

National Severe Weather Warning Service

Chief Forecasters Assessment

The warm, humid continental airmass will persist across eastern England into the first part of Friday and there remains the possibility of further localised intense downpours occurring. However, the situation remains finely-balanced and there is considerable uncertainty as to the extent of the showers or thunderstorms. Please monitor the website for any further updates.

The Met Office have issued a **Yellow Warning of Rain**

Valid from **00:05 on Fri, 21st Jun 2013** until **09:00 on Fri, 21st Jun 2013**

Further heavy showers or outbreaks of heavy thundery rain could occur across eastern parts of England on Friday. These are more likely in the early hours of Friday into Friday morning. There is a low risk of intense thundery downpours giving locally 15-20 mm in an hour and 30-40 mm in 3 hours. These should largely ease from the west during the morning, although further scattered thundery showers are possible on Friday afternoon. However these are less likely to lead to any disruption.

The public should be aware of the risk of localised surface water flooding,
