## Daily Weather Summaries for July 2020

**If you have any questions or feedback about this product or wish to obtain further data please contact the Met Office.**

This document contains daily weather summaries for each day of July 2020. The Met Office National Meteorological Library and Archive holds a continuous record of daily weather summaries or daily weather reports from 1860, and these daily weather summaries form a continuation of that series.

The purpose of each summary is to provide an overview of the weather conditions across the UK on that day, with the historical emphasis mainly based on observations from surface network of weather stations, although the format has varied over the decades. While the emphasis remains on observations from the surface network, the current daily weather summaries supplement these by including satellite and rain-radar imagery to provide a more complete overview. The current format of the daily weather summaries is as follows:

1. Text summary of the main characteristics of the weather during the day, written by an operational meteorologist in the Met Office operations centre.
2. Table of daily extremes for the UK for key climate variables including temperature, rainfall, sunshine and gust speeds.
3. Overview of the synoptic situation at 00 and 12 UTC comprising: analysis charts showing the surface pressure pattern and associated weather fronts; North Atlantic and European infra-red satellite images showing cloud-cover; combined infra-red and rain-radar images of the UK; maps of wind speed and direction at 00 and 12 UTC; observations of pressure, wind speed and direction, cloud cover, air and dewpoint temperature at selected UK and European stations in data tables.
4. UK maps of key climate variables from observing stations including maximum, minimum and grass minimum temperature, rainfall, sunshine, gust speed and snow.
5. Further guidance notes

If you spot any data errors or omissions in this product please contact the Met Office.

## Daily Weather Summary for Wednesday 01 July 2020

This day's summary created 21/07/2020 21:29

### Summary of the UK Weather for Wednesday 01 July 2020

Overnight, scattered showers were seen throughout, although these turned to longer spells of rain at times in the north and southern parts of Scotland. Winds remained light and it was mostly cloudy across the UK. It remained predominantly overcast during the morning throughout the UK, although there were some sunny spells on offer in parts of southeast England for a short while during the early morning. Light patches of drizzle were dotted around much of the UK which were heaviest in Scotland, though most places were dry, albeit with limited brightness. The afternoon saw some sharp showers developing sporadically in most parts, with some hail mixed in too. By the evening, many of the showers in the south had faded away, though drizzle was affecting many in Scotland, as showers still continued in northern England.

### Summary of the UK Weather for Thursday 02 July 2020

Overnight saw scattered showers, the heaviest of which were in the north of England, with patchy cloudy throughout. Winds remained light, with a breeze along the western coastlines. Showers slowly cleared eastwards through central and southern UK through the morning and into the evening, occasionally turning heavy and thundery, especially in the southeast. Otherwise, a cloudy day for most, with sunnier spells developing from the west through the afternoon as the showers cleared. Scotland and Northern Ireland also saw the odd shower.

### Summary of the UK Weather for Friday 03 July 2020

Wet and breezy conditions swept in from the west in the early hours, affecting Northern Ireland, western Scotland and northwest England. Most of the south remained dry with a few clear spells in the far southeast for much of the night. By sunrise, a second band of rain began to move towards western parts. Many southeastern parts of England started off dry with some sunshine, but turned increasingly cloudy as the rain over northern and western parts moved further southeast throughout the day. It became quite windy across the UK with strong gusts around the outbreaks of rain.

### Summary of the UK Weather for Saturday 04 July 2020

It was another predominantly cloudy night, with windy conditions in the west and some heavy rain around northern England and southern Scotland. Further south the rain was much patchier in nature and mainly confined the high ground in the west. The patchy rain and drizzle continued through the morning, slowly clearing eastward through the rest of the day. It was another cloudy but bright day between any outbreaks of rain and after the rain cleared. The wind eased slightly but remained breezy and felt quite humid in places. Further rain approached from the west during the evening, becoming quite heavy over Northern Ireland and west Scotland.

This day's summary created 24/07/2020 12:25

### Summary of the UK Weather for Monday 06 July 2020

A largely dry night across much of the country with clear spells prevalent across eastern and southern areas. Patchy rain lingered over Northern Ireland, parts of northern Scotland, Wales and Northwestern England. A calmer night than yesterday. There was patchy cloud and outbreaks of rain for much of the UK through the morning, some of the rain heavy in places, but with drier and sunny spells for many. Western Scotland and parts of the far south seeing the best of the dry weather. The afternoon saw most of the rain clear besides some further outbreaks in Northern Ireland and around some coasts of Scotland and eastern England. It remained largely cloudy in the north but with some good spells of sunshine developing in the south where the cloud cleared, particularly in central and southwestern areas. The winds started rather strong but eased through the day for many, still some strong gusts in the north. Some showers across the north and in parts of Wales during the evening with clear spells. Mostly dry in the south with periods of evening sunshine.

### Summary of the UK Weather for Tuesday 07 July 2020

Overnight stayed largely dry, with some scattered showers at times, but these generally remained confined to Wales, Northern England and Scotland from the west. During the early hours, rain, sometimes heavy, pushed across Northern Ireland from the west. By dawn, it had spread to the far northwest coast of England and western Scotland. Winds were light throughout, although breezier on the northeast coast. Through the day rain, which gave some heavy downpours in places, especially on the higher ground, edged across the central swathe of the UK towards eastern coasts with rather cloudy and overcast conditions here also. Rain in western Scotland cleared leaving showers with some longer spells of rain but also sunny spells developing, Northern Ireland and northern England had similar conditions. Parts of the far south, southwest in particular had a drier day with patchy cloud and sunny spells, although it was windy here at times. The evening saw rain, still heavy in places, continue for many central and southeastern parts but it did become patchier. A few showers and clear spells elsewhere.

### Summary of the UK Weather for Wednesday 08 July 2020

It was a wet night for much of the south of the UK, with some the heaviest bursts of rain over much of Wales. There was also some rather gusty winds in the southwest of England. Further north across Northern Ireland and much of Scotland, conditions were dry with some clear spells which allowed temperatures to fall to single figures. Fog and mist patches formed across southwest England and the west coast of Wales during the early hours. These fog and mist patches lingered through most of the day, particularly in rural spots. Through the morning, there were outbreaks of rain which spread eastwards across the south of England, with some heavier rain in Northern Ireland. Scotland and the north of England remained cloudy, dry and bright. In the afternoon, heavy rain continued in Northern Ireland, also pushing into Wales, northwest England and the midlands. This rain pushed eastwards during the evening, eventually reaching East Anglia and southeast England. Winds remained mostly light across the country, with some breezier conditions along coasts.

### Summary of the UK Weather for Thursday 09 July 2020

Overnight there was rain for many parts of the UK. Wales, northern and central England saw the heaviest of the rain with drier spells in the south, but still largely cloudy here. Scotland and Northern Ireland saw showers, some on the heavy side, but with many areas staying dry with clear spells developing. The rain turned patchier through the morning for England and Wales, although staying rather cloudy across these areas. The north saw outbreaks of heavy showers for some parts of Scotland but with many areas staying dry with sunny spells. Through the afternoon showers, still heavy in places, became more widespread across Scotland and into northern England, Northern Ireland stayed mostly dry. Sunny spells across the north of the UK, but becoming cloudier later. Elsewhere, England and Wales was cloudy and saw rain become heavier for many, although it did slowly move eastwards leaving parts of the southwest and Wales dry into the evening. Meanwhile showers continued in the north, with some developing for Northern Ireland. Rain, heavy in places, continued in eastern England with cloudy conditions also.

### Summary of the UK Weather for Friday 10 July 2020

A cloudy night for much of the UK with heavy showers moving towards southern Scotland and into parts northern England, some showers also in Northern Ireland. Central and eastern parts of England saw patchy rain but with many parts staying dry as the rain cleared eastwards. Wales and the southwest however had a mostly dry night with clear spells developing through the night. The day saw plenty of sunny spells across the UK, but also some heavy showers towards the north and east, which turned thundery at times in the northeast of England. However, central and southwest England, along with Wales, remained mostly dry with the best of the sunshine to be had here.

### Summary of the UK Weather for Saturday 11 July 2020

Overnight, much of the south of the UK turned dry and clear allowing conditions to turn reasonably chilly for the time of year. Further north more cloud was around in Northern Ireland, northern England and much of Scotland. The weather was mostly dry here as well, though one or two isolated showers did fall in northwest England. Showers developed over Northern Ireland, Scotland and northern England through the morning and afternoon, becoming quite heavy at times in the north of Scotland, but otherwise slowly fading away through the day. Elsewhere, the mostly dry weather continued, with spells of sunshine throughout most of the UK. The patchy cloud broke up further over Wales and towards the southwest and central areas of England to reveal extended periods of sunshine.

### Summary of the UK Weather for Sunday 12 July 2020

Overnight, it remained dry with light winds and patchy cloud over much of Northern Ireland and Scotland. Some lightning was observed in the early hours near the west coast of Wales and the south coast of England. The morning saw the cloudy skies continue over the north of the UK, bringing some showers to Northern Ireland, west Scotland and the west coast of Wales by lunchtime. Elsewhere, it was dry with patchier cloud and spells of sunshine, although there was still the occasional shower over the east of England. By the evening, a heavy band of rain and thick cloud approached the west coast of Scotland and Northern Ireland.

### Summary of the UK Weather for Monday 13 July 2020

Rain slowly moved across eastern and western Scotland overnight, in association with a warm front. Elsewhere it was mostly dry with clear spells becoming widespread across central and southern England. A few outbreaks of rain developed over Ireland and also northwest England and north Wales through the early hours which were fairly heavy and lingered until daybreak. A dry and sunny start in the southeast of England with rain reaching here by around lunchtime. Elsewhere was cloudy with outbreaks of rain continuing to spread eastwards across the UK, becoming quite heavy and persistent over southwest England and South Wales. The afternoon saw some clearer and brighter spells developing across the north, although there were still a few showers across Scotland and Northern Ireland.

This day's summary created 21/07/2020 21:29

### Summary of the UK Weather for Tuesday 14 July 2020

Locally heavy rain slowly moved across East Anglia and southeastern England overnight. There were a few showers and clear spells across Scotland with heavier rain in the far northeast. Northern England remained largely dry with clear spells whilst further south it was rather cloudy with the odd shower. Also there were a few outbreaks of rain across Northern Ireland. By dawn the UK was largely dry, with a few outbreaks of rain (occlusion debris) lingering in the South East and also showers in northern Scotland. However a band of rain (warm front) was edging into Ireland, with a few showers in northern Ireland, initially. Meanwhile, western Britain saw a cloudy start to the day, with some clear skies in northeastern parts. Towards mid-morning, heavy rain reached Ireland, covering Northern Ireland by late morning. This eased in intensity during the early afternoon, however lighter rain persisted, ensuring cool temperatures across Northern Ireland (less than 13 Celsius in some locations). The afternoon also saw rain for coastal Wales (fairly heavy at times), and in the South West. In certain areas there were scattered showers including in the far south, western Scotland and the North West, but elsewhere the weather was dry with bright spells, the best of which were in central and eastern parts.

### Summary of the UK Weather for Wednesday 15 July 2020

A largely cloudy and mild night across the UK with the best of the dry spells in the east. Western areas saw outbreaks of rain throughout, these turning heavy at times, particularly across north Wales and western Scotland. Through the early hours, some spells of rain pushed further inland, reaching the Midlands towards dawn. Later the rain drifted south-eastwards across much of the North West and also northeastern areas, with the odd patch of drizzle across Wales. Cloudy conditions and rain persisted after dawn, with intermittent rain extending from southern Scotland to southern England by mid-morning as well as light patches of rain observed in Northern Ireland. The rain and drizzle continued to drift further eastwards with the warm fronts, although it turned patchier in the afternoon. This continued into early evening leaving western parts of the UK mostly dry, but cloudy. It was relatively cool in the west and northwest and temperatures were close to average in the east/southeast.

### Summary of the UK Weather for Thursday 16 July 2020

Most places saw a dry but cloudy night with the odd clear spell at times, the best of these across northeast and southwest England. Northern Scotland saw some patchy drizzle through the early hours, pushing further south and west towards dawn. A cloudy start to the morning for much of the UK but with the cloud starting to break up to give sunny spells, especially in the southwest and northeast. There were some scattered showers also with much of these focused across Scotland, the heaviest in the west. Many places stayed dry however, avoiding the showers. The afternoon saw further showers move eastwards across Scotland with some heavy downpours but dry and sunny spells followed. Elsewhere there was the odd shower but many areas staying dry with the cloud continuing to break giving good sunny spells and also clear skies in the southwest giving plenty of sunshine. Cloud and rain, heavy in places, edged into the far northwest through the evening and moved eastwards into Scotland and Northern Ireland. Elsewhere was largely dry with patchy cloud giving some evening sunshine.

### Summary of the UK Weather for Friday 17 July 2020

Overnight a band of rain from the far northwest moved southeastwards through the north with heavy downpours at times and cloudy conditions throughout. It was dry however across much of England and Wales with patchy cloud giving long clear periods. The morning saw rain ease for many in northern Scotland with sunny spells breaking through. The rain, often heavy, and cloud became more established across the east of Northern Ireland and across northern England. Further south it was dry with good spells of sunshine, western Wales however seeing thicker cloud. The cloud and rain was slow moving and remained largely over Northern Ireland, northern England and southern Scotland through the afternoon with areas north and south of the rain band largely dry with good spells of sunshine. The best of the sun in the south making for a warm day in places. Rain cleared Northern Ireland and Scotland in the evening but stuck around northern England whilst edging into Wales, showers in the far north also. Elsewhere was dry with late sunshine and clear spells, especially in the south.

### Summary of the UK Weather for Saturday 18 July 2020

Into the early hours of Saturday morning, the band of rain was moving very slowly. There were further outbreaks of showery rain across Northern Ireland, northwestern Scotland, eastern Wales and across the northwest, particularly around coastal fringes. Some of the heavier outbreaks were across north Wales and Cumbria. Either side of the rain band, there were some clear spells through to the early hours leading to a chillier feel in sheltered spots. The band of rain tracked very slowly southeastwards through the day, bringing some heavy bursts or rain to parts of northwest England. Further south and north was largely dry and it was another warm and humid feeling day in the southeast. By the evening, much of rain had fizzled away from central parts, though a renewed burst of heavy rain moved into western and southern parts of Wales.

## Daily Weather Summary for Sunday 19 July 2020

This day's summary created 27/07/2020 21:11

### Summary of the UK Weather for Sunday 19 July 2020

Overnight a band of rain moved southeastwards through southern parts of England and Wales with some heavy downpours in places. The far southeast started the night dry but rain soon approached. The west of Scotland was cloudy with some heavy showers here. Elsewhere however was largely dry with some clear spells in the north and long clear periods for Northern Ireland. It was a damp and overcast morning for many towards the southeast of England, with drizzle and thick cloud lingering over many parts. Skies were clearer further north into The Midlands, northern England and Northern Ireland, with some warm sunshine beaming through patchy clouds. However, Scotland was in a slightly cooler air mass and experiencing a day of sunshine and showers, some of these rather heavy with hail. The cloud and drizzle over southeast England eventually cleared away to the east, leaving a pleasant evening of sunny skies across most parts of England and Wales. Scotland was still seeing some showers falling, though they were few and far between.

### Summary of the UK Weather for Monday 20 July 2020

Overnight it was cloudy with showers and occasional clear spells across much of Scotland. The showers were heaviest and most persistent in the northwest. It was dry elsewhere in the UK however, with patchy cloud across northern England and Northern Ireland. Otherwise skies remained mostly clear allowing temperatures too fall below average for many. A showery day for Scotland, Northern Ireland and the far north of England, becoming quite gusty in and around showers. Elsewhere remained dry with light winds. There were plenty of sunny spells to be had, with the south of England seeing the best of the sunshine.

### Summary of the UK Weather for Tuesday 21 July 2020

The last remaining showers faded away in the early hours, leaving behind a predominantly clear night throughout the UK. It was a fairly chilly night for many, especially in central parts, with temperatures widely dipping to mid-single figures. A dry and sunny start for many with patchy cloud, although there were still a few showers over Scotland. The spells of sunshine persisted for most parts throughout the day, with the south of England and west coast of Wales seeing the best of the sunshine. However, towards the afternoon, heavy and persistent rain approached Northern Ireland, reaching the west coast of Scotland by the late afternoon.

### Summary of the UK Weather for Wednesday 22 July 2020

A fairly cloudy affair for the northern half of the UK overnight, with Tuesday's rain still affecting Northern Ireland and northwest Scotland. The rain gradually pushed south and east towards northern England and Wales as dawn approached. The far south was able to hang onto mostly clear skies, although it wasn't a particularly chilly night. It was rather damp during the day for much of Scotland and northern England with some heavier downpours of rain in the morning, which turned patchier with some drizzle also through the afternoon, staying cloudy throughout however. Northern Ireland, Wales and central England saw some outbreaks of rain but with drier and sunnier spells. Meanwhile the south and far north had a dry day with plenty of sunshine on offer, especially in the south which made for a warm day here. Staying cloudy for northern parts of the UK with outbreaks of rain and drizzle through the evening. There were some outbreaks of rain also in central England and parts of south Wales but southern England stayed dry with clear spells as cloud gradually built.

### Summary of the UK Weather for Thursday 23 July 2020

After a largely dry start to the night, outbreaks of rain pushed across the Irish Sea, reaching northern England and north Wales through the early hours. This band of rain continued to spread inland, turning more persistent and heavier over Cumbria. Further south, it remained mostly dry with variable cloud, allowing for a few clear spells. Scotland also saw a good deal of dry weather, though some showers lingered in the northwest throughout the night.

Through the day the band of rain continued eastwards across the UK with some heavy downpours in places and rain, heavy at times, becoming established across the southwest. Rain cleared many northern parts by the late afternoon with the cloud breaking allowing some sunny spells to develop, but still a few showers in places, especially in the far northeast. Meanwhile rain turned patchier as it spread across the south with cloud building also, but still sunny spells, especially in the southeast. Showers eased in the north through the evening with some late sunshine. Patchy rain in the south eased for some but remained rather cloudy.

### Summary of the UK Weather for Friday 24 July 2020

Most places saw a dry night with outbreaks of rain across southern England gradually easing through the early hours. Cloudy skies remained across the majority of the UK, though there were some clear spells at times, especially across northern England and Scotland. The odd spot of rain also appeared along Scotland's western coasts, but these were short-lived. Aberdeenshire. It was a largely dry but cloudy morning for most, though there was some sunshine across central England and northern Scotland. Locally heavy rain moved westwards across Northern Ireland during the afternoon. The rain reached western Scotland, western Wales and the southwest towards evening.

### Summary of the UK Weather for Saturday 25 July 2020

A cloudy night for many in the UK overnight with rain, heavy in places, across the majority of Scotland. Elsewhere there was rain, also heavy at times, for many areas but it was more scattered with some long dry periods in between, particularly across the south. There were clear spells also for some in the south, as well in parts of Wales and Northern Ireland. Outbreaks of locally heavy rain and scattered showers spread across much of the country through the day. The showers were thundery across central parts. During the afternoon a band of heavy thundery showers and heavy rain moved over Northern Ireland, the southwest and southern and eastern England. Sunny spells developed over the southwest towards evening as the rain cleared.

### Summary of the UK Weather for Sunday 26 July 2020

A largely dry night for many in the UK but with scattered showers, mainly across the north and west, although many places here avoiding any showers. There was a band of heavy showers also in northwest England, which moved further inland through the night. The north had a mostly cloudy night but the south saw long clear periods. It was a bright start to the day, with some sunny spells in places, particularly across the east and south. A few showers pushed across Northern Ireland and the southwest during the morning, but these were light and short lived. Heavier showery rain pushed across Northern Scotland through most of the morning, clearing away to the east during the afternoon. Elsewhere, the afternoon was mainly dry with bright and sunny spells in places. There was the odd shower in places. Later in the evening, rain pushed across the southwest, Northern Ireland and northwest Scotland and continued to push eastwards through the first half of the night.

### Summary of the UK Weather for Monday 27 July 2020

It was a largely dry night with some clear spells across much of Scotland, central and eastern England. Locally heavy rain moved across northern Ireland, Wales, northwestern and southwestern England through the early hours. Rain continued to spread eastwards through the morning across all parts of the UK. The heavier and more persistent bursts were seen across Northern Ireland, Wales, the north of England and Scotland. There were also some thundery showers across the south at times. Into the afternoon, the west began to clear, in particular Northern Ireland, Wales and the southwest. All other areas of England cleared during the afternoon, leaving sunny or bright spells. Heavy rain continued across Scotland through most of the afternoon, only clearing to the north later in the evening. Winds were strong across most areas, particularly along western coastal areas.

### Summary of the UK Weather for Tuesday 28 July 2020

Overnight it stayed mostly dry with clear skies across much of England and Wales. Locally heavy rain slowly cleared northeastern Scotland through the early hours. Also, scattered showers slowly moved over Northern Ireland and central Wales during the early hours. Through the morning scattered showers continued along the west coast of England, Wales & Scotland and throughout Northern Ireland. Dry, sunny spells were seen elsewhere. By the afternoon, showers were mostly isolated to northern counties and Scotland with dry but cloudy conditions elsewhere. It was windy for most in the UK, particularly for northern regions, but this eased as we went into the evening.

### Summary of the UK Weather for Wednesday 29 July 2020

A dry night for most areas across the UK, with patchy cloud across most western areas and clearer skies in the south and east. There were a few light showers across northern Scotland earlier on in the night but these were all short-lived. Winds remained light throughout. The morning was dry with some sunny spells and a light easterly wind, although it was slightly windier across Scotland. Any showers were isolated to western Scotland and the southwest. By the afternoon, a breeze had picked up the midlands and some northern regions. Light, isolated showers drifted into Wales from the Irish Sea. It began to turn cloudier in the afternoon, with showers turning to rain in Wales across the west coast and in North Wales. The band of rain broke into patchy rain across Wales and the midlands into the evening, elsewhere remained mostly dry with some sunny spells remaining.

### Summary of the UK Weather for Thursday 30 July 2020

A largely dry night across the UK with some clear spells in places. Through the early hours, a band of rain pushed its way across the Irish Sea into northern England, turning heavy at times. This gradually moved further north and east as the night progressed with the best of the dry weather across the southern half of the UK. The clear skies over the south of the UK continued into the day, with plenty of sunshine and warmth here. It was a cloudier start further north, with Wales and northern England seeing spells of sunshine developing through the day as the cloud and associated showers continued to clear northeastwards. Scotland and Northern Ireland remained mostly cloudy throughout the day, with some heavy and persistent rain in these parts, although it began to brighten up across Northern Ireland in the late afternoon.

### Summary of the UK Weather for Friday 31 July 2020

Overnight, rain continued to clear northeastwards from northern Scotland, thereafter it was dry throughout until the early hours. It began cloudy in Scotland, northern England and Northern Ireland, with clear spells in Wales and southern England. As the night progressed, further clear spells began to form in northern England. Mostly light winds were recorded throughout. A sunny and warm start for most with patchy cloud soon spreading into western areas through the morning, reaching the east by the late afternoon. It stayed dry further east, but the west of the UK saw occasional showers, most persistent over Northern Ireland and western Scotland. By the late afternoon, some thunderstorms began to appear in the Irish Sea around the Isle of Man, and headed towards the southwest coast of Scotland. Later on, further thunderstorms were observed over the midlands. A very warm day for most, and particularly hot across the midlands and east of England. In fact, it was the third hottest day in the UK ever recorded.

# Daily Weather Summary for Friday 31 July 2020

## Daily Weather Summary for Friday 31 July 2020

None of the selected stations observed a day of sleet or snow falling or non-zero snow depth at 0900 UTC.

## Guidance Notes

UTC = Universal Coordinated Time. For the UK UTC is the same as GMT (Greenwich Mean Time).

National boundaries shown on the European station map are for illustrative purposes only.

### Daily extremes

- Daily extremes have been manually confirmed by Met Office Observations Quality Management as valid observations from the live database at the time of checking. However, more extreme values may still be possible if they occur after the time of production.
- Mountain stations above 500 masl are excluded from lowest temperatures, highest gust speeds and greatest snow depths at 0900 UTC. This is because they are not considered representative of low level areas.
- Counties quoted against each station are based on historical county boundaries pre-1974 and may not reflect current administrative boundaries.

### Analysis charts and satellite imagery

- The satellite imagery is infra-red imagery from the geostationary MSG satellite.
- The rainfall image is derived from satellite data from MSG and rain-radar data. This represents a snapshot of instantaneous rain-rates at 0000 UTC and 1200 UTC and so does not necessarily reflect daily accumulations in the rainfall station map.
- Any analysis charts or satellite images which are unavailable will be displayed as white space.

### Station maps

- The UK maps show station data for the same set of stations presented UK data table. These stations are selected to provide good spatial coverage across the UK; they represent only a fraction of the overall UK observing network.
- Wind speed maps show wind speed in Kt and direction both averaged over the hour up to the time of observation. 1 Kt = 1.151 mph.

### Hourly station data

- The data tables provide spot hourly observations from synoptic messages at 0000 and 1200 UTC. Missing data are denoted by '-'.

- Pressures are mean sea level pressure in hPa.
- For UK stations, Gibraltar and Jersey, the wind speeds and directions are both averaged over the hour up to the time of observation. However, for European stations wind speeds and directions are both averaged over a 10-minute period up to the time of observation.
- Wind speeds are in Kt. Wind directions are stored in the database every 10 degrees and have been converted to the nearest point of the compass. These give the direction the wind is blowing from, not to.
- Cloud amounts are in Oktas from 0 (clear) to 8 (overcast). 9 indicates sky obscured (eg by fog).
- Air temperature and dew point temperature are in Celsius.

### **Temperature maps**

- Daily maximum, minimum and grass minimum temperatures are in Celsius.
- The period for the daily maximum temperature on day D is defined from 0900 UTC day D to 0900 UTC day D+1.
- The period for the daily minimum and grass minimum temperatures on day D is defined as 0900 UTC day D-1 to 0900 UTC day D.
- On any given day D the minimum will typically occur in the early hours of the morning and the maximum in early afternoon.

### **Rainfall, sunshine and max gust speed maps**

- Daily rainfall is in mm from 0900 UTC day D to 0900 UTC day D+1.
- Daily sunshine is in hours from Kipp and Zonen CSD1 automatic sunshine records. Bright sunshine is defined as exceeding 120 W/m<sup>2</sup>.
- Max gust speeds are the daily max gust in Kt from 0000-0000 UTC

### **Snow maps**

- The day of snow falling map displays data from present weather sensors, showing stations which have recorded sleet or snow falling at any point in the day (0000-0000 UTC).
- The snow lying map shows level snow depth as recorded by the automatic snow depth sensors at 0900 UTC. These snow depth sensors do not record snow depth if this is less than 1cm.
- Snow depth sensors are normally operational from October to April, in the event of snow falling outside this period data availability may be limited.
- Snow maps will only be displayed if one or more of the selected stations on that date have recorded either snow falling or non-zero snow depths. If snow maps are not

displayed it is still possible that other stations in the network have recorded a day of sleet or snow falling or non-zero snow depth.
