

National Severe Weather Warning Service

Chief Forecasters Assessment

Warm, moisture laden air from the south will meet cold air to the north, generating an active frontal system later on Friday and into Saturday. Rainfall will be enhanced by air rising up southeast facing slopes in the strong flow, with over 40 mm of rain in places, and the potential for locally more than 60 mm in higher river catchments. This is likely to give enhanced river levels within, and downstream of, the wettest areas.

The Met Office have issued a **Yellow Warning of Rain**

Valid from **00:05 on Sat, 19th Oct 2013** until **12:00 on Sat, 19th Oct 2013**

Rain arriving later on Friday will turn heavy and persistent on Saturday over parts of Tayside and Angus. The public should be aware of the risk of localised flooding.

This is an update to the Alert issued yesterday to bring the expiry time forward to midday Saturday, since it now looks likely that the rain will have cleared by the afternoon.
