## Daily Weather Summaries for September 2023

**If you have any questions or feedback about this product or wish to obtain further data please contact the Met Office.**

This document contains daily weather summaries for each day of September 2023. The Met Office National Meteorological Library and Archive holds a continuous record of daily weather summaries or daily weather reports from 1860, and these daily weather summaries form a continuation of that series.

The purpose of each summary is to provide an overview of the weather conditions across the UK on that day, with the historical emphasis mainly based on observations from surface network of weather stations, although the format has varied over the decades. While the emphasis remains on observations from the surface network, the current daily weather summaries supplement these by including satellite and rain-radar imagery to provide a more complete overview. The current format of the daily weather summaries is as follows:

1. Text summary of the main characteristics of the weather during the day, written by an operational meteorologist in the Met Office operations centre.
2. Table of daily extremes for the UK for key climate variables including temperature, rainfall, sunshine and gust speeds.
3. Overview of the synoptic situation at 00 and 12 UTC comprising: analysis charts showing the surface pressure pattern and associated weather fronts; North Atlantic and European infra-red satellite images showing cloud-cover; combined infra-red and rain-radar images of the UK; maps of wind speed and direction at 00 and 12 UTC; observations of pressure, wind speed and direction, cloud cover, air and dewpoint temperature at selected UK and European stations in data tables.
4. UK maps of key climate variables from observing stations including maximum, minimum and grass minimum temperature, rainfall, sunshine, gust speed and snow.
5. Further guidance notes

If you spot any data errors or omissions in this product please contact the Met Office.

## Station Network Maps

This issue of the daily weather summary provides data for the following UK and European locations (Reykjavic (5) also included):

## Daily Weather Summary for Friday 01 September 2023

This day's summary created 08/09/2023 09:03

### Summary of the UK Weather for Friday 01 September 2023

The start of Friday was governed by low pressure, located to the northwest of the British Isles. A couple of occlusion, associated to the previously mentioned low-pressure system, continued to move from the southwest across the UK. This created a band of precipitation that pushed in the same direction, affecting Wales, central and northern parts of England. After this scattered showers happened in Wales, central and southwestern parts of England. A cloudy picture for most of the UK was observed, excluding northern parts such Scotland which saw clear spells. Light southwesterly winds were recorded for most of the period, accompanied by close to average, turning slightly above average in some places. During the day most of the country remained cloudy with spells of sunshine at times. An occlusion passing over England has brought showery weather over the Pennines and the south of England. Part of southern Wales also received some rainfall. For the north of Scotland, the day remained dry and calm, seeing the best of sunshine and clear skies. Wind was light during the day.

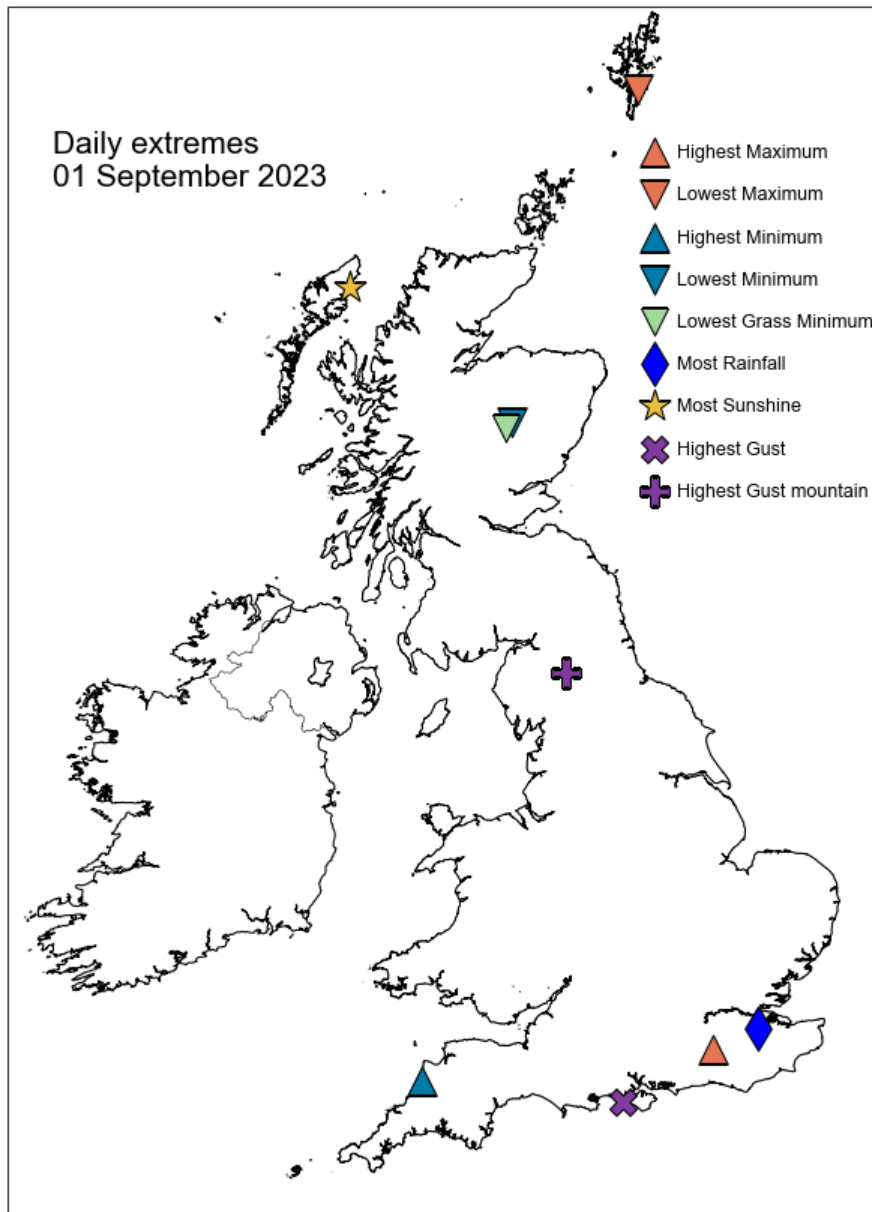

### Daily Extremes

<i>Highest Maximum</i>	<b>24.4°C</b> Charlwood (Surrey, 67mAMSL)
<i>Lowest Maximum</i>	<b>14.2°C</b> Lerwick (Shetland, 82mAMSL)
<i>Highest Minimum</i>	<b>15.7°C</b> Bude (Cornwall, 15mAMSL)
<i>Lowest Minimum</i>	<b>0.4°C</b> Braemar No 2 (Aberdeenshire, 327mAMSL)
<i>Lowest Grass Minimum</i>	<b>-2.2°C</b> Braemar No 2 (Aberdeenshire, 327mAMSL)
<i>Most Rainfall</i>	<b>19.9mm</b> Ham Hill S Wks (Kent, 10mAMSL)
<i>Most Sunshine</i>	<b>12.6hr</b> Stornoway Airport (Western Isles, 15mAMSL)
<i>Highest Gust</i>	<b>29Kt 33mph</b> Wight: Needles Old Battery (Isle Of Wight, 80mAMSL)
<i>Highest Gust (mountain*)</i>	<b>27Kt 31mph</b> Great Dun Fell No 2 B (Cumbria, 847mAMSL)
<i>Greatest Snow Depth at 0900 UTC</i>	No non-zero values.

mAMSL refers to station elevation in metres above mean sea level.

\*Mountain stations are above 500mAMSL.

## Daily Weather Summary for Friday 01 September 2023

## Daily Weather Summary for Friday 01 September 2023

### North Atlantic and Europe analysis charts and satellite images at 0000 UTC

### North Atlantic and Europe analysis charts and satellite images at 1200 UTC

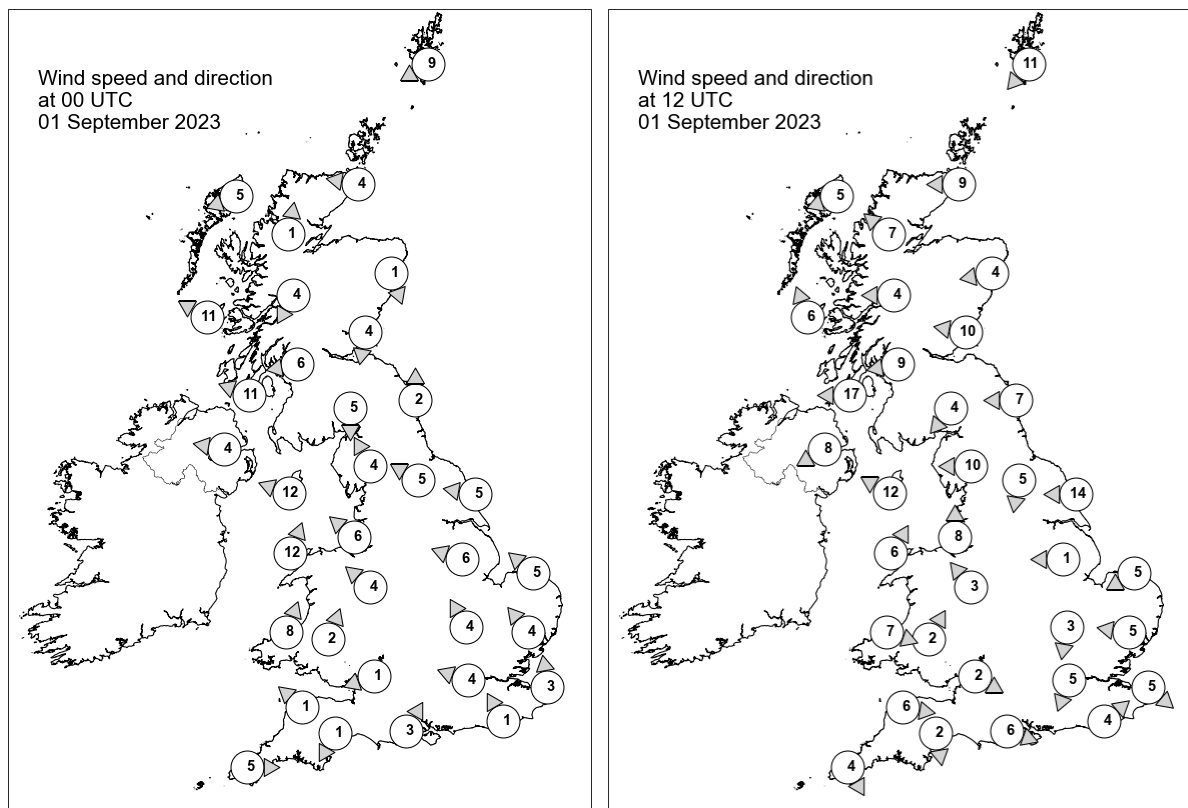

All satellite imagery copyright Met Office and EUMETSAT (European Organisation for the Exploitation of Meteorological Satellites). These show infra-red images from the geostationary MSG satellite. The rainfall rates are derived from both rain-radar and satellite data.

None of the selected stations observed a day of sleet or snow falling or non-zero snow depth at 0900 UTC.

## Daily Weather Summary for Saturday 02 September 2023

This day's summary created 09/09/2023 04:02

### Summary of the UK Weather for Saturday 02 September 2023

As high pressure built over the UK, an occluded front brought a band of cloud across central parts of the UK overnight. A dry start for most with widespread clear skies by dawn, but isolated showers on the east coast of Yorkshire. Southern and western areas saw the most of the clear skies whereas cloud was more dominant in the northeast. During the daytime the high pressure continued, bringing dry and sunny weather for most, while the south of Wales experienced some isolated showers in the early part of the day as the tail of the occlusion continued to hover above this area. Towards afternoon, all fronts had cleared the country, continuing the bright and sunny theme. However, a low pressure slowly approached the far northwest of Scotland, and brought some heavy, showery rainfall to the area. Wind was generally calm throughout the day, and temperatures slightly above average for this time of year.

### Daily Extremes

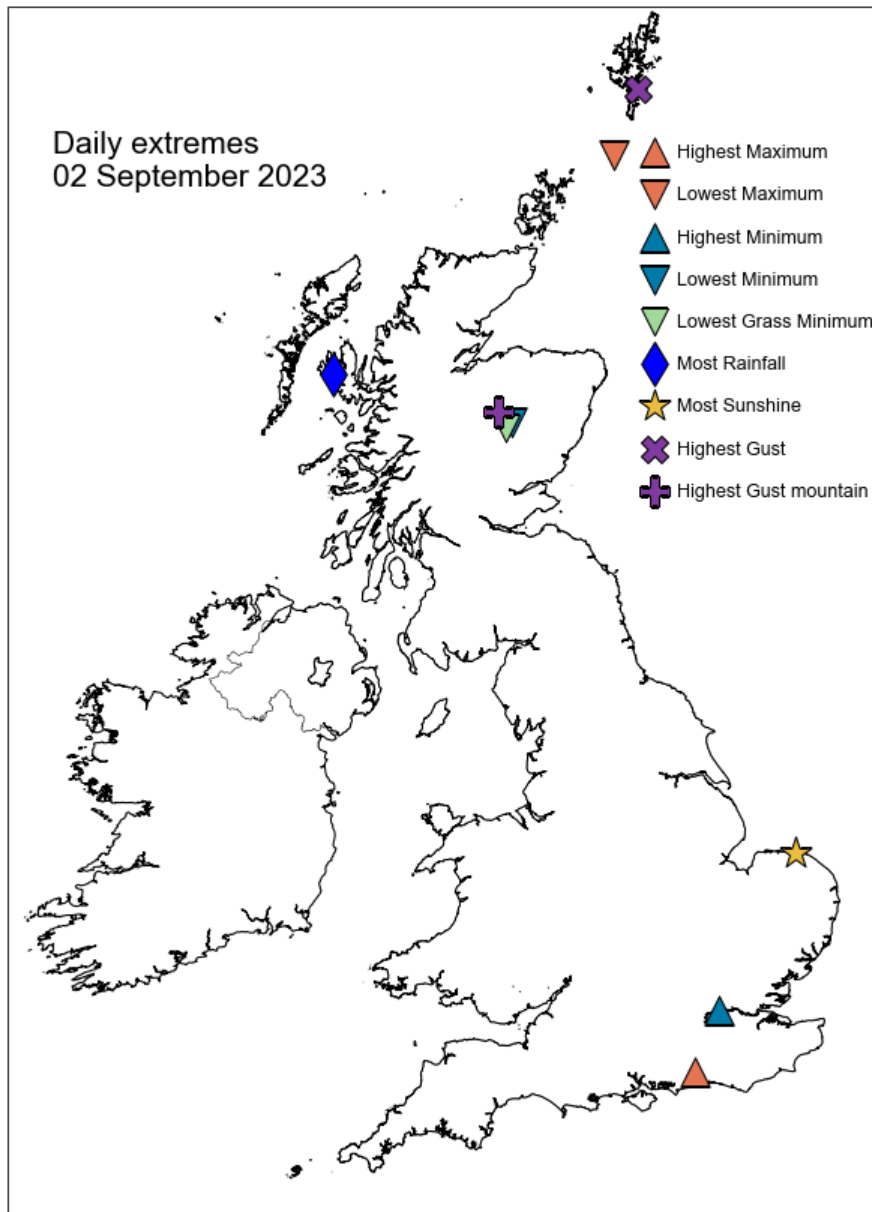

<i>Highest Maximum</i>	<b>25.1°C</b> Wiggonholt (West Sussex, 28mAMSL)
<i>Lowest Maximum</i>	<b>14.6°C</b> Fair Isle (Shetland, 57mAMSL)
<i>Highest Minimum</i>	<b>17.3°C</b> London, St James's Park (Greater London, 5mAMSL)
<i>Lowest Minimum</i>	<b>0.8°C</b> Braemar No 2 (Aberdeenshire, 327mAMSL)
<i>Lowest Grass Minimum</i>	<b>-1.0°C</b> Braemar No 2 (Aberdeenshire, 327mAMSL)
<i>Most Rainfall</i>	<b>34.3mm</b> Skye: Harlosh (Inverness-shire, 20mAMSL)
<i>Most Sunshine</i>	<b>12.4hr</b> Weybourne (Norfolk, 21mAMSL)
<i>Highest Gust</i>	<b>34Kt 39mph</b> Lerwick (Shetland, 82mAMSL)
<i>Highest Gust (mountain*)</i>	<b>55Kt 63mph</b> Cairngorm Summit (Inverness-shire, 1237mAMSL)
<i>Greatest Snow Depth at 0900 UTC</i>	No non-zero values.

mAMSL refers to station elevation in metres above mean sea level.

\*Mountain stations are above 500mAMSL.

# Daily Weather Summary for Saturday 02 September 2023

## Daily Weather Summary for Saturday 02 September 2023

None of the selected stations observed a day of sleet or snow falling or non-zero snow depth at 0900 UTC.

## Daily Weather Summary for Sunday 03 September 2023

This day's summary created 10/09/2023 04:03

### Summary of the UK Weather for Sunday 03 September 2023

Clouds thickened from the northwest of Scotland and Northern Ireland as fronts pushed southeastwards overnight. These fronts brought multiple bands of rain and gustier conditions to the far north of Scotland as they progressed, but remaining clear and dry elsewhere. Fog formed, predominantly in the Irish Sea, and moved eastwards inland to affect eastern parts of Wales, particularly the northwest coast. Meanwhile low cloud and mist spread across east/southeast England into the early hours of morning. During the day, the occlusion over the far northwest of Scotland has travelled further northeastwards, clearing the area from showering rainfall. For the rest, dry and sunny weather was the main story of the day. Later in the day, a stationary front lurked in slowly, bringing back some showery conditions to the far northwest of Scotland. Wind was mostly calm.

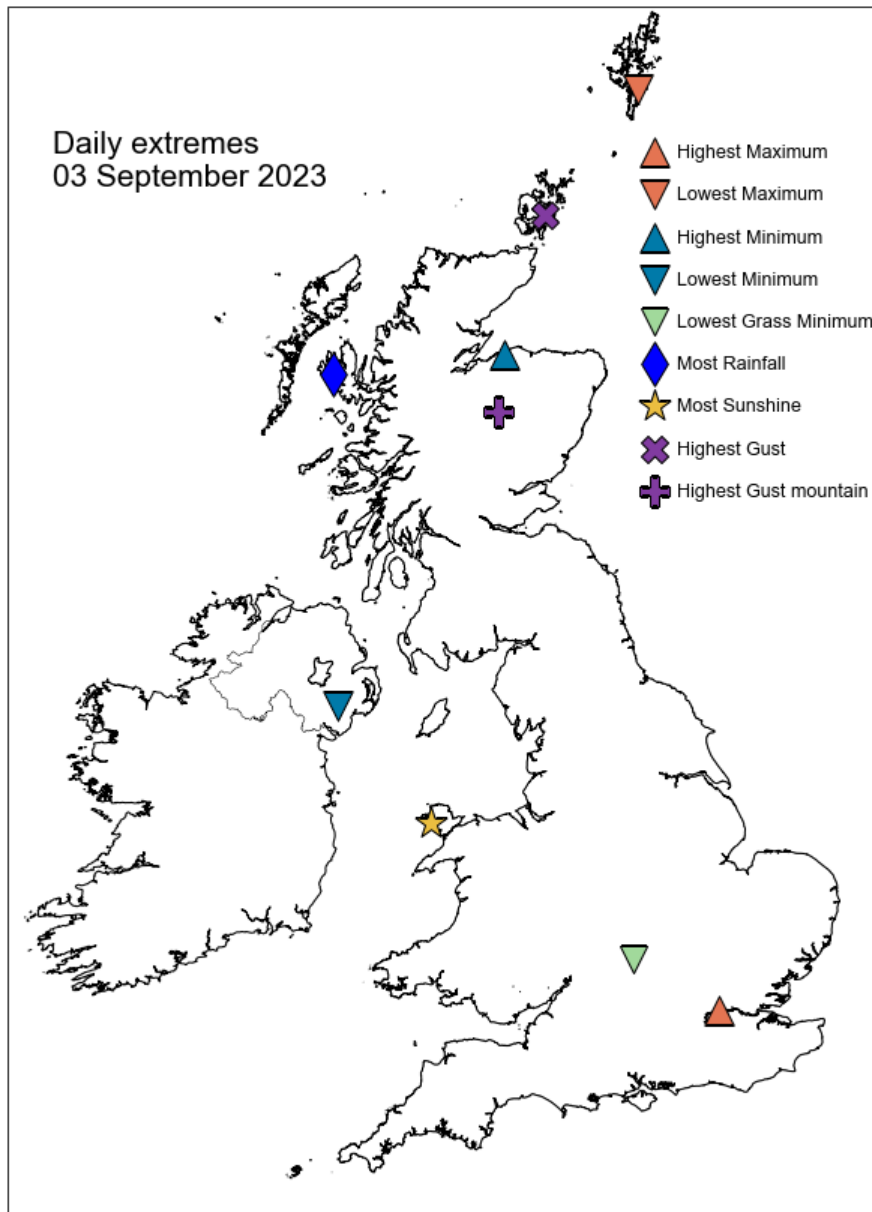

### Daily Extremes

<i>Highest Maximum</i>	<b>27.8°C</b> London, St James's Park (Greater London, 5mAMSL)
<i>Lowest Maximum</i>	<b>14.6°C</b> Lerwick (Shetland, 82mAMSL)
<i>Highest Minimum</i>	<b>16.5°C</b> Kinloss (Moray (in Grampian Region), 5mAMSL)
<i>Lowest Minimum</i>	<b>6.7°C</b> Katesbridge (Down, 91mAMSL)
<i>Lowest Grass Minimum</i>	<b>3.2°C</b> South Newington (Oxfordshire, 105mAMSL)
<i>Most Rainfall</i>	<b>5.6mm</b> Skye: Harlosh (Inverness-shire, 20mAMSL)
<i>Most Sunshine</i>	<b>12.2hr</b> Valley (Gwynedd, 10mAMSL)
<i>Highest Gust</i>	<b>43Kt 49mph</b> Kirkwall (Orkney, 26mAMSL)
<i>Highest Gust (mountain*)</i>	<b>74Kt 85mph</b> Cairngorm Summit (Inverness-shire, 1237mAMSL)
<i>Greatest Snow Depth at 0900 UTC</i>	No non-zero values.

mAMSL refers to station elevation in metres above mean sea level.

\*Mountain stations are above 500mAMSL.

## Daily Weather Summary for Monday 04 September 2023

This day's summary created 11/09/2023 04:03

### Summary of the UK Weather for Monday 04 September 2023

An Omega block was the dominating pressure pattern during the early hours, as high pressure steadied over northeast Germany. This brought about settled conditions with largely clear skies for a cooler night, allowing patches of mist and fog to form overnight. These soon cleared by dawn as temperatures quickly rose. Some patchy cloud and light rain began fringing parts of Shetland and Lewis. The early low cloud, mist and fog cleared away from most of the UK by mid-morning, leaving a day of sunny skies for the majority of the UK. The exception was Shetland and the far north of mainland Scotland, which lay under a front bringing cloud and some showers through the day. Winds were generally light, but coastal areas in the southwest and northwest did see some blustery conditions. The high pressure to the west of the UK dragged in some warm continental air, with southern areas in particular reaching temperatures well above the seasonal average.

### Daily Extremes

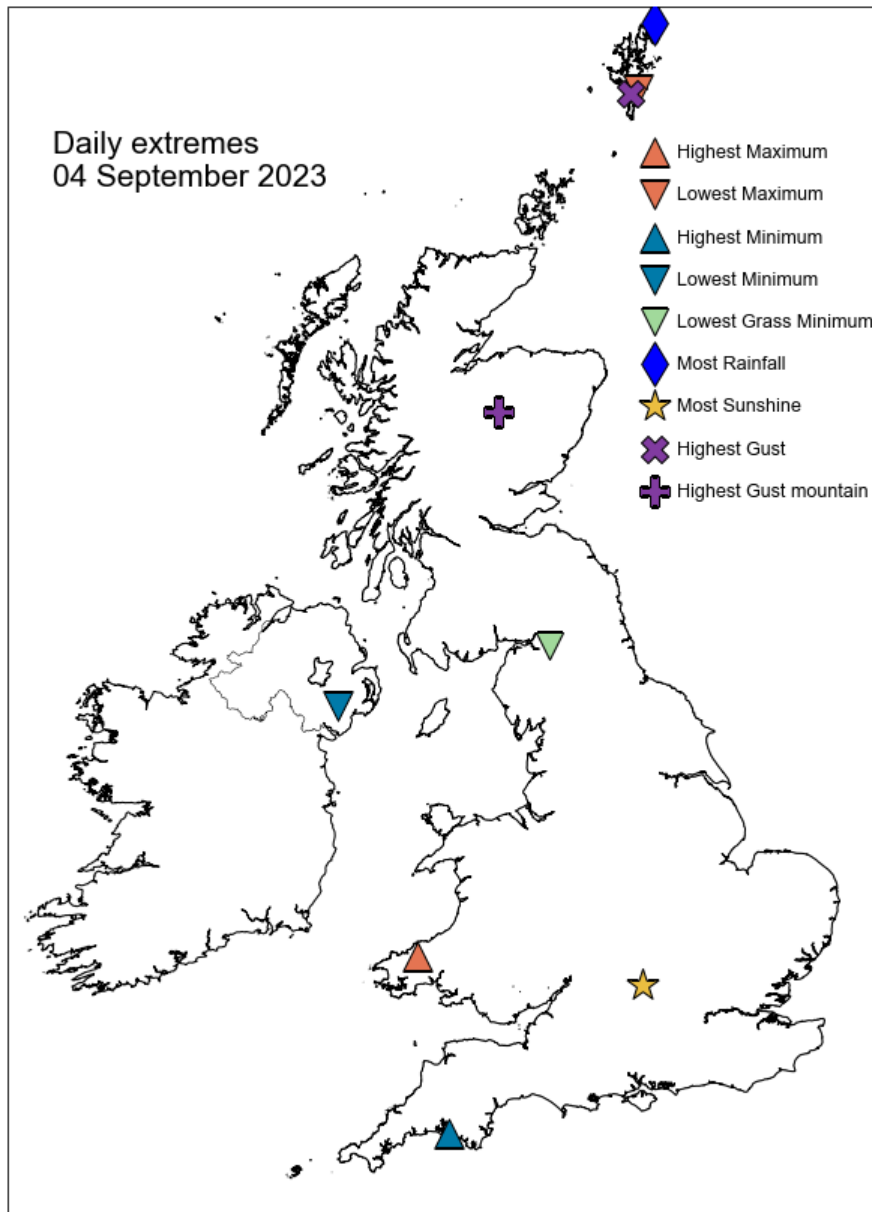

<i>Highest Maximum</i>	<b>30.2°C</b> Whitechurch (Dyfed, 129mAMSL)
<i>Lowest Maximum</i>	<b>15.1°C</b> Lerwick (Shetland, 82mAMSL)
<i>Highest Minimum</i>	<b>19.0°C</b> Plymouth, Mountbatten (Devon, 50mAMSL)
<i>Lowest Minimum</i>	<b>5.1°C</b> Katesbridge (Down, 91mAMSL)
<i>Lowest Grass Minimum</i>	<b>2.4°C</b> Brampton No 3 (Cumbria, 117mAMSL)
<i>Most Rainfall</i>	<b>7.4mm</b> Baltasound No 2 (Shetland, 15mAMSL)
<i>Most Sunshine</i>	<b>12.9hr</b> Oxford (Oxfordshire, 63mAMSL)
<i>Highest Gust</i>	<b>43Kt 49mph</b> Lerwick (Shetland, 82mAMSL)
<i>Highest Gust (mountain*)</i>	<b>51Kt 59mph</b> Cairngorm Summit (Inverness-shire, 1237mAMSL)
<i>Greatest Snow Depth at 0900 UTC</i>	No non-zero values.

mAMSL refers to station elevation in metres above mean sea level.

\*Mountain stations are above 500mAMSL.

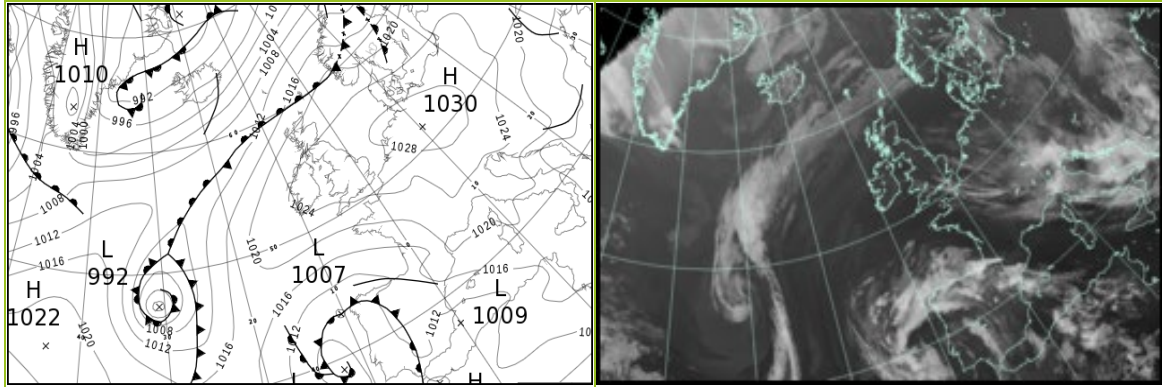

## Daily Weather Summary for Monday 04 September 2023

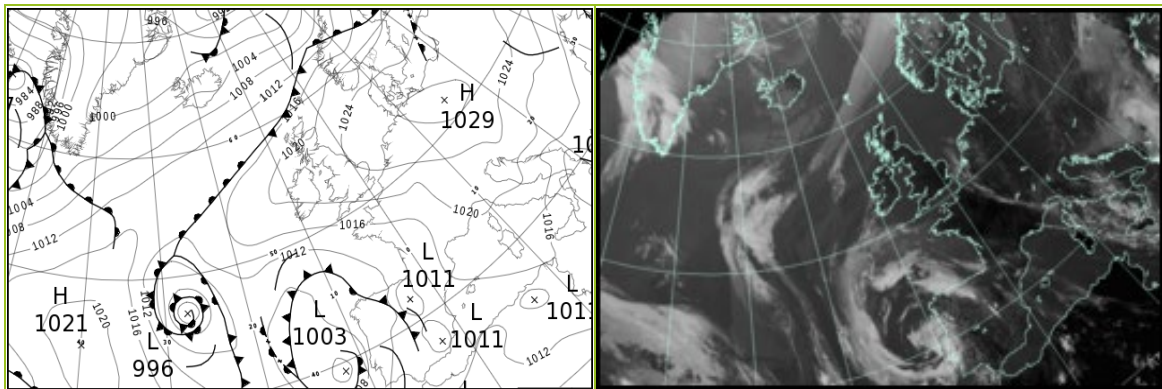

## Daily Weather Summary for Monday 04 September 2023

None of the selected stations observed a day of sleet or snow falling or non-zero snow depth at 0900 UTC.

## Daily Weather Summary for Tuesday 05 September 2023

This day's summary created 12/09/2023 04:03

### Summary of the UK Weather for Tuesday 05 September 2023

During the early hours, low pressure pushed a cold front and a trough into the far southwest of England and bringing low cloud and some heavy showers to Cornwall. The rest of the country remained clear and dry throughout the night, until near dawn where fog formed across some southeastern areas. There was a noticeable split in temperatures overnight, with some local areas seeing a tropical night in the south, but the lowest temperatures further north reaching close to freezing. The early morning fog lingered until the sun came up, but burned away by mid-morning. Meanwhile, low cloud associated with the depression to the southwest of the UK, moved over the southwest of England and southern Wales, accompanied by a few showers. Once this cloud and fog cleared, skies stayed largely clear over the whole country during the day. The exception was the far north of Scotland and Orkney, which saw some cloud throughout the day. It was another very warm day for most, with the highest temperatures recorded in south and central England and Wales.

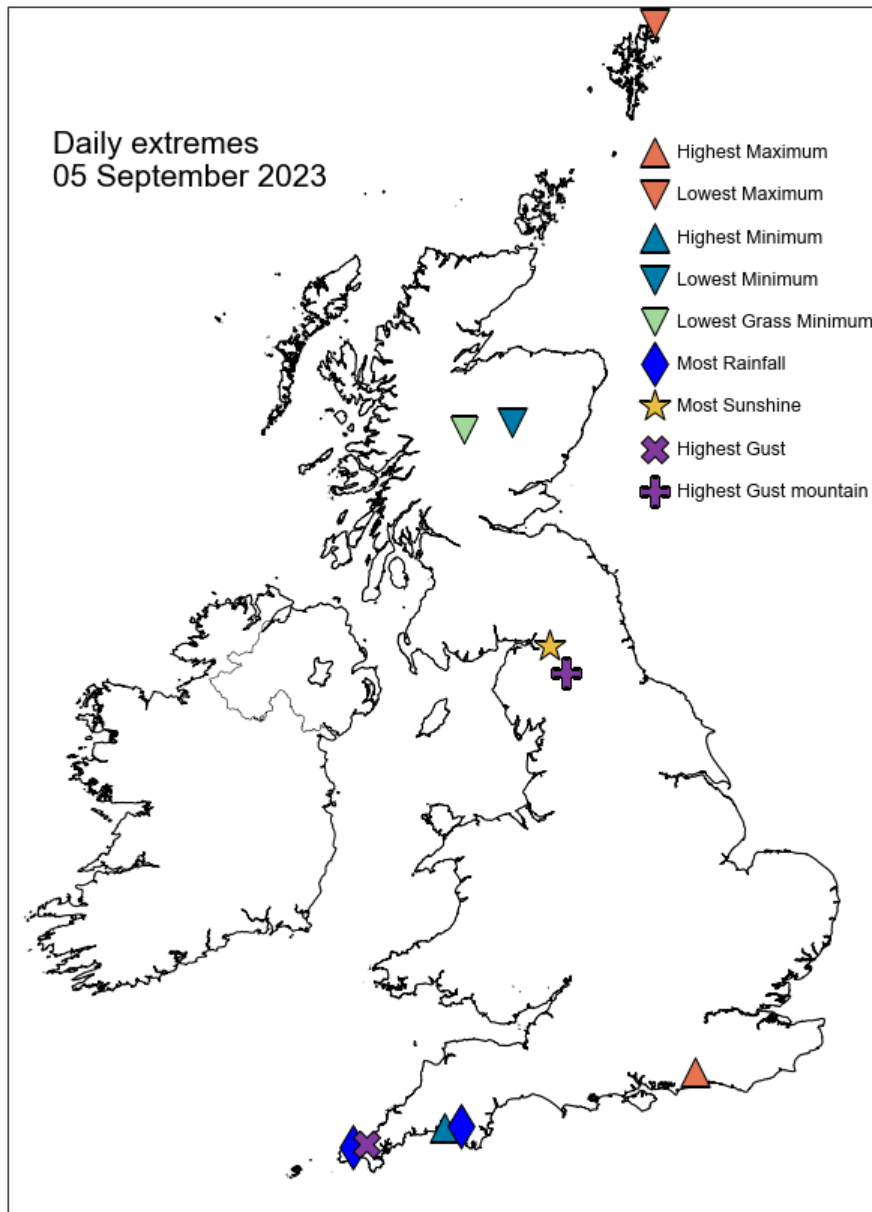

### Daily Extremes

<i>Highest Maximum</i>	<b>30.7°C</b> Wiggonholt (West Sussex, 28mAMSL)
<i>Lowest Maximum</i>	<b>15.2°C</b> Baltasound No 2 (Shetland, 15mAMSL)
<i>Highest Minimum</i>	<b>20.5°C</b> Plymouth, Kinterbury Point (Devon, 0mAMSL)
<i>Lowest Minimum</i>	<b>1.4°C</b> Braemar No 2 (Aberdeenshire, 327mAMSL)
<i>Lowest Grass Minimum</i>	<b>-1.5°C</b> Dalwhinnie No 2 (Inverness-shire, 351mAMSL)
<i>Most Rainfall</i>	<b>0.6mm</b> Cornwood (Devon, 95mAMSL) also Towednack (Cornwall, 150mAMSL)
<i>Most Sunshine</i>	<b>12.9hr</b> Brampton No 3 (Cumbria, 117mAMSL)
<i>Highest Gust</i>	<b>36Kt 41mph</b> Camborne (Cornwall, 87mAMSL)
<i>Highest Gust (mountain*)</i>	<b>34Kt 39mph</b> Great Dun Fell No 2 B (Cumbria, 847mAMSL)
<i>Greatest Snow Depth at 0900 UTC</i>	No non-zero values.

mAMSL refers to station elevation in metres above mean sea level.

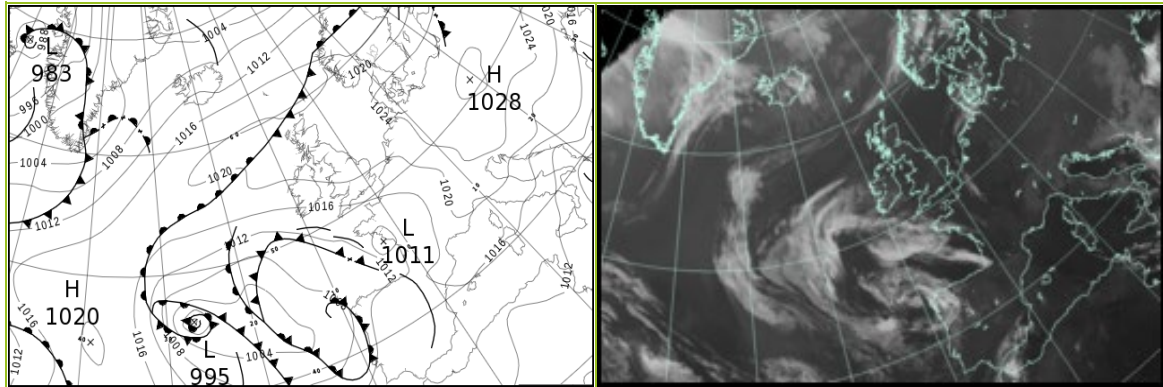

\*Mountain stations are above 500mAMSL.

None of the selected stations observed a day of sleet or snow falling or non-zero snow depth at 0900 UTC.

## Daily Weather Summary for Wednesday 06 September 2023

This day's summary created 13/09/2023 04:02

### Summary of the UK Weather for Wednesday 06 September 2023

High pressure remained in charge over the UK throughout the night, meaning most places saw a dry, clear and warm night. Mist and fog spread across the east coast counties from East Anglia northwards, pushing inland through the early hours, with the maximum extent reaching the central spine of the country around dawn. Further patchy fog formed in parts of the southwest at times. Most of the overnight cloud and fog burned back to the coasts by mid-morning, though it lingered in parts of central and eastern Scotland. The majority of England and Wales saw another day of sunshine, but it was cloudier over Northern Ireland. Some patchy cloud also formed over Scotland and parts of central England later in the day. Like previous days, it was warm or hot for most, with southern areas reaching mid-to-high twenties, although the lingering cloud over eastern Scotland kept temperatures lower in the mid-high teens.

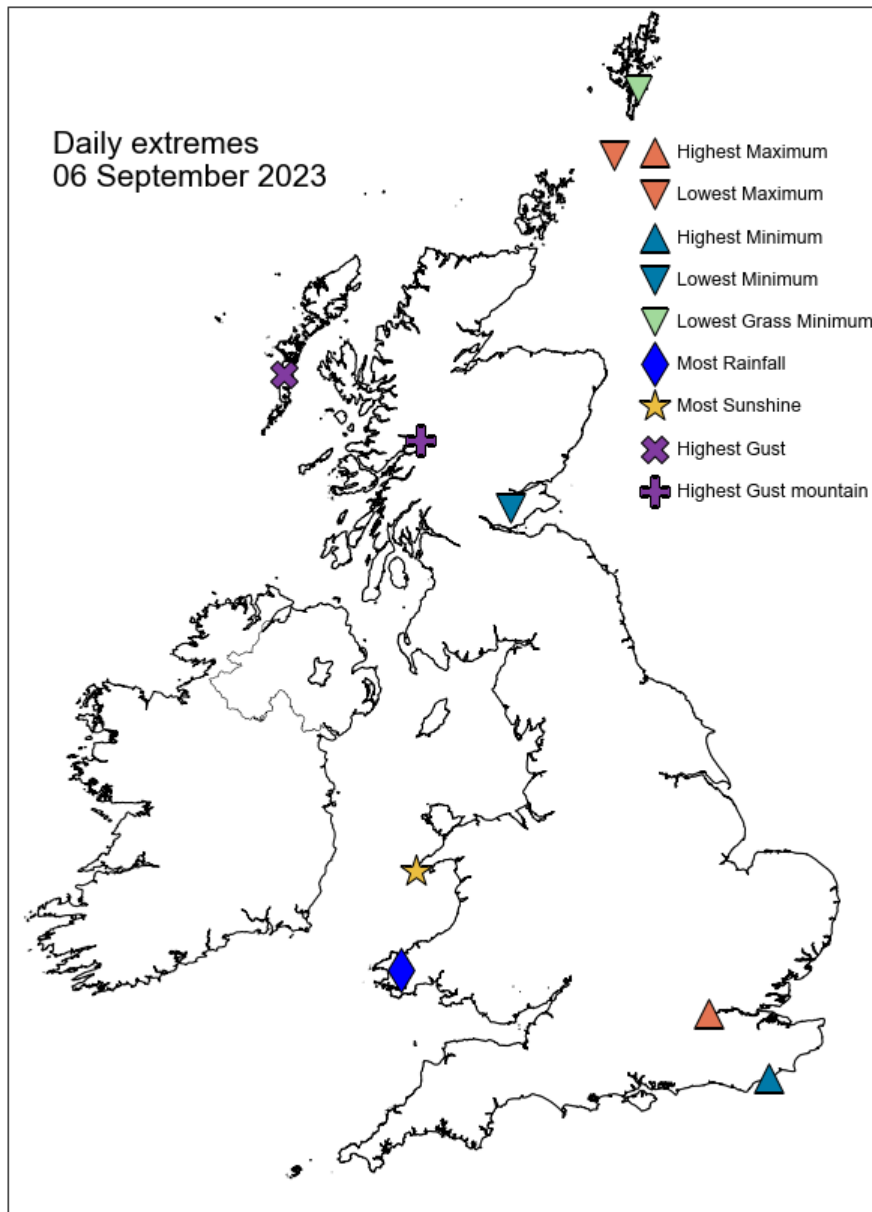

### Daily Extremes

<i>Highest Maximum</i>	<b>32.0°C</b> Kew Gardens (Greater London, 6mAMSL)
<i>Lowest Maximum</i>	<b>13.9°C</b> Fair Isle (Shetland, 57mAMSL)
<i>Highest Minimum</i>	<b>18.8°C</b> Hastings (East Sussex, 45mAMSL)
<i>Lowest Minimum</i>	<b>6.2°C</b> Kinross (Kinross-shire, 116mAMSL)
<i>Lowest Grass Minimum</i>	<b>2.4°C</b> Lerwick (Shetland, 82mAMSL)
<i>Most Rainfall</i>	<b>3.6mm</b> Scolton Country Park (Dyfed, 75mAMSL)
<i>Most Sunshine</i>	<b>11.9hr</b> Aberdaron (Gwynedd, 86mAMSL)
<i>Highest Gust</i>	<b>34Kt 39mph</b> South Uist Range (Western Isles, 4mAMSL)
<i>Highest Gust (mountain*)</i>	<b>38Kt 44mph</b> Aonach Mor (Inverness-shire, 1130mAMSL)
<i>Greatest Snow Depth at 0900 UTC</i>	No non-zero values.

mAMSL refers to station elevation in metres above mean sea level.

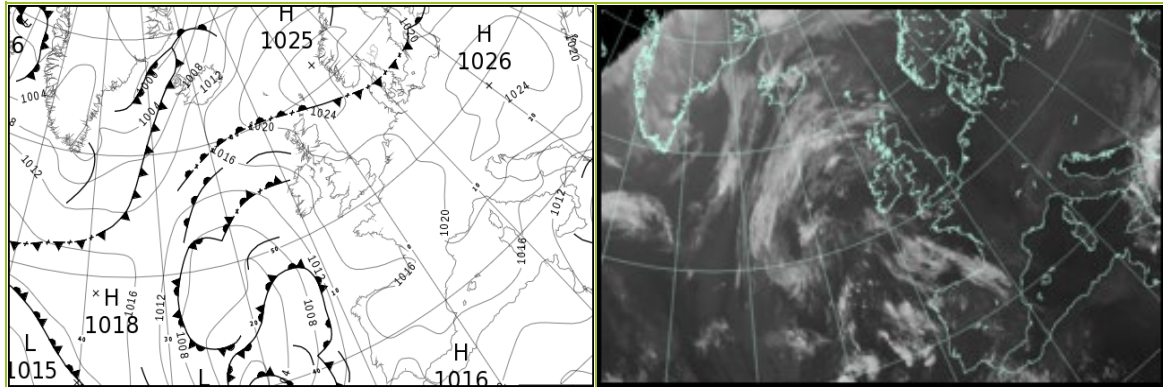

\*Mountain stations are above 500mAMSL.

## Daily Weather Summary for Wednesday 06 September 2023

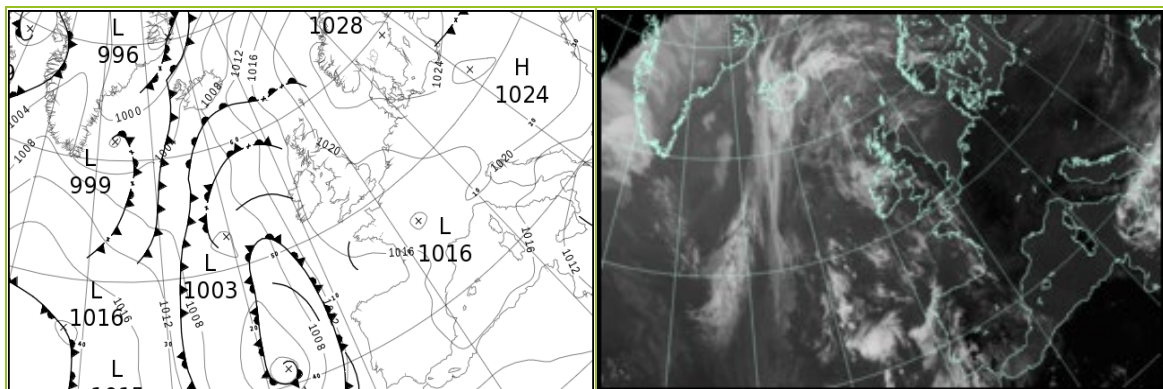

## Daily Weather Summary for Wednesday 06 September 2023

None of the selected stations observed a day of sleet or snow falling or non-zero snow depth at 0900 UTC.

## Daily Weather Summary for Thursday 07 September 2023

This day's summary created 14/09/2023 04:03

### Summary of the UK Weather for Thursday 07 September 2023

High pressure dominated the weather across the UK again. Many areas experienced a dry night with clear spells; however, from midnight an area of cloud and showers pushed from the south coast northward, extending into the central spine of the country through the early hours. The majority of the showers were across the southwest of England as well as Wales, some of which were thundery at times. Locally heavy showers were also experienced across northwestern Scottish isles. Further north across much of Scotland and in the southeast of England conditions remained dry with clear spells. Winds remained light overnight with temperatures remaining well above average for the time of year. Warm temperatures were persistent through the day, especially over the south. Precipitation in the form of showery rain lingered over the east coast of North Ireland and pushed across parts of Scotland during the afternoon. Fairly clear and dry elsewhere, although the east coast and the southwest often saw low cloud cover.

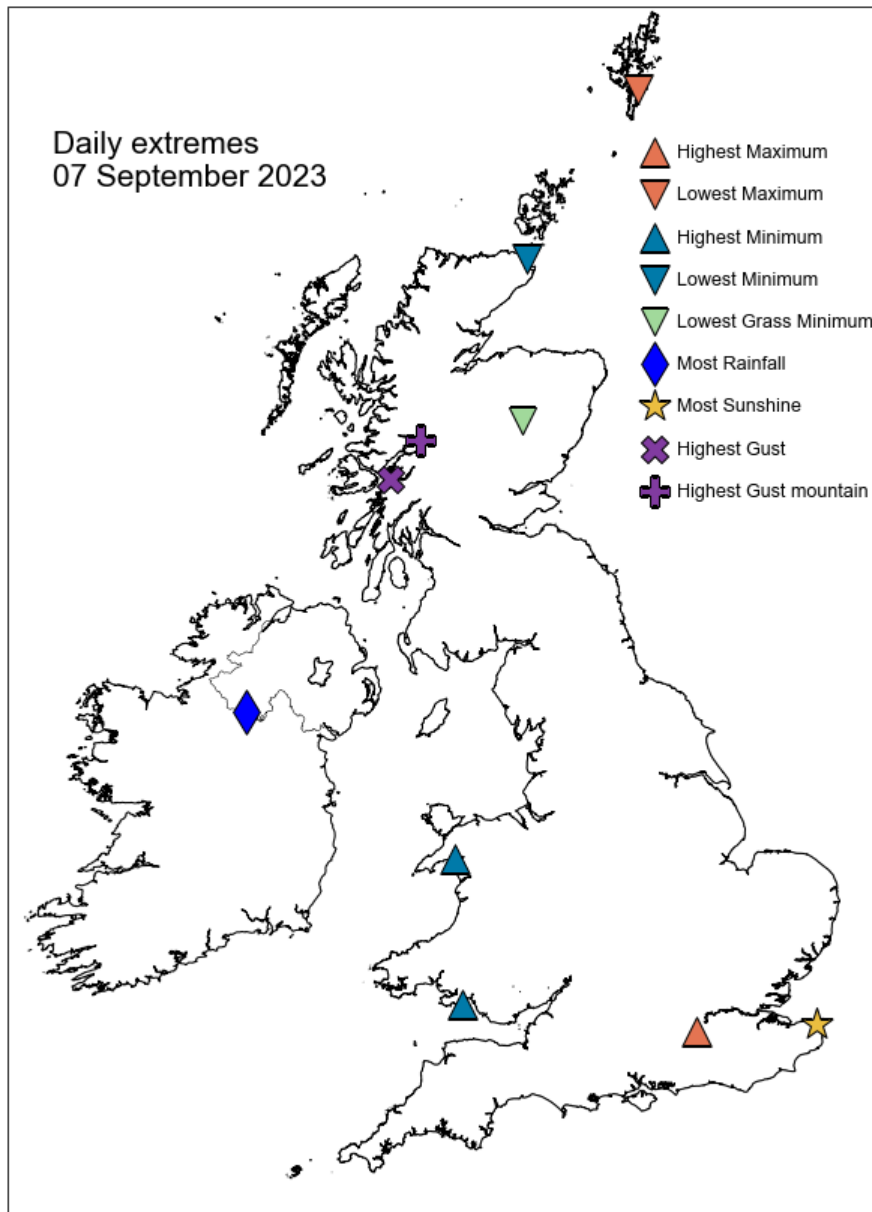

### Daily Extremes

<i>Highest Maximum</i>	<b>32.6°C</b> Wisley (Surrey, 38mAMSL)
<i>Lowest Maximum</i>	<b>17.9°C</b> Lerwick (Shetland, 82mAMSL)
<i>Highest Minimum</i>	<b>20.2°C</b> Mumbles Head (West Glamorgan, 44mAMSL) also Porthmadog (Gwynedd, 7mAMSL)
<i>Lowest Minimum</i>	<b>8.4°C</b> Lyth No 2 (Caithness, 24mAMSL)
<i>Lowest Grass Minimum</i>	<b>4.8°C</b> Balmoral (Aberdeenshire, 283mAMSL)
<i>Most Rainfall</i>	<b>24.2mm</b> Derrylin, Cornahoule (Fermanagh, 68mAMSL)
<i>Most Sunshine</i>	<b>11.8hr</b> Manston (Kent, 49mAMSL)
<i>Highest Gust</i>	<b>32Kt 37mph</b> Dunstaffnage (Argyll (in Strathclyde Region), 3mAMSL)
<i>Highest Gust (mountain*)</i>	<b>45Kt 52mph</b> Aonach Mor (Inverness-shire, 1130mAMSL)
<i>Greatest Snow Depth at 0900 UTC</i>	No non-zero values.

mAMSL refers to station elevation in metres above mean sea level.

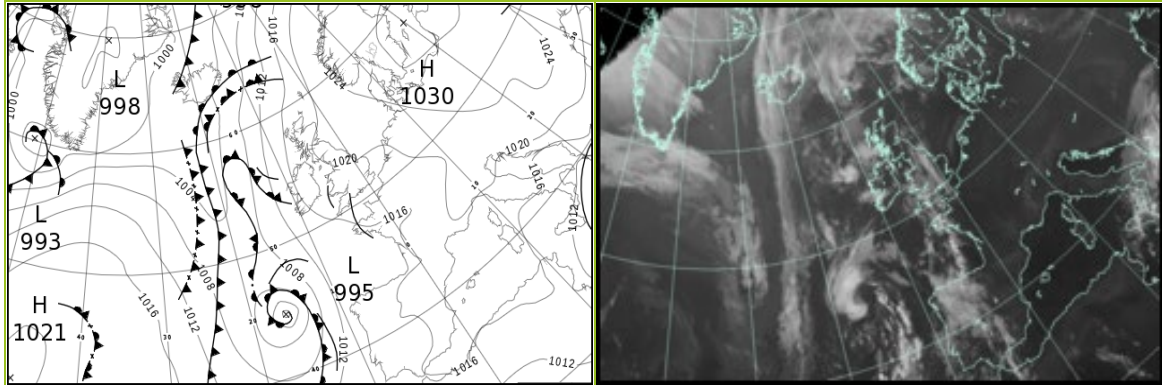

\*Mountain stations are above 500mAMSL.

## Daily Weather Summary for Thursday 07 September 2023

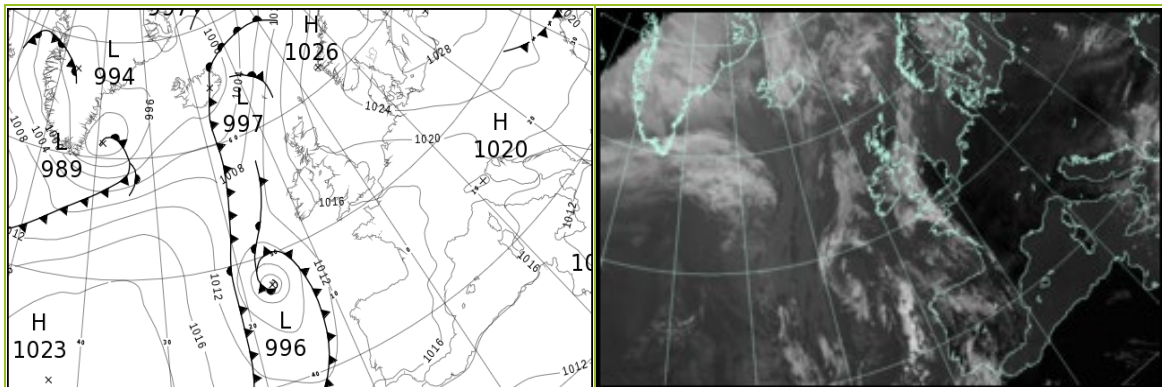

## Daily Weather Summary for Thursday 07 September 2023

None of the selected stations observed a day of sleet or snow falling or non-zero snow depth at 0900 UTC.

## Daily Weather Summary for Friday 08 September 2023

This day's summary created 15/09/2023 04:02

### Summary of the UK Weather for Friday 08 September 2023

Early showers in the north of Scotland largely cleared away to the east while the night was still young. Elsewhere, eastern, and southern areas saw patches of low cloud and fog, while much of the rest of the UK remained clear for the majority of the night. It was another night of warm temperatures all round, with southern areas generally remaining in the teens throughout, though eastern regions under cloud cover felt cooler. Friday saw variable cloud through the day, with temperatures reaching very warm and hot in places. Cloud developed over much of central and southern England and Wales through the morning, still seeing lengthy spells of sunshine throughout. This cloud largely became restricted to the eastern half of England by mid-afternoon. It remained dry for much of the day, with just the odd light rain shower in the far southwest of England and southern Wales in the early evening. Any showers faded through the evening leaving a largely dry night, remaining very warm and humid overnight. Winds were mostly light.

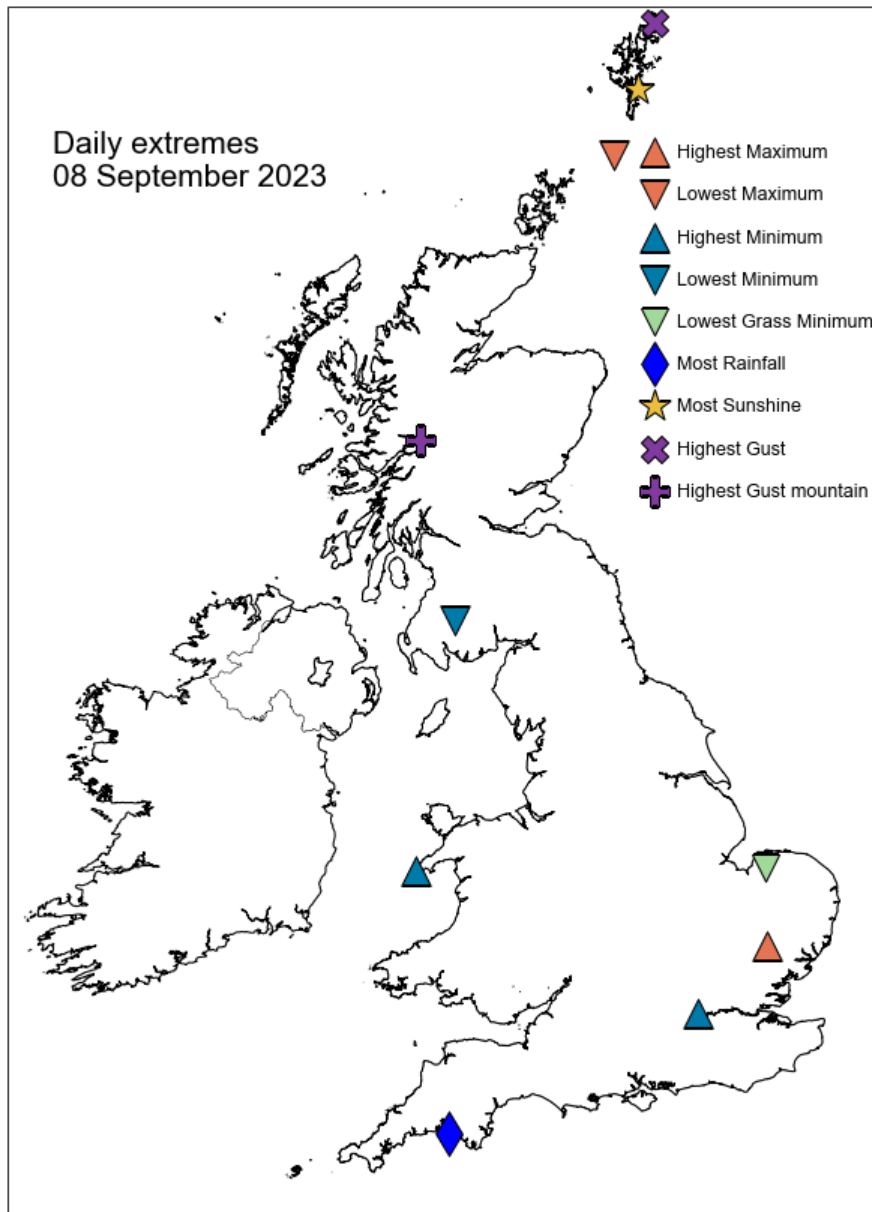

### Daily Extremes

<i>Highest Maximum</i>	<b>30.9°C</b> Cavendish (Suffolk, 55mAMSL)
<i>Lowest Maximum</i>	<b>20.0°C</b> Fair Isle (Shetland, 57mAMSL)
<i>Highest Minimum</i>	<b>18.9°C</b> Aberdaron (Gwynedd, 86mAMSL) also Heathrow (Greater London, 25mAMSL)
<i>Lowest Minimum</i>	<b>8.5°C</b> Forrest Lodge, Burnhead (Kirkcudbrightshire, 150mAMSL)
<i>Lowest Grass Minimum</i>	<b>6.5°C</b> Houghton Hall (Norfolk, 65mAMSL)
<i>Most Rainfall</i>	<b>3.8mm</b> Plymouth, Mountbatten (Devon, 50mAMSL)
<i>Most Sunshine</i>	<b>11.6hr</b> Lerwick (Shetland, 82mAMSL)
<i>Highest Gust</i>	<b>25Kt 29mph</b> Baltasound No 2 (Shetland, 15mAMSL)
<i>Highest Gust (mountain*)</i>	<b>41Kt 47mph</b> Aonach Mor (Inverness-shire, 1130mAMSL)
<i>Greatest Snow Depth at 0900 UTC</i>	No non-zero values.

mAMSL refers to station elevation in metres above mean sea level.

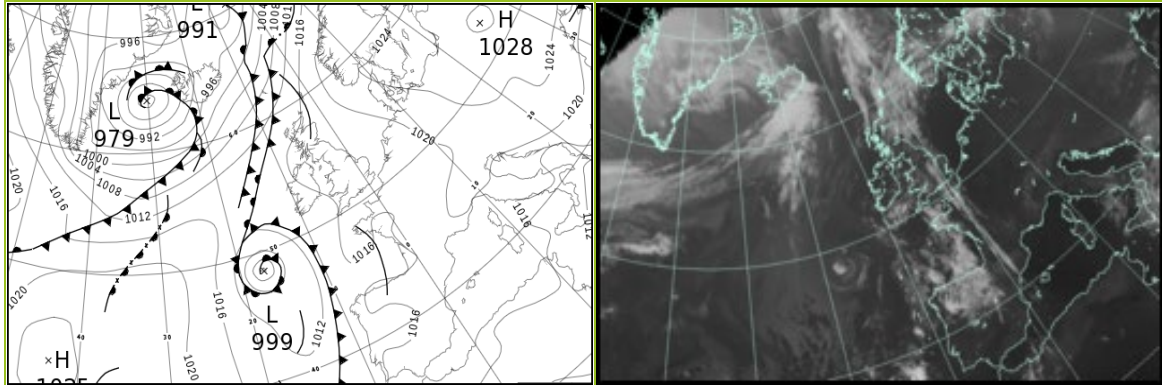

\*Mountain stations are above 500mAMSL.

## Daily Weather Summary for Saturday 09 September 2023

This day's summary created 19/09/2023 09:38

### Summary of the UK Weather for Saturday 09 September 2023

After another very warm and humid night, the early hours of Saturday saw cloud and patchy light rain across southwest and northeast England, and western Wales. Low visibility conditions were widespread, with mist, fog, and haze reported across some central but largely coastal locations, most prominent along North Sea coasts. During the day, some low mist or fog saturated around in the dawn, as it cleared, it was clear and sunny for most. However, cold fronts slowly heading into the country from the northwest. It has brought some rainfall in the area, as well as a few showers during the day that passed by northern England and the Pennines from the west. Wind was mostly still to calm, temperature was warm for most.

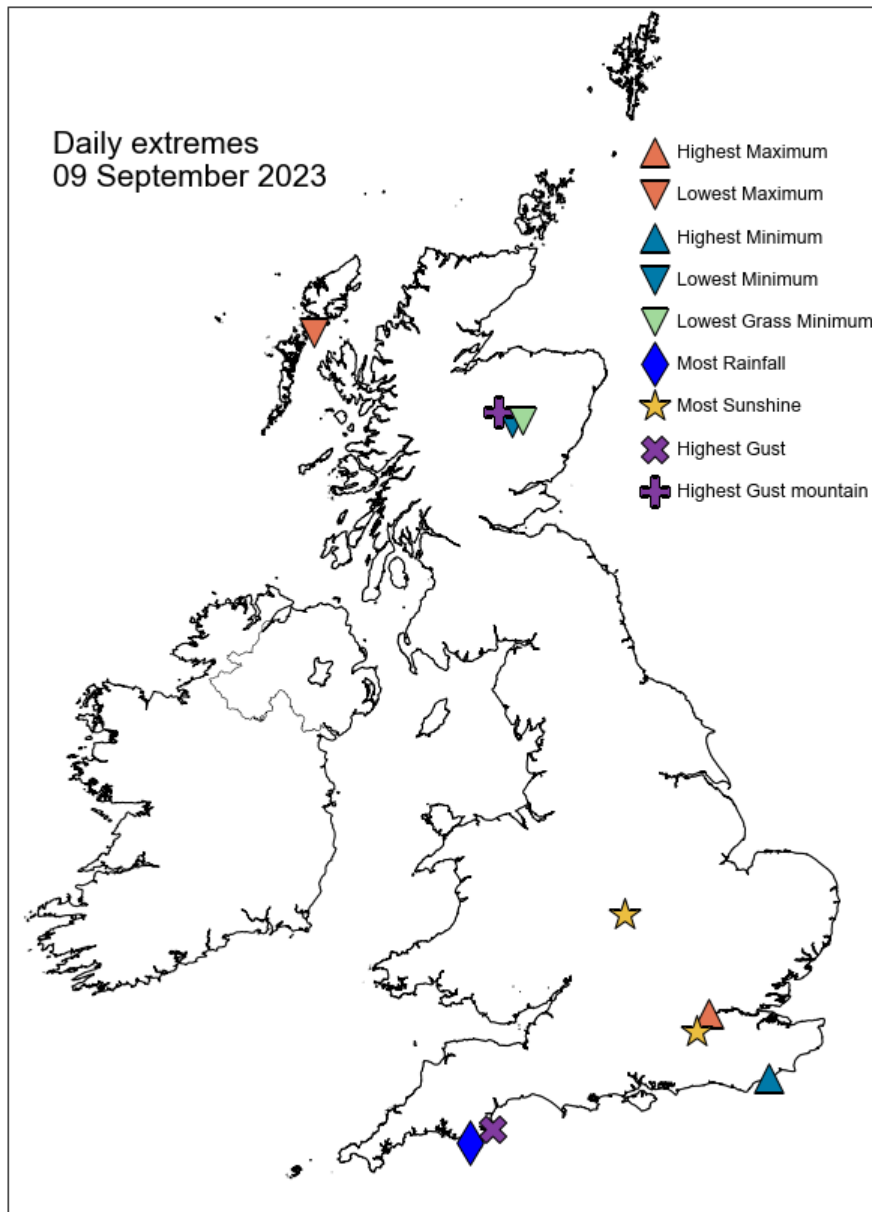

### Daily Extremes

<i>Highest Maximum</i>	<b>33.2°C</b> Kew Gardens (Greater London, 6mAMSL)
<i>Lowest Maximum</i>	<b>17.1°C</b> Harris: Quidnish (Western Isles, 13mAMSL)
<i>Highest Minimum</i>	<b>20.0°C</b> Hastings (East Sussex, 45mAMSL)
<i>Lowest Minimum</i>	<b>9.3°C</b> Braemar No 2 (Aberdeenshire, 327mAMSL)
<i>Lowest Grass Minimum</i>	<b>7.0°C</b> Balmoral (Aberdeenshire, 283mAMSL)
<i>Most Rainfall</i>	<b>14.2mm</b> Davey Park Farm (Devon, 90mAMSL)
<i>Most Sunshine</i>	<b>10.9hr</b> Wisley (Surrey, 38mAMSL) also Coventry, Coundon (West Midlands, 119mAMSL)
<i>Highest Gust</i>	<b>34Kt 39mph</b> Berry Head (Devon, 58mAMSL)
<i>Highest Gust (mountain*)</i>	<b>50Kt 58mph</b> Cairngorm Summit (Inverness-shire, 1237mAMSL)
<i>Greatest Snow Depth at 0900 UTC</i>	No non-zero values.

mAMSL refers to station elevation in metres above mean sea level.

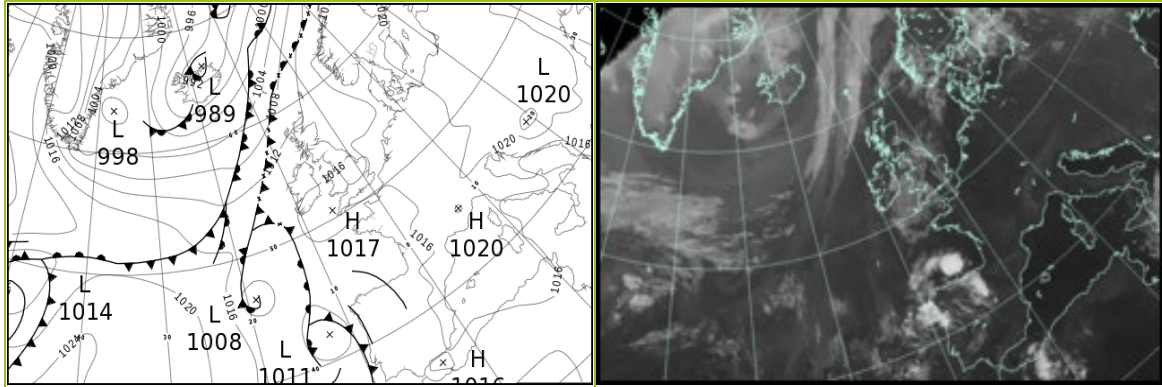

\*Mountain stations are above 500mAMSL.

## Daily Weather Summary for Saturday 09 September 2023

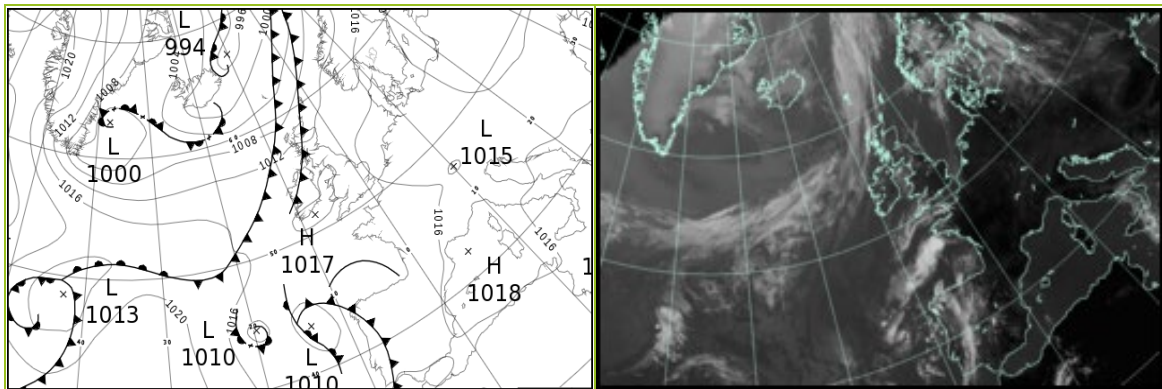

## Daily Weather Summary for Saturday 09 September 2023

None of the selected stations observed a day of sleet or snow falling or non-zero snow depth at 0900 UTC.

## Daily Weather Summary for Sunday 10 September 2023

This day's summary created 17/09/2023 04:04

### Summary of the UK Weather for Sunday 10 September 2023

Sunday started with a couple of cold fronts approaching the UK from the northwest. This lead to bands of rain forming in northern Scotland. Some showers and outbreaks of rain occurred in the southwest and pushed northeastwards, affecting central and northern parts of England. It was largely cloudy in the north, but the south remained fairly clear. The synoptic situation was mostly governed by high pressure, but low pressure was not far away, this lead to variables light winds throughout the period. Temperatures remained above average with peaks on the southeast. Into the day, heavy showery rainfall from the southwest shifted northwards, passing by Wales and into the central areas where rainfall turned heavy and thundery. In Scotland, a stationary front continued to hover above the region and has brought a band of rainfall to the north/ northwestern Scottish region. For the rest, it was mostly dry and clear with plenty of sunshine. Temperatures were warm.

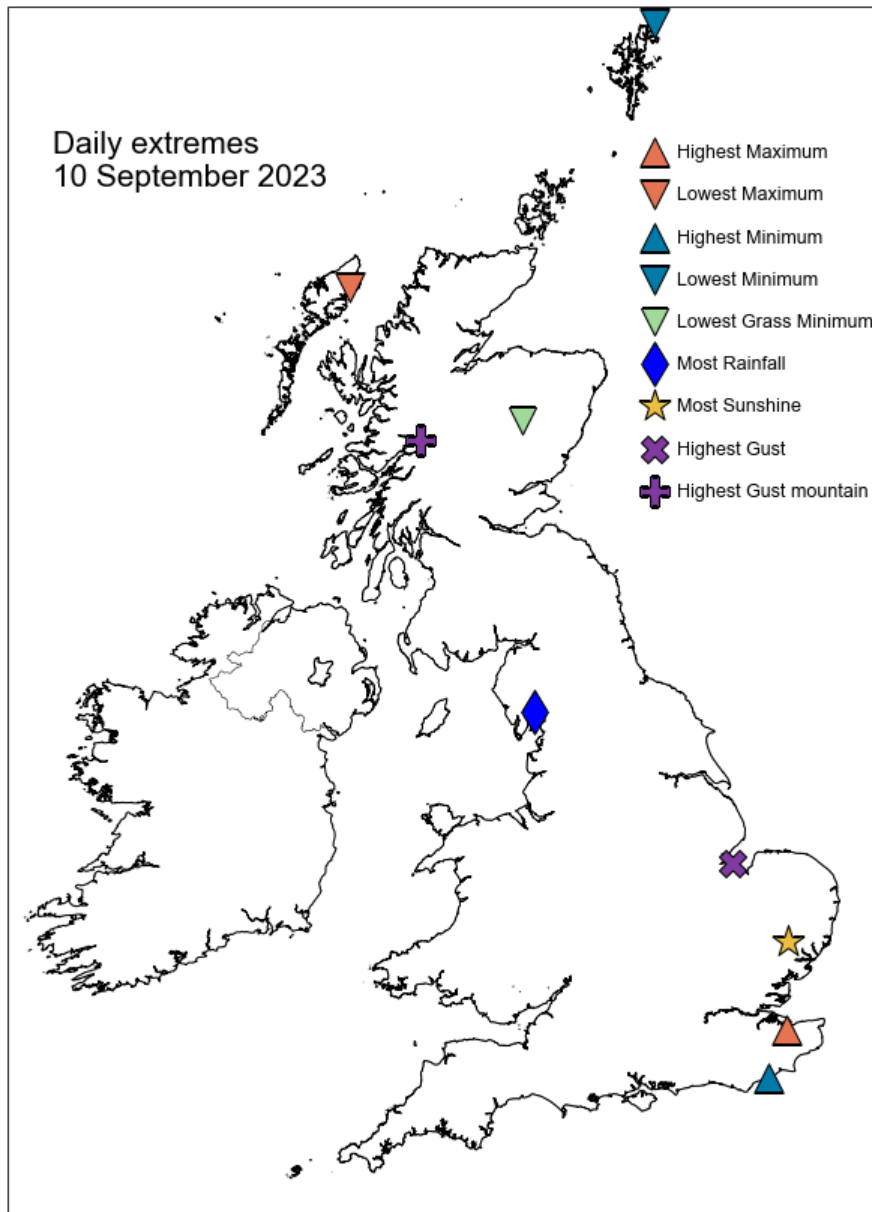

### Daily Extremes

<i>Highest Maximum</i>	<b>33.5°C</b> Faversham (Kent, 46mAMSL)
<i>Lowest Maximum</i>	<b>14.1°C</b> Stornoway Airport (Western Isles, 15mAMSL)
<i>Highest Minimum</i>	<b>20.3°C</b> Hastings (East Sussex, 45mAMSL)
<i>Lowest Minimum</i>	<b>8.1°C</b> Baltasound No 2 (Shetland, 15mAMSL)
<i>Lowest Grass Minimum</i>	<b>4.6°C</b> Balmoral (Aberdeenshire, 283mAMSL)
<i>Most Rainfall</i>	<b>69.8mm</b> Tower Wood S Wks (Cumbria, 50mAMSL)
<i>Most Sunshine</i>	<b>9.9hr</b> Wattisham (Suffolk, 89mAMSL)
<i>Highest Gust</i>	<b>67Kt 77mph</b> Holbeach No 2 (Lincolnshire, 3mAMSL)
<i>Highest Gust (mountain*)</i>	<b>40Kt 46mph</b> Aonach Mor (Inverness-shire, 1130mAMSL)
<i>Greatest Snow Depth at 0900 UTC</i>	No non-zero values.

mAMSL refers to station elevation in metres above mean sea level.

\*Mountain stations are above 500mAMSL.

## Daily Weather Summary for Monday 11 September 2023

This day's summary created 18/09/2023 04:06

### Summary of the UK Weather for Monday 11 September 2023

Two cold fronts moved eastwards across Northern Ireland, Scotland and Northern England at the start of Monday bringing heavy prolonged showers through the early hours. A couple isolated showers stretched down into parts of the northern Midlands but these were short lived. The rest of the country, remained dry for most of the early morning. Some central areas were clear, with cloud focused in southeaster areas, and northern and western areas. During the morning, central and eastern areas of England saw the best of the sunshine, with western areas being mostly cloudy, with some light showery outbreaks of rain brought by the fronts which were slowly progressing southeastwards. North western Scotland was fresher with some showers. During the afternoon, it was a slowly changing picture with some showers moving from west to east across Scotland, outbreaks of rain moving across Northern Ireland and northern England, some locally heavy showers in the North midlands and eastern England, along with a few in Wales southwest England. There were sunny intervals for some, between areas of cloud. Winds were mostly light. It was warmer than average for southeastern areas, despite being cooler than recently. Northwestern areas were significantly cooler.

### Daily Extremes

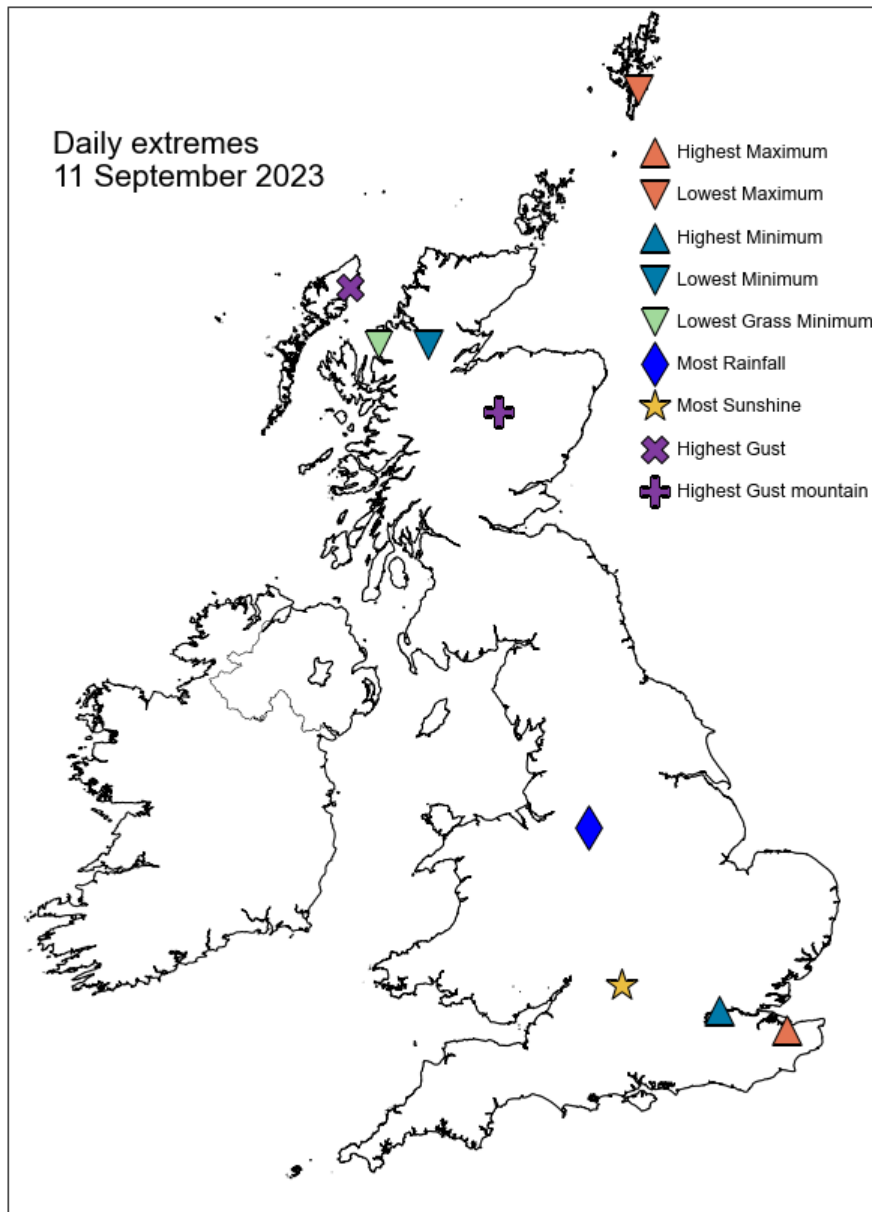

<i>Highest Maximum</i>	<b>27.3°C</b> Faversham (Kent, 46mAMSL)
<i>Lowest Maximum</i>	<b>14.0°C</b> Lerwick (Shetland, 82mAMSL)
<i>Highest Minimum</i>	<b>19.2°C</b> London, St James's Park (Greater London, 5mAMSL)
<i>Lowest Minimum</i>	<b>9.7°C</b> Loch Glascarnoch (Ross & Cromarty, 269mAMSL)
<i>Lowest Grass Minimum</i>	<b>6.2°C</b> Port Henderson (Ross & Cromarty, 18mAMSL)
<i>Most Rainfall</i>	<b>36.1mm</b> Langley, Bottoms Resr (Cheshire, 209mAMSL)
<i>Most Sunshine</i>	<b>7.9hr</b> Brize Norton (Oxfordshire, 82mAMSL)
<i>Highest Gust</i>	<b>30Kt 35mph</b> Stornoway Airport (Western Isles, 15mAMSL)
<i>Highest Gust (mountain*)</i>	<b>45Kt 52mph</b> Cairngorm Summit (Inverness-shire, 1237mAMSL)
<i>Greatest Snow Depth at 0900 UTC</i>	No non-zero values.

mAMSL refers to station elevation in metres above mean sea level.

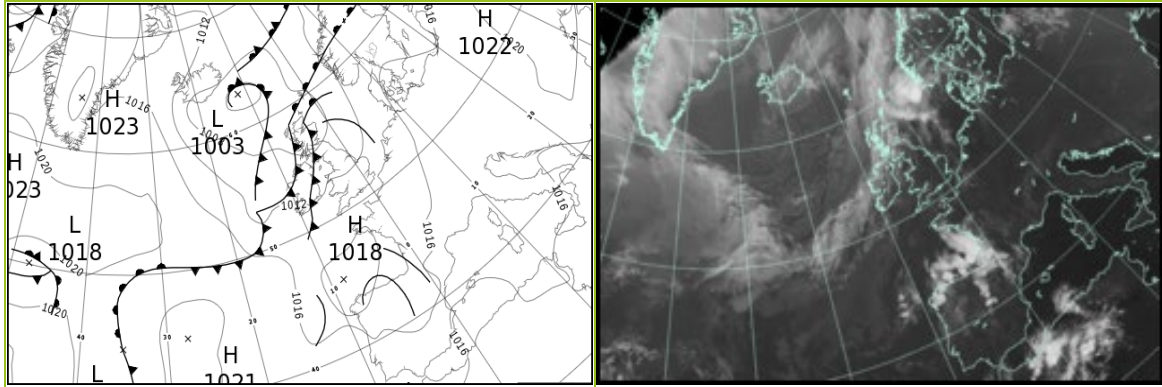

\*Mountain stations are above 500mAMSL.

# Daily Weather Summary for Monday 11 September 2023

## Daily Weather Summary for Monday 11 September 2023

None of the selected stations observed a day of sleet or snow falling or non-zero snow depth at 0900 UTC.

## Daily Weather Summary for Tuesday 12 September 2023

This day's summary created 19/09/2023 04:02

### Summary of the UK Weather for Tuesday 12 September 2023

A low pressure system lingered above central England to start the night, slowly moving southeastwards. This brought moderate to heavy rainfall in central England as well as parts of Wales overnight. Elsewhere, an occluded front brought associated showery rainfall to Scotland and Northern Ireland. The south coast saw further showers from a weakening cold front. Winds were generally calm to mild but rather cold in northern areas. The large area of rain accompanying the low pressure system lingered over central areas throughout the day, slowly moving eastwards by the evening. Further showers bubbled up over the southeast and east Anglia, these turning heavy and thundery, with lightning at times. Away from the low pressure, it was mostly dry with the only other area to see any showers was the northwest of Scotland. Patchy cloud also allowed for some good spells of sunshine across the southwest, Northern Ireland and Scotland. Winds were generally light and variable, although fresher northerly winds in coastal areas to the north of the low pressure.

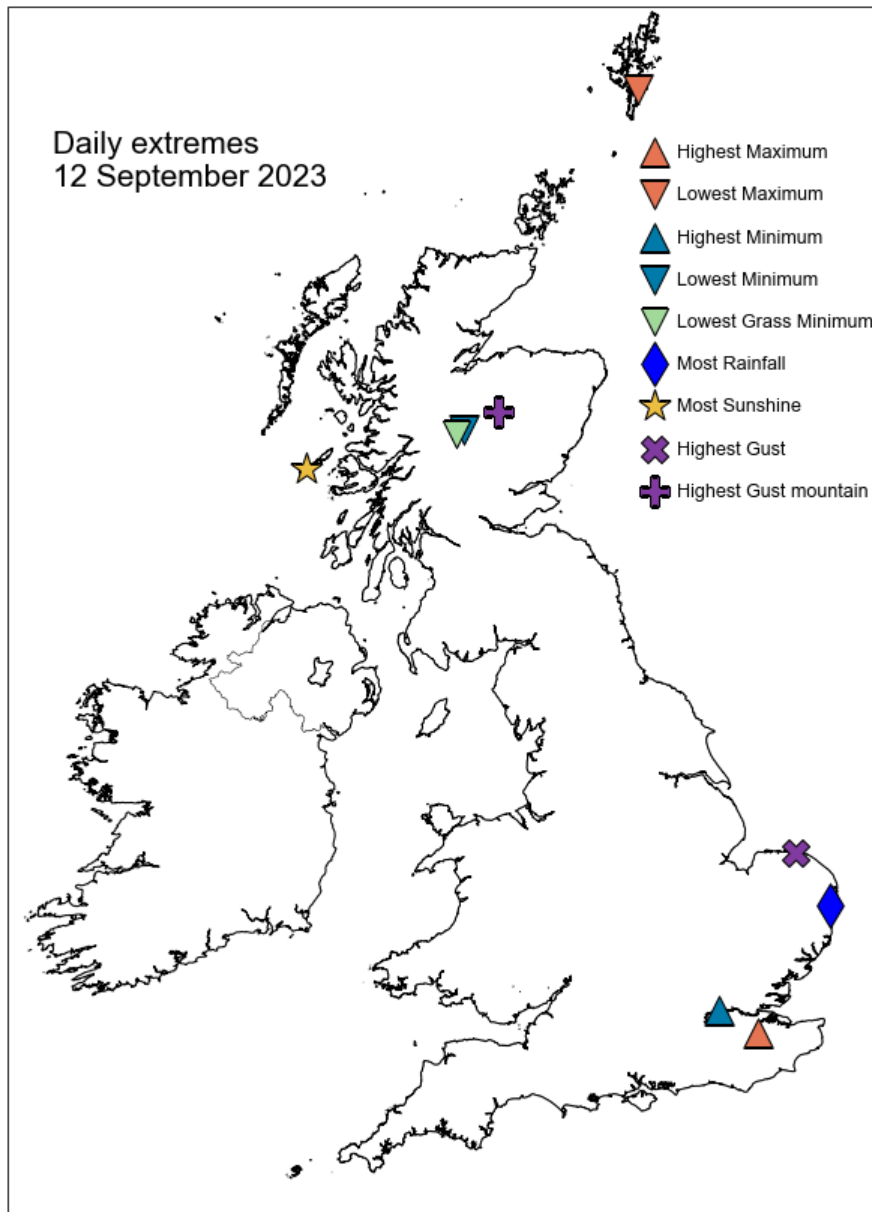

### Daily Extremes

<i>Highest Maximum</i>	<b>24.4°C</b> East Malling (Kent, 33mAMSL)
<i>Lowest Maximum</i>	<b>11.9°C</b> Lerwick (Shetland, 82mAMSL)
<i>Highest Minimum</i>	<b>18.0°C</b> London, St James's Park (Greater London, 5mAMSL)
<i>Lowest Minimum</i>	<b>1.3°C</b> Dalwhinnie No 2 (Inverness-shire, 351mAMSL)
<i>Lowest Grass Minimum</i>	<b>-3.2°C</b> Dalwhinnie No 2 (Inverness-shire, 351mAMSL)
<i>Most Rainfall</i>	<b>37.4mm</b> Worlingham (Suffolk, 10mAMSL)
<i>Most Sunshine</i>	<b>10.6hr</b> Tiree (Argyll (in Strathclyde Region), 9mAMSL)
<i>Highest Gust</i>	<b>35Kt 40mph</b> Weybourne (Norfolk, 21mAMSL)
<i>Highest Gust (mountain*)</i>	<b>31Kt 36mph</b> Cairngorm Summit (Inverness-shire, 1237mAMSL)
<i>Greatest Snow Depth at 0900 UTC</i>	No non-zero values.

mAMSL refers to station elevation in metres above mean sea level.

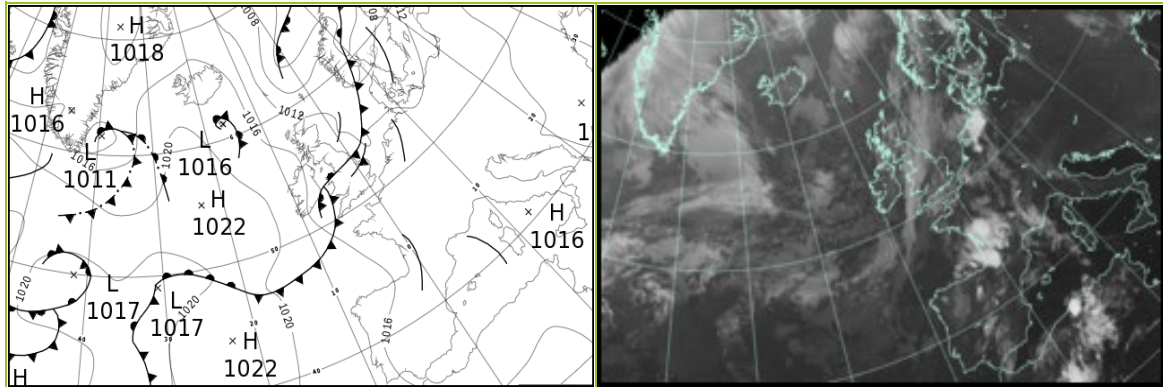

\*Mountain stations are above 500mAMSL.

## Daily Weather Summary for Tuesday 12 September 2023

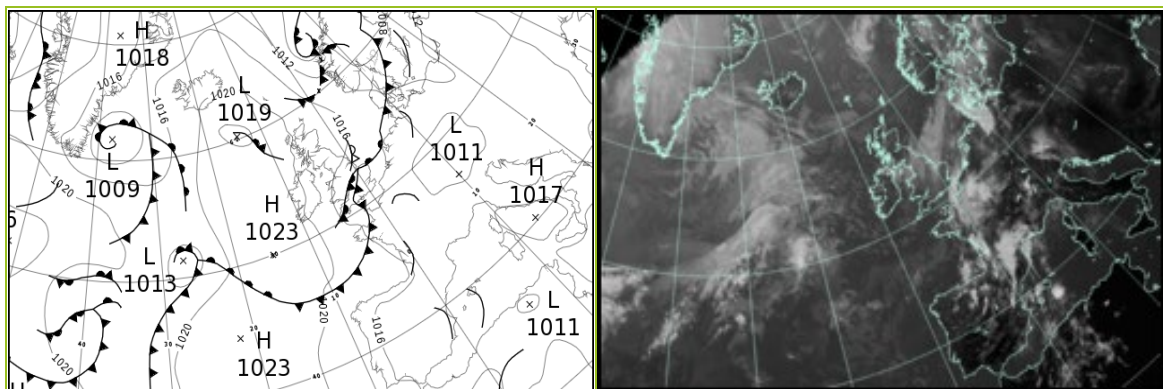

## Daily Weather Summary for Tuesday 12 September 2023

None of the selected stations observed a day of sleet or snow falling or non-zero snow depth at 0900 UTC.

## Daily Weather Summary for Wednesday 13 September 2023

This day's summary created 20/09/2023 08:56

### Summary of the UK Weather for Wednesday 13 September 2023

High pressure developed to the north of Scotland and spread southwards throughout the night. The main band of rain and showers cleared the east of England by the early hours, however strong northerly coastal winds remained in these parts overnight. A band of rain reached Northern Ireland around dawn. Elsewhere. Wind generally eased overnight with cooler temperatures than of late, cold in parts of Scotland. It was a dry and fine start, with some localised patches of mist and fog in the southeast of England. It was a bright and dry morning for most. A frontal system moved in from the west bringing low cloud and rain to Northern Ireland and the west coast of Scotland. This moved eastwards across Scotland through the afternoon and evening bringing rain to northern England later. The wind was initially calm, but the front brought strong winds to the Western Isles and western coastal areas. Temperatures were cooler than recently, although still near average for some especially in the south, and below average for some in the north.

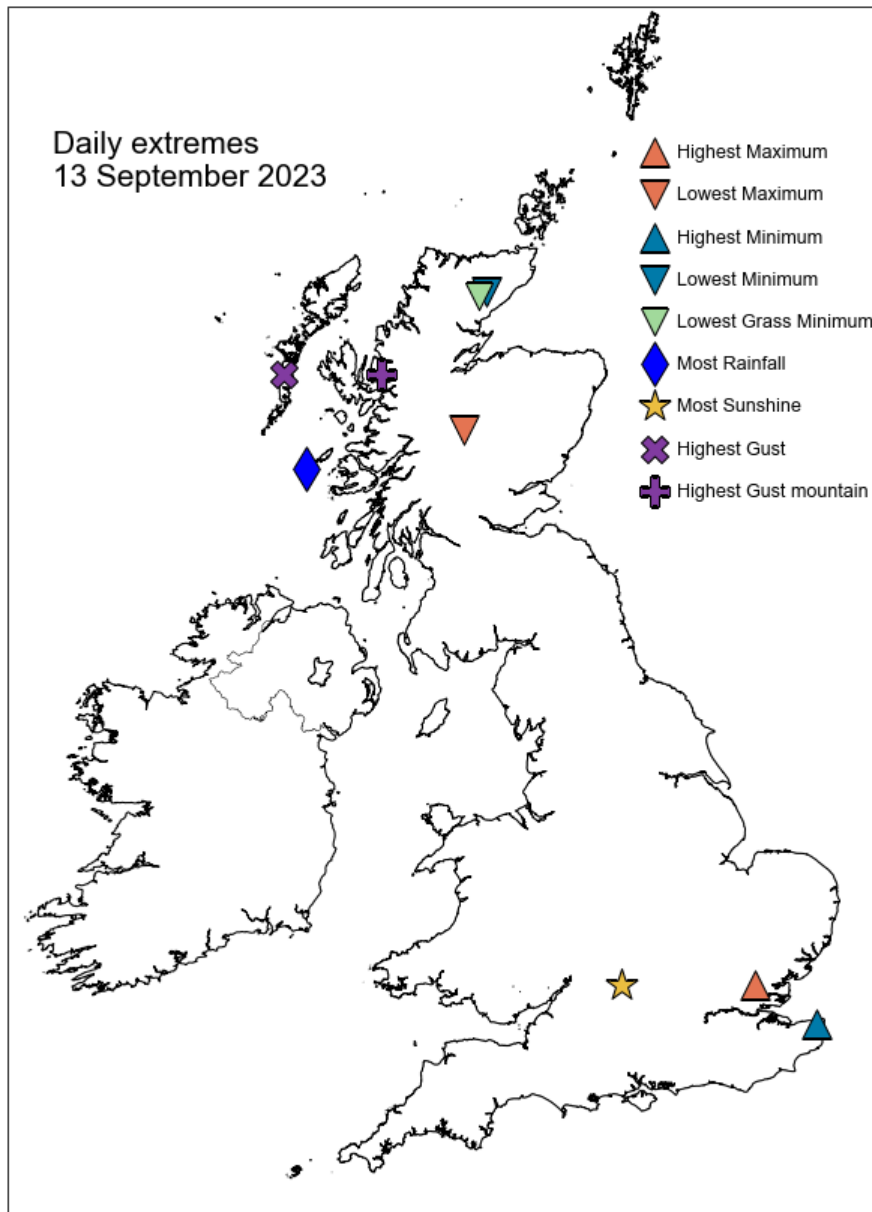

### Daily Extremes

<i>Highest Maximum</i>	<b>22.1°C</b> Writtle (Essex, 32mAMSL)
<i>Lowest Maximum</i>	<b>11.7°C</b> Dalwhinnie No 2 (Inverness-shire, 351mAMSL)
<i>Highest Minimum</i>	<b>15.0°C</b> Manston (Kent, 49mAMSL)
<i>Lowest Minimum</i>	<b>-3.5°C</b> Kinbrace, Hatchery (Sutherland, 103mAMSL)
<i>Lowest Grass Minimum</i>	<b>-4.5°C</b> Kinbrace, Hatchery (Sutherland, 103mAMSL)
<i>Most Rainfall</i>	<b>30.0mm</b> Tiree (Argyll (in Strathclyde Region), 9mAMSL)
<i>Most Sunshine</i>	<b>10.9hr</b> Brize Norton (Oxfordshire, 82mAMSL)
<i>Highest Gust</i>	<b>52Kt 60mph</b> South Uist Range (Western Isles, 4mAMSL)
<i>Highest Gust (mountain*)</i>	<b>72Kt 83mph</b> Bealach Na Ba No 2 (Ross & Cromarty, 773mAMSL)
<i>Greatest Snow Depth at 0900 UTC</i>	No non-zero values.

mAMSL refers to station elevation in metres above mean sea level.

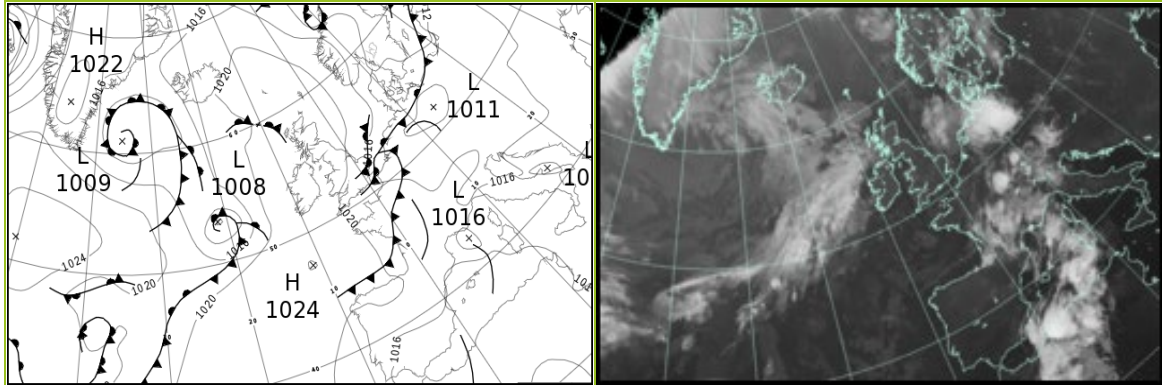

\*Mountain stations are above 500mAMSL.

None of the selected stations observed a day of sleet or snow falling or non-zero snow depth at 0900 UTC.

## Daily Weather Summary for Thursday 14 September 2023

This day's summary created 21/09/2023 09:18

### Summary of the UK Weather for Thursday 14 September 2023

Overnight, the main rain band cleared eastern Scotland, pushing into the North Sea and Northern England, with showers following. Winds strengthened in northern areas, reaching gale force for a time in the western Isles. This was associated with a deep low. Outbreaks of rain had reached much of Wales and the north Midlands by dawn. To the south of this, it was a quiet night with light winds and patchy cloud. During the morning, a depression to the west of the Northern Isles cast a very slow-moving frontal system in a band across northern England and Wales. This brought mostly light rain and showers to this area, and there were locally heavy showers across Scotland. The trailing cold front reversed direction during the morning, becoming a 2nd warm front moving very slowly northward. The rain dissipated during the afternoon, but returned overnight. Winds were strong in the far north around the depression, although it was much calmer further south. Temperatures were around average north of the fronts and average to warm to the south.

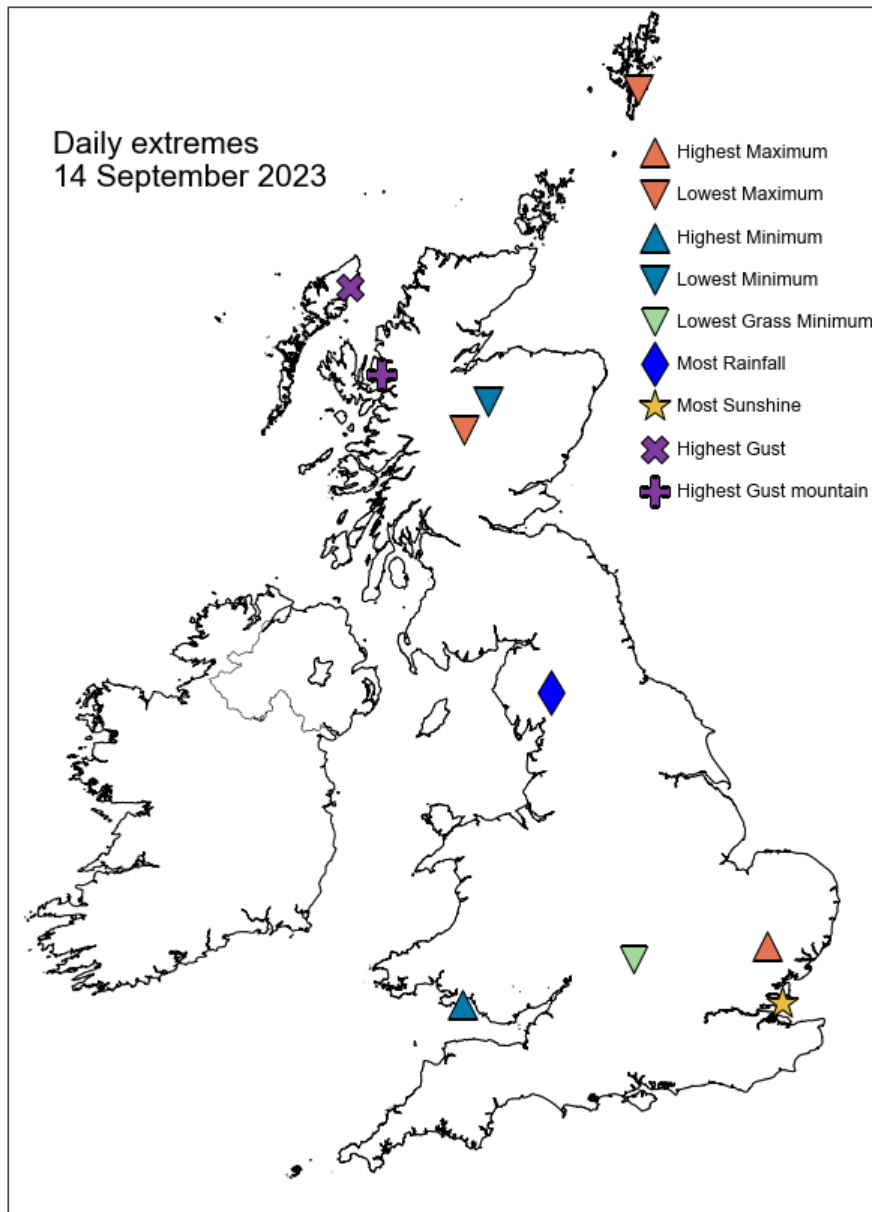

### Daily Extremes

<i>Highest Maximum</i>	<b>25.0°C</b> Cavendish (Suffolk, 55mAMSL)
<i>Lowest Maximum</i>	<b>14.7°C</b> Lerwick (Shetland, 82mAMSL) also Dalwhinnie No 2 (Inverness-shire, 351mAMSL)
<i>Highest Minimum</i>	<b>15.9°C</b> Mumbles Head (West Glamorgan, 44mAMSL)
<i>Lowest Minimum</i>	<b>4.9°C</b> Aviemore (Inverness-shire, 228mAMSL)
<i>Lowest Grass Minimum</i>	<b>2.7°C</b> South Newington (Oxfordshire, 105mAMSL)
<i>Most Rainfall</i>	<b>22.9mm</b> Wet Sledale Resr (Cumbria, 270mAMSL)
<i>Most Sunshine</i>	<b>11.0hr</b> Shoeburyness, Landwick (Essex, 2mAMSL)
<i>Highest Gust</i>	<b>56Kt 64mph</b> Stornoway Airport (Western Isles, 15mAMSL)
<i>Highest Gust (mountain*)</i>	<b>83Kt 96mph</b> Bealach Na Ba No 2 (Ross & Cromarty, 773mAMSL)
<i>Greatest Snow Depth at 0900 UTC</i>	No non-zero values.

mAMSL refers to station elevation in metres above mean sea level.

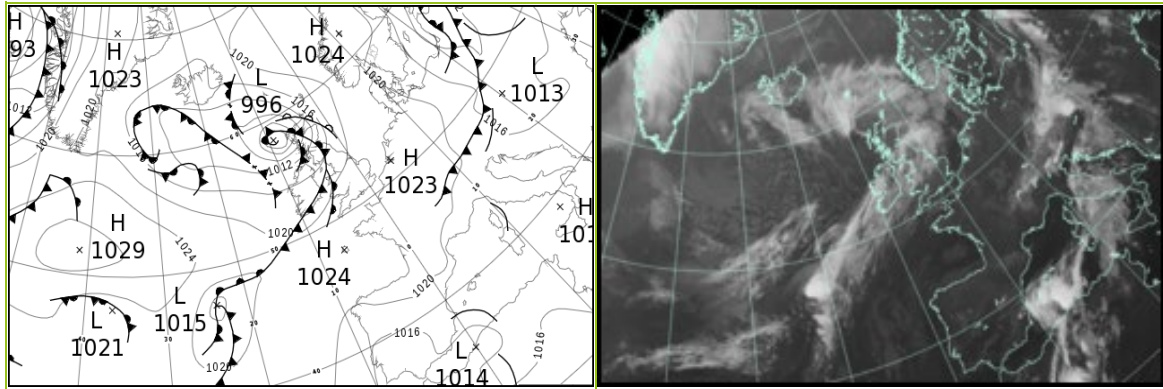

\*Mountain stations are above 500mAMSL.

# Daily Weather Summary for Thursday 14 September 2023

## Daily Weather Summary for Thursday 14 September 2023

None of the selected stations observed a day of sleet or snow falling or non-zero snow depth at 0900 UTC.

## Daily Weather Summary for Friday 15 September 2023

This day's summary created 22/09/2023 04:03

### Summary of the UK Weather for Friday 15 September 2023

Overnight, the warm front continued to move slowly north, with persistent rain spreading northeast along the front, affecting northern England, and also affecting Anglesey at times. This band moved gradually northwards to affect most of Northern Ireland and southern Scotland later in the night. For the midlands southwards it was a calm night with mostly clear skies allowing some patchy mist and fog to develop, and the far northwest of Scotland saw some clear spells with a few showers. Winds were light away from the northern isles of Scotland. Friday was mostly dominated by low pressure, located to the northeast and southwest of the British Isles. A warm front associated to this low centres continued to move northward through the day. This created a significant contrast in temperature between the south and the north of the UK. Southern Scotland, North Ireland and Northern parts of England were affected by a band of rain, which was heavy and thundery within warm and humid spots. While the south started cloudy with some showers in places, it cleared allowing for a warm and brighter theme to develop into the afternoon. Fairly cloudy over the north with few sunny spells. Temperatures were generally warm across the south and slightly below average in the north. Light southerly winds were predominant through the day.

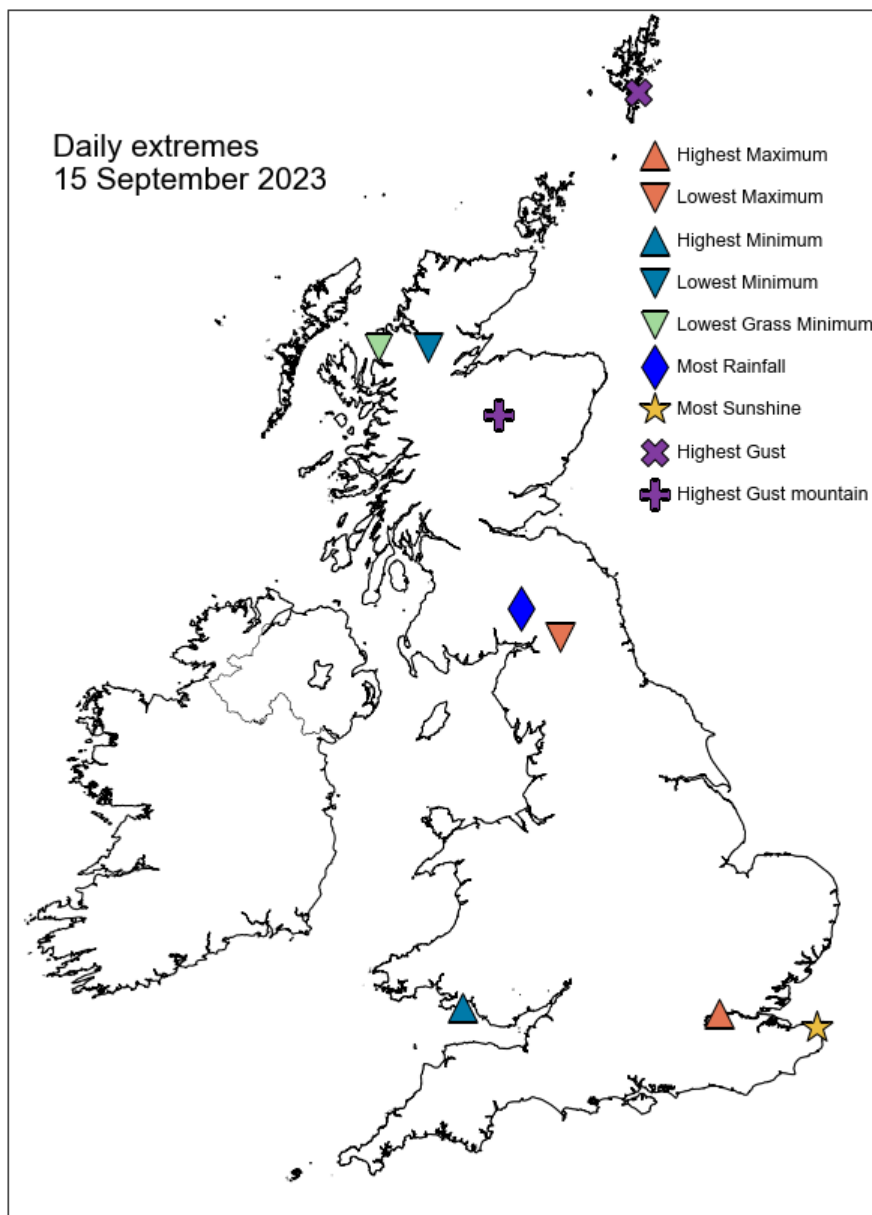

### Daily Extremes

<i>Highest Maximum</i>	<b>27.0°C</b> London, St James's Park (Greater London, 5mAMSL)
<i>Lowest Maximum</i>	<b>10.8°C</b> Spadeadam No 2 (Cumbria, 285mAMSL)
<i>Highest Minimum</i>	<b>15.2°C</b> Mumbles Head (West Glamorgan, 44mAMSL)
<i>Lowest Minimum</i>	<b>2.8°C</b> Loch Glascarnoch (Ross & Cromarty, 269mAMSL)
<i>Lowest Grass Minimum</i>	<b>-0.6°C</b> Port Henderson (Ross & Cromarty, 18mAMSL)
<i>Most Rainfall</i>	<b>35.6mm</b> Eskdalemuir (Dumfriesshire, 236mAMSL)
<i>Most Sunshine</i>	<b>11.4hr</b> Manston (Kent, 49mAMSL)
<i>Highest Gust</i>	<b>48Kt 55mph</b> Lerwick (Shetland, 82mAMSL)
<i>Highest Gust (mountain*)</i>	<b>32Kt 37mph</b> Cairngorm Summit (Inverness-shire, 1237mAMSL)
<i>Greatest Snow Depth at 0900 UTC</i>	No non-zero values.

mAMSL refers to station elevation in metres above mean sea level.

\*Mountain stations are above 500mAMSL.

None of the selected stations observed a day of sleet or snow falling or non-zero snow depth at 0900 UTC.

## Daily Weather Summary for Saturday 16 September 2023

This day's summary created 23/09/2023 04:02

### Summary of the UK Weather for Saturday 16 September 2023

A frontal band lay across the Northern Ireland, the north of England and much of Scotland bringing persistent rain to these area throughout the period. Elsewhere, it was a dry night with light cloud and clear intervals. By morning, rain started moving into the southwest. The wind was generally light, a little stronger across the north of England. It was a mild night in the south. Colder in the north under the cloud. Although around average for the time of year. Into the day, it was mostly cloudy for many across the UK, areas like Scotland and the southeast has a few sunny spells. The rest, it was also showery where Wales and the southwest received the most rainfall. Northern England, and central areas had several showery rainfall. This was due to a weakening warm front and a cold front hovering above northern regions coast to coast, as well as a trough that sat above southwest and southern Wales. Wind was mostly light blowing westerly.

### Daily Extremes

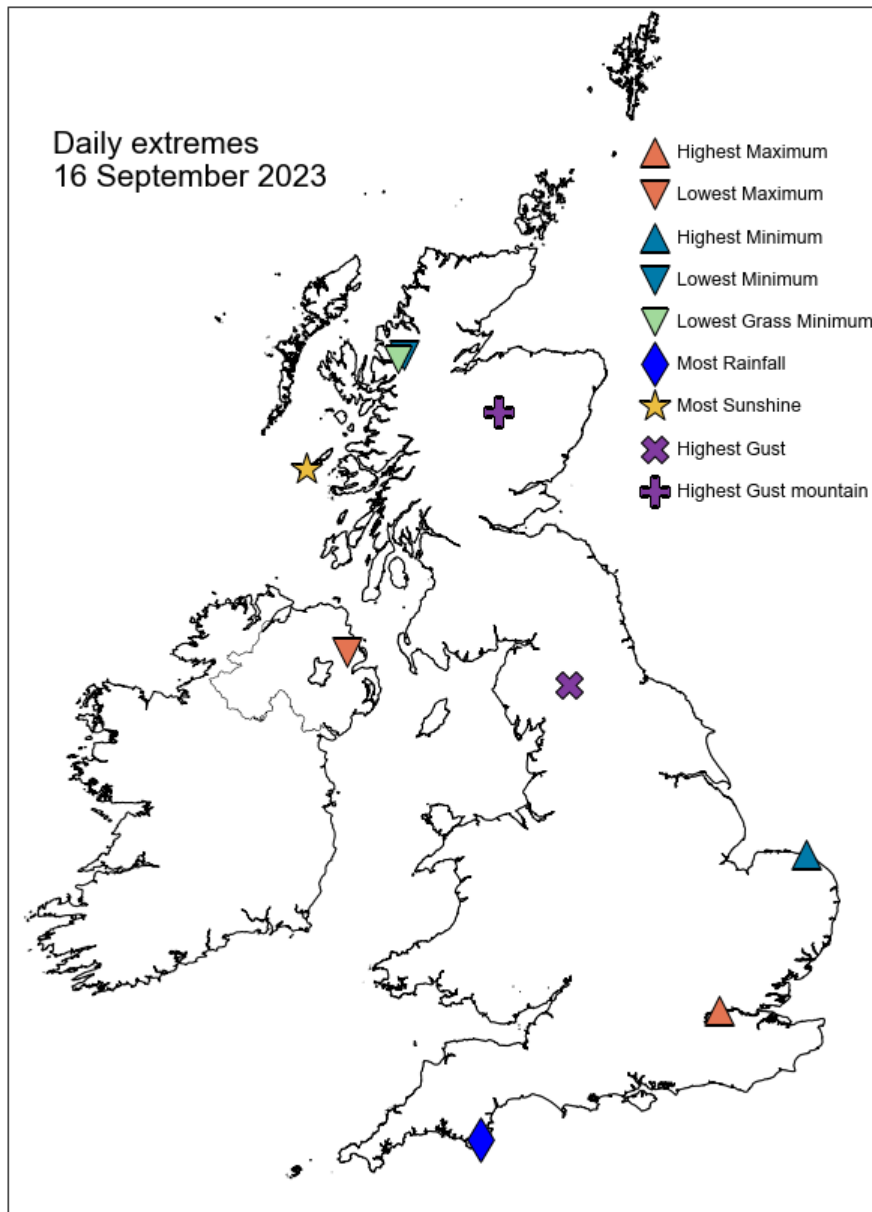

<i>Highest Maximum</i>	<b>28.0°C</b> London, St James's Park (Greater London, 5mAMSL)
<i>Lowest Maximum</i>	<b>11.7°C</b> Killylane (Antrim, 250mAMSL)
<i>Highest Minimum</i>	<b>16.5°C</b> Cromer (Norfolk, 37mAMSL)
<i>Lowest Minimum</i>	<b>2.1°C</b> Kinlochewe (Ross & Cromarty, 25mAMSL)
<i>Lowest Grass Minimum</i>	<b>-2.2°C</b> Kinlochewe (Ross & Cromarty, 25mAMSL)
<i>Most Rainfall</i>	<b>78.0mm</b> Slapton (Devon, 32mAMSL)
<i>Most Sunshine</i>	<b>11.0hr</b> Tiree (Argyll (in Strathclyde Region), 9mAMSL)
<i>Highest Gust</i>	<b>39Kt 45mph</b> Warcop Range (Cumbria, 227mAMSL)
<i>Highest Gust (mountain*)</i>	<b>22Kt 25mph</b> Cairngorm Summit (Inverness-shire, 1237mAMSL)
<i>Greatest Snow Depth at 0900 UTC</i>	No non-zero values.

mAMSL refers to station elevation in metres above mean sea level.

\*Mountain stations are above 500mAMSL.

# Daily Weather Summary for Saturday 16 September 2023

## Daily Weather Summary for Saturday 16 September 2023

None of the selected stations observed a day of sleet or snow falling or non-zero snow depth at 0900 UTC.

## Daily Weather Summary for Sunday 17 September 2023

This day's summary created 24/09/2023 04:02

### Summary of the UK Weather for Sunday 17 September 2023

Sunday started with showers and bands, these heavy and thundery at times, of rain affecting mostly western parts of the UK. This due to northward frontal displacement, which generated precipitation for Southwest England, Wales, eastern North Ireland and Scotland. Fairly dry elsewhere, especially along areas near the eastern coast. It was cloudy for most, with some clear spells for southern and central parts of England. The synoptic picture was mostly govern by low pressure, however high pressure built later to the northeast of the UK. This pushed predominantly southeasterly winds, which were moderate to fresh in places. In terms of temperatures a southeast-northwest split remained across the country, with the highest temperatures over the south and below average temperatures in the north. Into the day, a mixture of weather was felt across the country. A trough and a cold front slowly moved towards the southwestern area has brought torrential heavy downpour to the area as well as south Wales. In the north, a high pressure situated above Finland has brought settled conditions with sunny spells to the eastern part of Scotland, however, an occlusion that sat to the west of Scotland has slowly brought showery rainfall to the west of the region. The rest of the country has remained dry and cloudy with some localised shower.

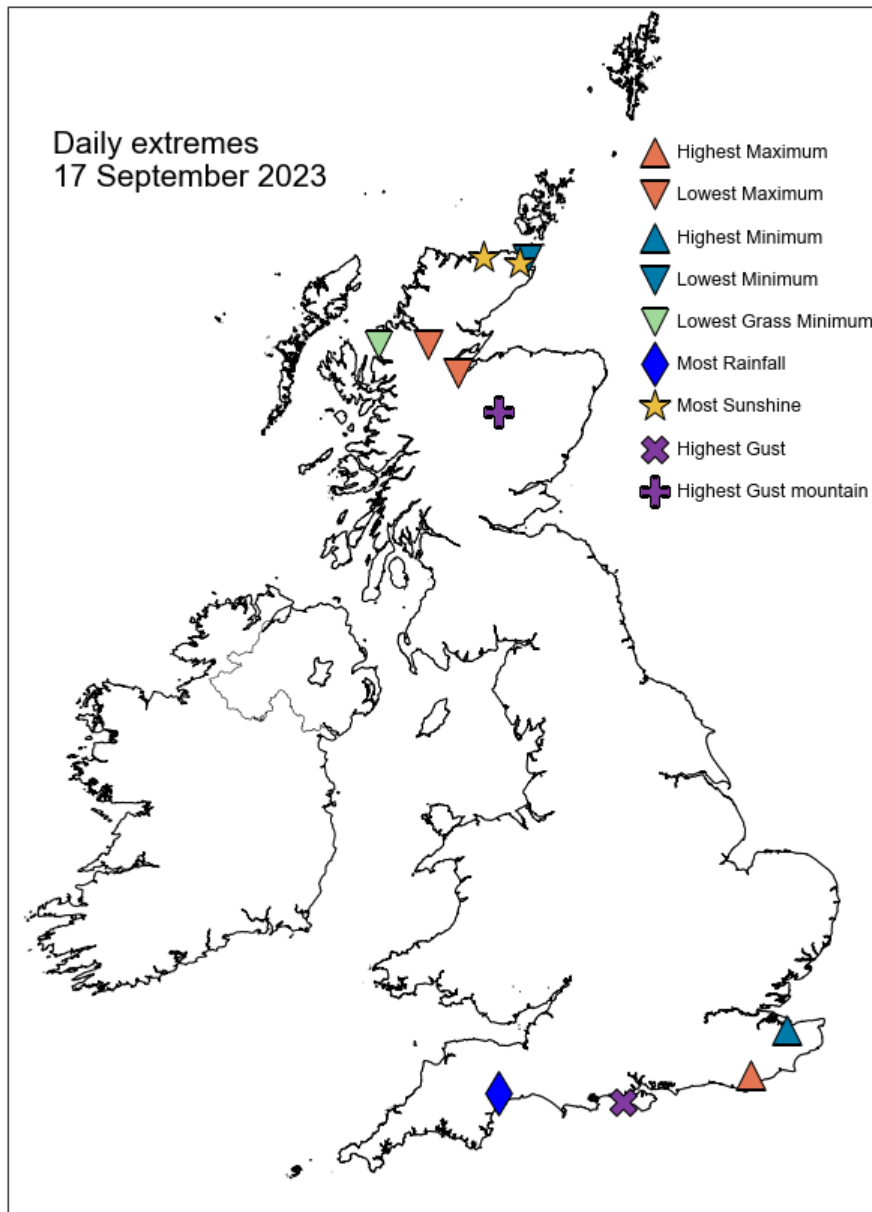

### Daily Extremes

<i>Highest Maximum</i>	<b>23.3°C</b> Herstmonceux, West End (East Sussex, 52mAMSL)
<i>Lowest Maximum</i>	<b>11.9°C</b> Loch Glascarnoch (Ross & Cromarty, 269mAMSL) also Lentrán (Inverness-shire, 146mAMSL)
<i>Highest Minimum</i>	<b>17.7°C</b> Faversham (Kent, 46mAMSL)
<i>Lowest Minimum</i>	<b>-1.0°C</b> Lyth No 2 (Caithness, 24mAMSL)
<i>Lowest Grass Minimum</i>	<b>-5.0°C</b> Port Henderson (Ross & Cromarty, 18mAMSL)
<i>Most Rainfall</i>	<b>47.8mm</b> Exeter Airport No 2 (Devon, 27mAMSL)
<i>Most Sunshine</i>	<b>4.2hr</b> Lyth No 2 (Caithness, 24mAMSL) also Strathy East (Sutherland, 68mAMSL)
<i>Highest Gust</i>	<b>55Kt 63mph</b> Wight: Needles Old Battery (Isle Of Wight, 80mAMSL)
<i>Highest Gust (mountain*)</i>	<b>45Kt 52mph</b> Cairngorm Summit (Inverness-shire, 1237mAMSL)
<i>Greatest Snow Depth at 0900 UTC</i>	No non-zero values.

mAMSL refers to station elevation in metres above mean sea level.

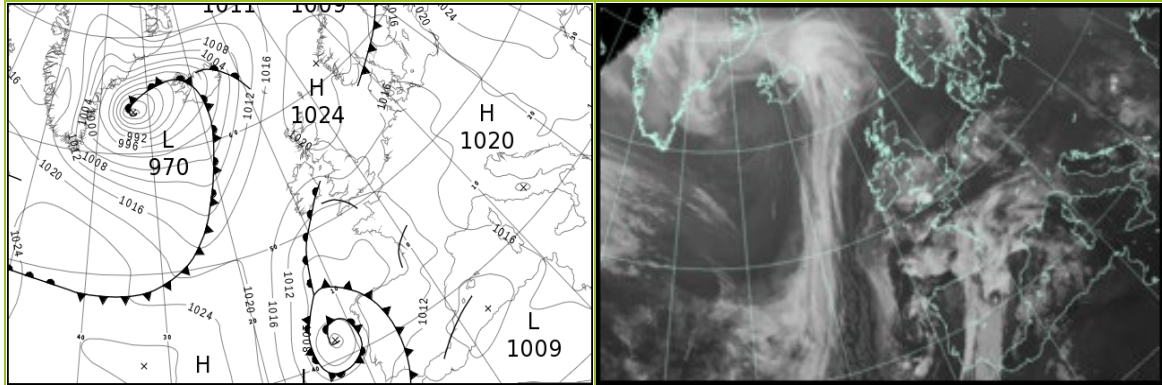

\*Mountain stations are above 500mAMSL.

None of the selected stations observed a day of sleet or snow falling or non-zero snow depth at 0900 UTC.

## Daily Weather Summary for Monday 18 September 2023

This day's summary created 25/09/2023 04:04

### Summary of the UK Weather for Monday 18 September 2023

Monday started with low pressure dominating across the UK. The synoptic set up generated mostly moderate to strong north-westerly winds, this pushed cold maritime air into the country. Heavy rain, thundery at times, affected Wales, Scotland, North and Southwest England. This due to a couple of cold fronts that moved eastwards into the country. It was mostly cloudy, with some outbreaks on central parts allowing for clear spells. Temperatures remained slightly below average, cool in places, with peaks on the southeast. During the day, it was mostly wet and unsettled for most. A band of double cold front straddled across the UK has brought light to moderate amounts of rainfall across the country. Some localised heavy showers. Spells of sunshine were seen on either side of the frontal feature. Wind was light to moderate, blowing easterly.

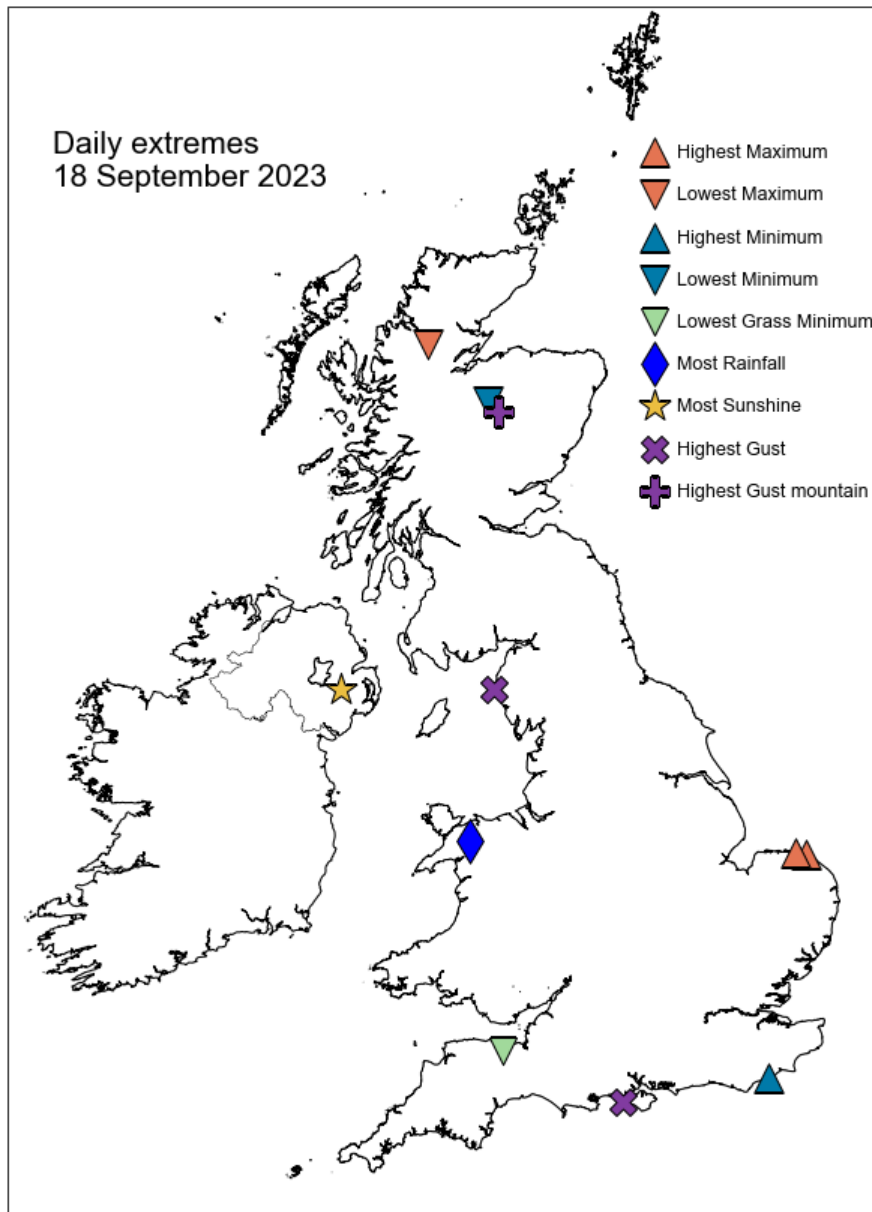

### Daily Extremes

<i>Highest Maximum</i>	<b>22.2°C</b> Cromer (Norfolk, 37mAMSL) also Weybourne (Norfolk, 21mAMSL)
<i>Lowest Maximum</i>	<b>12.1°C</b> Loch Glascarnoch (Ross & Cromarty, 269mAMSL)
<i>Highest Minimum</i>	<b>17.1°C</b> Hastings (East Sussex, 45mAMSL)
<i>Lowest Minimum</i>	<b>4.3°C</b> Aviemore (Inverness-shire, 228mAMSL)
<i>Lowest Grass Minimum</i>	<b>5.0°C</b> Nettlecombe (Somerset, 96mAMSL)
<i>Most Rainfall</i>	<b>61.4mm</b> Capel Curig No 3 (Gwynedd, 216mAMSL)
<i>Most Sunshine</i>	<b>9.0hr</b> Hillsborough (Down, 116mAMSL)
<i>Highest Gust</i>	<b>44Kt 51mph</b> Wight: Needles Old Battery (Isle Of Wight, 80mAMSL) also St Bees Head No 2 (Cumbria, 125mAMSL)
<i>Highest Gust (mountain*)</i>	<b>55Kt 63mph</b> Cairngorm Summit (Inverness-shire, 1237mAMSL)
<i>Greatest Snow Depth at 0900 UTC</i>	No non-zero values.

mAMSL refers to station elevation in metres above mean sea level.

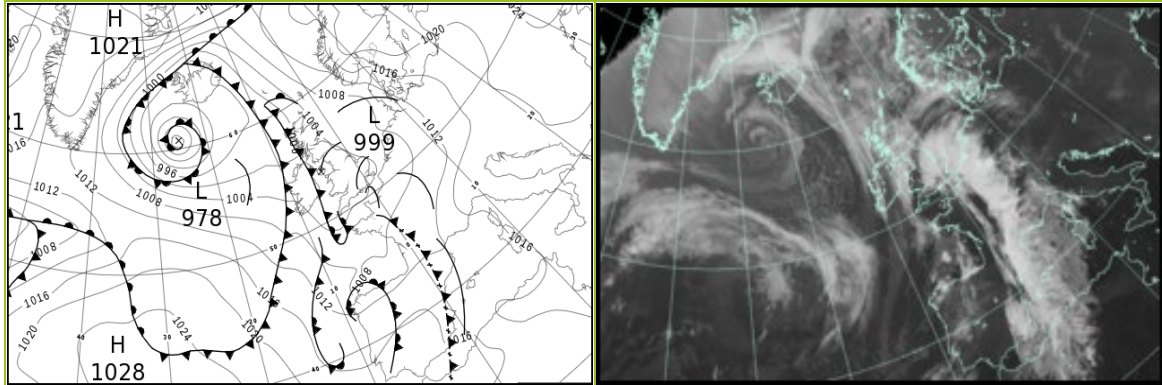

\*Mountain stations are above 500mAMSL.

# Daily Weather Summary for Monday 18 September 2023

## Daily Weather Summary for Monday 18 September 2023

None of the selected stations observed a day of sleet or snow falling or non-zero snow depth at 0900 UTC.

## Daily Weather Summary for Tuesday 19 September 2023

This day's summary created 26/09/2023 04:03

### Summary of the UK Weather for Tuesday 19 September 2023

Heavy and occasionally thundery showers made steady progress into western Scotland and northern England from midnight. A band of heavy rain moved into Northern Ireland, Wales and northwest England, persisting through the morning. Some light or moderate showers broke out in the southwest. During the morning, the persistent rain band continued to spread east, also affecting southern Scotland. It turned drier for some by late morning, however outbreaks of rain and drizzle continued moving east, especially for Wales and Northwest England where it was persistent and at times heavy over hills. The north of Scotland saw some sunshine during the morning with scattered showers through the day, while more southern areas of England were generally cloudy with patchy light rain and drizzle in places. This theme continued through the afternoon, although by late afternoon the persistent rain had eased from Wales, affecting parts of northwest England with further rain moving into Scotland. During the evening, this rain continued to push into Scotland and Northern Ireland, heavy in places. Winds were fresh to strong across England and Wales, locally gale force around coasts. Scotland and Northern Ireland saw much lighter winds, although increasing later. Temperatures were near average, but cooler in Scotland.

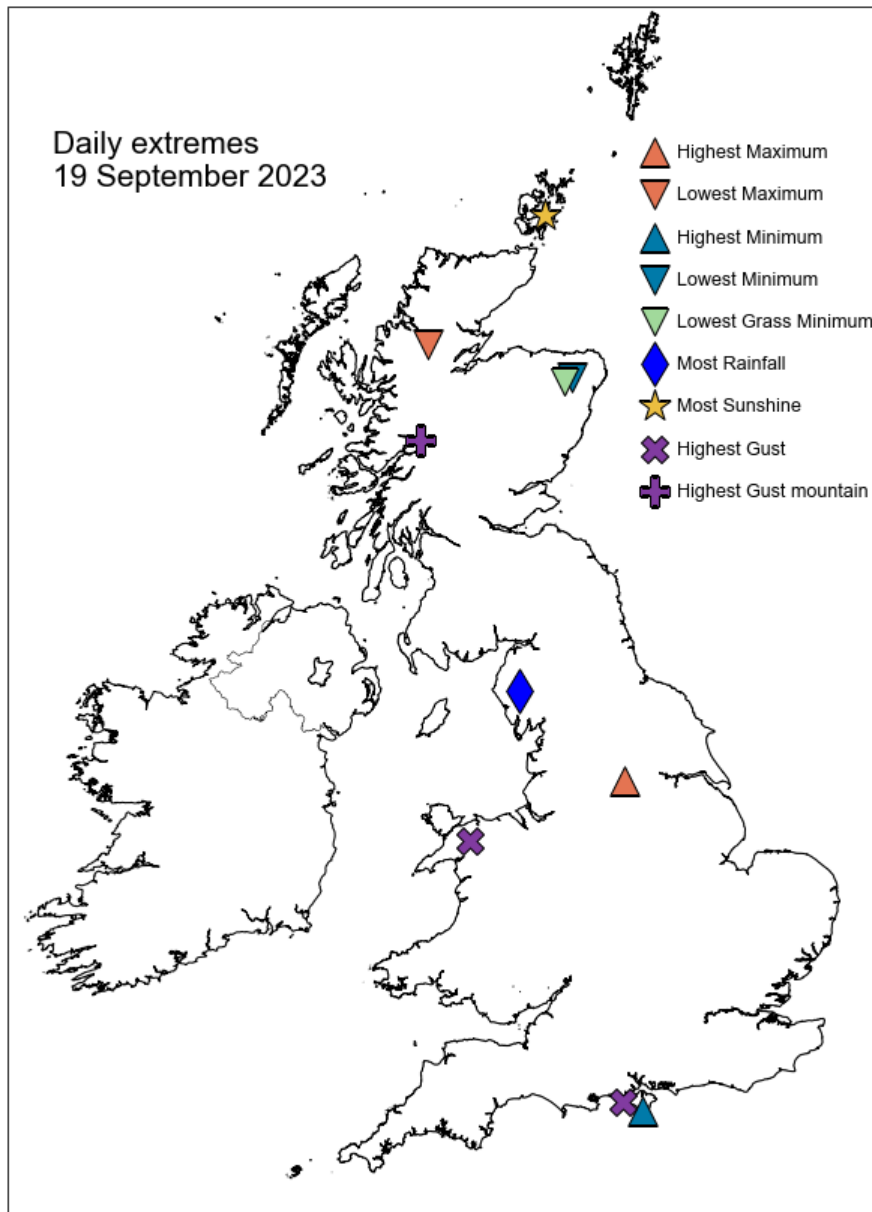

### Daily Extremes

<i>Highest Maximum</i>	<b>21.0°C</b> Thornes Park (West Yorkshire, 35mAMSL)
<i>Lowest Maximum</i>	<b>12.1°C</b> Loch Glascarnoch (Ross & Cromarty, 269mAMSL)
<i>Highest Minimum</i>	<b>15.6°C</b> Wight: St Catherines Point (Isle Of Wight, 20mAMSL)
<i>Lowest Minimum</i>	<b>2.2°C</b> Fyvie Castle (Aberdeenshire, 55mAMSL)
<i>Lowest Grass Minimum</i>	<b>-0.7°C</b> Fyvie Castle (Aberdeenshire, 55mAMSL)
<i>Most Rainfall</i>	<b>117.0mm</b> Honister Pass (Cumbria, 358mAMSL)
<i>Most Sunshine</i>	<b>8.6hr</b> Kirkwall (Orkney, 26mAMSL)
<i>Highest Gust</i>	<b>65Kt 75mph</b> Wight: Needles Old Battery (Isle Of Wight, 80mAMSL) also Capel Curig No 3 (Gwynedd, 216mAMSL)
<i>Highest Gust (mountain*)</i>	<b>73Kt 84mph</b> Aonach Mor (Inverness-shire, 1130mAMSL)
<i>Greatest Snow Depth at 0900 UTC</i>	No non-zero values.

mAMSL refers to station elevation in metres above mean sea level.

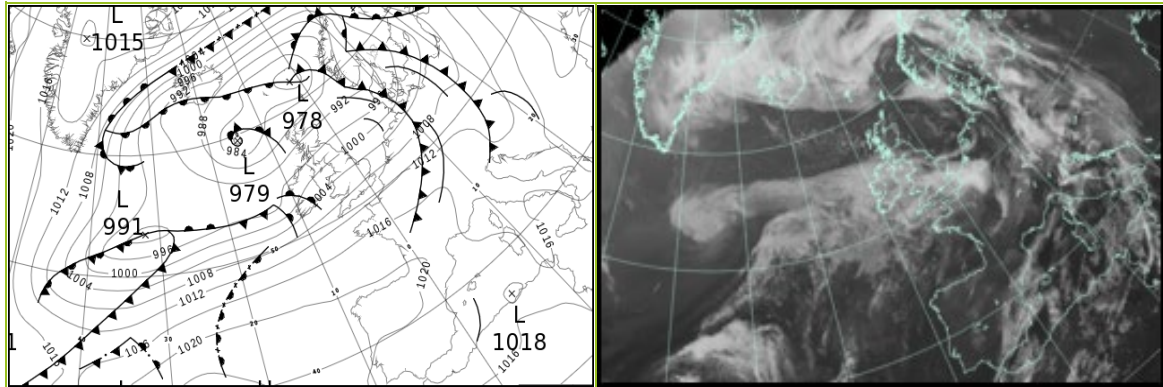

\*Mountain stations are above 500mAMSL.

## Daily Weather Summary for Tuesday 19 September 2023

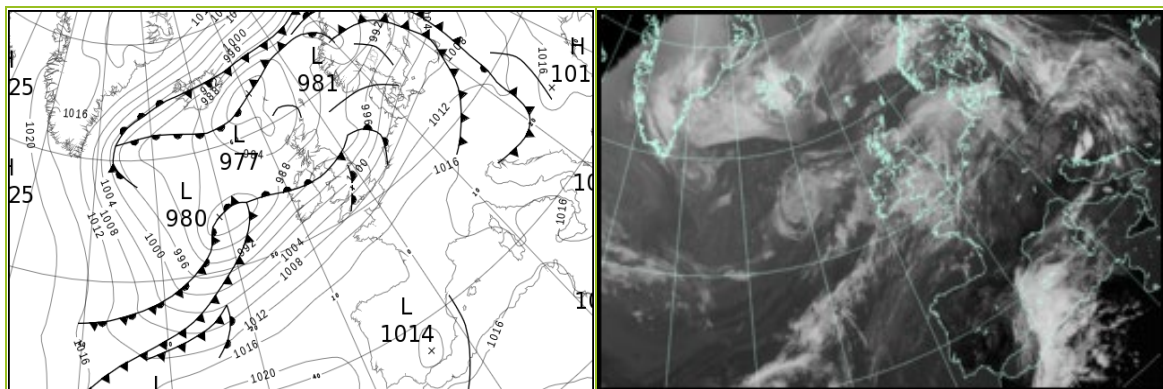

## Daily Weather Summary for Tuesday 19 September 2023

### North Atlantic and Europe analysis charts and satellite images at 0000 UTC

### North Atlantic and Europe analysis charts and satellite images at 1200 UTC

All satellite imagery copyright Met Office and EUMETSAT (European Organisation for the Exploitation of Meteorological Satellites). These show infra-red images from the geostationary MSG satellite. The rainfall rates are derived from both rain-radar and satellite data.

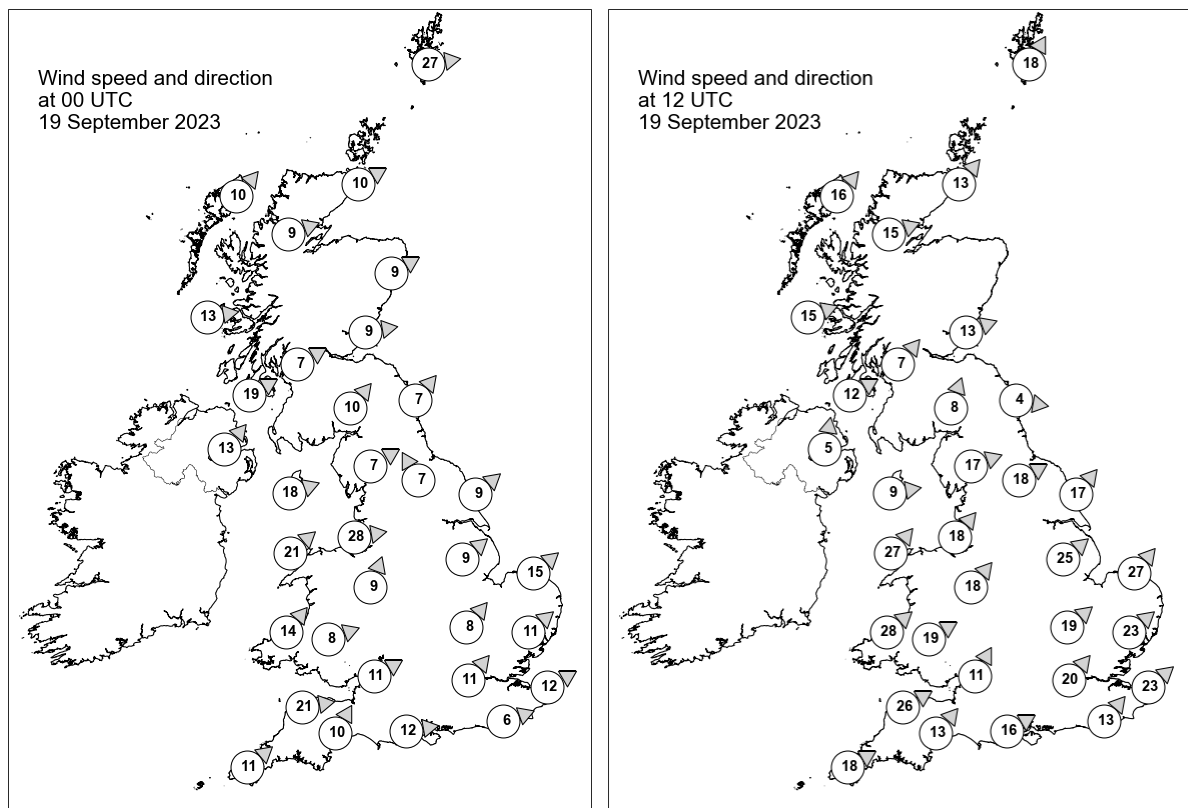

## Daily Weather Summary for Tuesday 19 September 2023

## Daily Weather Summary for Tuesday 19 September 2023

None of the selected stations observed a day of sleet or snow falling or non-zero snow depth at 0900 UTC.

## Daily Weather Summary for Wednesday 20 September 2023

This day's summary created 27/09/2023 04:02

### Summary of the UK Weather for Wednesday 20 September 2023

Over the night, showery rainfall affected the majority of the UK. Parts of Scotland, Northern England and Wales were most affected, heavy in places, especially over hills. This was caused by a double frontal feature, featuring a cold front followed by an occlusion. Strong winds were blowing from the southwest. It was a mild night away from northern Scotland. During the morning, it was windy for many and the fronts moved gradually southeast with outbreaks of rain moving into most areas of England, away from the southeast. This continued to be heavy at times, especially over western hills. This gradually moved into the southeast during the afternoon where it persisted into the evening, with heavy outbreaks. Meanwhile, it became drier for northern and western parts of England and Wales. Northern Ireland and Scotland were showery, however a wrap around of locally persistent, heavy rain and strong winds affected western Scotland during the afternoon, as the low centre moved across the western isles. Winds eased behind the cold front further south. Temperatures were near average for many, slightly warmer in the east and cooler further north and west.

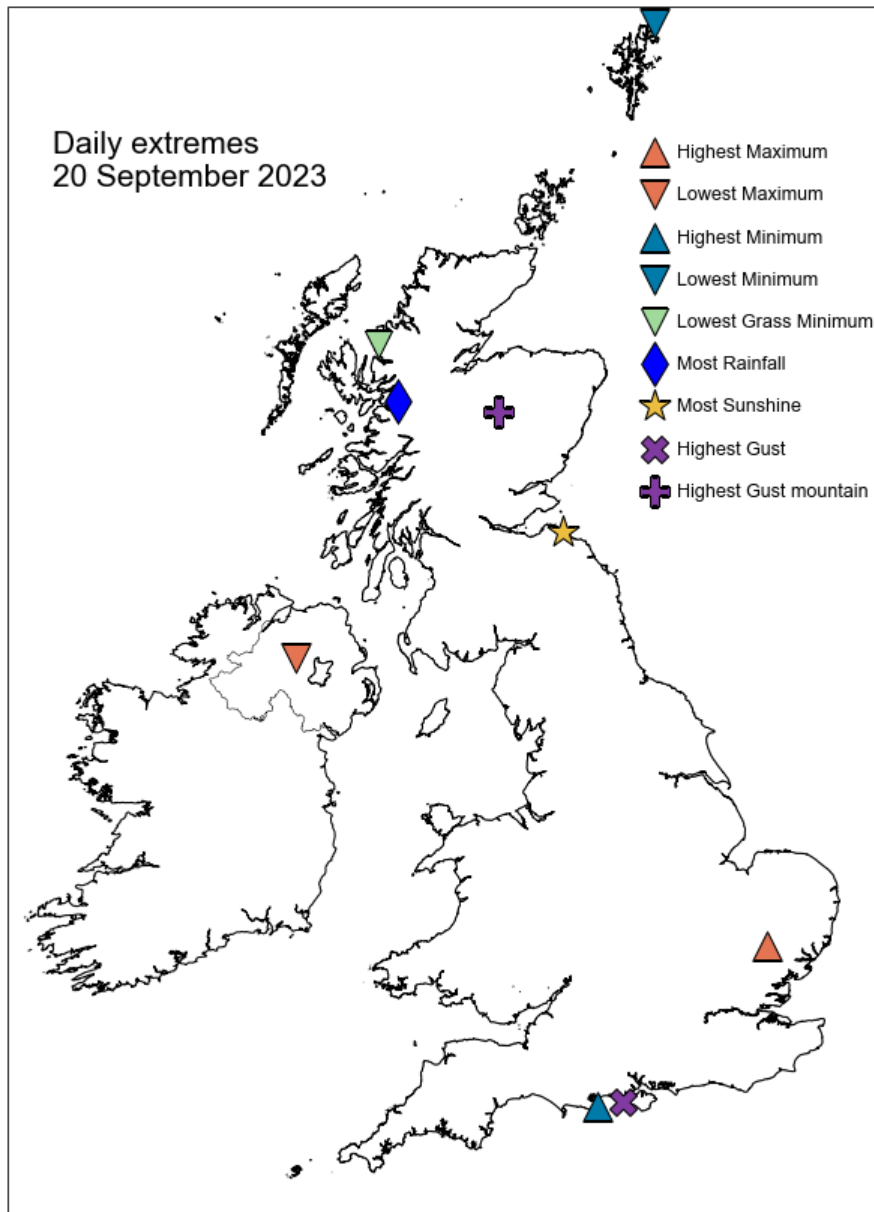

### Daily Extremes

<i>Highest Maximum</i>	<b>22.2°C</b> Cavendish (Suffolk, 55mAMSL)
<i>Lowest Maximum</i>	<b>13.6°C</b> Lough Fea (Londonderry, 225mAMSL)
<i>Highest Minimum</i>	<b>17.1°C</b> Swanage (Dorset, 10mAMSL)
<i>Lowest Minimum</i>	<b>6.0°C</b> Baltasound No 2 (Shetland, 15mAMSL)
<i>Lowest Grass Minimum</i>	<b>2.8°C</b> Port Henderson (Ross & Cromarty, 18mAMSL)
<i>Most Rainfall</i>	<b>61.2mm</b> Achnagart (Ross & Cromarty, 15mAMSL)
<i>Most Sunshine</i>	<b>8.0hr</b> Dunbar (East Lothian, 23mAMSL)
<i>Highest Gust</i>	<b>62Kt 71mph</b> Wight: Needles Old Battery (Isle Of Wight, 80mAMSL)
<i>Highest Gust (mountain*)</i>	<b>86Kt 99mph</b> Cairngorm Summit (Inverness-shire, 1237mAMSL)
<i>Greatest Snow Depth at 0900 UTC</i>	No non-zero values.

mAMSL refers to station elevation in metres above mean sea level.

\*Mountain stations are above 500mAMSL.

## Daily Weather Summary for Thursday 21 September 2023

This day's summary created 28/09/2023 04:03

### Summary of the UK Weather for Thursday 21 September 2023

A low pressure to the northwest of the country brought very wet and windy weather to the northwest highlands and a band of heavy rain and showers to the northwest and Wales. It was a chillier night than of late, although around average for the time of year. Many inland areas from southern Scotland southwards started mostly sunny. During the day, the low pressure centred to the west of the Northern Isles trailed occluded fronts across Scotland and Northern Ireland, bringing persistent rain and heavy showers here. Further south, heavy, sometimes thundery showers associated with troughs and an occlusion moved slowly eastwards across the south of England and south Wales. There were some sunny spells between these, although southeast England saw some frontal cloud lingering. Strong winds blew around the Northern Isles, but it was calmer farther south with light winds. The temperature felt cooler than of late at around or slightly below the seasonal norm. Temperatures dropped overnight under clearer skies as the showers eased.

### Daily Extremes

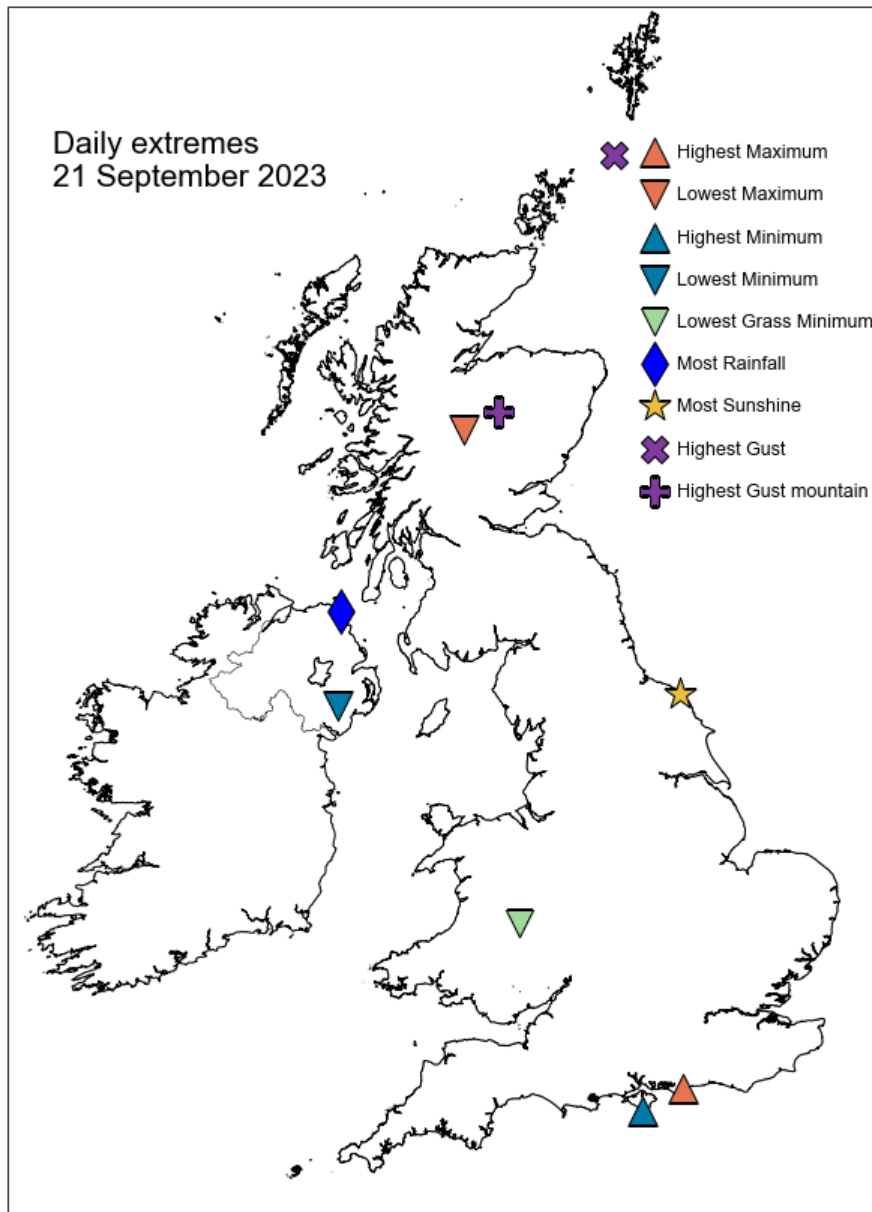

<i>Highest Maximum</i>	<b>20.8°C</b> Bognor Regis (West Sussex, 7mAMSL)
<i>Lowest Maximum</i>	<b>11.0°C</b> Dalwhinnie No 2 (Inverness-shire, 351mAMSL)
<i>Highest Minimum</i>	<b>13.8°C</b> Wight: St Catherines Point (Isle Of Wight, 20mAMSL)
<i>Lowest Minimum</i>	<b>2.4°C</b> Katesbridge (Down, 91mAMSL)
<i>Lowest Grass Minimum</i>	<b>0.2°C</b> Llangunllo, Cefnysur (Powys (south), 310mAMSL)
<i>Most Rainfall</i>	<b>23.4mm</b> Ballypatrick Forest (Antrim, 156mAMSL)
<i>Most Sunshine</i>	<b>10.4hr</b> Whitby (North Yorkshire, 41mAMSL)
<i>Highest Gust</i>	<b>44Kt 51mph</b> Fair Isle (Shetland, 57mAMSL)
<i>Highest Gust (mountain*)</i>	<b>81Kt 93mph</b> Cairngorm Summit (Inverness-shire, 1237mAMSL)
<i>Greatest Snow Depth at 0900 UTC</i>	No non-zero values.

mAMSL refers to station elevation in metres above mean sea level.

\*Mountain stations are above 500mAMSL.

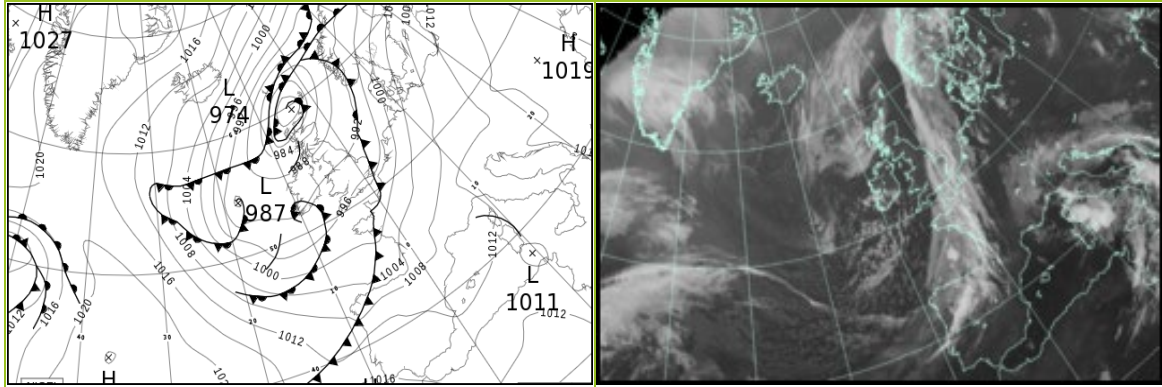

## Daily Weather Summary for Thursday 21 September 2023

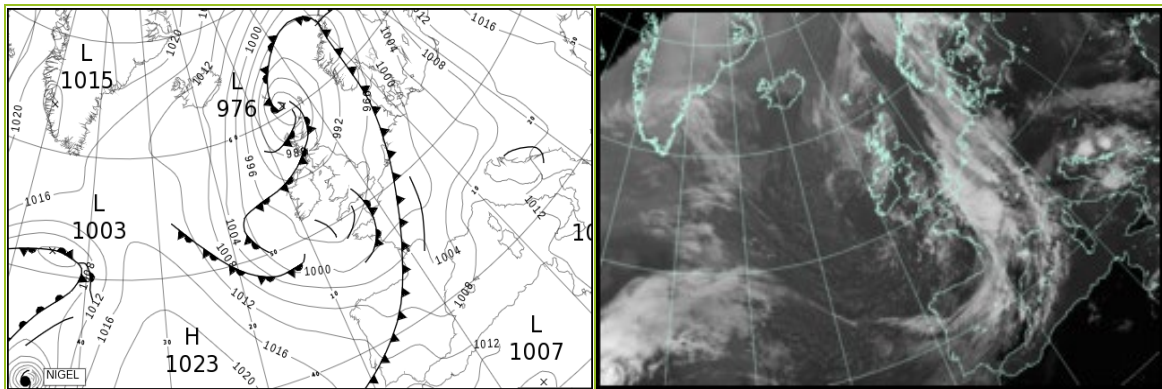

## Daily Weather Summary for Thursday 21 September 2023

None of the selected stations observed a day of sleet or snow falling or non-zero snow depth at 0900 UTC.

## Daily Weather Summary for Friday 22 September 2023

This day's summary created 29/09/2023 04:02

### Summary of the UK Weather for Friday 22 September 2023

Overnight, showery rain affected the southeast during the evening and the early hours. Locally heavy and thundery. This slowly moved into parts of East Anglia, clearing by dawn. Elsewhere, locally heavy and thundery showers affected northern and western coastal counties. An area of cloud also moved gradually southeast, covering Scotland, along with parts of Northern Ireland and Northern England by dawn, with some showers and patchy rain here. Away from these regions, it was mostly clear for much of England and eastern Wales. As a result it was a relatively cool night for these areas, although this also resulted in patchy mist and fog forming. A low pressure continued to be centred to the north of the country, trailing occluded fronts across Scotland and Northern Ireland, bringing showers, sometimes heavy, throughout the day. Farther south heavy, sometimes thundery showers associated with troughs and an occlusion moved slowly eastwards across much of England and Wales. It continued windy in the north of Scotland, but it was calmer farther south with light winds. The temperature was around average for the time of year. Temperatures dropped overnight under clearer skies as the showers eased.

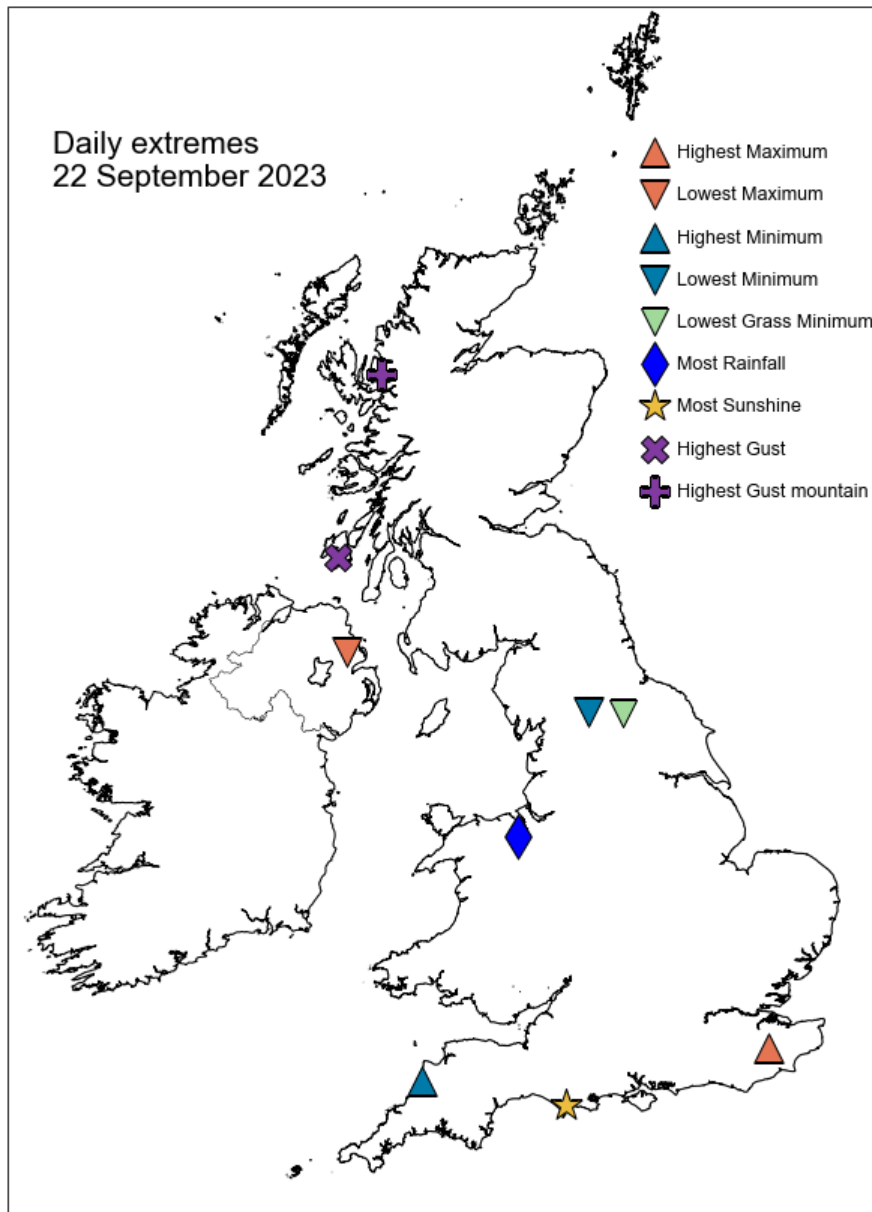

### Daily Extremes

<i>Highest Maximum</i>	<b>19.3°C</b> Frittenden (Kent, 38mAMSL)
<i>Lowest Maximum</i>	<b>11.4°C</b> Killylane (Antrim, 250mAMSL)
<i>Highest Minimum</i>	<b>12.7°C</b> Bude (Cornwall, 15mAMSL)
<i>Lowest Minimum</i>	<b>2.9°C</b> Bainbridge (North Yorkshire, 210mAMSL)
<i>Lowest Grass Minimum</i>	<b>-0.2°C</b> Leeming (North Yorkshire, 33mAMSL)
<i>Most Rainfall</i>	<b>24.6mm</b> Loggerheads, Colomendy Centre (Clwyd, 225mAMSL)
<i>Most Sunshine</i>	<b>9.9hr</b> Preston, Cove House (Dorset, 44mAMSL)
<i>Highest Gust</i>	<b>35Kt 40mph</b> Islay: Port Ellen (Argyll (in Strathclyde Region), 17mAMSL)
<i>Highest Gust (mountain*)</i>	<b>48Kt 55mph</b> Bealach Na Ba No 2 (Ross & Cromarty, 773mAMSL)
<i>Greatest Snow Depth at 0900 UTC</i>	No non-zero values.

mAMSL refers to station elevation in metres above mean sea level.

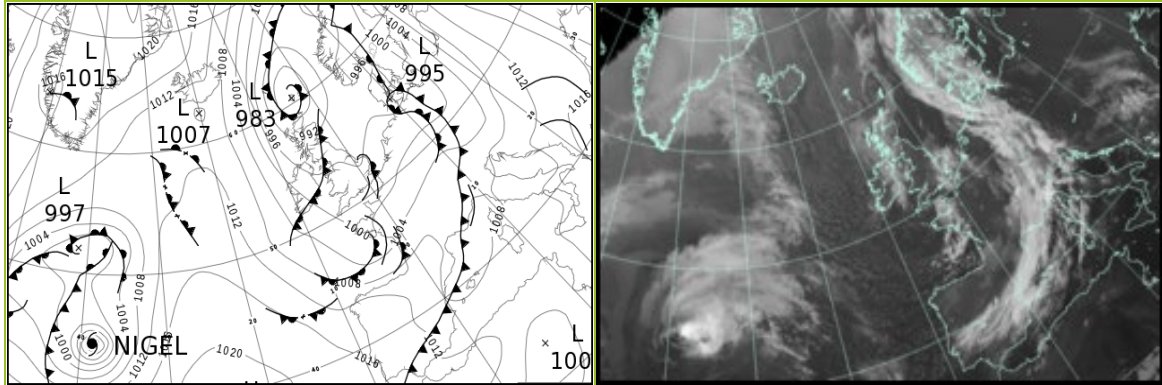

\*Mountain stations are above 500mAMSL.

# Daily Weather Summary for Friday 22 September 2023

## Daily Weather Summary for Friday 22 September 2023

None of the selected stations observed a day of sleet or snow falling or non-zero snow depth at 0900 UTC.

## Daily Weather Summary for Saturday 23 September 2023

This day's summary created 30/09/2023 04:03

### Summary of the UK Weather for Saturday 23 September 2023

An occlusion lay off the Northeast coast, bringing showery outbreaks across north and northeastern parts overnight, the heaviest along the northeast coast. Elsewhere saw a trend of clear skies and scattered cloud, with the best of the clear spells towards the southeast. Towards dawn and the majority of showers had eased, though cloud began to build in parts of far southwest Cornwall as a result of Ex-Nigel to the west. Some rural northern areas experienced localised grass frost, with isolated mist and fog patches further south. It was a largely dry day with scattered cloud for much of the UK. A thin band of showers moved eastward across northern England through the day. It was clearer in southern areas of England and Wales until mid-afternoon. Later in the afternoon and into the evening, a front moved into Northern Ireland and western areas of mainland Britain, bringing rain, thicker cloud and increased winds. Temperatures during the day were average for the time of year, with the warmest areas in the southeast under the best of the sunshine.

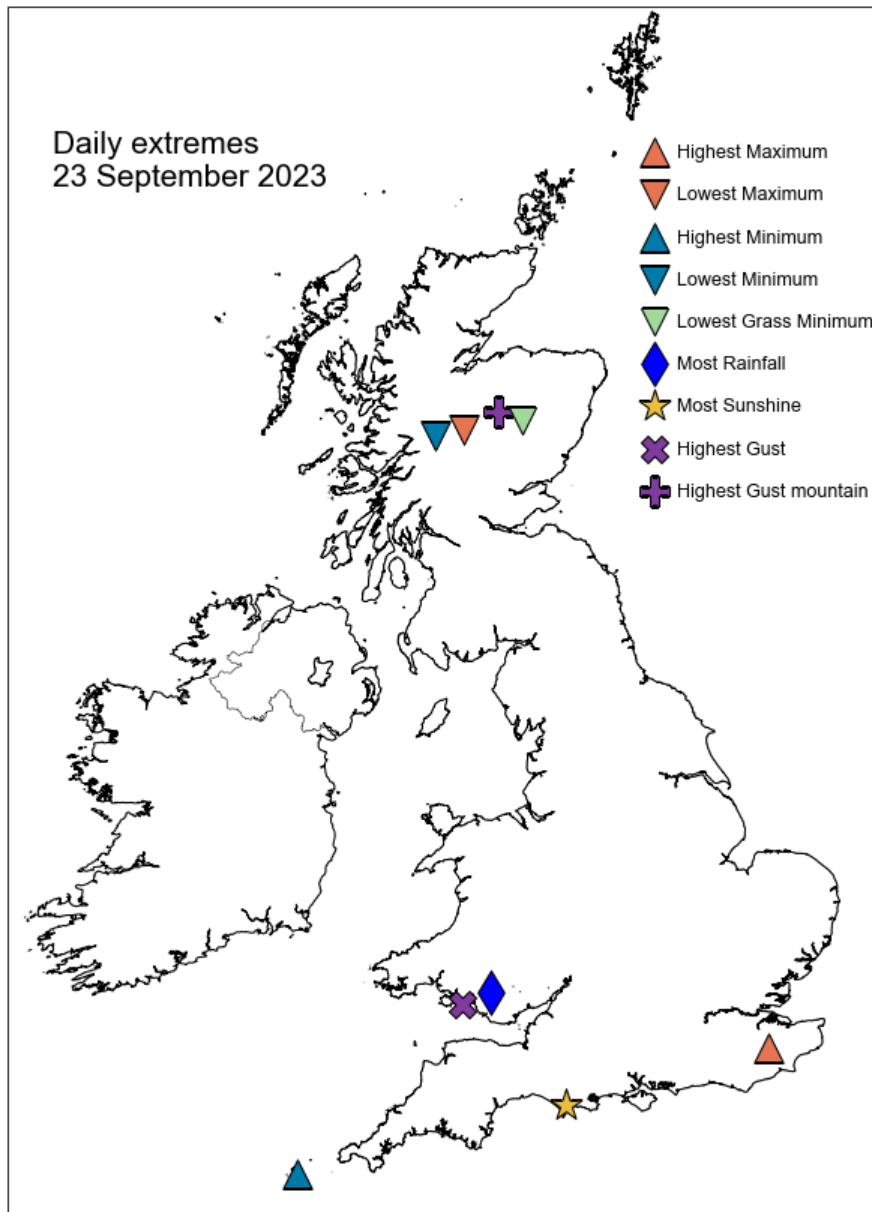

### Daily Extremes

<i>Highest Maximum</i>	<b>20.0°C</b> Frittenden (Kent, 38mAMSL)
<i>Lowest Maximum</i>	<b>11.4°C</b> Dalwhinnie No 2 (Inverness-shire, 351mAMSL)
<i>Highest Minimum</i>	<b>12.5°C</b> Scilly: St Marys Airport (Isles Of Scilly, 31mAMSL)
<i>Lowest Minimum</i>	<b>-0.4°C</b> Tulloch Bridge (Inverness-shire, 249mAMSL)
<i>Lowest Grass Minimum</i>	<b>-3.2°C</b> Balmoral (Aberdeenshire, 283mAMSL)
<i>Most Rainfall</i>	<b>44.2mm</b> Treherbert, Tyn-y-waun (Mid Glamorgan, 259mAMSL)
<i>Most Sunshine</i>	<b>9.6hr</b> Preston, Cove House (Dorset, 44mAMSL)
<i>Highest Gust</i>	<b>44Kt 51mph</b> Mumbles Head (West Glamorgan, 44mAMSL)
<i>Highest Gust (mountain*)</i>	<b>57Kt 66mph</b> Cairngorm Summit (Inverness-shire, 1237mAMSL)
<i>Greatest Snow Depth at 0900 UTC</i>	No non-zero values.

mAMSL refers to station elevation in metres above mean sea level.

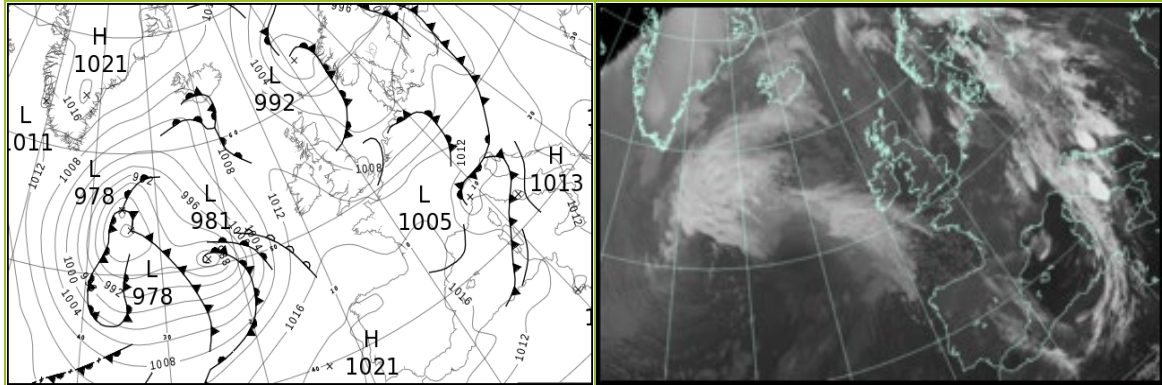

\*Mountain stations are above 500mAMSL.

# Daily Weather Summary for Saturday 23 September 2023

## Daily Weather Summary for Saturday 23 September 2023

None of the selected stations observed a day of sleet or snow falling or non-zero snow depth at 0900 UTC.

## Daily Weather Summary for Sunday 24 September 2023

This day's summary created 01/10/2023 04:02

### Summary of the UK Weather for Sunday 24 September 2023

Ex-Nigel was absorbed into a deep low due south of Iceland, and that led to a triple point occlusion running the length of the west coast at midnight. This brought persistent rain and strong winds/coastal gales across most of the west, heaviest in the NW. Dry areas were generally confined to the southeast as this rain pushed northeastwards through the early hours; with the heaviest rain beginning to clear the east coast by dawn. A succession of fronts moved eastwards across the UK during the day bringing rain to Wales and far western Scotland during the morning. During the afternoon, more widespread rain arrived into Northern Ireland, northern England and Scotland, turning heavy in places. Southern and eastern parts of England remained largely dry, and although there was widespread cloud, there were also some sunny spells in these locations. Eastern areas were relatively calm, but strong winds accompanied the fronts in the west and north, particularly in the Irish sea. The rain continued into the first half of the night, with bands also passing over central and southern England.

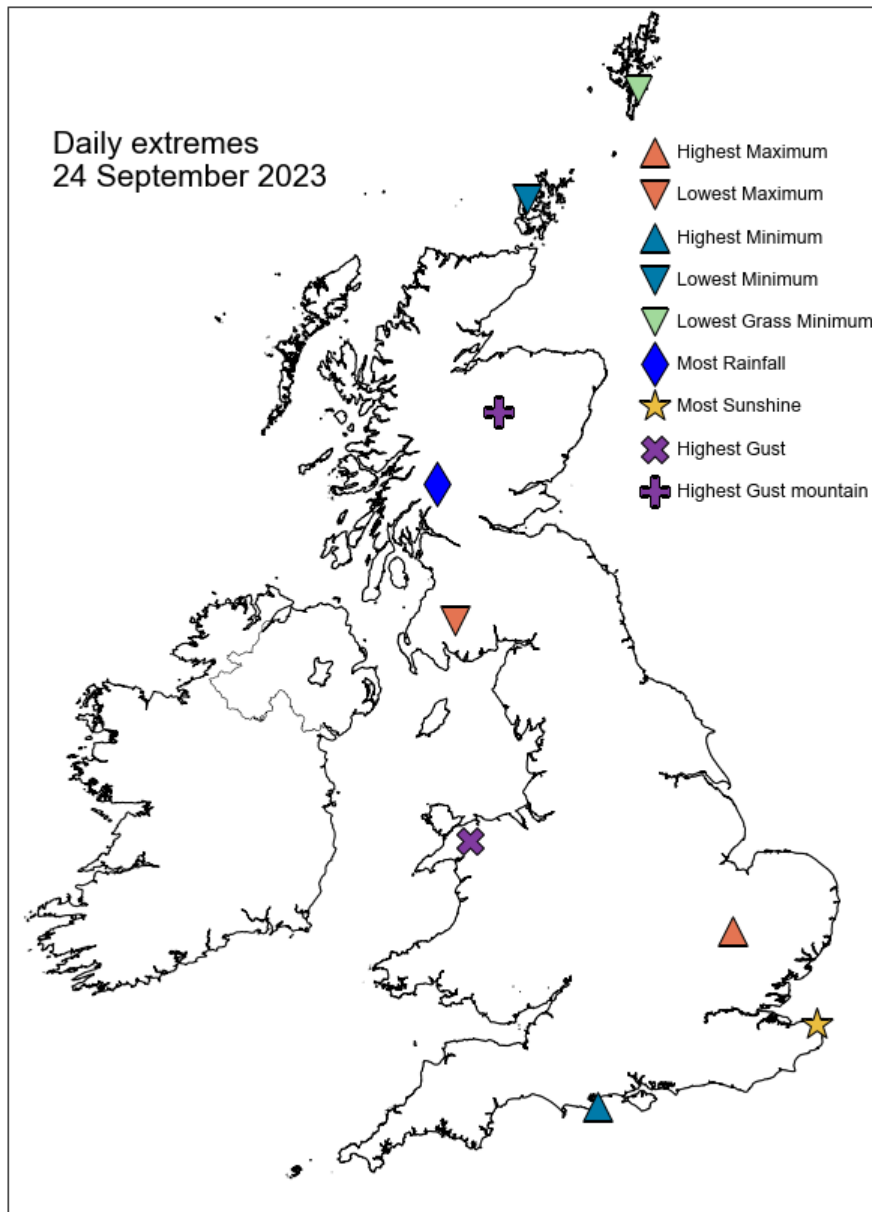

### Daily Extremes

<i>Highest Maximum</i>	<b>21.9°C</b> Cambridge, Niab (Cambridgeshire, 26mAMSL)
<i>Lowest Maximum</i>	<b>14.2°C</b> Forrest Lodge, Burnhead (Kirkcudbrightshire, 150mAMSL)
<i>Highest Minimum</i>	<b>15.1°C</b> Swanage (Dorset, 10mAMSL)
<i>Lowest Minimum</i>	<b>3.8°C</b> Orkney: Loch Of Hundland (Orkney, 28mAMSL)
<i>Lowest Grass Minimum</i>	<b>0.4°C</b> Lerwick (Shetland, 82mAMSL)
<i>Most Rainfall</i>	<b>61.8mm</b> Tyndrum No 3 (Perthshire (in Central Region), 168mAMSL)
<i>Most Sunshine</i>	<b>5.7hr</b> Manston (Kent, 49mAMSL)
<i>Highest Gust</i>	<b>60Kt 69mph</b> Capel Curig No 3 (Gwynedd, 216mAMSL)
<i>Highest Gust (mountain*)</i>	<b>89Kt 102mph</b> Cairngorm Summit (Inverness-shire, 1237mAMSL)
<i>Greatest Snow Depth at 0900 UTC</i>	No non-zero values.

mAMSL refers to station elevation in metres above mean sea level.

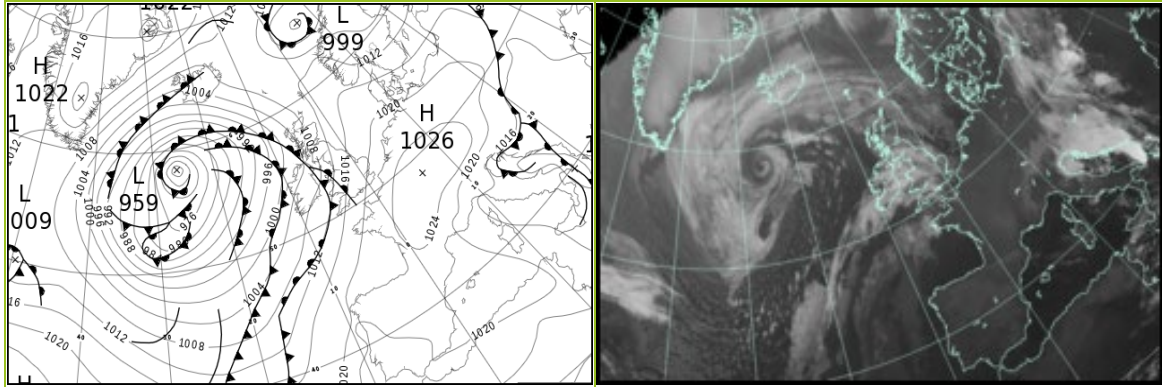

\*Mountain stations are above 500mAMSL.

## Daily Weather Summary for Sunday 24 September 2023

## Daily Weather Summary for Sunday 24 September 2023

None of the selected stations observed a day of sleet or snow falling or non-zero snow depth at 0900 UTC.

## Daily Weather Summary for Monday 25 September 2023

This day's summary created 02/10/2023 04:04

### Summary of the UK Weather for Monday 25 September 2023

Low pressure sat to the north of the UK at midnight. Two cold fronts crossed England resulting in rain/showers in central and eastern parts of the country. An occlusion sat across Scotland bringing heavier showers to the central uplands. The cold fronts progressed northeastwards through the early hours, leaving behind clear skies for large parts of the country. Around 3am, another occluded front approached from the west resulting in cloud and heavy rain in western Scotland, before moving northeastwards spreading across more central parts. The synoptic situation through Monday was governed by low pressure centres located to the north of the UK. They drove a westerly flow across the country with fresh to moderate winds, particularly over northern parts of the country. An occluded front, associated with one of the low centres, affected Scotland, bringing rainfall during the morning. Patchy cloud with few showers were observed elsewhere, with most showers happening in central areas. Precipitation cleared into the evening with most of the cloud cover over the western areas. Temperatures were near normal with peaks on the southeast.

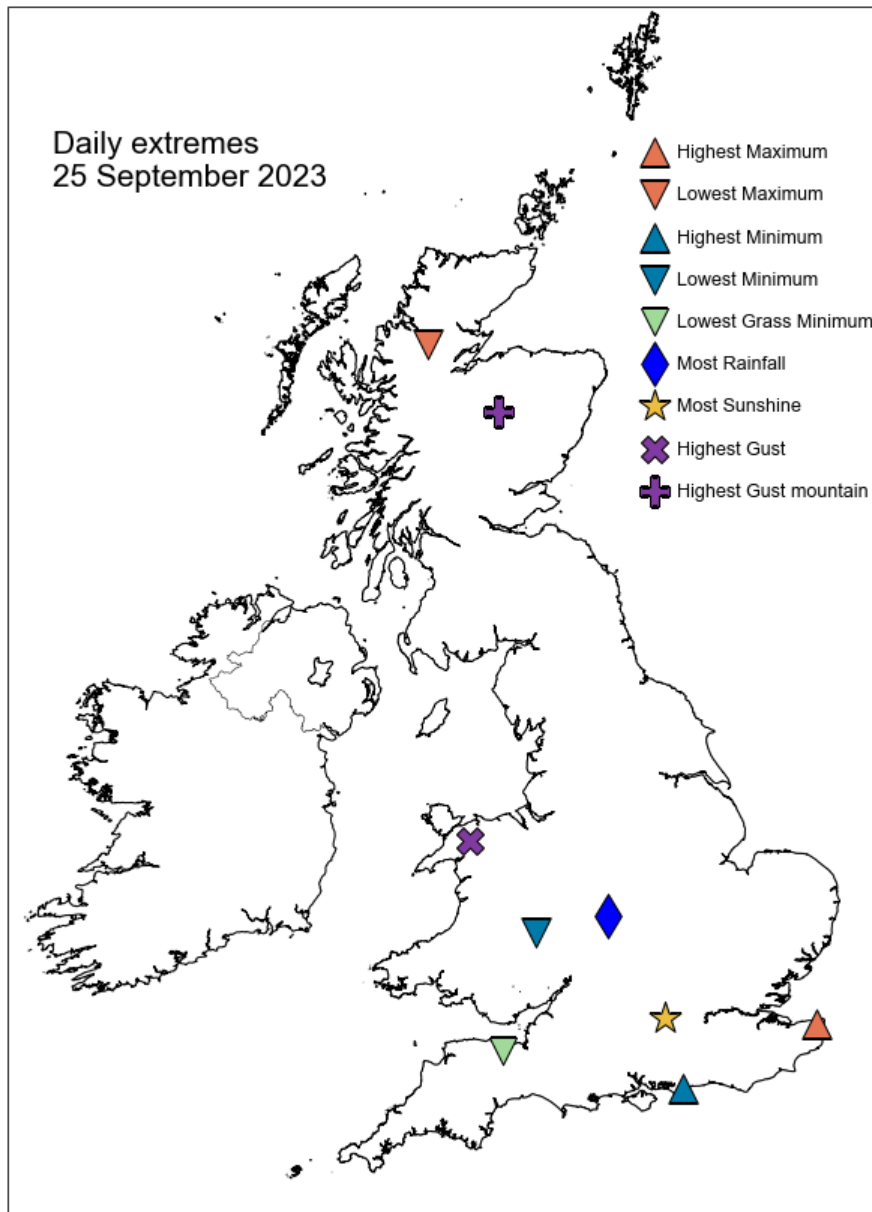

### Daily Extremes

<i>Highest Maximum</i>	<b>23.5°C</b> Manston No 2 (Kent, 54mAMSL)
<i>Lowest Maximum</i>	<b>13.8°C</b> Loch Glascarnoch (Ross & Cromarty, 269mAMSL)
<i>Highest Minimum</i>	<b>17.2°C</b> Bognor Regis (West Sussex, 7mAMSL)
<i>Lowest Minimum</i>	<b>8.1°C</b> Shobdon Airfield (Hereford & Worcester, 99mAMSL)
<i>Lowest Grass Minimum</i>	<b>5.0°C</b> Nettlecombe (Somerset, 96mAMSL)
<i>Most Rainfall</i>	<b>14.0mm</b> Solihull, Tudor Grange (West Midlands, 125mAMSL)
<i>Most Sunshine</i>	<b>9.9hr</b> Reading University, Whiteknights (Berkshire, 66mAMSL)
<i>Highest Gust</i>	<b>49Kt 56mph</b> Capel Curig No 3 (Gwynedd, 216mAMSL)
<i>Highest Gust (mountain*)</i>	<b>82Kt 94mph</b> Cairngorm Summit (Inverness-shire, 1237mAMSL)
<i>Greatest Snow Depth at 0900 UTC</i>	No non-zero values.

mAMSL refers to station elevation in metres above mean sea level.

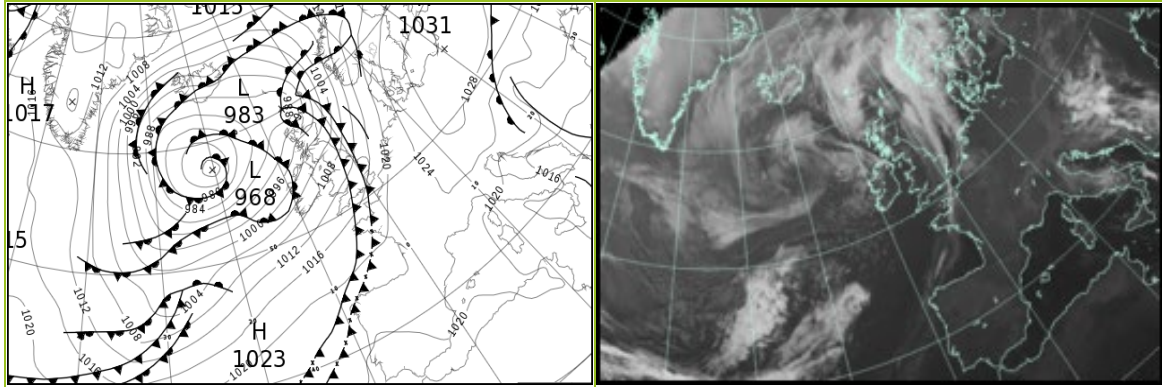

\*Mountain stations are above 500mAMSL.

## Daily Weather Summary for Monday 25 September 2023

## Daily Weather Summary for Monday 25 September 2023

None of the selected stations observed a day of sleet or snow falling or non-zero snow depth at 0900 UTC.

## Daily Weather Summary for Tuesday 26 September 2023

This day's summary created 03/10/2023 04:03

### Summary of the UK Weather for Tuesday 26 September 2023

Much of the UK remained largely dry through the night. Some frontal rain approached from the west before dawn, primarily affecting western Northern Ireland. Some showers also approached from the south-west, impacting parts of southern England. Some light patchy cloud persisted throughout the night in southern England and Northern Ireland, but much of the rest of the country stayed mostly clear. Wind were light although with some strong gusts over western areas, and temperatures remained fairly mild, staying in high single, or low double figures for most. A frontal band of rain affected Northern Ireland and western parts of England and Scotland, tracking northeastwards throughout the day, heaviest in the north. A band of heavier showers ahead of this affecting parts of the East Midlands. Clearest in the South, with patchy cloud thickening toward the evening. Some isolated showers behind the frontal bands as they cleared to the east.

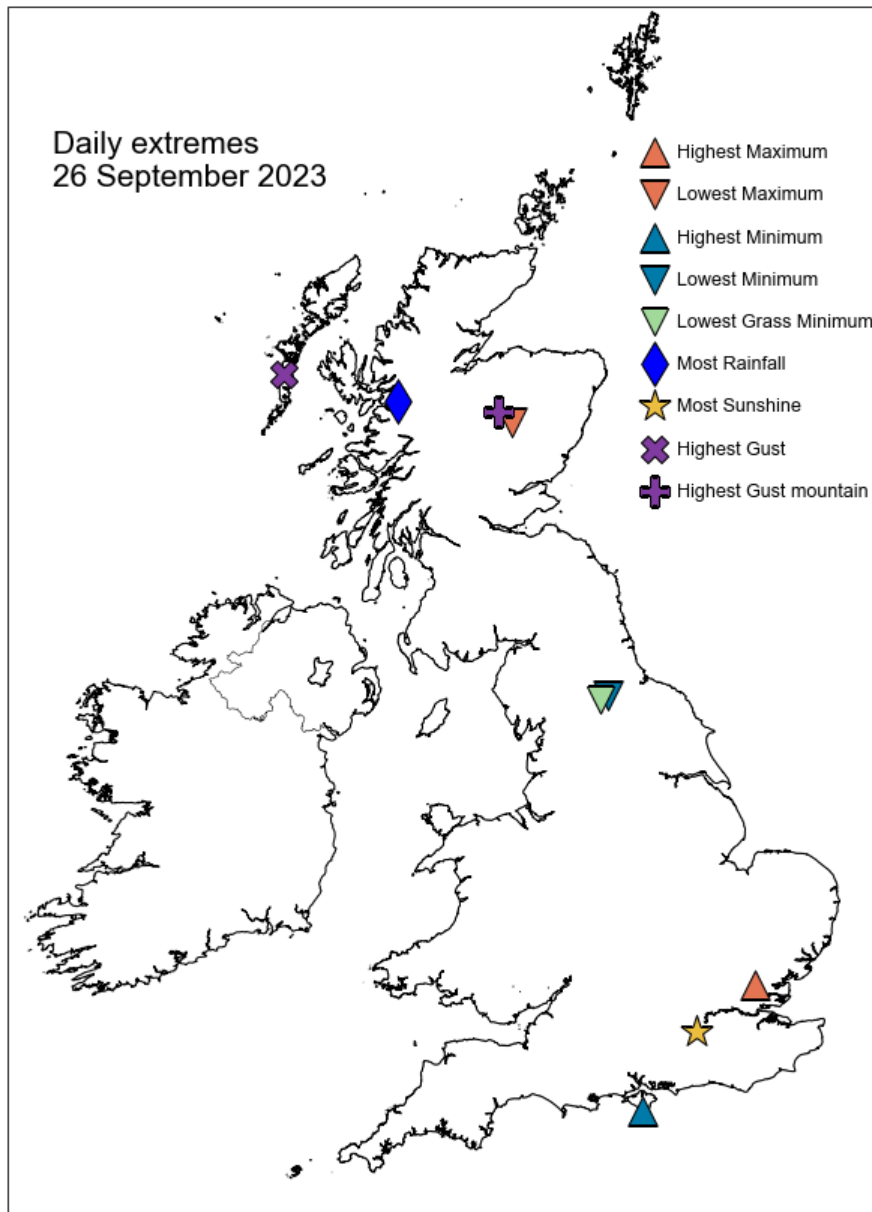

### Daily Extremes

<i>Highest Maximum</i>	<b>24.4°C</b> Writtle (Essex, 32mAMSL)
<i>Lowest Maximum</i>	<b>13.7°C</b> Braemar No 2 (Aberdeenshire, 327mAMSL)
<i>Highest Minimum</i>	<b>15.9°C</b> Wight: St Catherines Point (Isle Of Wight, 20mAMSL)
<i>Lowest Minimum</i>	<b>5.7°C</b> Ravensworth (North Yorkshire, 124mAMSL)
<i>Lowest Grass Minimum</i>	<b>1.7°C</b> Ravensworth (North Yorkshire, 124mAMSL)
<i>Most Rainfall</i>	<b>26.0mm</b> Achnagart (Ross & Cromarty, 15mAMSL)
<i>Most Sunshine</i>	<b>6.6hr</b> Wisley (Surrey, 38mAMSL)
<i>Highest Gust</i>	<b>46Kt 53mph</b> South Uist Range (Western Isles, 4mAMSL)
<i>Highest Gust (mountain*)</i>	<b>73Kt 84mph</b> Cairngorm Summit (Inverness-shire, 1237mAMSL)
<i>Greatest Snow Depth at 0900 UTC</i>	No non-zero values.

mAMSL refers to station elevation in metres above mean sea level.

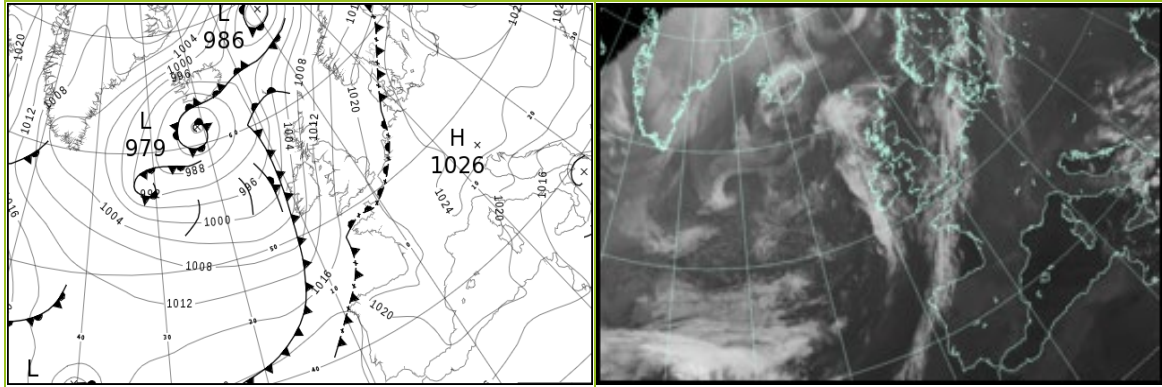

\*Mountain stations are above 500mAMSL.

## Daily Weather Summary for Tuesday 26 September 2023

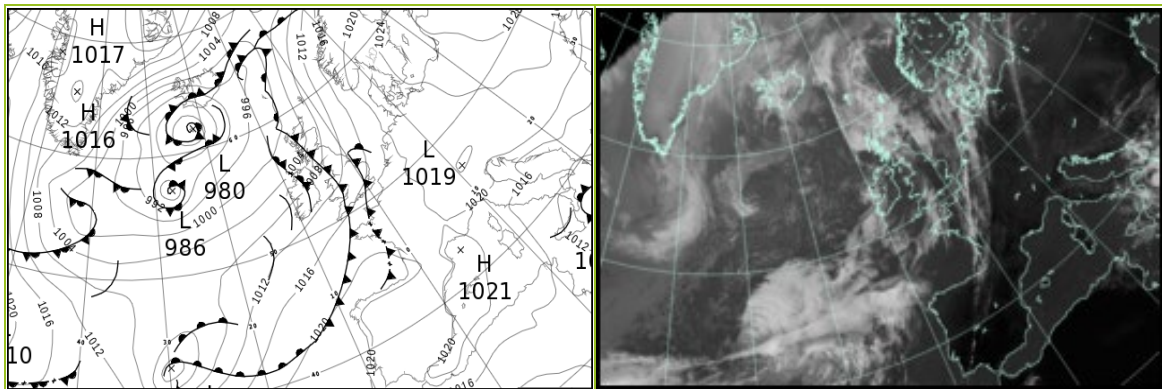

## Daily Weather Summary for Tuesday 26 September 2023

None of the selected stations observed a day of sleet or snow falling or non-zero snow depth at 0900 UTC.

## Daily Weather Summary for Wednesday 27 September 2023

This day's summary created 04/10/2023 04:03

### Summary of the UK Weather for Wednesday 27 September 2023

Wednesday began largely dry, with generally light winds and clear spells, under which mist and fog patches formed for much of the south in the early hours. Northern Scotland and the far west of England and Wales saw some early scattered showers. Through the morning, cloud thickened, and it became increasingly windy as Storm Agnes approached Northern Ireland, tracking northeastwards through the day, impacting much of Scotland and northwest England and Wales. This brought widespread strong winds and gusts, particularly strong around coastal regions, along with heavy rain. Parts of northwest Wales saw gusts of up to 69 knots. Yellow warnings for wind and rain were in force for much of the UK through Wednesday afternoon and evening. The southeast saw lighter winds and rain throughout. There were brief drier and brighter interludes throughout the afternoon over much of England, before further wet and windy conditions swept across the UK as Storm Agnes continued tracking northeastwards into the evening.

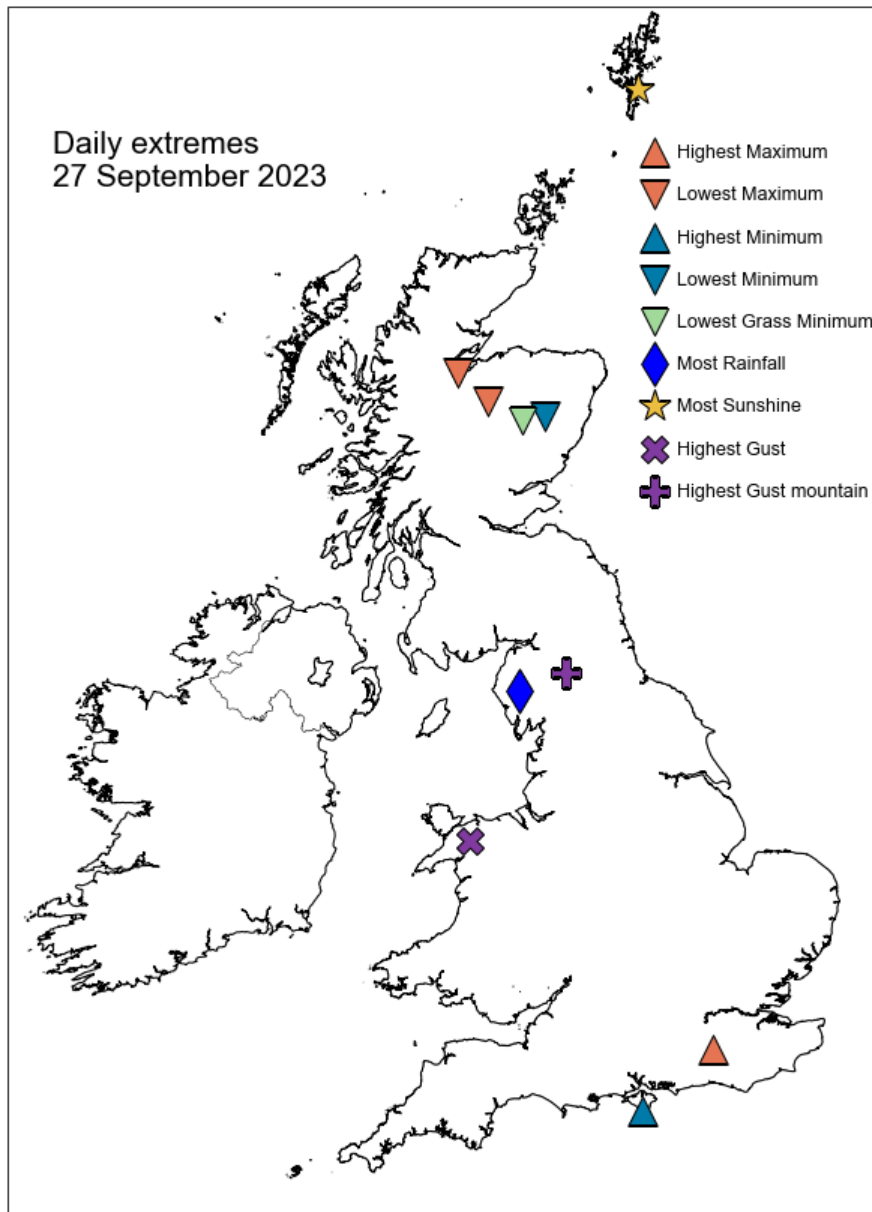

### Daily Extremes

<i>Highest Maximum</i>	<b>23.1°C</b> Charlwood (Surrey, 67mAMSL)
<i>Lowest Maximum</i>	<b>13.5°C</b> Aviemore (Inverness-shire, 228mAMSL) also Lentrán (Inverness-shire, 146mAMSL)
<i>Highest Minimum</i>	<b>15.9°C</b> Wight: St Catherines Point (Isle Of Wight, 20mAMSL)
<i>Lowest Minimum</i>	<b>1.1°C</b> Aboyne No 2 (Aberdeenshire, 140mAMSL)
<i>Lowest Grass Minimum</i>	<b>-1.9°C</b> Balmoral (Aberdeenshire, 283mAMSL)
<i>Most Rainfall</i>	<b>56.0mm</b> Honister Pass (Cumbria, 358mAMSL)
<i>Most Sunshine</i>	<b>6.4hr</b> Lerwick (Shetland, 82mAMSL)
<i>Highest Gust</i>	<b>73Kt 84mph</b> Capel Curig No 3 (Gwynedd, 216mAMSL)
<i>Highest Gust (mountain*)</i>	<b>82Kt 94mph</b> Great Dun Fell No 2 B (Cumbria, 847mAMSL)
<i>Greatest Snow Depth at 0900 UTC</i>	No non-zero values.

mAMSL refers to station elevation in metres above mean sea level.

\*Mountain stations are above 500mAMSL.

## Daily Weather Summary for Thursday 28 September 2023

This day's summary created 05/10/2023 04:03

### Summary of the UK Weather for Thursday 28 September 2023

The early hours of Thursday saw the remnants of Storm Agnes bringing light rain across Scotland and western areas. It was a dry and clear night elsewhere. Winds remained widely moderate across the UK overnight, with coastal areas seeing stronger winds and gusty conditions. It remained dry into Thursday morning with Canadian wildfire smoke bringing some interesting blue colours to the sunrise. It was a cloudy day for much of the UK with some scattered showers approaching western areas by the afternoon, heaviest over Northern Ireland, Wales and Western Scotland. These continued to spread eastwards overnight.

### Daily Extremes

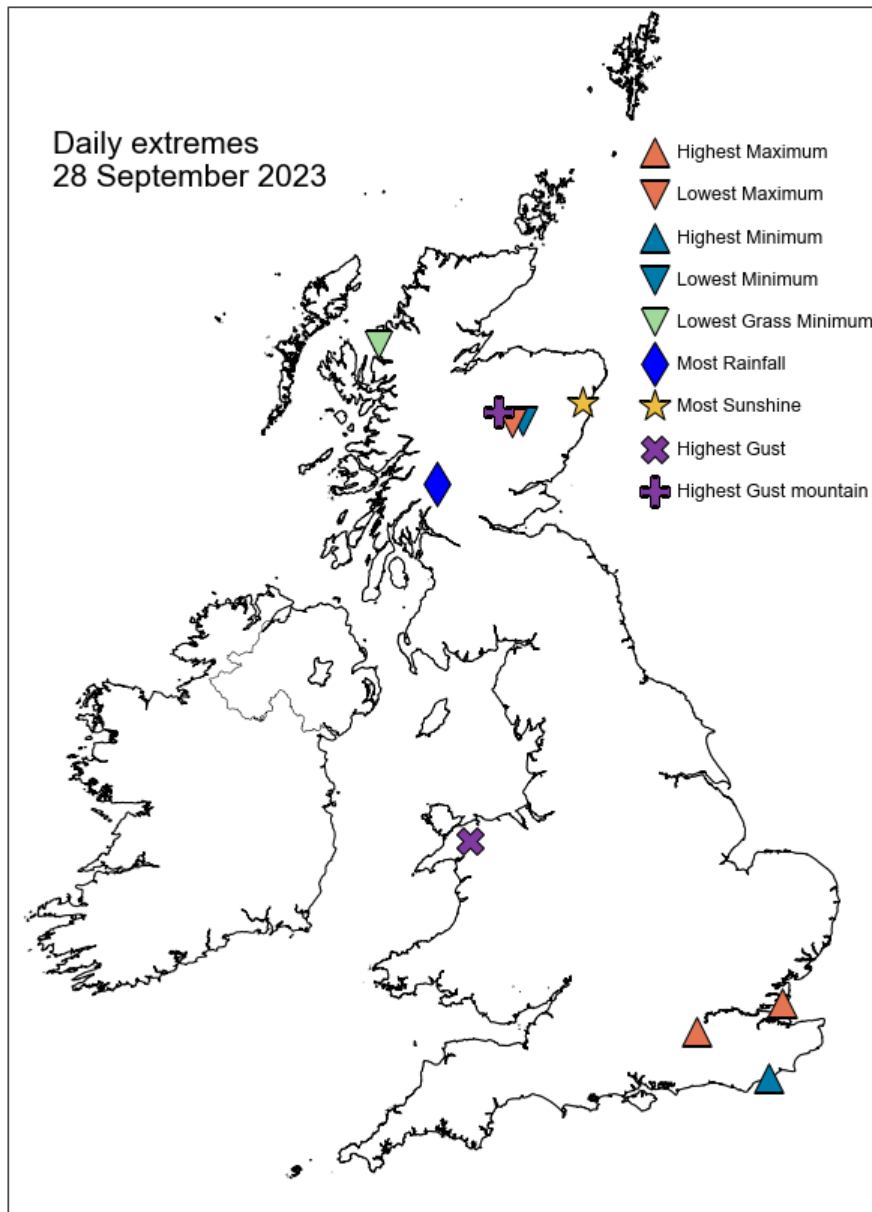

<i>Highest Maximum</i>	<b>20.3°C</b> Wisley (Surrey, 38mAMSL) also Shoeburyness, Landwick (Essex, 2mAMSL)
<i>Lowest Maximum</i>	<b>12.7°C</b> Braemar No 2 (Aberdeenshire, 327mAMSL)
<i>Highest Minimum</i>	<b>16.3°C</b> Hastings (East Sussex, 45mAMSL)
<i>Lowest Minimum</i>	<b>8.2°C</b> Balmoral (Aberdeenshire, 283mAMSL)
<i>Lowest Grass Minimum</i>	<b>5.2°C</b> Port Henderson (Ross & Cromarty, 18mAMSL)
<i>Most Rainfall</i>	<b>36.6mm</b> Tyndrum No 3 (Perthshire (in Central Region), 168mAMSL)
<i>Most Sunshine</i>	<b>2.5hr</b> Dyce (Aberdeenshire, 65mAMSL)
<i>Highest Gust</i>	<b>56Kt 64mph</b> Capel Curig No 3 (Gwynedd, 216mAMSL)
<i>Highest Gust (mountain*)</i>	<b>74Kt 85mph</b> Cairngorm Summit (Inverness-shire, 1237mAMSL)
<i>Greatest Snow Depth at 0900 UTC</i>	No non-zero values.

mAMSL refers to station elevation in metres above mean sea level.

\*Mountain stations are above 500mAMSL.

# Daily Weather Summary for Thursday 28 September 2023

## Daily Weather Summary for Thursday 28 September 2023

None of the selected stations observed a day of sleet or snow falling or non-zero snow depth at 0900 UTC.

## Daily Weather Summary for Friday 29 September 2023

This day's summary created 06/10/2023 04:03

### Summary of the UK Weather for Friday 29 September 2023

Friday started with strong winds over northern parts of the UK, this driven by low pressure to the northwest of the British Isles. Precipitation was mostly caused by a warm fronts that moved eastwards across most of the country, as well as a cold front that lingered around southern parts, which brought bands of rainfall overnight. Into the morning rain ceased in most parts of the UK, with some isolated showers, however western and parts of Scotland often saw rain and showers. Fairly cloudy initially, but cloud broke up for central and southeastern parts of England, allowing for some clear spells. Temperatures were slightly above average with peaks on the far southeast. It was a fine, clear start to the day on Friday in the South, but there were some scattered heavy showers further north, particularly over northwest Scotland that persisted though lessened in intensity throughout the day. High cloud built up over the afternoon from the southwest due an approaching low pressure system. Sunny across many areas leading to fairly warm day.

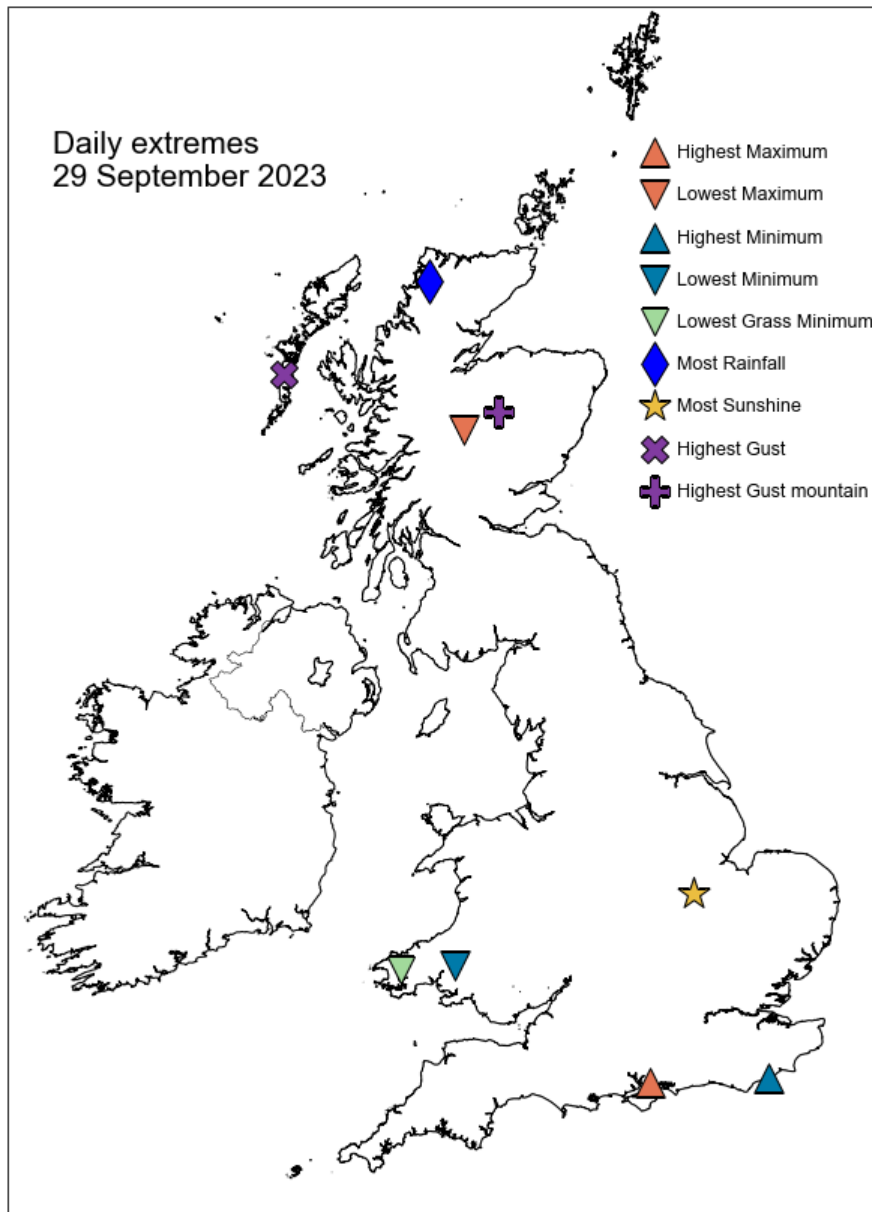

### Daily Extremes

<i>Highest Maximum</i>	<b>21.4°C</b> Gosport, Fleetlands (Hampshire, 1mAMSL)
<i>Lowest Maximum</i>	<b>12.8°C</b> Dalwhinnie No 2 (Inverness-shire, 351mAMSL)
<i>Highest Minimum</i>	<b>16.2°C</b> Hastings (East Sussex, 45mAMSL)
<i>Lowest Minimum</i>	<b>6.6°C</b> Llanfynydd, Broderi (Dyfed, 104mAMSL)
<i>Lowest Grass Minimum</i>	<b>2.2°C</b> Scolton Country Park (Dyfed, 75mAMSL)
<i>Most Rainfall</i>	<b>24.0mm</b> Achfary (Sutherland, 46mAMSL)
<i>Most Sunshine</i>	<b>10.1hr</b> Wittering (Cambridgeshire, 74mAMSL)
<i>Highest Gust</i>	<b>46Kt 53mph</b> South Uist Range (Western Isles, 4mAMSL)
<i>Highest Gust (mountain*)</i>	<b>87Kt 100mph</b> Cairngorm Summit (Inverness-shire, 1237mAMSL)
<i>Greatest Snow Depth at 0900 UTC</i>	No non-zero values.

mAMSL refers to station elevation in metres above mean sea level.

\*Mountain stations are above 500mAMSL.

# Daily Weather Summary for Friday 29 September 2023

## Daily Weather Summary for Friday 29 September 2023

None of the selected stations observed a day of sleet or snow falling or non-zero snow depth at 0900 UTC.

## Daily Weather Summary for Saturday 30 September 2023

This day's summary created 07/10/2023 04:03

### Summary of the UK Weather for Saturday 30 September 2023

Overnight, high pressure was dominant over southern parts of the UK. Cloud cover moved into western areas parts of the country, associated with an approaching weather system, while central eastern areas of England, and the far north of Scotland remained fairly clear by dawn. Temperatures remained slightly above average. During the morning, frontal cloud moved across many areas, although the southeast remained clearer. Rain moved into Wales through the morning, and then Northern Ireland by midday. Through the afternoon, this rain moved into much of Northern England and Southern Scotland, continuing to affect much of Wales, while it became patchier in Northern Ireland. Elsewhere, it was mostly cloudy, apart from the southeast which continued to see some sunny spells, as did the far north of Scotland. Winds started the day mostly light but increased in western and southwestern areas of the UK, to become moderate, locally fresh around coasts. Temperatures were near average or relatively cool under rain in central and northern areas, but with milder air in the south gradually moving northwards.

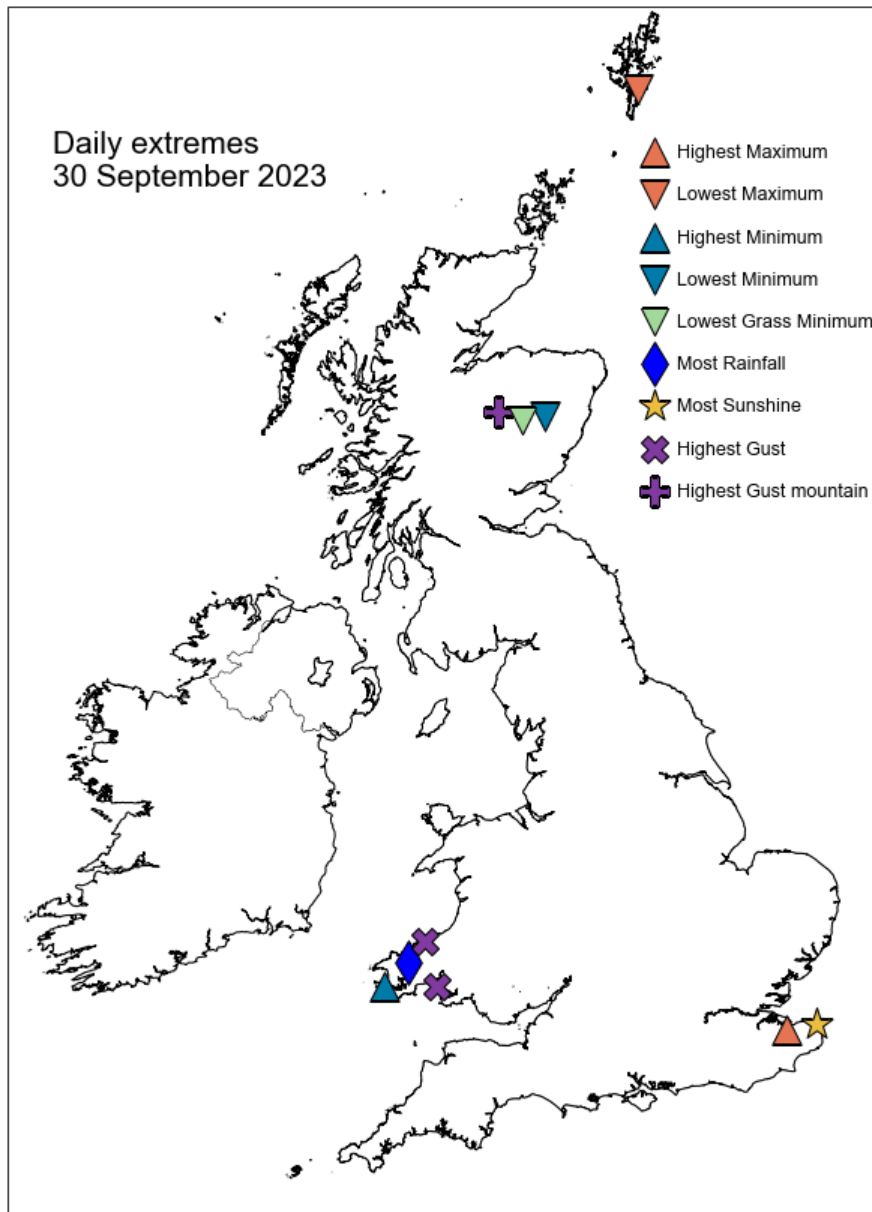

### Daily Extremes

<i>Highest Maximum</i>	<b>20.6°C</b> Faversham (Kent, 46mAMSL)
<i>Lowest Maximum</i>	<b>11.2°C</b> Lerwick (Shetland, 82mAMSL)
<i>Highest Minimum</i>	<b>14.4°C</b> Dale Fort (Dyfed, 33mAMSL)
<i>Lowest Minimum</i>	<b>3.2°C</b> Aboyne No 2 (Aberdeenshire, 140mAMSL)
<i>Lowest Grass Minimum</i>	<b>-0.7°C</b> Balmoral (Aberdeenshire, 283mAMSL)
<i>Most Rainfall</i>	<b>55.0mm</b> Maenclochog, Ddolwen Bridge (Dyfed, 226mAMSL)
<i>Most Sunshine</i>	<b>6.6hr</b> Manston (Kent, 49mAMSL)
<i>Highest Gust</i>	<b>39Kt 45mph</b> Aberporth (Dyfed, 133mAMSL) also Pembrey Sands (Dyfed, 3mAMSL)
<i>Highest Gust (mountain*)</i>	<b>55Kt 63mph</b> Cairngorm Summit (Inverness-shire, 1237mAMSL)
<i>Greatest Snow Depth at 0900 UTC</i>	No non-zero values.

mAMSL refers to station elevation in metres above mean sea level.

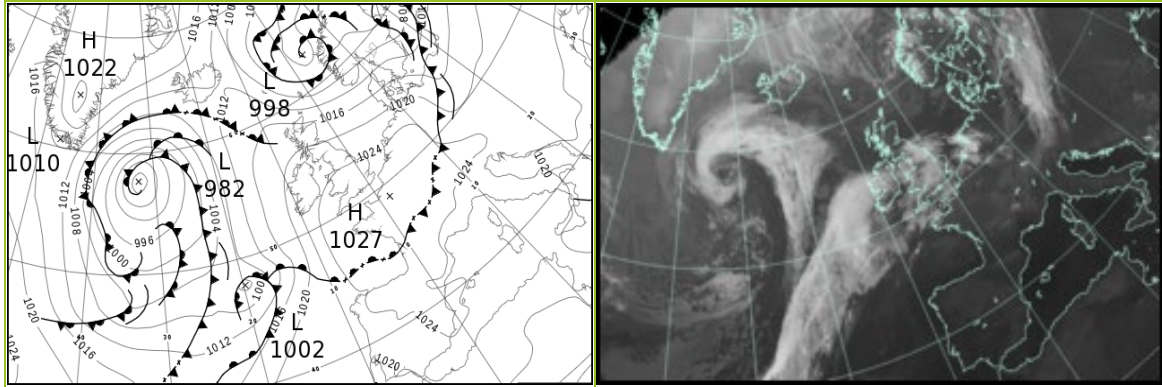

\*Mountain stations are above 500mAMSL.

# Daily Weather Summary for Saturday 30 September 2023

## Daily Weather Summary for Saturday 30 September 2023

None of the selected stations observed a day of sleet or snow falling or non-zero snow depth at 0900 UTC.

## Guidance Notes

UTC = Universal Coordinated Time. For the UK UTC is the same as GMT (Greenwich Mean Time).

National boundaries shown on the European station map are for illustrative purposes only.

### Daily extremes

- Daily extremes have been manually confirmed by Met Office Observations Quality Management as valid observations from the live database at the time of checking. However, more extreme values may still be possible if they occur after the time of production.
- Mountain stations above 500 masl are excluded from lowest temperatures, highest gust speeds and greatest snow depths at 0900 UTC. This is because they are not considered representative of low level areas.
- Counties quoted against each station are based on historical county boundaries pre-1974 and may not reflect current administrative boundaries.

### Analysis charts and satellite imagery

- The satellite imagery is infra-red imagery from the geostationary MSG satellite.
- The rainfall image is derived from satellite data from MSG and rain-radar data. This represents a snapshot of instantaneous rain-rates at 0000 UTC and 1200 UTC and so does not necessarily reflect daily accumulations in the rainfall station map.
- Any analysis charts or satellite images which are unavailable will be displayed as white space.

### Station maps

- The UK maps show station data for the same set of stations presented UK data table. These stations are selected to provide good spatial coverage across the UK; they represent only a fraction of the overall UK observing network.
- Wind speed maps show wind speed in Kt and direction both averaged over the hour up to the time of observation. 1 Kt = 1.151 mph.

### Hourly station data

- The data tables provide spot hourly observations from synoptic messages at 0000 and 1200 UTC. Missing data are denoted by '-'.

- Pressures are mean sea level pressure in hPa.
- For UK stations, Gibraltar and Jersey, the wind speeds and directions are both averaged over the hour up to the time of observation. However, for European stations wind speeds and directions are both averaged over a 10-minute period up to the time of observation.
- Wind speeds are in Kt. Wind directions are stored in the database every 10 degrees and have been converted to the nearest point of the compass. These give the direction the wind is blowing from, not to.
- Cloud amounts are in Oktas from 0 (clear) to 8 (overcast). 9 indicates sky obscured (eg by fog).
- Air temperature and dew point temperature are in Celsius.

### **Temperature maps**

- Daily maximum, minimum and grass minimum temperatures are in Celsius.
- The period for the daily maximum temperature is defined from 0900 UTC on the day in question to 0900 UTC the following day.
- The period for the daily minimum and grass minimum temperatures is defined as 0900 UTC the previous day to 0900 UTC on the day in question.
- On any given day the minimum will typically occur in the early hours of the morning and the maximum in early afternoon.

### **Rainfall, sunshine and max gust speed maps**

- Daily rainfall is in mm from 0900 UTC on the day in question to 0900 UTC the following day.
- Daily sunshine is in hours from Kipp and Zonen CSD1 automatic sunshine records. Bright sunshine is defined as exceeding 120 W/m<sup>2</sup>.
- Max gust speeds are the daily max gust in Kt from 0000-0000 UTC

### **Snow maps**

- The day of snow falling map displays data from present weather sensors, showing stations which have recorded sleet or snow falling at any point in the day (0000-0000 UTC).
- The snow lying map shows level snow depth as recorded by the automatic snow depth sensors at 0900 UTC. These snow depth sensors do not record snow depth if this is less than 1cm.
- Snow depth sensors are normally operational from October to April, in the event of snow falling outside this period data availability may be limited.

- Snow maps will only be displayed if one or more of the selected stations on that date have recorded either snow falling or non-zero snow depths. If snow maps are not displayed it is still possible that other stations in the network have recorded a day of sleet or snow falling or non-zero snow depth.
