SIGNIFICANT WEATHER

0600 GMT 01 MAY 2009	SIG WEATHER	1200 GMT 01 MAY 2009	SIG WEATHER	Summary of UK Weather for Friday 01 May 2009. Overnight a band of rain reached western parts of Northern Ireland, and the Western Isles of Scotland. Through the day rain band moved south-east, reaching south-west England, eastern Wales and north-eastern England by late afternoon. Through the morning the rain was often heavy, but during the afternoon the band fragmented, leaving only a little light rain and drizzle by the time the rain band moved across East Anglia and south-east England during the evening. Ahead of the rain band it was dry, with varying amounts of cloud, although everywhere had sunny periods at some point. Early patchy fog, hill fog and areas of low cloud, especially across south-west England around dawn, gradually cleared. However, sea fog drifted east across the English Channel, and affected many coasts for a time. Behind the rain band, broken cloud and scattered showers spread across Northern Ireland and Scotland, and isolated showers across Wales and northern England. It also became very windy across north-west Scotland, with localised gales across the far north-west during the morning.

SIGNIFICANT WEATHER

0600 GMT 06 MAY 2009 SIG WEATHER	1200 GMT 06 MAY 2009 SIG WEATHER	<p>Summary of UK Weather for Wednesday 06 May 2009. Patchy rain affected Northern Ireland and central Wales and the north Midlands and Lancashire overnight. The rain became heavier and more persistent over Northern Ireland later but most other parts stayed dry. Lowest temperatures occurred across the Scottish Highlands with a frost in some glens. Much of Wales and England had a dry and bright day with some sunshine. However, it was cloudier in northern England, Northern Ireland and western Scotland with outbreaks of rain. The rain died out across northern England during the afternoon but continued across Northern Ireland and Scotland, where it became heavy and persistent in the west. Skye had around 20mm in 12 hours with 31mm at Tyndrum. Highest temperatures during the day occurred in south-east England with 21 C at Heathrow and also Shoeburyness. The rain cleared through northern Scotland and Northern Ireland during the evening and into northern England with showers following.</p>

SURFACE REPORTS

SIGNIFICANT WEATHER

Summary of UK Weather for Friday 15 May 2009.

Overnight outbreaks of rain spread westwards across Scotland. Elsewhere, it was generally cloudy, misty and mild with widespread hill fog and further outbreaks of rain or showers, with some of these heavy and very locally thundery. The heaviest of the rain developed in a band from south-east England across the Midlands to Manchester, this subsequently moving northwards.

Outbreaks of locally heavy rain gradually moved northwards across northern and eastern England, continuing north to reach parts of south-eastern Scotland by late afternoon, and then many remaining parts of Scotland through the evening. Through the day to the north of this main rain area it was generally cloudy with outbreaks of rain, these locally heavy. To the south of the main rain area, there was some sunshine, but also scattered showers. Some of the showers were heavy, slow moving and thundery, especially across Wales and the Midlands.

Through the evening these heavy and sometimes thundery showers gradually moved across northern England. It became very windy across Scotland and south-west England, and later across English Channel coasts. Elsewhere winds were generally light.

SIGNIFICANT WEATHER

<p>0600 GMT 19 MAY 2009 SIG WEATHER</p> 	<p>1200 GMT 19 MAY 2009 SIG WEATHER</p> 	<p>Summary of UK Weather for Tuesday 19 May 2009.</p> <p>A showery south-westerly flow affected the U.K. during the day. Showers continued overnight across northern and western parts with a few over, and to the south-east of, London. It was chilly in some rural spots across the north.</p> <p>During the day most areas experienced a mixture of sunny intervals and showers. Some of the showers were very heavy, and thunderstorms broke out in many areas. However, the showers were more isolated across eastern and south-eastern parts of England, and some places here remained dry.</p> <p>It was generally rather windy with south-westerly gusts between 28 and 35 knots at times along western hills and coasts of England and Wales.</p> <p>During the evening most of the showers across England and Wales died out, however they did continue over Northern Ireland and parts of Scotland.</p> <p>Temperatures were generally near average for mid-May across most parts, although a few places where showers persisted were below average.</p>

SIGNIFICANT WEATHER

0600 GMT 20 MAY 2009	SIG WEATHER	1200 GMT 20 MAY 2009	SIG WEATHER	<p>Summary of UK Weather for Wednesday 20 May 2009. Showers continued across Scotland and northern England and also west Wales overnight. Elsewhere became dry with well-broken cloud. The lighter wind allowed a few short lived fog patches to form in some southern areas. Lowest temperatures were recorded along the Welsh Marches.</p> <p>Showers developed again through the day, quite frequent and heavy in parts of Scotland and northern England with some thunder. South of the Wash to around Bournemouth the showers were very few with many parts remaining dry with a good deal of sunshine. Further outbreaks of heavy rain continued into the evening across Wales, Cumbria and northern England with thunder across Lincolnshire. Temperatures were near average in the north and slightly above average in the south.</p>

SIGNIFICANT WEATHER

0600 GMT 21 MAY 2009	SIG WEATHER	1200 GMT 21 MAY 2009	SIG WEATHER	<p>Summary of UK Weather for Thursday 21 May 2009.</p> <p>Showers largely died back to western Scotland, Wales and northern England overnight.</p> <p>During the morning showers developed again across the U.K., some of the showers heavy with thunder. The heaviest showers occurred across the eastern side of England, particularly across north Yorkshire into Teeside, and also over the north-east of Scotland. Showers moved across the west of England and Wales, then during the afternoon they quickly lost their intensity in the east, allowing south-east England to have a warm day.</p> <p>Through the evening cloud and outbreaks of rain spread across Northern Ireland, western Wales and north-west England. Most remaining areas of England and Wales became dry, while showers continued across Scotland, although these showers gradually became lighter.</p>

SIGNIFICANT WEATHER

0600 GMT 22 MAY 2009	SIG WEATHER	1200 GMT 22 MAY 2009	SIG WEATHER	<p>Summary of UK Weather for Friday 22 May 2009.</p> <p>Outbreaks of rain spread eastwards across central parts of the U.K. during the early hours. There were some showers in western Scotland, but eastern Scotland was mainly dry. The southern half of England had a dry but locally chilly night with clear spells.</p> <p>During the day central parts of the U.K. were cloudy with patches of rain, the bulk of which fell over the western side of Wales, where it was misty with areas of hill fog. There were some heavy bursts of rain in north-western Wales. There were further showers across western Scotland at first, and showers also broke out in the east where there were some localised downpours with thunder during the afternoon.</p> <p>The south of England remained dry throughout, and there was a fair amount of sunshine here, especially in southern coastal counties. Afternoon temperatures were in general a bit above the May average in the sunnier south, close to average in eastern England, Scotland, Wales and Northern Ireland but a bit below average in north-western England.</p>

SIGNIFICANT WEATHER

0600 GMT 23 MAY 2009	SIG WEATHER	1200 GMT 23 MAY 2009	SIG WEATHER	<p>Summary of UK Weather for Saturday 23 May 2009. Overnight, most places were dry with cloud becoming well broken. It was a chilly night, with some Scottish glens getting close to freezing. However, thicker cloud across western Scotland and later Northern Ireland brought some outbreaks of rain, these mainly light, but with some heavier outbreaks across western Scotland later. During the day, much of England and Wales remained dry with sunshine becoming increasingly hazy. Scotland, Northern Ireland and north-west England were generally cloudy with rain at times, much of this light, but there was some heavier rain at times across Northern Ireland and some short-lived very heavy bursts across parts of western Scotland. However, rain became lighter from the west later. It became warm or very warm, especially in the south and east, the highest recorded temperature being 21.7 C at Cranwell in Lincolnshire The rain and showers across Scotland cleared away eastwards during the evening.</p>

<p>0600 GMT 25 MAY 2009 SIG WEATHER</p> 	<p>1200 GMT 25 MAY 2009 SIG WEATHER</p> 	<p>Summary of UK Weather for Monday 25 May 2009.</p> <p>Overnight it was largely dry, but with cloud increasing in the south. Northern Ireland and Scotland remained cloudy with outbreaks of rain, especially across western Scotland. It was a chilly night across some northern areas, even with a touch of grass frost, but southern areas were milder.</p> <p>During the day, Scotland and Northern Ireland remained cloudy with further rain, most of this across the higher ground of western Scotland. During the early morning, a band of showers spread northwards across southern counties, to lie from Wales, to the Midlands, to Yorkshire by evening. Thundery showers spread to Kent and Sussex during the afternoon and evening.</p> <p>However, many areas had some sunny spells and many areas became warm or very warm with highest temperatures in the London area.</p> <p>During the evening, outbreaks of rain became more extensive across many parts of the U.K., forming organised bands aligned north-east to south-west. Scattered thunderstorms ran north-eastwards across the extreme south-east of England.</p>

SIGNIFICANT WEATHER

<p>0600 GMT 27 MAY 2009 SIG WEATHER</p> 	<p>1200 GMT 27 MAY 2009 SIG WEATHER</p> 	<p>Summary of UK Weather for Wednesday 27 May 2009. During the early hours it was dry across the eastern U.K., while rain spread from the west to affect Northern Ireland and the west of the mainland. The rain, heavy at times, then spread to remaining areas during the course of the morning, before clearing away to the east early in the afternoon. For the rest of the afternoon and into the evening, it remained generally cloudy and damp towards the south and west of the U.K., with further drizzle at times, especially in coastal and upland areas. Meanwhile, across many of central and eastern areas, including much of Scotland and north-east Wales, the cloud broke to give some warm, hazy sunshine later in the afternoon and into the evening. Little changed after dark, with the cloudy, damp conditions persisting in the south and west. Maximum temperatures ranged from below average in the south and west, to near or slightly above average to the east of high ground and across the east of the mainland. A stiff westerly breeze affected most parts to make it feel cool where it remained overcast.</p>

SIGNIFICANT WEATHER

0600 GMT 29 MAY 2009	SIG WEATHER	1200 GMT 29 MAY 2009	SIG WEATHER	<p>Summary of UK Weather for Friday 29 May 2009.</p> <p>High pressure centered to the east of the U.K. dominated the weather across all areas. It was a dry night with patchy amounts of cloud and some clear periods for most places. However, low cloud, mist and fog affected western parts of the U.K. and especially the south-west.</p> <p>This gradually cleared away during the first part of the morning and all areas then saw a dry day with spells of sunshine. Some fair weather cloud formed during the day but this soon dispersed later in the afternoon and into the evening. There was a brisk east to south-easterly breeze, especially in the south-west of England and around coastal parts of Scotland.</p> <p>There was a dry and sunny end to the day. Temperatures across all parts of the UK were close to, or above the average.</p>
