FORECAST DISTRICTS AND BRITISH STATIONS.

STATIONS USED FOR UPPER AIR SUPPLEMENT.

BEAUFORT NOTATION OF WEATHER.

b blue sky (not more than a quarter covered).
bc sky partly cloudy (one half covered).
c generally cloudy.
d drizzle. h hail. KQ line squall.
o overcast sky.
m mist, visibility 1000-10000 m.
f fog. " 200-1000 m.
F thick fog. " less than 200 m.
jp precipitation within sight of station.
p passing showers. r rain.
s snow. rs sleet. t thunder.
v unusual visibility. y dry air.
x dust haze; the turbid atmosphere of dry weather.

With present weather is combined, whenever possible, the general character of the weather. A "solidus" divides actual existing weather from preceding conditions, thus: bc/r = fair weather after rain; i = intermittent; - = "decreasing"; + = "increasing"; h(r) = "hail" or "rain and hail".

Capital letters indicate intensity, suffix o indicates slight; and repetition of letters continuity, thus:—
R = heavy rain.
rr = continuous moderate rain.
rofo = continuous light rain.

THE BEAUFORT SCALE OF WIND FORCE.

Beaufort Number.	Admiral Beaufort's General Description of Wind.	Specification for use on Land, based on observations made at Land Stations.	Limits of Mean Velocities Statute Miles per Hour.
0	Calm ...	Calm; smoke rising vertically	Less than 1
1	Light air ...	Direction of wind shown by smoke drift	1-3
2	Slight breeze ...	Wind felt on face; leaves rustle	4-7
3	Gentle breeze ...	Leaves and small twigs in constant motion; wind extends light flag	8-12
4	Moderate wind ...	Raises dust and loose paper; small branches are moved	13-18
5	Fresh wind ...	Small trees in leaf begin to sway; crested wavelets on inland waters...	19-24
6	Strong wind ...	Large branches in motion; whistling heard in telegraph wires	25-31
7	High wind ...	Whole trees in motion; inconvenience felt when walking against wind	32-35
8	Gale ...	Breaks twigs off trees; generally impedes progress	39-46
9	Strong gale ...	Slight structural damage occurs (chimney pots and slates removed)	47-54
10	Whole gale ...	Seldom experienced inland; trees uprooted	55-63
11	Very rarely experienced; accompanied by widespread damage	64-75
12	Hurricane	Above 75

GALE WARNINGS.

The Meteorological Office issues warnings to ports and fishing stations of gales on or near the coasts of the British Isles. When one of these notices has been received at a station a black canvas cone is hoisted.

The South Cone (point downwards) is hoisted for gales from S.E., veering to S.W., W. or N.W.
" S.W., veering to W. or N.W.
" W., veering to N.W.
" E., veering to S. or S.W.

The North Cone (point upwards) is hoisted for gales from S.E., E. or N.E., backing to N.
" N.W., veering to N., N.E. or E.
" N., veering to N.E. or E.
" N.E., veering to E.

The Signals remain hoisted after the receipt of a warning telegram until danger of a gale is passed.

The Districts to which warnings are sent are shown in the British Section of the Daily Weather Report by the following symbols:—

▼ South Cone hoisted.
▲ North " "

METEOROLOGICAL OFFICE, LONDON.

NOTES ON THE INFORMATION CONTAINED IN THE BRITISH AND INTERNATIONAL SECTIONS OF THE DAILY WEATHER REPORT.

Heights of Stations.—The heights of British Stations above M.S.L. published in the British Section of the Daily Weather Report refer to the plot of ground on which the rain gauge is situated.

The heights published in the Report were revised on January 1st, 1926, certain of those published previously having been in error.

Pressure.—The distribution of barometric pressure at Mean Sea Level is shown by means of isobars which are drawn for intervals of 2 millibars on the British Section of the Report and for intervals of 4 millibars on the International Section.

The wind at a height of 1,500-2,000 feet above ground usually blows along the isobars and, for the same temperature, pressure and latitude, the speed of the wind is inversely proportional to the distance between the isobars, e.g., for isobars 1 inch apart (160 miles) in the Daily Weather Report the speed of the upper wind is about 12 m.p.h. in latitude 55°, with a temperature of 50° F. and a pressure of 1,015 mb; if, however, the isobars are $\frac{1}{2}$ inch apart the corresponding speed is 24 m.p.h.

The scale below can be used with both the International and the British Sections. If the distance between consecutive isobars is measured along the rule from the left-hand extremity the geostrophic wind is shown by the scale in miles per hour.

GEOSTROPHIC WIND SCALE FOR

4 mb isobars on 1 : 2 × 10⁷ Charts.
or 2 mb " " 1 : 10⁷ " "
or 1 mb " " 1 : 5 × 10⁶ " "

This scale applies under the following conditions:—

Pressure, 1,015 mb. Temperature, 50° F. Latitude, 55°.

Corrections.—For an increase of 10 mb pressure, subtract 1% from velocity; for an increase of 10° F. add 2%. From Latitude 55° to Latitude 65° subtract 1% for each degree above 55°. From Latitude 55° to Latitude 45° add 1½% for each degree below 55°.

Temperature.—Temperature is specified in degrees Fahrenheit, and is shown on the charts by means of figures written alongside the circles which indicate the positions of the stations.

Upper Air Temperature.—The British observations are made normally, one at 1,000 feet above the level of the aerodrome, and the remainder at pressures of 950, 900, 850, 800, etc., millibars. Heights are then computed and, apart from instrumental error, are correct heights: they do not require modification for differences of temperature from normal as these are allowed for in the computation. The values are shown graphically and in tabular form in the Upper Air Supplement. On the diagram, temperatures are given in degrees Fahrenheit and Absolute. The oblique line marked "Dry Adiabatic" shows the lapse rate of temperature for dry air ascending or descending under adiabatic conditions, i.e., without communication of heat from external sources. The lapse rate under these circumstances is very approximately 5.5° F. per 1,000 feet, or 10°a per kilometre. A lapse rate greater than this value indicates instability in a dry atmosphere.

The broken lines marked Saturated Adiabatic show lapse rates for saturated air. These are for air masses which contain just sufficient moisture at 1,015 mb. pressure to become saturated after rising 1 km. in an environment having the dry adiabatic lapse rate. The condensed moisture is assumed to be retained thereafter in the air as it rises.

Times of Sunrise, Noon and Sunset.—From January 1st, 1926, the times of Sunrise, Noon and Sunset published in the British Section of the Report for certain stations have been recalculated from (1) the figures for the duration of sunshine contained in the International Meteorological Tables and (2) the value of the sun's declination and the equation of time published in the Nautical Almanac. The change of declination of the sun on the same day from year to year over a cycle of four years is now taken into account. This change has formerly been neglected, as stated in previous issues of Form 2373.

Wind.—All wind directions specified in the reports are "true," as distinguished from "magnetic." The arrows indicating wind direction are drawn to fly with the wind. Wind velocities are shown on the charts of the British Section and Upper Air Supplement in m.p.h. by the numbers placed within the small circles. In the International Section velocities are not shown. In both Sections the number of feathers on the arrows denotes wind force by Beaufort number.

Upper Winds.—The direction and velocity of the wind are given in the charts of the Upper Air Supplement for heights of 2,000 feet and 6,000 feet. The data are also given in tabular form for various heights. The reports are usually based on Pilot Balloon ascents.

Wind reports deduced from British Pilot Balloon Ascents refer to the 1,000 feet layers centering at the heights given in the table up to 16,000 feet. When winds are reported at greater heights, they refer to the 5,000 feet layers centering at 20,000 feet, 25,000 feet, 30,000 feet and 35,000 feet.

In the tabular statement direction is specified in degrees from true north measured through East 90°, South 180°, West 270° to North 360°. (See diagram below.)

Sea Disturbance.—The code for sea disturbance used at coastal stations is given on p. 1 of the British Section of the Report. Ships at sea use the following code:—

0. No or slight swell	} and { Sea smooth to moderate.	5. No or slight swell	} and { Sea rough or above.
1. Moderate swell		6. Moderate swell	
2. Heavy " "		7. Heavy " "	
3. Long low " "		8. Long low " "	
4. Confused " "		9. Confused " "	

NOTE.—The maximum and minimum temperatures published on p. 4 of the British Section of the Report for Southport have referred to the periods 9h. to 17h. and 17h. to 9h. respectively throughout the quarter, and not to those stated in the footnote to the Report from January 1st to March 7th, 1926.

SUPPLEMENT TO THE DAILY WEATHER REPORT OF THE METEOROLOGICAL OFFICE, LONDON.
SUMMARY OF METEOROLOGICAL OBSERVATIONS AT SELECTED STATIONS ISSUED ON THE 1st DAY OF EACH MONTH.

Notes on the Weather of MARCH, 1926.

Perhaps the most outstanding feature of the weather of March 1926 was the scarcity of rainfall. Considerably less than half the average fell in many places while in several instances the total only amounted to a few millimetres: 5 mm. at Kew constituted a record for March at that observatory, being 1 mm. less than in 1893.

Mild weather which had prevailed in February continued to predominate during the first half of March but the passage of vigorous secondaries associated with depressions near Iceland frequently caused the winds to strengthen to gale force. On the 3rd. and 4th. and again on the 9th. and 10th. gusts of 70 - 80 miles per hour occurred in several places: Fleetwood registered a gust of 84 miles per hour on the 10th. In the rear of a depression which passed to Scandinavia on the 4th. there was a marked, though temporary drop in temperature with snow, hail or sleet showers in many places and thunder locally.

About the 16th, an anticyclone moved northwards across England, winds became more easterly in the south, the weather colder with some fog locally inland and a few showers on the east coast. High easterly winds prevailed in the Channel on the 21st.- 23rd. and at times on the east coast also, snow or sleet fell in many places including London though the amounts were generally quite small.

Meanwhile a decrease of pressure was spreading from the southwest and by the 26th. a warmer, southerly current was affecting the southeast counties. Temperature rose above 55°F. again and a shallow depression over the Channel caused a few millimetres of rain in many places about this time. During the last few days a large depression approached from the Atlantic giving considerable rain in the southwest but fair weather prevailed in the southeast with rather high day temperature but some frost at night.

A brilliant and extensive display of Aurora Borealis was witnessed on the evening of the 9th. It was observed as far south as the Channel Islands.

[illegible]

+ Since March 1st, 1921, the readings used have (except in the case of Phoenix Park & Bidston) been the maximum for the period 7h.-18h., and the minimum for the period 18h.-7h. Bidston now adopts the same practice. The normal values given above are based upon extremes taken over the 24 hours.

NOTES ON CHART OF ISOPLETHS (p. 4).

The diagram is obtained by drawing a line from Akureyri in Iceland to the South of France, near Marseilles. The points at which the isobars drawn for 4 mb pressure intervals intersect this line at 1h, 7h, 13h, and 19h, are plotted consecutively and joined to show the variation of pressure from day to day at any point in the line. The line terminates at Lat. 68° N., Long. 18° W. in the north, at Lat. 44° N., Long. 4° E. in the south.

* Based in part on reports made by telegraph in which the day & night measurements are rounded off to the nearest whole millimetre. Small discrepancies may arise between the totals and those given in the Monthly Weather Report which are based on readings taken to 0.1 mm.

GENERAL INFERENCE.

A large anticyclone centred off our S.W. coasts is moving eastwards while a depression is approaching Iceland from the Atlantic. Secondaries are likely to approach our Western Seaboard and maintain in Northern districts unsettled weather with winds reaching gale force at times locally. In southern districts mainly fair to cloudy and quiet weather will continue for a time.

Districts.

Forecasts for the 24 hours commencing 15h. G.M.T. Monday, 1st March, 1926.

Further Outlook.

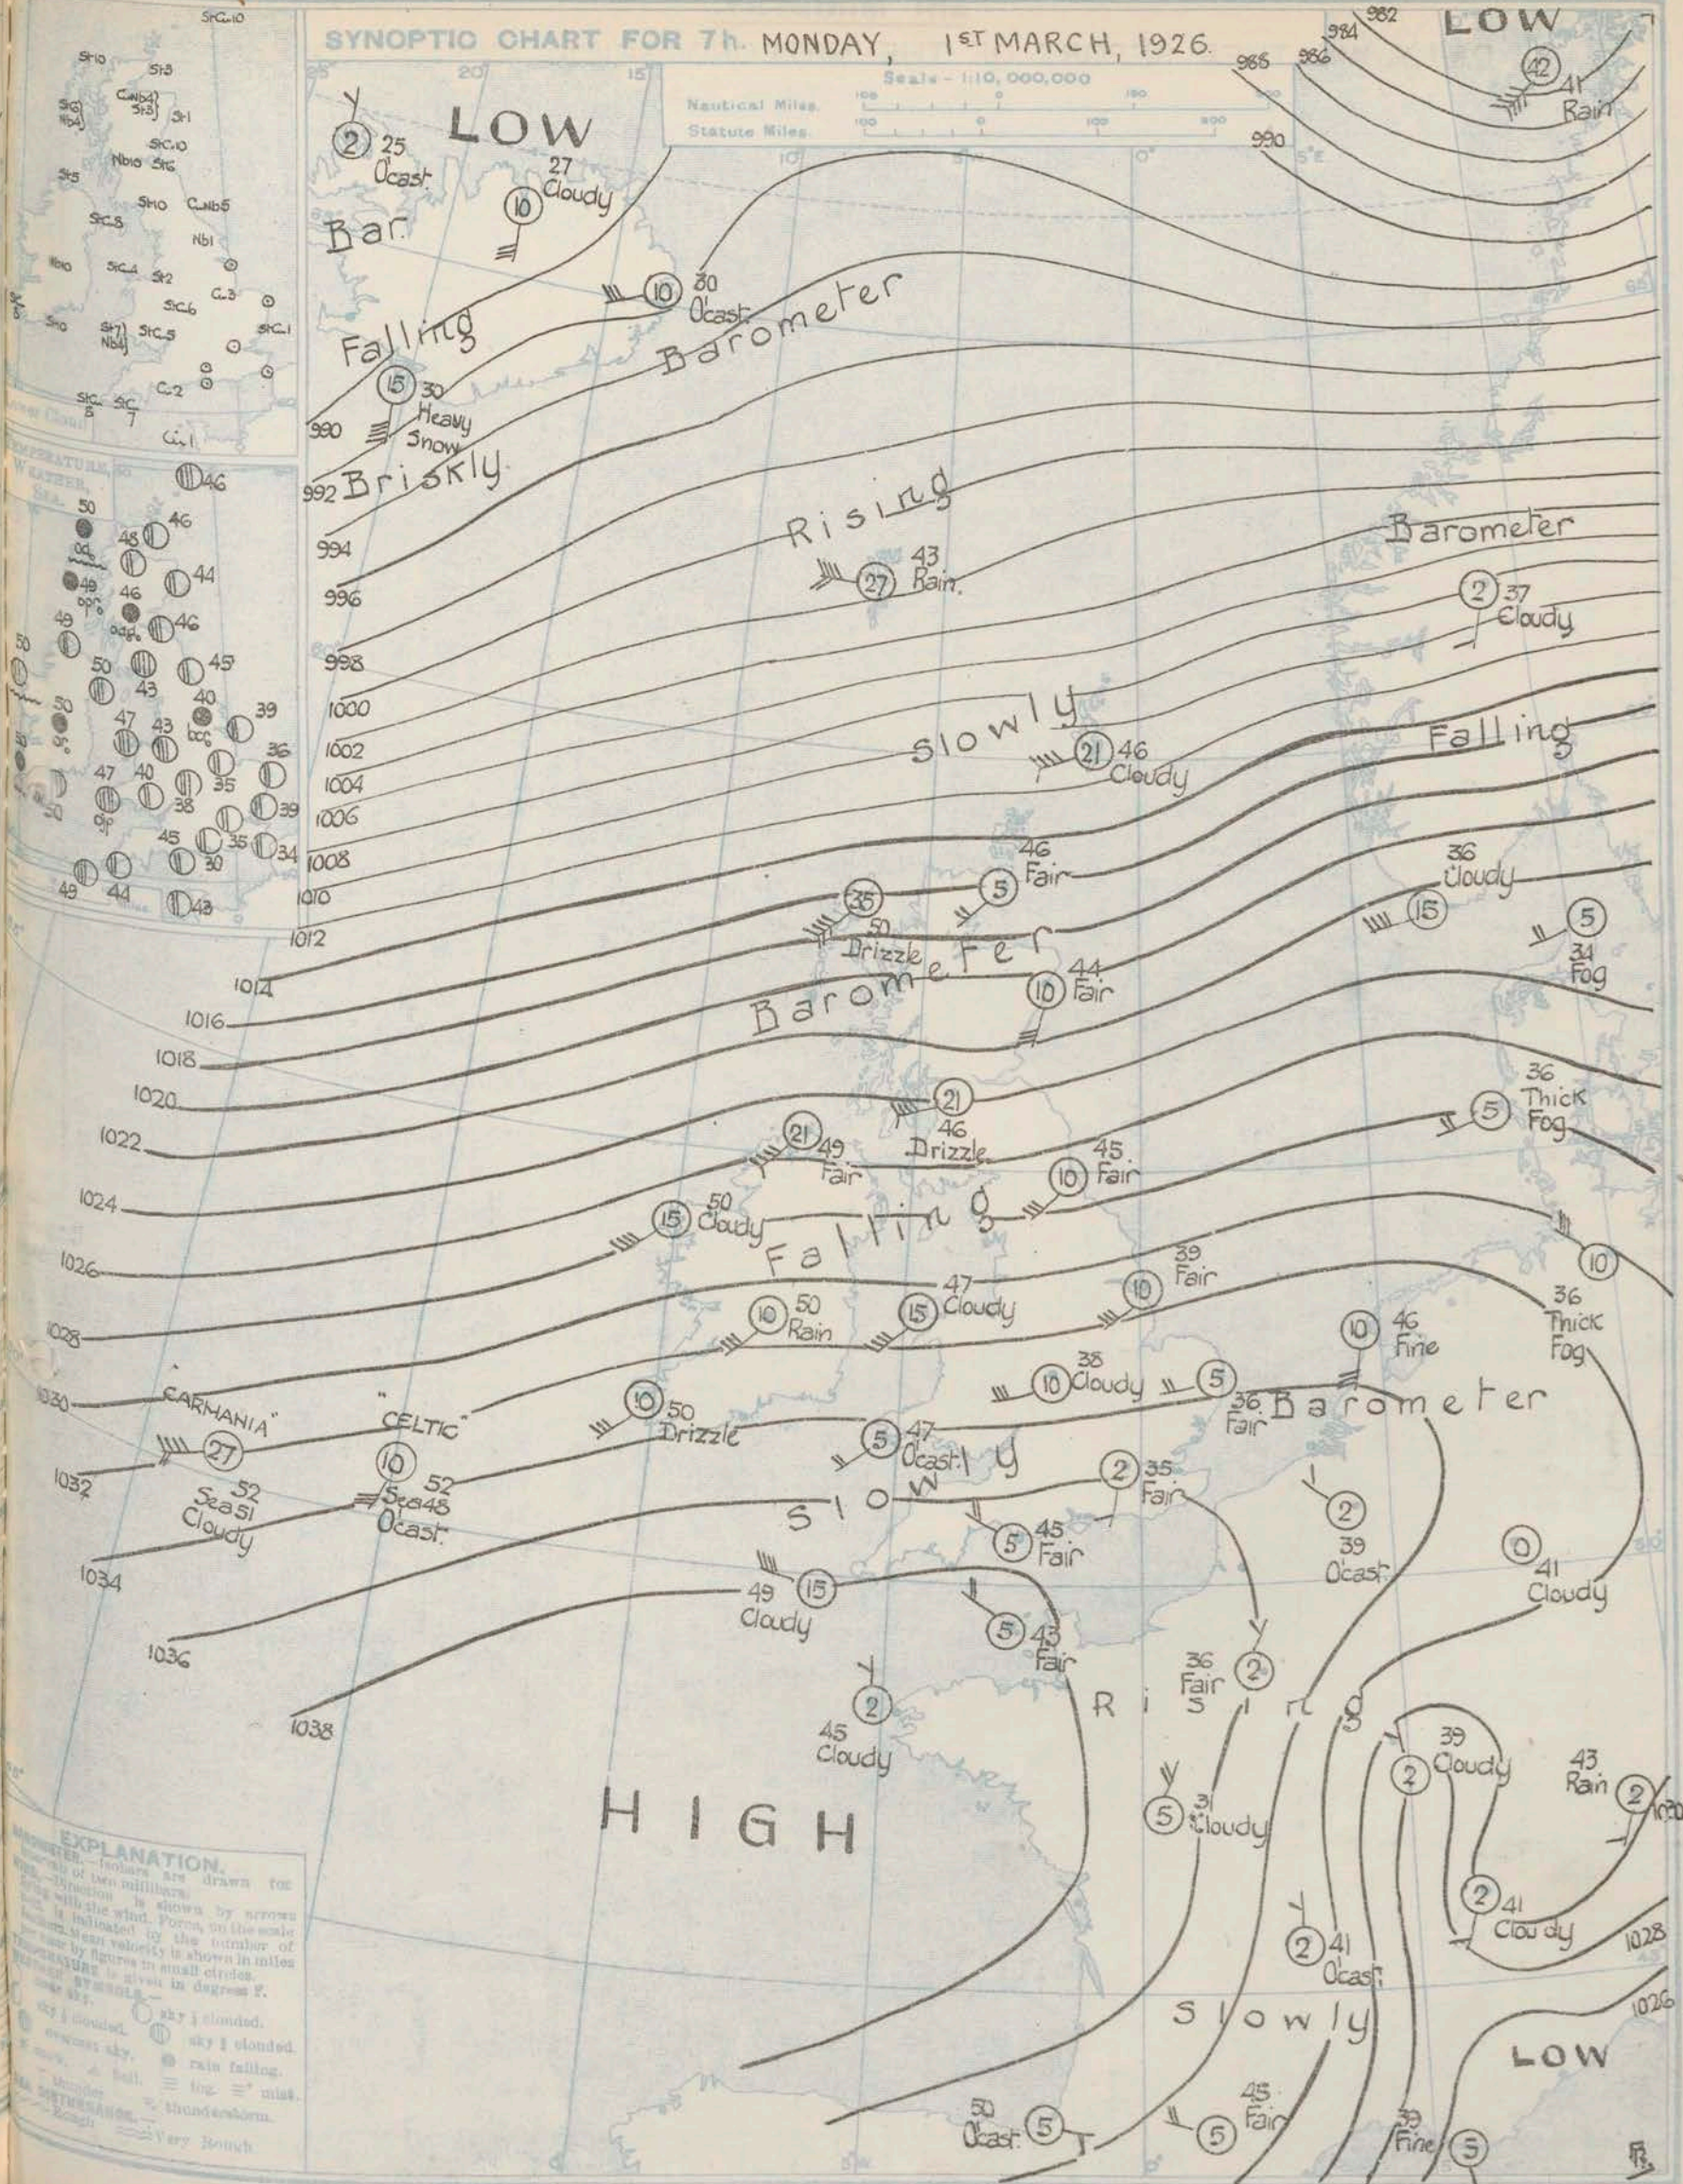

1. S.E. England	Wind variable to westerly, light or moderate; fair to cloudy with slight risk of local showers tomorrow; morning mist or fog locally; mild by day, ground frost locally at night.
2. E. England	
3. E. Midlands	
4. W. Midlands	
5. S.W. England	Wind westerly, light to moderate or fresh; fair to cloudy with occasional rain later; visibility mainly good, but risk of local coastal mist or fog; mild during day.
6. South Wales	
7. North Wales	Wind W. to S.W. moderate to strong; cloudy, occasional slight showers or drizzle locally today, rainy tomorrow; visibility mainly moderate to good; mild.
8. N.W. England	
9. N. Midlands	
10. N.E. England	
11. E. Scotland	Wind W. to S.W. strong to gale at times; cloudy to dull, some rain or drizzle; visibility poor at times; mild.
12. S.W. Scotland	
13. Isle of Man	
14. N. & N.W. Scotland	
15. Hebrides	As 7-13.
16. Orkneys and Shetlands	
17. N.W. Ireland	Wind W. to S.W. moderate, freshening; cloudy, occasional rain or drizzle; risk of local coastal mist or fog; mild.
18. N.E. Ireland	
19. S.E. Ireland	
20. S.W. Ireland	

Continuing unsettled in Northern and Western districts, probably becoming gradually less settled elsewhere.

South Cone still flying.

GENERAL INFERENCE.

Deep depressions are likely to pass eastwards between Scotland and Iceland during the next day or two, and secondary disturbances associated with them will pass directly across the British Isles and cause showers of rain, sleet, and snow, and local thunderstorms with bright intervals. Winds will remain westerly, strong to gale at times.

GENERAL INFERENCE

Cold winds from between west and north of decreasing strength are probable during the next twentyfour hours with mainly sunny weather and occasional local showers but a lively depression southwest of Iceland should move east and cut off the supply of Arctic air. Frost will be fairly general tonight in England and Scotland, but tomorrow the temperature is likely to become higher than of late.

Further Outlook

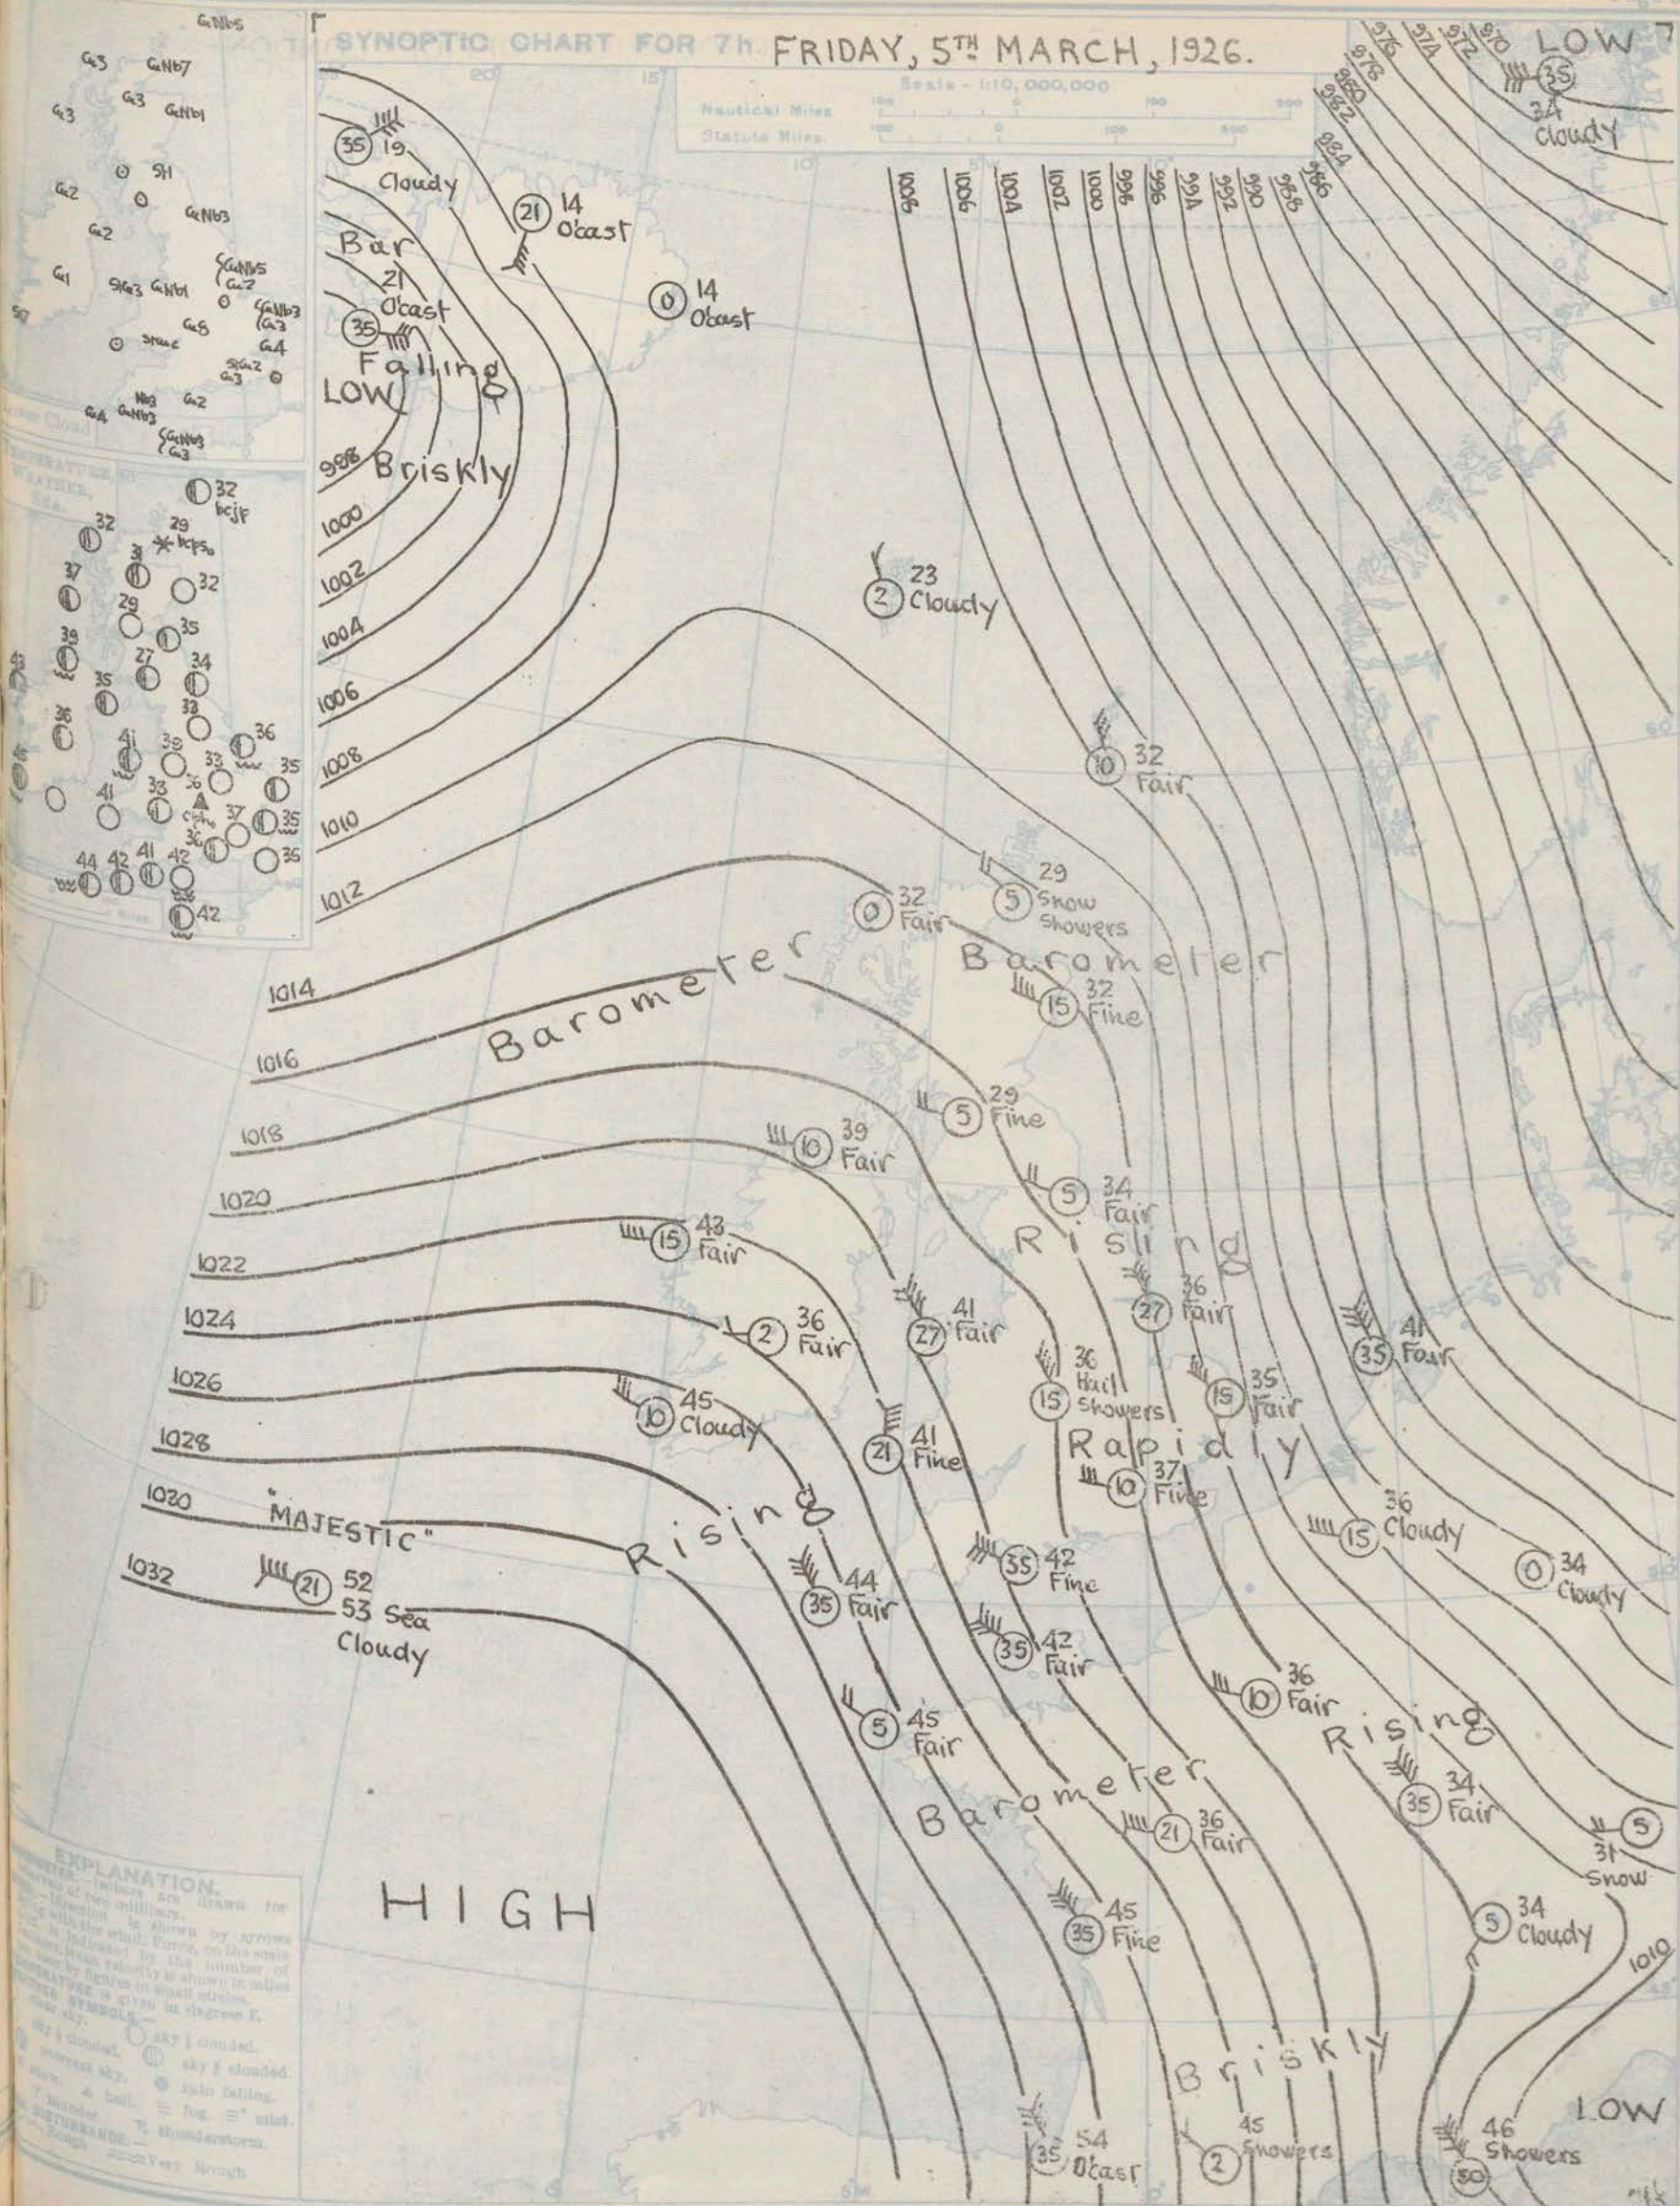

Westerly winds and changeable weather.

South cone still flying.

GENERAL INFERENCE.

A depression located between Iceland and Scandinavia will move away eastwards and secondaries will continue to cross the British Isles. Weather will be changeable and rather mild with alternating rainy and fair periods and winds will remain mainly westerly, strong to gale at times in exposed places.

Unsettled,
probably
becoming
colder again
for a brief
period.

EXPLANATION.
Barometer - isobars are drawn for every 2 millibars.
Wind - direction is shown by arrows.
Force - is indicated by the number of lines.
Rain - is shown by a vertical line with a horizontal bar at the top.
Snow - is shown by a vertical line with a horizontal bar at the top and a small circle at the bottom.
Sleet - is shown by a vertical line with a horizontal bar at the top and a small circle at the bottom.
Clouds - are shown by a series of horizontal lines.
Thunder - is shown by a series of horizontal lines with a small circle at the bottom.
Fog - is shown by a series of horizontal lines with a small circle at the bottom.
Mist - is shown by a series of horizontal lines with a small circle at the bottom.
Very Rough - is shown by a series of horizontal lines with a small circle at the bottom.

GENERAL INFERENCE.

A deep depression south of Iceland is likely to move eastward and secondary disturbances associated with it will cross the British Isles causing some rain or drizzle at times in all districts. Winds will continue generally from some westerly point and will reach gale force locally in exposed places.

Further Outlook.

Districts.	Forecast for the 24 hours commencing 15h G.M.T. Sunday, 7th March, 1926.
1. S.E. England	Moderate westerly winds, freshening to strong; occasional rain or drizzle, but some fair intervals; visibility moderate; rather mild.
2. E. England	
3. E. Midlands	
4. W. Midlands	
5. S.W. England	Freshening westerly winds, strong to a gale locally in exposed places; occasional rain or drizzle, but some fair intervals; visibility moderate; rather mild.
6. South Wales	
7. North Wales	
8. N.W. England	
9. N. Midlands	
10. N.E. England	As 1 - 4.
11. E. Scotland	
12. S.W. Scotland	As 5 - 9.
13. Isle of Man	
14. N. & N.W. Scotland	Freshening westerly wind, reaching gale force locally; dull, occasional rain at first, fairer periods, with risk of hail or sleet showers later; visibility moderate to good; changeable temperature.
15. Hebrides	
16. Orkneys and Shetlands	
17. N.W. Ireland	
18. N.E. Ireland

GENERAL INFERENCE.

A large anticyclone centred over the Southern part of the Bay of Biscay is moving slowly northeastward. Pressure is very low west of Iceland, and vigorous secondaries are likely to move northeastward outside our N.W. coasts. Weather will continue dry in the south and east of England, but further, rain and gales will occur in the Northwest.

Districts.

Nautical Miles.
Statute Miles.

Scale - 1:10,000,000

EXPLANATION.
Isobars 520 drawn for
of two millibars.
Direction is shown by arrows
with the wind. Force, on the scale,
is indicated by the number of
isobars. Mean velocity is shown in miles
per hour by figures in small circles.
Pressure is given in degrees F.

GENERAL INFERENCE.

Pressure is highest over France and a deep depression is approaching South Greenland. A new anticyclone has developed N.E. of Iceland and will probably move S.E. and eventually transfer the region of highest pressure to Scandinavia. Wind will become more southerly, and weather will be fair except in the extreme North and West, with decreasing cloud amounts.

Districts.	Forecasts for the 24 hours commencing 15h. G.M.T. Saturday, 13th March, 1926.	Further Outlook
1. S.E. England	Wind W., backing S., light; fair; local morning mist; mild during day.	Wind probably SE. or E. with mainly fair weather but a fall of temperature, and frosts at night.
2. E. England		
3. E. Midlands		
4. W. Midlands		
5. S.W. England		
6. South Wales		
7. North Wales		
8. N.W. England		
9. N. Midlands		
10. N.E. England		
11. E. Scotland	Wind becoming variable, light; mainly fair, but risk of local rain, chiefly in North part of district; mist locally; mild at first, perhaps colder later.	
12. S.W. Scotland	As 1-10.	
13. Isle of Man	Wind backing S., light to moderate or fresh; cloudy, local drizzle, but tending to improve; visibility moderate to good; mild.	
14. N. & N.W. Scotland	As 1-10.	
15. Hebrides	Wind easterly, light or moderate; some cold showers but improving, with bright intervals; visibility good; cold.	
16. Orkneys and Shetlands	As 20.	
17. N.W. Ireland	Wind S. light to moderate or fresh; fair to cloudy; visibility moderate to good; mild.	
18. N.E. Ireland		
19. S.E. Ireland

 @ = solar halo. @ = lunar halo.
 With present weather is combined, whenever possible, the general character of the weather.
 A "solidus" divides actual existing weather from preceding conditions, thus: -bc/r = fair weather after rain; - = has decreased; + = has increased.

THE BEAUFORT SCALE OF WIND is used only for surface observations. In the accompanying table the speed of the wind corresponding with the different numbers, is the speed at about 30 feet above the ground.

EXPLANATION.
Isobars are drawn for every 2 units of pressure.
Wind direction is shown by arrows.
Wind force is shown by the number of strokes.
Temperature is shown in small circles.
Weather symbols are given in degrees F.
Cloud symbols are given in degrees F.
Sky symbols are given in degrees F.
Sky: 1. clear, 2. cloudy, 3. overcast, 4. rain, 5. rain falling, 6. fog, 7. fog & rain, 8. thunderstorm, 9. very rough.

GENERAL INFERENCE.

From an anticyclone centre over the Bay of Biscay a ridge of high pressure extends northwards across the British Isles. Secondaries to a depression near Greenland are likely to skirt our Northwest Seaboard. Apart from local morning mist or fog, weather will be mainly fair, but there is a risk of slight rain or drizzle along our northwest coasts. Temperature will be high by day but ground frost will occur locally at night.

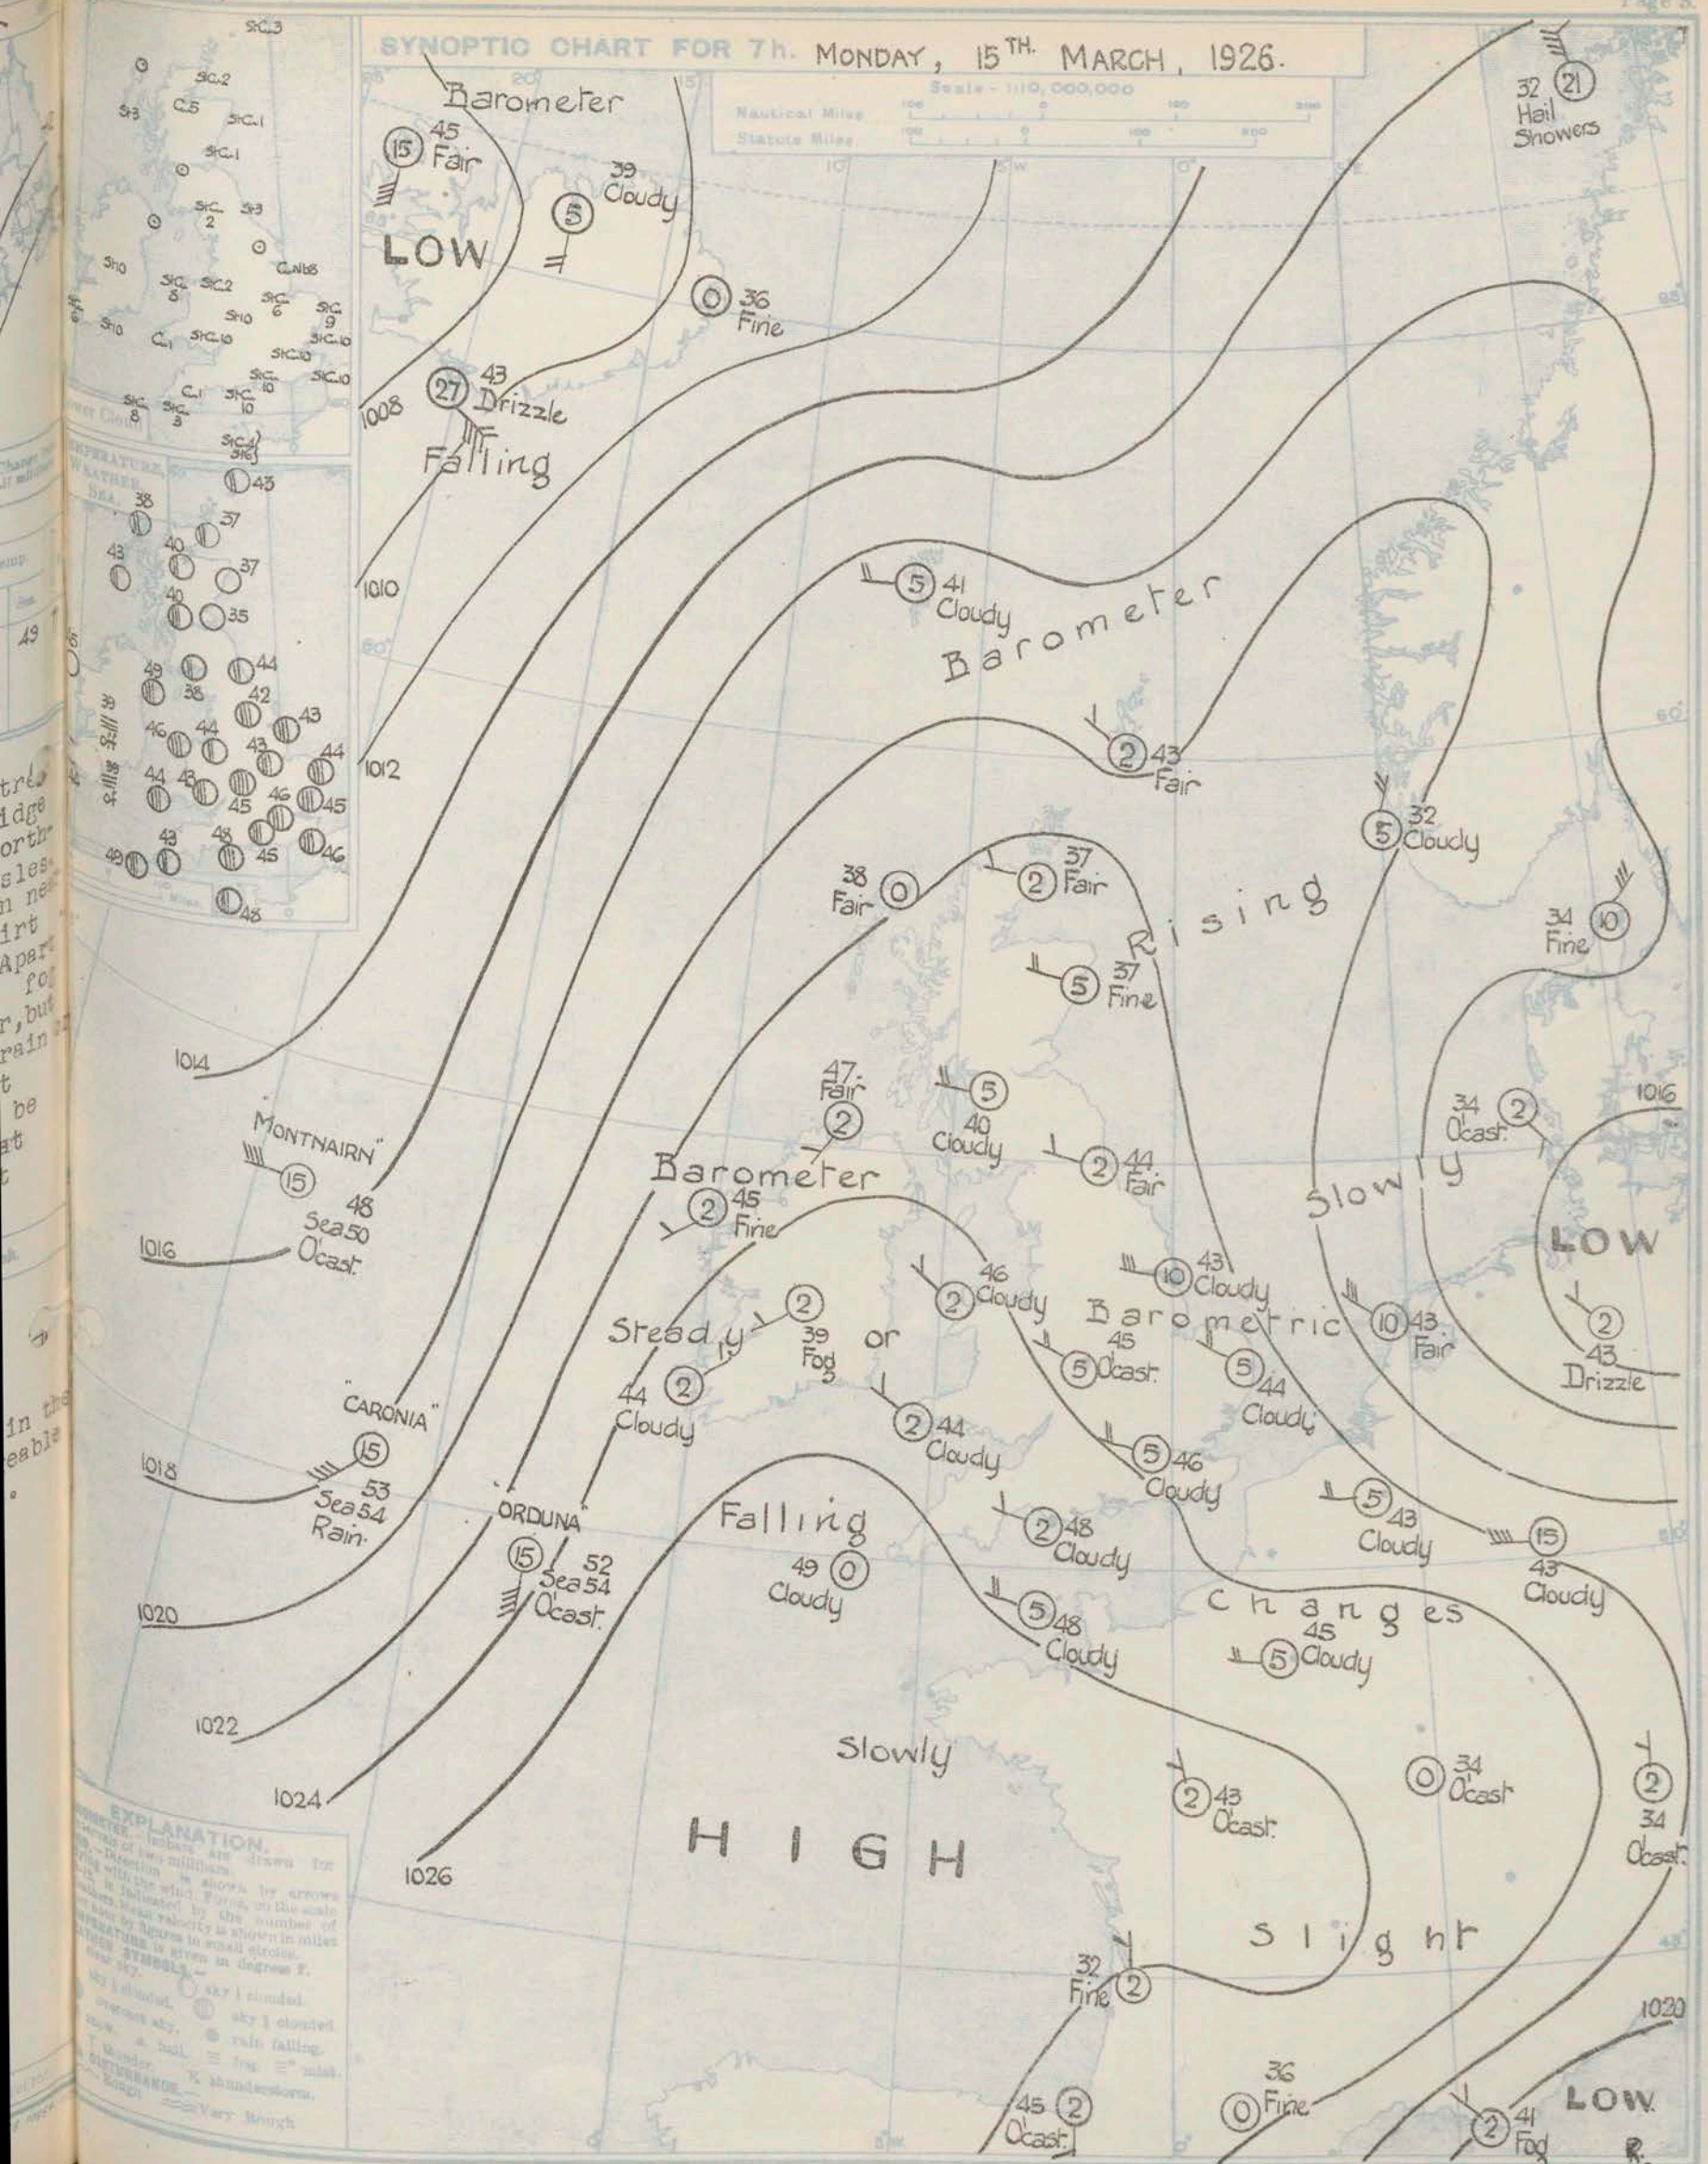

Districts.

Forecasts for the 24 hours commencing 15h. GMT. Monday, 15th March, 1926.

Further Outlook

1. S.E. England	Westerly wind, light to moderate; fair to cloudy; morning mist or fog in places; mild by day, ground frost locally at night.

3. E. Midlands	
4. W. Midlands	
5. S.W. England	
6. South Wales	
7. North Wales	
8. N.W. England	
9. N. Midlands	
10. N.E. England	
11. E. Scotland	Wind variable, light, freshening from between S.W. and S.; fine to fair at first, cloudy to dull later with perhaps rain or drizzle at times locally; visibility mainly moderate to good but morning mist in places; mild by day but risk of ground frost locally at night.
12. S.W. Scotland	
13. Isle of Man	
14. N. & N.W. Scotland	
15. Hebrides	
16. Orkneys and Shetlands	
17. N.W. Ireland

GENERAL INFERENCE.

An anticyclone is centred on the British Isles and a depression to the south of Greenland. Apart from local mist or fog weather will be mainly fair to cloudy. Secondaries are likely to move northeastwards between Iceland and Scotland and maintain a changeable type of weather in Northwestern districts.

Districts.	Forecast for the 24 hours commencing 15h. GMT. Tuesday, 16th March, 1926.	Further Outlook.

GENERAL INFORMATION.

A belt of high pressure extends from north of the Faeroes across the British Isles to Southern Germany and a trough of low pressure stretches from Southern Greenland to the Bay of Biscay. The southern portion of the trough will probably become detached, forming a separate centre of low pressure and move away over Spain to the Mediterranean. Weather will continue fine to fair in eastern districts but cloudier conditions with perhaps local rain or drizzle are likely in extreme western and southwestern districts.

GENERAL INFERENCE.

From an anticyclone centred between Iceland and Scandinavia a ridge of high pressure extends southwards and covers the British Isles. A belt of relatively low pressure stretches from the west of Greenland across the Atlantic and over Spain to the Mediterranean. Apart from morning mist or fog locally and a risk of showers along our Eastern Seaboard mainly fair and quiet weather will continue. Ground frost will be general at night.

Districts	Forecast for the 24 hours commencing 15h. GMT Thursday, 18th March, 1926.	Further Outlook
1. E.E. England	Light winds, mainly between N. and E.; fair; local morning mist or fog; moderate day temperature; frost locally at night.	Quiet weather continuing.
2. E. England	Wind northerly, light or moderate; fair to cloudy with a risk of local showers near coast; local morning mist; rather cold, with ground frost at night.	
3. E. Midlands	As 1.	
4. W. Midlands	Wind E. to S.E., light or moderate; fair; visibility moderate to good; moderate day temperature, ground frost locally at night.	
5. S.W. England	As 1.	
6. South Wales	As 1.	
7. North Wales	As 1.	
8. N.W. England	As 1.	
9. E. Midlands	As 1.	
10. N.E. England	Winds variable, light or moderate; fair to cloudy, risk of local showers; visibility good; rather cold, night frost in places.	
11. E. Scotland	As 1.	As 5 - 7.
12. S.W. Scotland	As 1.	
13. Isle of Man	As 1.

Pressure, though still highest north of Scotland, has fallen in those parts, and a gradual decrease in the strength of the easterly winds over the British Isles is likely. Cold weather will continue, however, for at least two days, and occasional sleet or snow showers are expected today in most districts.

Districts. Forecasts for the 24 hours commencing 15h. GMT. Tuesday, 23rd March, 1926.

1. S.E. England	Wind N.E. to E., strong at first, probably less strong later; mainly fair, but some dull periods; visibility moderate to good; continuing cold.
2. E. England	
3. E. Midlands	
4. W. Midlands	
5. S.W. England	
6. South Wales	
7. North Wales	Wind N.E. to E., fresh to strong, decreasing; mainly cloudy, a few local showers of sleet or snow; visibility moderate to good; continuing cold.
8. N.W. England	
9. N. Midlands	
10. N.E. England	
11. E. Scotland	
12. S.W. Scotland	
13. Isle of Man	Moderate easterly winds; mainly fair; visibility moderate to good; continuing cold.
14. N. & N.W. Scotland	
15. Hebrides	
16. Orkneys and Shetlands	
17. N.W. Ireland	
18. N.E. Ireland	
19. S.E. Ireland	Wind N.E. to E., fresh at first, probably moderating; mainly fair; visibility moderate to good; continuing cold.

GENERAL INFERENCE.

An anticyclone is likely to continue north of Scotland while the lowest pressure will be south and southwest of the British Isles. Winds will continue easterly over the British Isles, becoming fresh to strong again in the Southwest, and the weather will be fair to cloudy and rather cold with perhaps some rain later in the Southwest.

Districts.	Forecast for the 24 hours commencing 15h. G.M.T. Thursday, 25th March, 1926.	Further Outlook.
1. S.E. England	Light to moderate winds, mainly from between E. and N.E.; fair to cloudy; local fog; rather cold, frost in most places at night.	Easterly winds rather cold weather generally; mainly fair and dry, at least in the western districts; further night frosts.
2. E. England		
3. E. Midlands		
4. W. Midlands		
5. S.W. England	Freshening easterly winds; mainly cloudy, probably some rain later; visibility moderate to good; rather cold.	
6. South Wales

EXPLANATION.

Isobars are drawn for
every 2 millibars.
Direction is shown by arrows
with the wind. Force, on the scale
is indicated by the number of
feet per second. Rain is shown in
small circles.
Temperature is given in degrees F.

GENERAL INFERENCE.

A large area of high pressure which covers Scandinavia and the regions round the Baltic is likely to continue for the next few days while pressure remains low southwest of the British Isles. Winds will be easterly and the weather rather cold, but mainly fair after local rain or drizzle today in Western England and Southern Ireland.

Districts.	Forecast for the 24 hours commencing 15h. G.M.T. Friday, 26th March, 1926.	Further Outlook
1. S.E. England	Light to moderate easterly winds; mainly cloudy but sunny intervals in most places; local fog; rather cold.	Easterly winds; mainly fair, at least in the western districts; rather cold.
2. E. England		
3. E. Midlands		
4. W. Midlands		
5. S.W. England	Light to moderate easterly winds; mainly cloudy at first with local rain or drizzle, improving; some mist or fog; rather cold.	
6. South Wales		
7. North Wales		
8. N.W. England		
9. N. Midlands	As 1-4.	
10. N.E. England		
11. E. Scotland		
12. S.W. Scotland		
13. Isle of Man		
14. N. & N.W. Scotland		
15. Hebrides		
16. Orkneys and Shetlands		
17. N.W. Ireland	Light to moderate easterly winds; mainly cloudy, local rain or drizzle, probably improving later; some mist; rather cold.	
18. N.E. Ireland		
19. S.E. Ireland		
20. S.W. Ireland
