isles moved east and associated frontal troughs crossed northern districts.

06h of
23rd SEPTEMBER 1978

During the next 24 hours pressure is expected to remain high over France and low near Iceland maintaining a westerly airstream over the British Isles with frontal troughs moving east over all districts but becoming weak and slow moving in the south.

Issued at midday SATURDAY 23 SEPTEMBER 1978

Polar Stereographic Projection
Statute miles at 55°N
200 400 600
Scale is 1:20,000,000 at 60°N.

CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

CHARTS OF WEATHER IN WESTERN EUROPE

GENERAL SYNOPTIC DEVELOPMENT

During the past 24 hours a ridge of high pressure over France has persisted while a weak cold front moved slowly southeastwards from Scotland to South Wales and central England and became very weak. Further frontal troughs affected the north with another cold front moving slowly southeast over Scotland and Northern Ireland.

During the next 24 hours the cold front is expected to continue moving southeast into England and Wales with a shallow wave crossing central districts in a mainly westerly airflow.

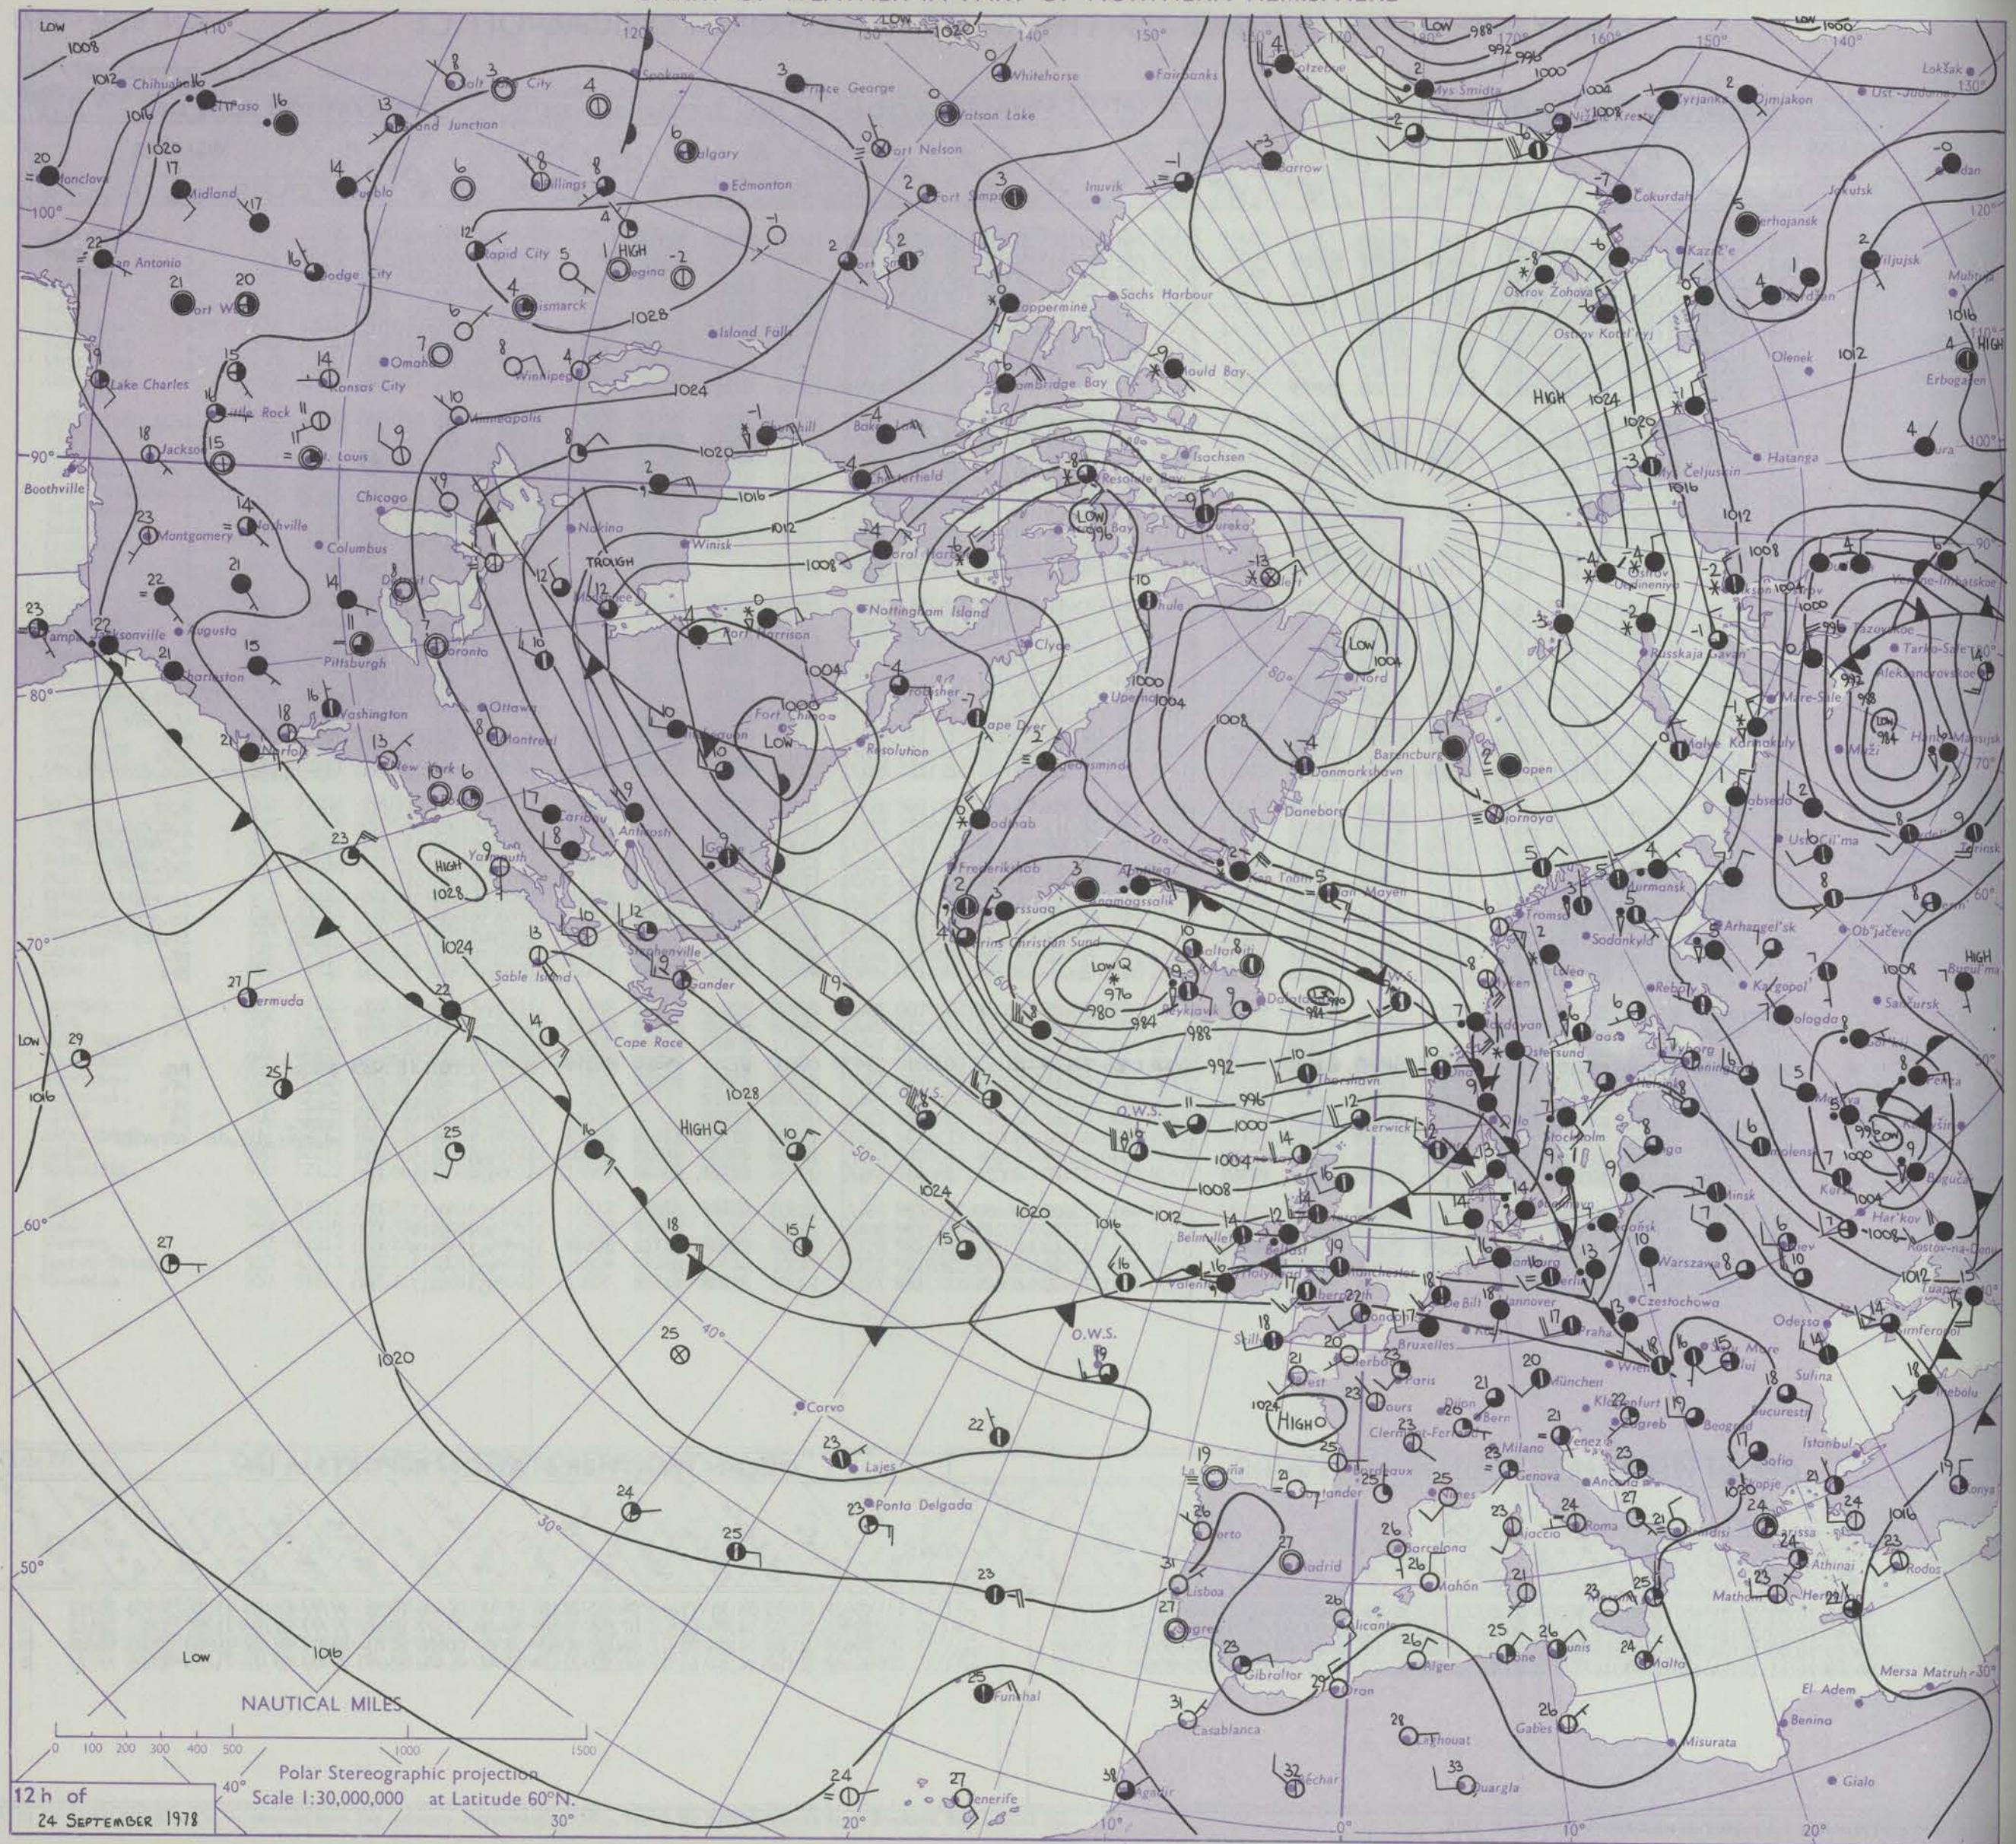

Issued at midday SUNDAY 24 SEPTEMBER 1978

Polar Stereographic Projection
Statute miles at 55°N
Scale is 1:20,000,000 at 60°N.

CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

CHARTS OF WEATHER IN WESTERN EUROPE

GENERAL SYNOPTIC DEVELOPMENT

During the past 24 hours a depression has remained in the Iceland area and its associated cold front, with minor waves running northeastwards, moved slowly southeast from central parts of the British Isles to southeast England.

During the next 24 hours the cold front over southeastern districts will continue to move slowly southeast into the Continent. Pressure will be low to the north of the British Isles and relatively high in the south.

Issued at midday MONDAY 25 SEPTEMBER 1978

Polar Stereographic Projection
Statute miles at 55°N
Scale is 1:20,000,000 at 60°N.

CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

CHARTS OF WEATHER IN WESTERN EUROPE

GENERAL SYNOPTIC DEVELOPMENT

During the past 24 hours a depression moved steadily eastwards across Iceland whilst pressure remained high to the south and southwest of the British Isles. A cold front over southeast England and the western English Channel moved slowly southwards and a trough moved eastwards across Northern Ireland and western Scotland overnight.

During the next 24 hours the trough over Britain will move away eastwards and the low east of Scotland will move towards southern Norway. With pressure remaining high to the south and southwest, an unstable west to northwest airstream will be maintained over the British Isles.

Issued at midday TUESDAY 26 SEPTEMBER 1978

Polar Stereographic Projection
Statute miles at 55°N
Scale is 1:20,000,000 at 60°N.

CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

CHARTS OF WEATHER IN WESTERN EUROPE

GENERAL SYNOPTIC DEVELOPMENT

During the past 24 hours a depression west of the Faeroes moved slowly east, maintaining an unstable west to northwest airstream over the British Isles with minor troughs embedded in the flow.

During the next 24 hours, the low to the north is expected to continue moving eastwards into Scandinavia. A weak ridge will cross western areas ahead of frontal troughs approaching from the Atlantic.

Polar Stereographic Projection
Statute miles at 55°N
Scale is 1:20,000,000 at 60°N.

CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

CHARTS OF WEATHER IN WESTERN EUROPE

GENERAL SYNOPTIC DEVELOPMENT

During the past 24 hours a depression near southern Norway moved southeast and a low over the Atlantic moved steadily towards Scotland as an associated warm front crossed western parts of the British Isles.

During the next 24 hours the low to the south of Iceland is expected to move east to Scotland whilst associated frontal troughs move east over all parts of the British Isles.

Issued at midday THURSDAY 28 SEPTEMBER 1978

CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

CHARTS OF WEATHER IN WESTERN EUROPE

Polar Stereographic Projection
Statute miles at 55°N
Scale is 1:20,000,000 at 60°N.

GENERAL SYNOPTIC DEVELOPMENT

During the past 24 hours a deep depression moved from the Atlantic to west Scotland and associated fronts over the British Isles moved southeast to the North Sea and Channel, followed by a strong west to northwest airflow over most parts.

During the next 24 hours the depression is expected to move slowly east southeast to the North Sea with a strong northwesterly airflow affecting all the British Isles.

Issued at midday FRIDAY 29 SEPTEMBER 1978

CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

CHARTS OF WEATHER IN WESTERN EUROPE

GENERAL SYNOPTIC DEVELOPMENT

During the past 24 hours the depression north of Scotland extended further southeast into the North Sea and maintained the strong northwest airflow over the British Isles.

During the next 24 hours the depression in the North Sea will move slowly southeast into the Continent. The gradient will relax and a weak ridge of high pressure will move southeast into Ireland just ahead of the next frontal system.

Issued at midday SATURDAY 30 SEPTEMBER 1978
