SIGNIFICANT WEATHER

0600 GMT 02 SEPTEMBER 2010 SIG WEATHER	1200 GMT 02 SEPTEMBER 2010 SIG WEATHER	<p>Summary of UK Weather for Thursday 02 September 2010. It was a chilly start for much of the U.K., with shallow mist and fog in many low-lying valleys, mainly in the south and east of England, including the Vale of York.</p> <p>Most of the U.K. had a dry and bright day with plenty of warm sunshine. Only a few places on the east coast and (early in the day) the coast of the far south-west had thicker cloud cover. Much of the sunshine in the south-west was, however, marred by high cloud - part of the remains of ex-Hurricane Danielle.</p> <p>There were light, mostly south-easterly winds for most parts, but the south coast of the South-west Peninsula and the Isles of Scilly felt a stronger wind, making it feel cooler here.</p> <p>Temperatures were generally warm for the time of year, especially in the north of England.</p>

SURFACE REPORTS

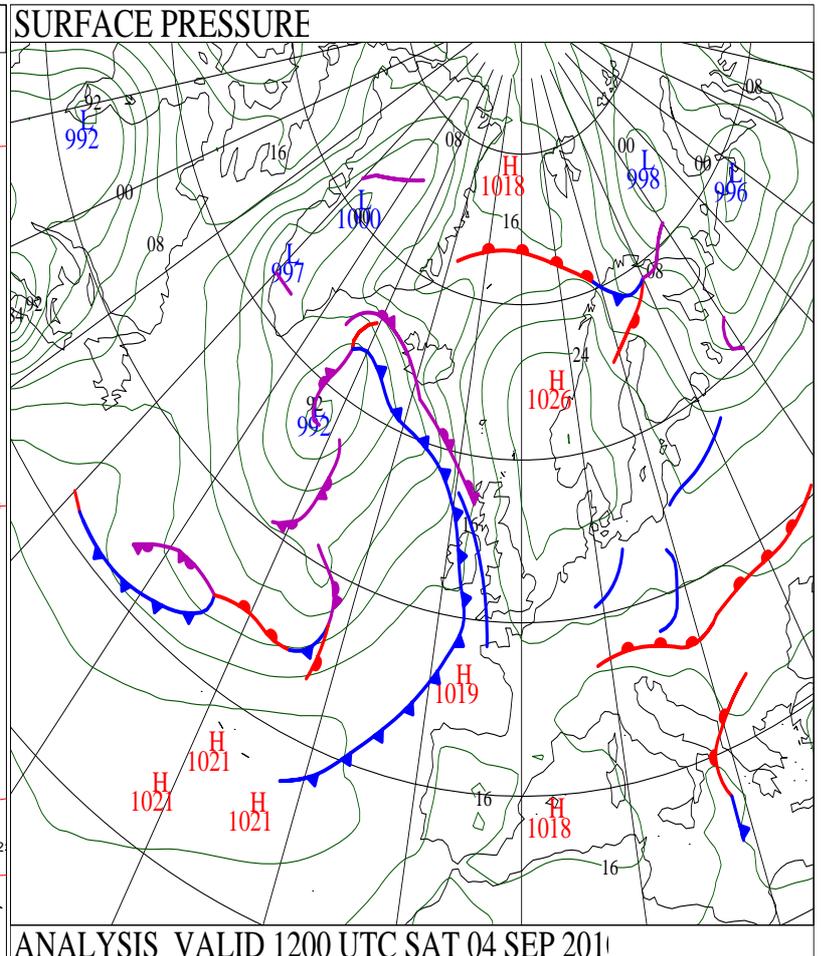

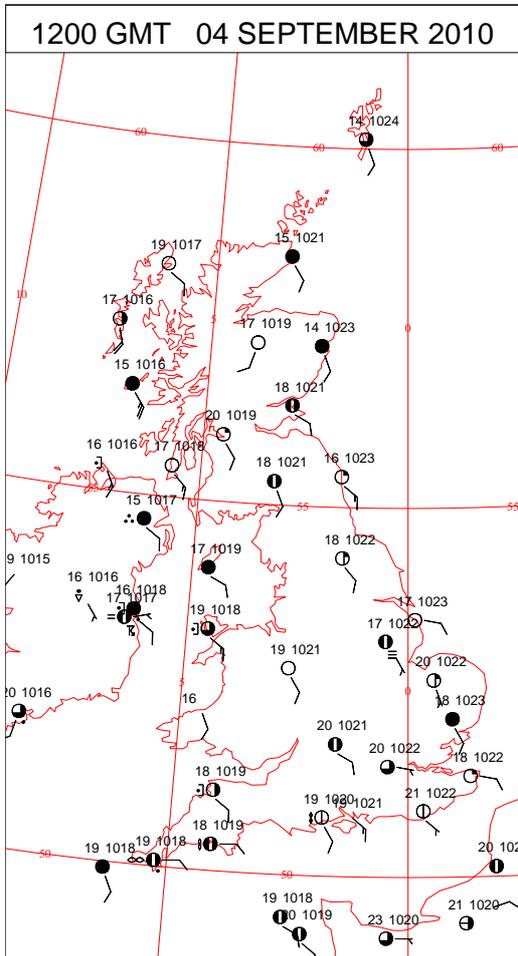

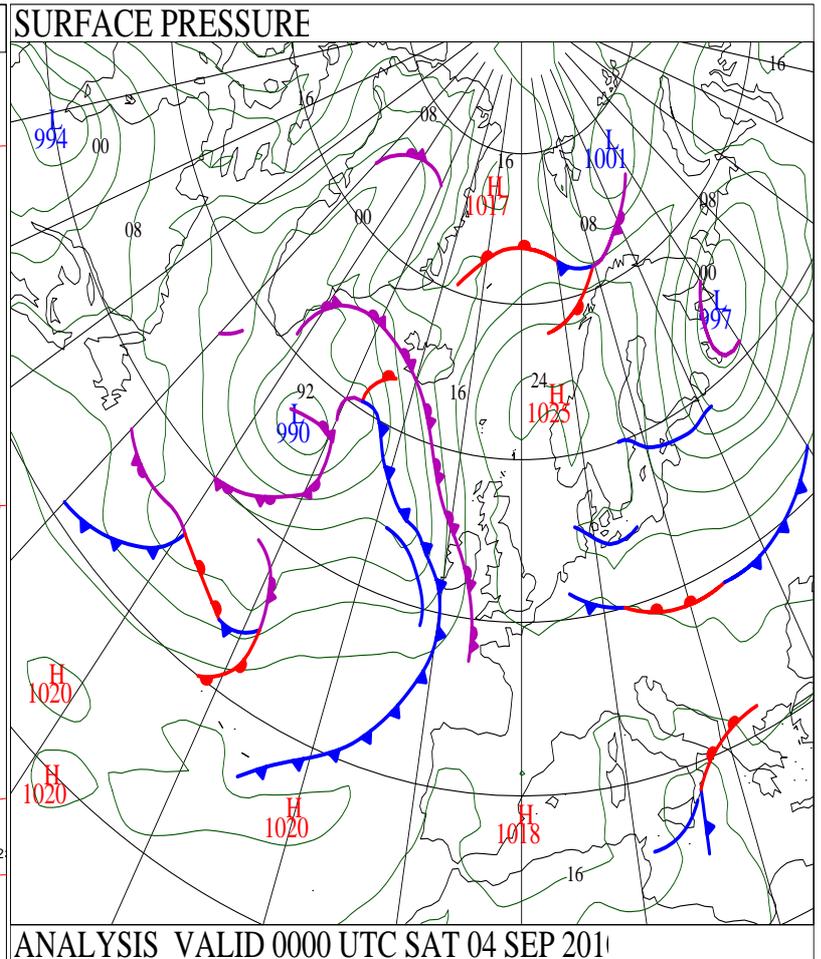

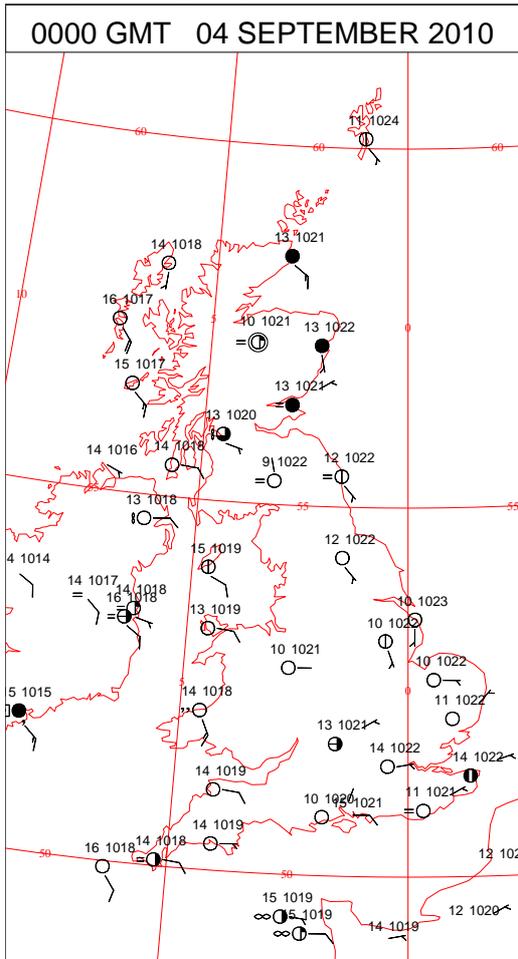

SIGNIFICANT WEATHER

0600 GMT 03 SEPTEMBER 2010 SIG WEATHER	1200 GMT 03 SEPTEMBER 2010 SIG WEATHER	<p>Summary of UK Weather for Friday 03 September 2010. It was a dry night for the whole of the U.K., and it turned quite chilly in some parts by dawn. Under clear skies some fog and low cloud formed, particularly in southern and eastern England. The fog was slow to clear in places, gradually lifting to low cloud, before eventually dispersing, leaving the majority of the country fine, dry and sunny. Some thick cloud was reluctant to thin and break over central Devon, but it eventually turned sunny here also, after midday. It felt quite pleasant in gentle south-easterly winds, with temperatures rising to the low twenties Celsius quite widely across the country during the afternoon. This is around average for southern England for the time of year, and above average for central parts of the U.K. However, with Scotland and Northern Ireland also rising to the low twenties Celsius due to the south-easterly wind, this was well above the seasonal average in these parts. The evening period remained dry and fine again for most of the country.</p>
1800 GMT 03 SEPTEMBER 2010 SIG WEATHER	0000 GMT 04 SEPTEMBER 2010 SIG WEATHER	<p>EXTREMES Highest Maximum: 23.4 Castlederg, Tyrone Lowest Maximum: 14.1 Fair Isle, Shetland Lowest Minimum: 1.6 Aboyne No 2, Aberdeenshire Lowest Grass Minimum: -0.4 Aboyne No 2, Aberdeenshire Most Rain: 2.2 St Angelo, Fermanagh Most Sun: 11.9 Fair Isle, Shetland</p>

SIGNIFICANT WEATHER

0600 GMT 04 SEPTEMBER 2010 SIG WEATHER	1200 GMT 04 SEPTEMBER 2010 SIG WEATHER	<p>Summary of UK Weather for Saturday 04 September 2010. It was another mostly dry and clear night across much of the U.K., with temperatures dropping to single figures Celsius quite widely, and some mist and fog forming in eastern England. A band of cloud and showery rain to the west was already approaching Northern Ireland and Cornwall by dawn. This progressed steadily eastwards into western Scotland, Wales and western England during the course of the day. The band of cloud and showery rain slowed and weakened during the afternoon, and didn't progress much beyond the western side of the country during the evening period. Ahead of the front, it remained dry with occasionally hazy sunshine, as high cloud increased. Temperatures were still above average for the time of year for many parts of the U.K., in a warm south-easterly breeze, with some warm temperatures again for Scotland, including the Western Isles. Elsewhere temperatures were close to the average.</p>

SIGNIFICANT WEATHER

0600 GMT 06 SEPTEMBER 2010 SIG WEATHER	1200 GMT 06 SEPTEMBER 2010 SIG WEATHER	<p>Summary of UK Weather for Monday 06 September 2010. Low pressure in the Atlantic Ocean brought strong winds and heavy rain to most parts of the U.K. At the start of the day rain was already falling in Northern Ireland, west Wales and south-west England, and it gradually spread eastwards during the morning and afternoon. By the evening the rain had reached northern England, the Midlands and East Anglia, and was still falling in Northern Ireland. However, drier and clearer conditions spread into south-western counties toward the end of the day. The rain crossing the U.K. was persistent, very heavy and became thundery at times. The only area to escape any significant rain was Scotland, where it stayed largely dry throughout the day. It was a very windy day across many parts of the U.K., especially over high ground in the north, where a gust of 94 knots was recorded on Cairngorm earlier in the morning. Winds eased in south-western areas once the rain had cleared later in the day. Temperatures were generally close to average for the time of year, but felt cool in the strong winds and heavy rain.</p>

0600 GMT 07 SEPTEMBER 2010 SIG WEATHER	1200 GMT 07 SEPTEMBER 2010 SIG WEATHER	<p>Summary of UK Weather for Tuesday 07 September 2010. It was fairly wet in the early hours with rain, heavy at times, over northern England and south-west Scotland. This moved north-eastwards during the day, crossing north-east Scotland by the evening. Many other areas saw sunshine at times with occasional showers, some of these were heavy with an occasional rumble of thunder. Some northern parts of Wales, and also parts of northern England saw longer spells of rain during the afternoon and evening. Again, these were sometimes thundery and very heavy at times. The wet weather generally died away through the evening, apart from central southern England, which saw further heavy rain move in from the south during the night. Temperatures were close to the average for the time of year.</p>

Many parts of England and Wales started the morning with mist or fog, which was slow to clear in places. During the day, eastern areas were largely cloudy but many places in the west of the UK saw some sunshine. Rain affected parts of southeast England and East Anglia for much of the day, but was not particularly heavy until the afternoon, when a band of showers formed near London. Heavy, thundery showers were also seen in southwest England, southwest Wales and Northern Ireland in the afternoon and over the Pennines in the early evening. Elsewhere, there were a scattering of showers but many places stayed dry. Later in the evening most of the showers died away or cleared out to sea. Maximum temperatures were around or slightly above average in particular in the north of the UK.</p>

SIGNIFICANT WEATHER

0600 GMT 09 SEPTEMBER 2010 SIG WEATHER	1200 GMT 09 SEPTEMBER 2010 SIG WEATHER	<p>Summary of UK Weather for Thursday 09 September 2010. Overnight fog and mist slowly cleared during the morning, before scattered showers developed over many parts of the U.K. around midday. During the afternoon some of these showers turned thundery, and formed into lines from Humberside to Hampshire. These eventually moved eastward by early evening, although they became slow moving for a time on the south coast due to a slight sea breeze. Away from this area of heavier showers, the day was largely dry with just a few lighter showers forming mostly on the hills of west Wales and Scotland. Following these showers was a more organised area of rain that spread into western parts of Northern Ireland and Wales by early evening. The cloud and rain associated with this feature continued to build and move eastward during the evening. Maximum temperatures were above average for the majority of the U.K.</p>

SIGNIFICANT WEATHER

0600 GMT 10 SEPTEMBER 2010 SIG WEATHER	1200 GMT 10 SEPTEMBER 2010 SIG WEATHER	<p>Summary of UK Weather for Friday 10 September 2010. Cloud and outbreaks of rain spread from the west overnight into much of the U.K., leading to a fairly mild but dull start for many, with rain then becoming slow-moving over Wales and north-west England. Northern Ireland and Scotland were in cooler air for much of the day, once the rain cleared these areas, with more in the way of dry and bright spells. Meanwhile, southern and south-east England stayed mostly dry, but fairly cloudy throughout the day. South-westerly winds were also brisk in many parts of England and Wales, with strongest gusts around western coasts and high ground. More persistent rain spread into Wales and parts of central and northern England during the evening, turning particularly heavy for a time in south-west Wales. It was a warm or very warm day in many areas, especially under the cloud and rain, and in eastern Scotland.</p>

ANALYSIS VALID 1200 UTC MON 13 SEP 2010

SURFACE REPORTS

SIGNIFICANT WEATHER

Summary of UK Weather for Monday 13 September 2010.
 A cloudy start for much of the U.K., although some areas, especially southern parts, began the day with sunny intervals. Scotland and Northern Ireland began with showery outbreaks of rain, with further rain soon moving in from the west. This extended over much of the north, and also eastern parts of England by the afternoon.

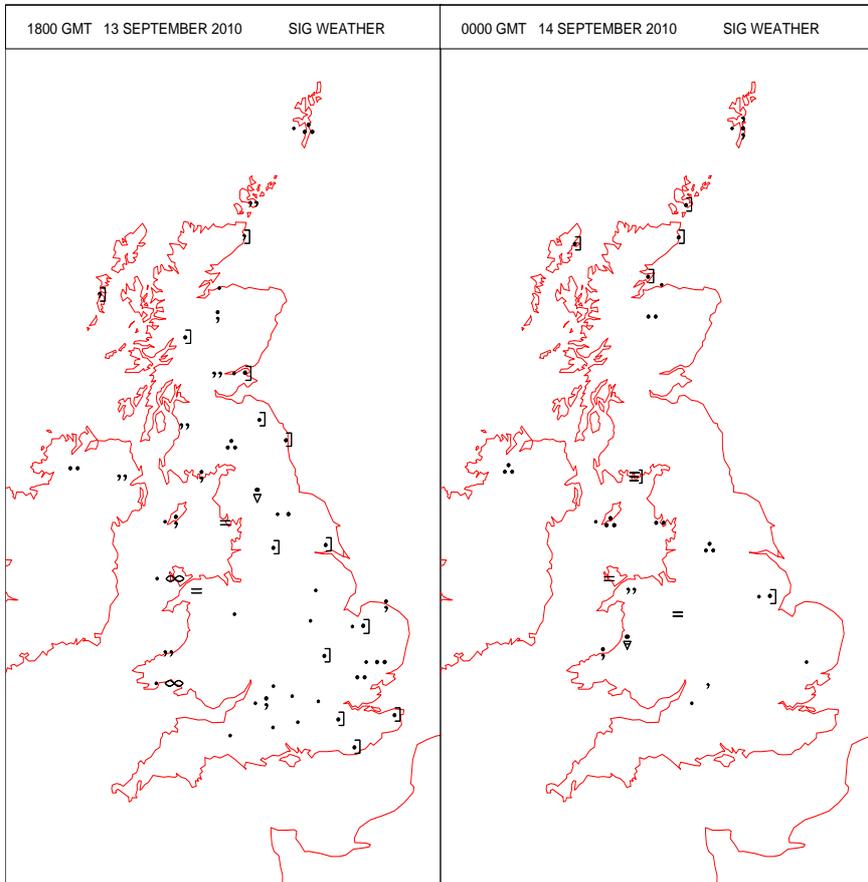

The wet weather cleared most of England and northern Scotland by evening, apart from an area of continuous, often heavy rain, lingering over Northern Ireland, and into Cumbria and southern Scotland. This gave some high accumulations, especially over higher ground in north-west England.

Some lighter rain also lingered in central Wales and south-east England.

After the rain cleared, cloudy conditions generally prevailed, with also the odd sunny interval. The far south-west of England saw a generally bright end to the day.

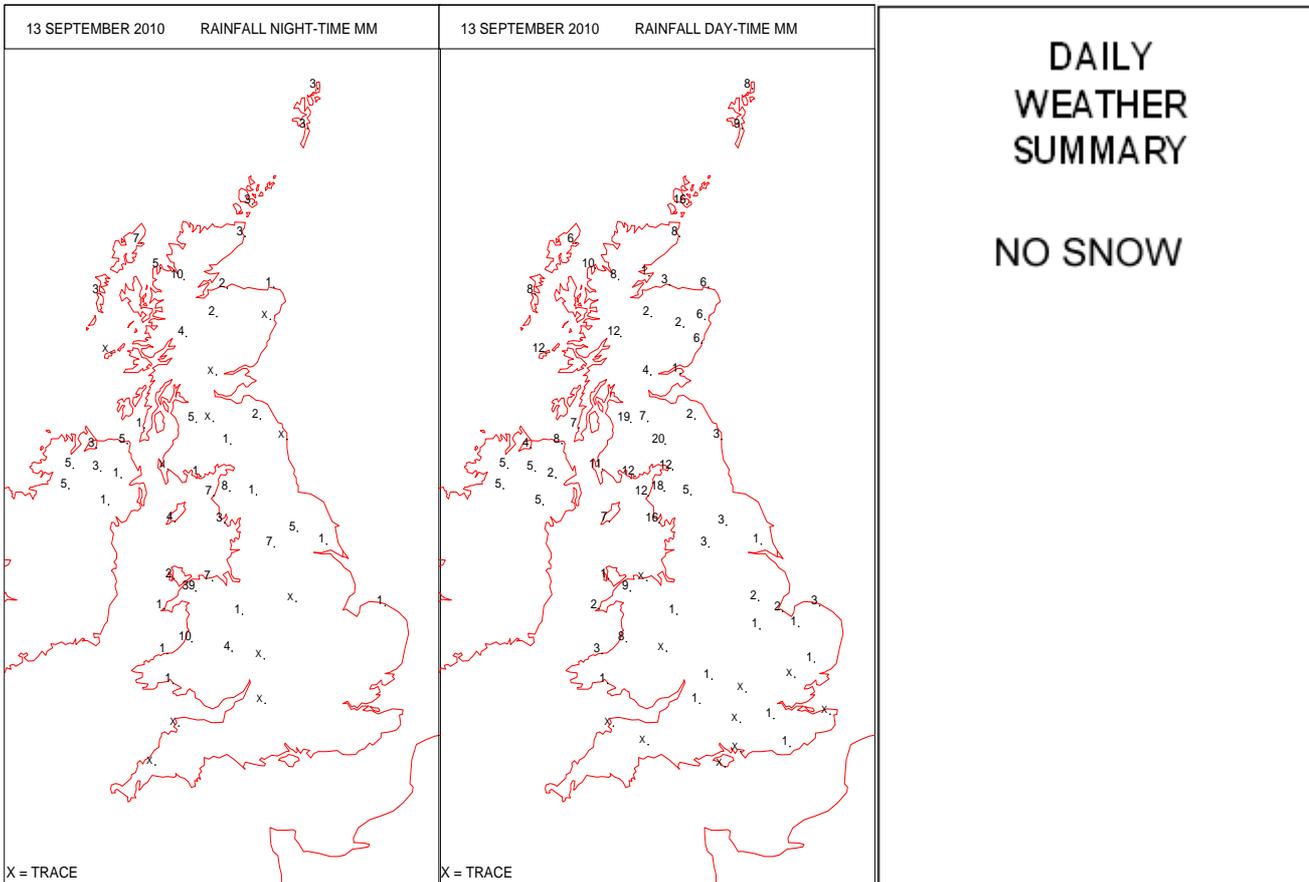

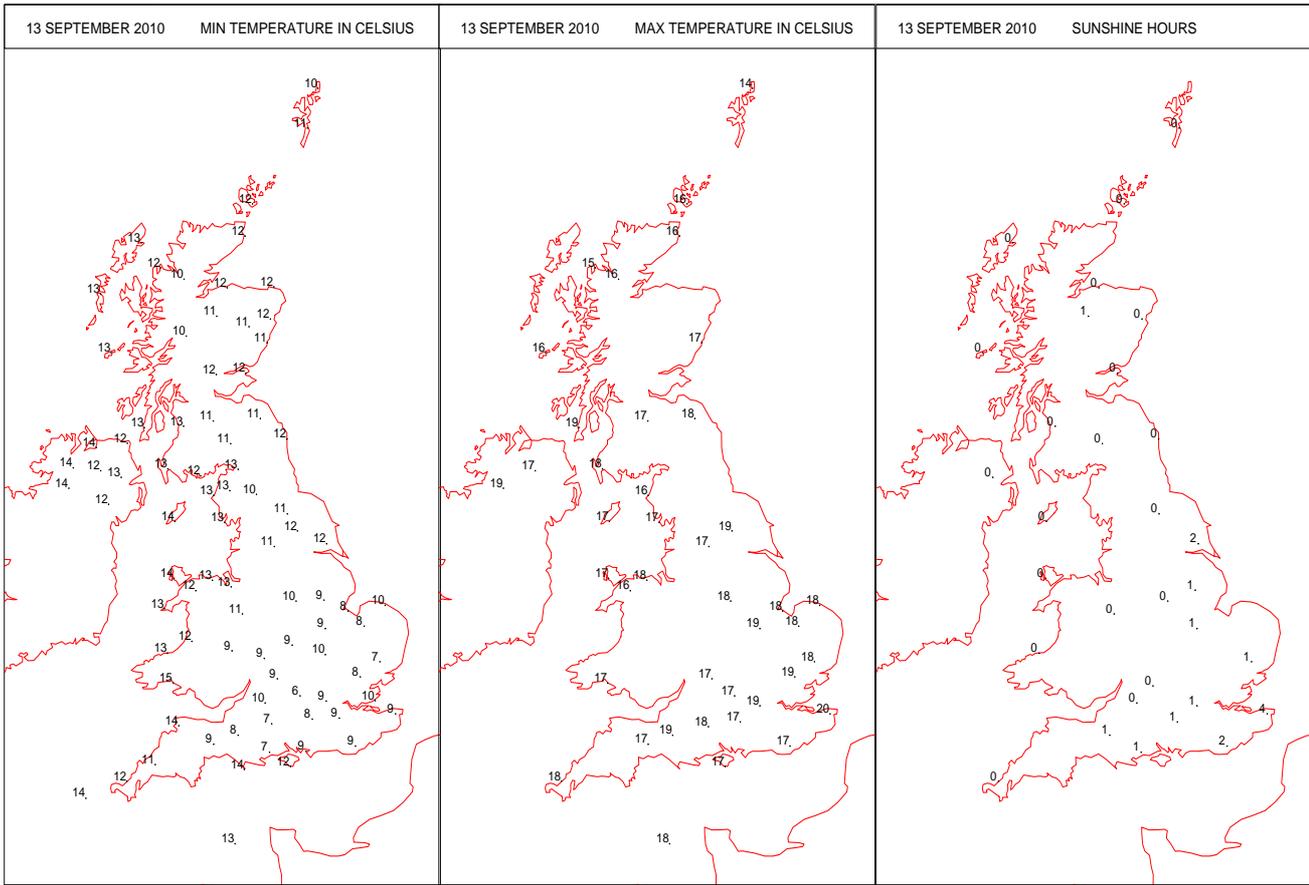

Strong and gusty south-westerly winds were also a noticeable feature that persisted throughout the day. The strongest gust of 84 knots was recorded at the summit of Cairngorm during the evening.

Most places had near to average temperatures, although it felt cool at times in the rain and strong winds.

DAILY WEATHER SUMMARY

SURFACE REPORTS

SIGNIFICANT WEATHER

Summary of UK Weather for Tuesday 14 September 2010.

The day began with a showery start for the north, with some areas seeing prolonged sunny spells. The south also started with some sunny intervals and was mainly dry.

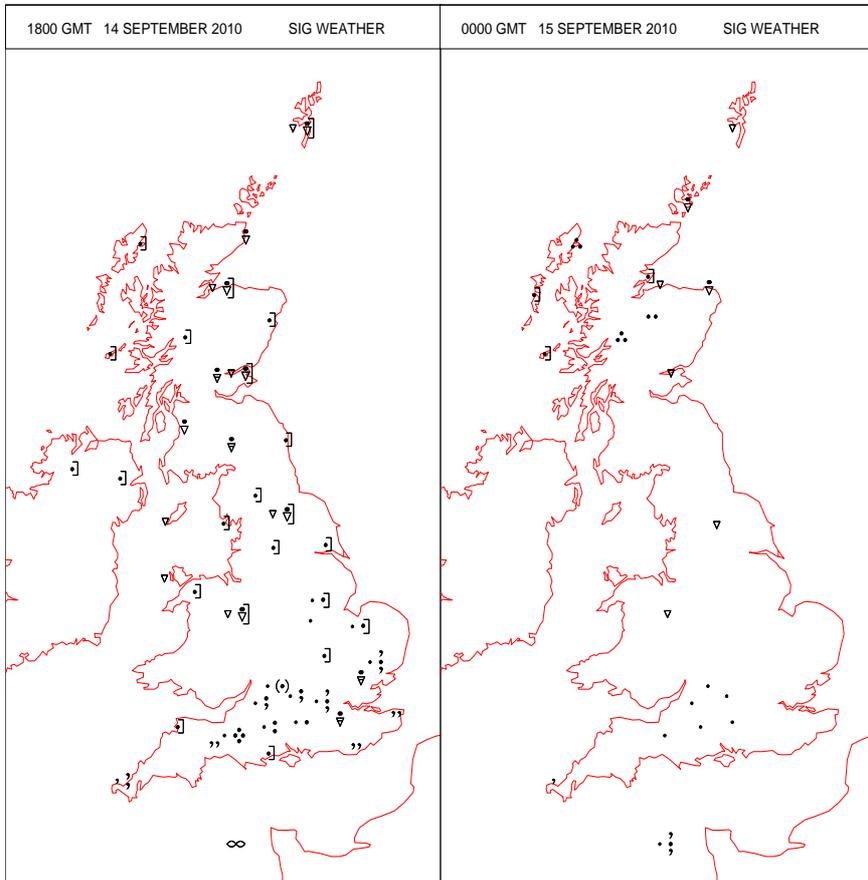

Most of Wales, the Midlands and northern parts of England began with persistent rain, this being heavy over high ground in western areas.

Associated cloudy conditions cleared south during the day, mainly with persistent light rain, and leaving dry and sunny weather in its wake.

Occasionally heavier spells of rain were also felt, especially along the back edge of the cloud, soon before it cleared. Northern parts saw sunshine and sharp showers continue throughout the day with the odd rumble of thunder at times, especially in northern Scotland.

A strong south-westerly, backing to north-westerly wind was felt throughout the U.K., and was noticeable especially in exposed western coasts and over high ground. A maximum gust of 74 knots was recorded at Cairnwell during the early afternoon.

Temperatures felt warm in the east, and near to average in many other parts, but cool during blustery showers in the north.

DAILY CLIMATE DATA

DAILY WEATHER SUMMARY

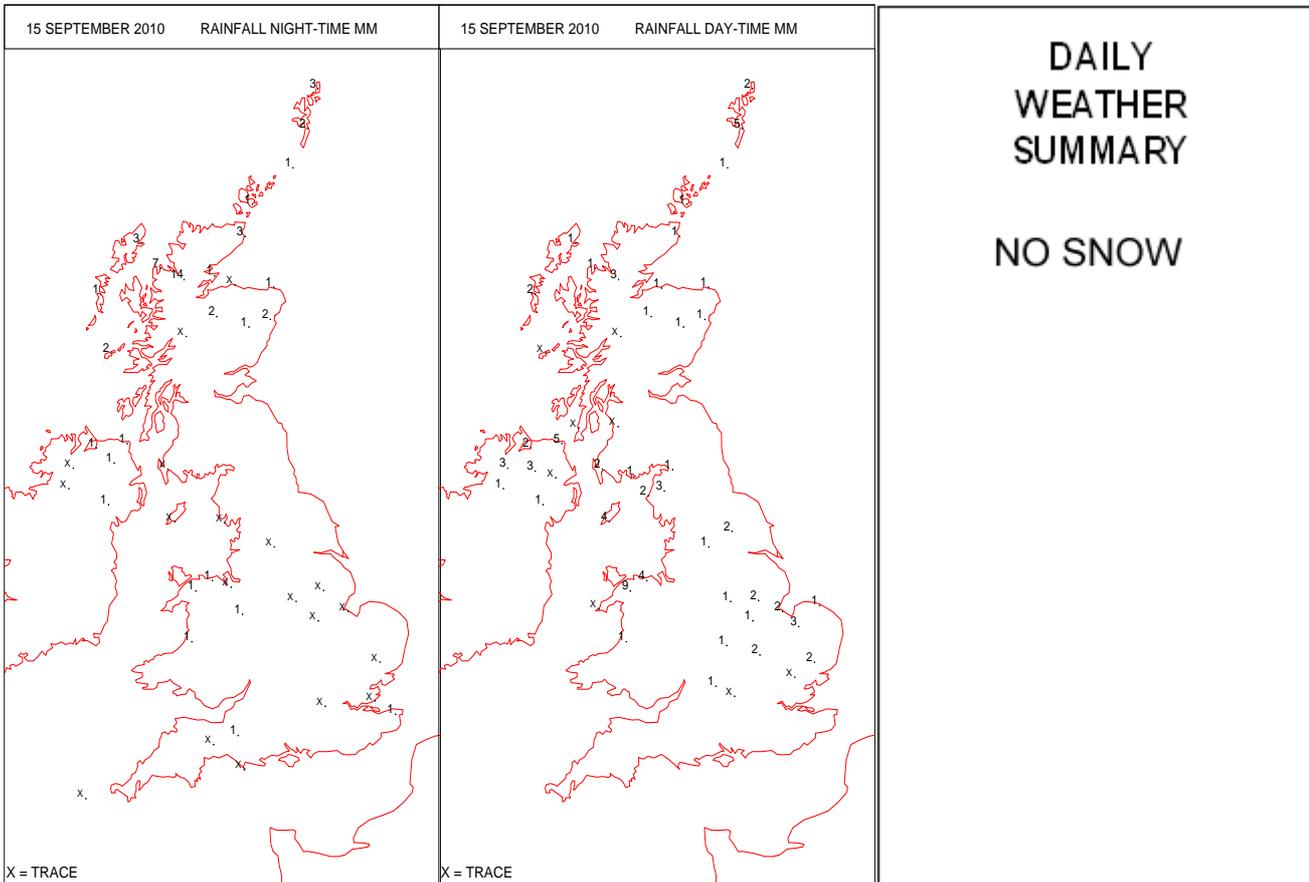

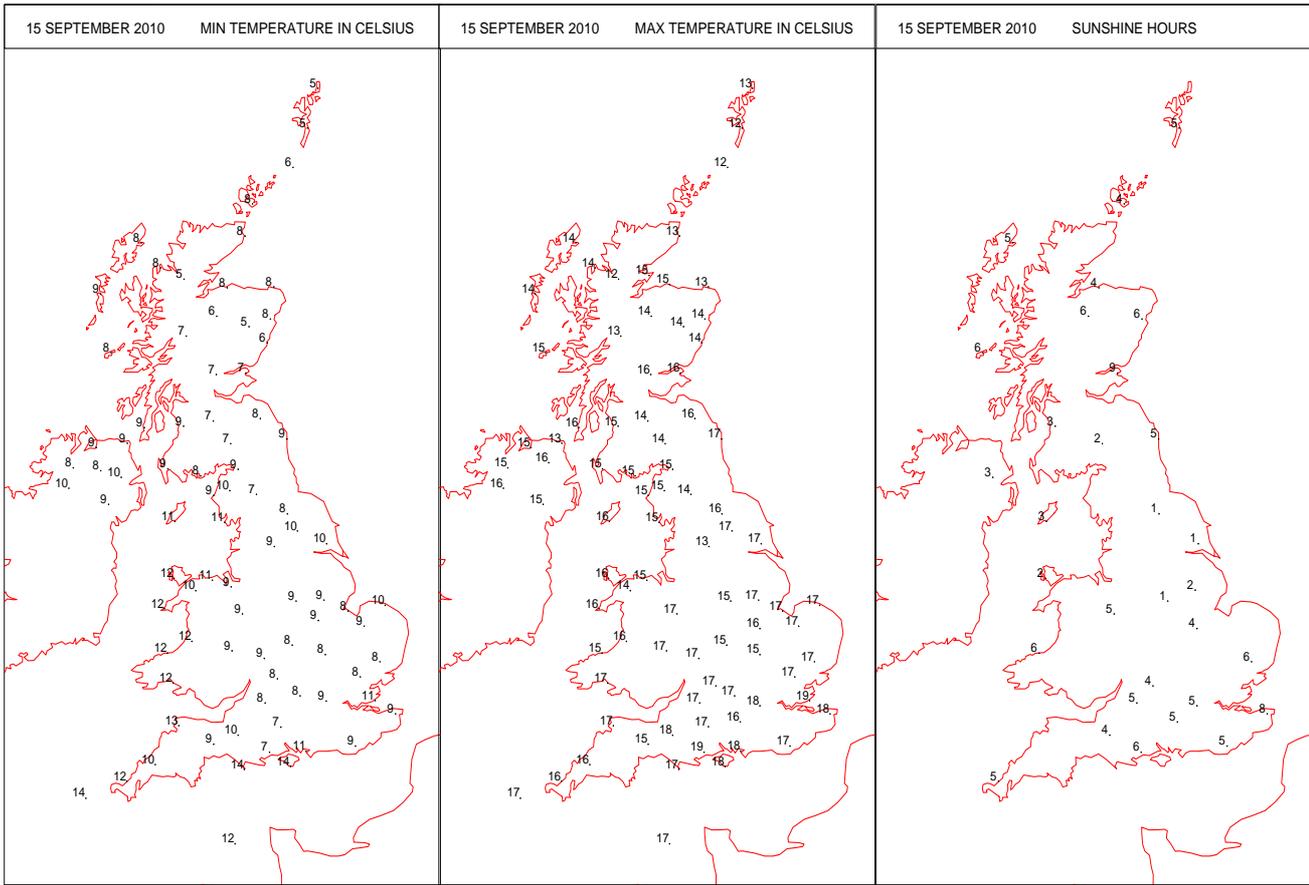

SURFACE REPORTS

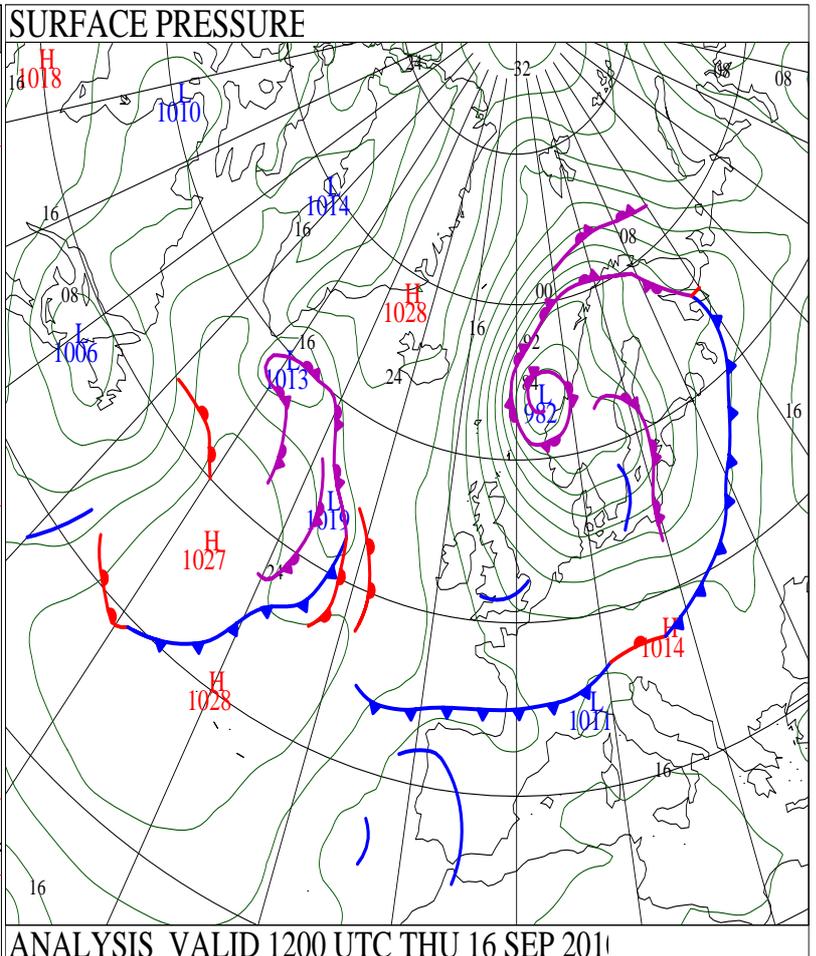

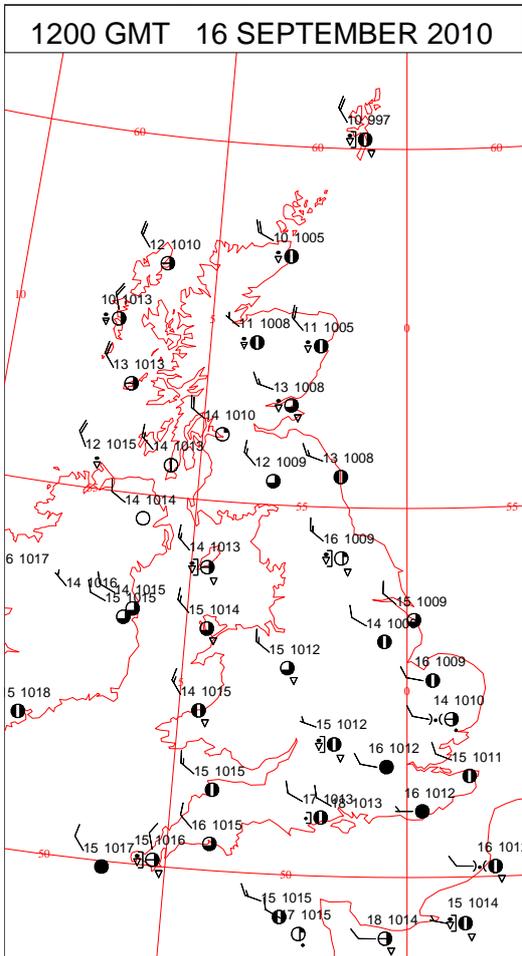

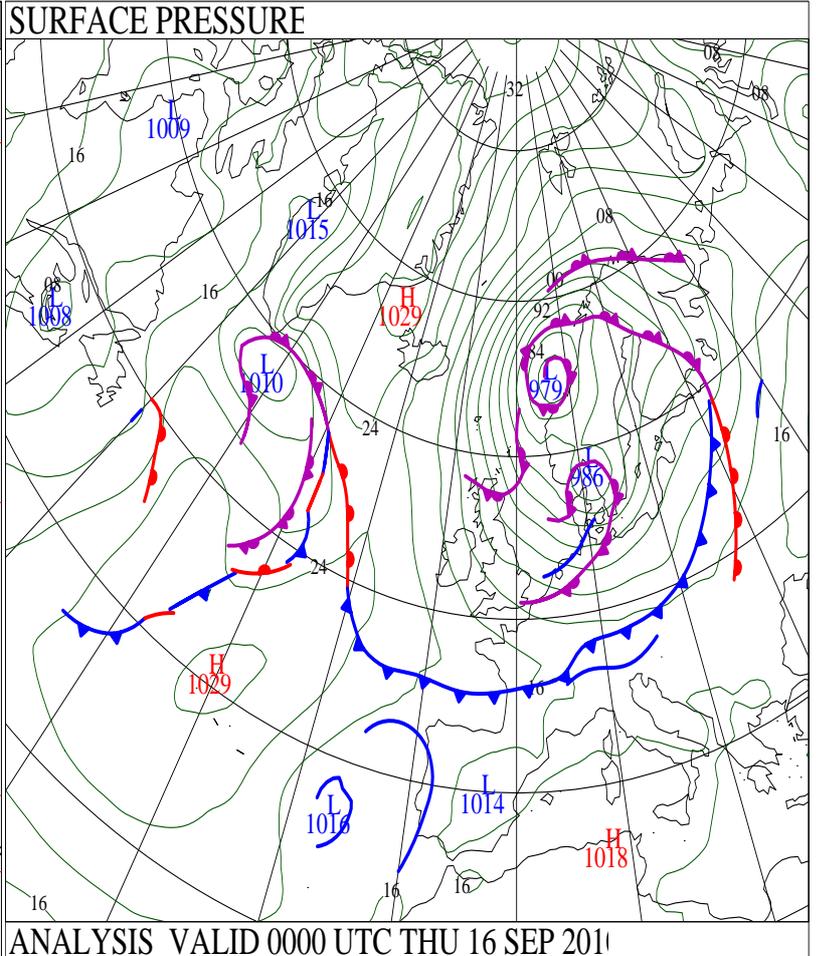

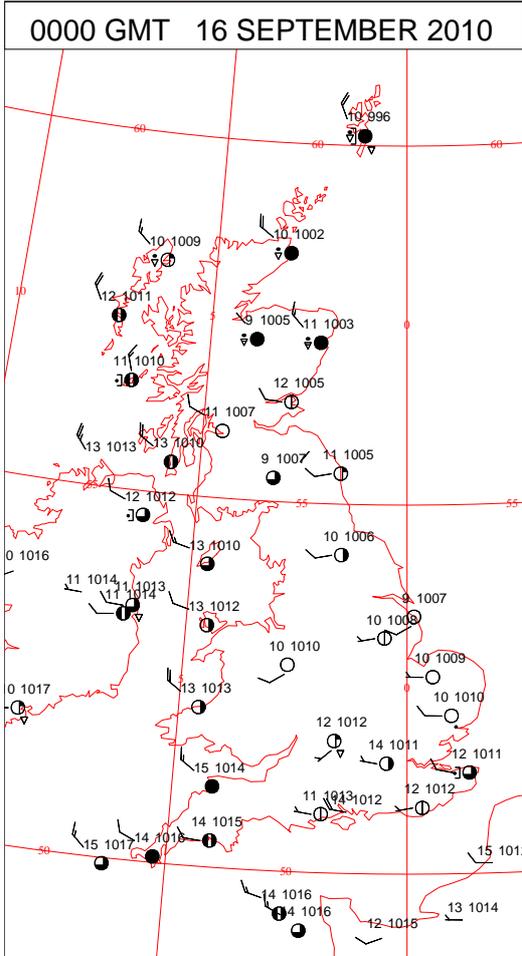

SIGNIFICANT WEATHER

Summary of UK Weather for Thursday 23 September 2010.

This was a day of widespread heavy rain or showers across much of the U.K.

During the early morning, a band of heavy rain moved eastwards across southern England, with some torrential downpours in places.

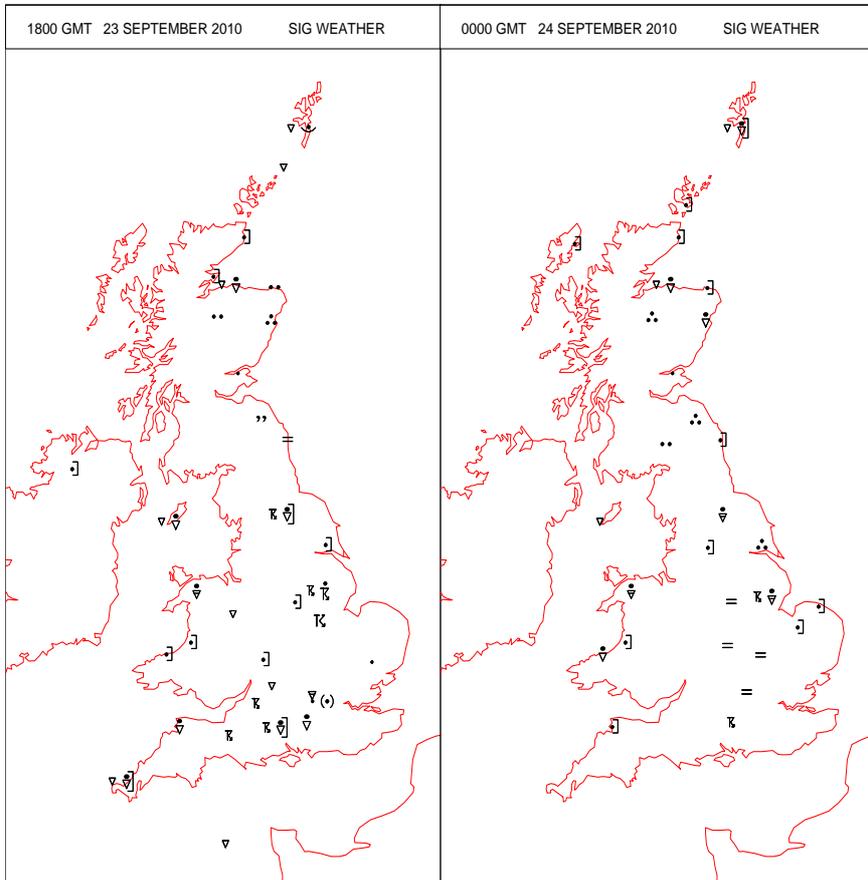

North-east Scotland also had a particularly wet day with persistent, and at times fairly heavy rain for much of the day. There were reports of flooding across parts of Moray and Aberdeenshire for example.

For much of the rest of the country, away from the Northern and Western Isles, and the western side of Northern Ireland, where it was a reasonably dry day, it was a day of heavy, thundery showers. These developed through the morning, and lasted throughout the afternoon, and well into the evening.

It did however become drier across south Wales and south-west England during the evening, though even then, there were still a scattering of showers.

It was quite a windy day across northern Scotland, with the stronger winds starting to edge southwards by the end of the day.

Maximum temperatures across southern England were slightly above average, whilst temperatures under the persistent rain across north-east Scotland were below average.

EXTREMES

Highest Maximum:

20.1 Leconfield, Humberside

Lowest Maximum:

9.8 Aviemore, Inverness-Shire

Lowest Minimum:

8.2 Loch Glascarnoch, Ross & Cromarty

Lowest Grass Minimum:

6.7 Charterhall, Berwickshire

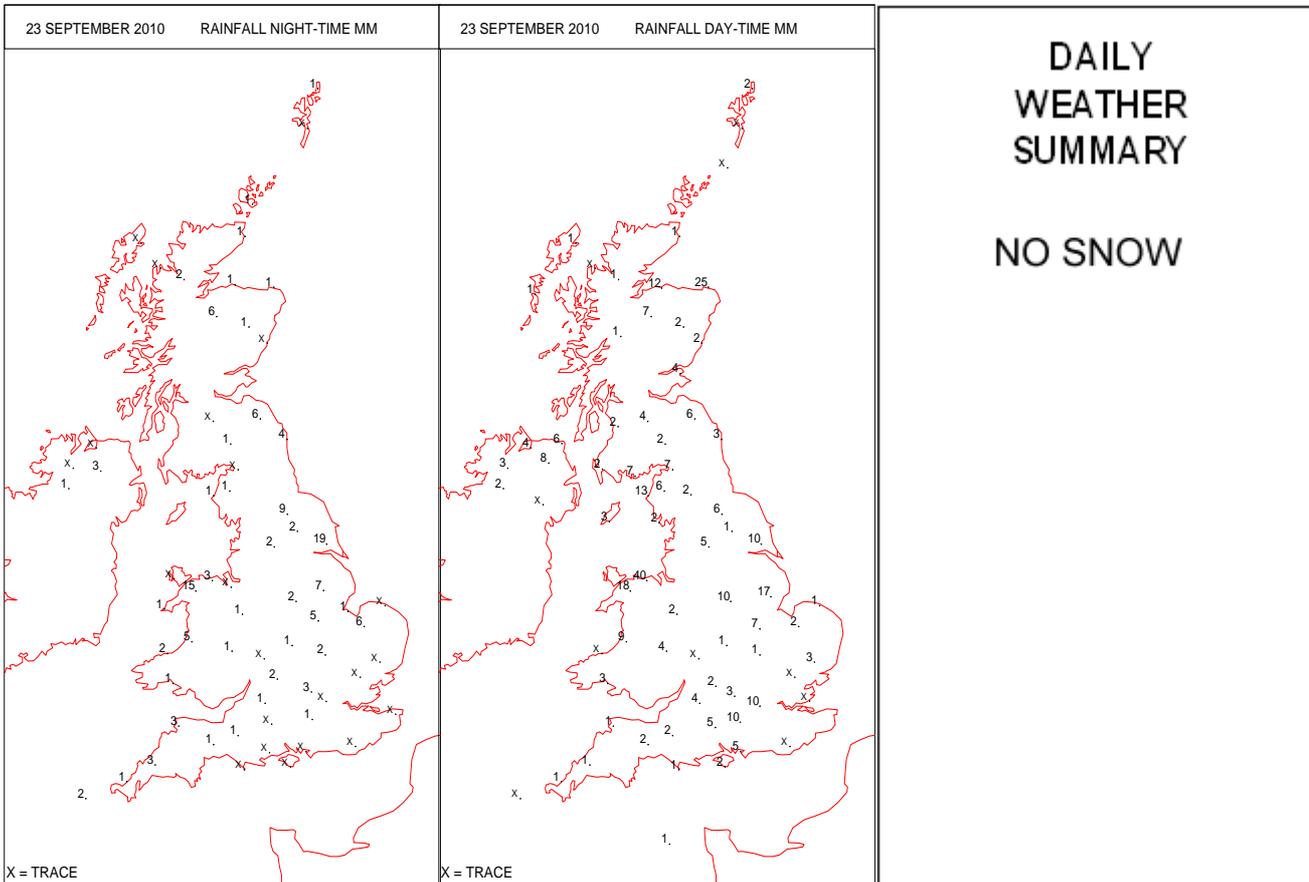

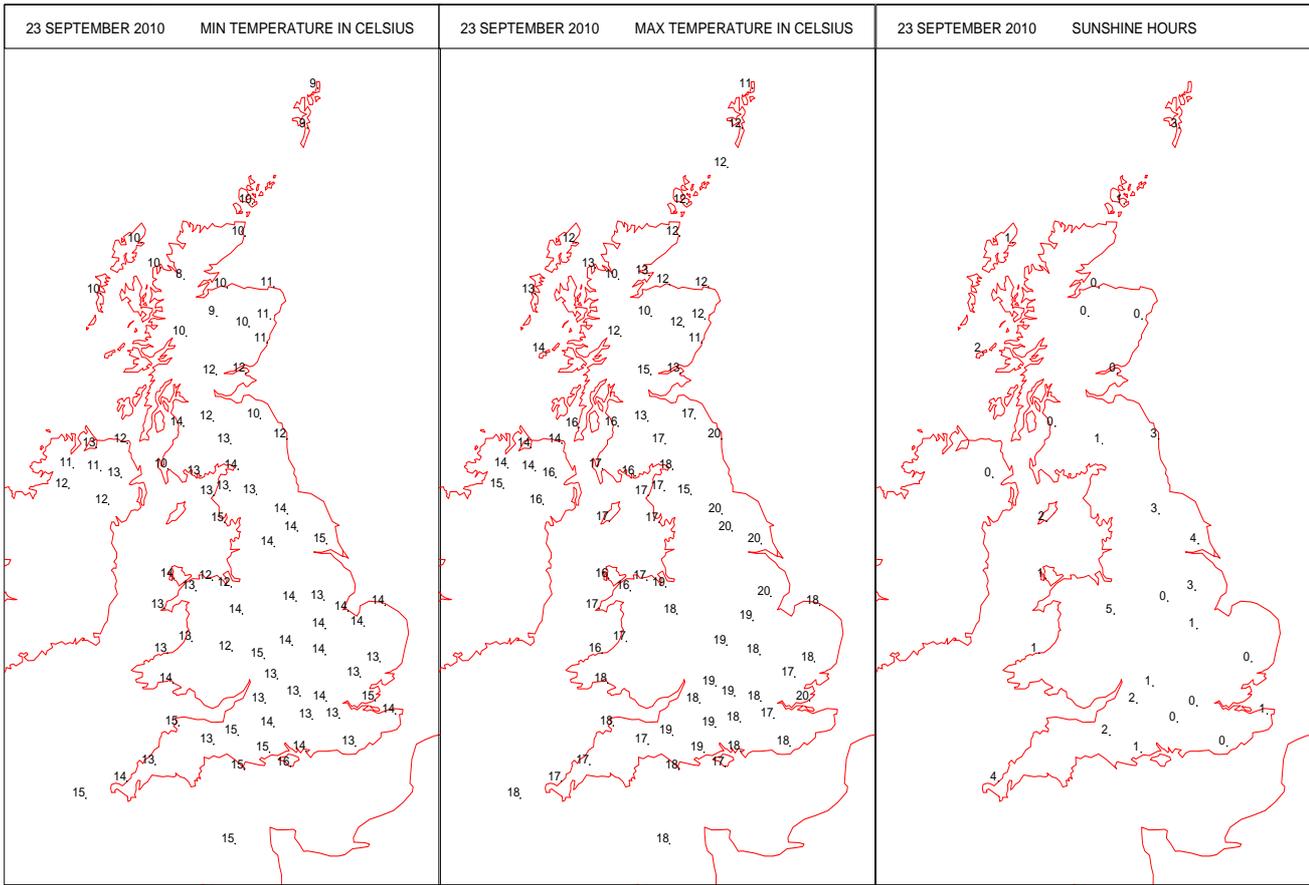

Most Rain:

42.8 Rhyl No 2, Clwyd

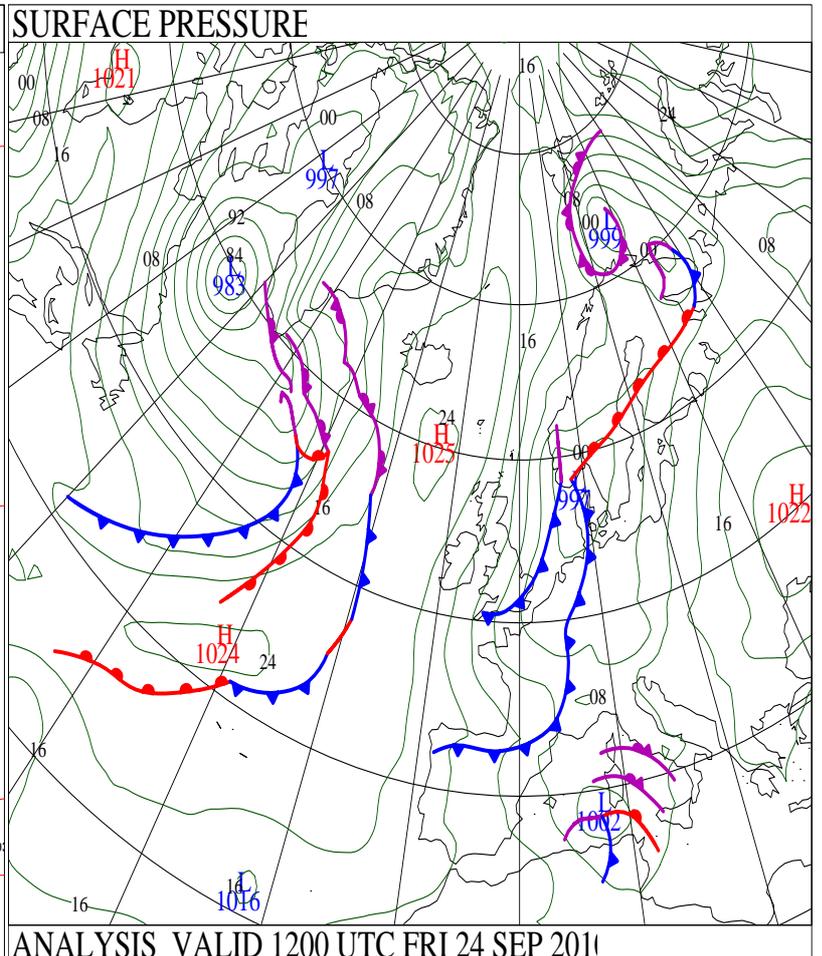

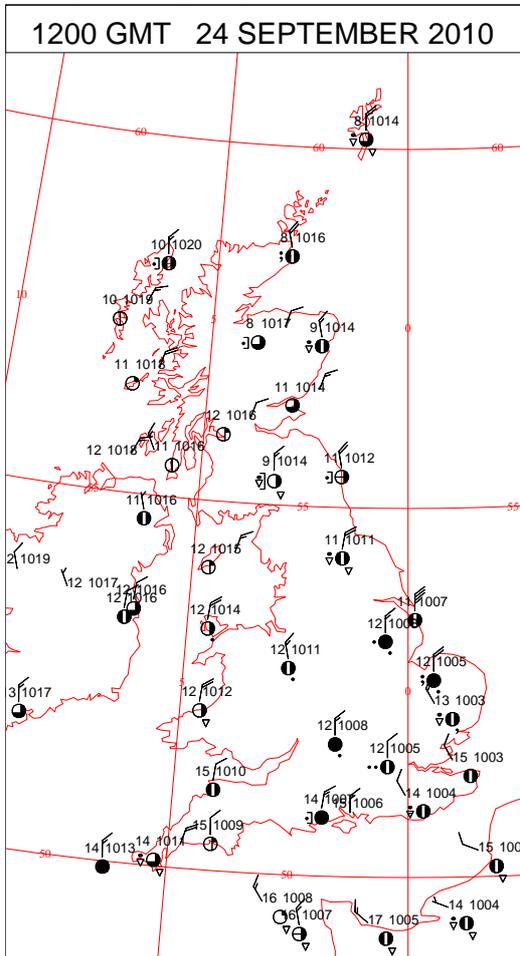

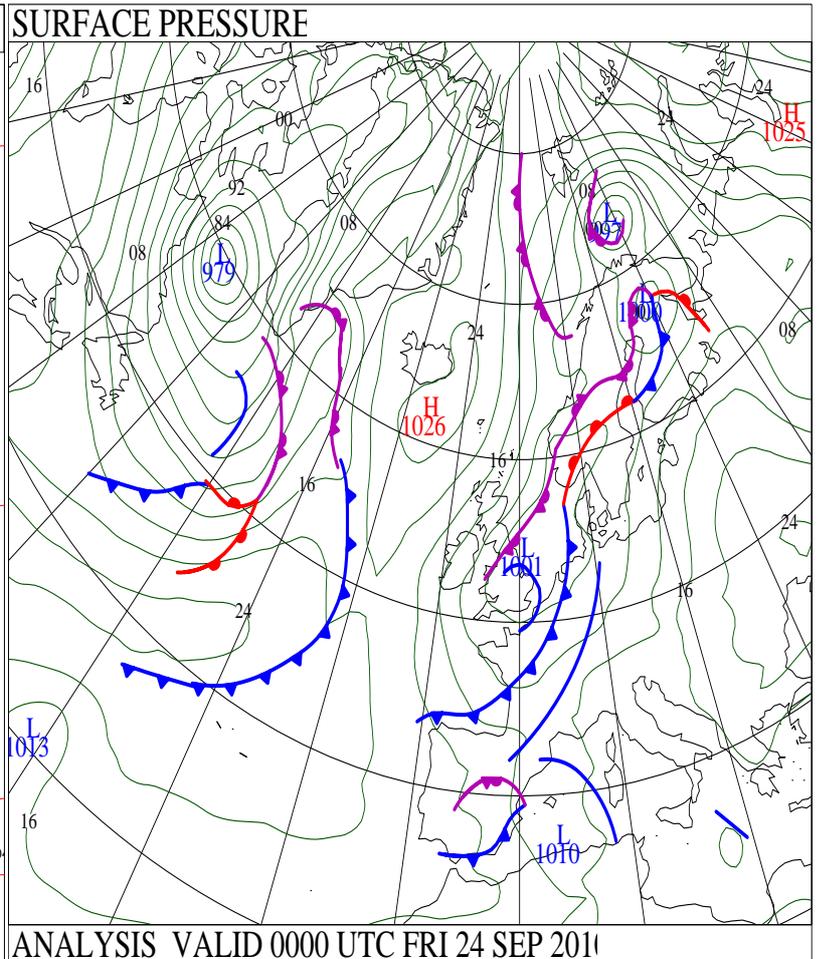

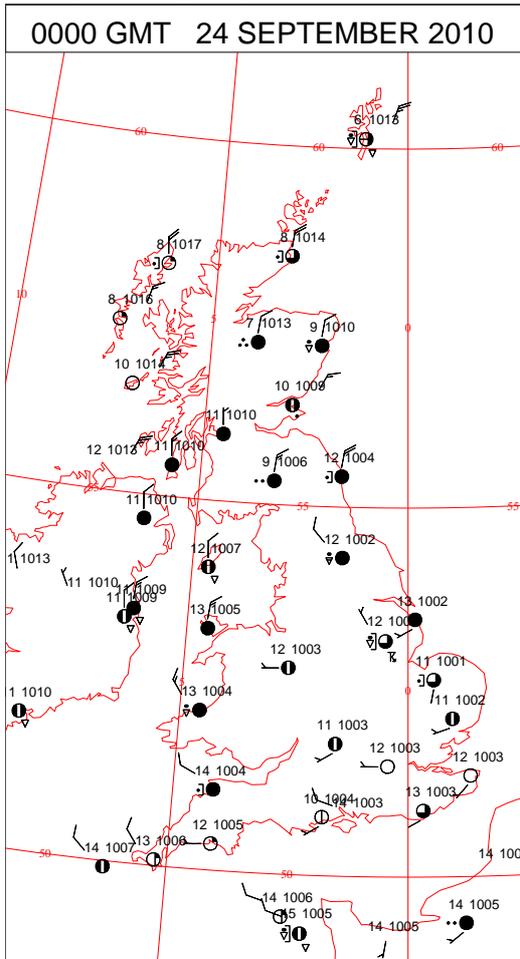

Most Sun:

4.5 Shawbury, Shropshire

SIGNIFICANT WEATHER

0600 GMT 24 SEPTEMBER 2010 SIG WEATHER	1200 GMT 24 SEPTEMBER 2010 SIG WEATHER	<p>Summary of UK Weather for Friday 24 September 2010. During the early morning, some heavy rain moved southwards along the coast of north-east England, with plenty of thunderstorms just offshore. By dawn, the intensity of this rain had eased, however it still provided quite a wet first part of the day for many eastern counties of England. Much of Scotland, the rest of northern England, Wales and parts of Northern Ireland saw scattered, mainly light showers at first, with these tending to die away in many central and western areas by the evening. However, they continued all day across north-east Scotland and along the east coast of England. Elsewhere, it was a largely dry day, albeit fairly cloudy. It was a fairly windy day for much of the U.K., especially so across northern England along many coasts, where some gusts reached gale force in exposed locations. Maximum temperatures were near average at best, but below average in the cloudier or wetter locations.</p>

SIGNIFICANT WEATHER

0600 GMT 25 SEPTEMBER 2010 SIG WEATHER	1200 GMT 25 SEPTEMBER 2010 SIG WEATHER	<p>Summary of UK Weather for Saturday 25 September 2010. It was a clear and dry night for most of the U.K., with temperatures falling to give a very localised air frost, and with a ground frost affecting many sites. Further to the east, occasional light showers drifted in off the North Sea to affect eastern coasts, particularly East Yorkshire, Lincolnshire and East Anglia. Most of the country then had a dry, bright and sunny day; particularly Wales and south-west England; though it felt rather cold in the northerly winds. The breeze was strongest in the east, with some gusty winds on the coast. Towards the evening, the showers died down in north-eastern parts, with more in the way of cloud and continuing light showers over eastern England. Clear skies over the majority of the country led temperatures to fall quickly once the sun had set. Maximum daytime temperatures were below average for the time of year.</p>

DAILY CLIMATE DATA

DAILY WEATHER SUMMARY

SURFACE REPORTS

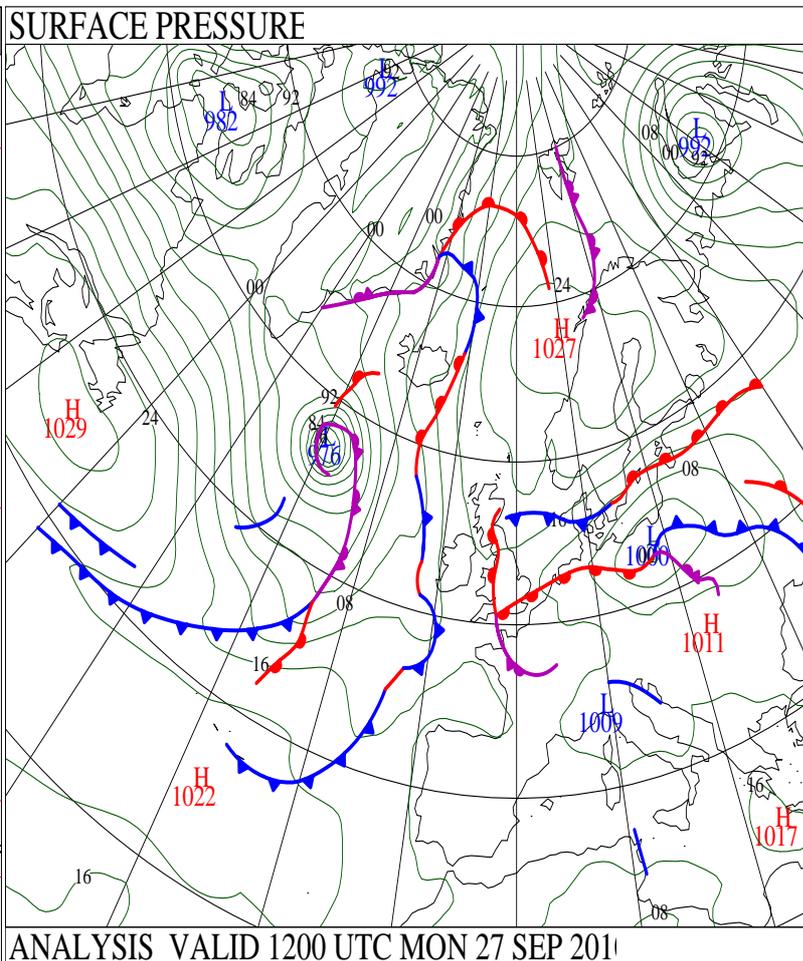

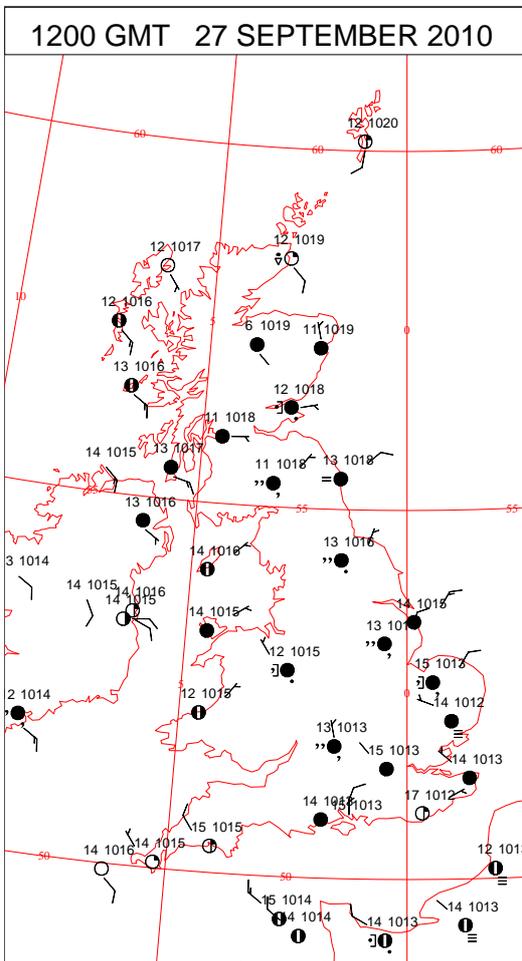

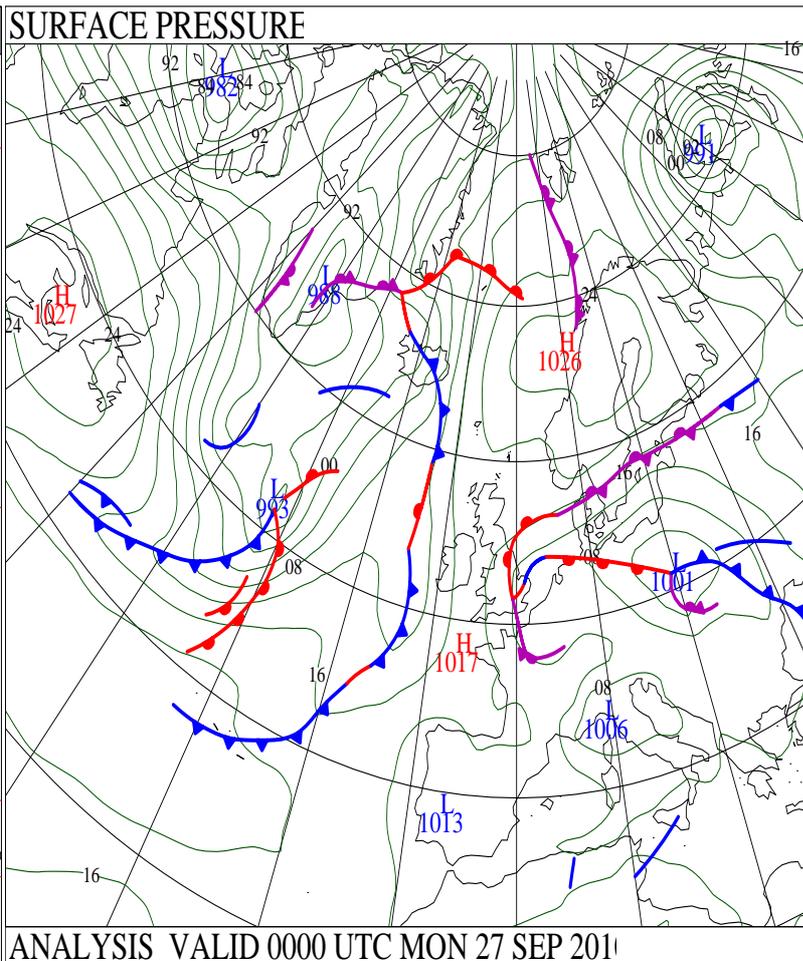

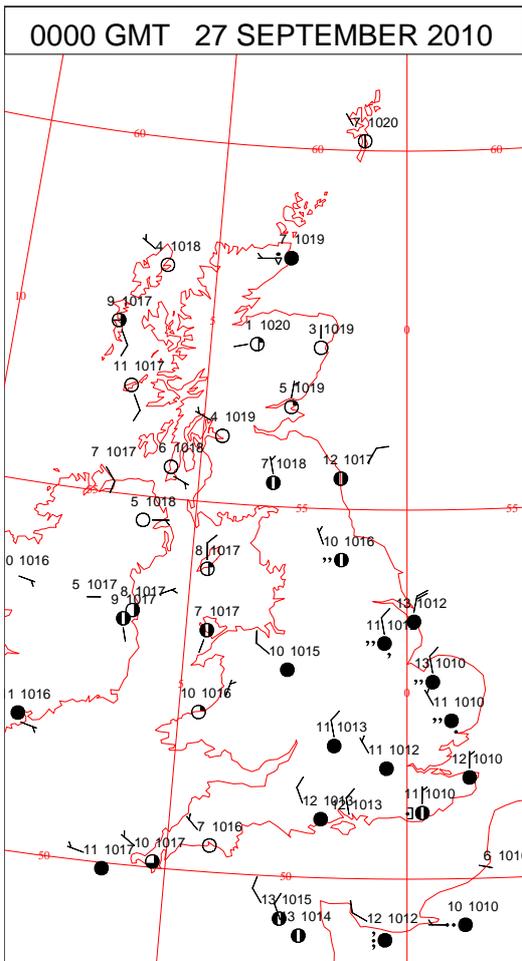

SIGNIFICANT WEATHER

Summary of UK Weather for Monday 27 September 2010.
 There was an east-west split across the U.K. today, with the country seeing cloud slowly encroaching from the east overnight, but with clearer skies in the west.
 This led to a chilly start across western areas, with ground frost for rural parts of northern Scotland, Northern Ireland, west Wales and south-west England.
 Further east it was grey for much of the day, with spells of light rain and drizzle edging slowly westwards across the country in a light breeze.
 The far west remained dry well into the day, with Cornwall and Northern Ireland seeing bright spells right up to dusk.
 Conditions remained similar in the evening, with the light rain mainly confined to East Anglia and parts of Scotland, but with clearer skies remaining in the far west.

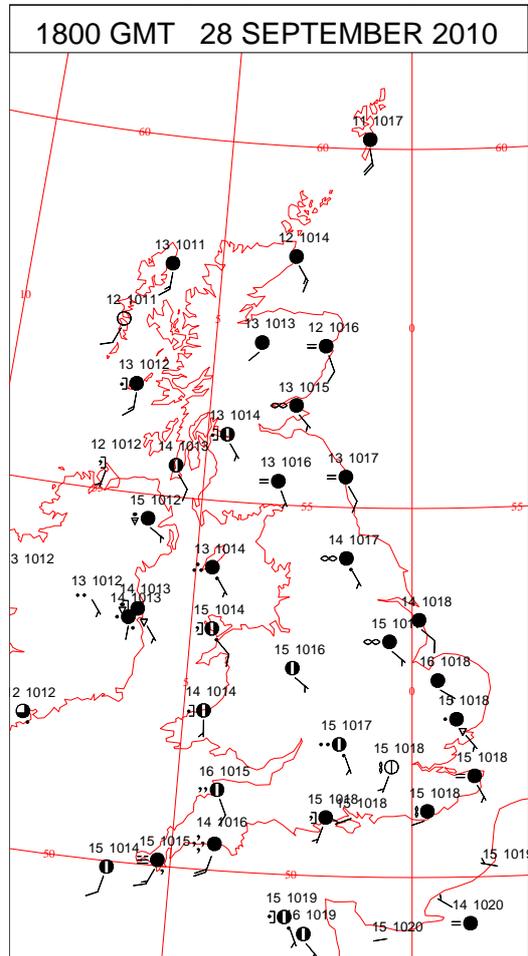

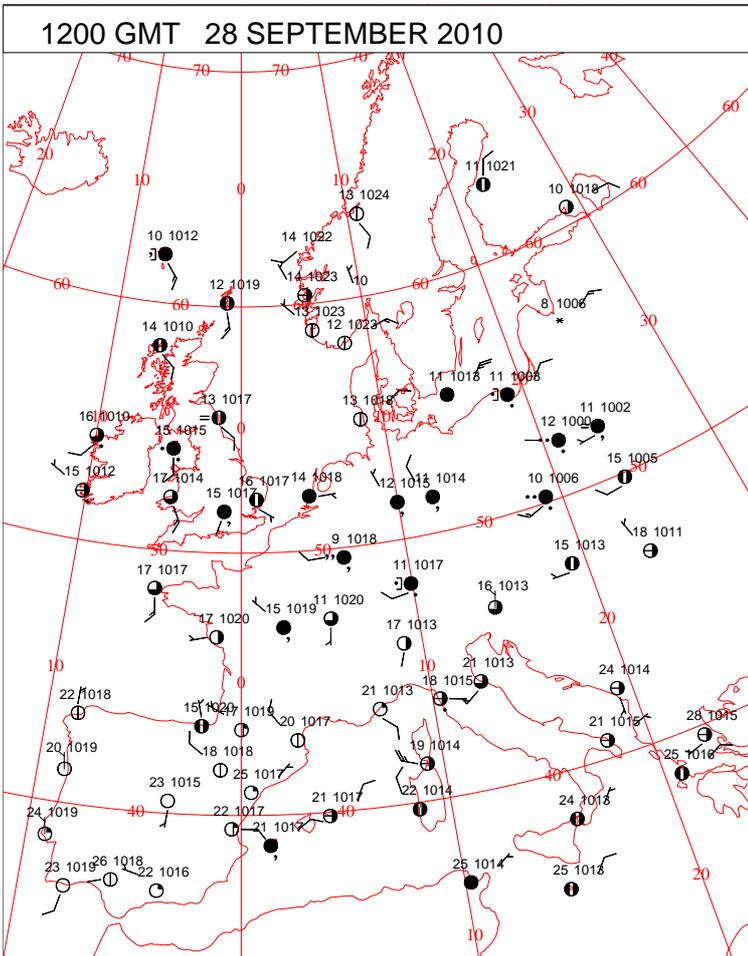

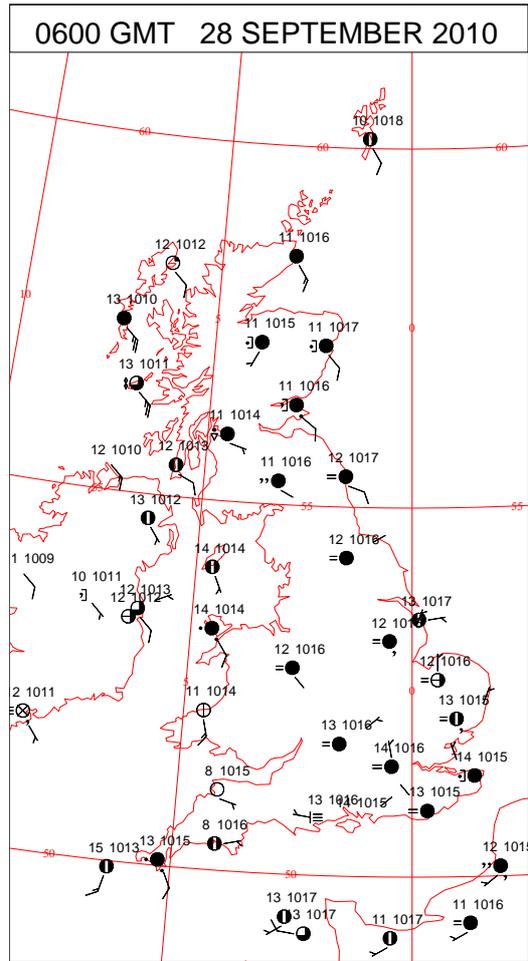

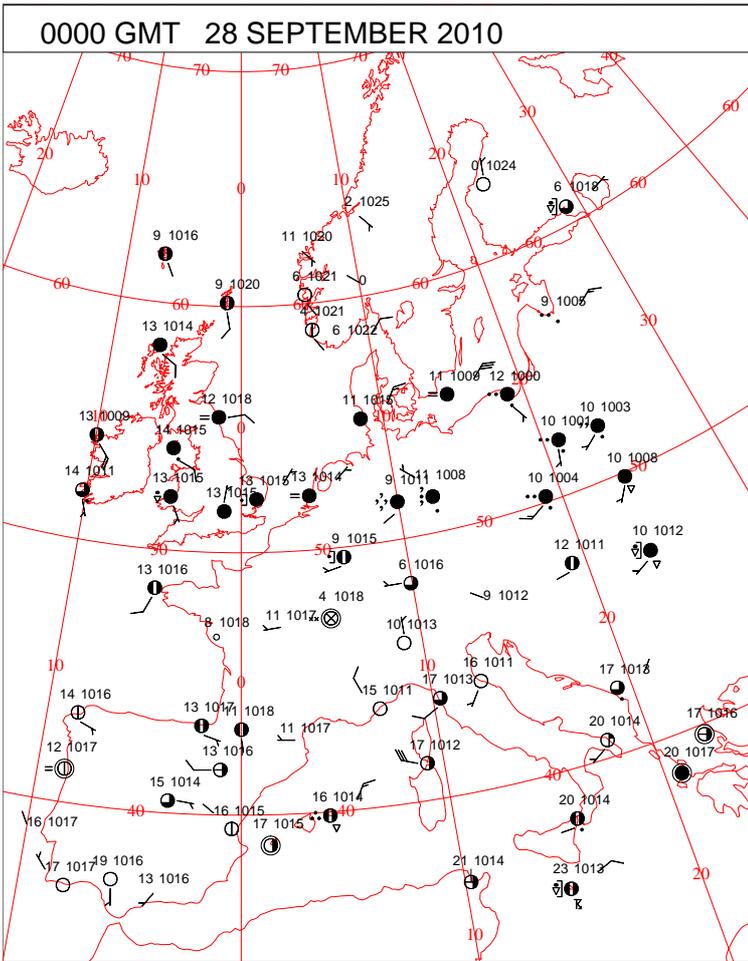

Having started cool under clearer skies in the west, the country as a whole saw daytime temperatures a little below average for the time of year, largely due to the cloud cover and rain.

- EXTREMES**
- Highest Maximum:**

SURFACE REPORTS

SIGNIFICANT WEATHER

0600 GMT 28 SEPTEMBER 2010 SIG WEATHER	1200 GMT 28 SEPTEMBER 2010 SIG WEATHER	<p>Summary of UK Weather for Tuesday 28 September 2010. It was a mild and largely cloudy night with light winds, bringing a dull and damp start for many, with intermittent light rain and drizzle. For some however, there were short-lived bright and sunny periods, first for parts of Wales and south-west England, and later for areas of south-east England, as clearer weather moved slowly eastwards. Conditions steadily deteriorated from the west, with heavier and more persistent rain arriving first into Northern Ireland during the morning, and then progressively encroaching on western Britain. This particularly affected south-facing slopes of higher ground, as a southerly breeze started to blow. During the evening the south-west of the U.K., including Wales, started to see pulses of heavier rain arrive, with the rest of the country seeing another relatively mild evening under cloud and occasional rain. It was a fairly cool day for most, with temperatures near or slightly below normal for the time of year under the covering of cloud.</p>

SIGNIFICANT WEATHER

0600 GMT 29 SEPTEMBER 2010 SIG WEATHER	1200 GMT 29 SEPTEMBER 2010 SIG WEATHER	<p>Summary of UK Weather for Wednesday 29 September 2010. A rather wet day but brightening up in the west later. During the early morning a band of rain moved slowly into the western U.K. by dawn, to lie from much of Scotland, through northern England and Wales, to south-west England. The rain was persistent and in places, rather heavy. East of this band of rain, it was a cloudy and mild night with the odd patch of mist or fog and some drizzle in places. The rain cleared away from Northern Ireland before dawn, and as a result it turned quite cold here. However, as a result, there was sunshine in Northern Ireland in the morning, but this gave way to some showers by afternoon. Across the rest of the U.K. the rain band continued to move slowly eastwards, giving a wet day for much of central and eastern England, as well as central and eastern Scotland. A distinct clearance behind the rain brought blue skies and a fine, sunny late afternoon and evening to western parts. Once the sun had set though, the clear skies and wet ground resulted in mist and fog beginning to form inland. Temperatures were close to average for the time of year.</p>
1800 GMT 29 SEPTEMBER 2010 SIG WEATHER	0000 GMT 30 SEPTEMBER 2010 SIG WEATHER	<p>EXTREMES Highest Maximum: 18.5 Northolt, Greater London Lowest Maximum: 11.3 Lerwick, Shetland Lowest Minimum: 4.6 Castleterg, Tyrone Lowest Grass Minimum: 0.3 South Uist, Western Isles Most Rain: 21.9 Lossiemouth, Moray Most Sun: 7.8 Camborne, Cornwall</p>

SIGNIFICANT WEATHER

0600 GMT 30 SEPTEMBER 2010 SIG WEATHER	1200 GMT 30 SEPTEMBER 2010 SIG WEATHER	<p>Summary of UK Weather for Thursday 30 September 2010. It was a fairly cold night for many with plenty of clear skies across much of the U.K. However, in the far east it was still raining, and this rain was slow to clear, with Norfolk remaining quite wet through the early morning, and Shetland staying rather damp for most of the day. Elsewhere, fairly extensive fog formed through the early hours, and this was slow to clear in the morning. Some places remained foggy until mid-to-late morning, especially southern England and some central parts. During the day, many eastern parts of the U.K. had dry and bright weather, although cloud started to build through the afternoon. Further west, it was dry in most parts in the morning, but there were a few showers near coasts at times, some of these being quite heavy. During the afternoon and evening, cloud became much thicker across south-west England and Wales, bringing rain by dark. Maximum temperatures were around average for the time of year.</p>
