NOTES:—(a) At the British and Irish Stations the readings of the barometer are not corrected for the difference in Gravity between the position of the Station and Latitude 45°. The approximate correction is:—For stations North of Malin Head and North Shields + '03 in.; but for Sumburgh Head + '04 in.; for stations South of Malin Head and North Shields + '02 in.; but for Scilly and Jersey + '01 in.

(b) The Sunshine for London given in this Table is recorded on the Tower of the Wesleyan Training College, Westminster; the Sunshine entered to Dungeness is recorded at Littlestone-on-Sea.

* Observations for this column not generally received.

† Observations received too late for insertion in Charts on next page.

WEATHER CHARTS

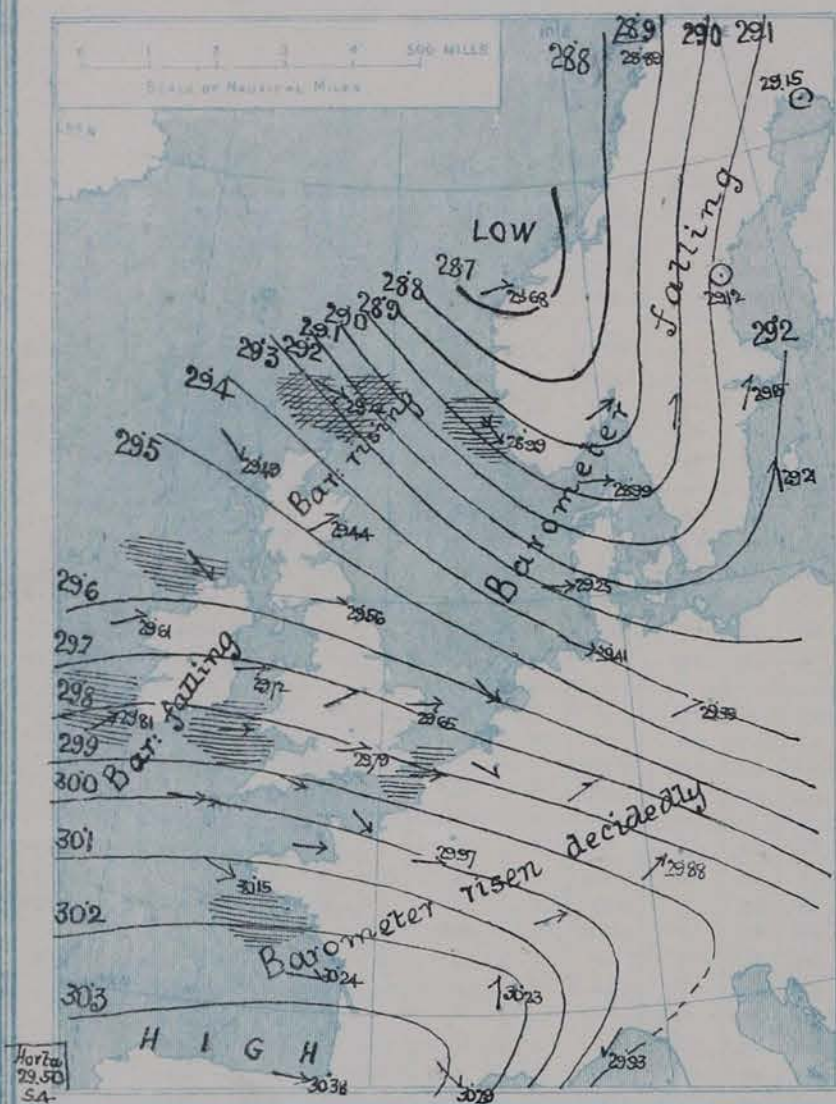

FOR Thursday, 1st March. 1906.

I. BAROMETER, WIND AND SEA. This Morning.

BAROMETER.—Isobars are drawn for each tenth of an inch.

WIND.—Arrows show Directions and Force, flying with the wind.

Force above 10 ——— Force 5 to 7 ——— } Calm ☉
Force 8 to 10 ——— Force 1 to 4 ——— }
SEA.—Rough ——— High ———

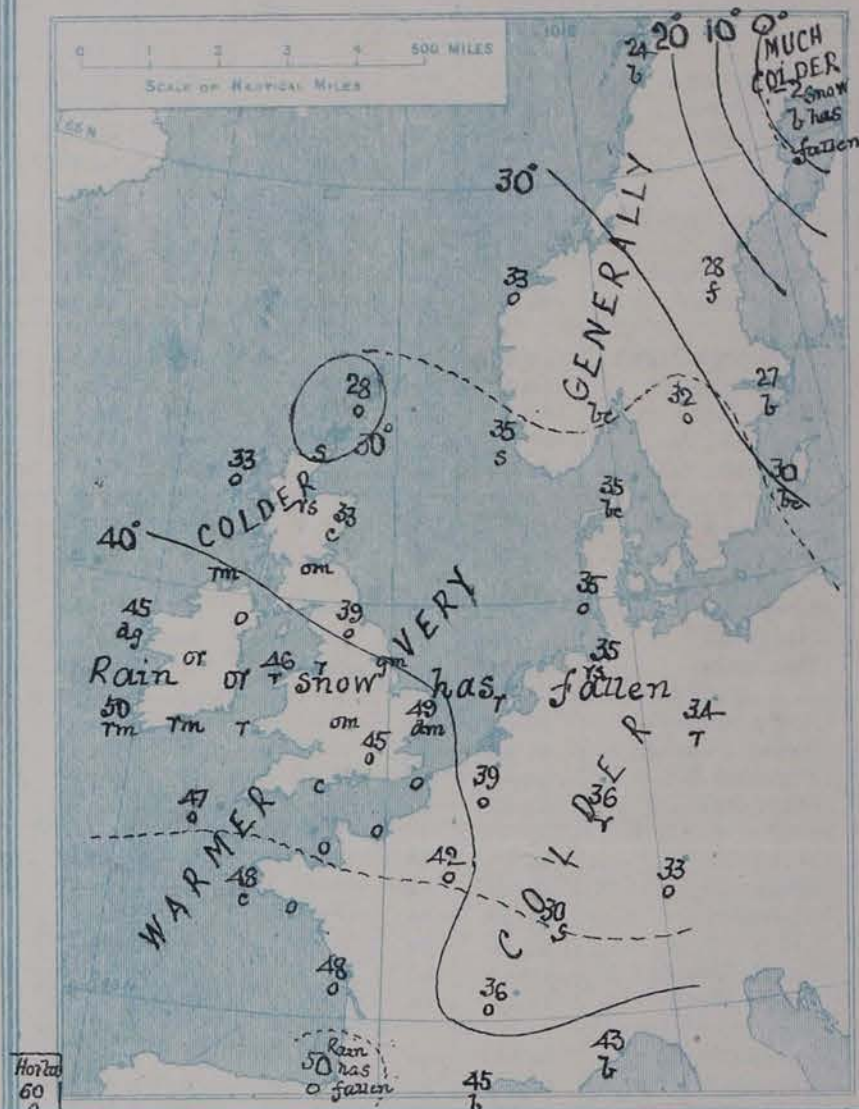

II. TEMPERATURE AND WEATHER. This Morning.

TEMPERATURE.—Isotherms are drawn for each 10°.

WEATHER.—Shown by Letters of the Beaufort Scale. (See P. 4.)

RAINFALL.—A dotted line separates areas where rain has fallen from those without rain. The fall in past 24 hours when exceeding half an inch is shown thus - 0.6

III. BAROMETER AND WIND

Yesterday morning.

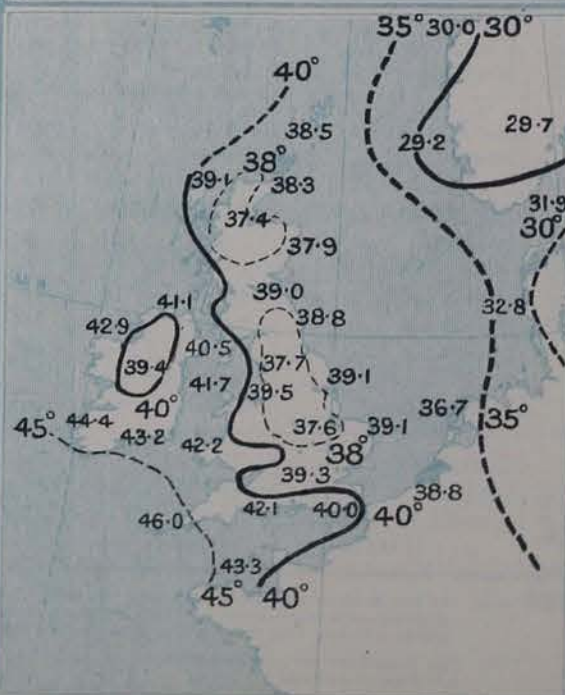

IV. LAST WEEK'S SUNSHINE.

Amount recorded in various districts of the United Kingdom during the week ended Saturday 24th Feb^y, with the percentage of the average duration for the corresponding week.

V. Averages of DAILY TEMPERATURE at 8 A.M. for the monthly period FEBRUARY - MARCH

(Derived chiefly from Observations extending over the 35 years 1871-1905).

GENERAL SITUATION AT 8 A.M.

PRESSURE

This morning's map shows a deep low pressure system in the northeast and a region of high pressure over Spain. The extreme readings reported are 30.56 ms. at Lisbon and 28.68 ms. at Christiansund. There is thus a rather steep gradient over our Islands, France and Germany. On the eastern side of the region of lowest pressure the gradient is also steep, readings being above 29.1 ms. in the east of Sweden. The barometer is again falling in the southwest.

WIND

TEMPERATURE

WEATHER

AND

SEA

On the western side of the region of lowest pressure gales or strong winds from the N.W. prevail in the Shetland Islands and over the south of Scandinavia and the north of Germany. In Scotland we find a region of light W. breezes while over England and Ireland moderate to fresh W. or even W.S.W. winds are blowing. N.W. winds are reported from the west of France. On the eastern side of the lowest pressure we find S. to S.W. winds at the Swedish stations. The weather is generally overcast both at home and abroad and rain or snow is of wide-spread occurrence; rain is falling at all Irish and Welsh stations with the exception of Donaghadee; snow or sleet is falling in the northeast of Scotland, while a third extensive area of precipitation extends over the north of Germany, Holland and the east of France. The W. wind has given rise to a considerable increase of temperature over England and Ireland and the west of France but in Scotland and the east of our area low temperatures still prevail. The British readings range from 28° at Sumburgh Head to 50° at Valencia; 50° is also reported from Biarritz. The sea is high at Sumburgh Head and rather rough on the west coast of Ireland, the French side of the Channel and in the Bay of Biscay. Rain fell during the previous 24 hours in all our western districts, but at many eastern stations the amounts were too light for measurement. The largest totals are reported from the north of Scotland. The amounts of bright sunshine exceeded 6 hours at many southern stations but in the north of England and in Wales and Ireland the sky was overcast throughout.

PROBABLE CHANGES IN SYSTEM NOW PREVALENT

A fresh fall of the barometer is reported from the Southwest. This will cause the gradient over the north of our Islands to become less steep, and a temporary decrease in the force of the wind may therefore be expected there. In the south the wind is likely to back towards S.W. Rather mild weather with some rain is probable in all districts.

FORECASTS*

For the 24 hours ending at NOON on 2nd March, 1906.

DISTRICTS.

FORECASTS.

0	SCOTLAND NORTH	Light W. breezes backing and freshening later; dull, some rain; milder.
1	SCOTLAND EAST	
2	ENGLAND N.E.	Moderate or fresh W. to S.W. winds; weather generally dull, with rain at times; rather mild.
3	ENGLAND EAST	
4	MIDLAND COUNTIES	
5	ENGLAND SOUTH	

DISTRICTS.

FORECASTS.

6	SCOTLAND WEST	Same as Nos. 0 & 1.
7	ENGLAND N.W.	
8	ENGLAND S.W.	Moderate to fresh or strong W. to S.W. winds; dull, some rain; mild.
9	IRELAND NORTH	
10	IRELAND SOUTH	

WARNINGS

At 3.35 p.m. yesterday to Districts 2 and 3, Hoist North Cone. At 9.35 a.m. today to Districts 0 to 3, Lower Cone. The signals are still up in Districts 7, 9 and part of 6.

Note.—The South Cone, point downwards (T), means that gales, or strong winds, are probable, at first from the Southward (from S.E. round by S. to N.W.). Should it appear likely that a gale beginning from between W. and N.W. is likely to veer towards N. or N.E., the North Cone is hoisted in preference to the South Cone.

The North Cone, point upwards (T), means that gales, or strong winds, are probable, at first from the Northward (from N.W. round by N. to S.E.). Should it appear likely that a gale beginning from between E. and S.E. is likely to veer towards S. or S.W., the South Cone is hoisted in preference to the North Cone.

*For terms for transmission of Forecasts by Telegraph, see next page.

SUBSCRIPTIONS both for the Daily and Weekly Weather Reports may be paid, in advance, to the Meteorological Office.

TERMS: For Daily Weather Report, forwarded by Book Post, £1 0 0 per annum.
" Weekly " " " £1 10 0 " Single Copies, 6d.

Single Copies of the Daily Weather Report (price 1d.) may be obtained after 3 p.m. on the day of issue at the Meteorological Office, and at Messrs. W. H. SMITH & SONS' Bookstalls at the following terminus Railway Stations:—Victoria, Charing Cross, King's Cross, St. Pancras, Euston.

FORECASTS OF WEATHER for one day in advance are drawn up at the Meteorological Office at 11 a.m., and between 7 and 8 p.m. The latest forecast can be had by Reply Telegram, on paying at any Post Office in the United Kingdom Sixpence in addition to the cost of the inquiry and reply Telegram. Information as to the Terms on which Forecasts can be sent daily, for a long or short period, may be obtained on application to the METEOROLOGICAL OFFICE, 63, VICTORIA STREET, S.W., either personally or by post.

W. N. SHAW (Director).

* At Oxford the observations are taken at 8 p.m.

NOTES:—(a) At the British and Irish Stations the readings of the barometer are not corrected for the difference in Gravity between the position of the Station and Latitude 45°. The approximate correction is:—For stations North of Malin Head and North Shields + '03 in., but for Sumburgh Head + '04 in.; for stations South of Malin Head and North Shields + '02 in., but for Scilly and Jersey + '01 in.

(b) The Sunshine for London given in this Table is recorded on the Tower of the Wesleyan Training College, Westminster; the Sunshine entered to Dungeness is recorded at Littlestone-on-Sea.

* Observations for this column not generally received.

† Observations received too late for insertion in Charts on next page.

WEATHER CHARTS

FOR

Friday, 2nd March,

1906.

I. BAROMETER, WIND AND SEA. This Morning.

BAROMETER.—Isobars are drawn for each tenth of an inch.

WIND.—Arrows show Direction and Force. Flying with the wind.

Force above 10 →

Force 5 to 7 →

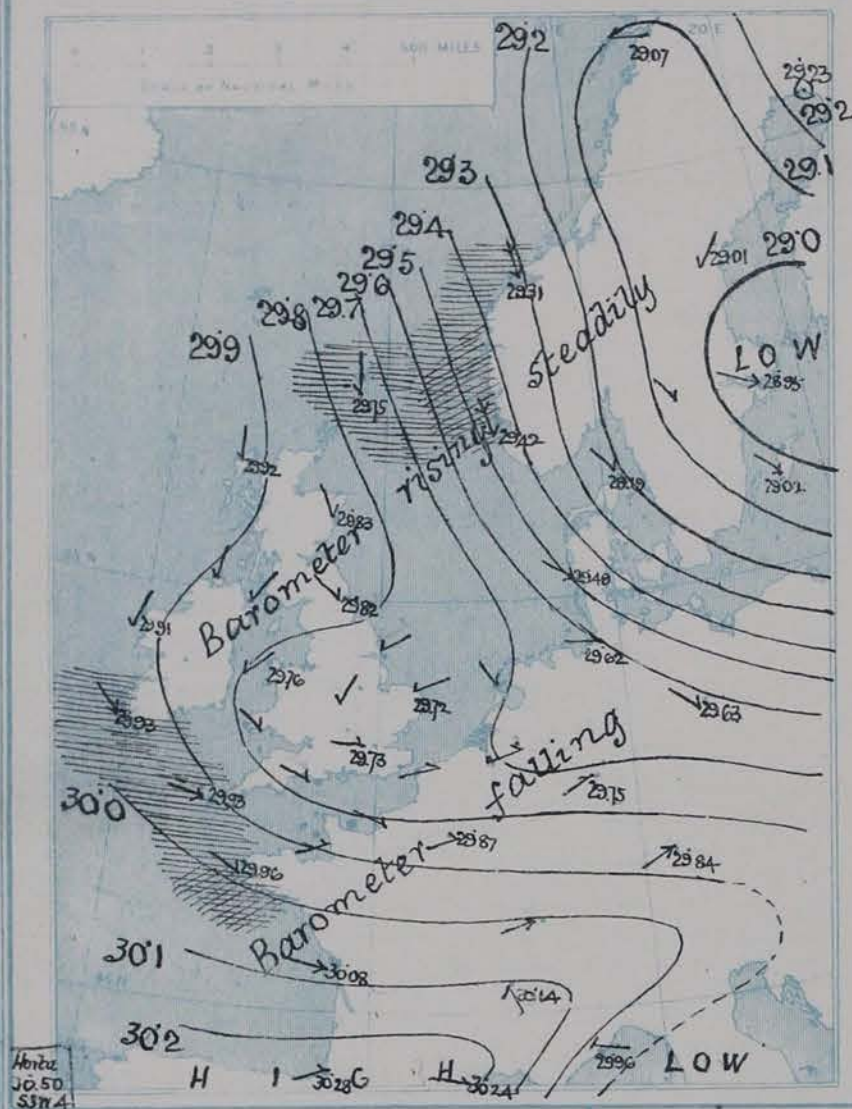

Calm ☉

Force 8 to 10 →

Force 1 to 4 →

SEA.—Rough

High

II. TEMPERATURE AND WEATHER. This Morning.

TEMPERATURE.—Isotherms are drawn for each 10°.

WEATHER.—Shown by Letters of the Beaufort Scale. (See P. 4.)

RAINFALL.—A dotted line separates areas where rain has fallen from those without rain. The fall in past 24 hours when exceeding half an inch is shown thus: 0.6.

III. BAROMETER AND WIND

Yesterday morning.

IV. RAINFALL IN 1906.

Total Amount recorded in various districts of the United Kingdom in the 8 weeks ended Saturday, Feb. 24th, with the percentage of the average amount for the corresponding period.

V. Averages of DAILY TEMPERATURE

at 8 A.M. for the monthly period
FEBRUARY - MARCH
(Derived chiefly from Observations extending over the 35 years 1871-1905).

GENERAL SITUATION AT 8 A.M.

PRESSURE

A brisk rise of the barometer has taken place during the night in the north of the British Isles and along our western coasts readings are now slightly above 29.9 ins., while the highest reading reported is 30.28 ins. at Biarritz. The deep low pressure system shown yesterday off the coast of Norway has passed to the east of Scandinavia, the lowest reading reported this morning being 28.95 ins. at Stockholm. A large area of uniform and relatively low pressure extends over the Midlands and East Anglia.

WIND

TEMPERATURE

WEATHER

AND

SEA

In the British Isles we find light N.^{ly} breezes blowing over the north of Scotland; further to the south but still on the northern side of the region of uniform pressure mentioned above these draw into N.E., while over our southern districts the wind remains N.W.^{ly} or W.^{ly}. Fresh W.^{ly} to S.W.^{ly} winds also prevail over France and Germany. Gales or strong winds from N. or N.W. are reported from Scandinavia. The weather has cleared at Stromway and Malin Head but over the remainder of the British Isles it continues cloudy or dull and light rain or sleet is falling in the central and eastern portions of England and also at some Irish and Scottish stations. Fog is reported from Scilly and from the French side of the English Channel. Dull, and in many cases rainy weather prevails at the remaining French stations and in the west of Germany. Over Scandinavia conditions are very variable. Temperature has risen in the region of W.^{ly} wind over France and the south of England, but it has fallen in our northern districts. Oxford and London report readings of 47° and 49° respectively, whereas Yarmouth and Nottingham show readings as low as 37° and 34° respectively. The sea is rough to the southwestward of our Islands and also in the extreme northeast.

During the previous 24 hours rain fell very generally though the amounts were, as a rule, not large. No bright sunshine was experienced at any of our English and Irish stations, in Scotland some small amounts were recorded. Temperature rose as high as 55° at Roche's Point and to close on 50° at most southern stations.

PROBABLE CHANGES IN SYSTEM NOW PREVALENT

The barometer is rising briskly in the north and northwest. It is therefore probable that N.^{ly} to N.E.^{ly} winds will become general. This will bring about a decided reduction of temperature in our southern counties. The weather is likely to be dull and damp at first, but as the N.^{ly} conditions become more pronounced it will clear.

FORECASTS*

For the 24 hours ending at NOON on 3rd. March, 1906.

4	MIDLAND COUNTIES	Moderate or light winds veering to N.W. or N.E.; dull and damp, clearing later; becoming colder.
5	ENGLAND SOUTH	

6	SCOTLAND WEST	Same as Nos. 0 & 1.
7	ENGLAND N.W.	
8	ENGLAND S.W.	{ N. ^{ly} breezes; dull, some showers, improving later; cold. Moderate or fresh N.W. ^{ly} to N.E. ^{ly} winds; cloudy or dull, clearing later; becoming colder.
9	IRELAND NORTH	
10	IRELAND SOUTH	{ Moderate or fresh N.E. ^{ly} or N.W. ^{ly} winds; fair intervals, some rain or sleet; rather cold.

WARNINGS

NONE ISSUED.

Note.—The South Cone, point downwards (T), means that gales, or strong winds, are probable, at first from the Southward (from S.E. round by S. to N.W.). Should it appear likely that a gale beginning from between W. and N.W. is likely to veer towards N. or N.E., the North Cone is hoisted in preference to the South Cone.
The North Cone, point upwards (T), means that gales, or strong winds, are probable, at first from the Northward (from N.W. round by N. to S.E.). Should it appear likely that a gale beginning from between E. and S.E. is likely to veer towards S. or S.W., the South Cone is hoisted in preference to the North Cone.

SUBSCRIPTIONS both for the Daily and Weekly Weather Reports may be paid, in advance, to the Meteorological Office.

TERMS: For Daily Weather Report, forwarded by Book Post, £1 0 0 per annum.
" Weekly " " " £1 10 0 " Single Copies, 6d.

Single Copies of the Daily Weather Report (price 1d.) may be obtained after 3 p.m. on the day of issue at the Meteorological Office, and at Messrs. W. H. SMITH & SONS' Bookstalls at the following terminus Railway Stations:—Victoria, Charing Cross, King's Cross, St. Pancras, Euston.

FORECASTS OF WEATHER for one day in advance are drawn up at the Meteorological Office at 11 a.m., and between 7 and 8 p.m. The latest forecast can be had by Reply Telegram, on paying at any Post Office in the United Kingdom Sixpence in addition to the cost of the inquiry and reply Telegram. Information as to the Terms on which Forecasts can be sent daily, for a long or short period, may be obtained on application to the METEOROLOGICAL OFFICE, 63, VICTORIA STREET, S.W., either personally or by post.

W. N. SHAW (Director).

* At Oxford the observations are taken at 8 p.m.

NOTES:—(a) At the British and Irish Stations the readings of the barometer are not corrected for the difference in Gravity between the position of the Station and Latitude 45°. The approximate correction is:—For stations North of Malin Head and North Shields + '03 in., but for Sumburgh Head + '04 in.; for stations South of Malin Head and North Shields + '02 in., but for Scilly and Jersey + '01 in.

(b) The Sunshine for London given in this Table is recorded on the Tower of the Wesleyan Training College, Westminster; the Sunshine entered to Dungeness is recorded at Littlestone-on-Sea.

* Observations for this column not generally received.

† Observations received too late for insertion in Charts on next page.

FOR Saturday, 3rd March, 1906.

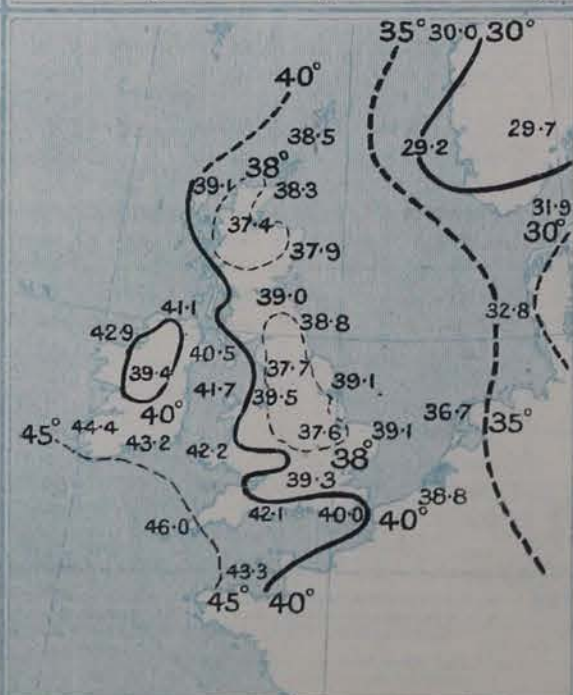

Yesterday morning.

Total Duration recorded
in various districts of the United Kingdom
in the 8 weeks ended Saturday, Feb 24th,
with the percentage of the average duration
for the corresponding period.

*(Derived chiefly from Observations
extending over the 35 years 1871-1905).*

GENERAL SITUATION AT 8 A.M.

PRESSURE

An anticyclone in which the highest readings are above 30.4 ins. covers the southern half of the British Isles and the north of France. A fall of the barometer has occurred during the night in our northern districts the present reading at Sumburgh Head being 29.72 ins. A deep low pressure system is indicated over the northwest of Russia, and there is a steep gradient over the east of Scandinavia.

WIND

TEMPERATURE

WEATHER

AND

SEA

W.^y breezes prevail over the northern half of our Islands; further to the east these increase in force and become N.W.^y or N.^y, and on the east coast of Sweden we find a gale from the N.^w. The anticyclonic region over the south of England is characterised by light variable to E.^y breezes, and E.^y to N.E.^y or N.^y winds also prevail over France. The weather in our southern counties is fine, bright and cold, temperature readings being below the freezing point at the inland stations. Further north there is rather more cloud, but the weather is fair in most places; rainfall is confined to the extreme north of Scotland and the northwest of Ireland. The backing of the wind to the W.^w has been accompanied by a rise of temperature of several degrees in most places; at Stornoway the present reading is 44°. Over the Continent the weather is fair or fine in most places and a fall of temperature has occurred very generally. The sea is moderate off Sumburgh Head and Malin Head, slight or smooth at our remaining stations.

During the previous 24 hours rain fell in our northwestern districts, and a second area of precipitation extends from our Midland and eastern counties into Central Europe; over half an inch of rainfall was measured at Frankfurt. Rain also fell in the western portion of France and snow in the east of Scandinavia. Yesterday proved dull in the south of England, but up to 5 hrs. of bright sunshine were recorded at some of our northern stations. Maxima of over 50° occurred in the south during the early part of the day, but frost was general during the night in all southern districts.

PROBABLE CHANGES IN SYSTEM NOW PREVALENT

The anticyclone in the south is likely to move slowly eastward but it is expected to maintain its influence over our southern counties during the ensuing 24 hours. The barometer is now again rising in the northwest, but it is probable that a fresh fall will set in before tomorrow.

FORECASTS*

For the 24 hours ending at NOON on 4TH March, 1906.

DISTRICTS.

FORECASTS.

0	SCOTLAND NORTH	Moderate W. ^y winds; fair at first, some rain or showers later; moderate temperature.
1	SCOTLAND EAST	
2	ENGLAND N.E.	Light W. ^y breezes; fair or fine generally, morning mist or fog locally; rather cold.
3	ENGLAND EAST	
4	MIDLAND COUNTIES	
5	ENGLAND SOUTH	Light variable to W. ^y breezes; fine generally, mist or fog locally; cold.

DISTRICTS.

FORECASTS.

6	SCOTLAND WEST	Same as Nos. 0 & 1
7	ENGLAND N.W.	W. ^y breezes; fair generally, mist or fog locally; rather cold.
8	ENGLAND S.W.	Same as No. 10.
9	IRELAND NORTH	Same as Nos. 0 & 1.
10	IRELAND SOUTH	Moderate to light variable to W. ^y winds; fair generally, mist or fog locally.

WARNINGS

NONE ISSUED.

Note—The South Cone, point downwards (⌣), means that gales, or strong winds, are probable, at first from the Southward (from S.E. round by S. to N.W.). Should it appear likely that a gale beginning from between W. and N.W. is likely to veer towards N. or N.E., the North Cone is hoisted in preference to the South Cone.
The North Cone, point upwards (⌢), means that gales, or strong winds, are probable, at first from the Northward (from N.W. round by N. to S.E.). Should it appear likely that a gale beginning from between E. and S.E. is likely to veer towards S. or S.W., the South Cone is hoisted in preference to the North Cone.

* For terms for transmission of Forecasts by Telegraph, see next page.

SUBSCRIPTIONS both for the Daily and Weekly Weather Reports may be paid, in advance, to the Meteorological Office.

TERMS: For Daily Weather Report, forwarded by Book Post, £1 0 0 per annum.

" Weekly " " " £1 10 0 " Single Copies, 6d.

Single Copies of the Daily Weather Report (price 1d.) may be obtained after 3 p.m. on the day of issue at the Meteorological Office, and at Messrs. W. H. SMITH & SONS' Bookstalls at the following terminus Railway Stations:—Victoria, Charing Cross, King's Cross, St. Pancras, Euston.

FORECASTS OF WEATHER for one day in advance are drawn up at the Meteorological Office at 11 a.m., and between 7 and 8 p.m. The latest forecast can be had by Reply Telegram, on paying at any Post Office in the United Kingdom Sixpence in addition to the cost of the inquiry and reply Telegram. Information as to the Terms on which Forecasts can be sent daily, for a long or short period, may be obtained on application to the METEOROLOGICAL OFFICE, 63, VICTORIA STREET, S.W., either personally or by post.

W. N. SHAW (Director).

* At Oxford the observations are taken at 8 p.m.

DAILY WEATHER REPORT.

NOTES:—(a) At the British and Irish Stations the readings of the barometer are not corrected for the difference in Gravity between the position of the Station and Latitude 45°. The approximate correction is:—For stations North of Malin Head and North Shields + '03 in., but for Sumburgh Head + '04 in.; for stations South of Malin Head and North Shields + '02 in., but for Scilly and Jersey + '01 in.

(b) The Sunshine for London given in this Table is recorded on the Tower of the Wesleyan Training College, Westminster; the Sunshine entered to Dungeness is recorded at Littlestone-on-Sea.

* Observations for this column not generally received.

† Observations received too late for insertion in Charts on next page.

WEATHER CHARTS

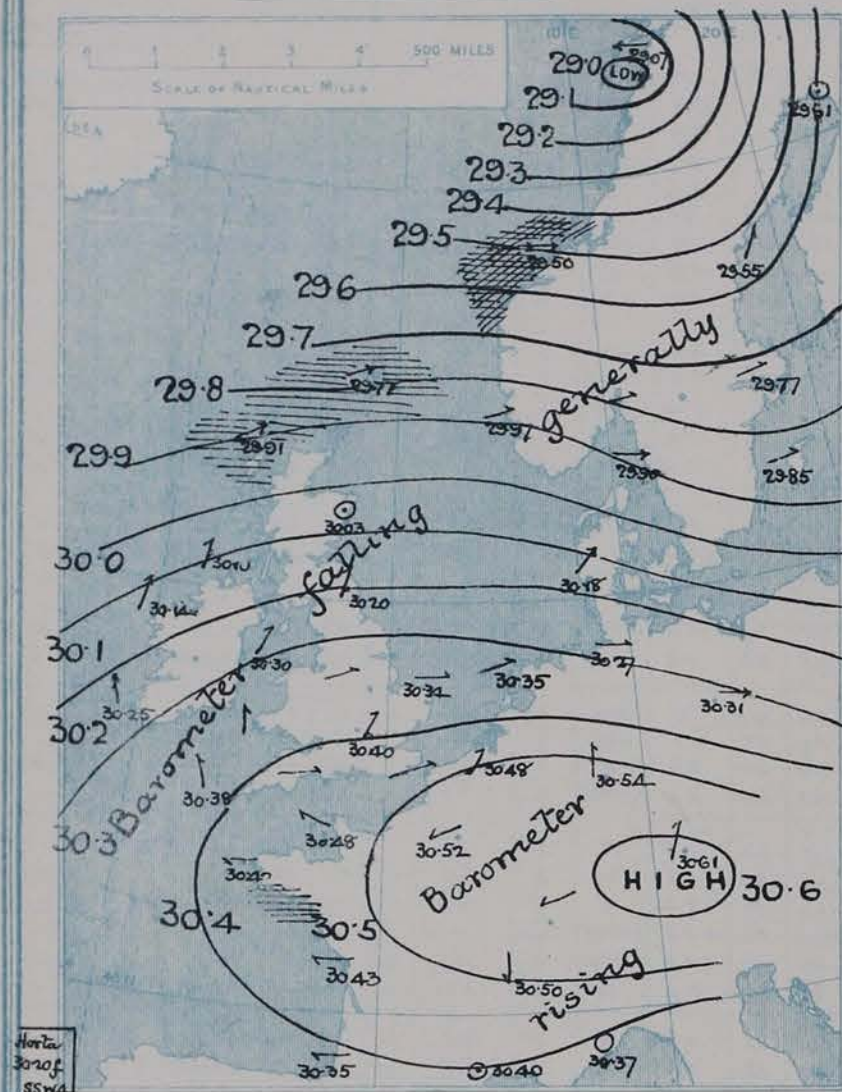

FOR SUNDAY, 4TH MARCH, 1906.

I. BAROMETER, WIND AND SEA. This Morning.

BAROMETER.—Isobars are drawn for each tenth of an inch.

WIND.—Arrows show Directions and Force, flying with the wind.

Force above 10 → : Force 5 to 7 → : } Calm ○
Force 8 to 10 → : Force 1 to 4 → :
SEA.—Rough High

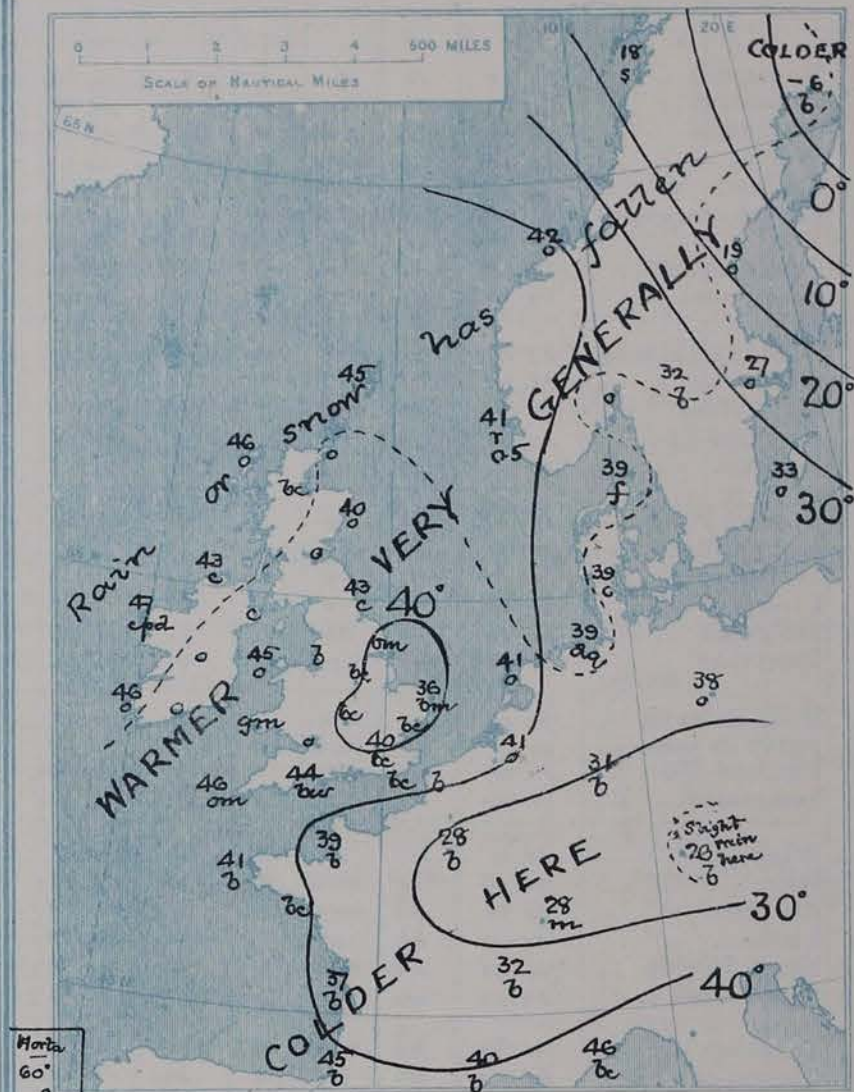

II. TEMPERATURE AND WEATHER. This Morning.

TEMPERATURE.—Isotherms are drawn for each 10°.

WEATHER.—Shown by Letters of the Beaufort Scale. (See P. 4.)

RAINFALL.—A dotted line separates areas where rain has fallen from those without rain. The fall in past 24 hours when exceeding half an inch is shown thus - 0.6

III. BAROMETER AND WIND

Yesterday morning.

IV. ACCUMULATED TEMPERATURE ABOVE 42°.

Amount recorded in various districts of the United Kingdom during the 8 weeks ended Saturday, 24th Feb., with the percentage of the average for the corresponding period.

Accumulated values are expressed in Day-Degrees—a "Day Degree" signifying 1° continued for 24 hours, or any other number of degrees for an inversely proportional number of hours.

V. Averages of DAILY TEMPERATURE at 8 A.M. for the monthly period

FEBRUARY - MARCH

(Derived chiefly from Observations extending over the 35 years 1871-1905).

GENERAL SITUATION AT 8 A.M.

PRESSURE

The anticyclone whose central space occupied the southern parts of the British Isles yesterday has since moved across to the Continent, and the region of highest barometer is now over Bavaria, 30.61 ms. at Munich. From the neighbourhood of Iceland a deep cyclonic system has reached the Norwegian coast, the barometer having fallen to 29.07 ms. at Bodø. A steep gradient is shown over Scandinavia, moderate over our northern districts, slight in the south.

WIND

At the French stations calms and light E.^s breezes prevail, and at Bodø a strong E.^s breeze. Over the rest of the region under observation the direction is from between S. and W., the force generally being light or moderate, but a fresh breeze is reported on our northwestern coasts, a strong breeze at Sumburgh Head and Skagen, and a strong gale at Christiansund. Temperature has fallen rather briskly over France, Western Germany and at Haparanda, risen elsewhere, decidedly in many places.

TEMPERATURE

The present values range from 36° at Yarmouth and 39° at Jersey and at some stations in the East of England to 46° on the southwest coasts and in the Hebrides and 47° at Blackrod Point; from -6° at Haparanda, +18° at Bodø and 19° at Hernösand, 26° at Munich and 28° at Belfort and Paris, to 46° at Tice and 52° at Lisbon. The weather is fair or fine over the greater part of England and over France and Western Germany, mostly very cloudy or overcast in other regions, with showers of drizzle at Blackrod Point and Luchaven, rain at Skudesnaes and snow at Bodø. Fog is reported at Skagen, mist at Pembroke and on the east coast of England. A high sea is running off Christiansund, and it is rough or rather round the north of Scotland and off Lorient, slight to very smooth in nearly all other localities.

WEATHER

AND

SEA

During yesterday temperature rose to 50° and upwards at a number of southern and eastern stations to 53° at Shields. At the Irish stations there was no bright sunshine, in Scotland very little, but all over England the amounts registered were large, exceeding 6 hrs in nearly all places, Bath, Margate and Oxford having 9 hrs, Worthing 9.2 hrs, Folkestone 9.4 hrs, Bournemouth, Bognor and Littlestone-on-Sea, 9.5 hrs, and Jersey 9.6 hrs.

WARNINGS

NONE ISSUED.

NONE ISSUED.

Note.—The South Cone, point downwards (T), means that gales, or strong winds, are probable, at first from the Southward (from S.E. round by S. to N.W.). Should it appear likely that a gale beginning from between W. and N.W. is likely to veer towards N. or N.E., the North Cone is hoisted in preference to the South Cone.
The North Cone, point upwards (T), means that gales, or strong winds, are probable, at first from the Northward (from N.W. round by N. to S.E.). Should it appear likely that a gale beginning from between E. and S.E. is likely to veer towards S. or S.W., the South Cone is hoisted in preference to the North Cone.

SUBSCRIPTIONS both for the Daily and Weekly Weather Reports may be paid, in advance, to the Meteorological Office.

TERMS: For Daily Weather Report, forwarded by Book Post, £1 0 0 per annum.
" Weekly " " " " £1 10 0 " " Single Copies, 6d.

Single Copies of the Daily Weather Report (price 1d.) may be obtained after 3 p.m. on the day of issue at the Meteorological Office, and at Messrs. W. H. SMITH & SONS' Bookstalls at the following terminus Railway Stations:—Victoria, Charing Cross, King's Cross, St. Pancras, Euston.

FORECASTS OF WEATHER for one day in advance are drawn up at the Meteorological Office at 11 a.m., and between 7 and 8 p.m. The latest forecast can be had by Reply Telegram, on paying at any Post Office in the United Kingdom Sixpence in addition to the cost of the inquiry and reply Telegram. Information as to the Terms on which Forecasts can be sent daily, for a long or short period, may be obtained on application to the METEOROLOGICAL OFFICE, 63, VICTORIA STREET, S.W., either personally or by post.

W. N. SHAW (Director).

* At Oxford the observations are taken at 8 p.m.

DAILY WEATHER REPORT.

NOTES:—(a) At the British and Irish Stations the readings of the barometer are not corrected for the difference in Gravity between the position of the Station and Latitude 45°. The approximate correction is:—For stations North of Malin Head and North Shields + '03 in., but for Sumburgh Head + '04 in.; for stations South of Malin Head and North Shields + '02 in., but for Scilly and Jersey + '01 in.

(b) The Sunshine for London given in this Table is recorded on the Tower of the Wesleyan Training College, Westminster; the Sunshine entered to Dungeness is recorded at Littlestone-on-Sea.

* Observations for this column not generally received.

† Observations received too late for insertion in Charts on next page.

WEATHER CHARTS

FOR MONDAY, 5TH MARCH, 1906.

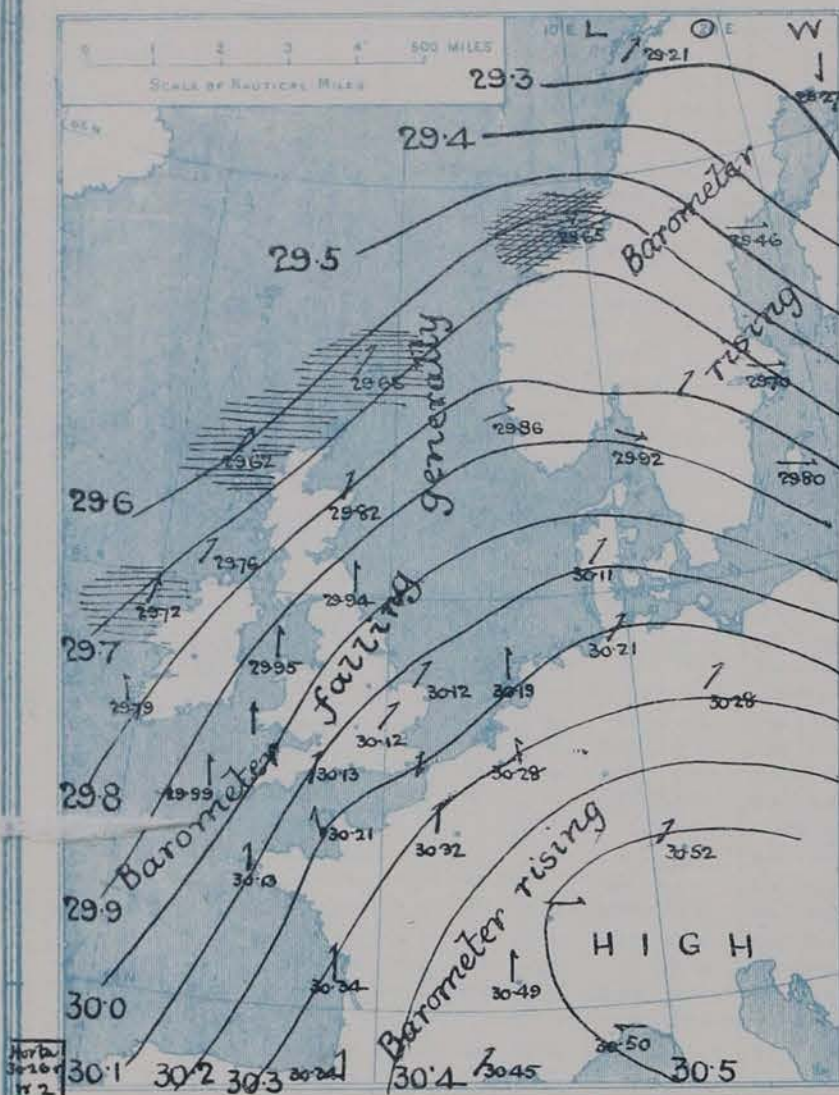

I. BAROMETER, WIND AND SEA. This Morning.

BAROMETER—Isobars are drawn for each tenth of an inch.

WIND—Arrows show Direction and Force, flying with the wind.

Force above 10 \rightarrow Force 5 to 7 \rightarrow } Calm \odot
Force 8 to 10 \rightarrow Force 1 to 4 \rightarrow

SEA—Rough |||| High ■

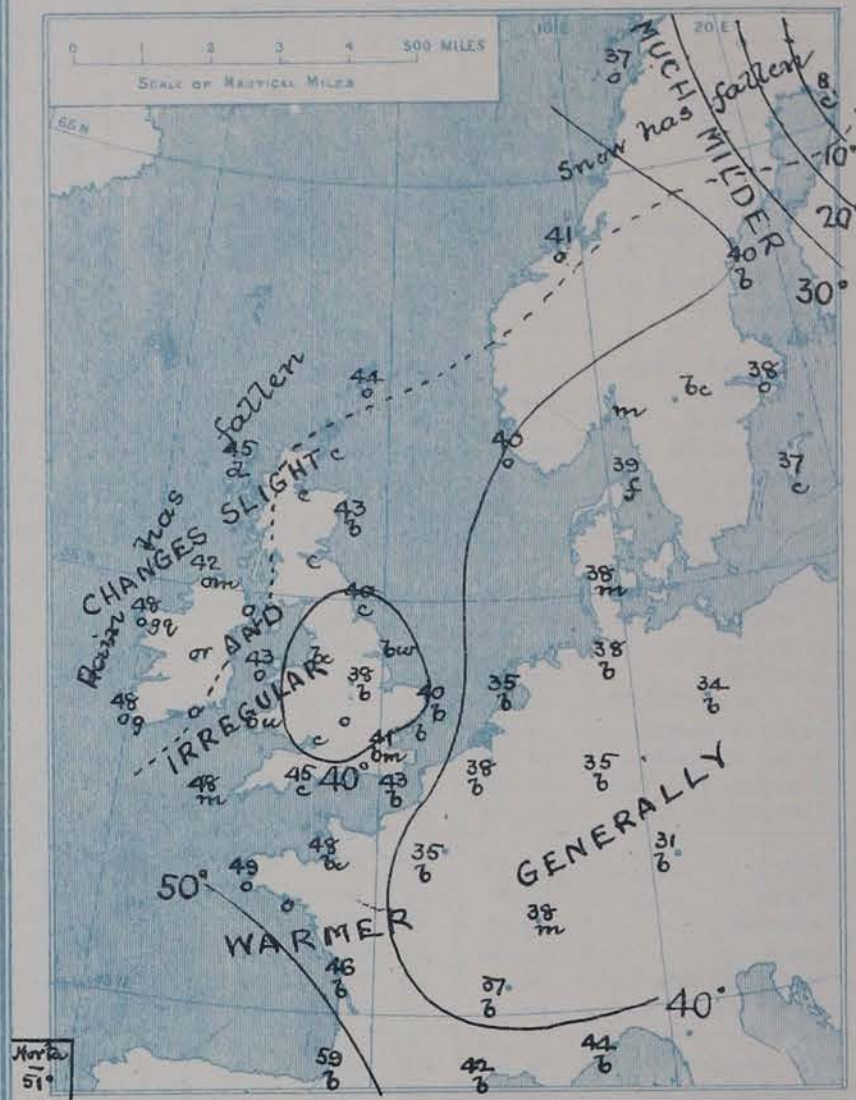

II. TEMPERATURE AND WEATHER. This Morning.

TEMPERATURE—Isotherms are drawn for each 10°.

WEATHER—Shown by Letters of the Beaufort Scale. (See P. 4.)

RAINFALL—A dotted line separates areas where rain has fallen from those without rain. The fall in past 24 hours when exceeding half an inch is shown thus—0.6

III. BAROMETER AND WIND

Yesterday morning.

IV. ACCUMULATED TEMPERATURE ABOVE 42°.

Amount recorded in various districts of the United Kingdom during the week ended Saturday, 24TH February, with the percentage of the average for the corresponding week.

Accumulated values are expressed in Day-Degrees—a "Day Degree" signifying 1° continued for 24 hours, or any other number of degrees for an inversely proportional number of hours

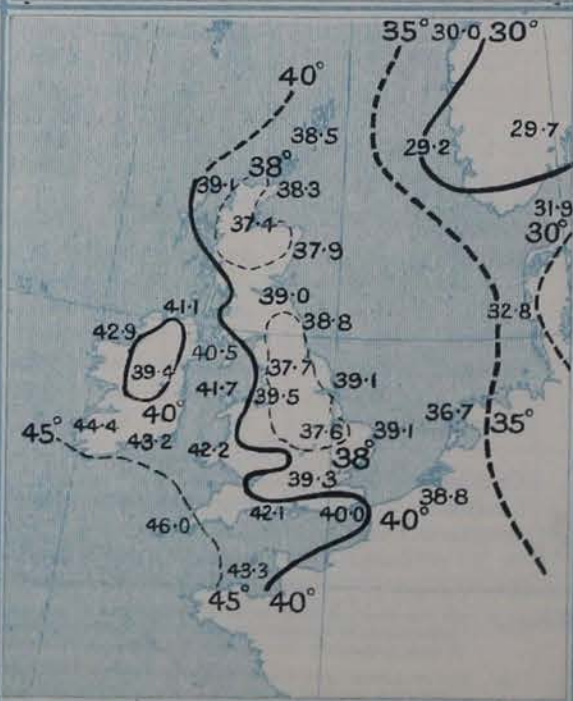

V. Averages of DAILY TEMPERATURE

at 8 A.M. for the monthly period

FEBRUARY - MARCH

(Derived chiefly from Observations extending over the 35 years 1871-1905).

GENERAL SITUATION AT 8 A.M.

PRESSURE

A decrease of pressure has occurred since yesterday morning over the western half of Europe generally except in the west of Norway and extreme south of France. The change amounts to nearly half an inch in the south of Ireland, to nearly three-tenths of an inch in the south-east of England, and to about a tenth in Germany. The increase of gradient has been slight, and pressure now ranges from 30.5 ins. over Bavaria, Switzerland and Northern Italy to 29.62 ins. in the Shetlands, and to about 29.2 ins. in Lapland.

WIND

Southerly and South-westerly winds are general in nearly all parts of North-western Europe but draw into West in the Skager Rack and over Sweden. They have very little force as a whole, but blow strongly at Blackhead, Stornoway and Bodø and a moderate gale at Skagen. Temperature

TEMPERATURE

has risen rather decidedly in France and South Germany and very quickly over Scandinavia; elsewhere the changes have been slight and irregular. Over this country readings range from 34° at Bath and 35° at Nottingham to 45° on our south coast and at Stornoway and to 48° in the south and west of Ireland.

WEATHER

At Biarritz the thermometer stands at 59°, but over the Continent generally readings are below 40°, the lowest being 8° at Stapaunda. The sky has become cloudy or overcast over the major portion of these

AND

SEA

Iceland and rain is falling at Stornoway and Birn Castle. At Aberdeen and at most stations in the eastern half of England, however, the sky is nearly cloudless. Fine, bright weather also prevails over France, Germany, and the Low Countries. The sea is high off Christiansund, rough off the north of Scotland, and rather rough off the north-west of Ireland; on our coasts generally it is slight or smooth.

During yesterday the thermometer rose to 58° in London, 57° at Nottingham, and to 55° at Scarborough, but on our south and south-west coasts the maxima were only about 50°. Slight rain has fallen at some Irish stations, and in the Shetlands and Hebrides. Bright sunshine was very abundant; more than 9.0 hours were recorded in several parts of England and Wales, and 10.3 hours at Jersey.

PROBABLE CHANGES IN SYSTEM NOW PREVALENT

Depressions on the Atlantic are likely to continue to encroach on our western and northern districts, where the Southerly and South-Westerly winds will increase somewhat in force and the weather become less fair. The greater part of England will not at present be much affected, and fine, warm weather is therefore probable.

FORECASTS*

For the 24 hours ending at NOON on 6TH MARCH, 1906.

DISTRICTS.

FORECASTS.

- 0 SCOTLAND NORTH
- 1 SCOTLAND EAST
- 2 ENGLAND N.E.
- 3 ENGLAND EAST
- 4 MIDLAND COUNTIES
- 5 ENGLAND SOUTH

SW^{ly} and W^{ly} winds, moderate to fresh or strong; cloudy or dull, some rain; mild.

SW^{ly} winds, light or moderate; fair as a whole, but much cloud.

S^{ly} and SW^{ly} winds, light or moderate; fine, warm day, rather cold at night.

DISTRICTS.

FORECASTS.

- 6 SCOTLAND WEST
- 7 ENGLAND N.W.
- 8 ENGLAND S.W.
- 9 IRELAND NORTH
- 10 IRELAND SOUTH

Same as No. 0

S^{ly} or SW^{ly} winds, freshening; mainly fair to-day, some showers to-morrow; mild.

S^{ly} or S.W^{ly} winds, moderate in east, fresh or strong in west; cloudy or dull, occasional slight rain; mild.

WARNINGS

NONE ISSUED.

Note.—The South Cone, point downwards (⌋), means that gales, or strong winds, are probable, at first from the Southward (from S.E. round by S. to N.W.). Should it appear likely that a gale beginning from between W. and N.W. is likely to veer towards N. or N.E., the North Cone is hoisted in preference to the South Cone. The North Cone, point upwards (⌋), means that gales, or strong winds, are probable, at first from the Northward (from N.W. round by N. to S.E.). Should it appear likely that a gale beginning from between E. and S.E. is likely to veer towards S. or S.W., the South Cone is hoisted in preference to the North Cone.

*For terms for transmission of Forecasts by Telegraph, see next page.

SUBSCRIPTIONS both for the Daily and Weekly Weather Reports may be paid, in advance, to the Meteorological Office.

TERMS: For Daily Weather Report, forwarded by Book Post, £1 0 0 per annum.
" Weekly " " " £1 10 0 " Single Copies, 6d.

Single Copies of the Daily Weather Report (price 1d.) may be obtained after 3 p.m. on the day of issue at the Meteorological Office, and at Messrs. W. H. SMITH & SONS' Bookstalls at the following terminus Railway Stations:—Victoria, Charing Cross, King's Cross, St. Pancras, Euston.

FORECASTS OF WEATHER for one day in advance are drawn up at the Meteorological Office at 11 a.m., and between 7 and 8 p.m. The latest forecast can be had by Reply Telegram, on paying at any Post Office in the United Kingdom Sixpence in addition to the cost of the inquiry and reply Telegram. Information as to the Terms on which Forecasts can be sent daily, for a long or short period, may be obtained on application to the METEOROLOGICAL OFFICE, 63, VICTORIA STREET, S.W., either personally or by post.

W. N. SHAW (Director).

* At Oxford the observations are taken at 8 p.m.

NOTES:—(a) At the British and Irish Stations the readings of the barometer are not corrected for the difference in Gravity between the position of the Station and Latitude 45°. The approximate correction is:—For stations North of Malin Head and North Shields +.03 in., but for Sumburgh Head +.04 in.; for stations South of Malin Head and North Shields +.02 in., but for Scilly and Jersey +.01 in.

(b) The Sunshine for London given in this Table is recorded on the Tower of the Wesleyan Training College, Westminster; the Sunshine entered to Dungeness is recorded at Littlestone-on-Sea.

* Observations for this column not generally received.

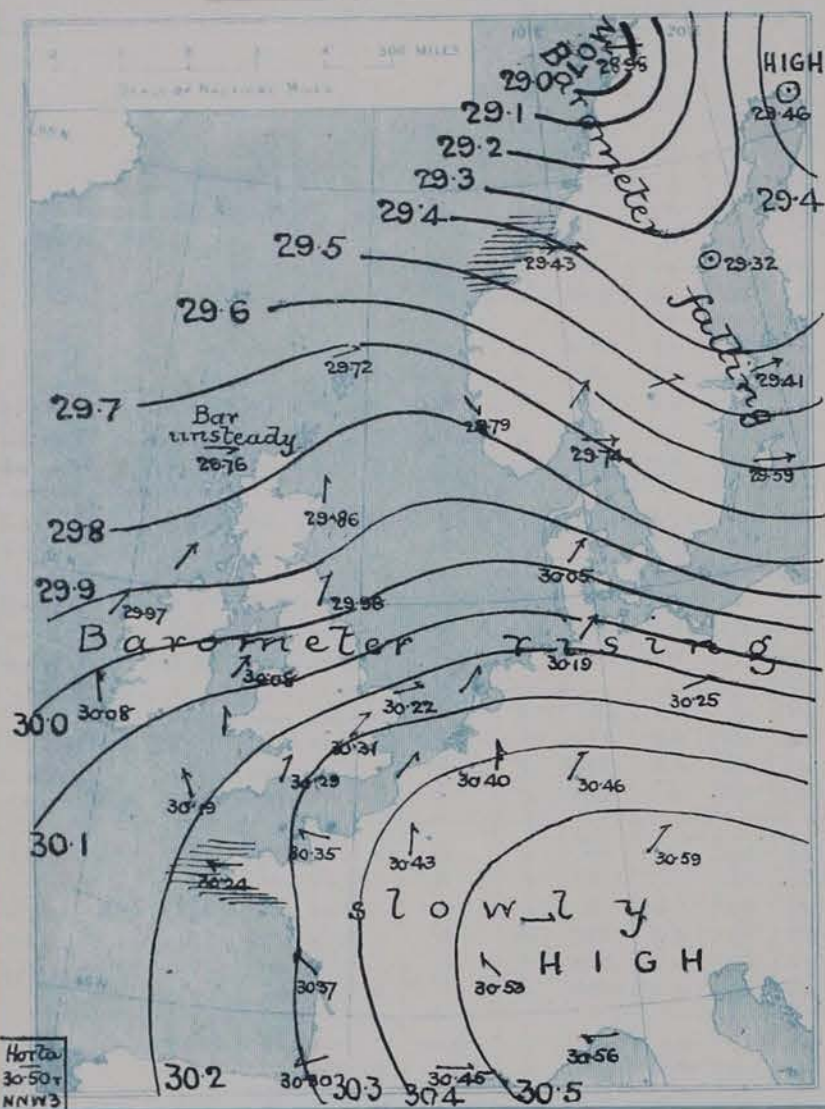

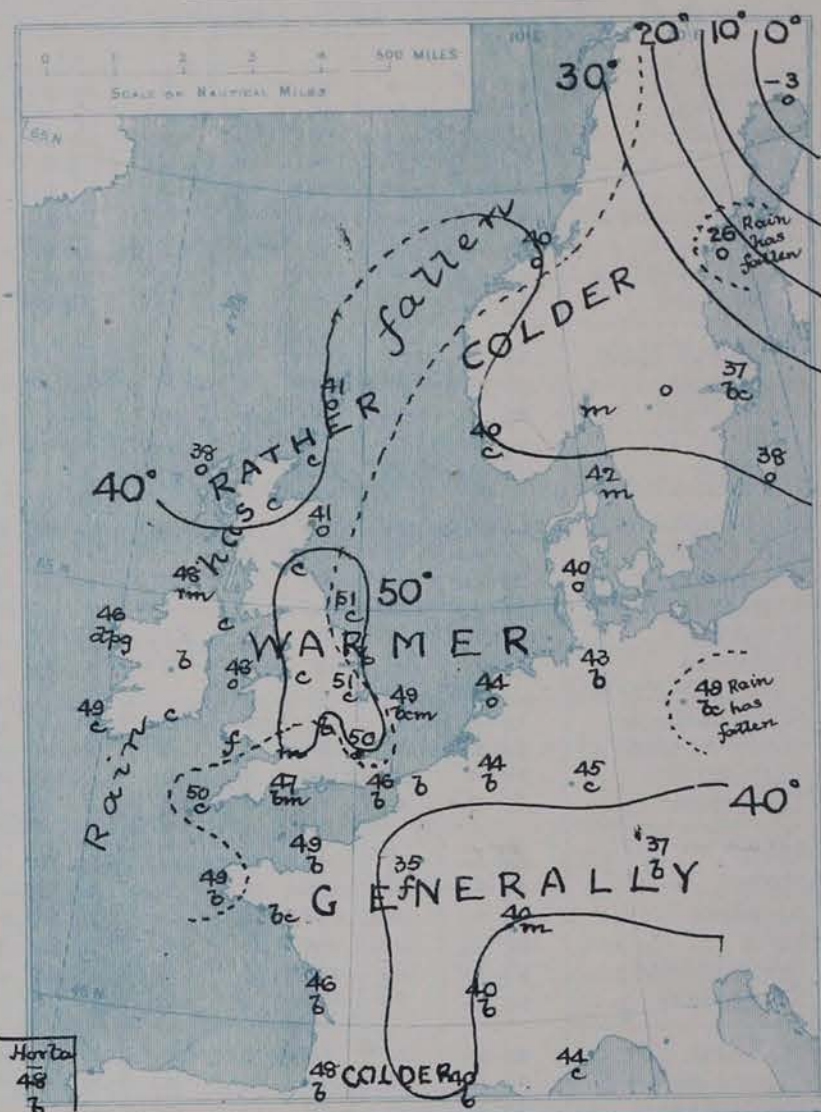

† Observations received too late for insertion in Charts on next page.

FOR TUESDAY, 6TH MARCH, 1906

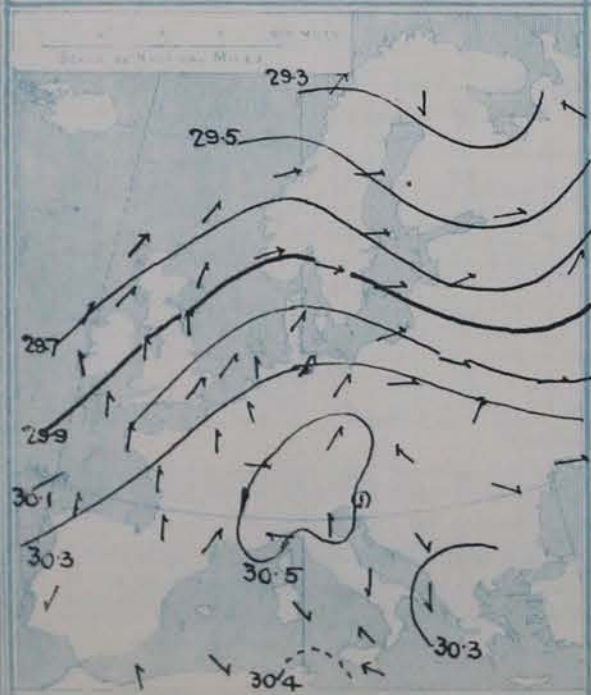

1. BAROMETER, WIND AND SEA. *This Morning.*

Calm ©

II. TEMPERATURE AND WEATHER. *This Morning*

III. BAROMETER AND WIND

Yesterday morning.

IV. EXTREMES OF TEMPERATURE

recorded

in various districts of the United Kingdom

during the week ended Saturday, 3rd March.

V. Averages of DAILY TEMPERATURE

at 8 A.M. for the monthly period

FEBRUARY - MARCH

(Derived chiefly from Observations
extending over the 35 years 1871-1905).

GENERAL SITUATION AT 8 A.M.

PRESSURE

Since yesterday morning the barometer has risen over the United Kingdom, France, the Low Countries, and South Germany, and also in the extreme north of Sweden; elsewhere it has fallen, the change being greatest in the west of Norway and the south of Sweden. Pressure now ranges from 30.5 ins. and upwards in the central part of an anticyclone extending northwards from Italy, and embracing the east of France, Switzerland and Bavaria to a little below 29.0 ins. in a depression having its centre near Bodö. The gradients are rather steep over Denmark, the Baltic, and the north of Scandinavia.

WIND

TEMPERATURE

WEATHER

AND

SEA

The main current of wind over North-western Europe is South-Westerly to Westerly, but over the Bay of Biscay a light easterly breeze is reported and in the extreme north of Norway a moderate Easterly gale. At a few of our own western and north-western stations, and over Denmark and the South of Sweden the wind is fresh to strong, while over the Skager Rack there is a moderate gale and at Christiansund a fresh gale. Temperature has fallen somewhat in Scotland, at various Scandinavian stations, and in the south of France, risen elsewhere, the change since 8 a.m. yesterday amounting to 16° at Bath and Nottingham. Over the south of Scotland and Ireland and England readings are high, Louth reporting 52° and many other places readings between 51° and 49°. In the extreme north of Scotland the thermometer stands at 38°. The highest reading reported from the Continent is 49° at Brest and Berlin and the lowest -3° at Haparanda; at Paris and Munich the respective values are 35° and 37°. Over the major portion of France and Germany, and also at some stations in the south and east of England the weather is fine and bright but over these Islands generally and also in the Scandinavian region there is much cloud. Rain is falling in the north and north-west of Ireland and dense fog prevails at Rimbroke; fog is also reported at Paris. The sea is rough at Christiansund, slight or smooth in most other places.

The maximum temperatures recorded over these Islands yesterday were a little above 50° in most places, and the minima of the night rather high for the time of year. Slight amounts of rain were measured this morning in the west and north. Bright sunshine was again abundant on the south-east coasts, but elsewhere the weather was more cloudy than of late.

PROBABLE CHANGES IN SYSTEM NOW PREVALENT

There are at present no indications of any great change in the conditions now prevalent. The anticyclone shows no signs of giving way, while the general distribution of pressure favours the passage of cyclonic systems on a north-easterly course outside our western and northern coasts.

FORECASTS*

For the 24 hours ending at NOON on 7th MARCH, 1906.

DISTRICTS.

FORECASTS.

DISTRICTS.

FORECASTS.

- 0 SCOTLAND NORTH
- 1 SCOTLAND EAST
- 2 ENGLAND N.E.
- 3 ENGLAND EAST
- 4 MIDLAND COUNTIES
- 5 ENGLAND SOUTH

SW^{ly} and W^{ly} winds, light or moderate; changeable, some showers, most in west and north; mild.

SW^{ly} winds, light or moderate; mostly fair, but some slight local showers; mild.

- 6 SCOTLAND WEST
- 7 ENGLAND N.W.
- 8 ENGLAND S.W.
- 9 IRELAND NORTH
- 10 IRELAND SOUTH

Same as Nos. 0 and 1.

SW^{ly} winds, moderate or fresh; some showers, but fair generally; mild.

S^{ly} or SW^{ly} winds, light or moderate; fair generally, but some showers; mild.

Light to fresh winds between S. and W.; changeable, some showers, most in west and north; mild.

WARNINGS

NONE ISSUED.

* The South Cone, point downwards (H), means that gales, or strong winds, are probable, at first from the Southward (from S.E. round by S. to N.W.). Should it appear likely that a gale beginning from between W. and N.W. is likely to veer towards N. or N.E., the North Cone is inserted in preference to the South Cone.

The North Cone, point upwards (T), means that gales, or strong winds, are probable, at first from the Northward (from N.W. round by N. to S.E.). Should it appear likely that a gale beginning from between E. and S.E. is likely to veer towards S. or S.W., the South Cone is inserted in preference to the North Cone.

* For terms for transmission of Forecasts by Telegraph, see next page.

Wick ...	6.57	12.24	5.50
Valencia ...	7.20	12.53	6.26

SUBSCRIPTIONS both for the Daily and Weekly Weather Reports may be paid, in advance, to the Meteorological Office.

TERMS: For Daily Weather Report, forwarded by Book Post, £1 0 0 per annum.
" Weekly " " " £1 10 0 " " Single Copies, 6d.

Single Copies of the Daily Weather Report (price 1d.) may be obtained after 3 p.m. on the day of issue at the Meteorological Office, and at Messrs. W. H. SMITH & SONS' Bookstalls at the following terminus Railway Stations:—Victoria, Charing Cross, King's Cross, St. Pancras, Euston.

FORECASTS OF WEATHER for one day in advance are drawn up at the Meteorological Office at 11 a.m., and between 7 and 8 p.m. The latest forecast can be had by Reply Telegram, on paying at any Post Office in the United Kingdom Sixpence in addition to the cost of the inquiry and reply Telegram. Information as to the Terms on which Forecasts can be sent daily, for a long or short period, may be obtained on application to the METEOROLOGICAL OFFICE, 63, VICTORIA STREET, S.W., either personally or by post.

W. N. SHAW (Director).

* At Oxford the observations are taken at 8 p.m.

DAILY WEATHER REPORT.

NOTES:—(a) At the British and Irish Stations the readings of the barometer are not corrected for the difference in Gravity between the position of the Station and Latitude 45°. The approximate correction is:—For stations North of Malin Head and North Shields +0.03 in., but for Sumburgh Head +0.04 in.; for stations South of Malin Head and North Shields +0.02 in., but for Scilly and Jersey +0.01 in.

(b) The Sunshine for London given in this Table is recorded on the Tower of the Wesleyan Training College, Westminster; the Sunshine entered to Dungeness is recorded at Littlestone-on-Sea.

* Observations for this column not generally received.

† Observations received too late for insertion in Charts on next page.

WEATHER CHARTS

FOR WEDNESDAY, 7th MARCH, 1906.

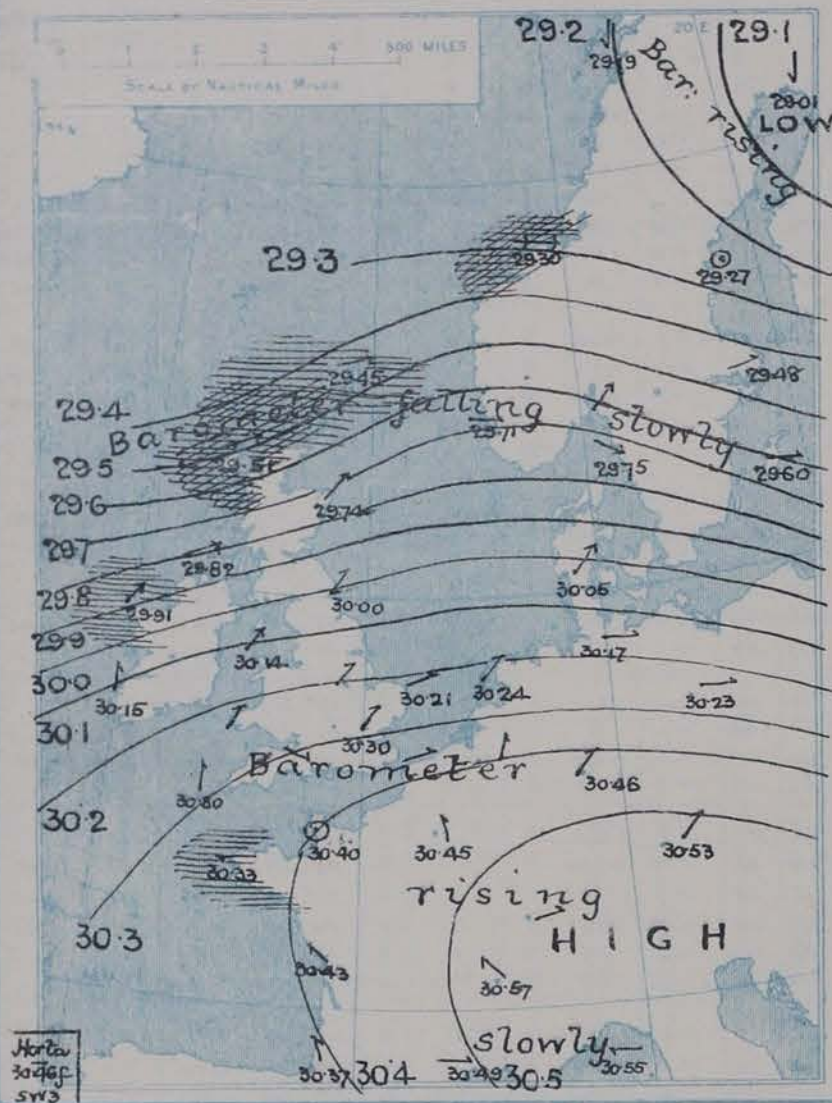

I. BAROMETER, WIND AND SEA. This Morning.

BAROMETER—Isobars are drawn for each tenth of an inch.

WIND—Arrows show Directions and Force, flying with the wind.

Force above 10 \rightarrow Force 5 to 7 \rightarrow } Calm \odot
Force 8 to 10 \rightarrow Force 1 to 4 \rightarrow

SEA—Rough |||| High |||||

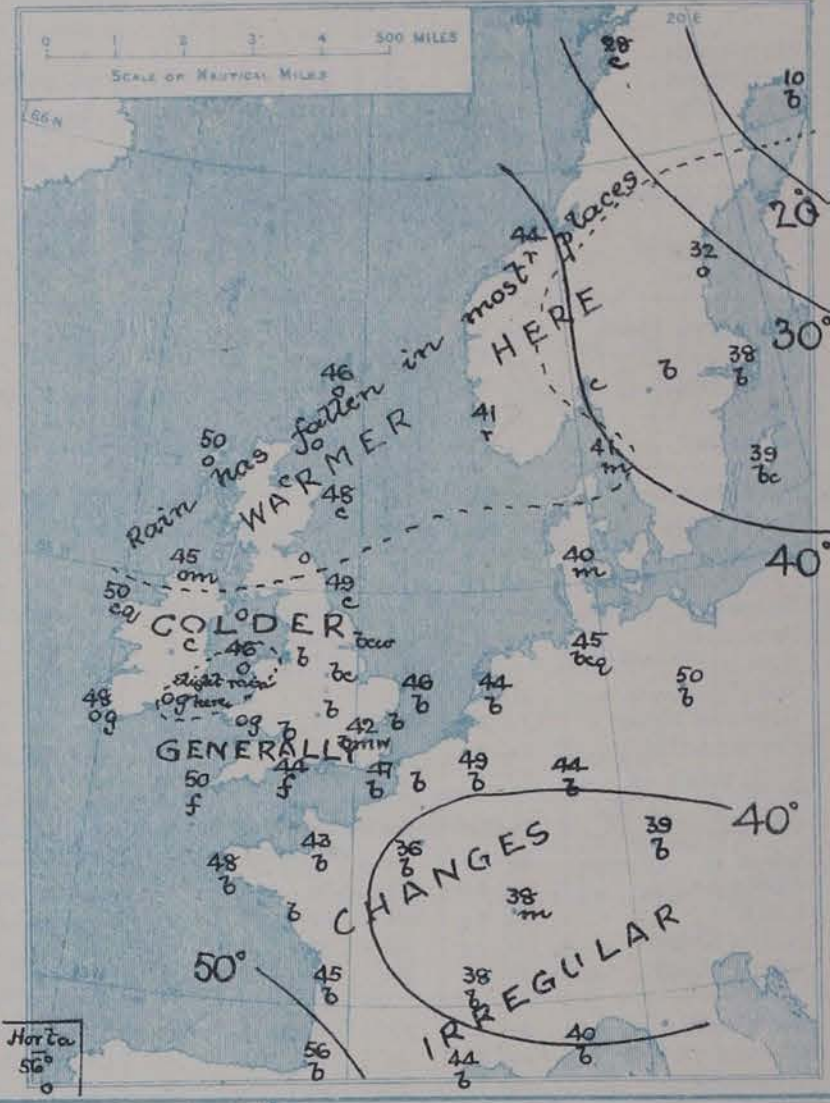

II. TEMPERATURE AND WEATHER. This Morning.

TEMPERATURE—Isotherms are drawn for each 10°.

WEATHER—Shown by Letters of the Beaufort Scale. (See P. 4.)

RAINFALL—A dotted line separates areas where rain has fallen from those without rain. The fall in past 24 hours when exceeding half an inch is shown thus - 0.6

III. BAROMETER AND WIND

Yesterday morning.

IV. LAST WEEK'S RAINFALL.

Amount recorded in various districts of the United Kingdom during the week ended Saturday, 3rd March, with the percentage of the average amount for the corresponding week.

V. Averages of DAILY TEMPERATURE

at 8 A.M. for the monthly period

FEBRUARY - MARCH

(Derived chiefly from Observations extending over the 35 years 1871-1905).

GENERAL SITUATION AT 8 A.M.

PRESSURE

Very little change has occurred in the general distribution of pressure, but a cyclonic disturbance over the north-eastern portion of the Atlantic has caused the barometer to fall about a quarter of an inch in the north of Scotland since yesterday morning. Pressure is now lowest, 29.1 ins. and less, over the north of Finland, and continues highest, above 30.5 ins., over Bavaria, Switzerland, the east of France, and the north of Italy.

WIND

TEMPERATURE

WEATHER

AND

SEA

With the fall of the barometer in the far north the wind has increased to a fresh or strong breeze from West-south-West on our north-western and northern coasts, and has reached the force of a gale in the Hebrides and at Christianaund. The South-Westerly and Westerly currents prevailing over our Islands and Western Europe generally have little strength. Along the west coast of France the wind is still South-Eastery. Temperature has risen at most Scottish stations and in several Continental regions, fallen in most parts of England. Over the United Kingdom it at present ranges from 50° at Stornoway, Blackrod Point and Scilly to 42° in London and to 36° at Bath. The highest Continental values are 56° at Biarritz and 50° at Berlin and the lowest 28° at Bodö, and 10° at Apataranda. The weather continues very fine and bright over England, France and Germany, but fog is reported at Portland Bill and the Scilly Isles, while on the coast of Wales and over Ireland and Scotland the sky is very cloudy or quite overcast. At most Swedish stations the weather is fine, but along the west coast of Norway rain is falling. The sea is high off Christianaund, very high in the Rinch, rough round the Shetlands, and rather rough off the north-west of Ireland and Brest; elsewhere it is moderate to smooth.

The maximum temperatures recorded yesterday were as high as 64° at Oxford, 63° at Bath and in London and about 60° over the south and south-east of England generally. Bright sunshine was very prevalent except in Scotland and the north of England; Eastbourne measured 10 hours and Jersey 10.2 hours. Some rain has fallen in the Shetlands and Hebrides and very slight amounts at some of our other northern and north-western stations.

PROBABLE CHANGES IN SYSTEM NOW PREVALENT

It does not seem probable that the depression off the northwest of Scotland will have much effect on the weather over these Islands generally. The southern half of the Kingdom is likely to remain under the influence of the Continental anticyclone and the general condition of the weather will be fine and very mild.

FORECASTS*

For the 24 hours ending at NOON on 8th MARCH, 1906.

DISTRICTS.

FORECASTS.

DISTRICTS.

FORECASTS.

- 0 { SCOTLAND NORTH
- 1 { SCOTLAND EAST
- 2 { ENGLAND N.E.
- 3 { ENGLAND EAST
- 4 { MIDLAND COUNTIES
- 5 { ENGLAND SOUTH

SW^{ly} and W^{ly} winds, fresh or strong to moderate; some showers, most in west and north; mild.

S.W^{ly} and W^{ly} winds, moderate or light; fair generally; very mild.

Light or moderate breezes between S. and W.; fine generally; warm.

- 6 { SCOTLAND WEST
- 7 { ENGLAND N.W.
- 8 { ENGLAND S.W.
- 9 { IRELAND NORTH
- 10 { IRELAND SOUTH

Same as Nos. 0 and 1.

S.W^{ly} and W^{ly} winds, moderate or fresh; mostly fair, but some showers; mild.

Light or moderate S^{ly} and S.W^{ly} winds; fair generally, but local fog on coast; mild.

S^{ly} and S.W^{ly} or W^{ly} winds, moderate to fresh or strong; some showers, fair at times; mild.

WARNINGS

NONE ISSUED.

Note.—The South Cone, point downwards (⌋), means that gales, or strong winds, are probable, at first from the Southward (from S.E. round by S. to N.W.). Should it appear likely that a gale beginning from between W. and N.W. is likely to veer towards N. or N.E., the North Cone is hoisted in preference to the South Cone.
The North Cone, point upwards (⌋), means that gales, or strong winds, are probable, at first from the Northward (from N.W. round by N. to S.E.). Should it appear likely that a gale beginning from between E. and S.E. is likely to veer towards S. or S.W., the South Cone is hoisted in preference to the North Cone.

* For terms for transmission of Forecasts by Telegraph, see next page.

Valencia ...	7.17	12.52	6.28

SUBSCRIPTIONS both for the Daily and Weekly Weather Reports may be paid, in advance, to the Meteorological Office.

TERMS: For Daily Weather Report, forwarded by Book Post, £1 0 0 per annum.
" Weekly " " " £1 10 0 " " Single Copies, 6d.

Single Copies of the Daily Weather Report (price 1d.) may be obtained after 3 p.m. on the day of issue at the Meteorological Office, and at Messrs. W. H. SMITH & SONS' Bookstalls at the following terminus Railway Stations:—Victoria, Charing Cross, King's Cross, St. Pancras, Euston.

FORECASTS OF WEATHER for one day in advance are drawn up at the Meteorological Office at 11 a.m., and between 7 and 8 p.m. The latest forecast can be had by Reply Telegram, on paying at any Post Office in the United Kingdom Sixpence in addition to the cost of the inquiry and reply Telegram. Information as to the Terms on which Forecasts can be sent daily, for a long or short period, may be obtained on application to the METEOROLOGICAL OFFICE, 63, VICTORIA STREET, S.W., either personally or by post.

W. N. SHAW (Director).

* At Oxford the observations are taken at 8 p.m.

NOTES:—(a) At the British and Irish Stations the readings of the barometer are not corrected for the difference in Gravity between the position of the Station and Latitude 45°. The approximate correction is:—For stations North of Malin Head and North Shields + '03 in., but for Sumburgh Head + '04 in.; for stations South of Malin Head and North Shields + '02 in., but for Scilly and Jersey + '01 in.

(b) The Sunshine for London given in this Table is recorded on the Tower of the Wesleyan Training College, Westminster; the Sunshine entered to Dungeness is recorded at Littlestone-on-Sea.

TEMPERATURE.—Isotherms are drawn for each 10°

WEATHER.—Shown by Letters of the Beaufort Scale. (See P. 4.)

RAINFALL.— { A dotted line separates areas where rain has fallen from those without rain. The fall in past 24 hours when exceeding half an inch is shown thus - 0·6

Yesterday morning.

Amount recorded
in various districts of the United Kingdom
during the week ended Saturday, 3rd March,
with the percentage of the average duration
for the corresponding week.

*(Derived chiefly from Observations
extending over the 35 years 1871-1905).*

GENERAL SITUATION AT 8 A.M.

PRESSURE

Since yesterday morning the low pressure to the north-westward and northward of our Islands has extended southwards rather briskly and caused the barometer to fall more than three-tenths of an inch over Great Britain and not much less over Germany and the north of France. The readings now range from above 30th ins. in the south and south-east of France and the north of Italy to 29.10 ins. at Dumburgh Head, and to 28.43 ins. at Bodø. A small secondary disturbance is shown over the St. George's Channel. Gradients are rather steep over nearly all parts of North-western Europe.

WIND

TEMPERATURE

WEATHER

AND

SEA

The South-Westerly and Westerly winds which still prevail over the United Kingdom and the adjacent countries of the Continent blow freely or strongly in most places; at Pembroke and Malin Head moderate gales are reported, and at St. Peter's and Christiansund fresh or strong gales. At Bodø the wind draws into East and blows with the force of a fresh gale. Temperature has fallen except in the southern parts of England and Sweden and at various French stations. In Scotland, where the change has been very decided, the readings are below 40°, and that at Stornoway no higher than 35°. The highest values over these Islands are 51° at Seilly and 49° at Bath. On the Continent the readings range from 53° at Biarritz to 43° at Paris, 41° at Stockholm and to below 20° in the north of Scandinavia.

The sky has become very cloudy or entirely overcast in nearly all parts of this country, with rain at several English stations, passing showers in the north and north-west of Ireland, and snow squalls in the Hebrides. Rain is also falling in Jutland and snow in the north of Sweden and Norway, but in most Continental regions the weather is fair or fine. The sea is high at Christiansund, rough or rather so off the north of Scotland, the west of Ireland, at Pembroke and Brest, moderate or slight elsewhere.

The highest temperatures recorded over these Islands yesterday were 67° at Lowestoft, 66° at Oxford, and 65° at Yarmouth and in London. Bright sunshine was again very prevalent in nearly all parts of England and Wales. Rain has been general in the west and north, the largest measurements being 0.6 in. at Holyhead and 0.8 in. at Valencia.

PROBABLE CHANGES IN SYSTEM NOW PREVALENT

The large low pressure system in the north and the small secondary over the St. George's Channel are likely to travel eastwards and to be accompanied by unsettled weather and rain at times over the United Kingdom. In their rear the wind will probably veer towards Northwest in the western and northern districts and to West in the south and east, with a fall of temperature.

FORECASTS*

For the 24 hours ending at NOON on 9TH MARCH, 1906.

DISTRICTS.		FORECASTS.	DISTRICTS.		FORECASTS.
0	{ SCOTLAND NORTH	{ Wind veering to the N.W. ² and blowing freshly or strongly; squally, showers of sleet, snow or rain.	6	{ SCOTLAND WEST	Same as Nos. 0 and 1.
1	{ SCOTLAND EAST		7	{ ENGLAND N.W.	
2	{ ENGLAND N.E.	{ S.W. ² to W. ² winds, moderate or fresh, strong in places; dull and rainy, then improving; colder.	8	{ ENGLAND S.W.	{ S.W. ² to W. ² winds, fresh or strong to moderate; showery, changeable; colder.
3	{ ENGLAND EAST		9	{ IRELAND NORTH	
4	{ MIDLAND COUNTIES		10	{ IRELAND SOUTH	
5	{ ENGLAND SOUTH			WARNINGS	

Note—The South Cone, point downwards (⌣), means that gales, or strong winds, are probable, at first from the Southward (from S.E. round by S. to N.W.). Should it appear likely that a gale beginning from between W. and N.W. is likely to veer towards N. or N.E., the North Cone is hoisted in preference to the South Cone. The North Cone, point upwards (⌣), means that gales, or strong winds, are probable, at first from the Northward (from N.W. round by N. to S.E.). Should it appear likely that a gale beginning from between E. and S.E. is likely to veer towards S. or S.W., the South Cone is hoisted in preference to the North Cone.

* For terms for transmission of Forecasts by Telegraph, see next page.

NOTES:—(a) At the British and Irish Stations the readings of the barometer are not corrected for the difference in Gravity between the position of the Station and Latitude 45°. The approximate correction is:—For stations North of Malin Head and North Shields + '03 in., but for Sumburgh Head + '24 in.; for stations South of Malin Head and North Shields + '02 in., but for Scilly and Jersey + '01 in.

(b) The Sunshine for London given in this Table is recorded on the Tower of the Wesleyan Training College, Westminster; the Sunshine entered to Dungeness is recorded at Littlestone-on-Sea.

* Observations for this column not generally received.

+ Observations received too late for insertion in Charts on next page.

WEATHER CHARTS

FOR FRIDAY, 9TH MARCH, 1906.

I. BAROMETER, WIND AND SEA. This Morning.

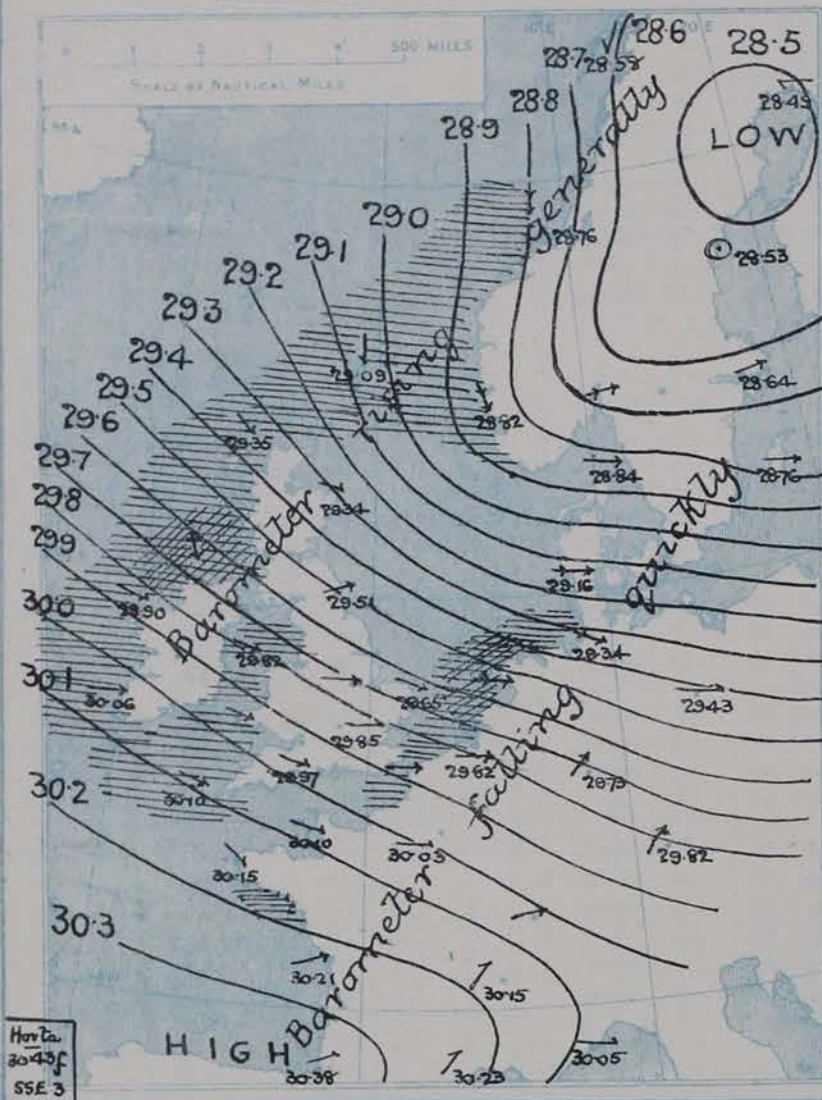

BAROMETER—Isobars are drawn for each tenth of an inch.

WIND—Arrows show Direction and Force, flying with the wind.

Force above 10 → Force 5 to 7 → } Calm ☉

Force 8 to 10 → Force 1 to 4 → }

SEA—Rough High

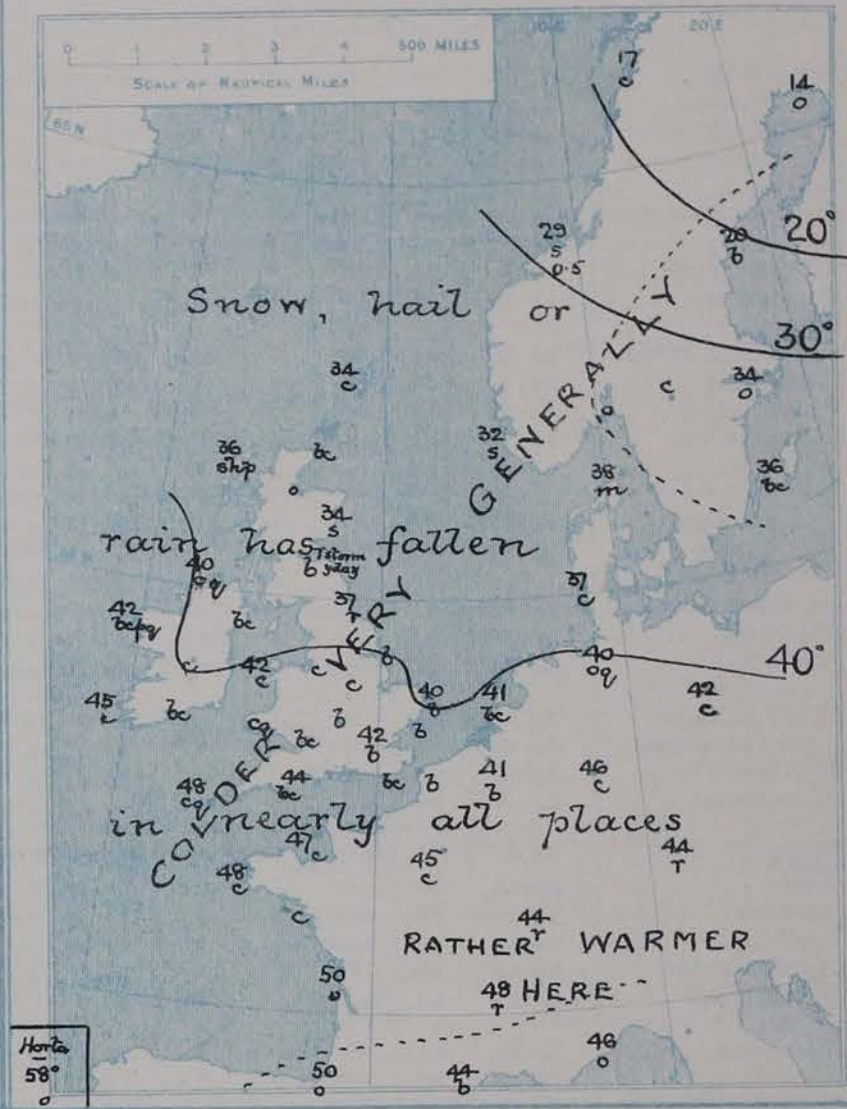

II. TEMPERATURE AND WEATHER. This Morning.

TEMPERATURE—Isotherms are drawn for each 10°.

WEATHER—Shown by Letters of the Beaufort Scale. (See P. 4.)

RAINFALL—A dotted line separates areas where rain has fallen from those without rain. The fall in past 24 hours when exceeding half an inch is shown thus - 0.6

III. BAROMETER AND WIND

Yesterday morning.

IV. RAINFALL IN 1906.

Total Amount recorded in various districts of the United Kingdom in the 9 weeks ended Saturday, March 3rd, with the percentage of the average amount for the corresponding period.

V. Averages of DAILY TEMPERATURE at 8 A.M. for the monthly period MARCH

(Derived chiefly from Observations extending over the 35 years 1871-1905).

GENERAL SITUATION AT 8 A.M.

PRESSURE

The centre of the large cyclonic disturbance which lay near Bodø yesterday morning has moved East-South-Eastwards to the north of Sweden, but at the same time the system has spread out in a southerly and south-easterly direction, causing the barometer to fall more than half an inch over the south of Scandinavia and over Denmark and Germany. As an increase of pressure has occurred over all our own western districts the type of distribution has become north-westerly, the readings of the barometer ranging from above 30.3 ins. over the southern portion of the Bay of Biscay to about 28.4 ins. in the north of Sweden. Gradients are steep or rather so in nearly all parts of North-western Europe.

WIND

The North-Westerly and Westerly winds which are now very general blow with the force of a strong gale on the north coast of Ireland and a moderate gale or strong breeze on several other parts of our coast, while on the eastern and southern shores of the North Sea fresh or strong gales are reported. In the immediate neighbourhood of lowest pressure the gradient is slight and the wind light in force; in the extreme north of Scandinavia it comes from the North-Eastward or Eastward.

TEMPERATURE

Temperature has fallen except at some French and German stations. Over the United Kingdom it ranges from 34° in various parts of Scotland to about 42° in the south-east of England and to 48° at Sicily. On the Continent it decreases from 50° in the south-west of France to below 20° in the north of Scandinavia.

WEATHER

The weather is in a changeable condition over these Islands and Western Europe generally, although in many places the sky is clear or nearly so. Showers are falling in the north-west of Ireland, and steady rain in the east of France and at Munich, while along the west coast of Norway and in some parts of Scotland snow is reported.

AND

SEA

The sea is high off the north of Ireland and on the Dutch coast, rough or rather rough in most other places.

During yesterday the thermometer rose to 50° or a little higher at most stations over the southern half of these Islands, but only touched 40° at Naïm. A considerable amount of snow has fallen in Scotland and rain was measured at 8 a.m. over Ireland and England. The day was very cloudy or dull generally but a considerable duration of sunshine occurred in some northern localities. During the afternoon a thunderstorm was experienced at Seith.

PROBABLE CHANGES IN SYSTEM NOW PREVALENT

As the rise of the barometer is very slight along our western coasts it does not appear probable that the North-westerly type of conditions will continue over this country generally until the ensuing 24 hours have elapsed. The wind is therefore expected to moderate in force and to again back towards West or South-West, at first in the western districts and subsequently in the east.

FORECASTS*

For the 24 hours ending at NOON on 10TH MARCH, 1906.

DISTRICTS.

FORECASTS.

1	SCOTLAND NORTH	NW ² to W ² or S.W ² winds, fresh to moderate; cold, changeable, occasional showers of snow, sleet or rain.
2	SCOTLAND EAST	
3	ENGLAND N.E.	
4	ENGLAND EAST	NW ² to W ² winds, decreasing in force later; cool and mostly fair, but some showers locally.
5	MIDLAND COUNTIES	
6	ENGLAND SOUTH	

DISTRICTS.

FORECASTS.

7	SCOTLAND WEST	Same as Nos. 0 to 2.
8	ENGLAND N.W.	NW ² to W ² winds, strong to moderate; cold, changeable, some showers, hail or sleet locally.
9	ENGLAND S.W.	Same as Nos. 3 to 5.
10	IRELAND NORTH	NW ² to W ² or S.W ² winds, fresh or strong to moderate; changeable, cool, showers of rain or hail.
11	IRELAND SOUTH	

WARNINGS

At 0.10 p.m. yesterday to districts 7, 10 and part of 9, HOIST SOUTH CONE; at 7.15 p.m. to districts 0, 1, 6 and the remainder of 9, HOIST UP SOUTH CONE; at 7.20 p.m. to districts 5 and 8, HOIST SOUTH CONE.

Note.—The South Cone, point downwards (⏚), means that gales, or strong winds, are probable, at first from the Southward (from S. round by S.E. to N.W.). Should it appear likely that a gale beginning from between W. and N.W. is likely to veer towards N. or N.E., the North Cone is hoisted in preference to the South Cone. The North Cone, point upwards (⏚), means that gales, or strong winds, are probable, at first from the Northward (from N.W. round by N. to S.E.). Should it appear likely that a gale beginning from between E. and S.E. is likely to veer towards S. or S.W., the South Cone is hoisted in preference to the North Cone.

* For terms for transmission of Forecasts by Telegraph, see next page.

SUBSCRIPTIONS both for the Daily and Weekly Weather Reports may be paid, in advance, to the Meteorological Office.

TERMS: For Daily Weather Report, forwarded by Book Post, £1 0 0 per annum.
" Weekly " " " £1 10 0 " Single Copies, 6d.

Single Copies of the Daily Weather Report (price 1d.) may be obtained after 3 p.m. on the day of issue at the Meteorological Office, and at Messrs. W. H. SMITH & SONS' Bookstalls at the following terminus Railway Stations:—Victoria, Charing Cross, King's Cross, St. Pancras, Euston.

FORECASTS OF WEATHER for one day in advance are drawn up at the Meteorological Office at 11 a.m., and between 7 and 8 p.m. The latest forecast can be had by Reply Telegram, on paying at any Post Office in the United Kingdom Sixpence in addition to the cost of the inquiry and reply Telegram. Information as to the Terms on which Forecasts can be sent daily, for a long or short period, may be obtained on application to the METEOROLOGICAL OFFICE, 63, VICTORIA STREET, S.W., either personally or by post.

W. N. SHAW (Director).

* At Oxford the observations are taken at 8 p.m.

DAILY WEATHER REPORT.

NOTES:—(a) At the British and Irish Stations the readings of the barometer are not corrected for the difference in Gravity between the position of the Station and Latitude 45°. The approximate correction is:—For stations North of Malin Head and North Shields + '03 in., but for Sumburgh Head + '04 in.; for stations South of Malin Head and North Shields + '02 in., but for Scilly and Jersey + '01 in.

(b) The Sunshine for London given in this Table is recorded on the Tower of the Wesleyan Training College, Westminster; the Sunshine entered to Dungeness is recorded at Littlestone-on-Sea.

* Observations for this column not generally received.

+ Observations received too late for insertion in Charts on next page.

WEATHER CHARTS

FOR SATURDAY, 10TH MARCH, 1906.

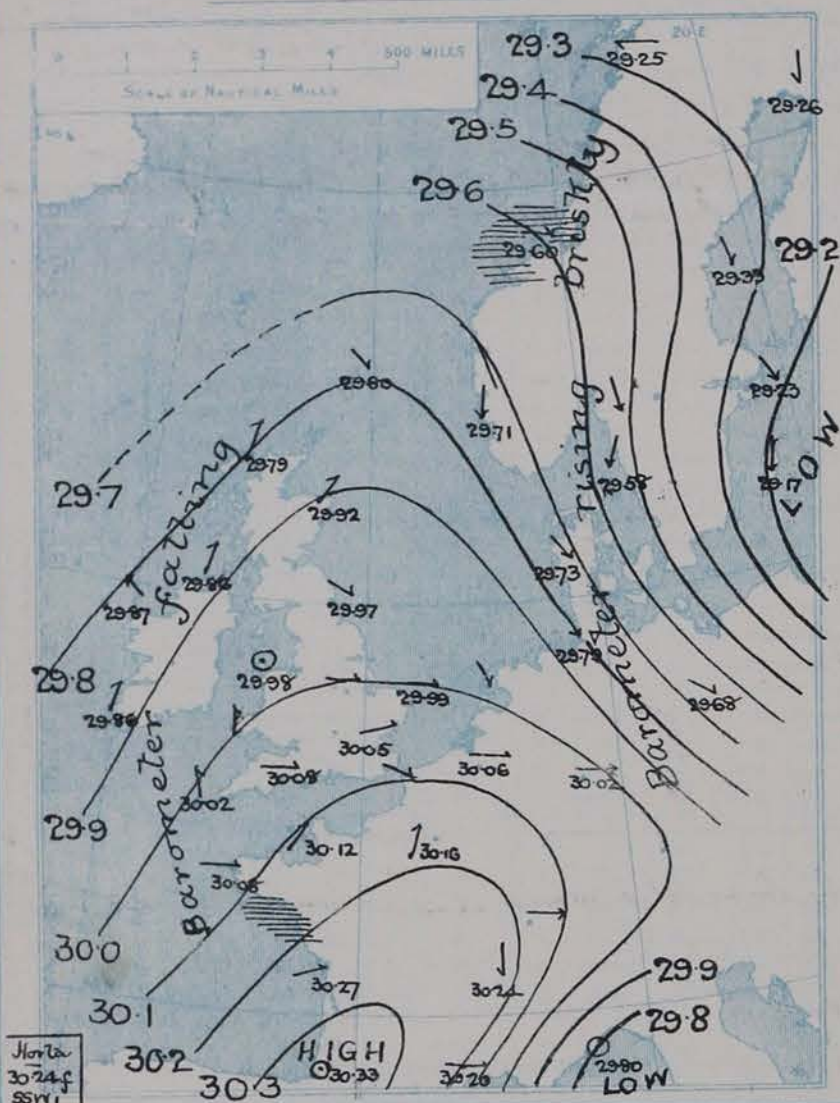

I. BAROMETER, WIND AND SEA. This Morning.

BAROMETER.—Isobars are drawn for each tenth of an inch.

WIND.—Arrows show Directions and Force, flying with the wind.

Force above 10 ——— Force 5 to 7 ——— } Calm Ⓞ
Force 8 to 10 ——— Force 1 to 4 ——— }

SEA.—Rough ——— High ———

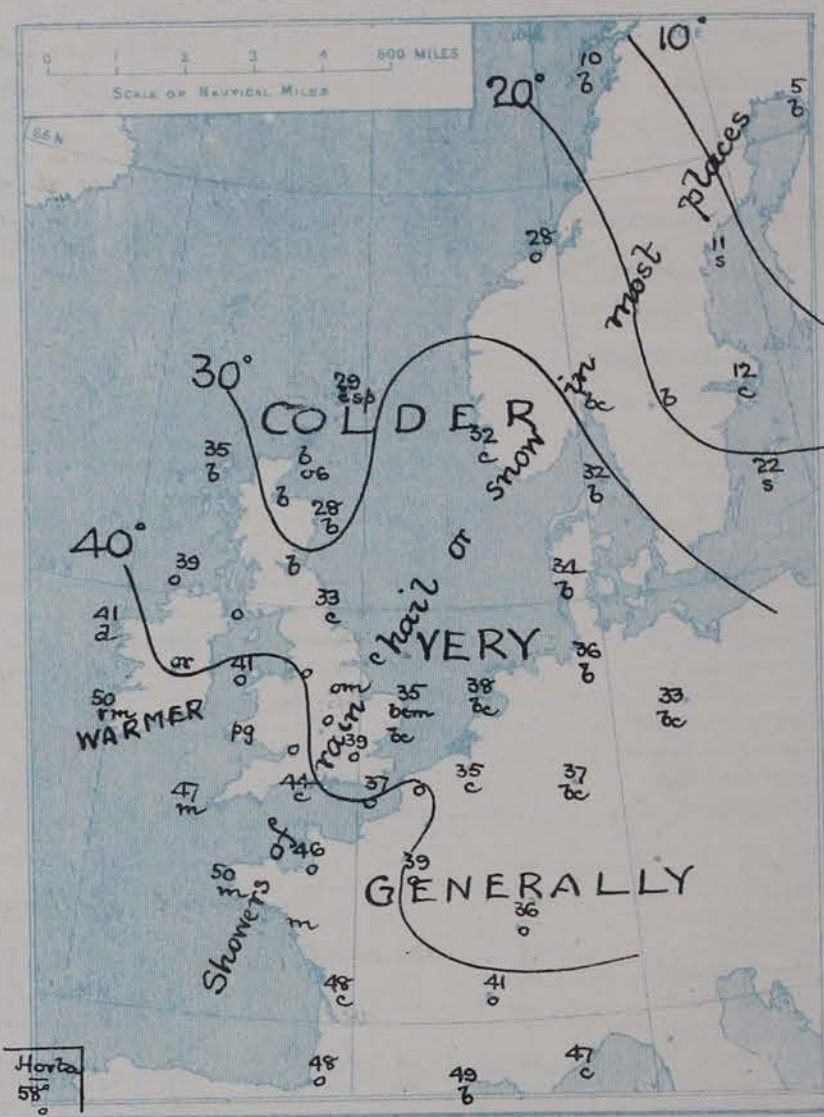

II. TEMPERATURE AND WEATHER. This Morning.

TEMPERATURE.—Isotherms are drawn for each 10°

WEATHER.—Shown by Letters of the Beaufort Scale. (See P. 4.)

RAINFALL.—A dotted line separates areas where rain has fallen from those without rain. The fall in past 24 hours when exceeding half an inch is shown thus - 0.8

III. BAROMETER AND WIND

Yesterday morning.

GENERAL SITUATION AT 8 A.M.

PRESSURE

The deep cyclonic disturbance shown over Scandinavia yesterday has travelled south-eastwards to Russia and the barometer has risen briskly or very quickly over North-western Europe generally. During the night, however, a fresh fall has commenced over the Bay of Biscay and the Atlantic seaboard of these Islands. Pressure at present ranges from above 30.3 ins. in the south-west of France to 29.8 ins. at Lumborough Head, and to 29.7 ins. at Wisby. The barometer is also as low as 29.8 ins. at Nice. Gradients have become moderate or slight except over Denmark, the Baltic, and Germany, and in the south-east of France.

WIND

TEMPERATURE

WEATHER

AND

SEA

The wind has returned to the southward over Ireland and the west of Great Britain and to the Westward over England and Scotland generally, while over Scandinavia, Denmark, the Baltic, and Germany it is North-Westerly. In all the latter regions it is either fresh or strong in force, and blows a gale in places, but over the United Kingdom the wind has little strength. Temperature has fallen except in the south and west of Ireland; the readings are nearly all below the freezing point in Scotland, the lowest value being 26° at Naom. Over England and Ireland the values range from 33° at North Shields and 35° at Yarmouth to 47° at Scilly, and to 50° at Valencia. Over Sweden and the north of Norway the thermometer is below 20°. The lowest reading being 5° at Haparanda. The highest Continental readings reported are 49° at Perpignan, 50° at Brest and 57° at Lisbon. The sky is very clear in Scotland, Denmark and at some stations in Scandinavia; in almost all other regions it is either cloudy or overcast, with rain in Ireland, passing showers in South Wales, and snow at Hernörand and Wisby. Snow showers are also falling in the Shetlands. The sea is rough at Christiansund, rather rough at Lorient, moderate or slight in most other places. The highest temperatures from any of our own stations yesterday were 52° at Torquay and 53° at Scilly; in many parts of Scotland the maxima were below 40°. Showers of rain and hail were experienced yesterday over Ireland and in several English localities and snow showers in Scotland, the largest measurements being 0.3 in. at Malin Head and 0.6 in. at Wick. Intervals of bright sunshine were very prevalent, the longest duration being about 8 hours in the east and extreme south-west of England.

PROBABLE CHANGES IN SYSTEM NOW PREVALENT

The fresh fall of the barometer which is in progress in the west and south-west will probably spread slowly over the whole Kingdom and be accompanied over Great Britain by Southerly and South-Westerly winds, an increase of cloud, a rise of temperature, and rain in many localities.

FORECASTS*

For the 24 hours ending at NOON on 11TH MARCH, 1906.

DISTRICTS.

FORECASTS.

DISTRICTS.

FORECASTS.

- 0 SCOTLAND NORTH
- 1 SCOTLAND EAST
- 2 ENGLAND N.E.
- 3 ENGLAND EAST
- 4 MIDLAND COUNTIES
- 5 ENGLAND SOUTH

S^W and S.W^W winds, light or moderate; fine and cold, then cloudy and much milder, with some rain or sleet.

Wind backing to S.W. or S., light or moderate; fair at first, then becoming milder and less settled, with some rain.

- 6 SCOTLAND WEST
- 7 ENGLAND N.W.
- 8 ENGLAND S.W.
- 9 IRELAND NORTH
- 10 IRELAND SOUTH

Same as Nos. 0 and 1.

S^W to S.W^W or W^W winds, moderate to fresh; cloudy or dull generally, with occasional rain; rather mild.

WARNINGS

NONE ISSUED.

Note.—The South Cone, point downwards (⌋), means that gales, or strong winds, are probable, at first from the Southward (from S.E. round by S. to N.W.). Should it appear likely that a gale beginning from between W. and N.W. is likely to veer towards N. or N.E., the North Cone is hoisted in preference to the South Cone.

The North Cone, point upwards (⌋), means that gales, or strong winds, are probable, at first from the Northward (from N.W. round by N. to S.E.). Should it appear likely that a gale beginning from between E. and S.E. is likely to veer towards S. or S.W., the South Cone is hoisted in preference to the North Cone.

* For terms for transmission of Forecasts by Telegraph, see next page.

NOTES:—(a) At the British and Irish Stations the readings of the barometer are not corrected for the difference in Gravity between the position of the Station and Latitude 45°. The approximate correction is:—For stations North of Malin Head and North Shields +0.3 in., but for Sumburgh Head +0.4 in.; for stations South of Malin Head and North Shields +0.2 in., but for Scilly and Jersey +0.1 in.

(b) The Sunshine for London given in this Table is recorded on the Tower of the Wesleyan Training College, Westminster; the Sunshine entered to Dungeness is recorded at Littlestone-on-Sea.

* Observations for this column not generally received.

† Observations received too late for insertion in Charts on next page.

WEATHER CHARTS

FOR SUNDAY, 11TH MARCH, 1906.

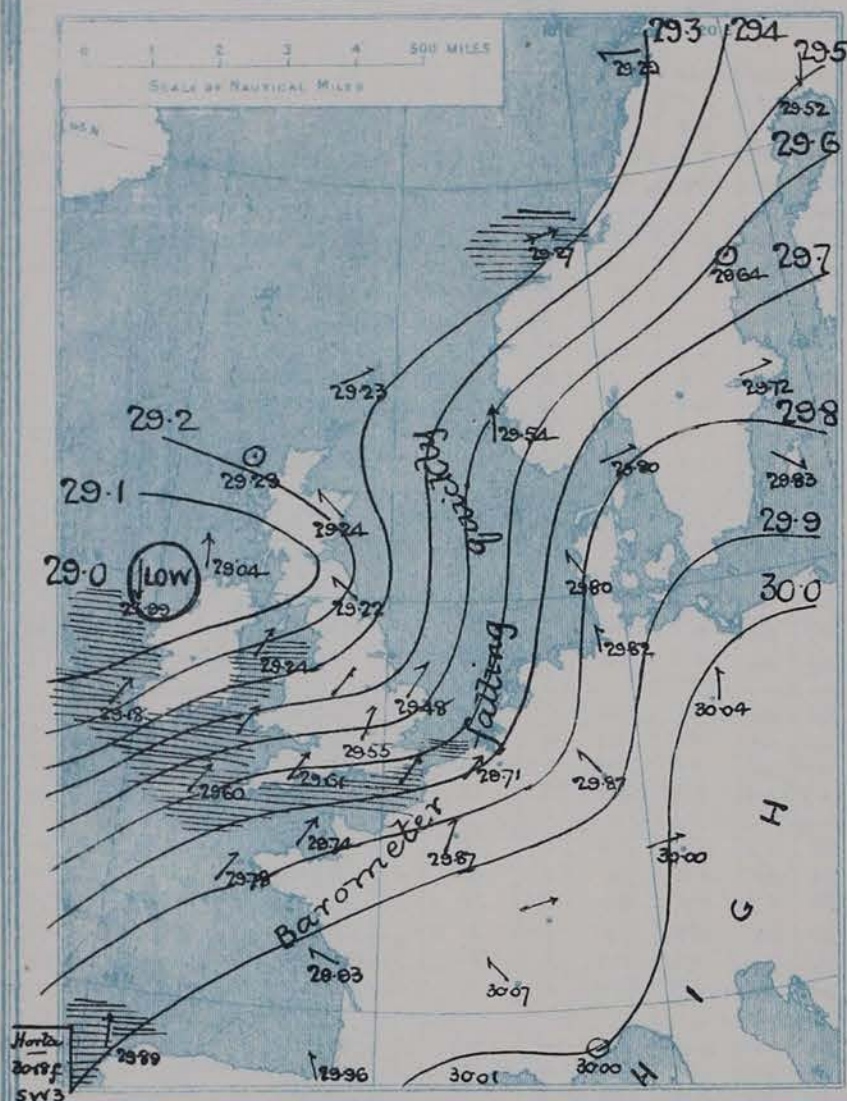

I. BAROMETER, WIND AND SEA. This Morning.

BAROMETER.—Isobars are drawn for each tenth of an inch.

WIND.—Arrows show Directions and Force, flying with the wind.

Force above 10 Force 5 to 7 } Calm

SEA.—Rough High

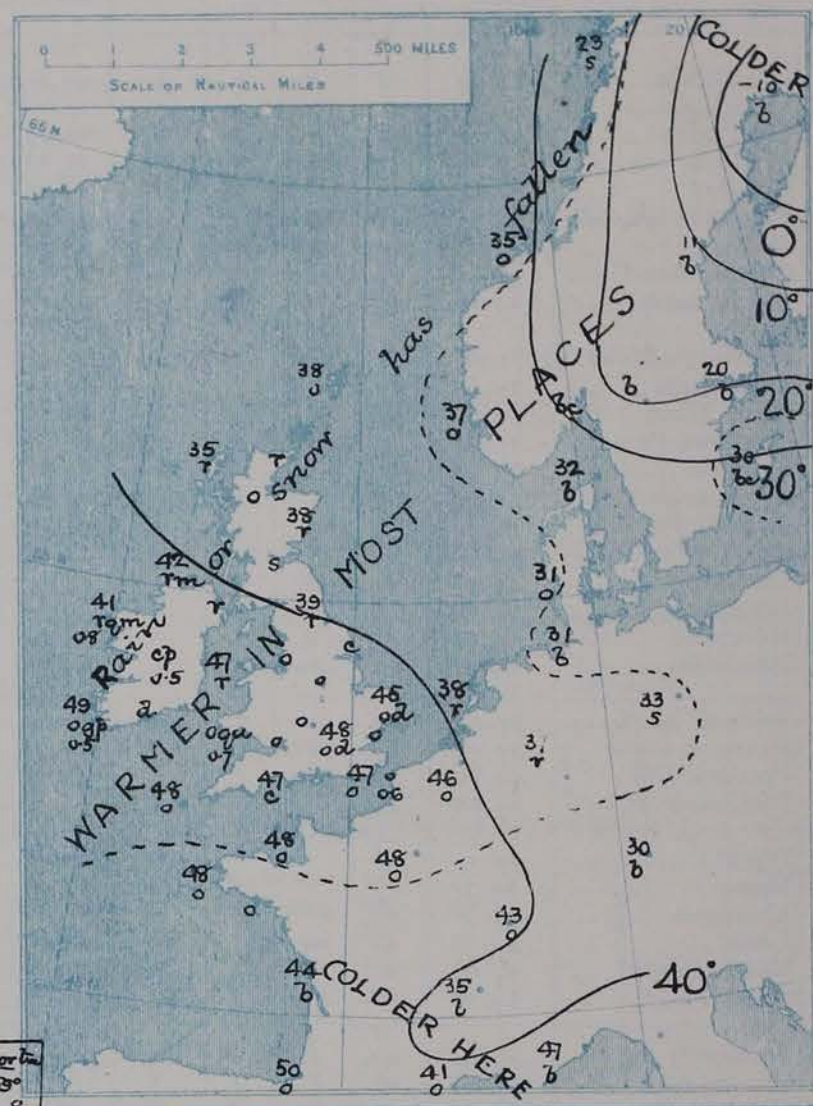

II. TEMPERATURE AND WEATHER. This Morning.

TEMPERATURE.—Isotherms are drawn for each 10°.

WEATHER.—Shown by Letters of the Beaufort Scale. (See P. 4.)

RAINFALL.—A dotted line separates areas where rain has fallen from those without rain. The fall in past 24 hours when exceeding half an inch is shown thus—0.6

III. BAROMETER AND WIND

Yesterday morning.

IV. ACCUMULATED TEMPERATURE ABOVE 42°.

Amount recorded in various districts of the United Kingdom during the 9 weeks ended March 3, with the percentage of the average for the corresponding period.

Accumulated values are expressed in Day-Degrees—a "Day Degree" signifying 1° continued for 24 hours, or any other number of degrees for an inversely proportional number of hours.

V. Averages of DAILY TEMPERATURE at 8 A.M. for the monthly period MARCH

(Derived chiefly from Observations extending over the 35 years 1871-1905).

GENERAL SITUATION AT 8 A.M.

PRESSURE

A rapid fall of the barometer has occurred during the night over the British Isles, and this morning's map shows a minimum reading of 28.99 ins., at Blacksod Point. The highest readings, which are above 30.0 ins., are reported from the southern and eastern margin of our area.

WIND

Strong S.W. winds are sweeping over the southern half of the British Isles and the north of France; in Scotland and the north of England moderate or light S.E. winds prevail, while at Blacksod Point the wind has shifted to the N.W., thus showing that the centre of the atmospheric disturbance has passed to the eastward of that station. Over Scandinavia and Germany the wind is S.W. in direction. The weather is very unsettled. Rain is falling at most home stations and the sky is overcast at the remainder. On the Continent conditions are also unsettled in Germany and the north of France. In the south of France and Sweden the weather is fair. The S. winds over our Islands have given rise to an increase of temperature in most places; this morning's readings are above 40° in England and Ireland and close on 50° in many places in the south. The sea is rough or rather rough in the Irish Sea, the English Channel and on the south and west coasts of Ireland. In the North Sea and off Scotland it is moderate or slight.

TEMPERATURE

WEATHER

AND

SEA

During the previous 24 hours rain fell in all parts of the country, the amounts exceeding half an inch at many western stations. Very little bright sunshine was experienced, but at Aberdeen 8.1 hours were recorded. Temperature rose above 50° at Bath, Sully and several Irish stations, but over the country as a whole this limit was not exceeded.

PROBABLE CHANGES IN SYSTEM NOW PREVALENT

FORECASTS*

- 74 { ENGLAND N.W.
- 84 { ENGLAND S.W.
- 94 { IRELAND NORTH
- 104 { IRELAND SOUTH

FORECASTS.

NONE ISSUED

WARNINGS

At 9.20 am. today to Districts 3, 5, 7, 8 and 10, Hoist South Cone. At 9.30 am. to Districts 6, 9 and part of 0, Hoist North Cone.

Note.—The South Cone, point downwards (T), means that gales, or strong winds, are probable, at first from the Southward (from S.E. round by S. to N.W.). Should it appear likely that a gale beginning from between W. and N.W. is likely to veer towards N. or N.E., the North Cone is hoisted in preference to the South Cone. The North Cone, point upwards (T), means that gales, or strong winds, are probable, at first from the Northward (from N.W. round by N. to S.E.). Should it appear likely that a gale beginning from between E. and S.E. is likely to veer towards S. or S.W., the South Cone is hoisted in preference to the North Cone.

NOTES:—(a) At the British and Irish Stations the readings of the barometer are not corrected for the difference in Gravity between the position of the Station and Latitude 45°. The approximate correction is:—For stations North of Malin Head and North Shields + '03 in., but for Sumburgh Head + '04 in.; for stations South of Malin Head and North Shields + '02 in., but for Scilly and Jersey + '01 in.

(b) The Sunshine for London given in this Table is recorded on the Tower of the Wesleyan Training College, Westminster; the Sunshine entered to Dungeness is recorded at Littlestone-on-Sea.

* Observations for this column not generally received.

† Observations received too late for insertion in Charts on next page.

WEATHER CHARTS

FOR Monday, 12th March, 1906.

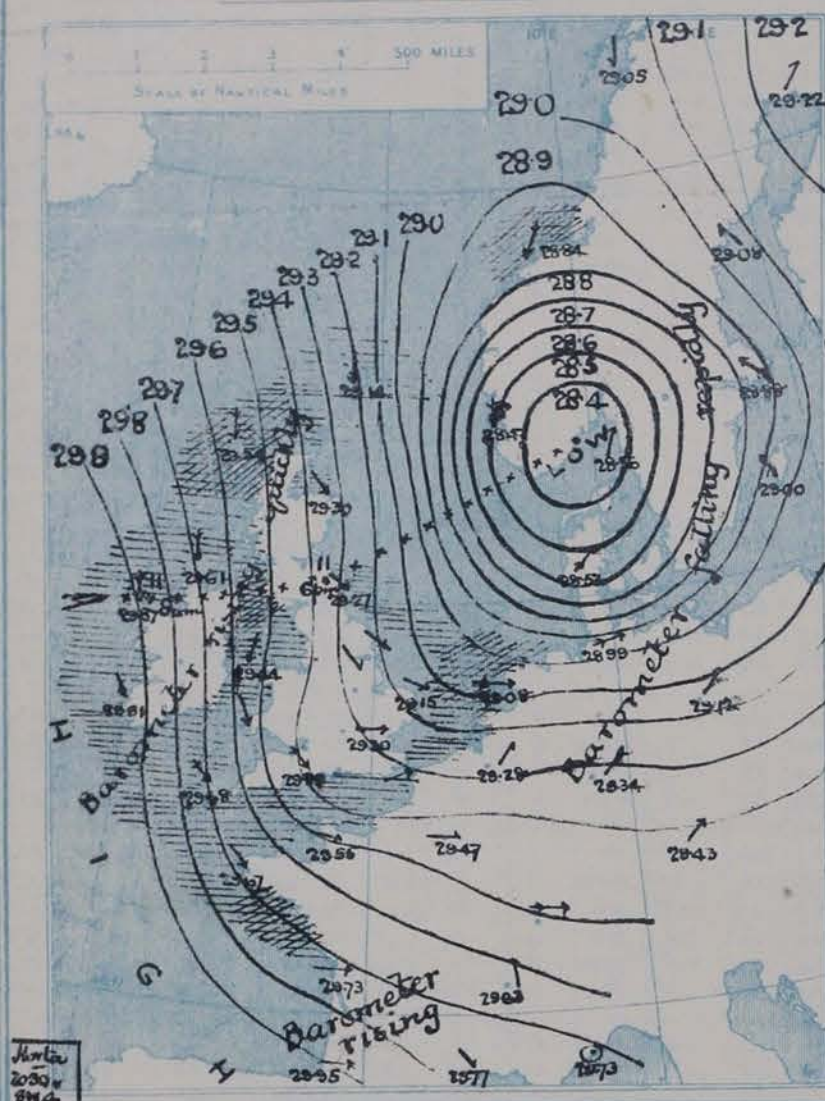

I. BAROMETER, WIND AND SEA. This Morning.

BAROMETER—Isobars are drawn for each tenth of an inch.

WIND—Arrows show Direction and Force, flying with the wind.

Force above 10 \rightarrow : Force 5 to 7 \rightarrow : } Calm \odot
Force 8 to 10 \rightarrow : Force 1 to 4 \rightarrow :

SEA—Rough |||| High ■

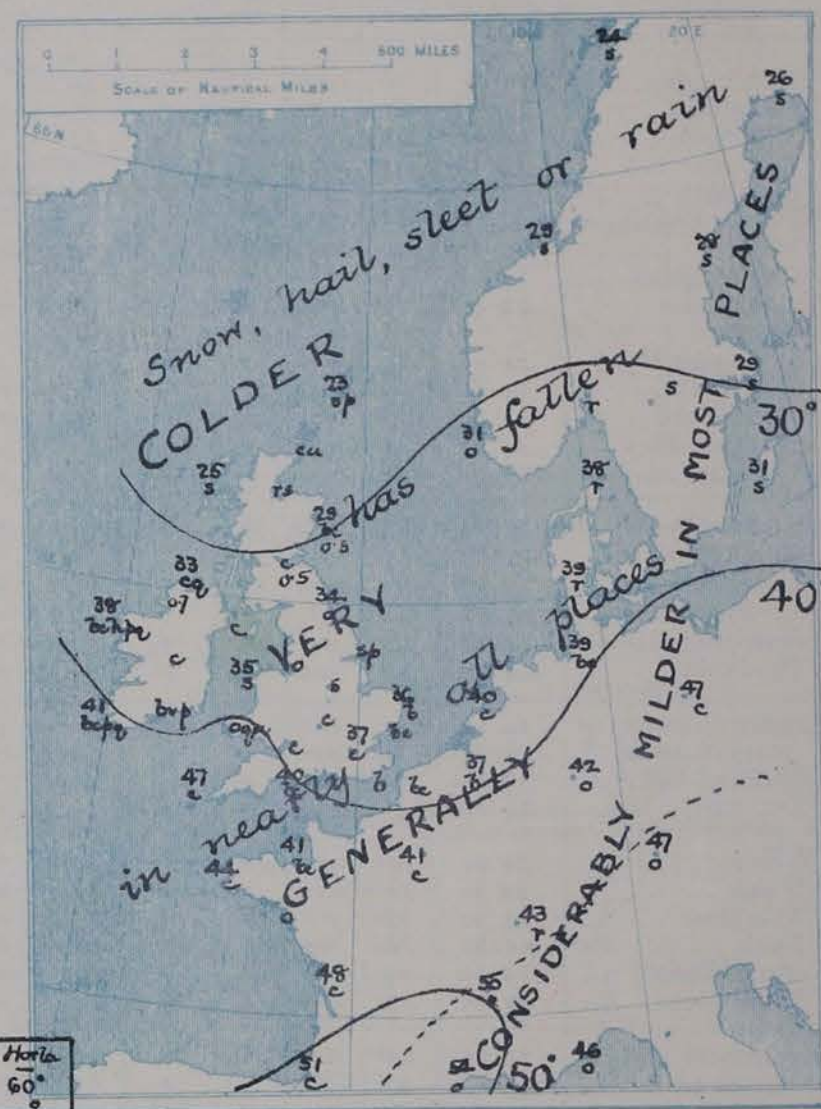

II. TEMPERATURE AND WEATHER. This Morning.

TEMPERATURE—Isotherms are drawn for each 10°.

WEATHER—Shown by Letters of the Beaufort Scale. (See P. 4.)

RAINFALL—A dotted line separates areas where rain has fallen from those without rain. The fall in past 24 hours when exceeding half an inch is shown thus - 0.6

III. BAROMETER AND WIND

Yesterday morning.

IV. ACCUMULATED TEMPERATURE ABOVE 42°.

Amount recorded in various districts of the United Kingdom during the week ended Saturday, March 3rd, with the percentage of the average for the corresponding week.

Accumulated values are expressed in Day-Degrees—a "Day Degree" signifying 1° continued for 24 hours, or any other number of degrees for an inversely proportional number of hours.

V. Averages of DAILY TEMPERATURE at 8 A.M. for the monthly period MARCH

(Derived chiefly from Observations extending over the 35 years 1871-1905).

GENERAL SITUATION AT 8 A.M.

PRESSURE

The cyclonic system which passed eastwards across our Islands yesterday has now reached the eastern side of the North Sea, its centre being shown over the Skager Rack. The system increased in depth during its passage, and the barometer off the south of Norway is apparently as low as 28.3 ins., just an inch lower than the reading at Aberdeen and in London, and about 1.6 ins. lower than the values in the south-west of Ireland and at Biarritz. Gradients are steep generally, especially over the North Sea, Denmark, the Baltic, and Scandinavia.

WIND

The cyclonic circulation of the wind is very complete, and gales are reported from almost all parts of North-western Europe. Over the United Kingdom they are North-easterly to North-westerly, over Holland, Denmark, and North Germany westerly to south-westerly, and over the south of Sweden south-easterly.

TEMPERATURE

Temperature has fallen very decidedly over the United Kingdom, Belgium and the north of France, and also in the west of Norway, even elsewhere, very quickly over Sweden and Germany. The readings are now below 30° at most Scotch stations, and not much higher than the freezing point over the greater part of England and Ireland. On the Continent they range from about 50° at some southern French stations and 47° at Berlin and Munich to 24° at Rottö.

WEATHER

The weather is in a very unsettled condition throughout our area. Rain is falling in the immediate neighbourhood of the lowest pressure, snow over the greater part of Scandinavia, showers of snow in various parts of England and Scotland, and showers of rain in the west and south of Ireland.

AND

SEA

The seas are very high in the North, high at Christiansund, Boulogne, on the Dutch coast, and off Dorset, rough or rather so generally. The maximum temperatures recorded in many parts of Ireland and England yesterday were about 50°, but in Scotland the thermometer remained below 40°. Sharp frost was experienced in Scotland and the north of Ireland during the night. Heavy rain has fallen at Malin Head and heavy sleet or snow in Scotland; precipitation has been general both over these Islands and in most Continental regions. Very little bright sunshine was reported yesterday, the longest duration being 5.5 hours in the south-west of Ireland.

PROBABLE CHANGES IN SYSTEM NOW PREVALENT

As the centre of the disturbance over the Skager Rack travels further to the eastward the gales over our Islands will gradually subside, but local irregularities of pressure are likely to cause squalls and showers of rain, sleet or snow in most districts.

FORECASTS*

For the 24 hours ending at NOON on 13th MARCH

1906.

DISTRICTS.

FORECASTS.

1	SCOTLAND NORTH	N ^{ly} and NW ^{ly} strong winds and gales, subsiding gradually. Very cold; showers of snow, some fair intervals.
1	SCOTLAND EAST	
2	ENGLAND N.E.	N.W ^{ly} and W ^{ly} winds, decreasing in force; squalls of rain, sleet, or snow, bright at times, frost at night.
3	ENGLAND EAST	
4	MIDLAND COUNTIES	
5	ENGLAND SOUTH	

DISTRICTS.

FORECASTS.

6	SCOTLAND WEST	Same as Nos. 0 to 2.
7	ENGLAND N.W.	
8	ENGLAND S.W.	Same as Nos. 3 to 5.
9	IRELAND NORTH	
10	IRELAND SOUTH	N ^{ly} to NW ^{ly} or W ^{ly} winds, decreasing in force; squalls of sleet or snow, fair intervals, frost at night.

WARNINGS

At 7.10 p.m. yesterday to districts 1, 2, and part of 0, "HOIST NORTH CONE." The South Cone is still flying in districts 3, 5, 7, 8 and 10, and the North Cone in districts 6, 9, and the remainder of 0.

Note.—The South Cone, point downwards (⏚), means that gales, or strong winds, are probable, at first from the Southward (from S.E. round by S. to N.W.). Should it appear likely that a gale beginning from between W. and N.W. is likely to veer towards N. or N.E., the North Cone is hoisted in preference to the South Cone.
The North Cone, point upwards (⏚), means that gales, or strong winds, are probable, at first from the Northward (from N.W. round by N. to S.E.). Should it appear likely that a gale beginning from between E. and S.E. is likely to veer towards S. or S.W., the South Cone is hoisted in preference to the North Cone.

* For terms for transmission of Forecasts by Telegraph, see next page.

NOTES:—(a) At the British and Irish Stations the readings of the barometer are not corrected for the difference in Gravity between the position of the Station and Latitude 45°. The approximate correction is:—For stations North of Malin Head and North Shields + '03 in., but for Sumburgh Head + '04 in.; for stations South of Malin Head and North Shields + '02 in., but for Scilly and Jersey + '01 in.

(b) The Sunshine for London given in this Table is recorded on the Tower of the Wesleyan Training College, Westminster; the Sunshine entered to Dungeness is recorded at Littlestone-on-Sea.

* Observations for this column not generally received.

† Observations received too late for insertion in Charts on next page.

WEATHER CHARTS

FOR TUESDAY, 13TH MARCH, 1906.

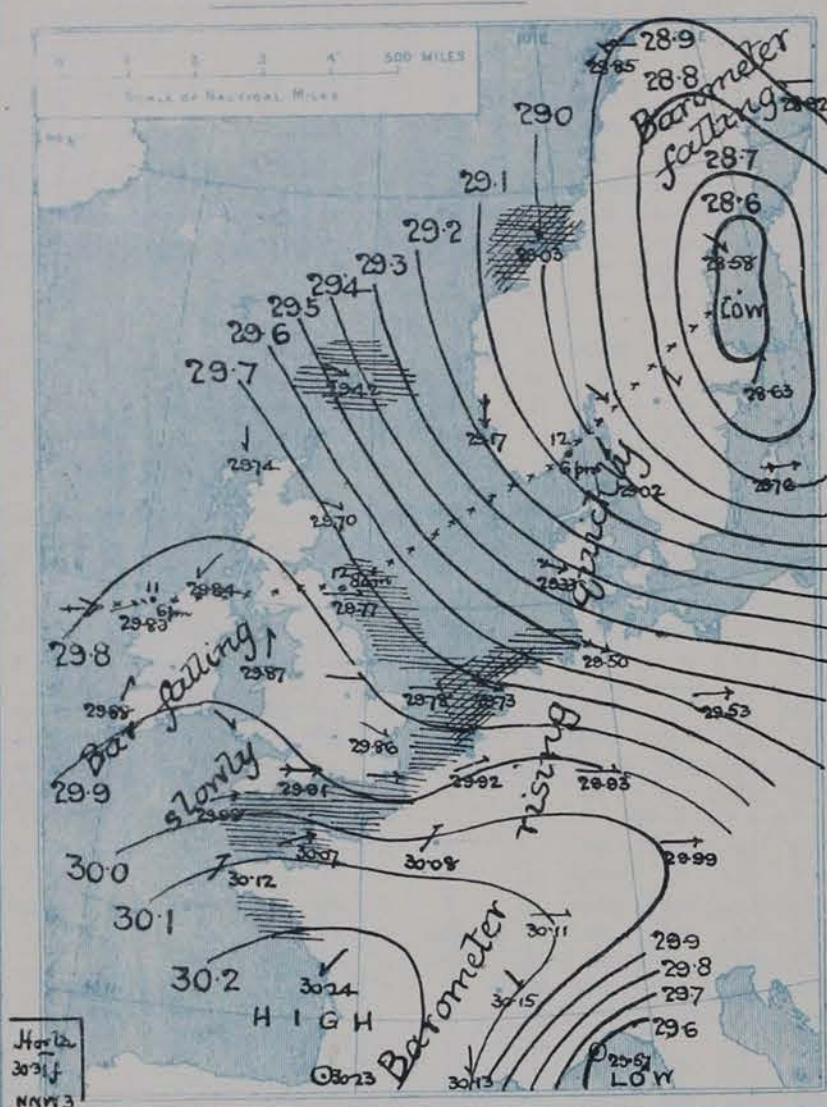

I. BAROMETER, WIND AND SEA. This Morning.

BAROMETER.—Isobars are drawn for each tenth of an inch.

WIND.—Arrows show Direction and Force, flying with the wind.

Force above 10 \rightarrow Force 5 to 7 \rightarrow } Calm \odot
Force 8 to 10 \rightarrow Force 1 to 4 \rightarrow

SEA.—Rough |||| High ■

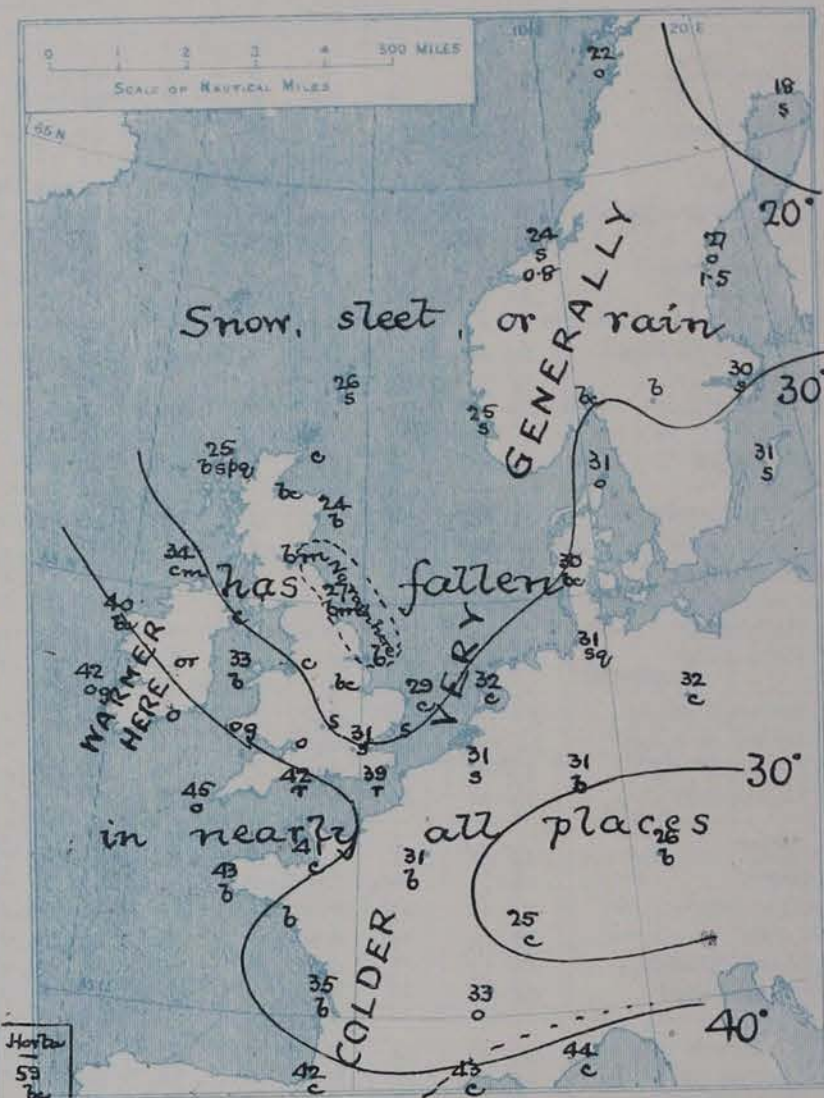

II. TEMPERATURE AND WEATHER. This Morning.

TEMPERATURE.—Isotherms are drawn for each 10°.

WEATHER.—Shown by Letters of the Beaufort Scale. (See P. 4.)

RAINFALL.—A dotted line separates areas where rain has fallen from those without rain. The fall in past 24 hours when exceeding half an inch is shown thus: 0.6

III. BAROMETER AND WIND

Yesterday morning.

IV. EXTREMES OF TEMPERATURE

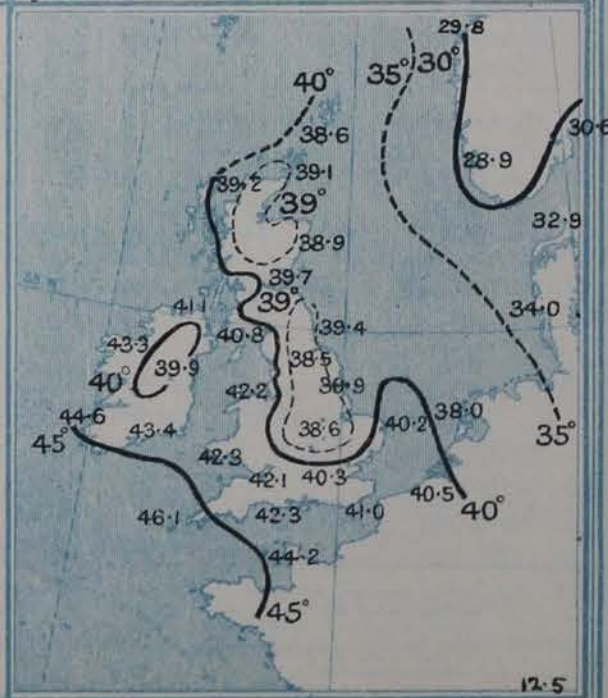

recorded

in various districts of the United Kingdom
during the week ended Saturday, March 10th

V. Averages of DAILY TEMPERATURE at 8 A.M. for the monthly period MARCH

(Derived chiefly from Observations
extending over the 35 years 1871-1905).

GENERAL SITUATION AT 8 A.M.

PRESSURE

Yesterday's cyclonic disturbance has moved in a North-Easterly direction and decreased in intensity. Its centre, where the barometer is below 28.6 ins., is now over the Gulf of Bothnia not far from Hernösand. In its rear a rapid recovery of pressure has occurred over the south of Sweden, Denmark, Germany, France, and England, the highest readings, above 30.2 ins., are now found over the south-west of France and its neighbourhood. During the night a fresh fall of the barometer has taken place in Ireland and the west of England, and this change appears to be extending eastwards. A separate low pressure system is shown over the Gulf of Genoa.

WIND

TEMPERATURE

WEATHER

AND

SEA

The wind has backed to the Westward in many parts of the United Kingdom and to S.S.W. on the south-west coast of Ireland. It has fallen to a light or moderate breeze in most places, but still blows a moderate to fresh gale over the English Channel and rather strongly in the Shetlands. In the immediate neighbourhood of the depression a decrease in the force of the wind has also taken place, but moderate or fresh North-easterly gales are reported on the west coast of Norway, and fresh or strong North-Westerly to Westerly gales over Denmark, North Germany, and the Baltic. Temperature has fallen very quickly in nearly all parts of France and Germany and has also fallen over Great Britain and Scandinavia. At nearly all stations in England and Scotland and at most of those on the Continent the thermometer is below 32°, the lowest readings being 25° at Belfort, 23° at Nîmes, 22° at Rodô, and 18° at Stapaunda. The highest values reported are 43° at Perpignan, 44° at Roches Point, 45° at Antibes, and 51° at Lisbon. The sky is nearly cloudless over the northern half of England and the greater part of Scotland, as well as at many French and South German stations; elsewhere it is cloudy or overcast, with rain in central Ireland, rain, sleet or snow over the south of England, the north-east of France, and Belgium. Snow is falling in various parts of Scandinavia and occasional snow in the Shetlands, Hebrides, and at the mouth of the Elbe. The sea is high at Christiansund, very high at the Helder rough round the Shetlands and in the English Channel, rather rough off the east coast of England and at Lorient.

The maximum temperatures of yesterday were below the freezing point at most Scotch stations, and during the night the thermometer fell to 20° both in Scotland and the north of England. Showers of snow were very general over this country, and snow or rain over North-western Europe as a whole. A thunderstorm occurred at Holyhead during the afternoon. Most parts of the United Kingdom experienced considerable intervals of bright sunshine.

PROBABLE CHANGES IN SYSTEM NOW PREVALENT

The depression of yesterday will soon cease to affect the weather over our Islands, and under the influence of the new decrease of pressure which is in progress in the west the wind is likely to back to the South-Westward over the United Kingdom generally. A rise of temperature will probably be experienced to-morrow.

FORECASTS*

For the 24 hours ending at NOON on 14TH MARCH, 1906.

DISTRICTS.

FORECASTS.

0	SCOTLAND NORTH	Wind backing to W. or S.W., light or moderate; snow showers and fair intervals to-day, milder with rain or sleet to-morrow.
1	SCOTLAND EAST	
2	ENGLAND N.E.	W ^{ly} and S.W ^{ly} winds, becoming moderate or light; sleet or snow showers to-day, frost at night, temperature rising to-morrow, and weather remaining unsettled.
3	ENGLAND EAST	
4	MIDLAND COUNTIES	
5	ENGLAND SOUTH	

DISTRICTS.

FORECASTS.

6	SCOTLAND WEST	Same as Nos. 0 and 1.
7	ENGLAND N.W.	
8	ENGLAND S.W.	W ^{ly} and S.W ^{ly} winds, light or moderate generally; cold, unsettled, showers of snow, sleet or rain; milder to-morrow.
9	IRELAND NORTH	
10	IRELAND SOUTH	Moderate or fresh winds, mainly between S. and W.; changeable, showers of rain or sleet; temperature rising.

WARNINGS

NONE ISSUED.

Note.—The South Cone, point downwards (T), means that gales, or strong winds, are probable, at first from the Southward (from S.E. round by S. to N.W.). Should it appear likely that a gale beginning from between W. and N.W. is likely to veer towards N. or N.E., the North Cone is hoisted in preference to the South Cone.

The North Cone, point upwards (T), means that gales, or strong winds, are probable, at first from the Northward (from N.W. round by N. to S.E.). Should it appear likely that a gale beginning from between E. and S.E. is likely to veer towards S. or S.W., the South Cone is hoisted in preference to the North Cone.

* For terms for transmission of Forecasts by Telegraph, see next page.

NOTES:—(a) At the British and Irish Stations the readings of the barometer are not corrected for the difference in Gravity between the position of the Station and Latitude 45°. The approximate correction is:—For stations North of Malin Head and North Shields + '03 in., but for Sumburgh Head + '04 in.; for stations South of Malin Head and North Shields + '02 in., but for Scilly and Jersey + '01 in.

(b) The Sunshine for London given in this Table is recorded on the Tower of the Wesleyan Training College, Westminster; the Sunshine entered to Dungeness is recorded at Littlestone-on-Sea.

* Observations for this column not generally received. † Observations received too late for insertion in Charts on next page.

WEATHER CHARTS

FOR WEDNESDAY, 14TH MARCH, 1906.

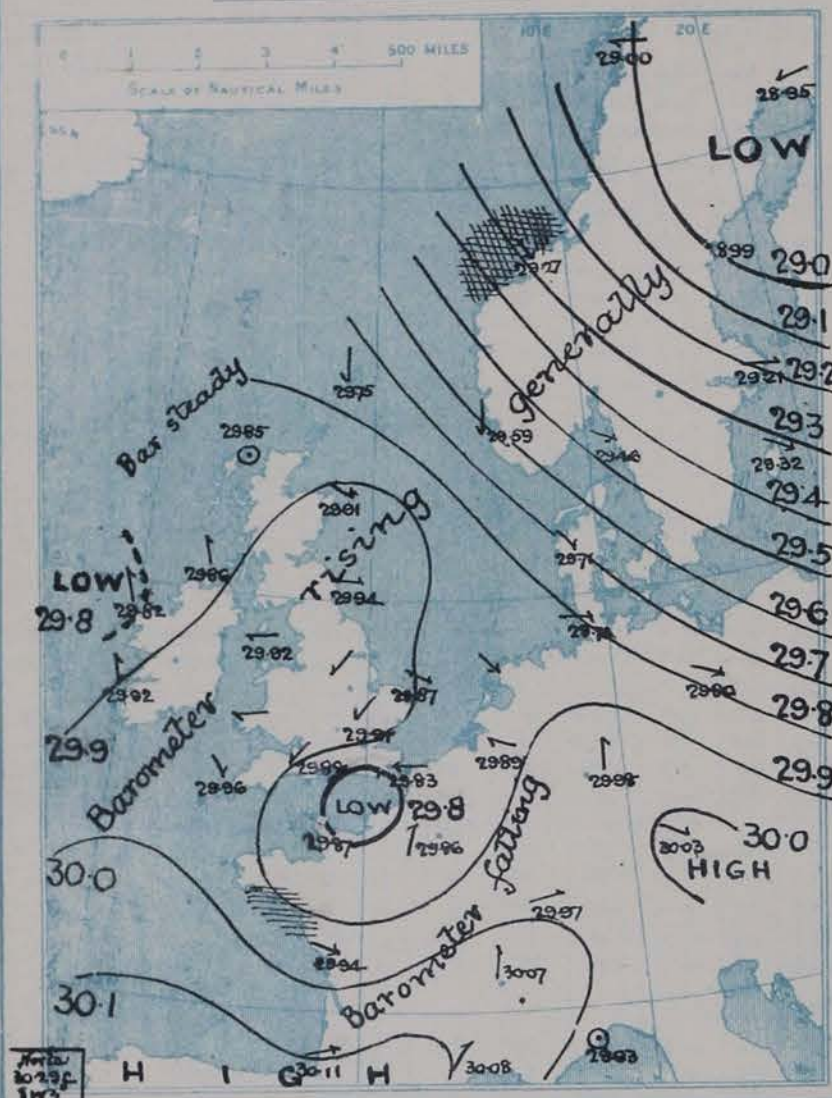

I. BAROMETER, WIND AND SEA. *This Morning.*

BAROMETER—Isobars are drawn for each tenth of an inch.

WIND—Arrows show Directions and Force, flying with the wind.

Force above 10 → Force 5 to 7 → } Calm ○
Force 8 to 10 → Force 1 to 4 → }

SEA—Rough High

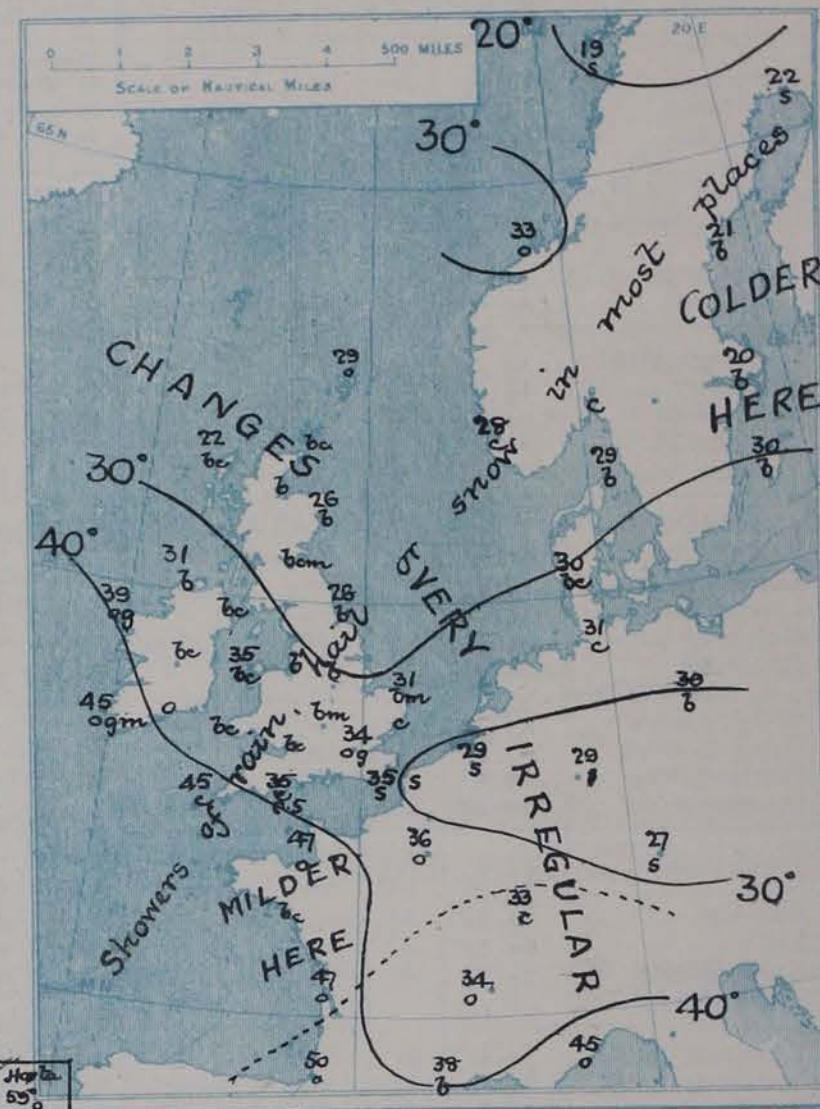

II. TEMPERATURE AND WEATHER. *This Morning.*

TEMPERATURE—Isotherms are drawn for each 10°

WEATHER—Shown by Letters of the Beaufort Scale. (See P. 4.)

RAINFALL—A dotted line separates areas where rain has fallen from those without rain. The fall in past 24 hours when exceeding half an inch is shown thus - 0.6

III. BAROMETER AND WIND

Yesterday morning.

IV. LAST WEEK'S RAINFALL.

Amount recorded in various districts of the United Kingdom during the week ended Saturday, 10th March, with the percentage of the average amount for the corresponding week.

V. Averages of DAILY TEMPERATURE at 8 A.M. for the monthly period MARCH

(Derived chiefly from Observations extending over the 35 years 1871-1905).

GENERAL SITUATION AT 8 A.M.

PRESSURE

During the night the barometer has become very uniform over the United Kingdom, and the small depression which was shown over Ireland at 6 p.m. yesterday has disappeared. Another small disturbance, however, which was developed over the English Channel has moved eastwards, its centre, where the barometer is about 29.75 ins., being now shown near Le Havre. Pressure is highest, 30.1 ins. and upwards, over the Spanish Peninsula, and lowest, less than 29.0 ins., over Finland and the north of Scandinavia.

WIND

TEMPERATURE

WEATHER

AND

SEA

A complete cyclonic circulation of the wind prevails around the southern depression, but its force is generally moderate or light. Over the United Kingdom as a whole the wind is light and variable; it is, however, mainly southerly in Ireland. Over Scandinavia, Denmark, and the Baltic, there is a moderate to very strong North-Westerly current, which at Christiansund blows a strong gale. Temperature has changed rather irregularly; in nearly all parts of these Islands it continues very low, frost being reported from Scotland, the north of Ireland, and the greater part of England. At Stromoway the reading is 22°, at North Shields 26°, and at Yarmouth 31°; at Scilly and Jersey the respective values are 45° and 47°. On the Continent the readings range from 52° at Lisbon and 50° at Biarritz, to below 32° in most other regions, and to 19° at Bodö. The sky is clear or nearly so over the major portion of this country, but overcast in the west and south of Ireland and in the south-east of England; at Dungeness snow is falling. Much cloud prevails over the western countries of the Continent and snow is reported at Cape Gris-Nez, Brussels, and in various parts of Germany, and also in the north and north-west of Scandinavia. The sea is very high off Christiansund, and rather rough at Lorient; elsewhere it is moderate to smooth.

At some Scotch stations the maximum temperatures of yesterday were below 32° and the frost of last night was very severe over the northern parts of the Kingdom generally; at Wick the thermometer fell to 17°, at North Shields to 18°, and at Harro to 19°. Various amounts of rain, sleet or snow were measured at 8 a.m. in most parts of the United Kingdom, as well as in Sweden, several parts of Germany, and the north and west of France. Bright sunshine was very prevalent over the north-west and north of England and along the east coast of Great Britain.

PROBABLE CHANGES IN SYSTEM NOW PREVALENT

There are no indications of the immediate approach of any further low pressure system towards our Islands, so that generally fair, cold weather is to be expected during the ensuing 24 hours over the greater part of the Kingdom, but the west and north may come under the influence of a depression far out on the Atlantic.

FORECASTS*

For the 24 hours ending at NOON on 15TH MARCH, 1906.

DISTRICTS.

FORECASTS.

DISTRICTS.

FORECASTS.

0	SCOTLAND NORTH	Variable to S.W. or S. winds, light or moderate; fair and very cold, then rather milder.
1	SCOTLAND EAST	W. and S.W. winds, light; fair generally; very cold.
2	ENGLAND N.E.	
3	ENGLAND EAST	Same as No. 5.
4	MIDLAND COUNTIES	Light variable airs; very cold, fair generally.
5	ENGLAND SOUTH	N.E. to N.W. winds, light or moderate; mostly fair and cold, sharp frost at night.

6	SCOTLAND WEST	Same as No. 0.
7	ENGLAND N.W.	Variable to S.W. winds; fair and cold, then rather milder.
8	ENGLAND S.W.	N.W. to W. winds, moderate; fair generally; cold.
9	IRELAND NORTH	Light or moderate winds between S. and W.; fair and cold to-day, milder and less fair to-morrow.
10	IRELAND SOUTH	

WARNINGS

At 3.0 p.m. yesterday to districts 8 and 10 "HOIST SOUTH CONE." At 9.30 a.m. to-day to the same districts "LOWER CONE."

Note.—The South Cone, point downwards (⌵), means that gales, or strong winds, are probable, at first from the Southward (from S.E. round by S. to N.W.). Should it appear likely that a gale beginning from between W. and N.W. is likely to veer towards N. or N.E., the North Cone is hoisted in preference to the South Cone.
The North Cone, point upwards (⌴), means that gales, or strong winds, are probable, at first from the Northward (from N.W. round by N. to S.E.). Should it appear likely that a gale beginning from between E. and S.E. is likely to veer towards S. or S.W., the South Cone is hoisted in preference to the North Cone.

NOTES:—(a) At the British and Irish Stations the readings of the barometer are not corrected for the difference in Gravity between the position of the Station and Latitude 45°. The approximate correction is:—For stations North of Malin Head and North Shields +0.03 in., but for Sumburgh Head +0.04 in.; for stations South of Malin Head and North Shields +0.02 in., but for Scilly and Jersey +0.01 in.

(b) The Sunshine for London given in this Table is recorded on the Tower of the Wesleyan Training College, Westminster; the Sunshine entered to Dungeness is recorded at Littlestone-on-Sea.

* Observations for this column not generally received.

† Observations received too late for insertion in Charts on next page.

WEATHER CHARTS

FOR THURSDAY, 15TH MARCH, 1906.

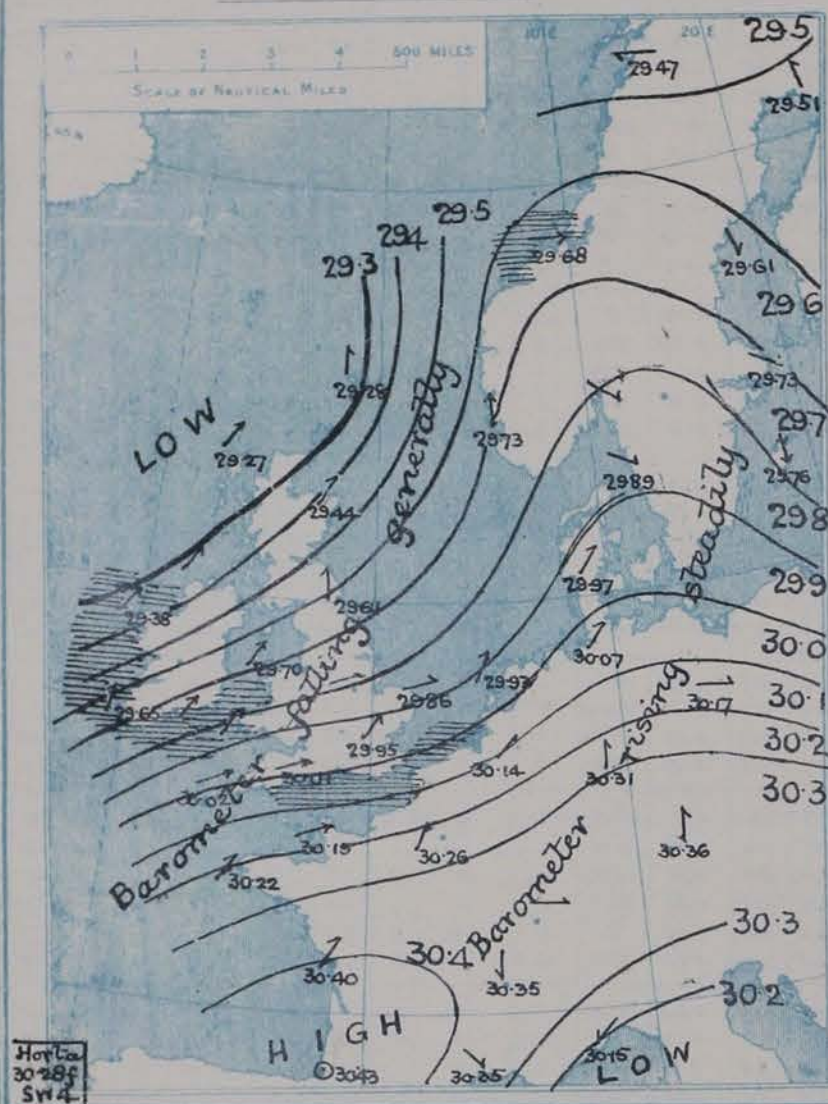

I. BAROMETER, WIND AND SEA. This Morning.

BAROMETER—Isobars are drawn for each tenth of an inch.

WIND—Arrows show Directions and Force, flying with the wind.

Force above 10 \rightarrow Force 5 to 7 \rightarrow Force 1 to 4 \rightarrow } Calm \odot

SEA—Rough \square High \square

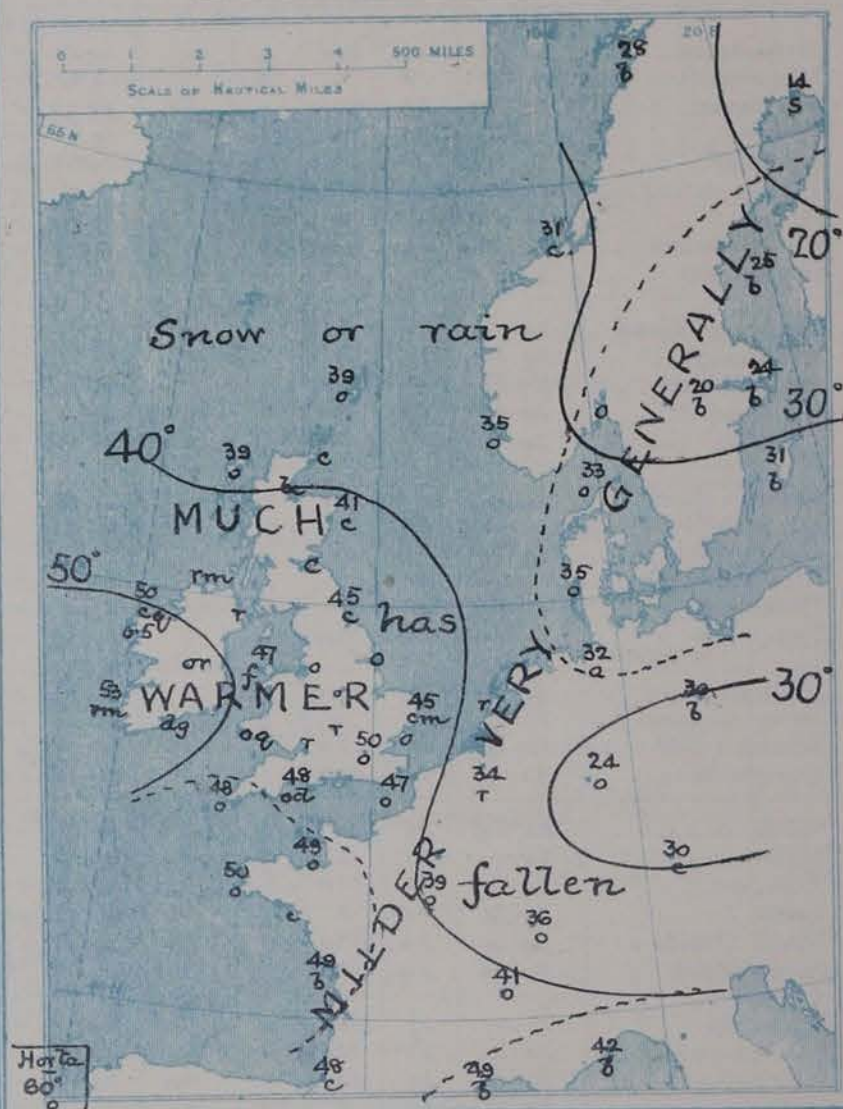

II. TEMPERATURE AND WEATHER. This Morning.

TEMPERATURE—Isotherms are drawn for each 10°.

WEATHER—Shown by Letters of the Beaufort Scale. (See P. 4.)

RAINFALL—A dotted line separates areas where rain has fallen from those without rain. The fall in past 24 hours when exceeding half an inch is shown thus - 0.6

III. BAROMETER AND WIND

Yesterday morning.

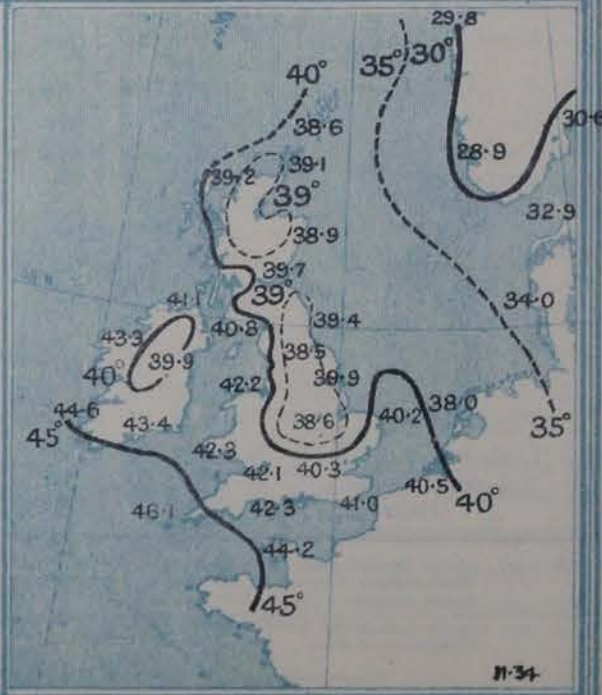

IV. LAST WEEK'S SUNSHINE.

Amount recorded in various districts of the United Kingdom during the week ended Saturday, 10th March, with the percentage of the average duration for the corresponding week.

V. Averages of DAILY TEMPERATURE at 8 A.M. for the monthly period MARCH

(Derived chiefly from Observations extending over the 35 years 1871-1905).

GENERAL SITUATION AT 8 A.M.

PRESSURE

A decided rise of the barometer over France, Germany, Denmark, and Scandinavia, and the arrival of a large and rather deep depression off our north-west coasts have caused a South-Westerly type of conditions over the United Kingdom and its neighbourhood. Pressure is now about 30.4 ins. over the south-west of France and the adjacent part of Spain, and about 30.3 ins. over South Germany, while it decreases to below 29.5 ins. in Lapland and to below 29.3 ins. off the north-west of Scotland. Gradients are rather steep and increasing over all our western and south-western districts.

WIND

TEMPERATURE

WEATHER

AND

SEA

The South-Westerly current of wind blows freshly or strongly on several parts of our southern and western coasts and also at The Helder, but is light to moderate in the east and north. Over Sweden the wind draws into North-West and blows a fresh gale at Visby. Under the influence of the South-Westerly wind temperature has risen over North-Western Europe generally, the change over the United Kingdom having been very rapid. The readings now range from about 50° at most English and Irish stations to about 40° in the north of Scotland. On the Continent the thermometer stands at 53° at Lisbon and 50° at Brest, but is below the freezing point over Germany, and below 20° in the north of Sweden.

The sky is very cloudy, or entirely overcast over the United Kingdom and all the nearer regions of the Continent, but clear in most parts of Sweden, at Berlin, and also in the south of France. Rain is very general in Ireland and the Low Countries, and is also falling at Cape Iris Hög and at several stations in the south of England. At Apataranda snow is reported. The sea is rough at Valencia and Pembroke and rather rough on several other parts of our western coasts, in the English Channel, and at Christiansund.

The maximum temperatures recorded yesterday were below 40° in many parts of England and Scotland, but during the night or early this morning the thermometer rose quickly, most of the maximum readings reported at 8 a.m. being above 45°, and some as high as 50°. Rain has fallen in nearly all parts of our Islands, as well as in various Continental regions. Bright sunshine was most prevalent in the north-west, north and east of England; in Ireland there was scarcely any.

PROBABLE CHANGES IN SYSTEM NOW PREVALENT

The low pressure system centred off our northwest coasts is likely to move northeastwards and to occasion mild, unsettled weather with rain at times over the whole of the United Kingdom during the ensuing 24 hours. Gales or very strong winds are expected on the west and southwest coasts.

FORECASTS*

For the 24 hours ending at NOON on 16TH MARCH, 1906.

DISTRICTS.

FORECASTS.

0 SCOTLAND
NORTH

S.W. to W. winds, fresh or strong to a gale; mild, rainy.

1 SCOTLAND
EAST

S.W. to W. winds, fresh or strong in places; mild, rain at times.

2 ENGLAND
N.E.

3 ENGLAND
EAST

Moderate or fresh winds, mainly S.W. to W.; mild, generally dull, occasional rain.

4 MIDLAND
COUNTIES

5 ENGLAND
SOUTH

Fresh or strong winds between S.W. and W.; cloudy or overcast, rain at times; mild.

10 IRELAND
SOUTH

S.W. to W. winds, fresh or strong to a gale; mild, rainy.

WARNINGS

At 9.30 a.m. to-day to districts 6, 7, 8, 9, 10 and part of 0. HOIST SOUTH CONE.

Note.—The South Cone, point downwards (⌵), means that gales, or strong winds, are probable, at first from the Southward (from S.E. round by S. to N.W.). Should it appear likely that a gale beginning from between W. and N.W. is likely to veer towards N. or N.E., the North Cone is hoisted in preference to the South Cone.
The North Cone, point upwards (⌶), means that gales, or strong winds, are probable, at first from the Northward (from N.W. round by N. to S.E.). Should it appear likely that a gale beginning from between E. and S.E. is likely to veer towards S. or S.W., the South Cone is hoisted in preference to the North Cone.

NOTES:—(a) At the British and Irish Stations the readings of the barometer are not corrected for the difference in Gravity between the position of the Station and Latitude 45°. The approximate correction is:—For stations North of Malin Head and North Shields + '03 in., but for Sumburgh Head + '04 in.; for stations South of Malin Head and North Shields + '02 in., but for Scilly and Jersey + '01 in.

(b) The Sunshine for London given in this Table is recorded on the Tower of the Wesleyan Training College, Westminster; the Sunshine entered to Dungeness is recorded at Littlestone-on-Sea.

* Observations for this column not generally received.

† Observations received too late for insertion in Charts on next page.

WEATHER CHARTS

FOR FRIDAY, 16TH MARCH, 1906.

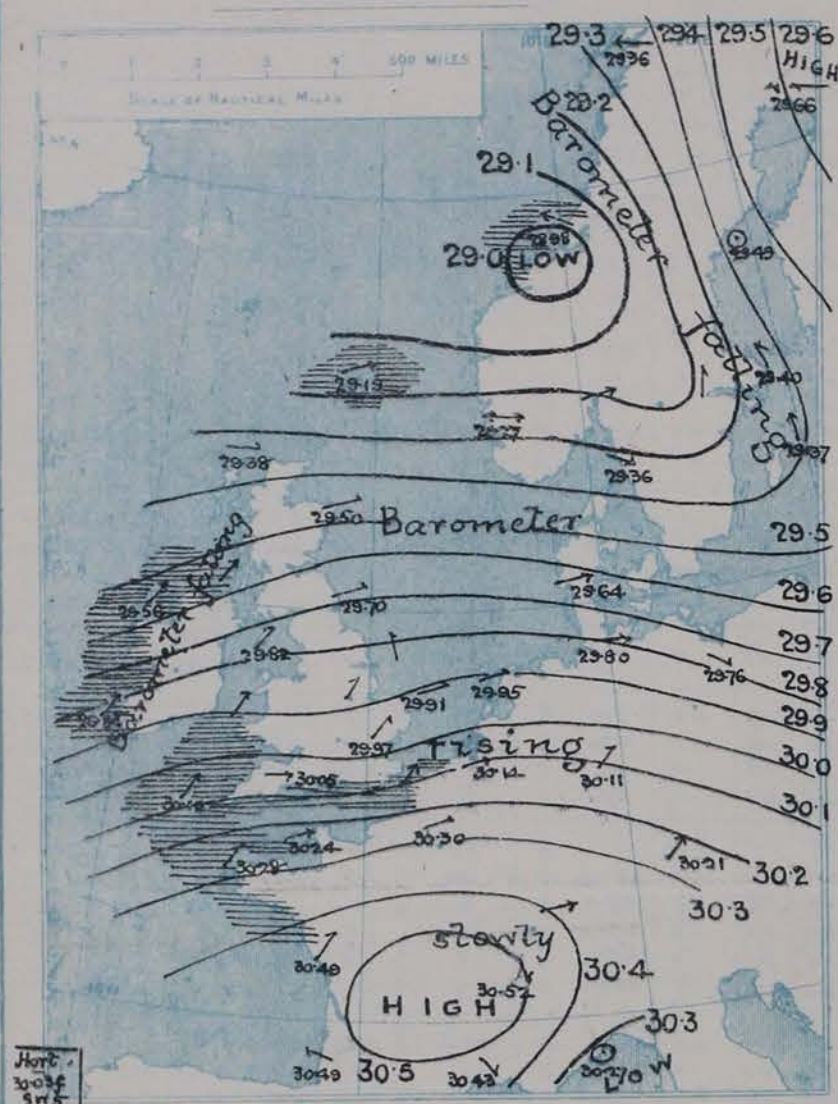

I. BAROMETER, WIND AND SEA. This Morning.

BAROMETER.—Isobars are drawn for each tenth of an inch.

WIND.—Arrows show Direction and Force, flying with the wind.

Force above 10 ——— Force 5 to 7 ——— } Calm ☉
Force 8 to 10 ——— Force 1 to 4 ———

SEA.—Rough ——— High ———

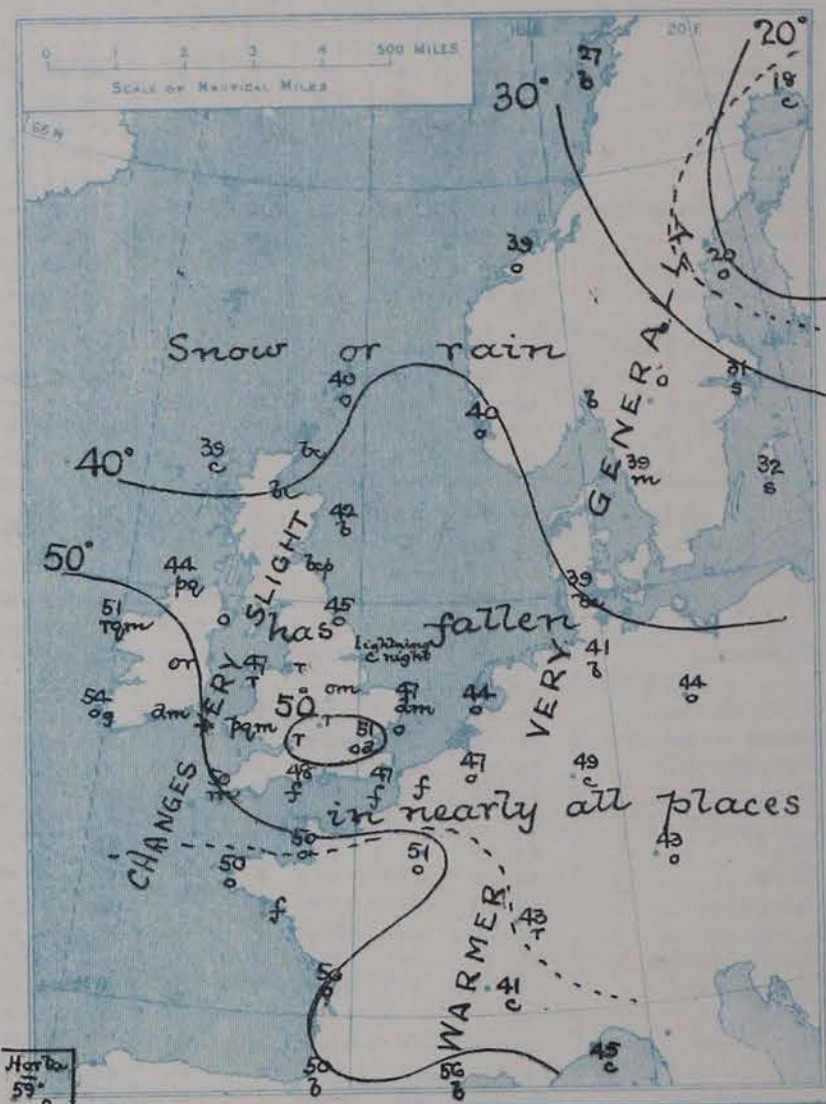

II. TEMPERATURE AND WEATHER. This Morning.

TEMPERATURE.—Isotherms are drawn for each 10°

WEATHER.—Shown by Letters of the Beaufort Scale. (See P. 4.)

RAINFALL.—A dotted line separates areas where rain has fallen from those without rain. The fall in past 24 hours when exceeding half an inch is shown thus - 0.6

III. BAROMETER AND WIND

Yesterday morning.

IV. RAINFALL IN 1906.

Total Amount recorded in various districts of the United Kingdom in the 10 weeks ended Saturday, March 10th, with the percentage of the average amount for the corresponding period.

V. Averages of DAILY TEMPERATURE at 8 A.M. for the monthly period MARCH

(Derived chiefly from Observations extending over the 35 years 1871-1905).

GENERAL SITUATION AT 8 A.M.

PRESSURE

A very decided fall of the barometer which has taken place over Scandinavia, Denmark, and the Baltic, has brought about a more westerly type of pressure distribution over the United Kingdom, the barometer being now lowest, less than 29.0 ins., in a minimum near Christiansund, and highest, about 30.5 ins., over the southern half of France. The mercury is at present rising somewhat in France, but the rise is ceasing in Great Britain, while in Ireland a fresh fall has commenced.

WIND

The South-Westerly to Westerly current of wind which prevails over the United Kingdom and the surrounding regions is fresh to very strong in force generally; at Portland Bill, Pembroke and Blackhead Point a moderate gale is reported, and on the south-west coast of Norway a fresh gale is blowing. In Sweden the wind draws into South or South-East, and over the north of Norway into East. Temperature has

TEMPERATURE

changed little over our Islands and the west of France, risen in most other places, very quickly over Germany. The highest readings reported at any of our own stations are 54° at Valencia and 52° at Bath, and the lowest 39° at Stornoway and Wick. On the Continent the readings range from 56° at Perpignan to 44° at Berlin, 31° at Stockholm, and to 18° at Haparanda.

WEATHER

AND

SEA

The weather is fine and bright at some stations in the south of France and temporarily so in a few other parts of our area; as a whole the sky is overcast, with rain or passing showers in many parts of these Islands and at Berlin, and with snow at Stockholm and Wisby. Fog is reported at Portland Bill and on both sides of the Straits of Dover, and also at Lorient. The sea is rough or rather so except off the east coast of Great Britain.

Rain has fallen since yesterday morning in all parts of the United Kingdom, as well as over Germany, Denmark, and the Netherlands, and rain or snow in Scandinavia. The highest temperatures recorded in this country yesterday were 58° at Shields and 56° at Donaghadee. Scarcely any bright sunshine was registered except at Aberdeen and Stornoway. Lightning was observed at Spurn Head last evening.

PROBABLE CHANGES IN SYSTEM NOW PREVALENT

The United Kingdom will continue under the influence of the low pressure over the northern regions of the Atlantic during the ensuing 24 hours. Fresh or strong winds, a gale in some western localities, from between South-West and West are anticipated, with mild, cloudy weather and occasional rain.

FORECASTS*

For the 24 hours ending at NOON on 17TH MARCH, 1906.

DISTRICTS.

FORECASTS.

- 0 SCOTLAND NORTH
- 1 SCOTLAND EAST
- 2 ENGLAND N.E.
- 3 ENGLAND EAST
- 4 MIDLAND COUNTIES
- 5 ENGLAND SOUTH

S.W.² and W.² winds, fresh or strong; squally, rainy; mild.

S.W.² and W.² winds, moderate generally; but fresh or strong in places; cloudy or dull, rain at times; mild.

Fresh or strong winds from between S.W. and W.; cloudy or overcast, rain at times; mild.

DISTRICTS.

FORECASTS.

- 6 SCOTLAND WEST
- 7 ENGLAND N.W.
- 8 ENGLAND S.W.
- 9 IRELAND NORTH
- 10 IRELAND SOUTH

S.W.² to W.² winds, fresh or strong generally, a gale in places; mild, rain at times.

WARNINGS

The South Cone is still flying in Districts 5 to 10 and part of 0.

Note.—The South Cone, point downwards () means that gales, or strong winds, are probable, at first from the Southward (from S.E. round by S. to N.W.). Should it appear likely that a gale beginning from between W. and N.W. is likely to veer towards N. or N.E., the North Cone is hoisted in preference to the South Cone.
The North Cone, point upwards () means that gales, or strong winds, are probable, at first from the Northward (from N.W. round by N. to S.E.). Should it appear likely that a gale beginning from between E. and S.E. is likely to veer towards S. or S.W., the South Cone is hoisted in preference to the North Cone.

* For terms for transmission of Forecasts by Telegraph, see next page.

NOTES:—(a) At the British and Irish Stations the readings of the barometer are not corrected for the difference in Gravity between the position of the Station and Latitude 45°. The approximate correction is:—For stations North of Malin Head and North Shields + '03 in., but for Sumburgh Head + '04 in.; for stations South of Malin Head and North Shields + '02 in., but for Scilly and Jersey + '01 in.

(b) The Sunshine for London given in this Table is recorded on the Tower of the Wesleyan Training College, Westminster; the Sunshine entered to Dungeness is recorded at Littlestone-on-Sea.

* Observations for this column not generally received.

† Observations received too late for insertion in Charts on next page.

WEATHER CHARTS

FOR SATURDAY, 17TH MARCH, 1906.

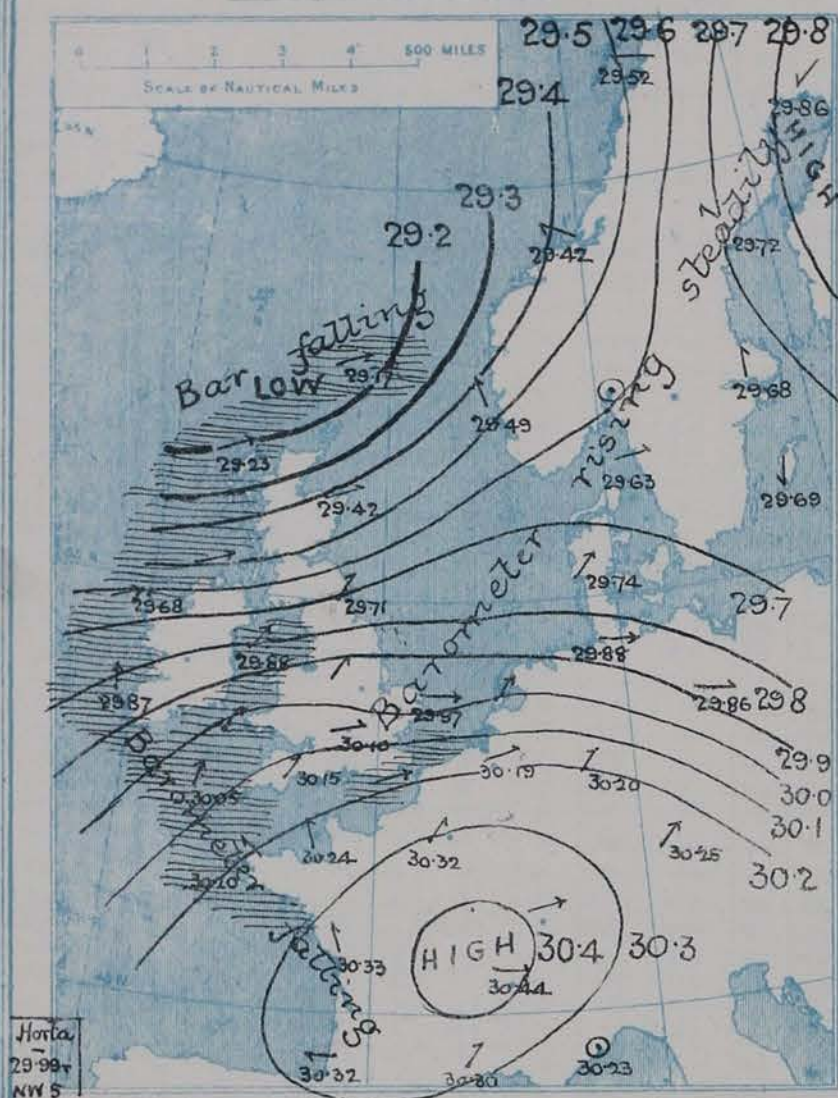

I. BAROMETER, WIND AND SEA. This Morning.

BAROMETER—Isobars are drawn for each tenth of an inch.

WIND—Arrows show Directions and Force, flying with the wind.

Force above 10 → : Force 5 to 7 → : } Calm ⊙
Force 8 to 10 → : Force 1 to 4 → :

SEA—Rough High

II. TEMPERATURE AND WEATHER. This Morning.

TEMPERATURE—Isotherms are drawn for each 10°

WEATHER—Shown by Letters of the Beaufort Scale. (See P. 4.)

RAINFALL—A dotted line separates areas where rain has fallen from those without rain. The fall in past 24 hours when exceeding half an inch is shown thus -0.6

III. BAROMETER AND WIND

Yesterday morning.

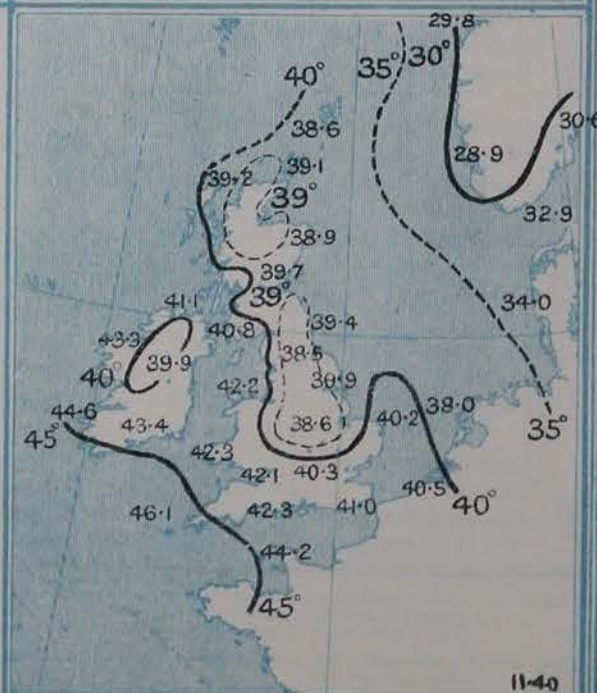

IV. BRIGHT SUNSHINE IN 1906.

Total Duration recorded in various districts of the United Kingdom in the 10 weeks ended Saturday, March 10th, with the percentage of the average duration for the corresponding period.

V. Averages of DAILY TEMPERATURE at 8 A.M. for the monthly period MARCH

(Derived chiefly from Observations extending over the 35 years 1871-1905).

GENERAL SITUATION AT 8 A.M.

PRESSURE

The barometer is now falling steadily over the Bay of Biscay and the west of France and rising over Germany, Denmark, and Scandinavia; in most parts of the United Kingdom it is either steady or rising somewhat, but a slight fall is in progress both at Valencia and Stornoway. The readings range from above 30.4 ins. in an anticyclone with its maximum pressure over the east of France to 29.2 ins. and less off the north of Scotland.

WIND

The wind is fresh from South on the south-west coast of Ireland, but over this country generally it is South-Westerly in direction. Strong winds are reported from Dungeness and the north-west of Ireland, and fresh or strong breezes from many other localities. On the eastern and southern shores of the North Sea the wind blows strongly from some point between South and West, and with little force from the eastward in the north of Scandinavia. Along the west coast of France there is a light to moderate breeze from the South-Eastward.

TEMPERATURE

Temperature has risen decidedly over Scotland and the most northern counties of England and Ireland, fallen over France and our own southern districts. Over these Islands it ranges from 54° at Leith to about 50° over the Kingdom generally, and to 44.5° at Wick and Lumburg Head. The highest Continental readings reported are 55° at Lisbon and 53° at Frankfurt, and the lowest 15° at Aparanda.

WEATHER

AND

SEA

The weather has become fine in nearly all parts of England, but is still very cloudy or quite overcast in Ireland and Scotland, with showers at Leith and steady rain in the Hebrides. On the Continent the weather is very variable; at most French stations it is fine and bright, over North Germany, Denmark, and the south-west of Norway rain is falling, at Skagen and in the south of Sweden fog prevails, and at Helsingfors snow is reported. The sea is rough or rather so off the north of Scotland, on most Irish coasts, off the south-west of England, and also at Sorrent and Dungeness.

The highest temperatures recorded over these Islands yesterday were 58° at Nottingham and 57° at Lowestoft and Skegness. Rain fell in nearly all localities excepting over France, the largest amount in our Islands being 0.4 in. at Hain.

PROBABLE CHANGES IN SYSTEM NOW PREVALENT

The anticyclone appears likely to travel east-wards to Central Europe, and as pressure will probably continue relatively low over the north-western portion of the Atlantic, the wind over our Islands is expected to become rather more Southerly in direction. Mild weather, with considerable fair intervals, is likely over the greater part of the Kingdom.

FORECASTS*

For the 24 hours ending at NOON on 18TH MARCH, 1906.

DISTRICTS.

FORECASTS.

DISTRICTS.

FORECASTS.

WARNINGS

At 7.20 p.m. yesterday to districts 6, 7, 8, 9, 10 and part of 0, "KEEP UP SOUTH CONE."

Note.—The South Cone, point downwards (⌋), means that gales, or strong winds, are probable, at first from the Southward (from S.E. round by S. to N.W.). Should it appear likely that a gale beginning from between W. and N.W. is likely to veer towards N. or N.E., the North Cone is hoisted in preference to the South Cone.
The North Cone, point upwards (⌋), means that gales, or strong winds, are probable, at first from the Northward (from N.W. round by N. to S.E.). Should it appear likely that a gale beginning from between E. and S.E. is likely to veer towards S. or S.W., the South Cone is hoisted in preference to the North Cone.

NOTES:—(a) At the British and Irish Stations the readings of the barometer are not corrected for the difference in Gravity between the position of the Station and Latitude 45°. The approximate correction is:—For stations North of Malin Head and North Shields + '03 in., but for Sumburgh Head + '04 in.; for stations South of Malin Head and North Shields + '02 in., but for Scilly and Jersey + '01 in.

(b) The Sunshine for London given in this Table is recorded on the Tower of the Wesleyan Training College, Westminster; the Sunshine entered to Dungeness is recorded at Littlestone-on-Sea.

* Observations for this column not generally received. † Observations received too late for insertion in Charts on next page.

FOR Sunday, 18TH March, 1906.

BAROMETER—Isobars are drawn for each tenth of an inch.
WIND—Arrows show Direction and Force; flying with the wind.

Force above 10 \rightarrow Force 5 to 7 \rightarrow } Calm ☺
 Force 8 to 10 \rightarrow Force 1 to 4 \rightarrow }
 SEA - Rough High

Yesterday morning.

Amount recorded
in various districts of the United Kingdom
during the 10 weeks ended 10th March, 1918,
with the percentage of the average for the
corresponding period.

Accumulated values are expressed in Day-Degrees—a "Day Degree" signifying 1° continued for 24 hours, or any other number of degrees for an inversely proportional number of hours.

TEMPERATURE.—Isotherms are drawn for each 10°

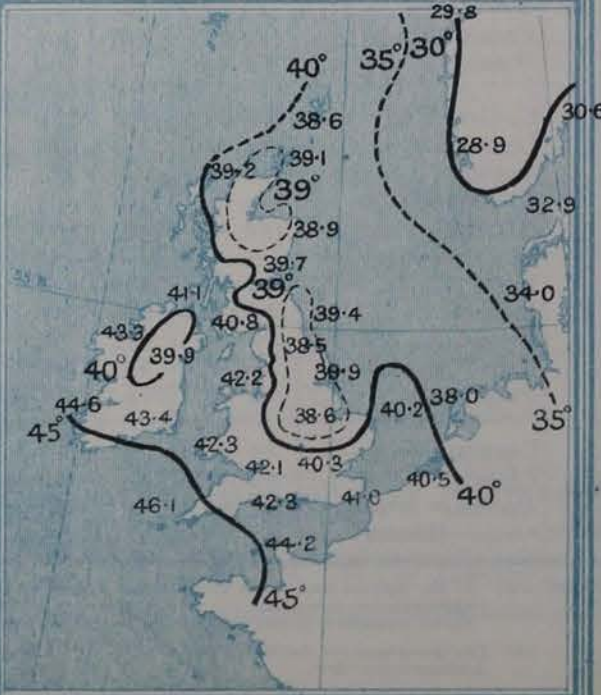

WEATHER—Shown by Letters of the Beaufort Scale. (See P. 4.)

RAINFALL.—A dotted line separates areas where rain has fallen from those without rain. The fall in past 24 hours when exceeding half an inch is shown thus: 0.6

at 8 A.M. for the monthly period
MARCH

*(Derived chiefly from Observations
extending over the 35 years 1871-1905).*

GENERAL SITUATION AT 8 A.M.

PRESSURE

A barometric minimum with the lowest readings below 29.2 ins. covers the southeast of Sweden. The gradient is rather steep over Denmark and the North Sea, the barometer standing at about 29.8 ins. along our east coast. The British Isles as a whole are situated between a region of high pressure, with readings above 30.1 ins. over the south of France, and a region of equally high readings off the west of Ireland.

WIND

Strong Westerly to West-northwesterly winds prevail over Denmark and the North Sea, and along our east coasts we find moderate Westerly breezes. Over the south of England the wind has fallen light and variable, while in Ireland and the west a light Northerly air current has established itself.

TEMPERATURE

The weather is fine at most Irish and Scottish stations and also in parts of the north of England. In the south the sky is overcast, and light rain is falling in London, at Oxford and Pembroke. Fog prevails in the English Channel. Fine weather is reported from the French and German stations; over Scandinavia the conditions are unsettled.

WEATHER

AND

SEA

Temperature has fallen in most parts, and in the north and northeast the changes since yesterday morning have been considerable. This morning's observations in the British Isles range from 36° at Stornoway and Wick to 51° at Scilly. Little change has occurred in the west of France, but in the east and over Germany a fall of temperature has been general.

During the previous 24 hours slight precipitation occurred at many western and northern stations. In most districts the weather was fair or fine, and over 10 hours of bright sunshine were experienced in many parts. Temperature rose, in the course of the day, to over 60° at our inland stations. In the south of France some high temperatures were experienced, Perpignan reports a maximum of 81°, Biarritz 79°.

The sea is rather rough at Lumburgh Head and Scilly, moderate to slight or smooth elsewhere.

PROBABLE CHANGES IN SYSTEM NOW PREVALENT

WARNINGS

None issued.

NONE ISSUED.

Note.—The South Cone, point downwards (⌒), means that gales, or strong winds, are probable, at first from the Southward (from S.E. round by S. to N.W.). Should it appear likely that a gale beginning from between W. and N.W. is likely to veer towards N. or N.E., the North Cone is hoisted in preference to the South Cone.

The North Cone, point upwards (⌒), means that gales, or strong winds, are probable, at first from the Northward (from N.W. round by N. to S.E.). Should it appear likely that a gale beginning from between E. and S.E. is likely to veer towards S. or S.W., the South Cone is hoisted in preference to the North Cone.

NOTES:—(a) At the British and Irish Stations the readings of the barometer are not corrected for the difference in Gravity between the position of the Station and Latitude 45°. The approximate correction is:—For stations North of Malin Head and North Shields + '03 in., but for Sumburgh Head + '04 in.; for stations South of Malin Head and North Shields + '02 in., but for Scilly and Jersey + '01 in.

(b) The Sunshine for London given in this Table is recorded on the Tower of the Wesleyan Training College, Westminster; the Sunshine entered to Dungeness is recorded at Littlestone-on-Sea.

* Observations for this column not generally received.

† Observations received too late for insertion in Charts on next page.

WEATHER CHARTS

FOR *Monday, 19th March, 1906.*

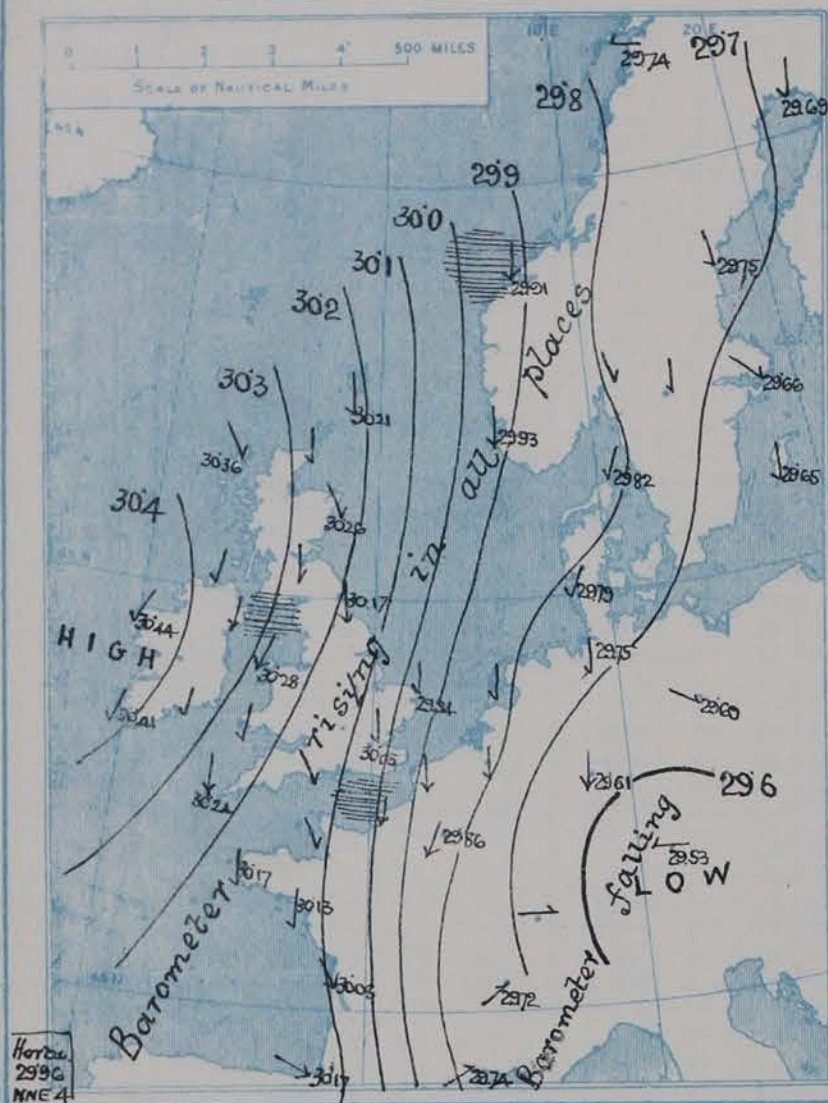

I. BAROMETER, WIND AND SEA. *This Morning.*

BAROMETER—Isobars are drawn for each tenth of an inch.

WIND—Arrows show Directions and Force, flying with the wind.

Force above 10 → Force 5 to 7 → } Calm ☉
Force 8 to 10 → Force 1 to 4 → }

SEA—Rough High

II. TEMPERATURE AND WEATHER. *This Morning.*

TEMPERATURE—Isotherms are drawn for each 10°

WEATHER—Shown by Letters of the Beaufort Scale. (See P. 4.)

RAINFALL—A dotted line separates areas where rain has fallen from those without rain. The fall in past 24 hours when exceeding half an inch is shown thus - 0.6

III. BAROMETER AND WIND

Yesterday morning.

IV. ACCUMULATED TEMPERATURE ABOVE 42°.

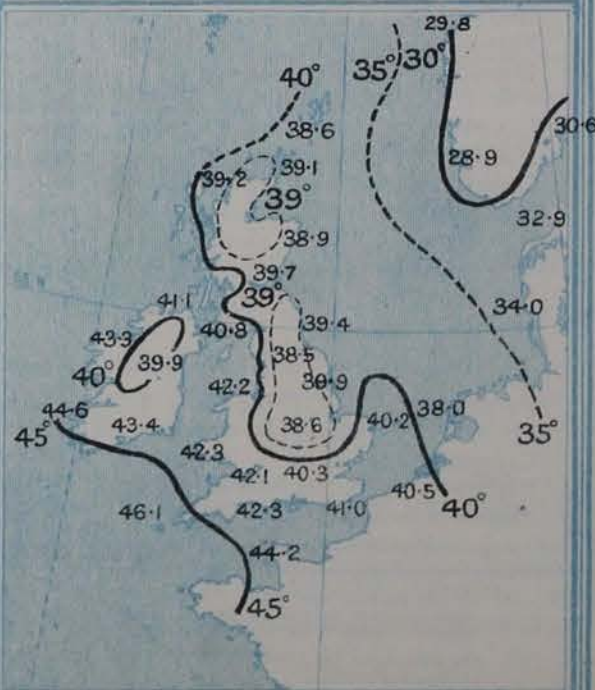

Amount recorded in various districts of the United Kingdom during the week ended *Sat. 10th MARCH* with the percentage of the average for the corresponding week.

Accumulated values are expressed in Day-Degrees—a "Day Degree" signifying 1° continued for 24 hours, or any other number of degrees for an inversely proportional number of hours.

V. Averages of DAILY TEMPERATURE at 8 A.M. for the monthly period MARCH

(Derived chiefly from Observations extending over the 35 years 1871-1905).

GENERAL SITUATION AT 8 A.M.

PRESSURE

A large anticyclone now extends from the Atlantic over all our western and northern districts and the barometer is rising over North-western Europe generally, the highest pressures, 30.4 ins. and upwards, being found in the west of Ireland. The mercury is lowest, 29.6 ins. and less in a depression over South Germany; this system is apparently moving southwards, and the barometer is consequently falling in the southern parts of France and Germany.

WIND

TEMPERATURE

WEATHER

AND

SEA

Northerly winds are now reported over nearly the whole of our area, with an inclination to draw into North-East on our western coasts, but into North-West in the north and east. In the south of France a light breeze from the South-Westward is blowing towards the German depression. Temperature has again fallen generally, and is now rather low for the time of year. Over a considerable portion of Great Britain the morning readings are below 40°, while in Central Ireland the thermometer is slightly below 35°. Frost prevails in Sweden and the north of Norway, the lowest temperatures reported being 11° at Jokaranda and 17° at Skutumpah. In the south of France the thermometer is slightly above 50°. The weather is fine over Ireland, England and the northern parts of the Continent, as well as in the west of France. In Scotland and in Germany and Central France the sky is overcast; rain is falling at Havre, and snow at Frankfurt. The sea is moderate or slight generally, but rather rough at Donaghadee.

During yesterday the thermometer rose to 50° or slightly above it at several of our western and northern stations, but failed to reach 45° on some parts of our extreme north and north-west coasts. Over Central and Southern France the weather was again very warm, the thermometer rising to 58° at Paris, 70° at Lyons, 72° at Rochefort and to 75° at Biarritz. In the west and north of our Islands the amount of bright sunshine was considerable (more than 9 hours at Valencia and Binn Castle); at most of the English Channel stations the day was continuously dull. Snow or hail showers fell along our north-east coasts, and slight rain in many other parts of the Kingdom.

PROBABLE CHANGES IN SYSTEM NOW PREVALENT

The Northerly type of weather appears to be well established. The western anticyclone will probably spread somewhat further to the eastward, and fair weather is likely to continue in all our western districts. Small shallow depressions may be expected to pass southwards along our eastern coasts, and to cause showers of snow or sleet in the northern and eastern parts of the Kingdom. Temperature will continue low generally, with frost in most districts at night.

FORECASTS*

WARNINGS

NONE ISSUED.

Note.—The South Cone, point downwards (⌋), means that gales, or strong winds, are probable, at first from the Southward (from S.E. round by S. to N.W.). Should it appear likely that a gale beginning from between W. and N.W. is likely to veer towards N. or N.E., the North Cone is hoisted in preference to the South Cone.
The North Cone, point upwards (⌋), means that gales, or strong winds, are probable, at first from the Northward (from N.W. round by N. to S.E.). Should it appear likely that a gale beginning from between E. and S.E. is likely to veer towards S. or S.W., the South Cone is hoisted in preference to the North Cone.

NOTES:—(a) At the British and Irish Stations the readings of the barometer are not corrected for the difference in Gravity between the position of the Station and Latitude 45°. The approximate correction is:—For stations North of Malin Head and North Shields + '03 in., but for Sumburgh Head + '04 in.; for stations South of Malin Head and North Shields + '02 in., but for Scilly and Jersey + '01 in.

(b) The Sunshine for London given in this Table is recorded on the Tower of the Wesleyan Training College, Westminster; the Sunshine entered to Dungeness is recorded at Littlestone-on-Sea.

* Observations for this column not generally received.

* Observations received too late for insertion in Charts on next page.

WEATHER CHARTS

FOR *TUESDAY, 20th MARCH, 1906.*

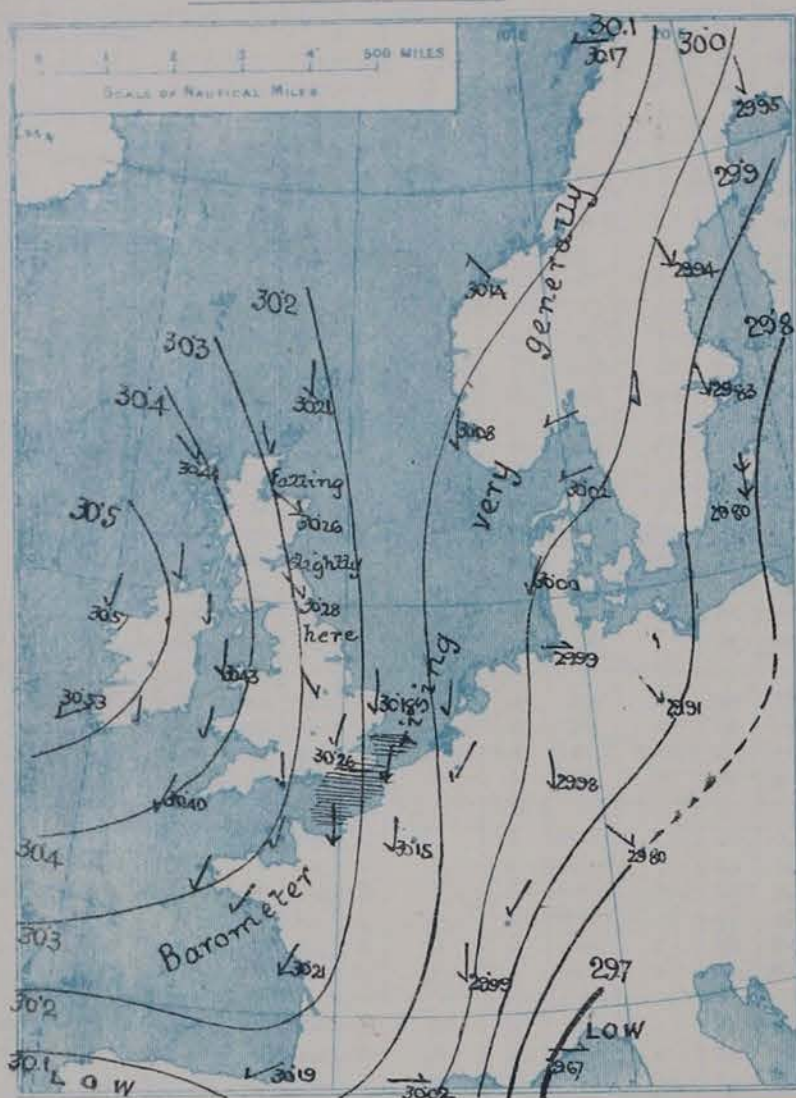

I. BAROMETER, WIND AND SEA. *This Morning.*

BAROMETER—Isobars are drawn for each tenth of an inch.

WIND—Arrows show Directions and Force, flying with the wind.

Force above 10 ——— Force 5 to 7 ——— } Calm ☉
Force 8 to 10 ——— Force 1 to 4 ——— }

SEA—Rough ——— High ———

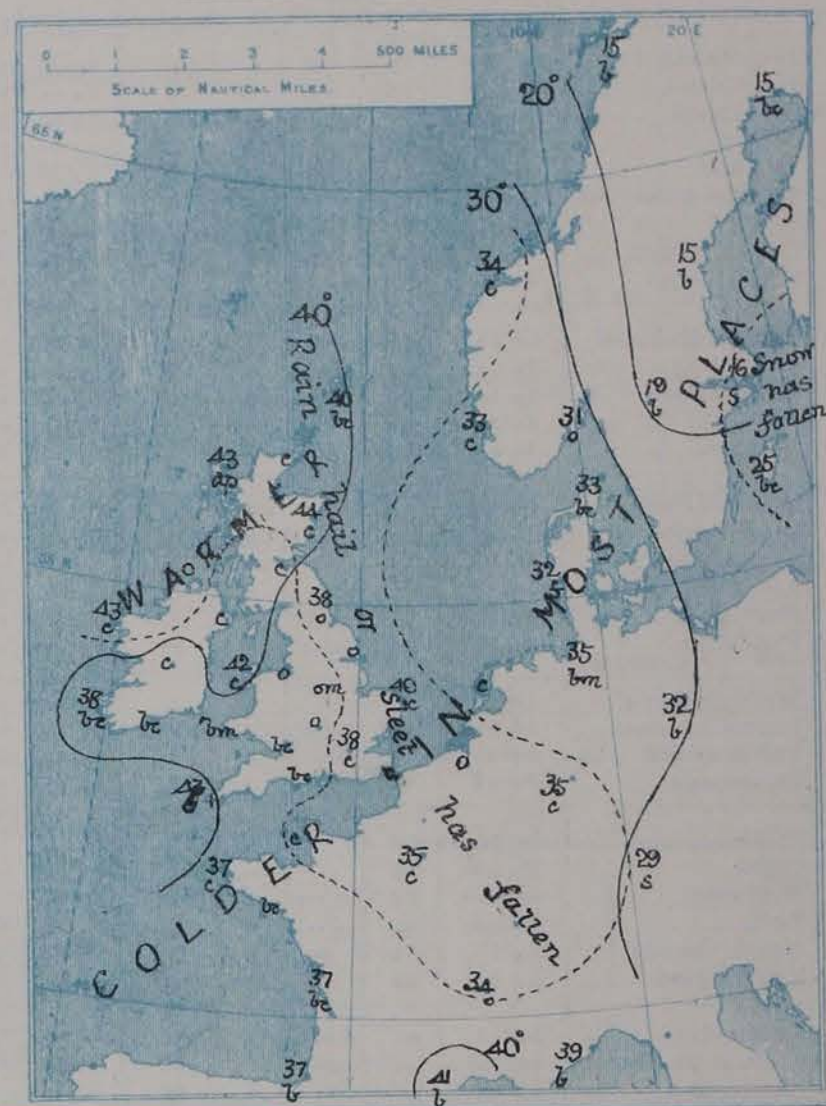

II. TEMPERATURE AND WEATHER. *This Morning.*

TEMPERATURE—Isotherms are drawn for each 10°

WEATHER—Shown by Letters of the Beaufort Scale. (See P. 4.)

RAINFALL—A dotted line separates areas where rain has fallen from those without rain. The fall in past 24 hours when exceeding half an inch is shown thus - 0.6

III. BAROMETER AND WIND

Yesterday morning.

IV. EXTREMES OF TEMPERATURE

recorded

in various districts of the United Kingdom

during the week ended Sat. 17th MARCH

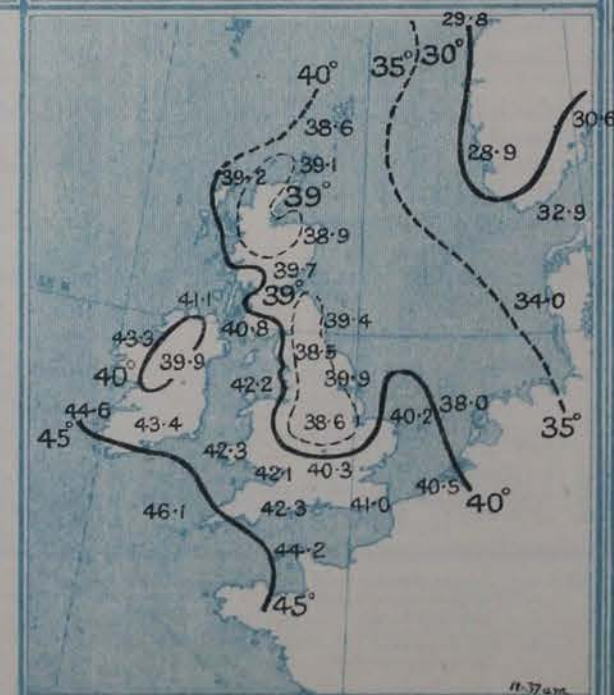

V. Averages of DAILY TEMPERATURE

at 8 A.M. for the monthly period

MARCH

(Derived chiefly from Observations extending over the 35 years 1871-1905).

GENERAL SITUATION AT 8 A.M.

PRESSURE

An anticyclone extends from the Atlantic over the greater part of these Islands, and also over Brittany, the highest pressures, 30.5 ins. and upwards being found in Western and Central Ireland. Over North-western Europe as a whole the barometer continues to rise, but on our own north and east coasts a slight fall is in progress. The lowest pressures, 29.7 ins. and less, are found respectively over the Riviera, and over the southern parts of the Spanish Peninsula; at Lisbon the barometer appears to be falling steadily.

WIND

TEMPERATURE

WEATHER

AND

SEA

Northerly winds, (inclining in some places to North-West, and in others to North-East,) continue to prevail over practically the whole of Western Europe, and are generally light or moderate in force. In the west of Norway, however, there is a feeble current from East or South-East, while in the extreme south of France the wind is light from the Westward.

Temperature has risen somewhat over the northern parts of these Islands, where the readings are now higher than in any other portion of Western Europe. In the northern districts of Ireland and Scotland the thermometer ranges between 42° and 44°; over the greater part of England and the south of Ireland the readings are below 40°, while in Germany and Central France the thermometer stands at or below 35°. Hard frost prevails in Sweden and the north of Norway, the lowest temperature reported being 15° at Haparanda, Hertsjund and Bodö. Fair weather is reported over Western Europe as a whole, but in many parts of the United Kingdom the sky is overcast, and at Stormoway showers of drizzling rain prevail. Snow is falling at Stockholm, and also at Munich.

The sea is moderate or slight generally, but is rough on the French side of the Channel. Over a considerable portion of Great Britain the thermometer yesterday failed to reach 45°, and only in the Scilly Islands did it touch 50°; ground frost occurred in many places at night. The amount of bright sunshine varied considerably in different places, but was mostly large on our western and southern coasts. Showers of rain, hail or sleet were experienced during the day at most of our northern, eastern and south-eastern stations.

PROBABLE CHANGES IN SYSTEM NOW PREVALENT

There are at present no signs of any material change in the general conditions. The western parts of the Kingdom are likely to remain for the present under the influence of the Atlantic high pressure system, and the weather in those districts will therefore continue fair. In the north and east the conditions will be influenced by small depressions passing southwards down the North Sea, and occasioning cold showers in all our more eastern districts.

FORECASTS*

For the 24 hours ending at NOON on 21st. March, 1906.

DISTRICTS.

WARNINGS

NONE ISSUED.

Note.—The South Cone, point downwards (T), means that gales, or strong winds, are probable, at first from the Southward (from S.E. round by S. to N.W.). Should it appear likely that a gale beginning from between W. and N.W. is likely to veer towards N. or N.E., the North Cone is hoisted in preference to the South Cone.
The North Cone, point upwards (T), means that gales, or strong winds, are probable, at first from the Northward (from N.W. round by N. to S.E.). Should it appear likely that a gale beginning from between E. and S.E. is likely to veer towards S. or S.W., the South Cone is hoisted in preference to the North Cone.

NOTES:—(a) At the British and Irish Stations the readings of the barometer are not corrected for the difference in Gravity between the position of the Station and Latitude 45°. The approximate correction is:—For stations North of Malin Head and North Shields + '03 in., but for Sumburgh Head + '04 in.; for stations South of Malin Head and North Shields + '02 in., but for Scilly and Jersey + '01 in.

(b) The Sunshine for London given in this Table is recorded on the Tower of the Wesleyan Training College, Westminster; the Sunshine entered to Dungeness is recorded at Littlestone-on-Sea.

* Observations for this column not generally received.

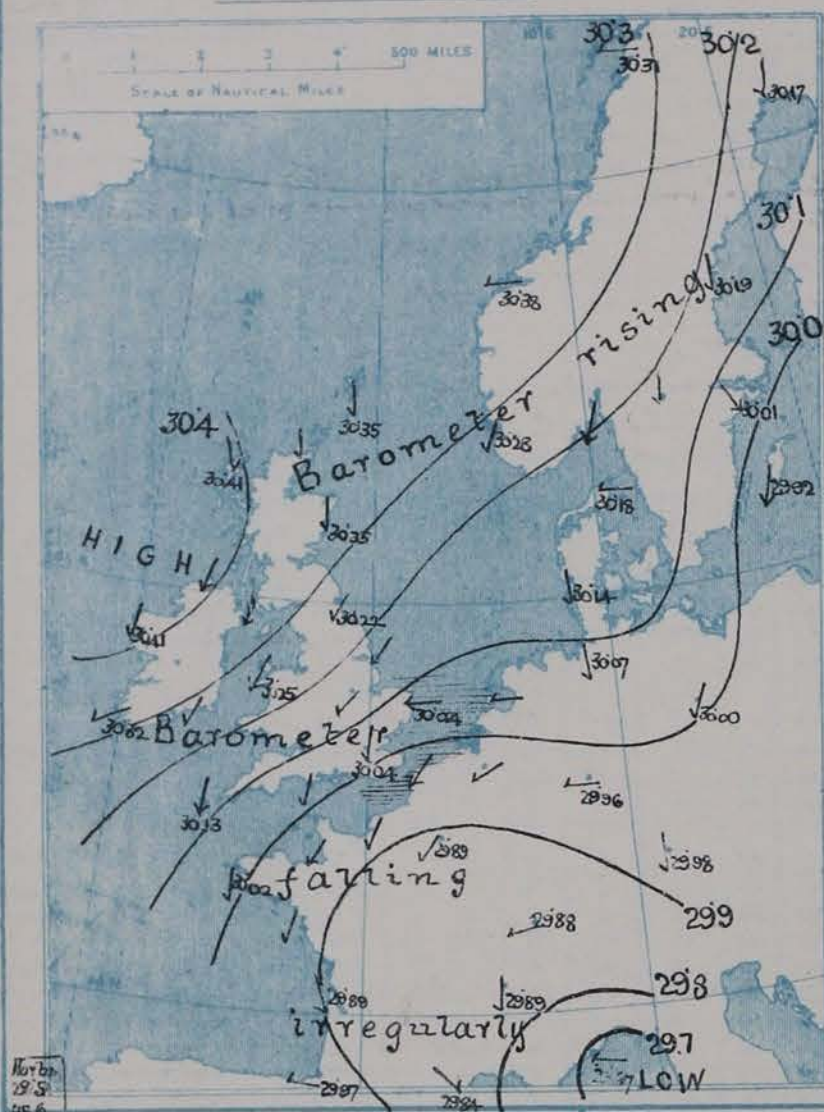

+ Observations received too late for insertion in Charts on next page.

WEATHER CHARTS

FOR Wednesday, 21st March, 1906.

I. BAROMETER, WIND AND SEA. This Morning.

BAROMETER—Isobars are drawn for each tenth of an inch.
WIND—Arrows show Directions and Force, flying with the wind.
Force above 10 ———— Force 5 to 7 ———— } Calm ☉
Force 8 to 10 ———— Force 1 to 4 ———— }
SEA—Rough ———— High ————

II. TEMPERATURE AND WEATHER. This Morning.

TEMPERATURE—Isotherms are drawn for each 10°.
WEATHER—Shown by Letters of the Beaufort Scale. (See P. 4.)
RAINFALL—A dotted line separates areas where rain has fallen from those without rain. The fall in past 24 hours when exceeding half an inch is shown thus - 0.6

III. BAROMETER AND WIND

Yesterday morning.

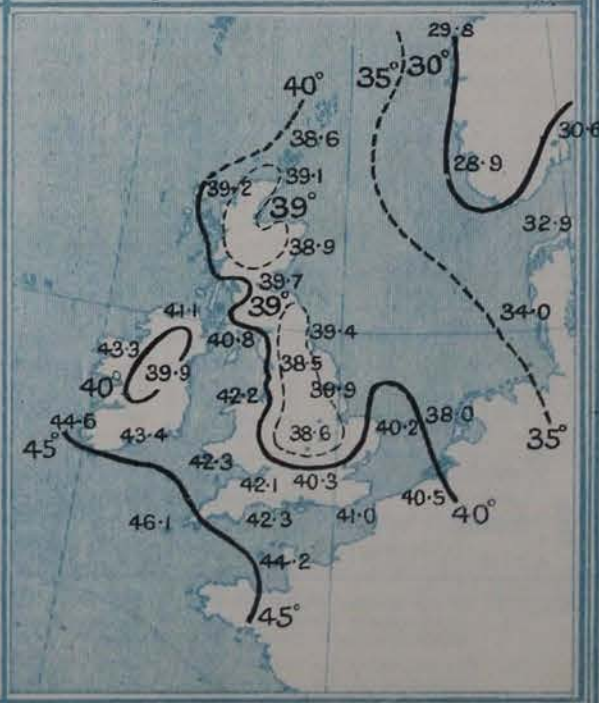

IV. LAST WEEK'S RAINFALL.

Amount recorded in various districts of the United Kingdom during the week ended Sat. 17th MARCH, with the percentage of the average amount for the corresponding week.

V. Averages of DAILY TEMPERATURE at 8 A.M. for the monthly period MARCH

(Derived chiefly from Observations extending over the 35 years 1871-1905).

GENERAL SITUATION AT 8 A.M.

PRESSURE

The anticyclone of yesterday has taken up a more northerly position, and while the highest pressures, 30 in. and upwards are found in the Hebrides and the extreme north-west of Ireland, the borders of the system now extend north-eastwards over the greater part of Scandinavia. The lowest readings 29.7 in. and less, are still reported over the Riviera and the southern part of the Spanish Peninsula. In those regions the barometer is apparently rising, but over the greater part of France and also in our own western and southern districts it is falling irregularly.

WIND

TEMPERATURE

WEATHER

AND

SEA

Winds from between North and East are prevalent over the whole of Western Europe, the North-Easterly current being fresh in force on the more exposed portions of the English and Irish coasts, and very strong in the Straits of Dover. Temperatures have risen somewhat in the west and south of these Islands and also in Sweden, but has fallen in most other parts of our area. On our extreme west and south-west coasts the thermometer stands at or slightly above 45°; but over Eastern and Central England and on the north and east coasts of Scotland the readings are below 40°; the lowest reported being 35° at Clackton-on-Sea. Frost prevails over the northern and central parts of the Continent, and is still severe in Sweden and the north of Norway.

Fair weather is reported over Western Europe as a whole, but showers of cold rain, hail or sleet are falling at several of the English stations, as well as in the west of Ireland. Snow is reported at Brussels, and also at Stockholm and Wisby. The sea is moderate or slight generally, but rough at Dungeness and rather rough at Yarmouth.

On the east coast of England the thermometer yesterday did not reach 45°, but in other parts of the Kingdom that value was exceeded, the highest readings reported being 51° at Leith and 50° at Blackpool and Roches Point. Ground frost occurred in many districts at night. The amount of bright sunshine was generally small, but was large on some parts of our south-west coasts, and also at Aberdeen. Showers of hail, sleet or cold rain have again fallen in most parts of Great Britain.

PROBABLE CHANGES IN SYSTEM NOW PREVALENT

The anticyclone in the north will probably maintain its position, and will continue to spread north-eastwards. A low pressure system is extending northwards from France, and the gradient for North-Easterly wind is likely to become steeper, with a consequent increase in the strength of that current. On our east and south-east coasts the wind will probably rise to the force of a gale; snow or sleet showers are anticipated in most of the English districts.

FORECASTS*

For the 24 hours ending at NOON on 22nd. March. 1906.

DISTRICTS.		FORECASTS.	
0	{ SCOTLAND NORTH	{ N ^{ly} and N.E ^{ly} winds, light or moderate; fair, cold	{
1	{ SCOTLAND EAST		
2	{ ENGLAND N.E	{ N.E ^{ly} winds, freshening; cold, changeable, some snow or sleet showers	{
3	{ ENGLAND EAST		
4	{ MIDLAND COUNTIES	Same as No. 2.	
5	{ ENGLAND SOUTH	{ N.E ^{ly} winds, increasing in strength, a gale on coast; changeable, some snow or sleet showers, becoming colder.	{
DISTRICTS.		FORECASTS.	
6	{ SCOTLAND WEST	{ Same as Nos. 0 and 1.	{
7	{ ENGLAND N.W.		
8	{ ENGLAND S.W	{ N.E ^{ly} winds, strong on coast; changeable, some hail or sleet showers.	{
9	{ IRELAND NORTH		
10	{ IRELAND SOUTH	{ N.E ^{ly} winds, freshening; fair at first, some cold showers later.	{
WARNINGS		{ At 10.0 am. this morning to district 3 and part of 5. "HOIST NORTH CONE."	

Note.—The South Cone, point downwards (⌣), means that gales, or strong winds, are probable, at first from the Southward (from S.E. round by S. to N.W.). Should it appear likely that a gale beginning from between W. and N.W. is likely to veer towards N. or N.E., the North Cone is hoisted in preference to the South Cone.
The North Cone, point upwards (⌢), means that gales, or strong winds, are probable, at first from the Northward (from N.W. round by N. to S.E.). Should it appear likely that a gale beginning from between E. and S.E. is likely to veer towards S. or S.W., the South Cone is hoisted in preference to the North Cone.

NOTES:—(a) At the British and Irish Stations the readings of the barometer are not corrected for the difference in Gravity between the position of the Station and Latitude 45°. The approximate correction is:—For stations North of Malin Head and North Shields + '03 in., but for Sumburgh Head + '04 in.; for stations South of Malin Head and North Shields + '02 in., but for Scilly and Jersey + '01 in.

(b) The Sunshine for London given in this Table is recorded on the Tower of the Wesleyan Training College, Westminster; the Sunshine entered to Dungeness is recorded at Littlestone-on-Sea.

* Observations for this column not generally received.

† Observations received too late for insertion in Charts on next page.

WEATHER CHARTS

FOR Thursday, 22nd March. 1906.

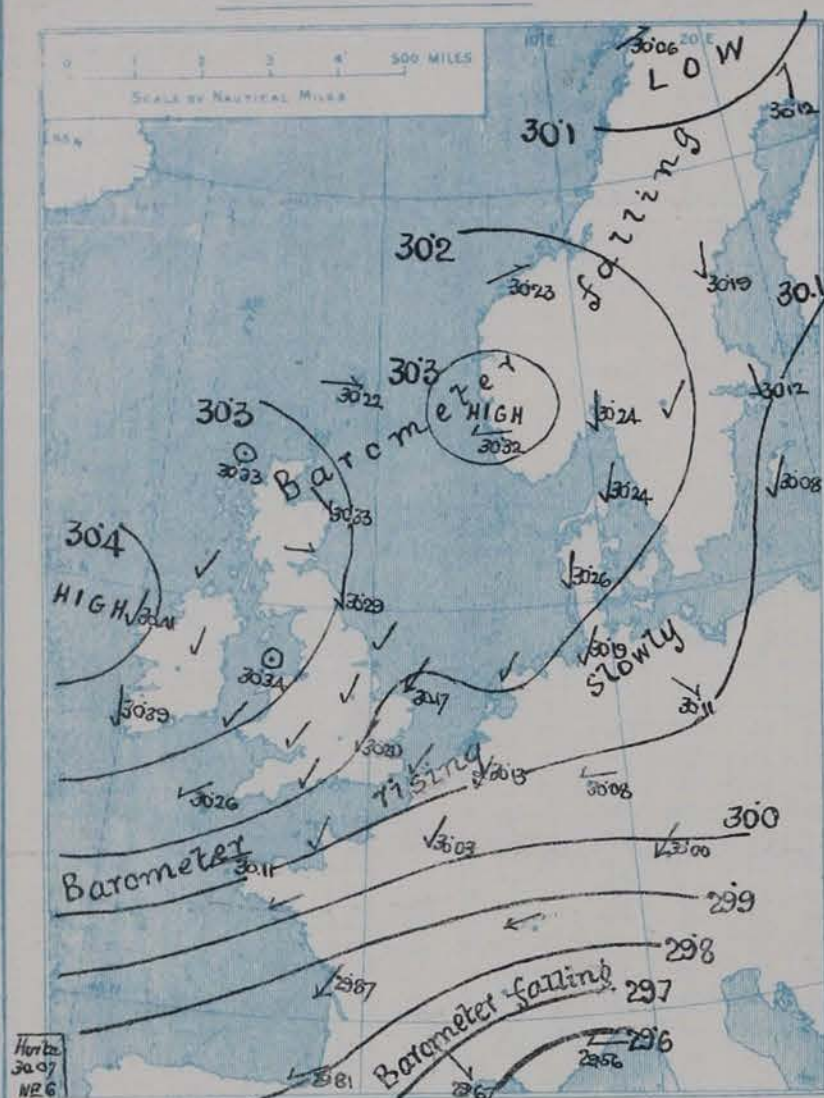

I. BAROMETER, WIND AND SEA. This Morning.

BAROMETER—Isobars are drawn for each tenth of an inch.

WIND—Arrows show Directions and Force, flying with the wind.

Force above 10 → Force 5 to 7 → } Calm ☉
Force 8 to 10 → Force 1 to 4 → }

SEA—Rough High

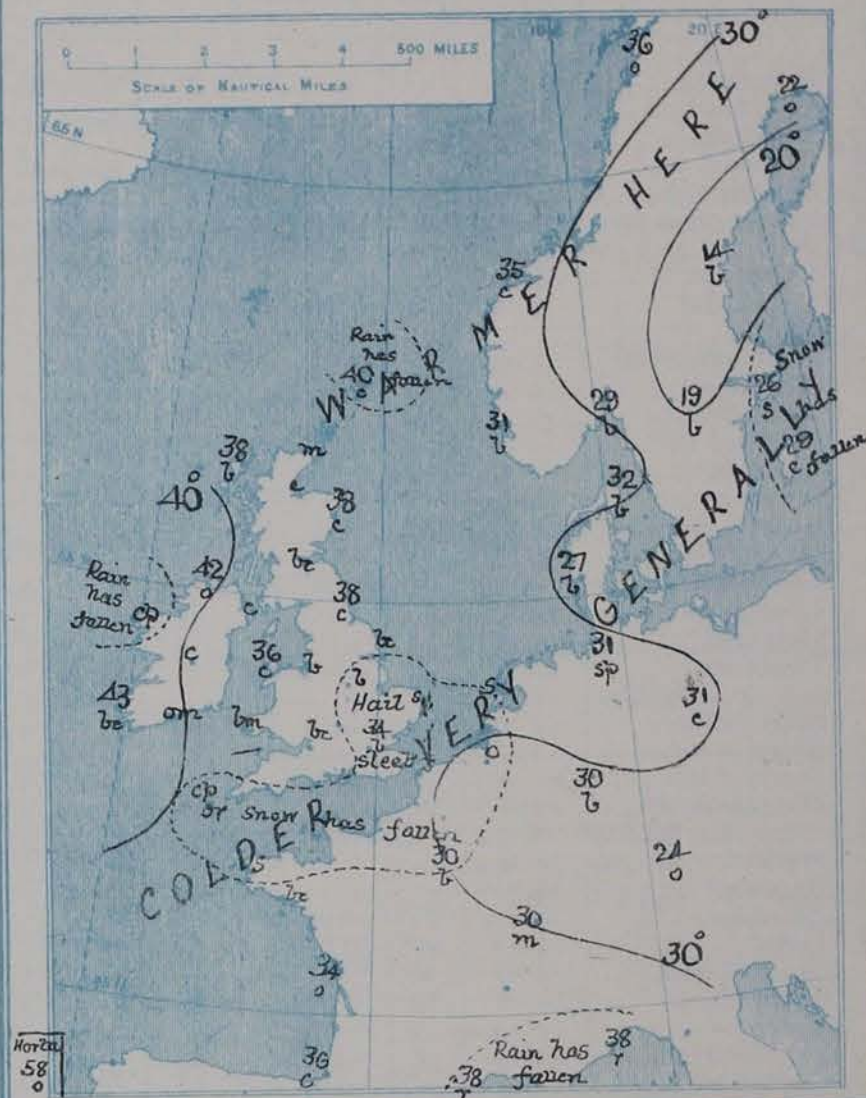

II. TEMPERATURE AND WEATHER. This Morning.

TEMPERATURE—Isotherms are drawn for each 10°.

WEATHER—Shown by Letters of the Beaufort Scale. (See P. 4.)

RAINFALL—A dotted line separates areas where rain has fallen from those without rain. The fall in past 24 hours when exceeding half an inch is shown thus - 0.6

III. BAROMETER AND WIND

Yesterday morning.

IV. LAST WEEK'S SUNSHINE.

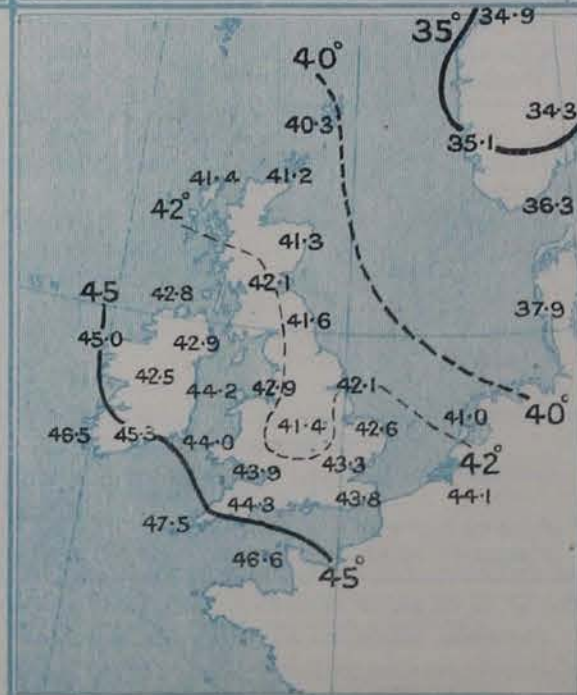

Amount recorded in various districts of the United Kingdom during the week ended SAT. 17th MARCH with the percentage of the average duration for the corresponding week.

V. Averages of DAILY TEMPERATURE

at 8 A.M. for the monthly period MARCH - APRIL

(Derived chiefly from Observations extending over the 35 years 1871-1905).

GENERAL SITUATION AT 8 A.M.

PRESSURE

Over the greater part of North-western Europe the weather remains under the influence of a large anticyclone, the highest pressures, 30.3 ins. and upwards, being found over Ireland and North Britain, and also in a small area over the south-west of Norway. The barometer has, however, begun to fall rather decidedly in the north-west of Norway, and slightly in Scotland and Sweden. In most other parts of our area the mercury is rising, but in the extreme south of France it is falling, a depression, in which readings are below 29.6 ins. having appeared over the Gulf of Genoa.

WIND

TEMPERATURE

WEATHER

AND

SEA

The barometric fall in the north is accompanied by a light South-Westerly breeze on the west coast of Norway, and by a light Westerly breeze at some of the Scotch stations. In other parts of Western Europe the wind remains chiefly North-Easterly, and at some of the English and French stations it blows freshly or strongly. Temperature has risen somewhat in the extreme north, but continues low over Western Europe as a whole. Readings above 40° are found only along the west and north coasts of Ireland; over Central Ireland the thermometer is but a degree or two above the freezing point, while at a large majority of the Continental stations it is below that level. At Munich the reading is only 24°, and at some of the Swedish stations the values are below 20°. Fair weather is reported over the greater part of our area but snow is falling on the east and south-east coasts of England, as well as at Cape Iris Nez, the Helles and Cuxhaven. In the extreme south of France the weather is rainy. The sea is slight or smooth generally, but is rather rough on the Norfolk coast.

Over a considerable portion of Great Britain the thermometer yesterday failed to reach 45° but in the south of Ireland it touched or slightly exceeded 50°. Frost occurred at night in most places; in London the thermometer on the grass fell to 25°. Showers of hail, sleet or snow were again experienced yesterday in many parts of Great Britain, but the duration of bright sunshine was, as a rule, considerable, more than 8 hours being reported at several of the English and Welsh stations.

PROBABLE CHANGES IN SYSTEM NOW PREVALENT

The anticyclone over North-western Europe is likely to move southwards, and the weather in our northern districts will be influenced shortly by cyclonic disturbances appearing in the far north. Westerly to South-Westerly winds and milder weather may therefore be expected in Scotland. Over all the more southern parts of the Kingdom the wind will remain for the present North-Easterly or Easterly, and the weather cold, with sharp frost at night.

FORECASTS*

For the 24 hours ending at NOON on 23rd March 1906.

DISTRICTS.	FORECASTS.	DISTRICTS.	FORECASTS.
0 SCOTLAND NORTH	W ^{ly} winds, moderate; fair and cold at first, becoming unsettled and milder later.	6 SCOTLAND WEST	Same as No. 1.
1 SCOTLAND EAST	W ^{ly} winds, light; fair generally, rather milder.	7 ENGLAND N.W.	Same as No. 2.
2 ENGLAND N.E.	NE ^{ly} to N.W ^{ly} winds, light; fair, cold.	8 ENGLAND S.W.	E ^{ly} and N.E ^{ly} winds, moderate; fair generally, but snow showers in places. Sharp frost inland to-night.
3 ENGLAND EAST	Same as No. 5.	9 IRELAND NORTH	Same as No. 2.
4 MIDLAND COUNTIES	Light breezes chiefly N ^{ly} ; fair, cold, sharp frost at night.	10 IRELAND SOUTH	Light breezes chiefly N ^{ly} ; fair, cold. Sharp frost inland to-night.
5 ENGLAND SOUTH	N.E ^{ly} winds, strong in places; some snow showers to-day, finer to-morrow, sharp frost probable to-night.	WARNINGS	
		The North Cone is still flying in district 3 and part of 5.	

Note.—The South Cone, point downwards (⌋), means that gales, or strong winds, are probable, at first from the Southward (from S.E. round by S. to N.W.). Should it appear likely that a gale beginning from between W and N.W. is likely to veer towards N. or N.E., the North Cone is hoisted in preference to the South Cone.
The North Cone, point upwards (⌋), means that gales, or strong winds, are probable, at first from the Northward (from N.W. round by N. to S.E.). Should it appear likely that a gale beginning from between E. and S.E. is likely to veer towards S. or S.W., the South Cone is hoisted in preference to the North Cone.

* For terms for transmission of Forecasts by Telegraph, see next page.

NOTES:—(a) At the British and Irish Stations the readings of the barometer are not corrected for the difference in Gravity between the position of the Station and Latitude 45°. The approximate correction is:—For stations North of Malin Head and North Shields + '03 in., but for Sumburgh Head + '04 in.; for stations South of Malin Head and North Shields + '02 in., but for Scilly and Jersey + '01 in.

(b) The Sunshine for London given in this Table is recorded on the Tower of the Wesleyan Training College, Westminster; the Sunshine entered to Dungeness is recorded at Littlestone-on-Sea.

* Observations for this column not generally received.

† Observations received too late for insertion in Charts on next page.

WEATHER CHARTS

FOR *Friday, 23rd March, 1906.*

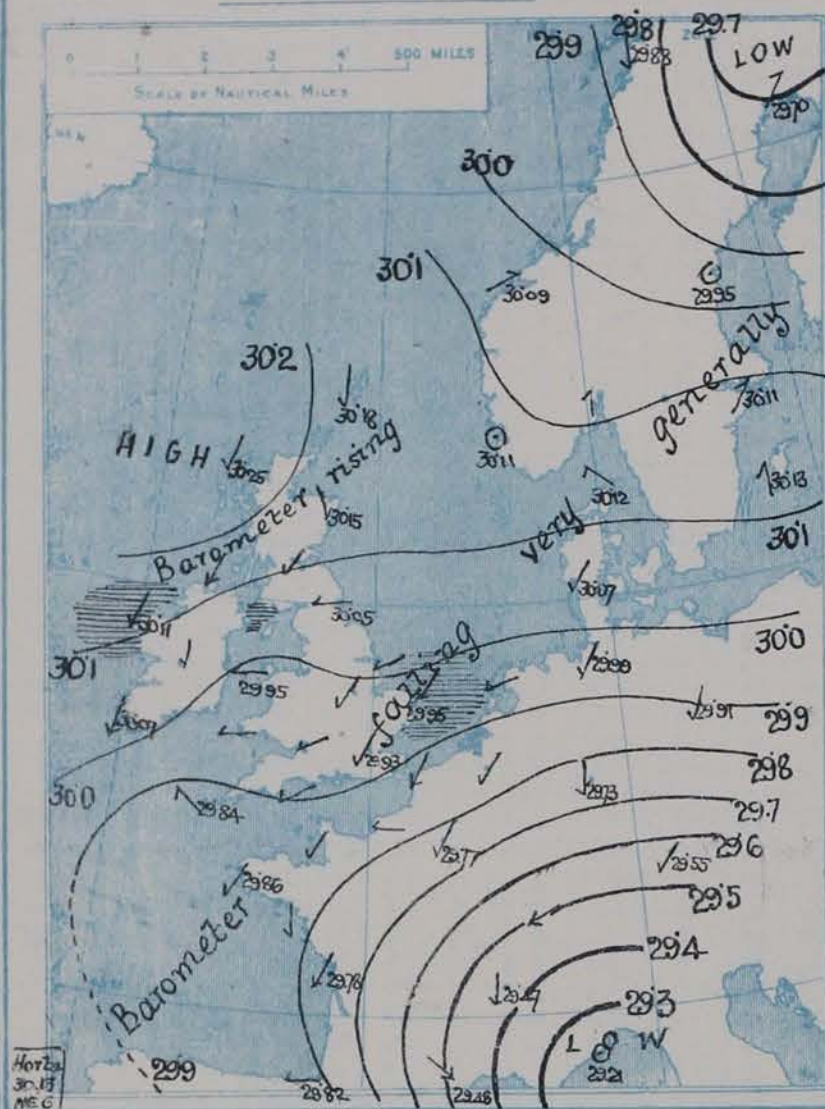

I. BAROMETER, WIND AND SEA. *This Morning.*

BAROMETER.—Isobars are drawn for each tenth of an inch.

WIND.—Arrows show Directions and Force, flying with the wind.

Force above 10 → Force 5 to 7 → } Calm ☉
Force 8 to 10 → Force 1 to 4 → }

SEA.—Rough High

II. TEMPERATURE AND WEATHER. *This Morning.*

TEMPERATURE.—Isotherms are drawn for each 10°.

WEATHER.—Shown by Letters of the Beaufort Scale. (See P. 4.)

RAINFALL.—A dotted line separates areas where rain has fallen from those without rain. The fall in past 24 hours when exceeding half an inch is shown thus - 0.6

III. BAROMETER AND WIND

Yesterday morning.

IV. RAINFALL IN 1906.

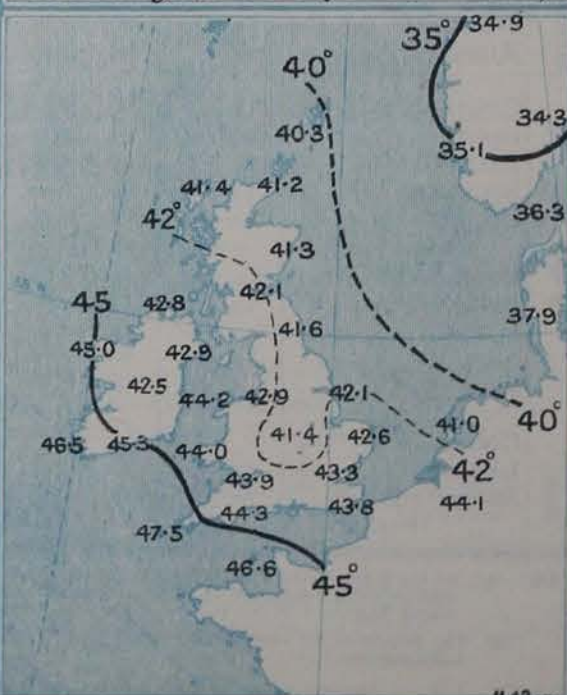

Total Amount recorded in various districts of the United Kingdom in the 11 weeks ended Saturday 17th MARCH with the percentage of the average amount for the corresponding period.

V. Averages of DAILY TEMPERATURE

at 8 A.M. for the monthly period
MARCH - APRIL

(Derived chiefly from Observations extending over the 35 years 1871-1905).

GENERAL SITUATION AT 8 A.M.

PRESSURE

Barometrical pressure is now highest, 30.2 ins. and upwards, in the neighbourhood of the Hebrides, but is also high in an area of irregular form covering the whole of Scotland, the northern parts of the North Sea and the south of Scandinavia. To the north-eastward of this region the readings decrease to below 29.7 ins. in a shallow depression over Lapland, while to the southward of it they decrease to below 29.3 ins. in a deeper disturbance having its centre, apparently, over the Gulf of Genoa. Within the high pressure system the barometer is rising, and on our western coasts it is steady, but in other parts of Western Europe a fall is in progress.

WIND

The wind after backing to the Westward in Scotland yesterday, has again become Northerly or North-Easterly over Western Europe generally; in force it varies considerably in different localities, - on the north coast of Ireland it blows very strongly. In Sweden a light breeze from South or South-West is reported.

TEMPERATURE

Temperature remains low, the only localities in which the thermometer is as high as 40° being a few scattered places on our western and northern coasts. Frost prevails over Central England and at a large majority of the Continental stations, the lowest temperatures reported being (1) In these Islands, 29° at Bath and Oxford; (2) On the Continent, 19° at Harstad, 24° at Haparanda, and 26° at Stockholm, Wisby and Janö.

WEATHER

The weather is in a rather changeable condition, with snow showers at some of the English stations, and hail at Blacksod Point. Snow is also falling at Munich and Biarritz, and rain at Nice. The sea is moderate or slight generally, but rough off the north of Ireland, and rather rough at Yarmouth.

AND

SEA

The maximum temperatures registered over England yesterday were generally below 45°; on our east and south-east coasts the thermometer did not reach 40°. Sharp frost prevailed at night in the central and southern districts; in London the thermometer on the grass fell to 21°, and at Oxford to 20°. The amount of bright sunshine recorded yesterday varied considerably; over Wales and the north of England they were generally large. Rain has fallen in Scotland, and snow showers in many parts of England.

PROBABLE CHANGES IN SYSTEM NOW PREVALENT

The depression over Southern Europe appears to be spreading northwards, and as the barometer is now rising in Scotland the tendency is for an increase in the steepness of the gradient over England, Ireland and France. Fresh or strong North-Easterly winds are therefore probable on many parts of our coasts, with a continuance of cold weather, and with snow or sleet in most of the English and Irish districts.

FORECASTS*

For the 24 hours ending at NOON on 24th March 1906.

DISTRICTS.		FORECASTS.	
0	{ SCOTLAND NORTH	}	N ^{ly} and N.E ^{ly} winds, moderate; fair generally, but snow showers in places, colder.
1	{ SCOTLAND EAST		
2	{ ENGLAND N.E	}	NE ^{ly} winds, freshening; cold, changeable, some snow showers.
3	{ ENGLAND EAST		
			Same as No. 5.
4	{ MIDLAND COUNTIES	}	Same as No. 2.
5	{ ENGLAND SOUTH		
			N.E ^{ly} winds, strong on coast; cold, changeable, some snow showers.

DISTRICTS.		FORECASTS.	
6	{ SCOTLAND WEST	}	Same as Nos. 0 and 1.
7	{ ENGLAND N.W.		
8	{ ENGLAND S.W	}	Same as No. 2.
9	{ IRELAND NORTH		
10	{ IRELAND SOUTH	}	Same as No. 5.
			N.E ^{ly} winds, strong; cold and changeable, with snow or hail showers.
WARNINGS		NONE ISSUED.	

Note.—The South Cone, point downwards (⌣), means that gales, or strong winds, are probable, at first from the Southward (from S.E. round by S. to N.W.). Should it appear likely that a gale beginning from between W. and N.W. is likely to veer towards N. or N.E., the North Cone is hoisted in preference to the South Cone.
The North Cone, point upwards (⌢), means that gales, or strong winds, are probable, at first from the Northward (from N.W. round by N. to S.E.). Should it appear likely that a gale beginning from between E. and S.E. is likely to veer towards S. or S.W., the South Cone is hoisted in preference to the North Cone.

NOTES:—(a) At the British and Irish Stations the readings of the barometer are not corrected for the difference in Gravity between the position of the Station and Latitude 45°. The approximate correction is:—For stations North of Malin Head and North Shields +.03 in., but for Sumburgh Head +.04 in.; for stations South of Malin Head and North Shields +.02 in., but for Scilly and Jersey +.01 in.

(b) The Sunshine for London given in this Table is recorded on the Tower of the Wesleyan Training College, Westminster; the Sunshine entered to Dungeness is recorded at Littlestone-on-Sea.

* Observations for this column not generally received.

† Observations received too late for insertion in Charts on next page.

WEATHER CHARTS

FOR Saturday, 24th March. 1906.

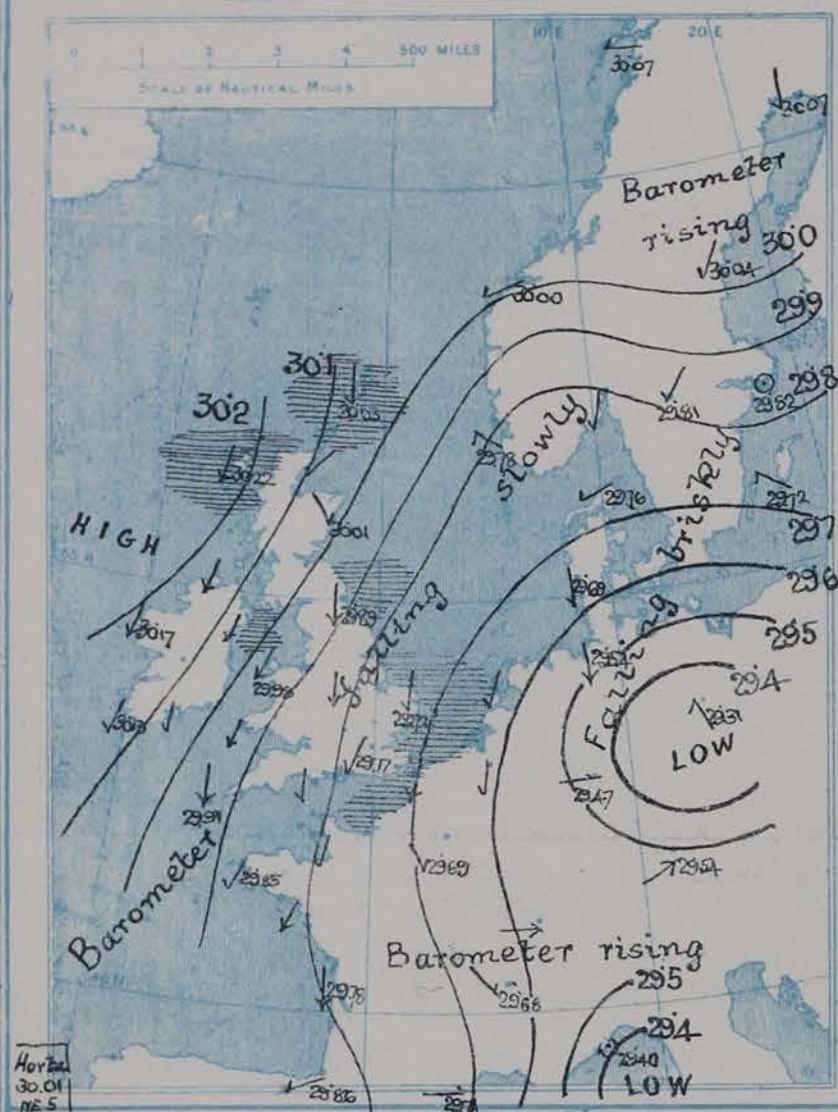

I. BAROMETER, WIND AND SEA. This Morning.

BAROMETER.—Isobars are drawn for each tenth of an inch.

WIND.—Arrows show Directions and Force, flying with the wind.

Force above 10 \rightarrow Force 5 to 7 \rightarrow } Calm \odot
Force 8 to 10 \rightarrow Force 1 to 4 \rightarrow

SEA.—Rough |||| High ■

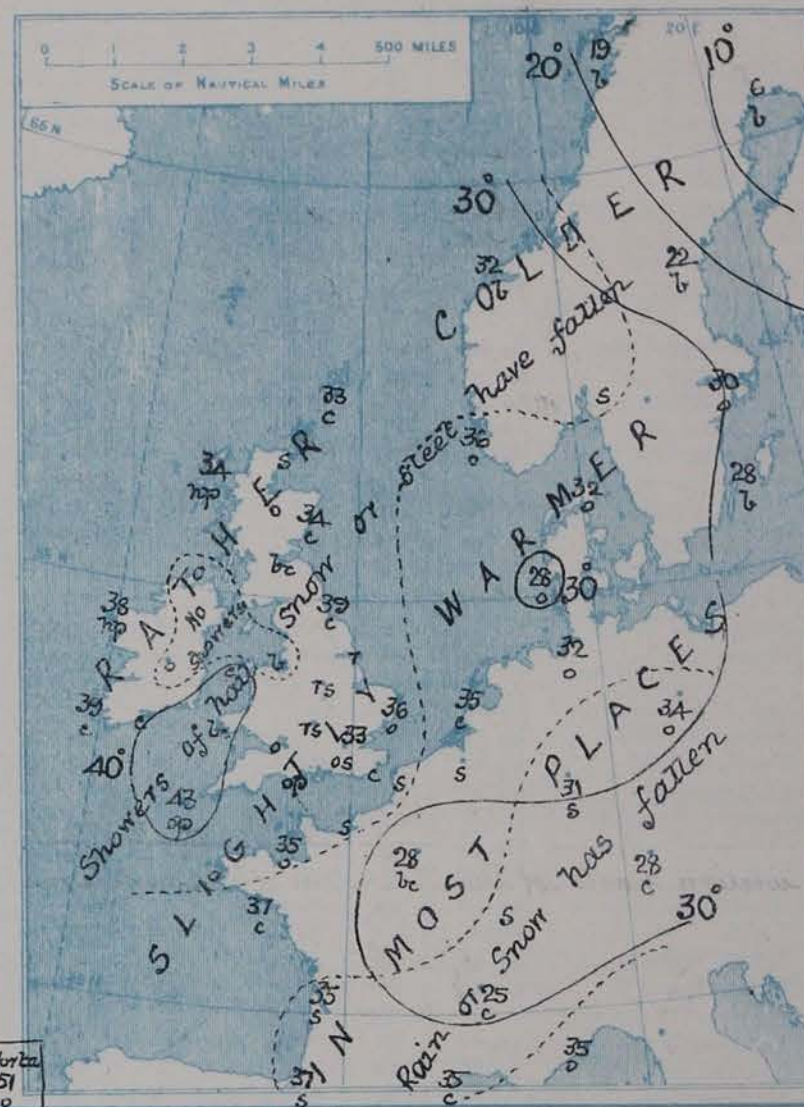

II. TEMPERATURE AND WEATHER. This Morning.

TEMPERATURE.—Isotherms are drawn for each 10°

WEATHER.—Shown by Letters of the Beaufort Scale. (See P. 4.)

RAINFALL.—A dotted line separates areas where rain has fallen from those without rain. The fall in past 24 hours when exceeding half an inch is shown thus—0.6

III. BAROMETER AND WIND

Yesterday morning.

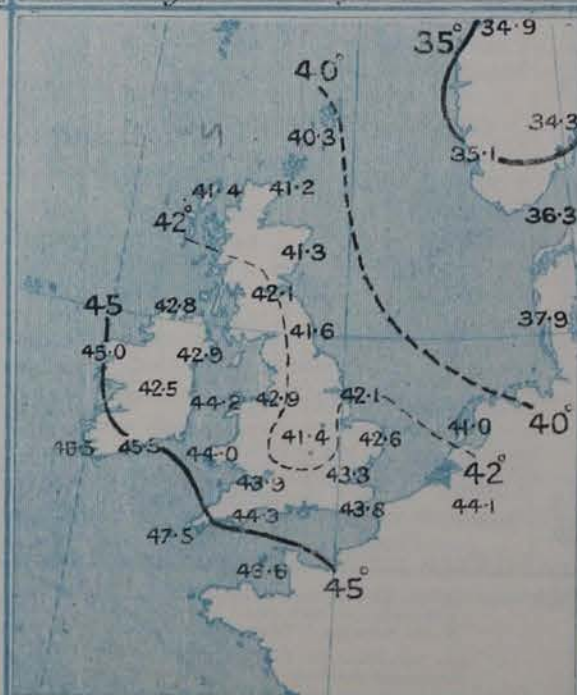

IV. BRIGHT SUNSHINE IN 1906

Total Duration recorded in various districts of the United Kingdom in the 11 weeks ended Saturday, 17th MARCH with the percentage of the average duration for the corresponding period.

V. Averages of DAILY TEMPERATURE at 8 A.M. for the monthly period MARCH - APRIL

Derived chiefly from Observations extending over the 35 years 1871-1905.

GENERAL SITUATION AT 8 A.M.

PRESSURE

The anticyclone noticed yesterday in the north has taken up a more westerly position over the Atlantic, but the highest pressures, 30.2 ins. and upwards, are still found in the neighbourhood of the Hebrides. The well-marked depression which had its centre yesterday over the Gulf of Genoa has apparently moved in a North-North-Easterly direction, and is now found over Germany, where the barometer is below 29.4 ins. In the rear of this disturbance, - i.e. over the greater part of France, the mercury is at present rising, but in most other parts of our area a fall is in progress.

WIND

TEMPERATURE

WEATHER

AND

SEA

The change in the distribution of pressure has been accompanied by a general backing of the wind to the Northward in these Islands and France, with some increase in its strength along our western and northern coasts. In Germany there is a complete circulation of air round the depression mentioned above, while in Scandinavia the wind is chiefly Easterly. Temperature has fallen in Scotland and the northern parts of Scandinavia, and remains low over Western Europe generally. In the United Kingdom the morning readings range from 40° or slightly above it on some few parts of our western coasts to a little below 35° in the north of Scotland and the south-east of England; in the latter district the readings are about 10° below the average. Frost still prevails over a large portion of the Continent. The weather remains in a very changeable condition with snow or sleet in many parts of England and the Continent, and with showers of hail or rain at Stornoway and Blackhead Point. A clear sky is reported only over the northern parts of Scandinavia. The sea is rather rough on our north-west, north and east coasts, but moderate or slight elsewhere.

In the east and south-east of England the maximum temperatures yesterday were mostly below 40°; but in many parts of Ireland and Scotland the thermometer exceeded 45°. Showers of hail, snow or sleet again occurred in many parts of the Kingdom, but in some localities, the intervals of bright sunshine were of considerable length. Frost was experienced in most districts at night.

PROBABLE CHANGES IN SYSTEM NOW PREVALENT

The Northerly type of weather is likely to continue for the present. In the western parts of the Kingdom the conditions will be influenced mainly by an anticyclone lying over the Atlantic, but in the eastern districts they will be affected by the low pressure system over Germany, and by small secondary disturbances which are likely to be developed over the North Sea. Cold, changeable weather is still probable, with snow or sleet showers in many places.

FORECASTS*

For the 24 hours ending at NOON on 25th March 1906.

DISTRICTS.

FORECASTS.

0	SCOTLAND NORTH	N ^{ly} winds, strong in places; cold, changeable, some snow or sleet showers.
1	SCOTLAND EAST	
2	ENGLAND N.E.	
3	ENGLAND EAST	N ^{ly} or N.W ^{ly} winds, moderate; cold, changeable, some snow or sleet showers.
4	MIDLAND COUNTIES	
5	ENGLAND SOUTH	

DISTRICTS.

FORECASTS.

6	SCOTLAND WEST	Same as Nos. 0 to 3.
7	ENGLAND N.W.	
8	ENGLAND S.W.	N ^{ly} winds, strong in places; cold, fair generally, but with local showers of hail or sleet
9	IRELAND NORTH	
10	IRELAND SOUTH	

WARNINGS

NONE ISSUED.

Note—The South Cone, point downwards (⌒), means that gales, or strong winds, are probable, at first from the Southward (from S.E. round by S. to N.W.). Should it appear likely that a gale beginning from between W. and N.W. is likely to veer towards N. or N.E., the North Cone is hoisted in preference to the South Cone.
The North Cone, point upwards (⌒), means that gales, or strong winds, are probable, at first from the Northward (from N.W. round by N. to S.E.). Should it appear likely that a gale beginning from between E. and S.E. is likely to veer towards S. or S.W., the South Cone is hoisted in preference to the North Cone.

NOTES:—(a) At the British and Irish Stations the readings of the barometer are not corrected for the difference in Gravity between the position of the Station and Latitude 45°. The approximate correction is:—For stations North of Malin Head and North Shields + '03 in., but for Sumburgh Head + '04 in.; for stations South of Malin Head and North Shields + '02 in., but for Scilly and Jersey + '01 in.

(b) The Sunshine for London given in this Table is recorded on the Tower of the Wesleyan Training College, Westminster; the Sunshine entered to Dungeness is recorded at Littlestone-on-Sea.

* Observations for this column not generally received.

+ Observations received too late for insertion in Charts on next page.

WEATHER CHARTS

FOR Sunday, 25th March, 1906.

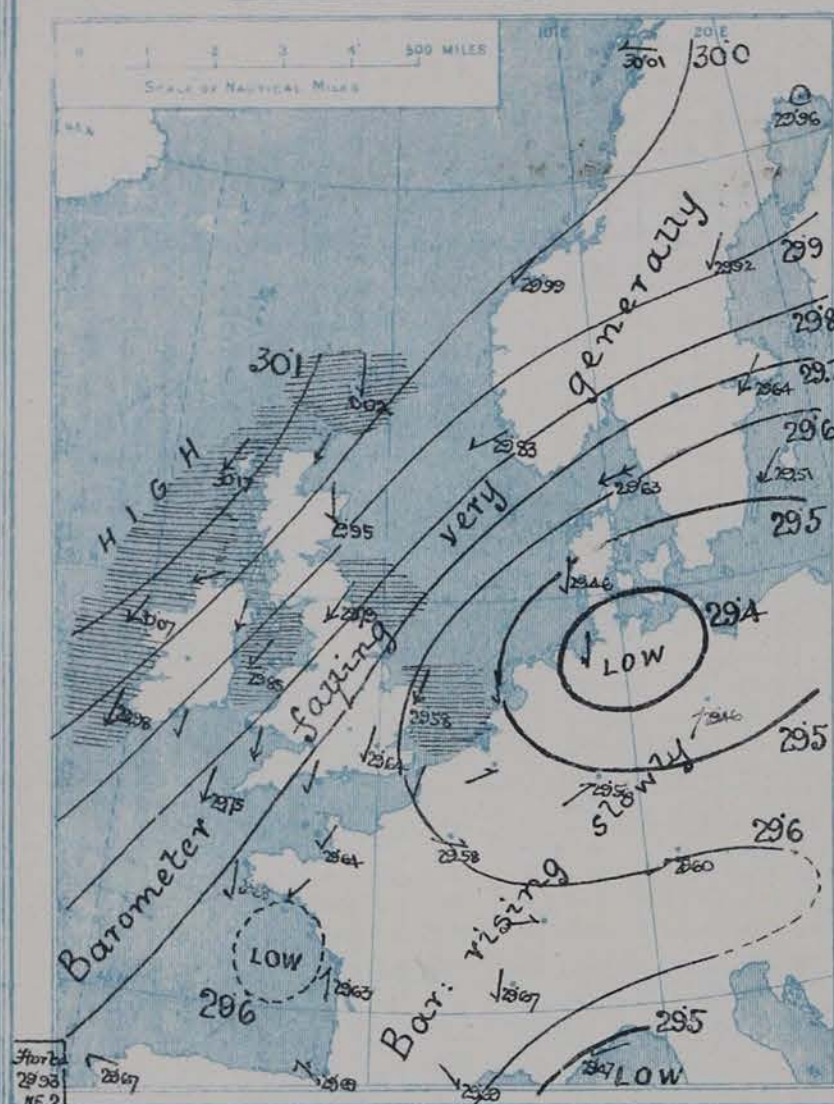

I. BAROMETER, WIND AND SEA. This Morning.

BAROMETER.—Isobars are drawn for each tenth of an inch.

WIND.—Arrows show Directions and Force, flying with the wind.

Force above 10 \rightarrow Force 5 to 7 \rightarrow } Calm \odot
Force 8 to 10 \rightarrow Force 1 to 4 \rightarrow

SEA.—Rough \square High \blacksquare

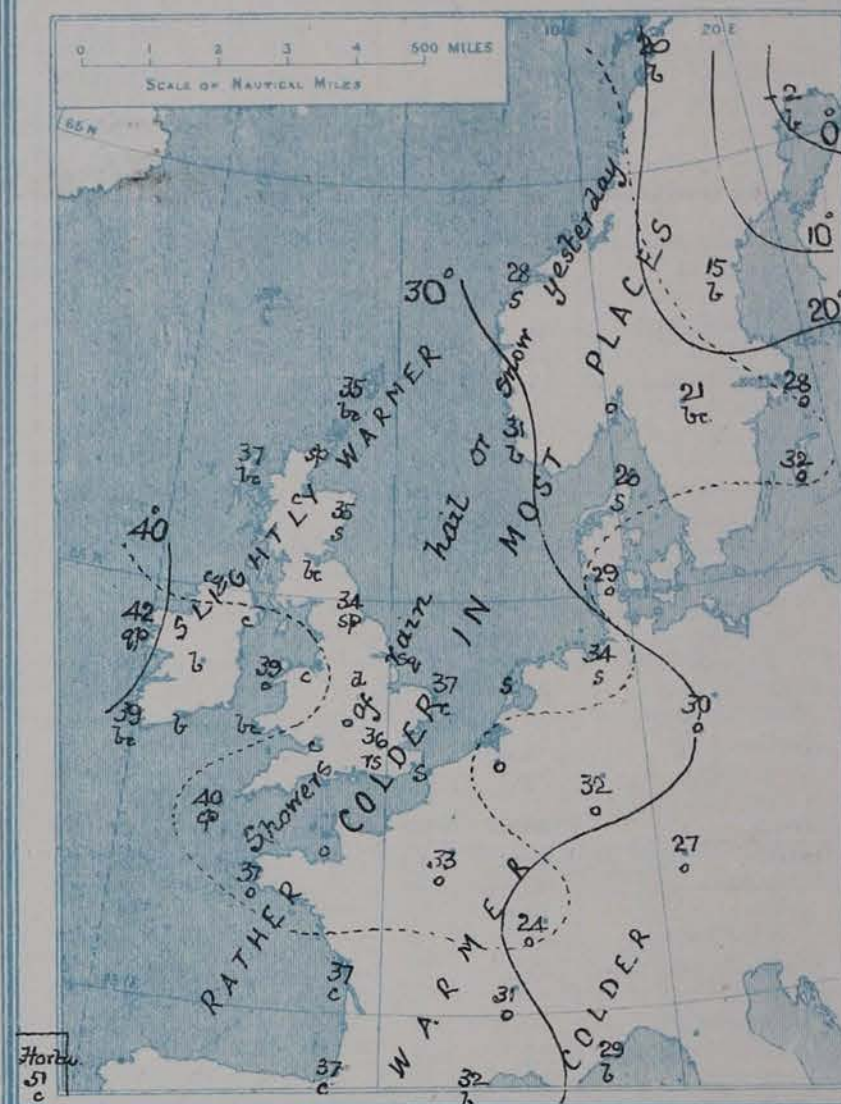

II. TEMPERATURE AND WEATHER. This Morning.

TEMPERATURE.—Isotherms are drawn for each 10°.

WEATHER.—Shown by Letters of the Beaufort Scale. (See P. 4.)

RAINFALL.—A dotted line separates areas where rain has fallen from those without rain. The fall in past 24 hours when exceeding half an inch is shown thus - 0.6

III. BAROMETER AND WIND

Yesterday morning.

IV. ACCUMULATED TEMPERATURE ABOVE 42°.

Amount recorded in various districts of the United Kingdom during the 11 weeks ended 17th MARCH with the percentage of the average for the corresponding period.

Accumulated values are expressed in Day-Degrees—a "Day Degree" signifying 1° continued for 24 hours, or any other number of degrees for an inversely proportional number of hours.

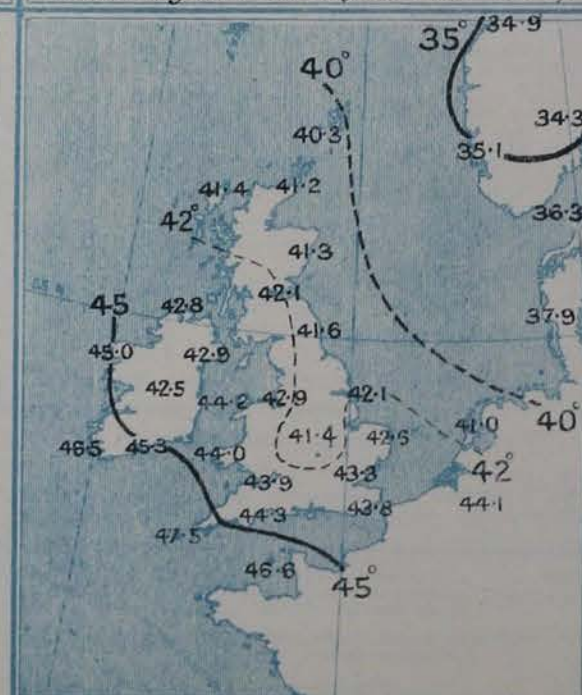

V. Averages of DAILY TEMPERATURE

at 8 A.M. for the monthly period

MARCH - APRIL

(Derived chiefly from Observations extending over the 35 years 1871-1905)

GENERAL SITUATION AT 8 A.M.

PRESSURE

Since yesterday morning the barometer has fallen over the whole of our area except the southeast of France and the southern regions of Germany. The readings now range from above 30.1 ins. in an anticyclone off our northwest coasts to about 29.3 ins. in a depression centred near Hamburg. It is also relatively low in a small system off the west of France and the Riviera as well as in another disturbance which has arrived over the southwest of the Spanish Peninsula.

WIND

TEMPERATURE

WEATHER

AND

SEA

The wind is Northeasterly over our area as a whole, but a cyclonic circulation is shown over Germany and its immediate neighbourhood. The Northeasterly current blows very strongly on various parts of our northwest coasts and with the force of a fresh gale at Skagen. In most other regions it is moderate or fresh.

Temperature has fallen generally, but risen in Scotland and also at some English and French stations. Over this country it ranges from 42° at Blackhead Point to 34° at Blackton-on-Sea, and to 33° at Birt Castle. The Continental readings range from 48° at Lisbon to 32° at Perpignan and to 29° at Nice, and from 37° along the west coast of France to 21° at Karlstad, and to -2° at Haparanda.

The sky is nearly clear at some of our western stations and in some localities both in the north and south of the Continent; over our area generally it is very cloudy or entirely overcast, with snow showers in several parts of Great Britain. Snow is also reported at Cape Gris Nez, the Helder, Skagen, and Christiansund.

The sea is rough or rather so off our north and northwest coasts as well as off the east coasts of England.

The thermometer failed to rise above 40° in several parts of these Islands yesterday and only rose to 31° and 33° respectively at Belfort and Lyons. Slight frost was experienced at night in most parts of the United Kingdom and a sharp one in France. At Nice the minimum temperature was 23°. Showers of rain, sleet, or snow were very general over Great Britain and the nearer regions of the Continent, the largest measurement being 0.47 in. at Lorient. The duration of bright sunshine was small.

PROBABLE CHANGES IN SYSTEM NOW PREVALENT

WARNINGS

NONE ISSUED.

Note.—The South Cone, point downwards (∩), means that gales, or strong winds, are probable, at first from the Southward (from S.E. round by S. to N.W.). Should it appear likely that a gale beginning from between W. and N.W. is likely to veer towards N. or N.E., the North Cone is hoisted in preference to the South Cone.
The North Cone, point upwards (∪), means that gales, or strong winds, are probable, at first from the Northward (from N.W. round by N. to S.E.). Should it appear likely that a gale beginning from between E. and S.E. is likely to veer towards S. or S.W., the South Cone is hoisted in preference to the North Cone.

NOTES:—(a) At the British and Irish Stations the readings of the barometer are not corrected for the difference in Gravity between the position of the Station and Latitude 45°. The approximate correction is:—For stations North of Malin Head and North Shields +0.3 in., but for Sumburgh Head +0.4 in.; for stations South of Malin Head and North Shields +0.2 in., but for Scilly and Jersey +0.1 in.

(b) The Sunshine for London given in this Table is recorded on the Tower of the Wesleyan Training College, Westminster; the Sunshine entered to Dungeness is recorded at Littlestone-on-Sea.

* Observations for this column not generally received.

† Observations received too late for insertion in Charts on next page.

FOR Monday, 26th March. 1906.

BAROMETER—Isobars are drawn for each tenth of an inch.

WIND.—Arrows show Directions and Force, flying with the wind

WIND—Arrows show Directions and Force, flying with the wind.

Force about 10 \Rightarrow \longrightarrow Force 5 to 7 \longrightarrow \longrightarrow } Calm ☉
Force 8 to 10 \Rightarrow \longrightarrow Force 1 to 4 \longrightarrow \longrightarrow

SEA — Rough High

TEMPERATURE.—Isotherms are drawn for each 10°

WEATHER.—Shown by Letters of the Beaufort Scale. (See P. 4.)

RAINFALL.—A dotted line separates areas where rain has fallen from those without rain. The fall in past 24 hours when exceeding half an inch is shown thus: 0.6

Yesterday morning.

Amount recorded

in various districts of the United Kingdom during the week ended Sat^y 17th MARCH, with the percentage of the average for the corresponding week.

Accumulated values are expressed in Day-Degrees—a "Day Degree" signifying 1° continued for 24 hours, or any other number of degrees for an inversely proportional number of hours

*(Derived chiefly from Observations
extending over the 35 years 1871-1905).*

1142 a.m.

GENERAL SITUATION AT 8 A.M.

PRESSURE

The Atlantic anticyclone has again spread north-eastwards, its borders extending across Scotland and the North Sea to the west of Norway; the highest pressures, 30.1 ins. and upwards, are, however, still found in the Hebrides. The lowest readings, 29.3 ins. and less, are reported in a depression over the Spanish Peninsula. Three other low pressure systems are found over our area, one off the north-west of Norway, another over the Baltic, and a third (a very shallow system) over the Netherlands. In the west of France the barometer appears to be falling rather decidedly, but in most other parts of Western Europe it is at present rising.

WIND

North-Easterly winds are again blowing over the greater part of our area, strongly at some of the western stations in these Islands and France. In the upper part of the Baltic there is a gale from the Northward, but in Germany the wind is light and rather variable. Temperature has changed rather irregularly, the general tendency being for a slight further decrease, excepting in the south of France, where a rather decided rise has occurred. The readings are now below 40° in all parts of the United Kingdom, and below 35° in several parts of England and Central Ireland, the lowest reported being 32° at Beth and Oxford. Frost prevails over the northern and central portions of the Continent generally; at many of the Swedish stations the thermometer is below 20°, and at Haparanda it stands at 4°.

TEMPERATURE

WEATHER

AND

SEA

The weather is at present fine in the west and south of these Islands and the north-west of France, as well as in Scandinavia, Denmark and Germany. Snow is, however, falling at several of our own northern and central stations, as well as at Brussels and Cape Gris Nez; rain is reported at Biarritz and St. Raphael. The sea is moderate or slight generally, but rather rough on the east coasts of England, and rough at Donaghadee. The maximum temperatures reported over these Islands yesterday were below 45° at all but the coast stations in the west and south-west. Over England the amount of bright sunshine was small, but in Ireland and Scotland it was much larger. Showers of hail, sleet or snow fell in all districts, and lightning was seen at night at Roche's Point and Scilly.

PROBABLE CHANGES IN SYSTEM NOW PREVALENT

With a rising barometer in these Islands and a decided fall in progress in the west of France the tendency is in favour of an increase in the steepness of the barometric gradient over England and Ireland. The North-Easterly wind is therefore likely to blow strongly on many parts of our coasts, and the weather will remain cold and changeable over the United Kingdom generally, with showers of snow or sleet in most districts.

FORECASTS*

For the 24 hours ending at NOON on 27th March 1906.

DISTRICTS.

FORECASTS.

0	SCOTLAND NORTH	N ^{ly} winds, light or moderate; cold, cloudy, snow showers in places.
1	SCOTLAND EAST	
2	ENGLAND N.E.	Same as No. 5.
3	ENGLAND EAST	
4	MIDLAND COUNTIES	N.E ^{ly} winds, freshening; cold, changeable, some snow showers.
5	ENGLAND SOUTH	
		N.E ^{ly} winds, moderate to strong; cold, changeable, some snow showers.

DISTRICTS.

FORECASTS.

6	SCOTLAND WEST	Same as Nos. 0 and 1.
7	ENGLAND N.W.	
8	ENGLAND S.W.	N.E ^{ly} winds, strong; cold, changeable, some hail or snow showers.
9	IRELAND NORTH	
10	IRELAND SOUTH	
	WARNINGS	
		At 7.0 p.m. yesterday to districts 2, 3, 6 to 10 and part of 0, HOIST NORTH CONE

Note.—The South Cone, point downwards (⌵), means that gales, or strong winds, are probable, at first from the Southward (from S.E. round by S. to N.W.). Should it appear likely that a gale beginning from between W. and N.W. is likely to veer towards N. or N.E., the North Cone is hoisted in preference to the South Cone.

The North Cone, point upwards (⌴), means that gales, or strong winds, are probable, at first from the Northward (from N.W. round by N. to S.E.). Should it appear likely that a gale beginning from between E. and S.E. is likely to veer towards S. or S.W., the South Cone is hoisted in preference to the North Cone.

* For terms for transmission of Forecasts by Telegraph, see next page.

(b) The Sunshine for London given in this Table is recorded on the Tower of the Wesleyan Training College, Westminster; the Sunshine entered to Dungeness is recorded at Littlestone-on-Sea.

* Observations for this column not generally received.

† Observations received too late for insertion in Charts on next page.

WEATHER CHARTS

FOR Tuesday, 27th March, 1906.

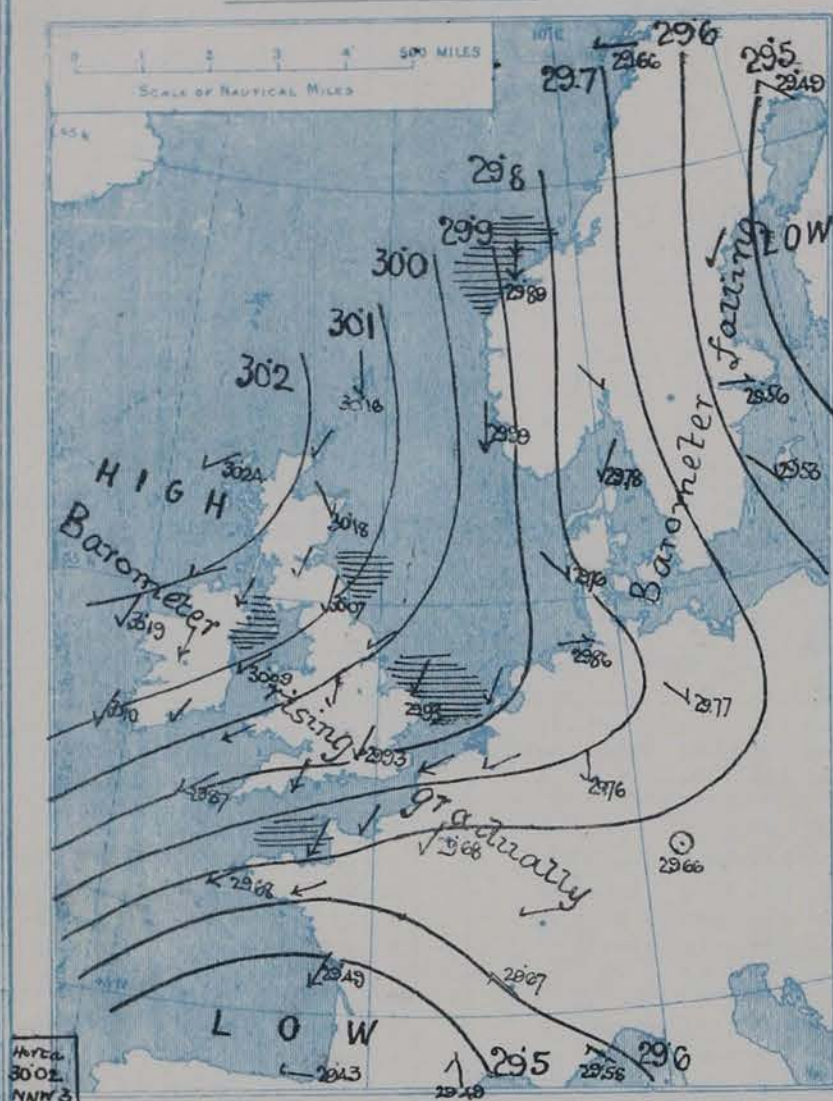

I. BAROMETER, WIND AND SEA. This Morning.

BAROMETER.—Isobars are drawn for each tenth of an inch.

WIND.—Arrows show Directions and Force, flying with the wind.

Force above 10 ———— : Force 5 to 7 ———— : } Calm ☉
Force 8 to 10 ———— : Force 1 to 4 ———— :

SEA.—Rough ———— High ————

II. TEMPERATURE AND WEATHER. This Morning.

TEMPERATURE.—Isotherms are drawn for each 10°.

WEATHER.—Shown by Letters of the Beaufort Scale. (See P. 4.)

RAINFALL.—A dotted line separates areas where rain has fallen from those without rain. The fall in past 24 hours when exceeding half an inch is shown thus — 0.6

III. BAROMETER AND WIND

Yesterday morning.

IV. EXTREMES OF TEMPERATURE

recorded

in various districts of the United Kingdom

during the week ended Sat. 24th MARCH

V. Averages of DAILY TEMPERATURE

at 8 A.M. for the monthly period

MARCH - APRIL

(Derived chiefly from Observations extending over the 35 years 1871-1905).

GENERAL SITUATION AT 8 A.M.

PRESSURE

The type of weather over Western Europe remains unchanged. The highest barometric pressures, 30.2 ins. and upwards, are still found over the west and north of Scotland and the adjacent portions of the Atlantic, while the lowest, 29.4 ins. and less, are reported in a depression lying over Spain. Readings below 29.5 ins. are also found in another depression which has reached Finland from the north-westward. Over Sweden, Germany and the Baltic the barometer is apparently falling, but in all other parts of our area a gradual rise is in progress.

WIND

TEMPERATURE

WEATHER

AND

SEA

North-Easterly winds are reported over the greater part of these Islands and France, and blow strongly at several of our eastern and southern stations. The influence of the depression over Northern Europe is marked by Easterly breezes in the north of Scandinavia and North-Westerly or Westerly breezes in the south of Sweden and in North Germany; in the west of Norway the wind is strong to a gale from the Northward. Temperature has risen slightly in most places, but is still very low for the time of year. In these Islands the readings range from 40° or a trifle above it on our north-east coasts to between 33° and 35° over nearly the whole of Central and Southern England. Over the northern and central parts of the Continent the thermometer is again below the freezing point, the lowest readings reported being 17° at Haparanda and 24° at Stockholm and Karlsbad. The weather is at present fair in most parts of Western Europe, but a good deal of cloud prevails locally, and hail is falling at Shields. At most of the Scandinavian stations the sky is clear; snow is, however, reported at Christiansund. The sea is rough at Jersey, and rather rough on our east coasts, as well as at Donaghadee, but moderate or slight elsewhere.

Over a considerable portion of Eastern and Central England the thermometer yesterday did not reach 40°; readings as high as 45° being reported only in the extreme north of Scotland. Showers of hail, sleet or snow were again experienced in most parts of Great Britain, but in many places in the west and south the amount of bright sunshine was large. Frost occurred at night in nearly all districts.

PROBABLE CHANGES IN SYSTEM NOW PREVALENT

There are at present no signs of any material change in the general conditions. The northern anticyclone will probably expand temporarily in a north-easterly direction towards Norway. The depression over Spain appears to be filling up, and the barometric gradient over our southern districts will become less steep. Cold North-Easterly winds are likely to continue over the United Kingdom generally, with occasional showers of snow or sleet in many parts of Great Britain.

FORECASTS*

For the 24 hours ending at NOON on 28th March 1906.

DISTRICTS.		FORECASTS.	DISTRICTS.		FORECASTS.
0	SCOTLAND NORTH	N ^{ly} or N.E ^{ly} winds, light; fair generally, but snow showers in places. Remaining cold.	6	SCOTLAND WEST	N.E ^{ly} winds, light; fair, cold.
1	SCOTLAND EAST		7	ENGLAND N.W.	
2	ENGLAND N.E.	N.E ^{ly} winds, light or moderate; cold, changeable, some hail or sleet showers.	8	ENGLAND S.W.	Same as No. 5.
3	ENGLAND EAST	Same as No. 5.	9	IRELAND NORTH	N.E ^{ly} winds, moderate or fresh; fair, cold.
4	MIDLAND COUNTIES	Same as No. 2.	10	IRELAND SOUTH	
5	ENGLAND SOUTH	N.E ^{ly} winds, moderate inland, fresh or strong on coast; cold, changeable, some snow or sleet showers.	WARNINGS		NONE ISSUED.

Note.—The South Cone, point downwards (T), means that gales, or strong winds, are probable, at first from the Southward (from S.E. round by S. to N.W.). Should it appear likely that a gale beginning from between W. and N.W. is likely to veer towards N. or N.E., the North Cone is hoisted in preference to the South Cone. The North Cone, point upwards (T), means that gales, or strong winds, are probable, at first from the Northward (from N.W. round by N. to S.E.). Should it appear likely that a gale beginning from between E. and S.E. is likely to veer towards S. or S.W., the South Cone is hoisted in preference to the North Cone.

* For terms for transmission of Forecasts by Telegraph, see next page.

NOTES:—(a) At the British and Irish Stations the readings of the barometer are not corrected for the difference in Gravity between the position of the Station and Latitude 45°. The approximate correction is:—For stations North of Malin Head and North Shields + '03 in., but for Sumburgh Head + '04 in.; for stations South of Malin Head and North Shields + '02 in., but for Scilly and Jersey + '01 in.

(b) The Sunshine for London given in this Table is recorded on the Tower of the Wesleyan Training College, Westminster; the Sunshine entered to Dungeness is recorded at Littlestone-on-Sea.

†NOTE: The corresponding values in yesterday's report should have been respectively 29.36 ins. and 29.61 ins.

WEATHER CHARTS

FOR Wednesday, 28th March, 1906.

I. BAROMETER, WIND AND SEA. This Morning.

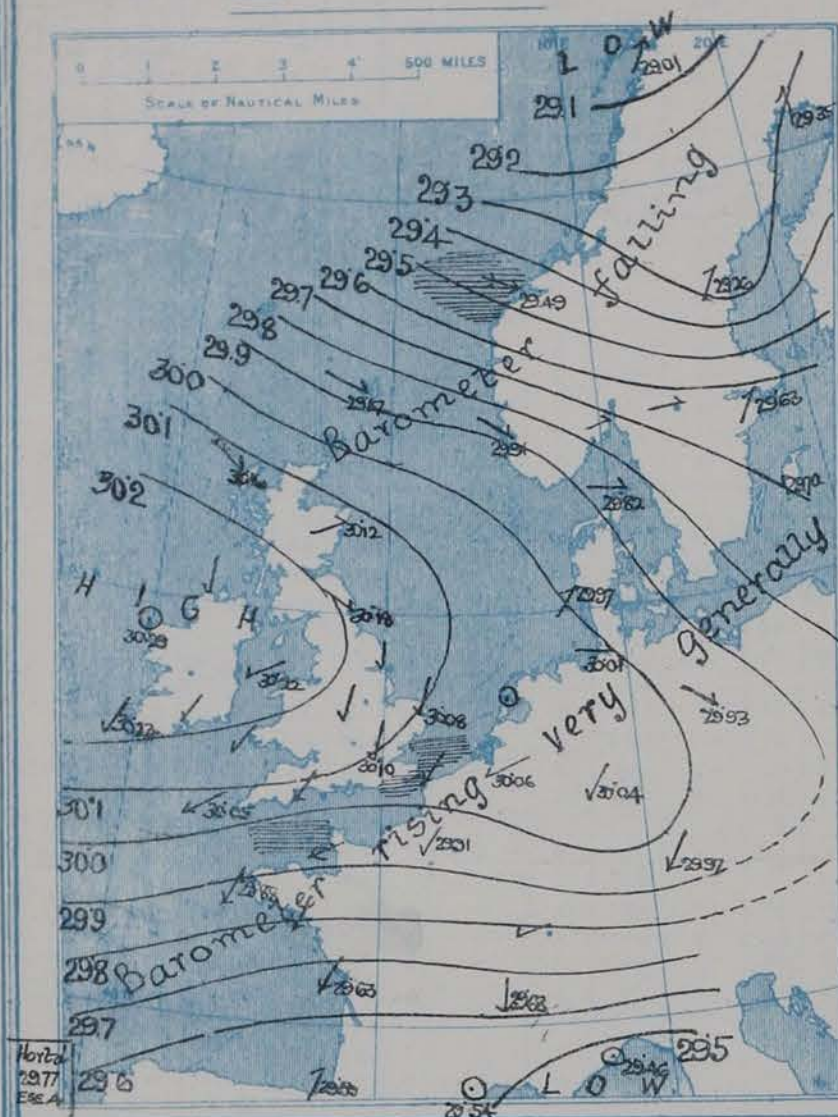

BAROMETER—Isobars are drawn for each tenth of an inch.

WIND—Arrows show Directions and Force, flying with the wind.

Force above 10 → Force 5 to 7 → } Calm ⊙

Force 8 to 10 → Force 1 to 4 → }

SEA—Rough High

II. TEMPERATURE AND WEATHER. This Morning.

TEMPERATURE—Isotherms are drawn for each 10°.

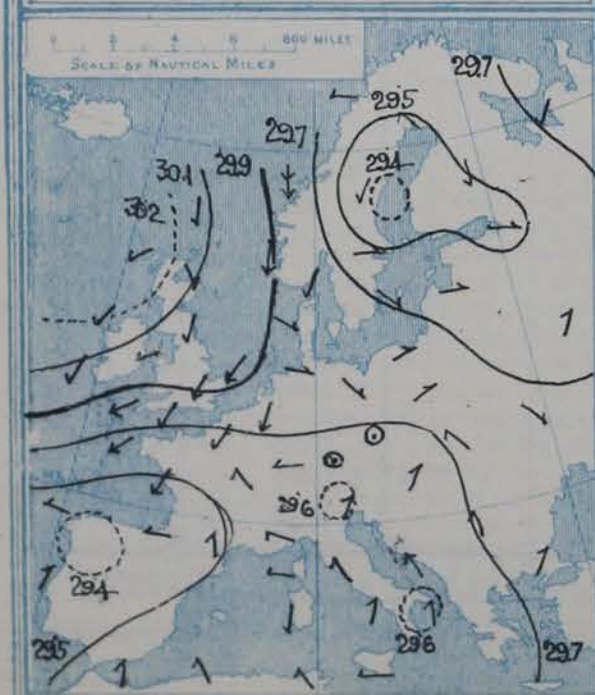

WEATHER—Shown by Letters of the Beaufort Scale. (See P. 4.)

RAINFALL—A dotted line separates areas where rain has fallen from those without rain. The fall in past 24 hours when exceeding half an inch is shown thus - 0.6

III. BAROMETER AND WIND

Yesterday morning.

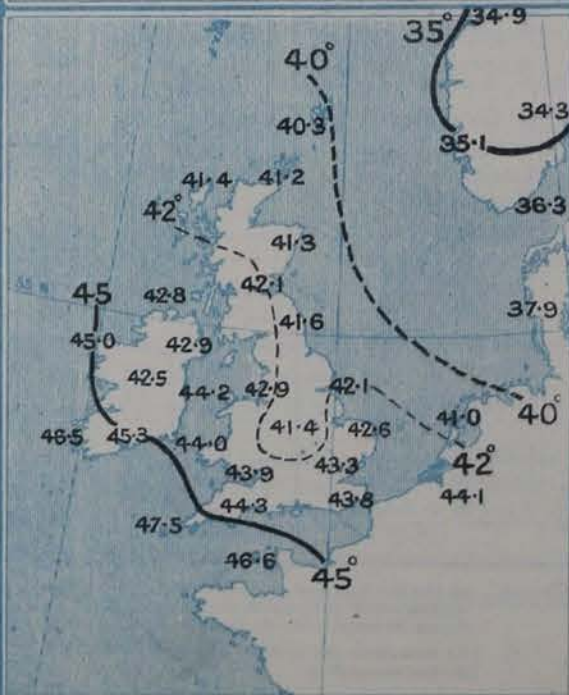

IV. LAST WEEK'S RAINFALL.

Amount recorded in various districts of the United Kingdom during the week ended Sat^y 24th MARCH, with the percentage of the average amount for the corresponding week.

V. Averages of DAILY TEMPERATURE at 8 A.M. for the monthly period MARCH - APRIL

(Derived chiefly from Observations extending over the 35 years 1871-1905).

GENERAL SITUATION AT 8 A.M.

PRESSURE

The anticyclone which lay yesterday off our extreme north-west coasts has extended eastwards and southwards, and now embraces nearly the whole Kingdom, the highest pressures, 30.2 ins. and upwards, being found over Ireland and the Irish Sea. The centre of a deep depression, with readings apparently below 29.0 ins. is now shown off the coasts of Finmark, and the barometer is falling briskly in Norway, and less decidedly in Scotland. Another depression with readings below 29.5 ins., is lying off the south coasts of France.

AND

SEA

The wind remains North-Easterly over the greater part of England and France, and blows strongly in the Channel and Bay of Biscay. Under the influence of the northern disturbance it has backed to the North-Westward or Westward in Scotland and Norway (blowing a gale at Christiansund) and to the South-Westward in Sweden. Temperature has changed rather irregularly but has risen decidedly in the extreme north of Scotland, where the readings are now above 40°. In other parts of our Islands the thermometer is below that level, and in central Ireland it is below the freezing point. Frost is also prevalent over the northern and central parts of the Continent, the lowest readings reported being 4° F. at Staparanda, 22° at Stockholm and 26° at Munich. The weather is at present fair or fine over Western Europe as a whole, but is dull in a few isolated localities. Snow is falling at Bodø, and rain at Christiansund and Stormoway. The sea is rough at some of the English Channel stations, and also at Christiansund, but is moderate to smooth elsewhere.

The maximum temperatures recorded yesterday were again below 45° in most parts of Great Britain; at Darwen the thermometer did not exceed 36°. Frost occurred at night in most districts, the sheltered thermometer falling to 26° at Nairn and Birk bath. The amount of bright sunshine recorded yesterday was generally small, but large on some parts of our south-west, west and north-west coasts; at Stormoway there were as many as 10½ hours.

PROBABLE CHANGES IN SYSTEM NOW PREVALENT

The brisk decrease of pressure which is taking place in Scandinavia is likely to cause an increase in the barometric gradient over our own extreme northern coasts, where the wind will blow very strongly from the North-Westward. The anticyclone over these Islands will probably move away in a south-westerly direction, and milder weather will set in shortly over the northern parts of the Kingdom. In the south the weather will remain cold for the present.

FORECASTS*

For the 24 hours ending at NOON on 29th March, 1906.

DISTRICTS.

FORECASTS.

1	SCOTLAND NORTH	Strong N.W. ^{ly} winds, moderating and backing later; squally, some cold rain or sleet.
2	SCOTLAND EAST	W ^{ly} and N.W. ^{ly} winds, freshening; fair at first, some showers later, rather milder.
3	ENGLAND EAST	N.E. ^{ly} winds, backing later to the N. ^{ly} or N.W. ^{ly} ; fair to-day, sharp frost to night, milder and less settled to-morrow.
4	MIDLAND COUNTIES	
5	ENGLAND SOUTH	

DISTRICTS.

FORECASTS.

6	SCOTLAND WEST	N.W. ^{ly} to W. ^{ly} winds, moderate; fair at first, some showers later, rather milder.
7	ENGLAND N.W.	N. ^{ly} and N.W. ^{ly} winds, light; fair at first, some showers later, rather milder.
8	ENGLAND S.W.	N.E. ^{ly} to N. ^{ly} winds, light; fair generally, sharp frost at inland stations to night.
9	IRELAND NORTH	Same as No. 6.
10	IRELAND SOUTH	Same as No. 8.
WARNINGS		At 9.45 am to-day to parts of districts 0 and 1 HOIST NORTH CONE.

Note.—The South Cone, point downwards (⏚), means that gales, or strong winds, are probable, at first from the Southward (from S.E. round by S. to N.W.). Should it appear likely that a gale beginning from between W. and N.W. is likely to veer towards N. or N.E., the North Cone is hoisted in preference to the South Cone.
The North Cone, point upwards (⏚), means that gales, or strong winds, are probable, at first from the Northward (from N.W. round by N. to S.E.). Should it appear likely that a gale beginning from between E. and S.E. is likely to veer towards S. or S.W., the South Cone is hoisted in preference to the North Cone.

NOTES:—(a) At the British and Irish Stations the readings of the barometer are not corrected for the difference in Gravity between the position of the Station and Latitude 45°. The approximate correction is:—For stations North of Malin Head and North Shields + '03 in., but for Sumburgh Head + '04 in.; for stations South of Malin Head and North Shields + '02 in., but for Scilly and Jersey + '01 in.

(b) The Sunshine for London given in this Table is recorded on the Tower of the Wesleyan Training College, Westminster; the Sunshine entered to Dungeness is recorded at Littlestone-on-Sea.

* Observations for this column not generally received.

† Observations received too late for insertion in Charts on next page.

WEATHER CHARTS

FOR Thursday, 29th March, 1906.

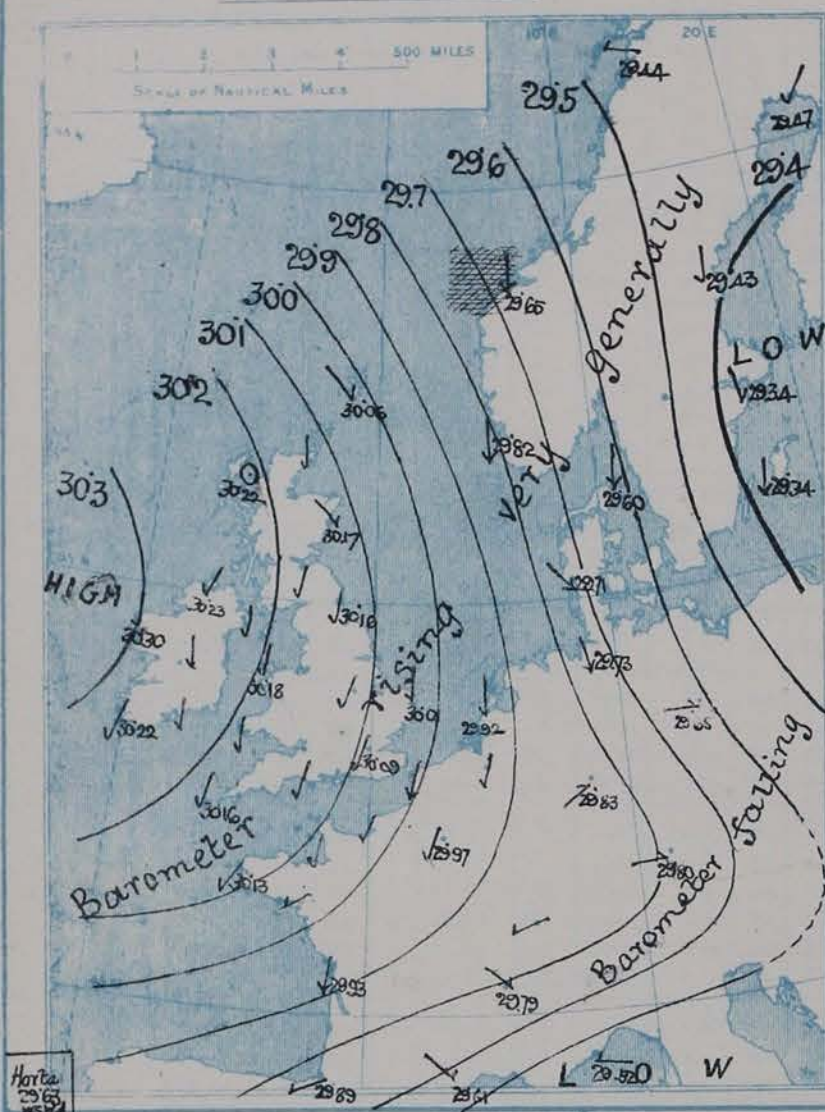

I. BAROMETER, WIND AND SEA. This Morning.

BAROMETER—Isobars are drawn for each tenth of an inch.

WIND—Arrows show Directions and Force, flying with the wind.

Force above 10 → : Force 5 to 7 → : } Calm ☉
Force 8 to 10 → : Force 1 to 4 → :

SEA—Rough High

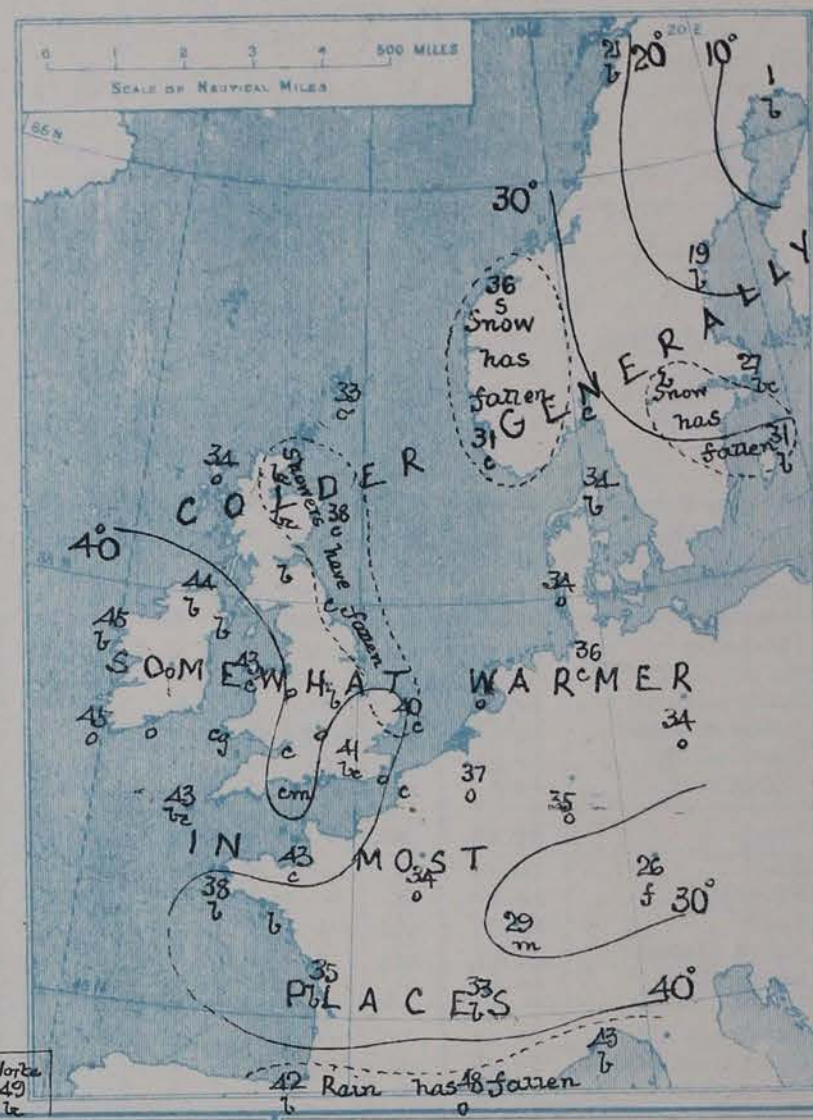

II. TEMPERATURE AND WEATHER. This Morning.

TEMPERATURE—Isotherms are drawn for each 10°.

WEATHER—Shown by Letters of the Beaufort Scale. (See P. 4.)

RAINFALL—A dotted line separates areas where rain has fallen from those without rain. The fall in past 24 hours when exceeding half an inch is shown thus - 0.6

III. BAROMETER AND WIND

Yesterday morning.

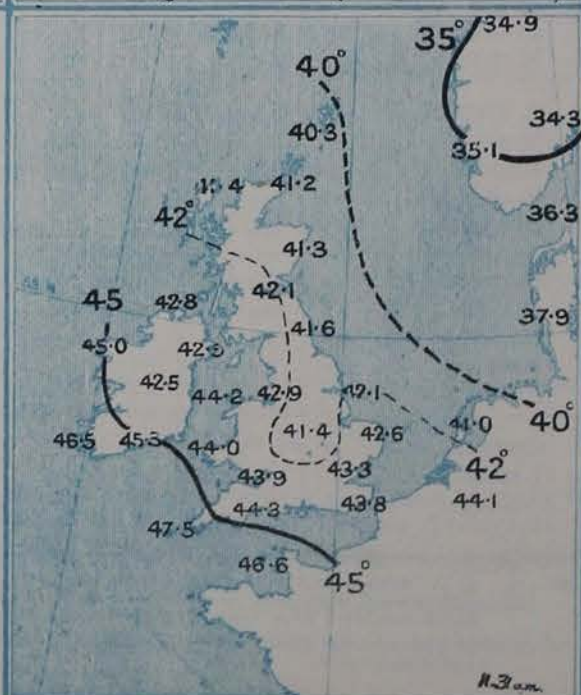

IV. LAST WEEK'S SUNSHINE.

Amount recorded in various districts of the United Kingdom during the week ended Sat. 24th MARCH with the percentage of the average duration for the corresponding week.

V. Averages of DAILY TEMPERATURE at 8 A.M. for the monthly period MARCH - APRIL

(Derived chiefly from Observations extending over the 35 years 1871-1905).

GENERAL SITUATION AT 8 A.M.

PRESSURE

The depression noticed yesterday morning off the Norwegian coasts has travelled south-eastwards and is now passing away across Russia. The Atlantic anticyclone is again spreading eastwards, and now dominates the whole of these Islands and the neighbouring portions of the North Sea and the Continent; in the extreme west of Ireland the barometer has risen to 30.3 ins. The lowest pressures, 29.4 ins. and less, are found to the eastward of Sweden, but the barometer is also low, 29.6 ins. and less, in the extreme south of France.

WIND

TEMPERATURE

WEATHER

AND

SEA

Northerly winds are again reported over North-western Europe generally, but North-easterly winds in France, and light westerly breezes in Germany. On the west coast of Norway the Northerly current is very strong in force. Temperature has risen somewhat over Ireland, England and the neighbouring parts of the Continent, but has fallen in the north of Scotland, and also in Scandinavia. In the west of these Islands the readings range between 42° and 45°, and differ but little from the average. In all other parts of our area the thermometer continues low for the time of year, the lowest readings reported being, - (1) In these Islands 33° to 35° in the north of Scotland; (2) On the Continent 17° at Haparanda, 19° at Hernoisand and 21° at Bodö. In parts of Central France and South Germany the readings are below the freezing point. The weather is at present fair over nearly the whole of Western Europe, but dull in a few isolated localities. Snow is falling at Christiansund. The sea is slight or smooth generally, but moderate off our own east coasts, and high at Christiansund. At many places in the north and east of England the thermometer yesterday failed to reach 45°, but at Naism it rose to 50°, and at Leith to 56°. Frost again occurred at night in many parts of Great Britain. In the west and south the duration of bright sunshine yesterday was very large; at Bournemouth and Jersey it amounted to more than 11 hours.

PROBABLE CHANGES IN SYSTEM NOW PREVALENT

The anticyclone will probably continue to extend eastwards and southwards, and fair, cold weather is therefore likely to prevail in most districts, with however, local showers in the east and south-east. On our extreme northern coasts the conditions may shortly be affected by a new low pressure system moving over the upper part of the Atlantic.

- 4 MIDLAND COUNTIES
- 5 ENGLAND SOUTH

N.W.^{ly} to W.^{ly} winds, moderate; fair and cold to-day, unsettled to-morrow and rather milder.

N.^{ly} and N.W.^{ly} winds, moderate; fair generally, but some cold showers in places.

N.E.^{ly} to N.^{ly} winds, moderate or light; fair generally, but some local showers. Becoming temporarily colder.

DISTRICTS.

FORECASTS.

- 6 SCOTLAND WEST
- 7 ENGLAND N.W.
- 8 ENGLAND S.W.
- 9 IRELAND NORTH
- 10 IRELAND SOUTH

N.^{ly} winds, light or moderate; fair generally. Becoming temporarily colder.

WARNINGS

At 9.45 a.m. to-day to parts of districts 0 and 1 "LOWER CONE."

Note—The South Cone, point downwards (⌵), means that gales, or strong winds, are probable, at first from the Southward (from S.E. round by S. to N.W.). Should it appear likely that a gale beginning from between W. and N.W. is likely to veer towards N. or N.E., the North Cone is hoisted in preference to the South Cone.

The North Cone, point upwards (⌴), means that gales, or strong winds, are probable, at first from the Northward (from N.W. round by N. to S.E.). Should it appear likely that a gale beginning from between E. and S.E. is likely to veer towards S. or S.W., the South Cone is hoisted in preference to the North Cone.

NOTES:—(a) At the British and Irish Stations the readings of the barometer are not corrected for the difference in Gravity between the position of the Station and Latitude 45°. The approximate correction is:—For stations North of Malin Head and North Shields + '03 in., but for Sumburgh Head + '04 in.; for stations South of Malin Head and North Shields + '02 in., but for Scilly and Jersey + '01 in.

(b) The Sunshine for London given in this Table is recorded on the Tower of the Wesleyan Training College, Westminster; the Sunshine entered to Dungeness is recorded at Littlestone-on-Sea.

* Observations for this column not generally received. † Observations received too late for insertion in Charts on next page.

WEATHER CHARTS

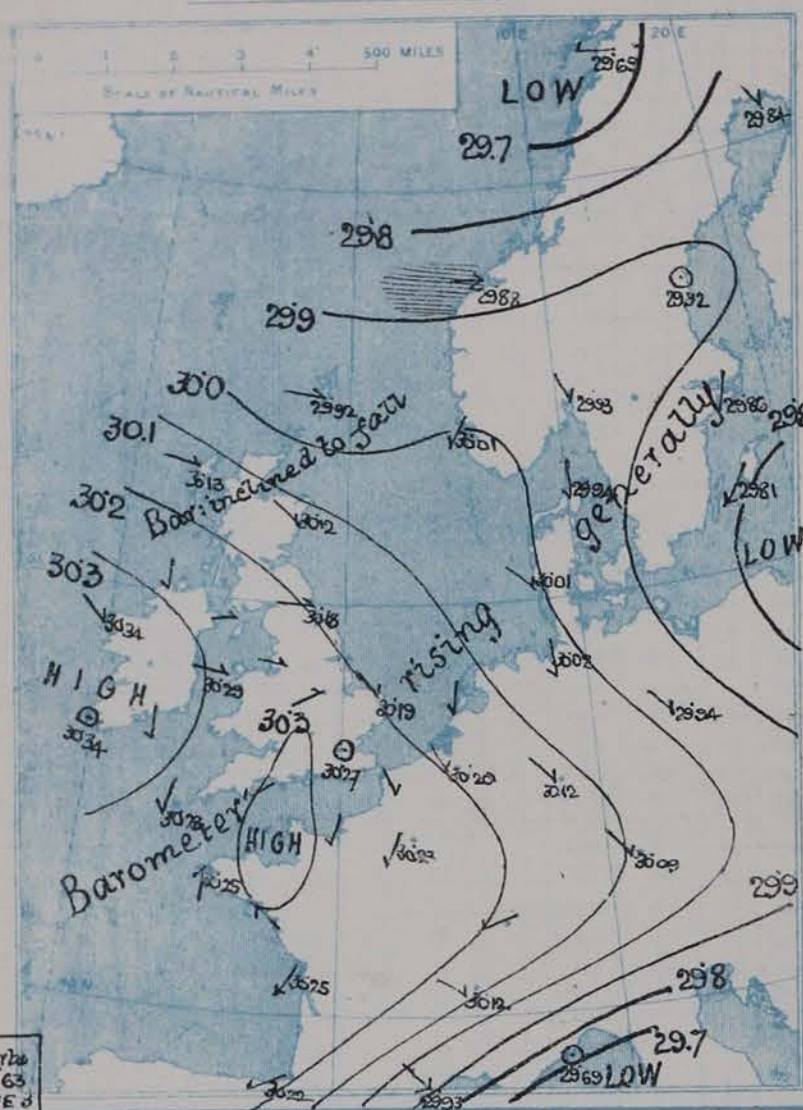

FOR Friday, 30th March. 1906.

I. BAROMETER, WIND AND SEA. This Morning.

BAROMETER—Isobars are drawn for each tenth of an inch.

WIND—Arrows show Directions and Force, flying with the wind.

Force above 10  Force 5 to 7  } Calm 
Force 8 to 10  Force 1 to 4 
SEA—Rough  High 

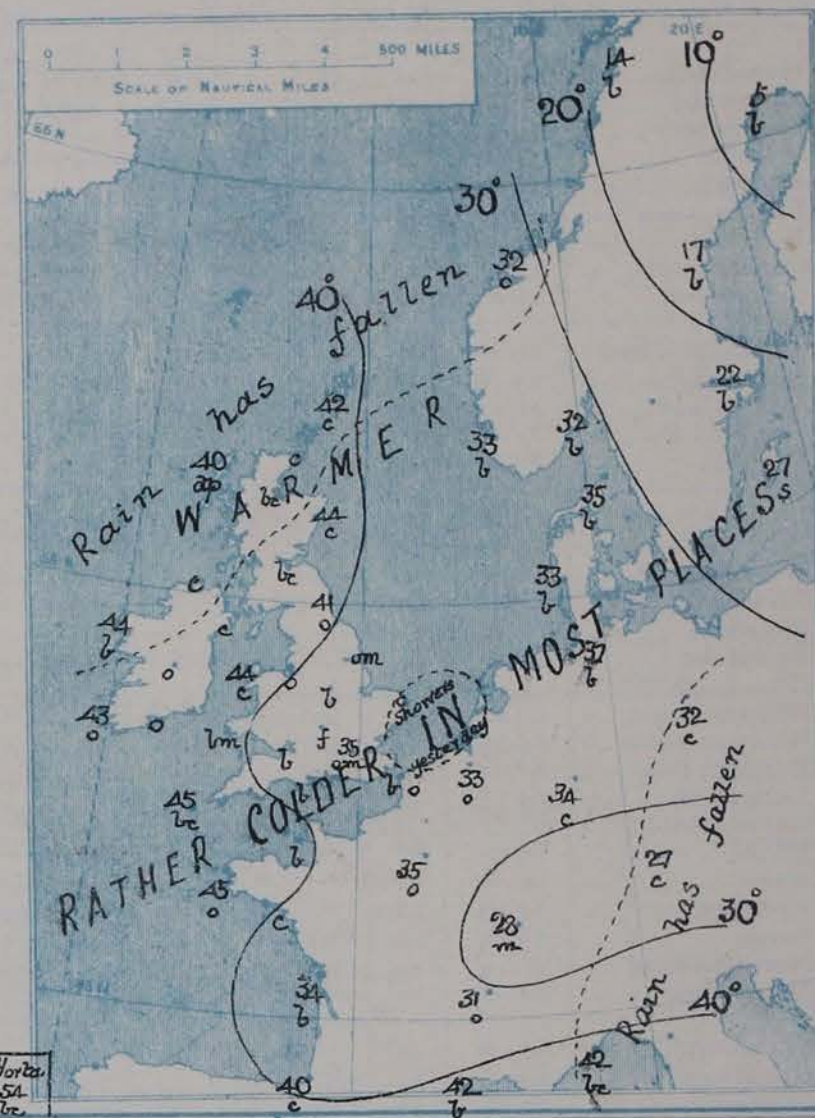

II. TEMPERATURE AND WEATHER. This Morning.

TEMPERATURE—Isotherms are drawn for each 10°

WEATHER—Shown by Letters of the Beaufort Scale. (See P. 4.)

RAINFALL—A dotted line separates areas where rain has fallen from those without rain. The fall in past 24 hours when exceeding half an inch is shown thus - 0.6

III. BAROMETER AND WIND

Yesterday morning.

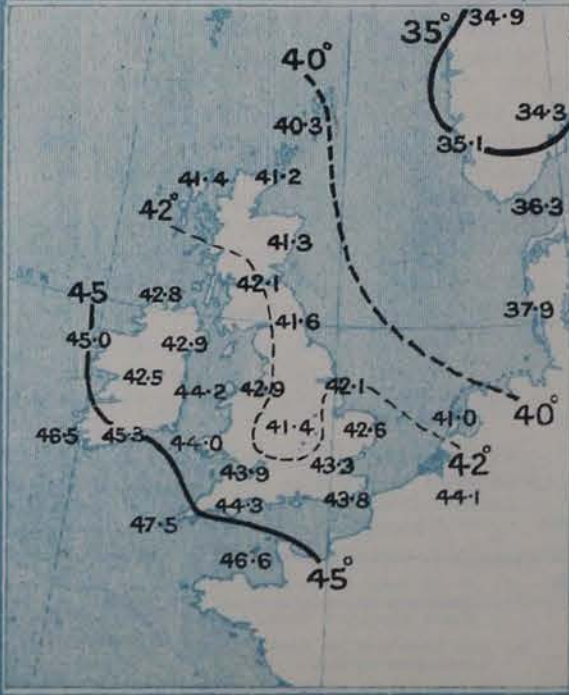

IV. RAINFALL IN 1906.

Total Amount recorded in various districts of the United Kingdom in the 12 weeks ended Saturday 24th March with the percentage of the average amount for the corresponding period.

V. Averages of DAILY TEMPERATURE at 8 A.M. for the monthly period MARCH - APRIL

(Derived chiefly from Observations extending over the 35 years 1871-1905).

GENERAL SITUATION AT 8 A.M.

PRESSURE

The anticyclone of yesterday has spread eastwards over nearly the whole of Western Europe. The highest pressures, 30.3 ins. and upwards, are now found, respectively, over Ireland, and in a small area covering a portion of the south of England and the Channel. The lowest readings, 29.7 ins. and less, are reported in a depression off the north-west of Norway, and also in another area over the Gulf of Genoa. The barometer is at present rising at all but the Scotch stations, where it is either steady or inclined to fall.

WIND

TEMPERATURE

WEATHER

AND

SEA

The wind has backed to the North-Westward or Westward in all the more northern and eastern parts of these Islands. In the south it is rather variable, and over a considerable portion of France it remains North-Easterly. Northerly breezes are reported in Sweden and Denmark, and North-Westerly breezes in Germany and the south of France. On our northern coasts the shift of wind to the Westward has been accompanied by a rise of temperature, and in the west and north of our Islands generally the readings of the thermometer are now above 40°; the highest reported being 45° at Lundy. Over Central and Southern England the thermometer has fallen, and at Bath and Oxford it stands as low as 30°. Slight frost prevails also in some parts of Germany and France, and hard frost in the north of Scandinavia. The weather is fair or fine over Western Europe as a whole, but fog prevails over Central England, and showers of drizzling rain are reported at Stornoway. Snow is falling at Wisby. The sea is slight or smooth generally, but moderate off the east of England, and rough at Christiansund.

During yesterday the thermometer rose to 50° or slightly above it at several of our western and northern stations, but failed to reach 45° on our east coasts. Sharp frost occurred over Central and Southern England at night; in London the thermometer on the grass fell to 19°, and at Oxford to 20°. The amount of bright sunshine yesterday varied considerably in different localities. Slight rain has fallen in the extreme north and north-west.

PROBABLE CHANGES IN SYSTEM NOW PREVALENT

The anticyclone is likely to move or to spread in a south-easterly direction. Its influence will continue to be felt for a time over all the more southern parts of the United Kingdom, where the weather will remain fair. In the north the conditions will probably be affected by low pressure systems appearing off the Scotch coasts, and causing some rain in the extreme northern districts.

FORECASTS*

For the 24 hours ending at NOON on 31st. March 1906.

DISTRICTS.

FORECASTS.

- 0 SCOTLAND NORTH
- 1 SCOTLAND EAST
- 2 ENGLAND N.E.
- 3 ENGLAND EAST
- 4 MIDLAND COUNTIES
- 5 ENGLAND SOUTH

W^{ly} to S.W^{ly} winds, light or moderate; fair at first, showery later, rather milder.
W^{ly} and N.W^{ly} winds, light; fair generally.
Rather cold to-day, milder to-morrow.
Light variable airs; fair generally. Rather cold to-day, frosty at night, milder to-morrow.

DISTRICTS.

FORECASTS.

- 6 SCOTLAND WEST
- 7 ENGLAND N.W.
- 8 ENGLAND S.W.
- 9 IRELAND NORTH
- 10 IRELAND SOUTH

N.W^{ly} to W^{ly} winds, moderate; fair at first, some showers later, rather milder.
Same as Nos. 2 and 3.
Light variable airs; fair generally. Frost inland to-night.
Same as No. 6.
N^{ly} to W^{ly} winds, light; fair generally, rather milder.

WARNINGS

NONE ISSUED.

Note.—The South Cone, point downwards (⌣), means that gales, or strong winds, are probable, at first from the Southward (from S.E. round by S. to N.W.). Should it appear likely that a gale beginning from between W. and N.W. is likely to veer towards N. or N.E., the North Cone is hoisted in preference to the South Cone.
The North Cone, point upwards (⌢), means that gales, or strong winds, are probable, at first from the Northward (from N.W. round by N. to S.E.). Should it appear likely that a gale beginning from between E. and S.E. is likely to veer towards S. or S.W., the South Cone is hoisted in preference to the North Cone.

NOTES:—(a) At the British and Irish Stations the readings of the barometer are not corrected for the difference in Gravity between the position of the Station and Latitude 45°. The approximate correction is:—For stations North of Malin Head and North Shields + 0.3 in., but for Sumburgh Head + 0.4 in.; for stations South of Malin Head and North Shields + 0.2 in., but for Scilly and Jersey + 0.1 in.

(b) The Sunshine for London given in this Table is recorded on the Tower of the Wesleyan Training College, Westminster; the Sunshine entered to Dungeness is recorded at Littlestone-on-Sea.

* Observations for this column not generally received.

† Observations received too late for insertion in Charts on next page.

IV. BRIGHT SUNSHINE IN 1906.

*Total Duration recorded
in various districts of the United Kingdom
in the 12 weeks ended Saturday, 24th March
with the percentage of the average duration
for the corresponding period.*

*(Derived chiefly from Observations
extending over the 35 years 1871-1905).*

GENERAL SITUATION AT 8 A.M.

PRESSURE

No material change is reported in the general conditions. An anticyclone still extends from the Atlantic over the greater part of Western Europe, the highest pressures, 30.3 ins. and upwards, being found over the west and south of these Islands and the north of France. A depression, in which readings are below 29.4 ins., is passing across the north of Scandinavia, and is causing a general fall of the barometer over the northern parts of the Continent. In other parts of our area the mercury is at present rising slowly.

WIND

TEMPERATURE

WEATHER

AND

SEA

The wind is light from the North-Westward in all the more northern and eastern parts of the United Kingdom, and strong from the same quarter on the Norwegian coasts; in the south of Sweden it draws into South-West. Light Northerly airs are reported on our own west and south-west coasts, and Easterly or North-Easterly breezes in the west of France. Temperature has risen in most places. In these Islands the morning readings are very uniform, the highest value reported being 45° at Wick and Aberdeen, and also at Scilly; and the lowest 40° at Oxford, Clacton-on-Sea and Jersey. In France the readings are nearly all below 40°, and in the east of that country and in South Germany they are below the freezing point. Frost also prevails over the greater part of Scandinavia.

The weather is dull over England and the south of Ireland, as well as in the neighbouring parts of the Continent, but to the northward and southward of those regions it is mostly fine and bright. Snow is, however, reported at Christiansund and Hafslunda.

The sea is slight or smooth generally, but rough off the west coast of Norway.

The maximum temperatures recorded over these Islands yesterday were somewhat higher than of late. In Scotland and in some isolated parts of England and Wales the thermometer exceeded 50°, and at Leith it rose to 57°. The amount of bright sunshine was large at some of our western stations, but small elsewhere. Slight rain has again fallen on our extreme north and north-west coasts.

PROBABLE CHANGES IN SYSTEM NOW PREVALENT

There are at present no signs of any decided change in the distribution of pressure. The anticyclone is expanding temporarily in a northerly direction, but it is not unlikely that a new low pressure system will appear off our northern coasts in the course of the ensuing 24 hours. Over the greater part of the United Kingdom the weather is likely for the present to remain fair and dry.

FORECASTS*

For the 24 hours ending at NOON on 1st April, 1906.

DISTRICTS.

FORECASTS.

0	SCOTLAND NORTH	} N.W. ^{ly} to W. ^{ly} winds, moderate; fair at first, some rain later.
1	SCOTLAND EAST	
2	ENGLAND N.E.	} N.W. ^{ly} winds, light; fair generally, continuing rather cool.
3	ENGLAND EAST	
4	MIDLAND COUNTIES	} Light breezes, chiefly N. ^{ly} ; fair generally, continuing rather cool.
5	ENGLAND SOUTH	

DISTRICTS.

FORECASTS.

6	SCOTLAND WEST	} Same as Nos. 1 to 3.
7	ENGLAND N.W.	
8	ENGLAND S.W.	} N.E. ^{ly} winds, light or moderate; fair, cool.
9	IRELAND NORTH	
10	IRELAND SOUTH	} Same as No. 8.

WARNINGS

NONE ISSUED.

Note.—The South Cone, point downwards (T), means that gales, or strong winds, are probable, at first from the Southward (from S.E. round by S. to N.W.). Should it appear likely that a gale beginning from between W. and N.W. is likely to veer towards N. or N.E., the North Cone is hoisted in preference to the South Cone.
The North Cone, point upwards (T), means that gales, or strong winds, are probable, at first from the Northward (from N.W. round by N. to S.E.). Should it appear likely that a gale beginning from between E. and S.E. is likely to veer towards S. or S.W., the South Cone is hoisted in preference to the North Cone.

* For terms for transmission of Forecasts by Telegraph, see next page.
