## THE BEAUFORT SCALE OF WIND FORCE.

Beaufort Number.	Admiral Beaufort's General Description of Wind.	Specification for use on Land, based on observations made at Land Stations.	Limits of Mean Velocities Statute Miles per Hour.
0	Calm	Calm : smoke rising vertically	Less than 1
1	Light air	Direction of wind shown by smoke drift	1-3
2	Light breeze	Wind felt on face ; leaves rustle	4-7
3	Gentle breeze	Leaves and small twigs in constant motion ; wind extends light flag	8-12
4	Moderate breeze	Raises dust and loose paper ; small branches are moved	13-18
5	Fresh breeze	Small trees in leaf begin to sway ; crested wavelets on inland waters...	19-24
6	Strong breeze	Large branches in motion ; whistling heard in telegraph wires	25-31
7	Moderate gale	Whole trees in motion ; inconvenience felt when walking against wind	32-38
8	Fresh gale	Breaks twigs off trees ; generally impedes progress	39-46
9	Strong gale	Slight structural damage occurs (chimney pots and slates removed)	47-54
10	Whole gale	Seldom experienced inland ; trees uprooted	55-63
11	Storm	Very rarely experienced ; accompanied by widespread damage	64-75
12	Hurricane		Above 75

## GALE WARNINGS.

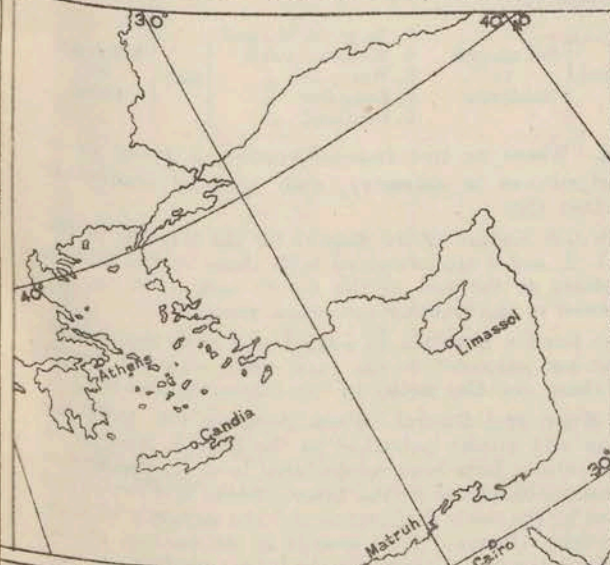

The Meteorological Office issues warnings to ports and fishing stations of gales on or near the coasts of the British Isles. When one of these notices has been received at a station a black canvas cone is hoisted.

The South Cone (point downwards) is hoisted for gales from S.E., veering to S.W., W. or N.W.  
 " S.W., veering to W. or N.W.  
 " W., veering to N.W.  
 " E., veering to S. or S.W.

The North Cone (point upwards) is hoisted for gales from S.E., E. or N.E., backing to N.  
 " N.W., veering to N., N.E. or E.  
 " N., veering to N.E. or E.  
 " N.E., veering to E.

The Signals remain hoisted after the receipt of a warning telegram until danger of a gale is passed. The Districts to which warnings are sent are shown in the British Section of the Daily Weather Report by the following symbols :—

- ▼ South Cone hoisted.
- ▲ North " "

With present weather is combined, whenever possible, the general character of the weather.  
 A "solidus" divides actual existing weather from preceding conditions, thus :—bc/r = fair weather after rain ; i = intermittent ; - = "decreasing" ; + = "increasing" ; h(r) = "hail" or "rain and hail".  
 Capital letters indicate intensity, suffix o indicates slight ; and repetition of letters continuity, thus :—  
 R = heavy rain.  
 rr = continuous moderate rain  
 rrr = continuous light rain.

### NOTES ON THE INFORMATION CONTAINED IN THE VARIOUS SECTIONS OF THE DAILY WEATHER REPORT.

**Heights of Stations.**—The heights of British Stations above M.S.L. published in the British Section of the Daily Weather Report refer to the plot of ground on which the rain gauge is situated.

**Pressure.**—The distribution of barometric pressure at Mean Sea Level is shown by means of isobars which are drawn for intervals of 2 millibars on the British Section of the Report and for intervals of 4 millibars on the International Section.

The wind at a height of 1,500-2,000 feet above ground usually blows along the isobars and, for the same temperature, pressure and latitude, the speed of the wind is inversely proportional to the distance between the isobars, *e.g.*, for isobars 1 inch apart in the Daily Weather Report the speed of the upper wind is about 12 m.p.h. in latitude 55°, with a temperature of 50° F. and a pressure of 1,015 mb; if, however, the isobars are  $\frac{1}{2}$  inch apart the corresponding speed is 24 m.p.h.

The scale below can be used with both the International and the British Sections. If the distance between consecutive isobars is measured along the rule from the left-hand extremity the geostrophic wind is shown by the scale in miles per hour.

#### GEOSTROPHIC WIND SCALE FOR

4 mb isobars on 1 : 2 × 10<sup>7</sup> Charts.  
or 2 mb " " 1 : 10<sup>7</sup> "  
or 1 mb " " 1 : 5 × 10<sup>6</sup> "

This scale applies under the following conditions:—

Pressure, 1,015 mb. Temperature, 50° F. Latitude, 55°.

**Corrections.**—For an increase of 10 mb pressure, subtract 1% from velocity; for an increase of 10° F. add 2%. From Latitude 55° to Latitude 65° subtract 1% for each degree above 55°. From Latitude 55° to Latitude 45° add 1½% for each degree below 55°.

**Temperature.**—Temperature is specified in degrees Fahrenheit, and is shown on the charts by means of figures written alongside the circles which indicate the positions of the stations.

**Relative Humidity.**—From January 1st 1926, relative humidity at British stations has been calculated from the following hygrometric formulæ:

$$x = f - .444(t - t') \text{ for wet bulb readings above } 32^\circ \text{ F.}$$

$$x = f - .400(t - t') \text{ for wet bulb readings below } 32^\circ \text{ F.}$$

where  $x$  is the vapour pressure in mb.;

$f$  the saturation vapour pressure at the temperature of the wet bulb;

$t$  the dry bulb temperature; and

$t'$  " wet "

The use of Glaisher's tables has been discontinued.

The tables used for calculating humidities from the readings of the dry and wet bulb thermometers on aeroplanes, are based on a formula similar to the above, but allowance is made for the variation of barometric pressure with height and for the increased ventilation of the thermometers.

**Upper Air Temperature.**—The British observations are made normally, one at 1,000 feet above the level of the aerodrome, and the remainder at pressures of 950, 900, 850, 800, etc., millibars. Heights are then computed and, apart from instrumental error, are correct heights: they do not require modification for differences of temperature from normal as these are allowed for in the computation. The values are shown graphically and in tabular form in the Upper Air Supplement. On the diagram, temperatures are given in degrees Fahrenheit and Absolute. The oblique line marked "Dry Adiabatic" shows the lapse rate of temperature for dry air ascending or descending under adiabatic conditions, *i.e.*, without communication of heat from external sources. The lapse rate under these circumstances is very approximately 5.5° F. per 1,000 feet, or 10°a per kilometre. A lapse rate greater than this value indicates instability in a dry atmosphere.

The broken lines marked Saturated Adiabatic show lapse rates for saturated air. These are for air masses which contain just sufficient moisture at 1,015 mb. pressure to become saturated after rising 1 km. in an environment having the dry adiabatic lapse rate. The condensed moisture is assumed to be retained thereafter in the air as it rises.

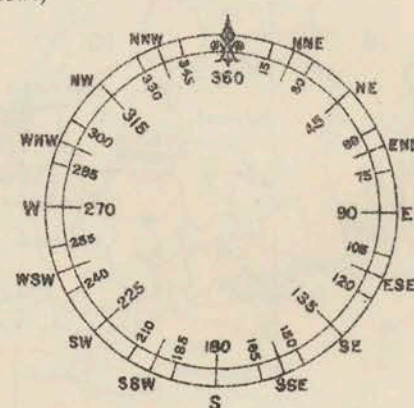

**Wind.**—All wind directions specified in the reports are "true," as distinguished from "magnetic." The arrows indicating wind direction are drawn to fly with the wind. Wind velocities are shown on the charts of the British Section and Upper Air Supplement in m.p.h. by the

numbers placed within the small circles. In the International Section velocities are not shown. In both Sections the number of feathers on the arrows denotes wind force by Beaufort number.

**Upper Winds.**—The direction and velocity of the wind are given in the charts of the Upper Air Supplement for heights of 2,000 feet and 6,000 feet. The data are also given in tabular form for various heights. The reports are usually based on Pilot Balloon ascents.

Wind reports deduced from British Pilot Balloon Ascents refer to the 1,000 feet layers centering at the heights given in the table up to 16,000 feet. When winds are reported at greater heights, they refer to the 5,000 feet layers centering at 20,000 feet, 25,000 feet, 30,000 feet and 35,000 feet.

In the tabular statement direction is specified in degrees from true north measured through East 90°, South 180°, West 270° to North 360°. (See diagram below.)

**Rainfall.**—At Stations marked † in the International Section of the Report, the rainfall is received in an abbreviated code and the measurement entered is therefore not necessarily correct to the nearest millimetre. For example any fall between 11 and 15 mm. would be reported by the same code figure and entered as 13 mm. in the Report.

**Sea Disturbance.**—The code for sea disturbance used at coastal stations is given on p. 1 of the British Section of the Report. Ships at sea use the following code:—

0. No or slight swell	} and {	Sea smooth to moderate.	} and {	5. No or slight swell	} and {	Sea rough or above.
1. Moderate swell				6. Moderate swell		
2. Heavy "				7. Heavy "		
3. Long low "				8. Long low "		
4. Confused "				9. Confused "		

**Adjusted Readings.**—Where an instrumental reading is found to be in error and some adjustment is necessary, such adjusted reading is published in brackets thus (50).

The entries in the British Section of the Report for the stations in the main tables on pages 1, 2, and 4 are compared with those in the returns received from the stations at the end of the month and errors in the Report so found are noted in the monthly correction sheets.

The reports from the London Stations on page 1 and from the Health Resorts on page 4 are not subjected to the same close scrutiny but if any errors are found these are also noted in the correction sheets.

**Times of Sunrise, Noon and Sunset.**—From January 1st, 1926, the times of Sunrise, Noon and Sunset published in the British Section of the Report for certain stations have been recalculated from (1) the figures for the duration of sunshine contained in the International Meteorological Tables and (2) the value of the sun's declination and the equation of time published in the Nautical Almanac. The change of declination of the sun on the same day from year to year over a cycle of four years is now taken into account. This change was formerly neglected.

**Valentia.**—The observations at 1 a.m. are taken at the Post Office Wireless Station on Valentia Island. Those at all other hours at the Observatory near Cahirciveen on the mainland.

**Guernsey.**—The observations at 7h., 13h., and 18h. are taken at Fort George, the station being situated at 295 feet above M.S.L. on the high ground to the south of St. Peter Port and outside the town. The observations at 1h. together with the sunshine readings are taken at the station of the States Meteorological Service which is situated in St. Peter Port at 173 feet above M.S.L.

## SUPPLEMENT TO THE DAILY WEATHER REPORT OF THE METEOROLOGICAL OFFICE, LONDON.

SUMMARY OF METEOROLOGICAL OBSERVATIONS AT SELECTED STATIONS ISSUED ON THE 1st DAY OF EACH MONTH.

## Notes on the Weather of SEPTEMBER 1927.

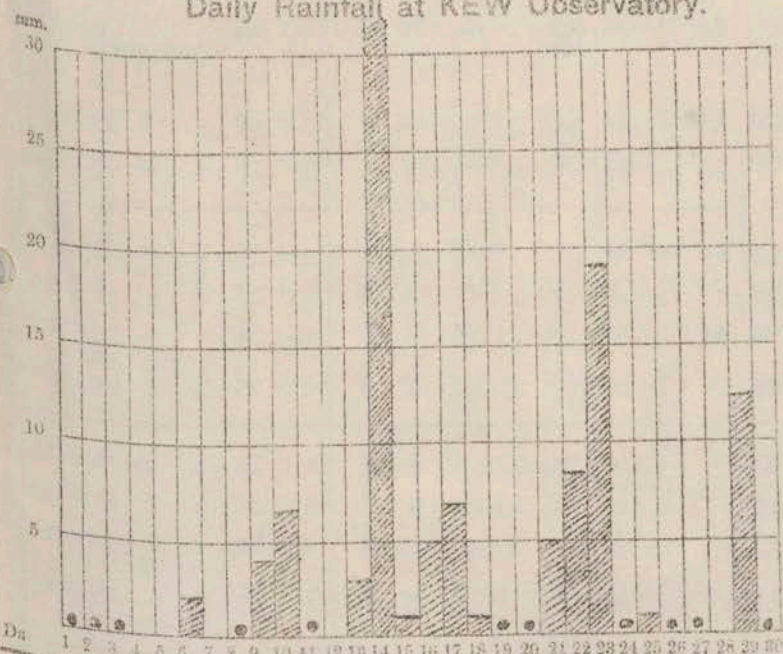

Near the beginning of the month high pressure systems tended to spread over the British Isles giving mainly dry, warm weather for a few days but the approach of depressions from the Atlantic caused an early renewal of unsettled conditions. Rain fell repeatedly, sometimes in very large amounts and strong winds and gales occurred at times. Over 40mm. of rain was measured in some parts of Northern Ireland, Southern Scotland and Northern England on the 8th and 9th and thunderstorms developed locally in Southern England on the 10th. After a temporary improvement on the 11th and 12th a complex depression caused some very wet weather in Southern England on and about the 14th. Gorleston had 45mm. on the 13th followed by another 46mm. on the 14th on which date 63mm. fell at Brighton, 61mm. at Portsmouth, 58mm. at Westbourne in Sussex, 56mm. at Northy Down near Winchester and 51mm. at Southampton. The London measurements were about 38mm. in several districts. Norwich had 57mm. on the 14th and 43mm. on the 15th.

Further heavy falls occurred again after the 20th among which may be mentioned 41mm. at Birr Castle on the 20th., 52mm. at Eskdalemuir on the 21st and 64mm. at Aberdeen on the 22nd. About 30mm. fell in several parts of England on the 23rd. then a secondary depression which had developed off our Southwest coasts deepened rapidly as it passed to the North Sea causing gales in some exposed places. In its rear rather cold, northerly winds and bright though not settled weather prevailed for a few days. Before the end of the month, however, milder, southwesterly winds were renewed with some further heavy rain and local gales at times.

The total rainfall was between two and three times the average for September in several places and in some instances even slightly exceeded the latter value. Notwithstanding the very heavy falls experienced during several of the preceding months the September records proved to be the heaviest so far this year in many parts of Great Britain.

The total sunshine was remarkable low in many places. At Kew and at Portsmouth the deviation from the normal exceeded 40 hours while at Ross-on-Wye it was the lowest. September total for fourteen years.

4=Bare ground frozen (but more than 2 ins. deep).  
5=Dew (or wet grass but not wet ground).  
6=Skating to-day in 1800 and 1800 reports (Hoar frost in 0100 and 0700 reports).  
7=Snow (thin layer, often not continuous).  
8=Snow (deep, impeding traffic, usually a continuous layer).  
9=Glazed roads (ice on roads from frozen rain or melted snow).

\* The average sunshine for Liverpool & the average rainfall for Edinburgh, Renfrew, & Cranwell have been computed from the records available for those stations by reference to the nearest stations with long records.

† Based in part on reports made by telegraph in which the day & night measurements are rounded off to the nearest whole millimetre. Small discrepancies may arise between these totals and those given in the Monthly Weather Report which are based on readings taken to 0.1 mm.

G. C. SIMPSON, F.R.S. Director.

SEPTEMBER, 1927

The image contains two maps of Europe, each showing isobars and weather systems. The top map is for the year 1901 and the bottom map is for the year 1902. Both maps show pressure contours (isobars) and labels for high and low pressure systems. The top map shows a high pressure system over the British Isles and a low pressure system over the North Atlantic. The bottom map shows a high pressure system over the British Isles and a low pressure system over the North Atlantic. The maps are oriented with North at the top.

## GENERAL INFLUENCE.

A relatively shallow trough of low pressure, associated with a depression Southwest of Iceland covers the British Isles while anticyclone is maintained over the Continent. Weather will be cooler though still warm with variable skies and local thunderstorms.

## GENERAL INFERENCE.

An anticyclone, centred over Scandinavia, covers nearly the whole of Europe, and will maintain mainly fine quiet warm weather over England and Eastern Scotland but wet fogs are expected to occur, especially in the early morning. Further West the weather will become less settled rain probably occurring in Western Ireland today, extending North and East later, but it is uncertain whether Wales and Western England will be affected during the week-end.

Further Outlook.

GENERAL INFERENCE.

A depression is maintained south of Iceland and pressure continues high from Scandinavia across England to the Azores. A shallow depression over France is spreading slowly northeast. Winds will be mainly southerly in the extreme north and west, and northeasterly in the south. Cloudy weather with local drizzle and a tendency for thunder is probable in the south, and some drizzle may occur along the western seaboard. In northern districts conditions will be fair to cloudy.

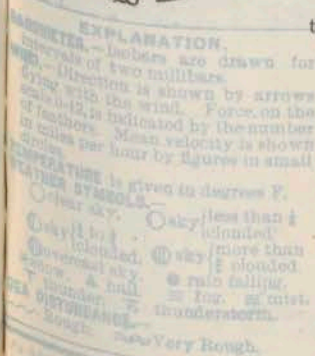

Districts. Forecasts for the 24 hours commencing 15h. G.M.T. Sunday, 4th September, 1927.

Further Outlook.

1. S.E. England	Wind N.E. to E., light to moderate, mainly cloudy, perhaps local drizzle, tendency for local thunder, local fog at night, and in the early morning, rather warm.
2. E. England	
3. E. Midlands	
4. W. Midlands	
5. S.W. England	Wind variable to southeast or S., light to moderate, fair to cloudy, local fog at night, and in the early morning, warm or rather warm.

## GENERAL INFERENCE.

A deep depression over the North Sea is moving away eastwards. In its rear a ridge of high pressure will cross the British Isles and cause a brief interval of mainly fair weather with occasional showers and perhaps local thunder. Further disturbances will, however, soon move in from the Atlantic and weather become unsettled again with further rain in most places.

## Districts.

Forecast for the 24 hours commencing 15h G.M.T. Friday, 9th September, 1927..

## Further Outlook.

1. S.E. England	Westerly winds, strong at times, moderating, then backing and freshening; fair apart from thundery showers at first, probably some rain later; visibility moderate to good; moderate temperature.	
2. E. England		
3. E. Midlands		
4. W. Midlands		
5. S.W. England	Northwesterly winds, backing southwest or south, moderate to fresh, freshening to probably strong to gale at times later; mainly fair apart from local thundery showers at first, cloudy with some rain later; visibility moderate to good; moderate temperature.	
6. South Wales		
7. North Wales		
8. N.W. England		
9. N. Midlands		
10. N.E. England		
11. S.E. Scotland		
12. S.W. Scotland		
13. A.W. Scotland		
14. N.W. Scotland		
15. N.E. Scotland	Westerly winds, moderate at first, backing and freshening later and probably reaching a gale at times; fair at first, some rain later; visibility mainly moderate to good; moderate temperature.	
16. Orkneys and Shetlands		
17. N.W. Ireland		
18. N.E. Ireland		
19. S.E. Ireland		
20. S.W. Ireland		

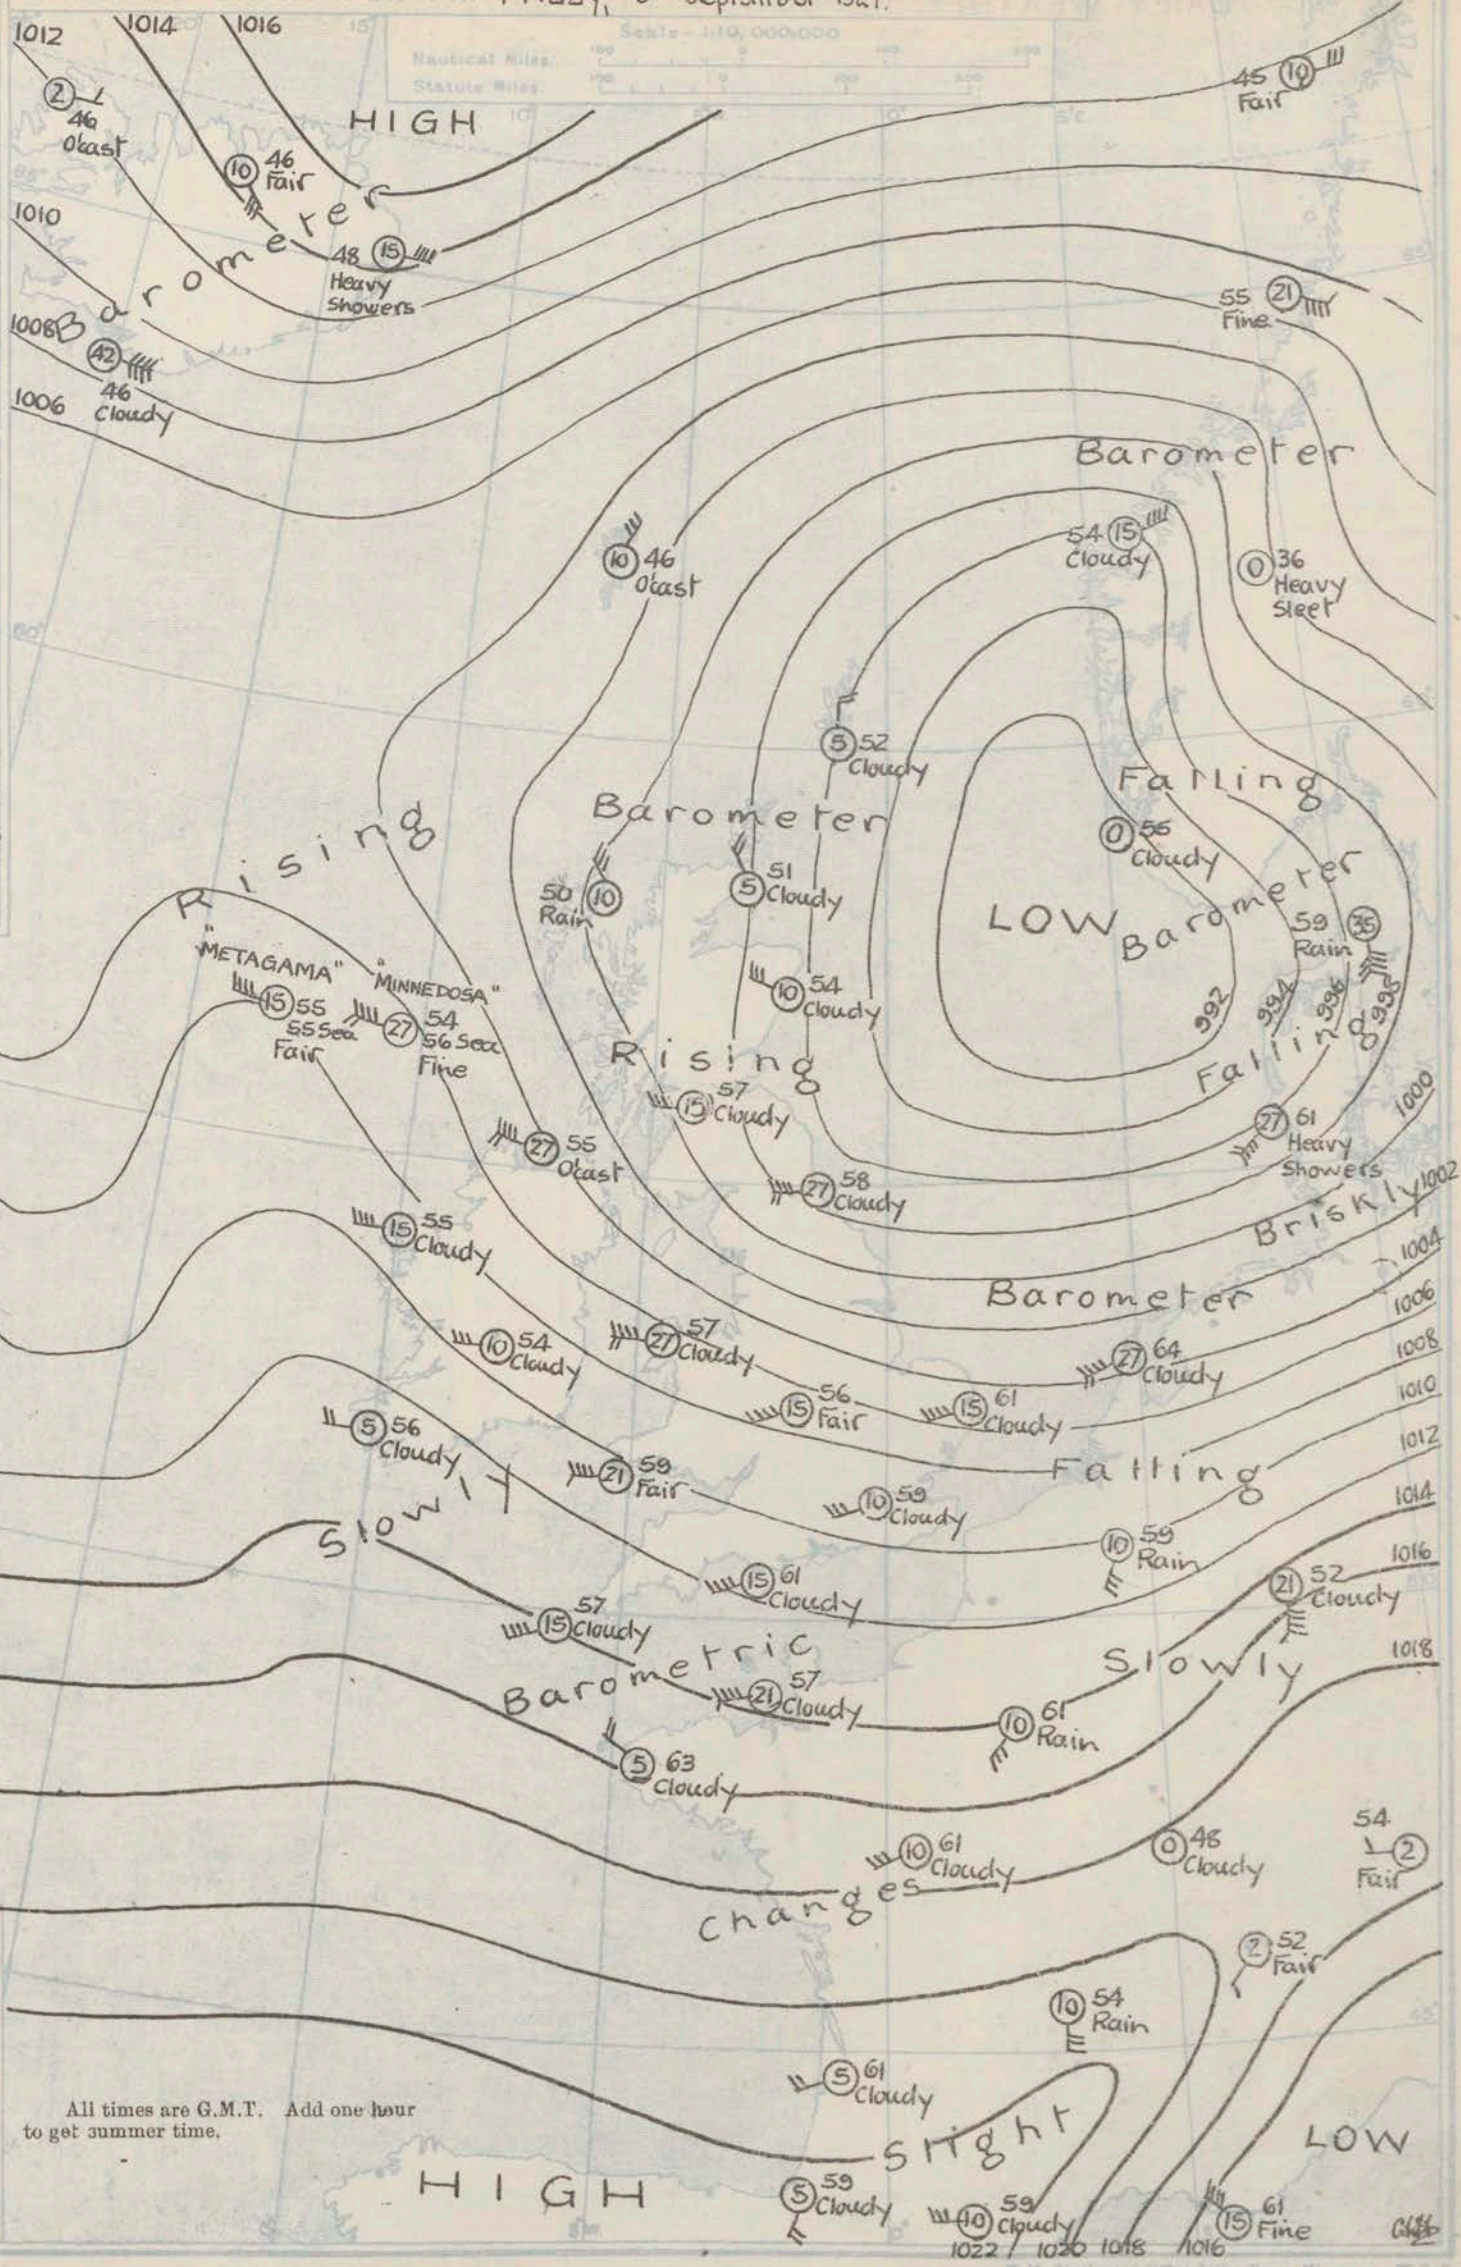

Continuing unsettled generally; some fair periods, particularly in Southeast England.

South Cone hoisted 17h. G.M.T. 8/9/27 in districts 6 to 8, 10 to 13, and 15 to 20 inclusive.

# SYNOPTIC CHART FOR 7h. Friday, 9th September 1927.

Nautical Miles  
Statute Miles

Scale - 1:10,000,000

**EXPLANATION.**  
Isobars are drawn for intervals of two millibars. Direction is shown by arrows with the wind. Force on the scale is indicated by the number in the circle. Mean velocity is shown in miles per hour by figures in small circles.  
Temperature is given in degrees F.  
Sky: less than 1 clouded, more than 1 clouded, cloudy, overcast, rain falling, rain, fog, mist, thunderstorm, Very Rough.

All times are G.M.T. Add one hour to get summer time.

# SYNOPTIC CHART FOR 7th SATURDAY, 10th SEPTEMBER, 1927.

Scale - 1:10,000,000

Nautical Miles  
Statute Miles

**EXPLANATION.**  
Isobars are drawn for intervals of two millibars.  
Direction is shown by arrows.  
Force on the scale 0-12 is indicated by the number of feathers. Mean velocity is shown in miles per hour by figures in small circles.  
TEMPERATURE is given in degrees F.

## GENERAL INFERENCE.

A ridge of high pressure is moving east across the British Isles and the weather will become generally fine over England and Scotland for a time, but a depression approaching from the Atlantic will cause winds to back to south in Western Ireland this evening, with a renewal of dull to rainy weather, and unsettled weather will then spread gradually eastwards to all districts.

## Districts.

Forecasts for the 24 hours commencing 15h. G.M.T. Monday, 12th September, 1927.

## Further Outlook.

1. S.E. England	Wind N.W., backing to S.W., light to moderate today, stronger tomorrow; mainly fine and sunny today, cloudier with some rain tomorrow; visibility mainly good; cool, ground frost locally tonight.	Unsettled, rather warmer.

## GENERAL INFERENCE.

A complex system of depressions which covers Ireland, England and the southern part of the North Sea is moving slowly south. Northeasterly to northerly winds are expected to spread slowly south and reach the south coast of England tomorrow. Rain is probable at times in all districts but in Scotland and Northern Ireland the weather should become mainly fair within 24 hours.

Districts. Forecasts for the 24 hours commencing 15h. G.M.T. Wednesday, 14th September, 1927.

1. S.E. England	Wind variable, becoming N.E. later, light to moderate today, perhaps rather stronger tomorrow; further rain, but some fair periods; local fog to-night; moderate temperature.
2. E. England	
3. E. Midlands	
4. W. Midlands	
5. S.W. England	
6. South Wales	As 1.
7. North Wales	Wind N.E. to N., strong locally, moderating gradually; occasional rain, improving gradually; visibility moderate to good; rather cold.
8. N.W. England	
9. N. Midlands	
10. N.E. England	Wind N.E. to N., moderate to fresh; occasional rain; improving gradually; visibility moderate to good; rather cold.
11. S.E. Scotland	
12. S.W. Scotland & Isle of Man	
13. W. Scotland	Wind northerly, backing to N.W. later, moderate to light; occasional local showers; visibility moderate to good; rather cold.
14. Mid-Scotland	
15. N.E. Scotland	
16. Orkneys and Shetlands	
17. N.W. Ireland	As 7 - 8.
18. N.E. Ireland	As 1.
19. S.E. Ireland	
20. S.W. Ireland	

Mainly fair in the North; improving in the South; rather cold.

Isobars are drawn for intervals of two millibars.  
Direction is shown by arrows.  
Force, on the scale 0-12, is indicated by the number of feathers. Mean velocity is shown in miles per hour by figures in small circles.  
TEMPERATURE is given in degrees F.

All times are C.M.T. Add one hour to get summer time.

**EXPLANATION**

Barometer.—Isobars are drawn for intervals of two millibars.

Wind.—Direction is shown by arrows with the wind speed indicated by the number of lines. A line with a dot indicates a wind speed of 10 knots. A line with a cross indicates a wind speed of 20 knots. A line with a triangle indicates a wind speed of 30 knots. A line with a square indicates a wind speed of 40 knots. A line with a circle indicates a wind speed of 50 knots. A line with a diamond indicates a wind speed of 60 knots. A line with a star indicates a wind speed of 70 knots. A line with a plus sign indicates a wind speed of 80 knots. A line with a cross-hatch indicates a wind speed of 90 knots. A line with a solid black shape indicates a wind speed of 100 knots.

Temperature.—Isotachs are drawn for intervals of 1 degree Fahrenheit.

Weather Symbols.—

Cloudy (C), Rain (R), Heavy Showers (HS), Fair (F), Drizzle (D), Thunderstorm (T), O'cast (O), Fine (F), Slowly (S), falling (F), rising (R), changes (C), slight (S).

## GENERAL INFERENCE.

A depression approaching Ireland from the Atlantic will cause a renewal of rain in all districts and winds to freshen from the south or southwest generally. Some fair periods, however, will occur in Scotland and Northeast England today.

Farther Outlook.

Districts.	Forecast for the 24 hours commencing 15h. G.M.T. Tuesday, 20th September, 1927.
1. S.E. England	Westerly winds, backing, light to moderate, freshening to strong at times; cloudy with occasional local rain at first, more general rain or drizzle later; visibility moderate to good, deteriorating; moderate temperature.
2. E. England	
3. E. Midlands	
4. W. Midlands	
5. S.W. England	
6. South Wales	
7. North Wales	
8. N.W. England	
9. N. Midlands	
10. N.E. England	Light variable winds, freshening from south or southwest; mainly fair today, cloudy with some rain or drizzle tomorrow; morning mist locally; rather low to moderate temperature.
11. S.E. Scotland	
12. S.W. Scotland & Isle of Man	
13. A.W. Scotland	
14. B.N.W. Scotland	
15. Mid-Scotland	
16. N.E. Scotland	Southerly to southwesterly winds, moderate to strong, stronger at times locally; cloudy with some rain today, fairer intervals tomorrow; visibility poor at times; moderate temperature.
17. Orkneys and Shetlands	
18. N.W. Ireland

# SYNOPTIC CHART FOR 7h. TUESDAY, 20<sup>th</sup> SEPTEMBER, 1927.

Scale - 1:10,000,000

All times are G.M.T. Add one hour at summer time.

**EXPLANATION.**  
Isobars are drawn for intervals of two millibars.  
Direction is shown by arrows lying with the wind. Force, on the scale 0-12, is indicated by the number of barbs. Mean velocity is shown in miles per hour by figures in small circles.  
TEMPERATURE is given in degrees F.  
**WEATHER SYMBOLS.**  
Clear sky.

**GENERAL INFLUENCE.**

A complex depression, having centres over Ireland and the North Sea, covers the British Isles. The centre over Ireland will probably first move south-east to the English Channel and deepen, then northeastwards to the North Sea. Weather will continue unsettled generally with further rain in most places. Winds will freshen from the Southwest in southern districts and approach gale force at times in exposed places.

Further Outlook.

Continuing unsettled, particularly in southern districts.

EXPLANATION.  
Isobars are drawn for intervals of two millibars.  
Direction is shown by arrows with the wind. Force on the scale is indicated by the number in the circle. Mean velocity is shown in miles per hour by figures in small circles.

TEMPERATURE is given in degrees F.  
WIND SYMBOLS:  
Clear sky. ☉ sky less than 1/4 clouded.

EXPLANATION.  
Isobars are drawn at intervals of two millibars.  
Direction of wind is shown by arrows.  
Force of wind is indicated by the number of barbs.  
Rain is shown by vertical lines with horizontal dashes.  
Heavy showers are shown by vertical lines with horizontal dashes and a central dot.  
Clouds are shown by horizontal lines.  
Fine is shown by a circle with a dot.  
Overcast is shown by a circle with a horizontal line.  
Bar. indicates barometer.  
Rising, falling, slowly, briskly, etc., indicate the direction and speed of barometer change.  
Temperature is given in degrees F.  
Wind speed is given in knots.  
Wind direction is given by the number of the compass point.  
Thunder is shown by a jagged line.  
Hail is shown by a circle with a cross.  
Fog is shown by a circle with a horizontal line.  
Ice is shown by a circle with a dot.  
Snow is shown by a circle with a cross.  
Rain, snow, etc., are shown by the appropriate weather symbol.

## GENERAL REFERENCE.

The depression centred off Southwest Norway continues to move slowly northeastward. Winds will be mainly from between North and West and will approach gale force at times on some exposed parts of our Northwest Coasts. There will be considerable fair periods but some further rain or thundery showers. Temperature will be rather low for the time of year and ground frost is likely to occur locally at night.

Rather cold; considerable fair periods but not settled.

## GENERAL INFERENCE.

A wedge of high pressure off West Ireland will move eastward and give a short interval of mainly fine weather, but a depression off S.W. Iceland will move E.S.E. and cause rain in N.W. districts by tonight, probably spreading to all districts tomorrow.

## Districts.

Forecasts for the 24 hours commencing 15h. GMT.

Tuesday, 27th September, 1927.

## Further Outlook.

1. S.E. England	Wind N.W. light or moderate backing W. to S.W. later; fine apart from a few local thundery showers, probably deteriorating during tomorrow; local morning mist; rather cool with sharp ground frost at night.
2. E. England	
3. E. Midlands	
4. W. Midlands	
5. S.W. England	
6. South Wales	
7. North Wales	Wind N.W. light or moderate, backing S.W. and freshening; fine at first apart from scattered showers, probably some rain tomorrow; local morning mist; rather cool with ground frost locally at night.
8. N.W. England	
9. N. Midlands	
10. N.E. England	
11. S.E. Scotland	
12. S.W. Scotland & Isle of Man	
13. N.W. Scotland	Wind backing S.W. and freshening decidedly; becoming dull and rainy; visibility deteriorating; rather cold.
14. Mid-Scotland	
15. N.E. Scotland	
16. Orkneys and Shetlands	Wind variable, light, then S. freshening; fair at first, rain later; visibility good, deteriorating; rather cool.
17. N.W. Ireland	As 13 - 15.
18. N.E. Ireland	
19. S.E. Ireland	As 7 - 12.
20. S.W. Ireland

## GENERAL INFERENCE.

A very deep depression is still centred near Iceland and a secondary trough is moving eastwards across the British Isles. Rain will be fairly general over England and Eastern Scotland at first, with southerly winds reaching a gale in the South, but subsequently more westerly winds will spread from the Atlantic and cause changeable weather with bright intervals.

## GENERAL INFERENCE.

An anticyclone lies to the southwest of the British Isles and a rather deep depression north of the Faeroes is moving slowly east. There are some indications of the approach of another depression from the Atlantic but today the weather should be generally fine, and for the most part sunny, apart from a few scattered showers, with winds from between southwest and west, strong at times in the North.

## Further Outlook.

Unsettled.
