This report has not been published.
Permission to quote from it should be obtained from the
Branch Director (Observation Provision).

1. INTRODUCTION

Drifting buoys operated by European countries, the United States, Canada and E.G.O.S. (European Group on Ocean Stations) provide valuable meteorological data in the North Atlantic Ocean. This report is a summary of the performance of these buoys giving information on the number of buoys operating, the accuracy of reported locations and data quality, timeliness and availability. It is compiled by looking at observations received in the Met. Office Meteorological Data Bank (Met.D.B.) and by comparisons of observations with background fields from the Met. Office forecast model. Additional information on buoy operations and data quality is extracted from E.G.O.S. Technical Secretariat reports.

SPECIAL NOTE :

A number of problems were experienced during the quarter with the storage of drifting buoy data within the Met. Office's databanks. These problems affected all elements included in this report and all the buoys. The problems are summarised below :-

- 1) Corruption of the Observation Processing Databank (OPD) meant the loss of pressure data, air temperatures, wind speeds and directions between the 3rd October and 11th October from the graphs in the Annexes. (NB. The Table of Statistics in Annex A collates data from a different source and thus the statistics include data for the missing week).
- 2) The Sea Surface Temperature OPD suffered a problem from 27th November to 3rd December resulting in a similar problem to that stated above.
- 3) A problem with the Met. D. B. has resulted in some Collecting Centre information being unavailable. This is currently being investigated.

2. SUMMARY OF PRESSURE PERFORMANCE

(a) Buoy deployments,etc.

North of 50deg N

There were 22 buoys reporting pressure at the beginning of the period (Buoy 62507 which had a mean position south of 50 degN last quarter has drifted north this quarter and is included in the figure above) and 21 at the end. 6 new buoys were deployed during the period (44624, 44762, 44780, 64529, 64546 and 64560). 7 buoys ceased reporting (44727, 44761, 44770, 44774, 62675, 62721 and 64043).

South of 50deg N

There were 12 buoys reporting pressure at the beginning of the period and 7 at the end (Buoy 62508 ceased reporting pressure on 16/11 but continued to report other elements throughout the period). Only 1 new buoy was deployed (44614). 5 buoys ceased reporting (13556, 13561, 44743, 62501 and 62514).

(b) Location Accuracy

The location accuracy was poor over the quarter with 18 out of 41 of the buoys reporting having a '% of observations with acceptable positions' greater than 95% (compared to 40 out of 43 last quarter). There were 51 gross errors in location during the quarter, compared with 4 last quarter (see under Data Quality).

(c) Data timeliness

(see note 9 of section 5 for definition of terms.)

Timeliness	Last quarter.	This quarter
Very Good	17	12
Good	4	8
Satisfactory	5	5
Poor	5	7
Very poor	12	9
Total no. of buoys	43	41

(d) Data availability

(see note 9 of section 5 for definition of terms.)

Availability	South of 50 deg N		North of 50 deg N	
	Previous Quarter	Present Quarter	Previous Quarter	Present Quarter
Very Good	--	--	14	14
Good	1	1	3	7
Satisfactory	8	8	7	2
Poor	10	3	--	4
Very Poor	--	1	--	1

The total number of buoy days in the quarter was 3,016 [obtained by summing the number of reporting days for each buoy] (last quarter the total was 2,613) and the number of 'buoy hours' with at least one observation was 41,544 (compared with 39,518 last quarter). Thus, the mean number of hours per day, for days with at least one observation (averaged over all buoys operating in the area) was 13.77 (last quarter the figure was 15.12).

(e) Data Quality - Pressure

Revised RMS Differences

The technique used to assess the quality of pressure data in this report is based on the Revised RMS differences between the observations and the background field from the Global Forecast Model (see note 8 in Explanatory Notes). For buoys south of 50 degN the Revised RMS differences should be less than 2.0 hPa and for buoys north of 50 degN they should be below 3.0 hPa. The buoys whose revised RMS difference were found to lie outside these limits have had their performance described as 'suspect' and are included in the section below. Examination of the time-series plots (see Annex B) indicates the performance of these buoys:-

- 44727 - Pressure data became erroneous from around 5/11 until the end of the buoy's life on 20/11.
- 44769 - Pressure data showed a significant number (135) of gross errors from 3/12 until the end of the quarter.
- 62508 - Pressure data showed a bias of -1.3 hPa and a larger than normal scatter from the start of the period until it stopped reporting pressure on 16/11.
- 62513 - This buoy showed a bias of +0.8 hPa throughout the period, and towards the end of the quarter showed a slightly larger than normal scatter.
- 62675 - Pressure data showed a bias of -1.6 hPa and then became erroneous from around 20/11 until the end of the buoy's life on 25/11.

Biases

6 buoys (excluding those mentioned in the previous section) showed pressure biases greater than 0.5 hPa (pressure biases are determined using the mean value for unflagged data from Annex A). Those buoys whose pressure data showed a bias of greater than 0.5 hPa have also had their performance described as 'suspect'.

WMO No.	Position	Buoy bias (hPa)	Ship bias (hPa)	Period of reports
62501	NE of SCOS	-0.8	+0.1	01/10 - 08/12
62507	NE of SCOS	+0.7	+0.1	01/10 - 31/12
62511	SCOS	+0.8	-0.1	01/10 - 31/12
62512	SCOS	+0.8	+0.1	01/10 - 31/12
62514	SCOS	-1.0	-0.2	01/10 - 01/11
64546	SOBA	+1.5	-1.6	05/12 - 31/12

The ship bias represents the mean pressure biases reported from ships within a radius of 500 nautical miles of the mean position of each buoy.

Gross errors

The observations which appear to lie outside the expected distribution - the 'gross' errors (see Time-series graphs) - have been ringed. (The erroneous observations which occurred at the end of the life of buoys 44727, 44769 and 62675 have not been included in this section.) The observations have been individually examined to see whether the errors lie with the pressure, location or the background field. Out of 257 occasions the results are as follows -

ERROR	NUMBER LAST QUARTER	NUMBER THIS QUARTER	COLLECTING CENTRE
bg field	0	1	-----
location	4	48	Oslo
location	0	3	Sondre Stromfjord
location	0	0	Paris
location	0	0	Unknown
pressure	105	92	Oslo
pressure	52	67	Sondre Stromfjord
pressure	6	0	Paris
pressure	2	0	US Air Force
pressure	1	46	Unknown
Total no. of buoy hours	39,518	41,544	

During the quarter 205 gross pressure errors were transmitted as compared to 166 (with another 686 being reported by buoy 44766) last quarter. The number of gross location errors from the Local User Terminals showed an increase (51 compared to 4 last quarter).

(3) Air Temperatures and Sea Surface Temperatures

The following table shows the mean and standard deviation of observation minus background differences for air temperatures and sea surface temperatures. Figures in brackets are for the observations from voluntary observing ships within a radius of about 500 nautical miles of the mean position of each buoy.

(Note : The calculations below include gross errors. Therefore, in some instances, the figures may be slightly misleading.)

WMO No.	Air Temperature			Sea Surface Temperature		
	Mean	St. Dev.	No. of Obs	Mean	St. Dev.	No. of Obs
13556	---	---	---	---	---	---
13561	---	---	---	---	---	---
44614	0.6(0.0)	2.5(1.6)	944 (277)	1.4(-0.4)	1.7(1.9)	225 (177)

64544	0.3(0.3)	1.3(1.3)	693 (23)	0.1(-0.6)	0.5(1.7)	940 (24)
64546	0.1(0.5)	2.2(1.0)	325 (14)	-0.8(-0.2)	0.3(1.4)	12 (14)

Statistics of (ob-bg) differences for buoys reporting this quarter and all ships within 500 nautical miles

WMO No.	Air Temperature			Sea Surface Temperature		
	Mean	St. Dev.	No. of Obs	Mean	St. Dev.	No. of Obs
64560	-1.1(0.7)	5.5(1.1)	941 (19)	0.1(-0.3)	0.1(1.0)	8 (18)
65571	-0.3(0.2)	3.1(1.1)	2186 (23)	-1.3(-0.5)	1.3(1.3)	702 (23)
65592	-0.4(0.3)	2.7(1.2)	1877 (39)	-0.9(-0.8)	1.6(1.8)	570 (73)

Buoys 44761 (+2.7), 44768 (-2.4), 44769 (+2.6), 44775 (+4.6), 44780 (+15.3), 62524 (+5.3), 62696 (+12.0) and 64560 (-1.1) all showed significant air temperature biases. However, it should be noted that only 5 reports were received from buoy 44768. Buoys 44769, 44780 and 62524 produced good data for much of the period and only became erratic towards the end of the quarter.

Buoys 44614 (+1.4), 44727 (+6.0) and 65571 (-1.3) showed significant sea surface temperature (SST) biases.

Between 2nd November and 10th November a number of corrupt observations got onto the SST Databases (as can be seen in the graphs in Annex D) and are represented by a string of observations with a negative bias, which show a large displacement from the normal observations.

(4) Winds

The following table shows the mean and standard deviation of observation minus background differences for wind speed and direction. Figures in brackets are for the observations from voluntary observing ships within a radius of about 500 nautical miles of the mean position of each buoy (Note - it is not known what proportion of the ships' winds were measured rather than estimated visually using the Beaufort Scale). The statistics for this report can be compared with those for ships and the relative quality of the wind data from each buoy can be assessed. Buoy 13561 produced wind speed data but not wind direction data. This has resulted in the data not being stored in the Office's Observation Processing Databank and thus it is not available for analysis.)

		Wind Speed (kn)		Wind Direction (deg)		
WMO No.	Period	Mean	St. Dev.	Mean	St. Dev.	No. of Obs
13556	01/10-28/11	-3.1(2.0)	3.1(6.2)	-3.3(-0.5)	27.6(30.0)	442(536)
44617	01/10-31/12	-2.2(3.4)	4.9(12.8)	-6.2(-3.8)	28.3(31.2)	2038(194)
44727	01/10-20/11	-1.3(3.7)	4.3(8.6)	-3.3(-2.6)	28.4(35.4)	498(108)
44762	03/10-31/12	-1.2(3.8)	5.2(8.8)	10.6(-4.9)	29.5(33.7)	1985(116)
44764	01/10-31/12	0.0(5.8)	5.7(7.3)	0.3(-4.5)	24.7(26.2)	2601(81)
44776	01/10-31/12	-1.7(5.3)	4.8(7.2)	3.4(-3.2)	55.1(25.9)	2599(71)
62508	01/10-31/12	1.0(1.9)	5.7(6.2)	-9.2(-1.7)	22.8(26.4)	576(1148)
62509	01/10-31/12	11.5(1.8)	9.7(6.3)	13.7(-2.8)	18.7(26.0)	72(941)
64043	01/10-29/12	-2.1(1.9)	4.9(5.3)	8.3(-4.8)	47.7(35.9)	146(94)
64544	01/10-31/12	-11.0(3.1)	7.8(13.7)	0.0(2.6)	65.3(48.7)	461(24)

Statistics of (ob-bg) differences for buoys reporting this quarter and all ships within 500 nautical miles

Buoys 13556 (-3.1), 62509 (11.5) and 64544 (-11.0) all showed significant wind speed biases.

Buoys 44776, 64043 and 64544 all showed a larger than normal standard deviation of wind direction of 55.1, 47.7 and 65.3 degrees respectively.

5 EXPLANATORY NOTES:

1. Buoy owners are as follows,

CA	- Canada	P	- Portugal
F	- France	UK	- United Kingdom
D	- Germany	US	- United States
N	- Norway	IC	- Iceland
NL	- Netherlands	EG	- EGOS
IR	- Ireland	??	- unknown

2. Number of observations received is the number received at Bracknell in the Meteorological Data Bank (Met.DB). If identical reports are received which have originated at different Collecting Centres, the earliest one received at Bracknell is stored in the Met.DB.
3. An observation with valid Time and Date is one that contains no coding errors in the Date/Time group.
4. An acceptable position for an observation is within a distance d of the last acceptable position where $d=vt$ and,
 $v = \text{maximum drift speed} = 1/4 \text{ knot}$
 $t = \text{time between observations.}$
5. The percentage of elements present is calculated from the total number of observations received.
6. The delay is (Time of Receipt at Bracknell) - (Time of Observation).
7. The mean number of observations per day is calculated from the total number of observations received divided by the number of days in the period. It therefore includes 'quasi-identical' observations, ie those made within a few minutes of one another. For this reason the mean number of hours per day with at least one observation and the % of hour periods without an observation has been included, where an 'hour period' is defined as the period from HH-30 to HH+29 minutes.

8. Mean (OB-BG) is the mean value of (Observation-Background) Pressure, where the Background is the 6-hour forecast from the Global Forecast Model. RMS (OB-BG) is the Root Mean Square value of (Observation-Background) Pressure differences.

Unflagged data are those data used in model analyses.

Flagged data (ie. unused observations) are those observations of suspect quality and all observations reported by a buoy at a frequency greater than 5 times every 6 hours, with accepted observations being at least one hour apart. Thus, those buoys which report most frequently have a higher percentage of flagged data.

The Mean calculated over Unflagged Data gives an indication of the instrument bias, since any gross errors have been excluded from the calculation.

The Revised RMS is based on all data except for the few that contain gross errors (as indicated on the time-series graphs - see Annex B).

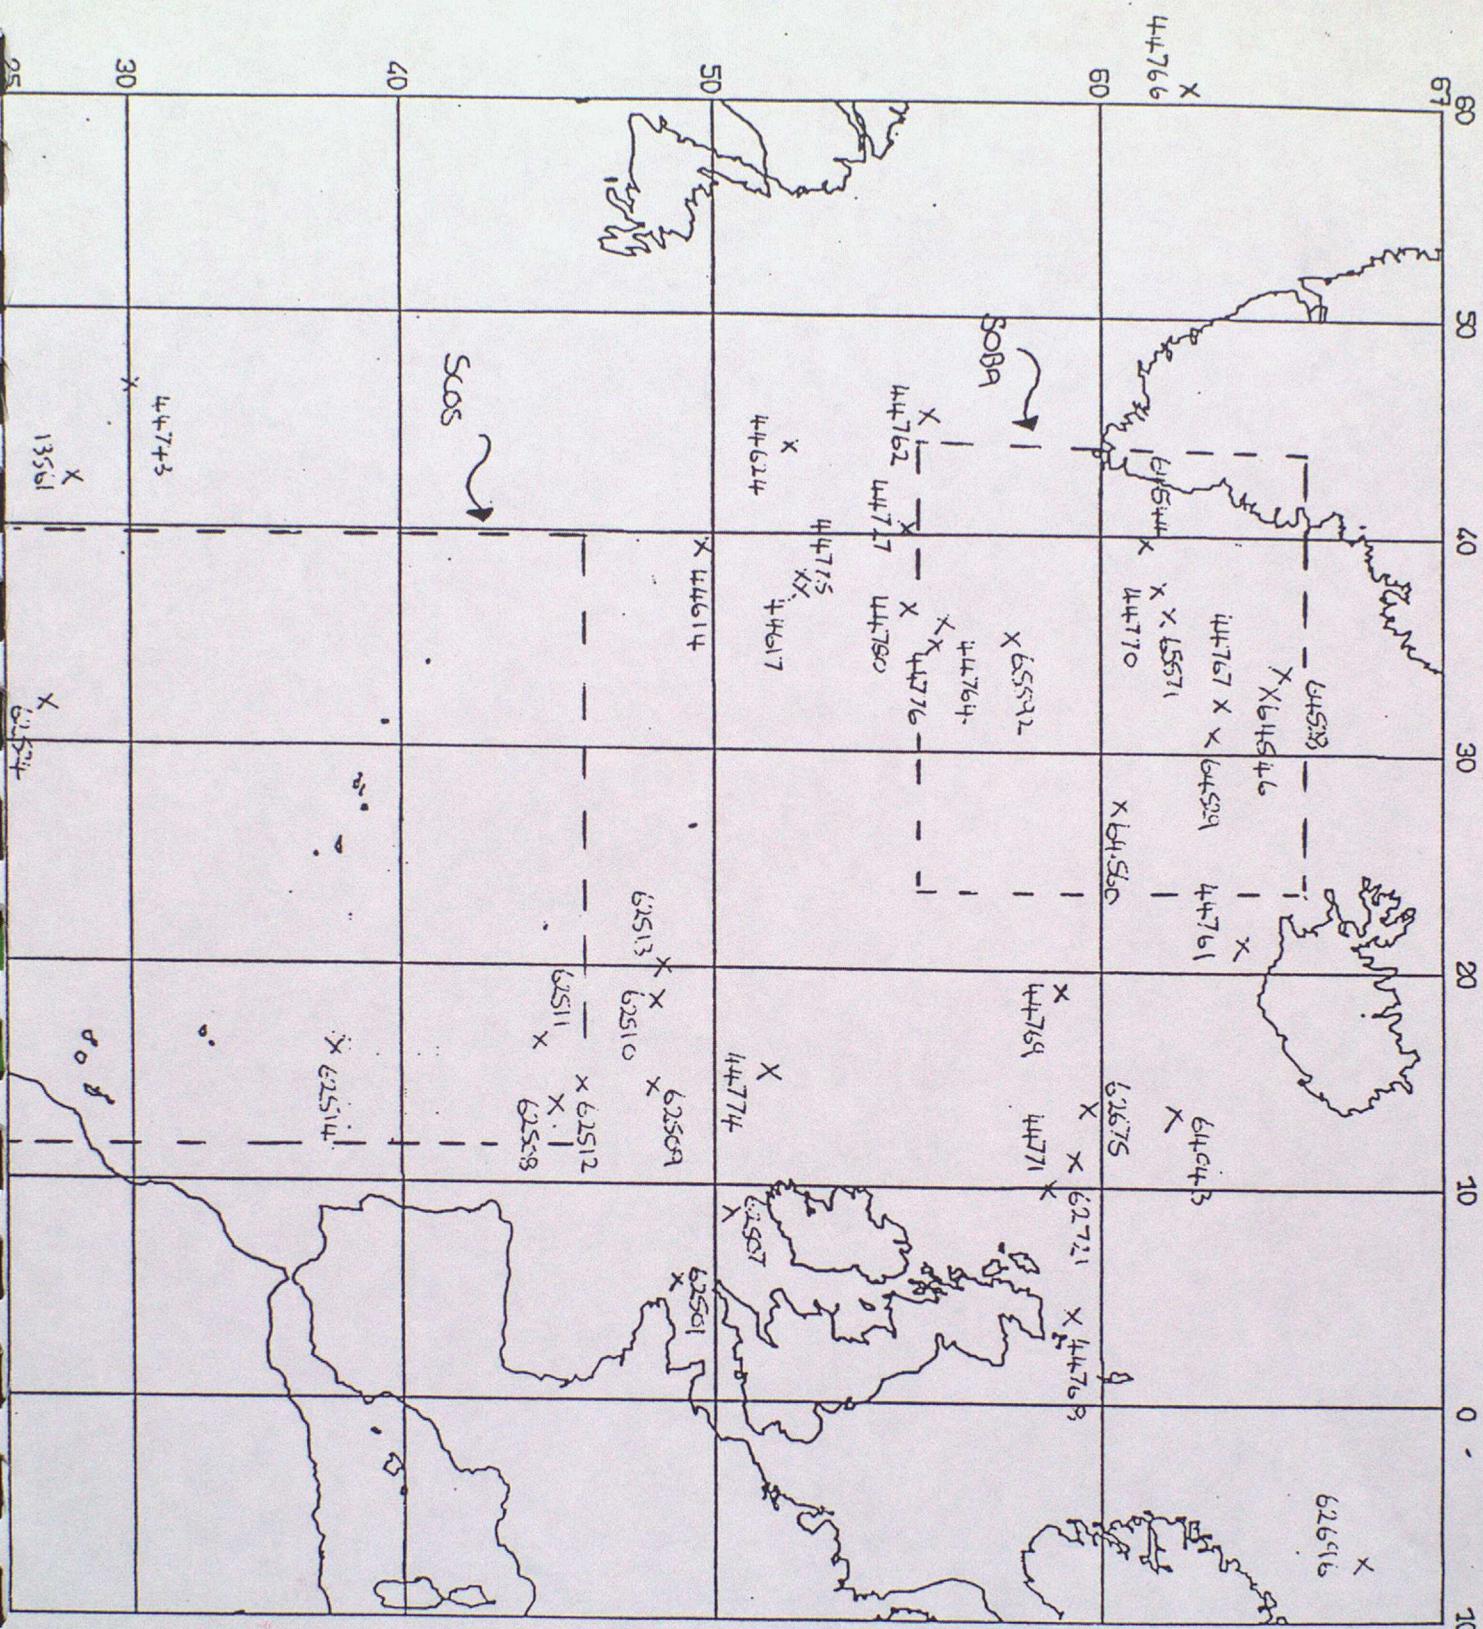

9. The performance categories are defined in the table below.

Performance	Availability (mean no. of obs/day)	Timeliness (median delay in mins)
Very Good	> 35	< 60
Good	25 - 35	60 - 119
Satisfactory	15 - 24	120 - 179
Poor	5 - 14	180 - 239
Very Poor	< 5	> 240

(N.B. WMO requirements state the need for only 4 observations per day from marine stations.)

The pressure quality is assessed from the Revised RMS and the Mean (for unflagged data).

Performance	Pressure Quality (in hPa)				
	North of 50 degN		South of 50 degN		
	RMS	MEAN	RMS	MEAN	
Acceptable	< 3.0	< 0.5	< 2.0	< 0.5	
Suspect	> 3.0	> 0.5	> 2.0	> 0.5	

6. MEAN POSITION OF BUOYS DURING PERIOD OCTOBER TO DECEMBER 1994
