SIGNIFICANT WEATHER

0600 GMT 01 JUNE 2001	SIG WEATHER	1200 GMT 01 JUNE 2001	SIG WEATHER	<p>Summary of UK Weather for Friday 01 June 2001.</p> <p>Overnight, most parts were rather cloudy with occasional light rain, although the skies were largely clear for a time over southern England.</p> <p>The morning was also rather cloudy with outbreaks of mostly light rain over northern and western parts. Towards midday the rain over western Scotland became heavier and more persistent.</p> <p>Through the afternoon, the more persistent rain over western Scotland extended across eastern Scotland, northern England and north Wales. Remaining areas had a mainly dry afternoon, although Northern Ireland saw further outbreaks of mostly light rain. For southern counties of England and Wales, the skies actually brightened with sunny spells developing for a time. Shetland also fared well with sunny spells.</p> <p>During the evening, outbreaks of rain also developed across East Anglia and parts of southeast England, but much of Wales and southwest England remained largely dry.</p> <p>The temperatures were generally close to or a little above normal.</p>
1800 GMT 01 JUNE 2001	SIG WEATHER	0000 GMT 02 JUNE 2001	SIG WEATHER	<p>EXTREMES</p> <p>Highest Maximum: 19.4 Hurn, Dorset</p> <p>Lowest Maximum: 10.1 Fair Isle, Shetland</p> <p>Lowest Minimum: 4.4 Redhill, Surrey</p> <p>Lowest Grass Minimum: 0.2 Hawarden Airport, Clwyd</p> <p>Most Rain: 14.4 Capel Curig, Gwynedd</p> <p>Most Sun: 7.7 Lerwick, Shetland</p>

SIGNIFICANT WEATHER

0600 GMT 02 JUNE 2001	SIG WEATHER	1200 GMT 02 JUNE 2001	SIG WEATHER	<p>Summary of UK Weather for Saturday 02 June 2001.</p> <p>The night started cloudy across the UK with weather fronts sinking south bringing some rain, very patchy and light in general, but with some heavier bursts down from southeast Scotland into East Anglia. Southern counties of England stayed mostly dry, with Northern Ireland and Southern Scotland becoming dry. Across the north of Scotland scattered showers developed.</p> <p>Northern Ireland had a dry day with sunny spells. Across Scotland the showers, some heavy with hail, drifted south whilst slowly fading. Weather fronts continued south across England and Wales bringing some showery bursts of rain. Drier, brighter conditions followed to most parts by mid-afternoon. However late afternoon/ early evening a line of showers developed along a convergence line, running from Southwest Scotland down into the Midlands.</p> <p>During the evening this line of showers slowly sank south-southeast reaching the Sussex coast by midnight, and with a few showers continuing across Northern Scotland. Elsewhere it was dry with clear spells.</p> <p>Moderate to fresh north-northwesterly winds were strong around exposed coasts. Temperatures were mostly cool, but near average in South Wales and around the Solent region.</p>
1800 GMT 02 JUNE 2001	SIG WEATHER	0000 GMT 03 JUNE 2001	SIG WEATHER	<p>EXTREMES</p> <p>Highest Maximum: 19.3 Saughall, Ayrshire</p> <p>Lowest Maximum: 7.7 Foula, Shetland</p> <p>Lowest Minimum: 4.7 Lerwick, Shetland</p> <p>Lowest Grass Minimum: 0.2 Hawarden Airport, Clwyd</p> <p>Most Rain: 11.0 Dishforth Airfield, North Yorkshire</p> <p>Most Sun: 13.7 Prestwick, Ayrshire</p>

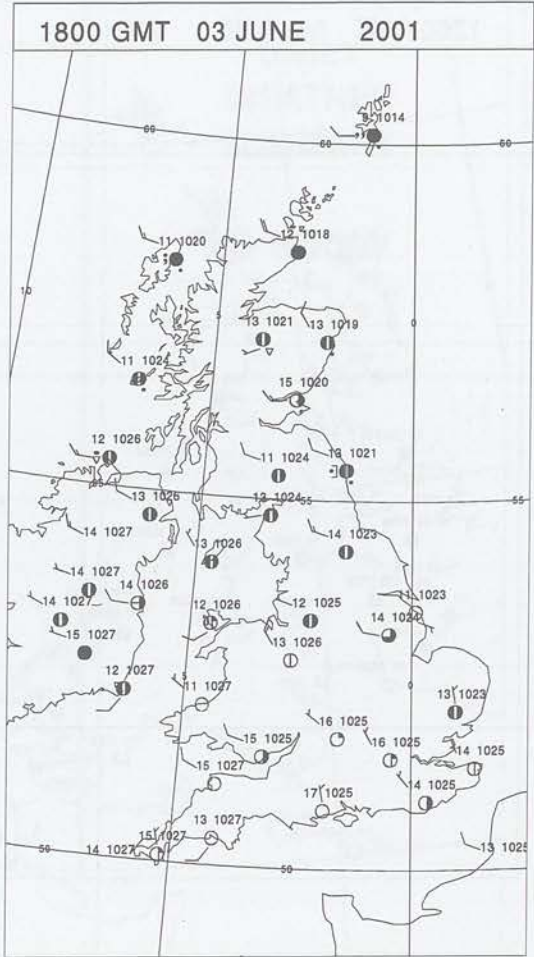

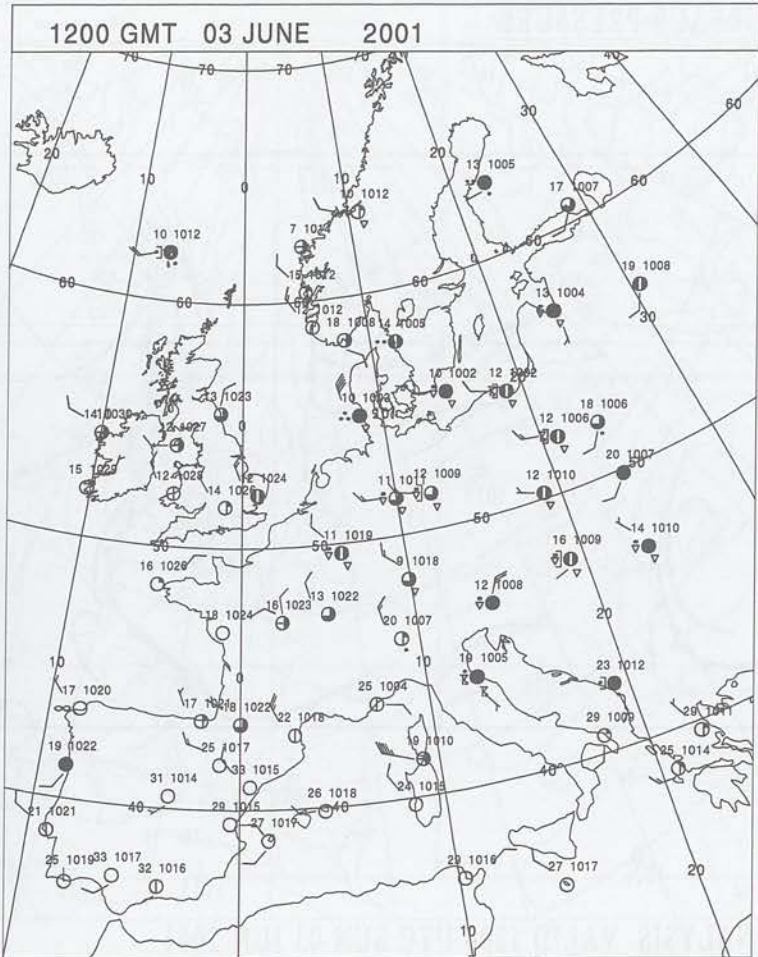

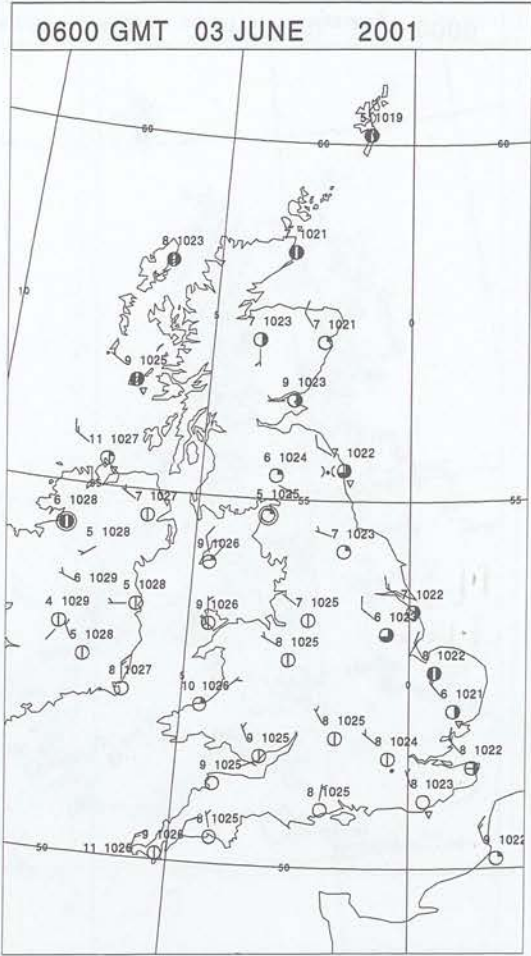

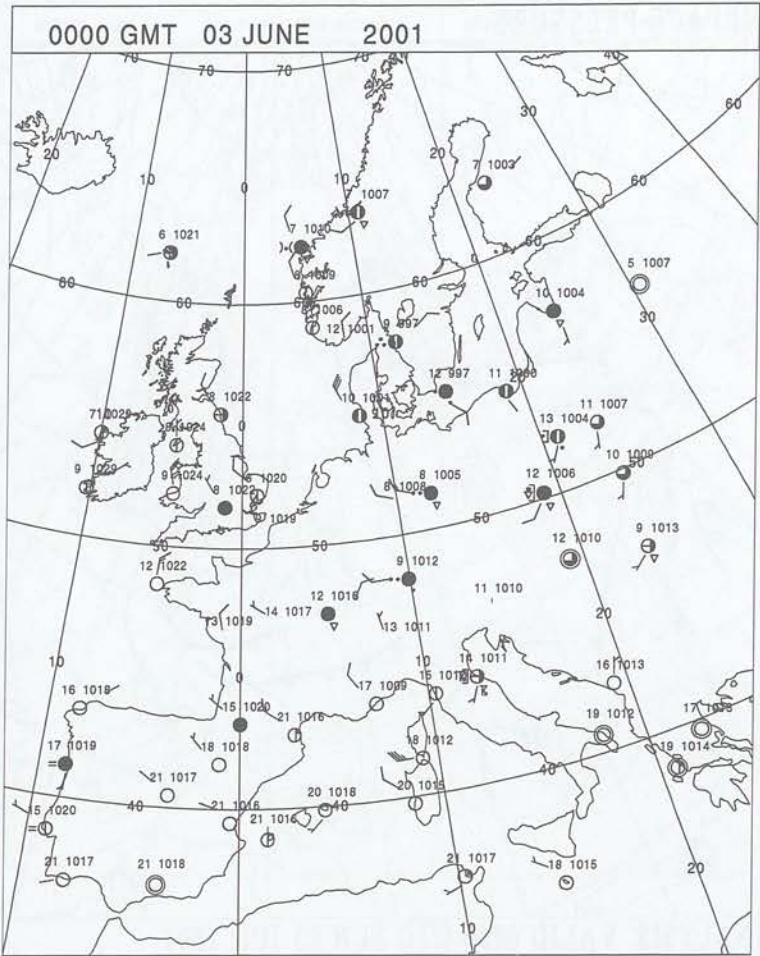

DAILY CLIMATE DATA

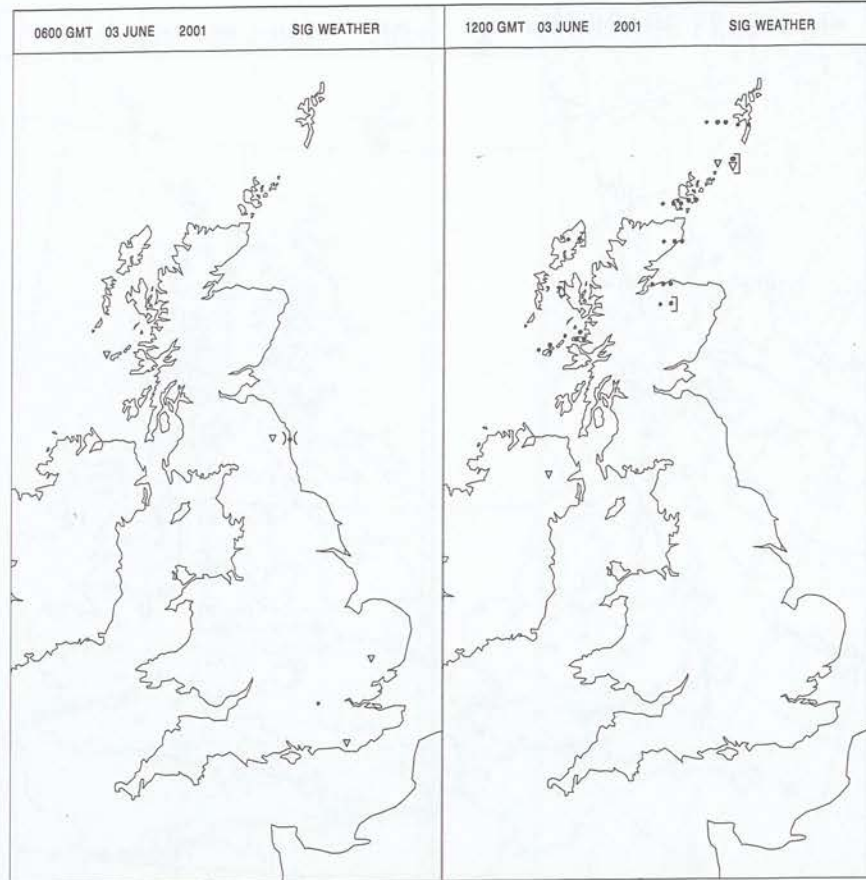

DAILY WEATHER SUMMARY

SURFACE REPORTS

SIGNIFICANT WEATHER

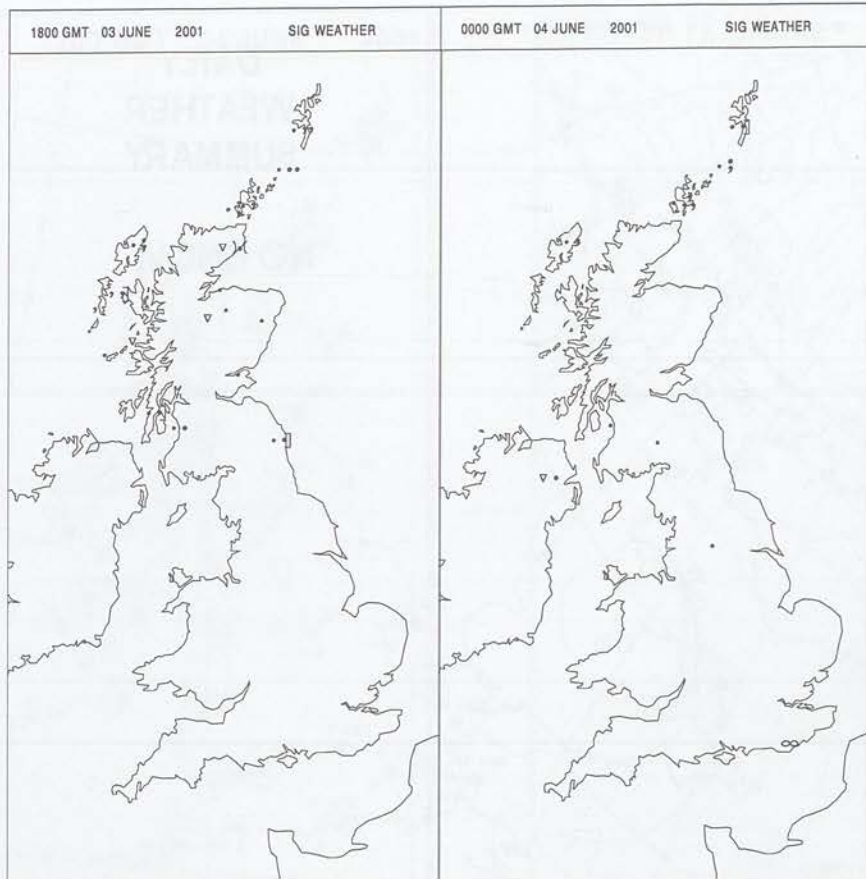

Summary of UK Weather for Sunday 03 June 2001.

Most of the night was clear across the UK, although cloudier over Northern Scotland for a time, with a few showers here. Also from the northwest Midlands down to the Sussex coast, with a band of showers advecting southeast here, soon clearing by the early hours. Then apart from isolated showers along the Lincolnshire coast and into Norfolk, most of the UK was dry. Temperatures over parts of Northern England fell low enough for an air frost, with -0.9C at Shap Fell.

Through daylight hours England and Wales enjoyed a mainly dry day with sunny periods and patchy low cloud, although cloudier for a time down North Sea coasts. Northern Ireland stayed mostly dry although turning cloudy, whilst across Scotland cloud soon into the west brought outbreaks of light rain, this extending east across the mainland.

During the evening NW England, Northern Ireland and Scotland were mostly cloudy with a few spots of rain, remaining areas staying dry and mainly clear.

Temperatures ranged from cool to locally average on the south coast. Strong northwest winds along some eastern coasts eased.

EXTREMES

Highest Maximum:

18.2 Great Malvern, Hereford & Worcester

Lowest Maximum:

9.9 Sella Ness, Shetland

Lowest Minimum:

0.2 Keswick, Cumbria

0.2 Warcop Range, Cumbria

Lowest Grass Minimum:

-7.2 Hawarden Airport, Clwyd

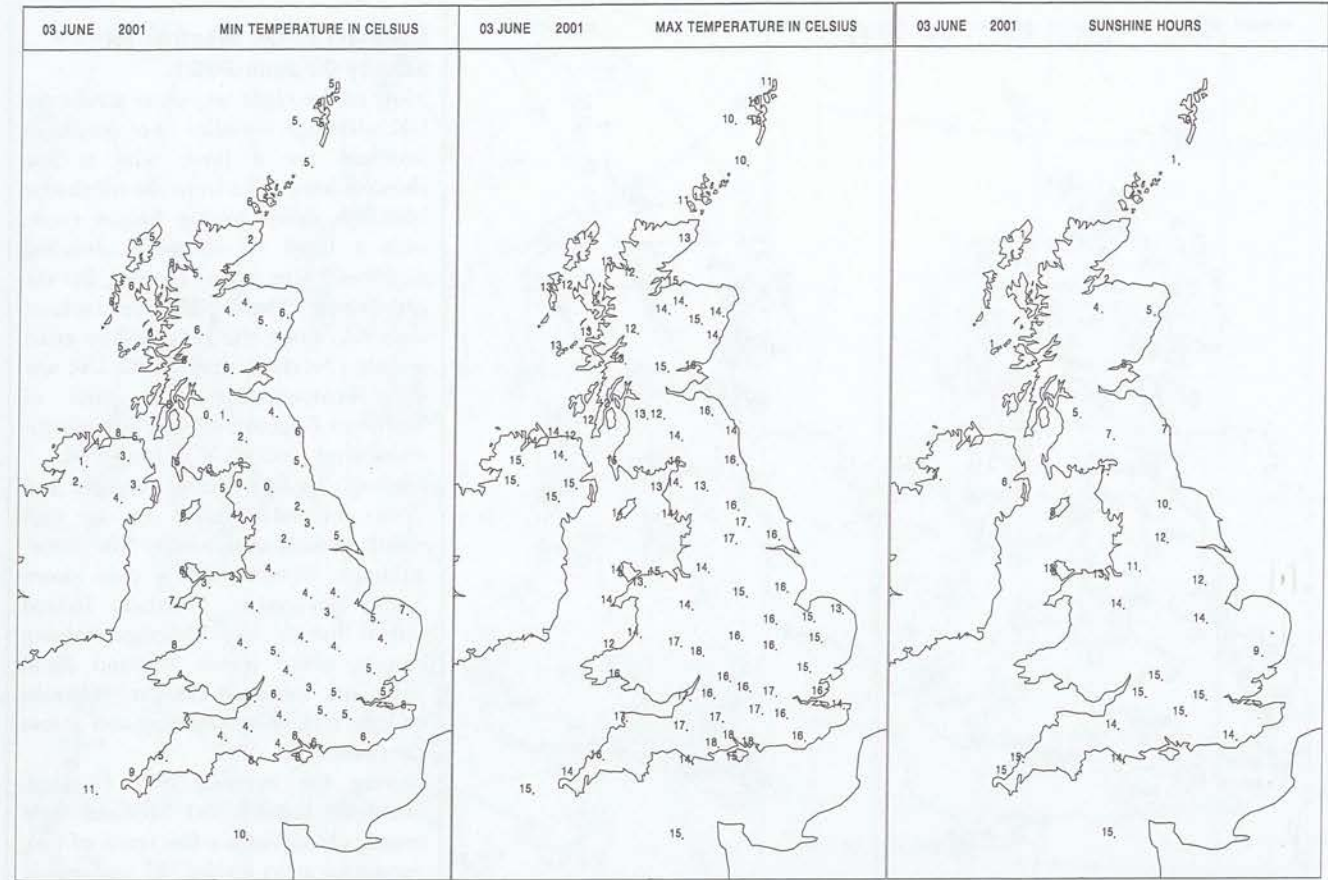

Most Rain:

3.6 Lerwick, Shetland

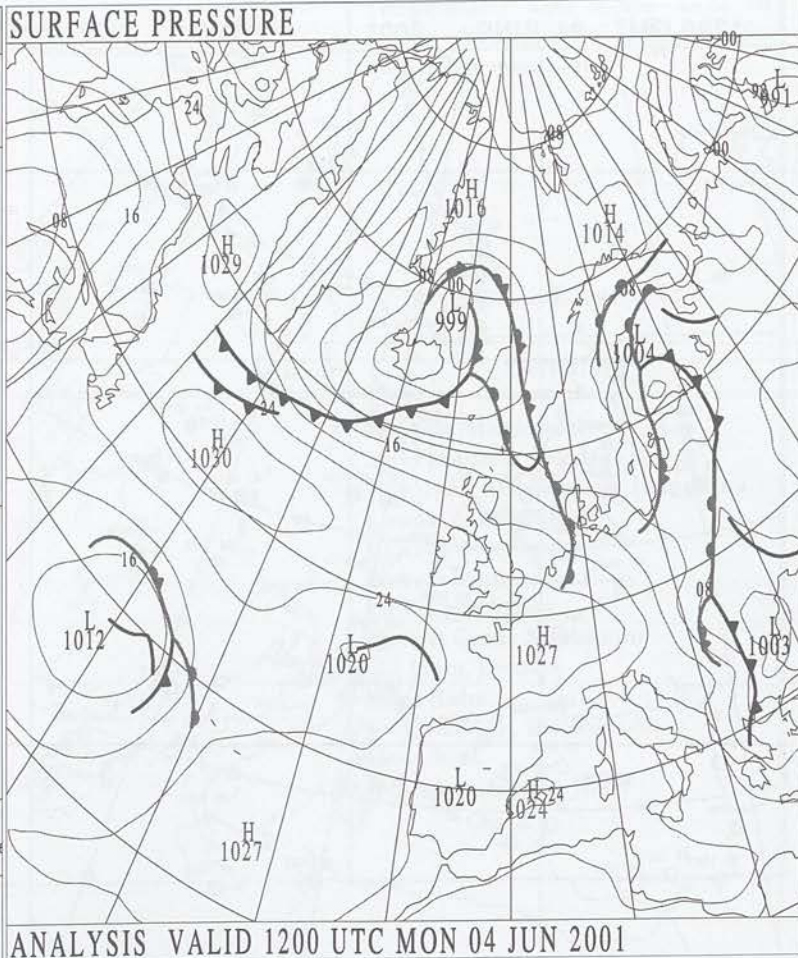

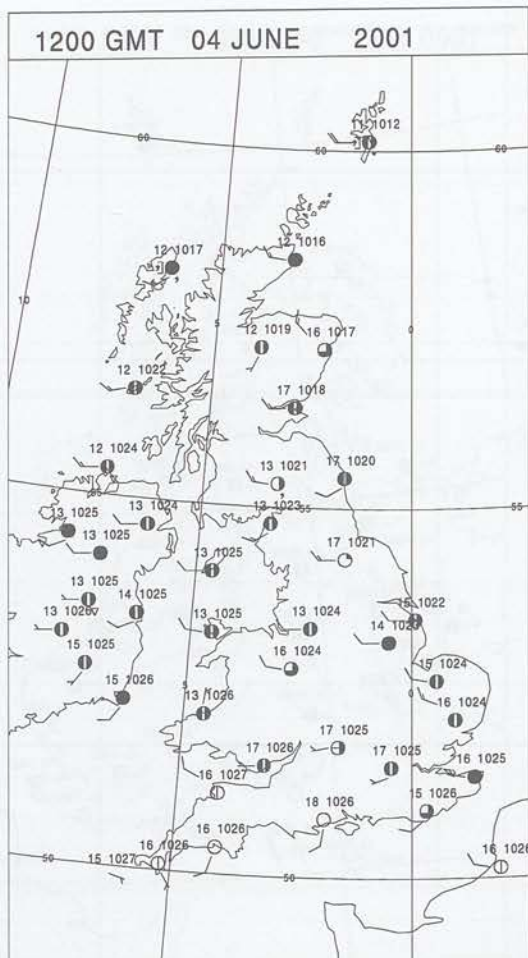

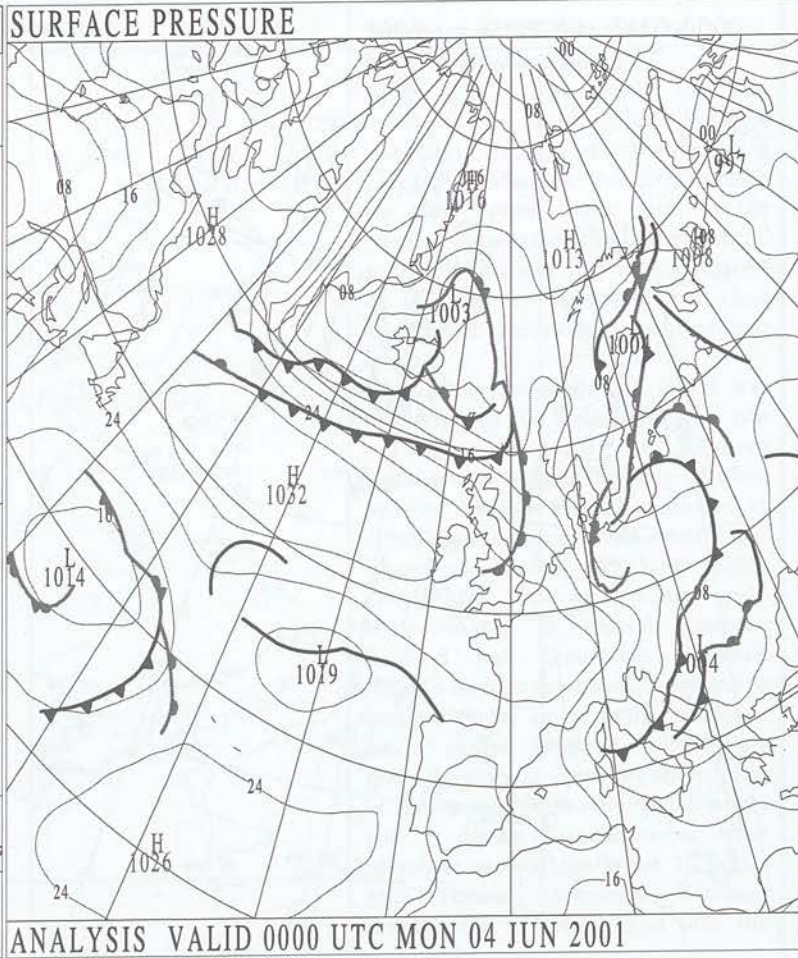

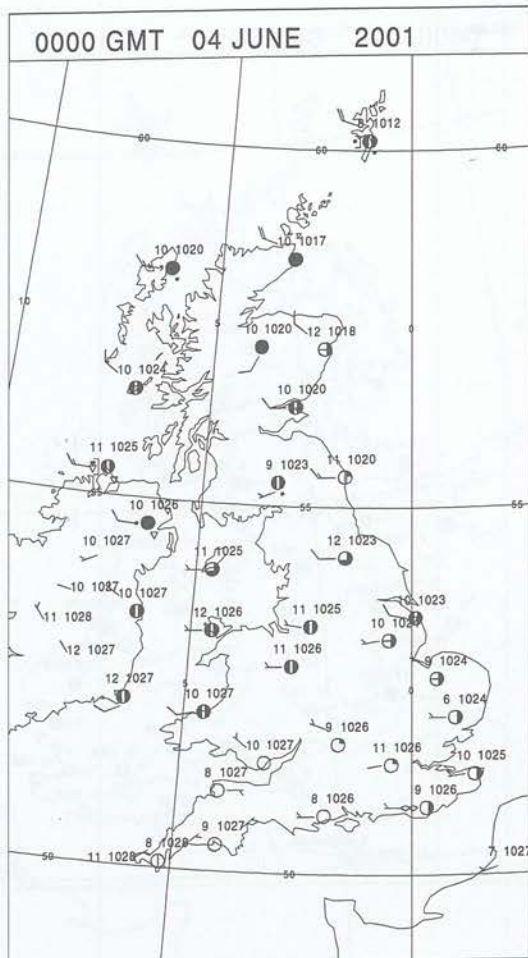

Most Sun:

15.3 Lyneham, Wiltshire

SIGNIFICANT WEATHER

0600 GMT 04 JUNE 2001	SIG WEATHER	1200 GMT 04 JUNE 2001	SIG WEATHER	<p>Summary of UK Weather for Monday 04 June 2001.</p> <p>Apart from a little patchy rain and drizzle in the Northern and Western Isles and the odd showery burst in Northern Ireland it was dry through the early hours. Many parts of the country were rather cloudy but central southern England and the Southwest of England in particular, had clear skies which permitted a slight ground frost.</p> <p>During the morning the cloud was thick enough for the odd spot of rain or drizzle amongst the southern Uplands and around the Isle of Man, and the rain and drizzle continued to affect the Northern and Western Isles. Elsewhere it was dry with rather cloudy skies, but some sunny spells were lengthy in central southern England and Southwest England. Around midday the sunshine tended to become more and more extensive across central England, with sunny spells developing in other eastern parts of the country, too. The patchy light rain or drizzle became rather more prevalent around the Inner Hebrides and western Mainland Scotland through the afternoon and into the evening, however.</p> <p>Temperatures were mostly close to average although a few sheltered spots were rather warm.</p>

SIGNIFICANT WEATHER

0600 GMT 05 JUNE 2001	SIG WEATHER	1200 GMT 05 JUNE 2001	SIG WEATHER	<p>Summary of UK Weather for Tuesday 05 June 2001.</p> <p>Most places had a dry night, but outbreaks of rain affected northern parts of Scotland. Towards the end of the night showers arrived across western areas of Cornwall.</p> <p>For northern Scotland it was a cloudy day with outbreaks of rain, although the east coast did see some drier and brighter interludes during the afternoon. Northern Ireland, north Wales and northern counties of England remained dry but rather cloudy all day with just a few bright or sunny intervals. Devon and Cornwall had showers during the morning, and some of these turned heavy and thundery through the afternoon, 22mm of rain falling at St. Mawgan between 14 and 1500z. Afternoon showers also developed across south Wales and Somerset, but central and southeast England stayed dry with the best of the sunshine.</p> <p>During the evening a heavier pulse of rain spread into northwest Scotland, and scattered showers broke out across East Anglia, Central Southern and Southeast England.</p> <p>Northern Ireland and western Scotland had a rather cool day, but elsewhere temperatures were between normal and rather warm.</p>
1800 GMT 05 JUNE 2001	SIG WEATHER	0000 GMT 06 JUNE 2001	SIG WEATHER	<p>EXTREMES</p> <p>Highest Maximum: 21.5 South Farnborough, Hampshire</p> <p>Lowest Maximum: 10.3 Fair Isle, Shetland</p> <p>Lowest Minimum: 3.1 Redhill, Surrey</p> <p>Lowest Grass Minimum: -2.2 Lough Fea W.Wks, Londonderry</p> <p>Most Rain: 54.8 St Mawgan, Cornwall</p> <p>Most Sun: 11.5 Boulmer, Northumberland</p>

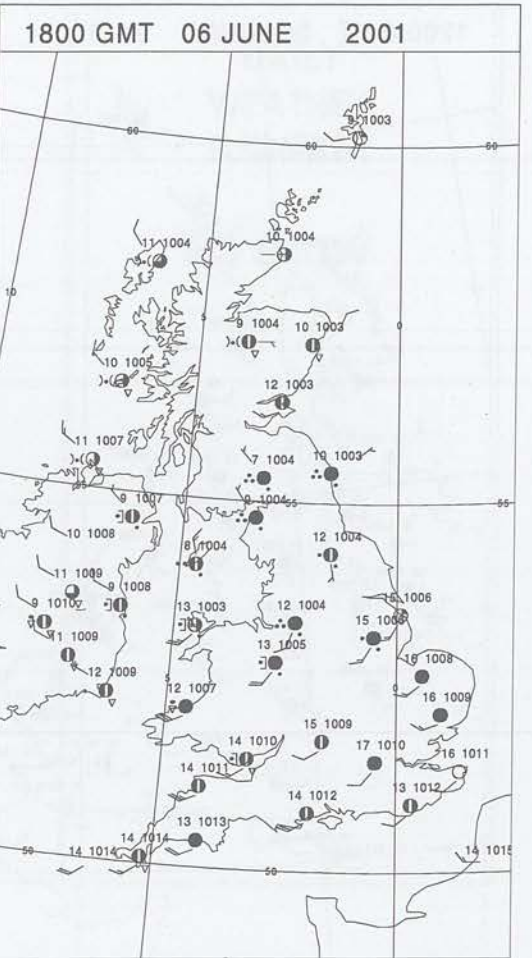

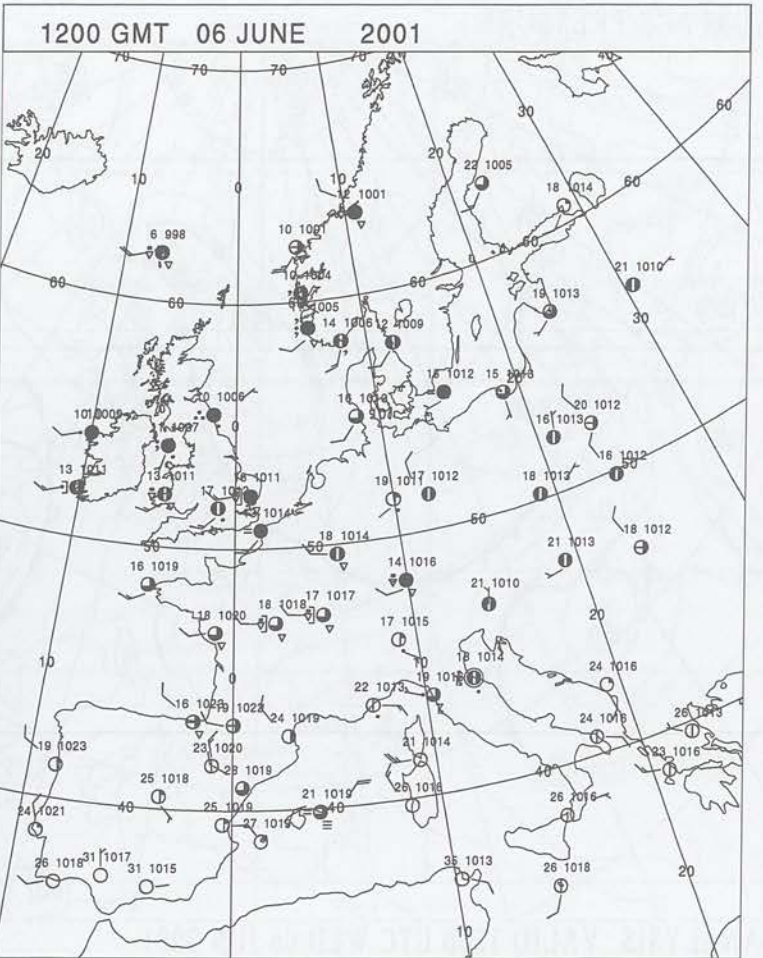

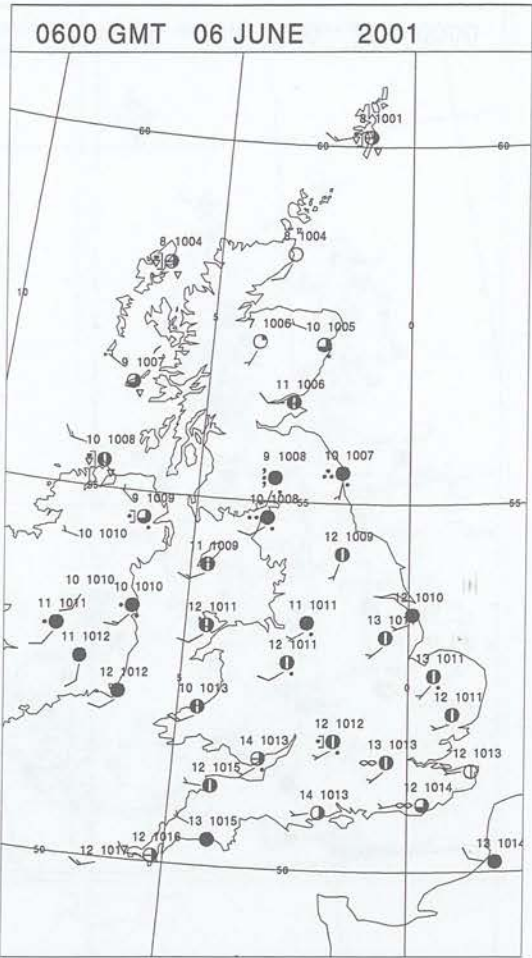

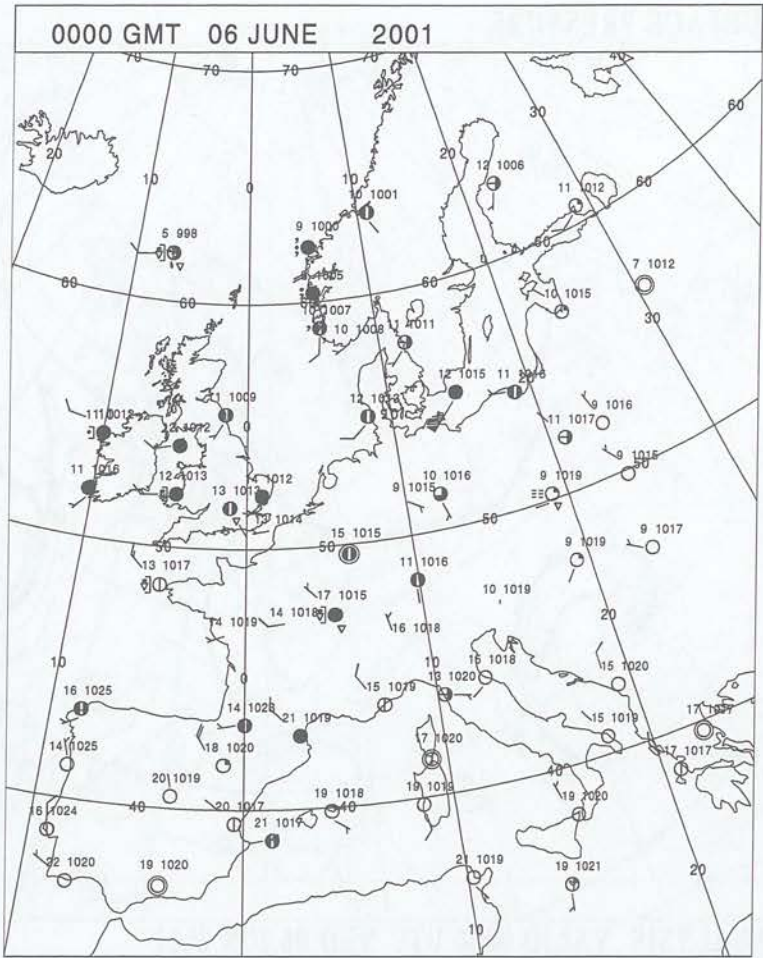

DAILY CLIMATE DATA

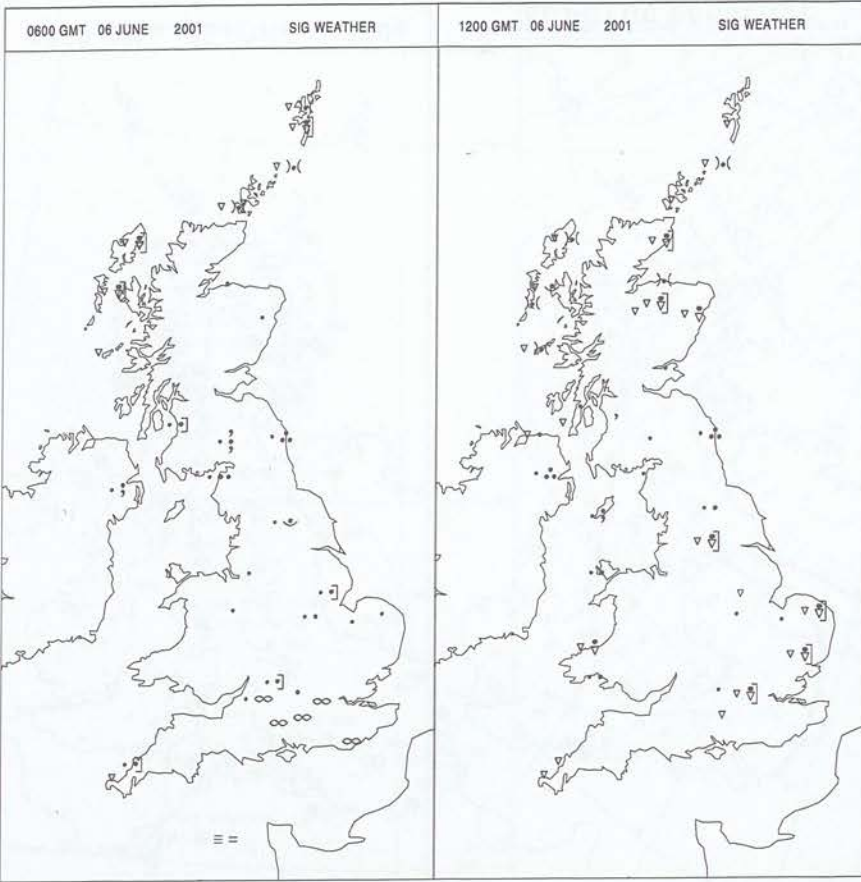

DAILY WEATHER SUMMARY

SURFACE REPORTS

SIGNIFICANT WEATHER

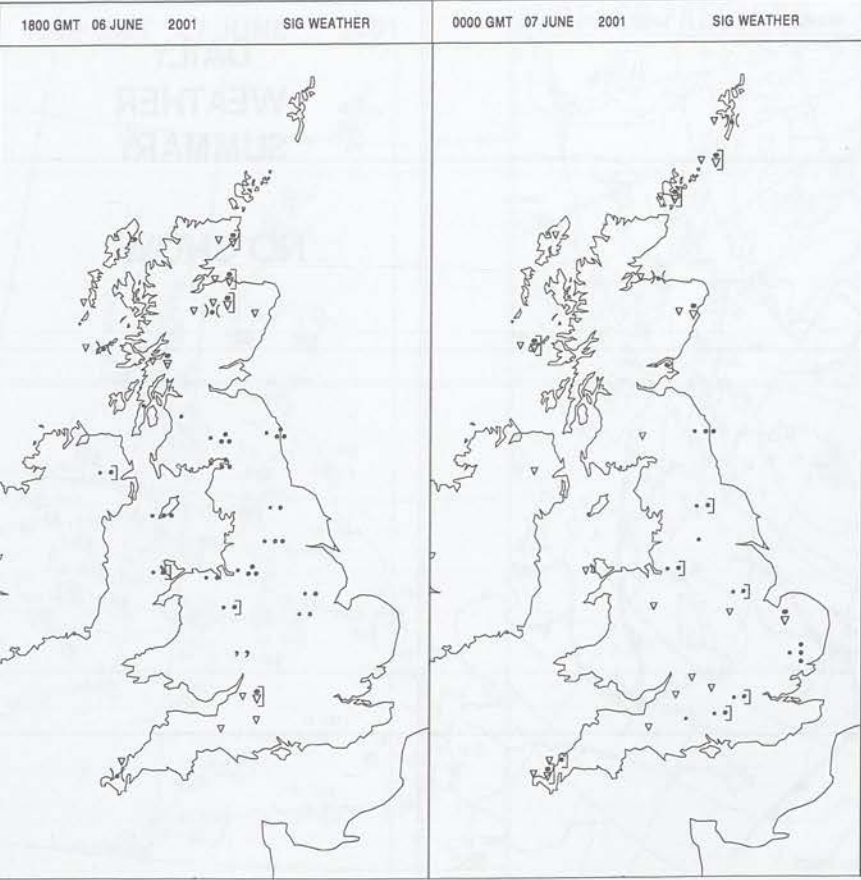

Summary of UK Weather for Wednesday 06 June 2001.

Overnight, scattered light showers affected parts of England and Wales along with the far northwest of Scotland. A band of more persistent rain lay from Northern Ireland across southern Scotland and the far north of England.

During the day scattered showers developed across southeast England and East Anglia for a time, dying out by mid afternoon. Scattered showers also continued in the north of Scotland. Meanwhile the band of rain intensified and broadened across Northern Ireland by lunchtime, and this area of quite heavy rain pushed steadily east in the afternoon affecting much of north Wales, Northern England and southern Scotland by late afternoon. The evening saw further heavy rain at times in northern England, with a weakening area of rain swinging south and east across the Midlands, southwest England and towards the southeast.

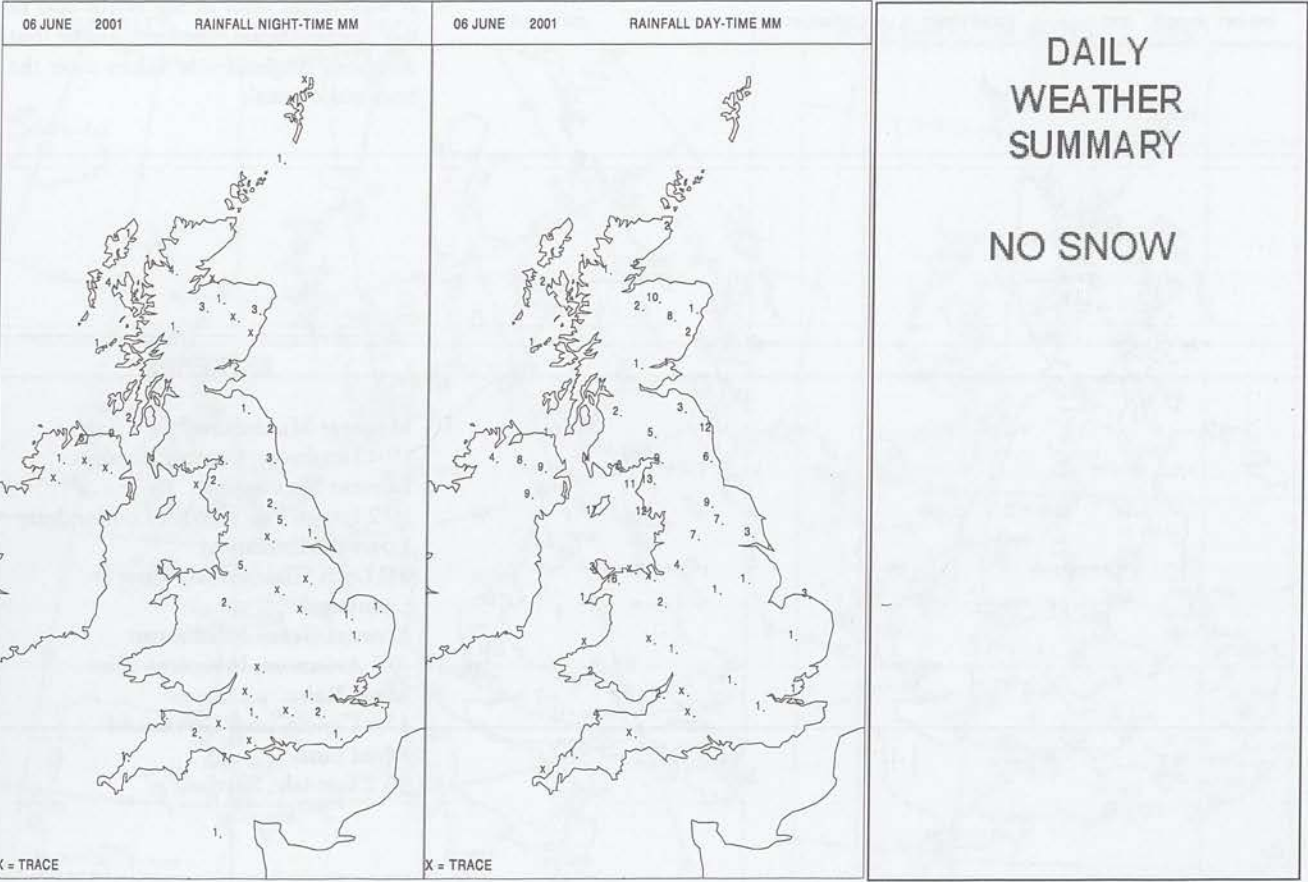

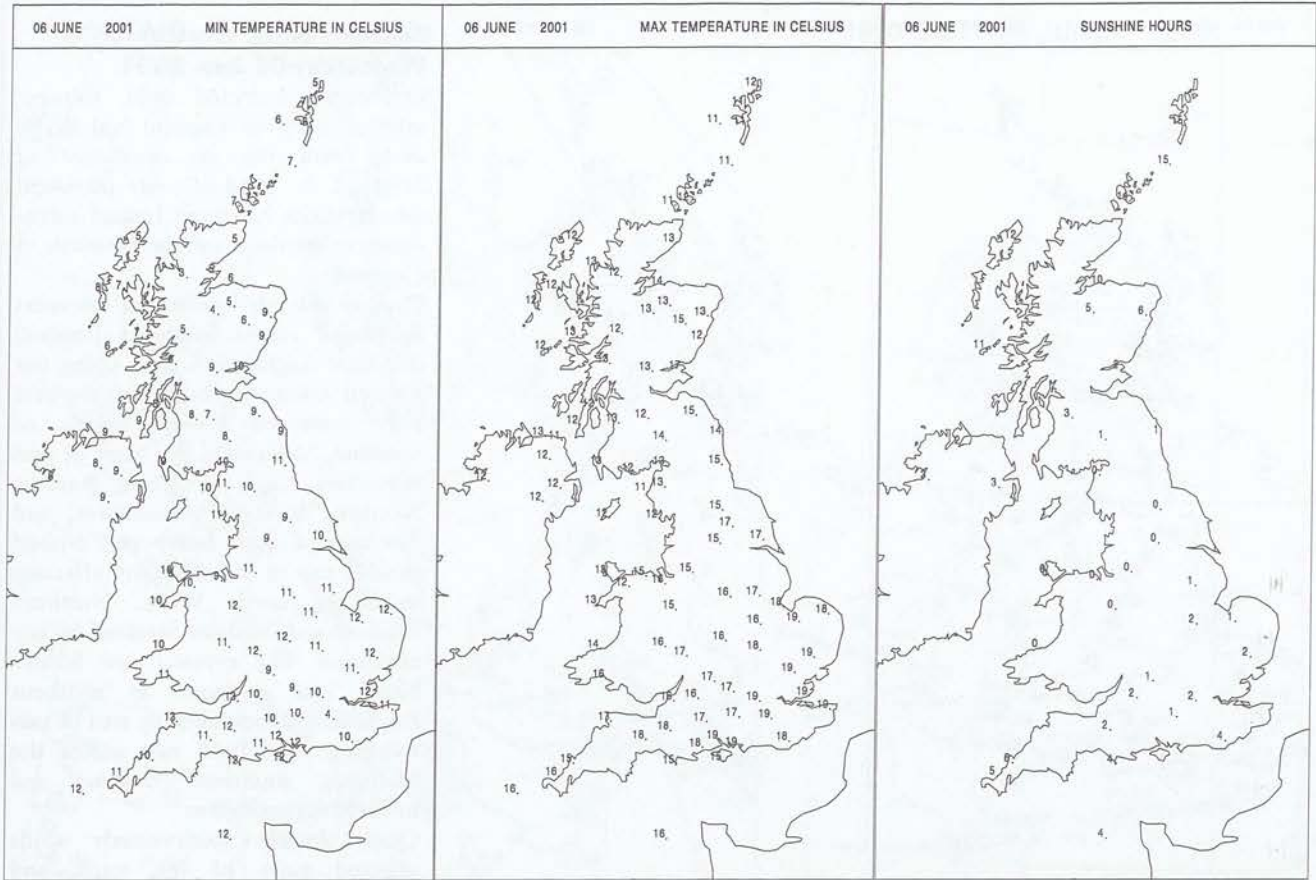

Quite blustery southwesterly winds affected parts of the south and southwest of England with gusts over 50 mph on the Welsh coast in the evening.

It was rather cool in the north and in the wetter areas further south, but southern England saw values near the seasonal normal.

SIGNIFICANT WEATHER

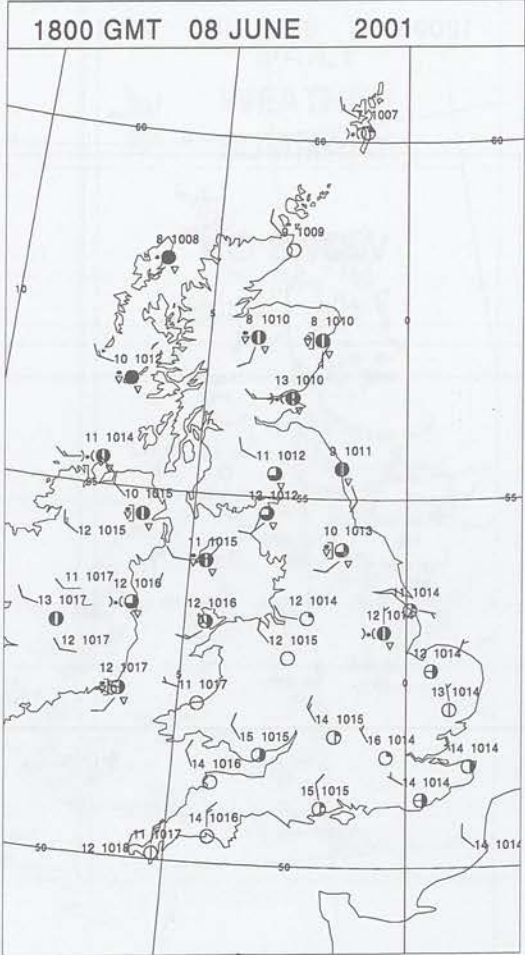

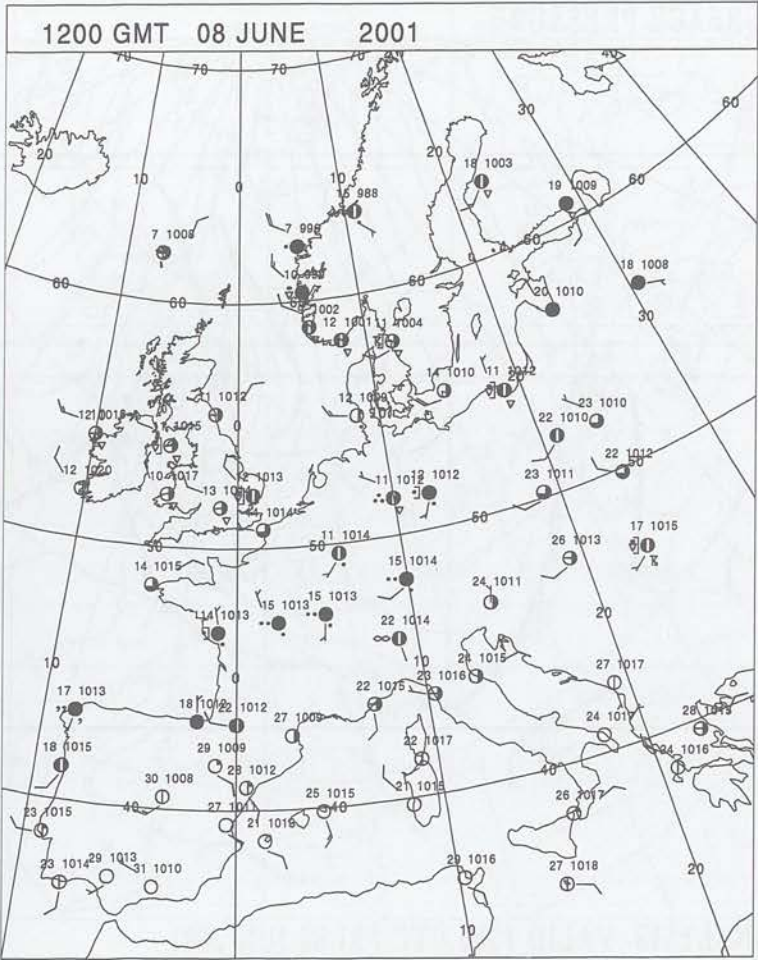

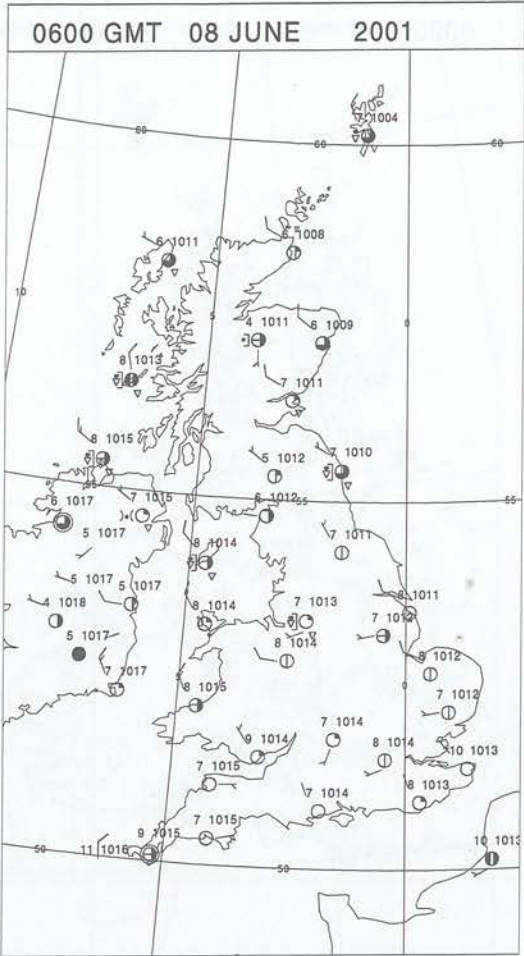

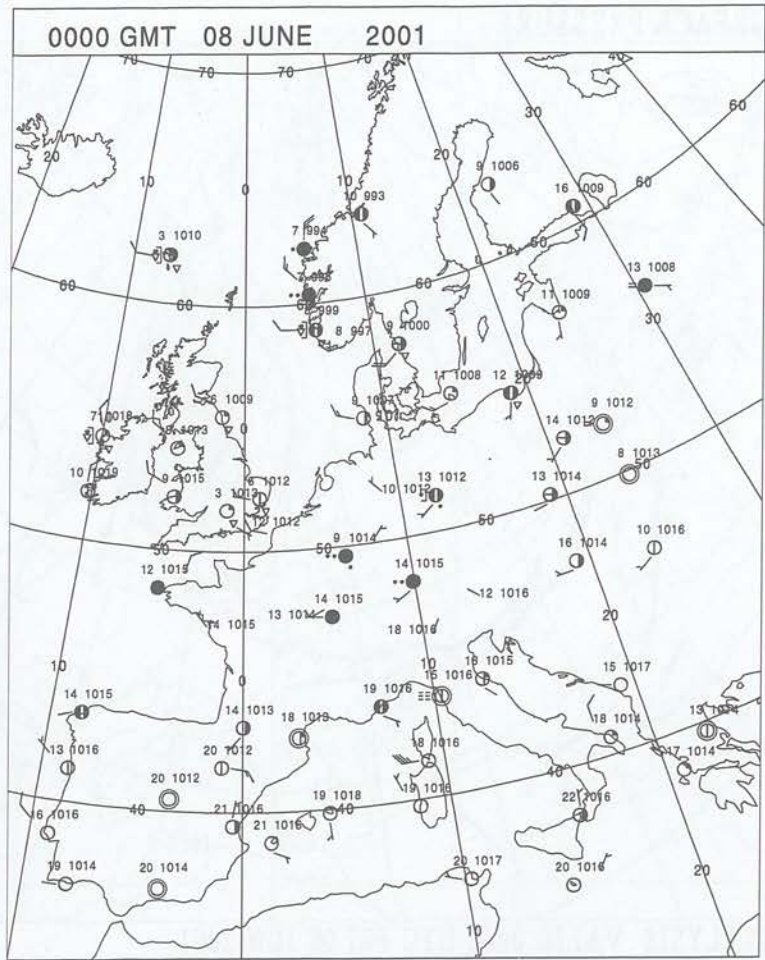

0600 GMT 07 JUNE 2001	SIG WEATHER	1200 GMT 07 JUNE 2001	SIG WEATHER	<p>Summary of UK Weather for Thursday 07 June 2001.</p> <p>A band of rain had cleared Kent to the southeast before dawn. Showers affected Northern Ireland and northwest Scotland from the start of the day, while an area of rain across Aberdeen soon moved off into the North Sea. Around dawn the showers stretched further south to affect much of western Scotland and northwest England as well, while southwest England was also peppered.</p> <p>By mid-morning the showers were widespread across all parts north of the Midlands and had spread further east in southern England into Hampshire. As midday approached almost every part of Britain had showers, some heavy with thunder in the Borders.</p> <p>The showers continued across most places in the afternoon. Thunderstorms were largely confined to the east between Aberdeen and The Wash.</p> <p>During the evening the showers gradually died away from all but Northern Ireland, the Grampians and Borders, while the odd one or two kept going elsewhere through until late evening.</p> <p>Temperatures were generally rather cool; parts of Northern Ireland were cool while the odd spot in the Midlands and southeast was normal.</p>

SIGNIFICANT WEATHER

0600 GMT 09 JUNE 2001	SIG WEATHER	1200 GMT 09 JUNE 2001	SIG WEATHER	<p>Summary of UK Weather for Saturday 09 June 2001.</p> <p>Initially a band of showery rain stretched from Northern Ireland to northeast Scotland. Through the night this band fragmented and edged slowly southwards, with showers reaching the north Midlands by the end of the night. At the same time the showers became more scattered across Scotland. Across the southern half of England and Wales, skies were clear for much of the night allowing a ground frost to develop in places and even an air frost across the Low Weald of Surrey.</p> <p>During the day there were showers spread across much of the country. Those showers became more organised across Southern Scotland and northeast England with some prolonged and thundery downpours. At the same time showers were fairly isolated across northwest Scotland, Northern Ireland, Wales and southern counties of England, with these parts enjoying the best of the sunshine.</p> <p>Through the evening the showers died away across many parts but some more organised areas continued to affect parts of East Anglia, central and northern England.</p> <p>Temperatures were close to normal in the sunnier spots but generally it was a rather cool day.</p>

SIGNIFICANT WEATHER

0600 GMT 10 JUNE 2001	SIG WEATHER	1200 GMT 10 JUNE 2001	SIG WEATHER	<p>Summary of UK Weather for Sunday 10 June 2001.</p> <p>A band of heavy and sometimes thundery showers, over northeast England initially, edged southwards during the night to affect East Anglia and southeast England. Remaining areas had a largely dry night with clear spells.</p> <p>Showers were still evident across southeasternmost parts of England at the start of the day. Further showers developed across eastern counties of England during the morning, chiefly Lincolnshire, East Anglia and southeast England. The showers were once again heavy in a number of places. During the latter part of the afternoon and evening, the showers largely died away.</p> <p>Elsewhere, it was a mainly dry day with a good deal of sunshine. Northwestern parts of Scotland though did become cloudier with some outbreaks of light rain in the afternoon. Northwestern parts of Northern Ireland also saw some light rain during the evening. It was generally rather cool or cool.</p>

SIGNIFICANT WEATHER

0600 GMT 18 JUNE 2001	SIG WEATHER	1200 GMT 18 JUNE 2001	SIG WEATHER	<p>Summary of UK Weather for Monday 18 June 2001.</p> <p>Cloud slowly thinned and cleared away from many eastern areas during the early hours of the morning and this afforded a widespread ground frost across the north and a very localised air frost amongst the cooler Scottish Glens. All parts were dry and the west was mostly clear, although high cloud arrived later across Northern Ireland and the far west mainland.</p> <p>The morning continued to see the cloud breaking across the remaining parts of the country but at the same time high cloud invaded from the west to make the sunshine rather hazy at best. In the west the cloud thickened but it remained dry until late afternoon when some outbreaks of patchy light rain extended from western Wales across Northern Ireland into the Hebrides.</p> <p>Through the late afternoon and evening rain continued to push northeast into western mainland Scotland and into parts of Wales and western England. Elsewhere though it was generally dry but with thickening cloud.</p> <p>Temperatures were mostly near average, a few places in the east were a little below, whilst a few in the west were a little above average.</p>

SIGNIFICANT WEATHER

0600 GMT 19 JUNE 2001	SIG WEATHER	1200 GMT 19 JUNE 2001	SIG WEATHER	Summary of UK Weather for Tuesday 19 June 2001. The night was mainly cloudy across the United Kingdom. Occasional rain developed over Scotland and Northern Ireland, with patchy light rain across west Wales, the Isle of Man and later northern England. There were some clear intervals in southeast England where it became hazy with mist patches around dawn. It was a cloudy, windy day with occasional rain across Scotland and Northern Ireland. The rain was persistent and often heavy for the Outer Hebrides, Isle of Skye and Highland. The rain gradually edged away from northwest Scotland during the evening. England and Wales were mostly dry and cloudy, although intermittent light rain fell across parts of west Wales and northern England during the morning and the north Midlands and towards the Wash early afternoon. Much of southern England and the Channel Islands were warm with sunny spells or hazy sunshine. This sunny weather extended across most of Wales, the Midlands and East Anglia during the afternoon and evening. Temperatures were near or above average across the United Kingdom.

0600 GMT 20 JUNE 2001	SIG WEATHER	1200 GMT 20 JUNE 2001	SIG WEATHER	<p>Summary of UK Weather for Wednesday 20 June 2001.</p> <p>The night started cloudy with occasional rain for Northern Ireland and Scotland, with heavier bursts over the higher ground of southern Scotland. The rain weakened as it moved southeast to affect the Isle of Man, northwest England and Wales. Light rain finally reached the north Midlands by the end of the night as clear intervals and scattered showers followed to Northern Ireland, central and northern Scotland. Southern England and East Anglia remained dry with clear spells, although it became hazy with mist patches.</p> <p>Scotland and Northern Ireland had a day of sunny intervals and showers, locally heavy. A band of cloud with residual light rain and drizzle affected northern England, Wales and the Midlands during the morning. Meanwhile, southern England and East Anglia enjoyed hazy sunshine. Parts of southwest England were cloudy and misty during the afternoon, whereas much of England and Wales were dry and bright with sunny periods and broken cloud. The day was particularly sunny across southeast England and the Channel Islands.</p> <p>Afternoon temperatures were near average, but it was warm or very warm across east and southeast England.</p>

SIGNIFICANT WEATHER

0600 GMT 21 JUNE 2001	SIG WEATHER	1200 GMT 21 JUNE 2001	SIG WEATHER	Summary of UK Weather for Friday 15 June 2001. <p>The night started cloudy across the UK, with a broad band of rain lying from Northern Ireland across Southern Scotland, Northern England and down through East Anglia to Kent. During the night this crept slowly northwards into Central Scotland, whilst still affecting parts of Northern England and Northern Ireland by dawn. Bands of heavy showers also affected the southwest of England, Wales and West Midlands extending into Northwest England, with a few isolated showers into central southern England.</p> <p>During the day the rain extended into Northern Scotland, turning drier for a time across the south and more showery across Northern Ireland. Across England and Wales scattered showers developed fairly widely, heavy and thundery with some torrential downpours. Central Southern and Southeast England saw less activity with some good spells of sunshine.</p> <p>In the evening showery rain continued to affect Scotland and Northern Ireland with heavy showers across parts of England and Wales. Thunder mostly dying away.</p> <p>Winds were light or moderate. Daytime temperatures ranged on the cool side of average in the north, to warm in sunnier spots of England.</p>

DAILY CLIMATE DATA

DAILY WEATHER SUMMARY

SIGNIFICANT WEATHER

Summary of UK Weather for Monday 25 June 2001.

Most places had a dry night with clear spells. There were a few mist and fog patches around by dawn. There were a few showers in northern Scotland and some spread into Northern Ireland before the end of the night.

There were some showers in parts of Northern Ireland during the morning and a few reached southwestern part of Scotland. For most of the United Kingdom though, it was a dry day with long sunny spells. The sunshine was rather hazy at times across much of Scotland. There were early fog patches in the Isle of Man and along some western coasts and it stayed foggy in some parts of the Shetland and Orkney Isles.

In the evening, most places remained dry but thundery showers broke out across south Wales. It became rather cloudy across large parts of Northern England in particular. There was still some fog in the Northern Isles and isolated showers in northern Scotland. After a very mild night everywhere, it was a very warm or hot day generally and very hot in parts of the south.

0600 GMT 26 JUNE 2001	SIG WEATHER	1200 GMT 26 JUNE 2001	SIG WEATHER	<div>Summary of UK Weather for Tuesday 26 June 2001.</div> <div>Many places had a dry night, but thunderstorm affected North Wales, northern England and eastern Scotland during the early hours of the morning. This area of thundery rain spread into south and central Scotland and Northern Ireland during the morning to give a fairly wet day for these areas. Further north across Orkney and Shetland the day was cold with extensive low cloud, drizzle and fog. Showers continued to affect northeast England during the day, but much of central, southern and eastern England together with Wales had a dry, hot and fairly sunny day. However, low cloud and drizzle did affect coastal areas of Cornwall.</div> <div>During the evening the rain pushed into northern Scotland and further thundery showers affected southwest Scotland and northeast England. Thunderstorms in the eastern part of the English Channel ran across East Sussex and Kent before midnight. Temperatures across Northern Ireland and much of Scotland were near normal or rather cool, although northwest Scotland was rather warm. Northern and the extreme Southwest of England were near normal, but elsewhere across England and Wales it was hot or very hot.</div>
