SATURDAY
1 SEPTEMBER 1984SUMMARY
OF
BRITISH WEATHER

Northern England, Northern Ireland and southern Scotland had quite a lot of rain overnight, but during the morning it became mostly light and intermittent whilst extending a little further north into central and southeast Scotland and the Western Isles. Further north over north Scotland and the Orkney and Shetland Islands it was mostly dry with a good deal of sunshine and a few showers over Shetland. Over the rest of England and Wales there was patchy cloud but with sunny periods in places. Cloud increased over North Wales during the late morning and for the rest of the day it was cloudy here with rain at times. Temperatures were below average over much of Scotland, elsewhere over Northern Ireland, England and Wales it was warm or very warm.

SUNDAY
2 SEPTEMBER 1984SUMMARY
OF
BRITISH WEATHER

The night was fine and clear over southern Britain, and cooler than recently. Rain moved slowly north over Scotland, but slowly died out over Northern Ireland and northern England.

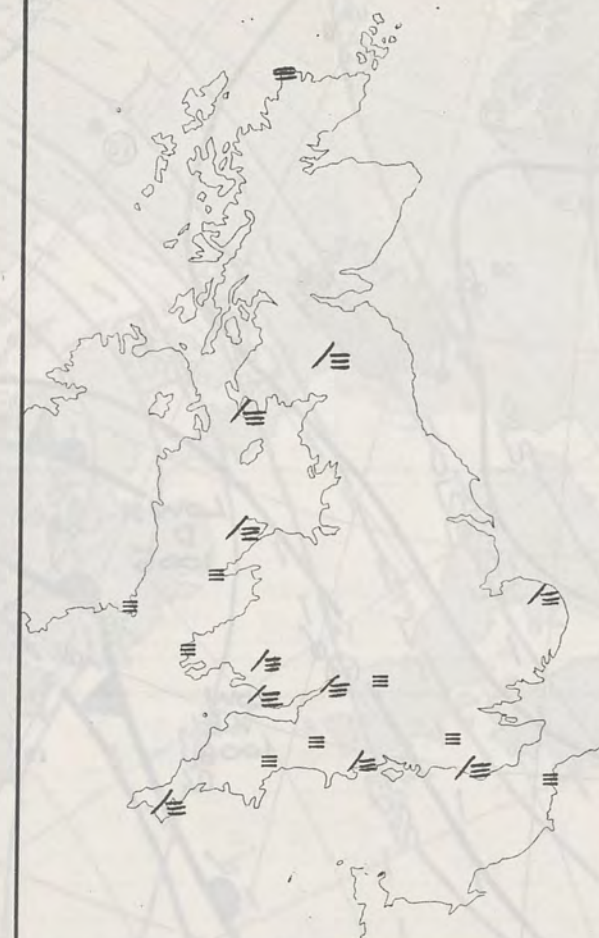

In England and Wales most places stayed dry with a fair amount of sunshine, but some thundery showers affected southern England in the morning, parts of Devon and Wales in the afternoon and East Anglia in the evening. It was mostly very warm.

Northern Ireland and southern Scotland became mostly very warm and dry with a little sunshine, after some early rain, but most of central and northern Scotland had a rather cool, wet day.

MONDAY
3 SEPTEMBER 1984

SUMMARY
OF
BRITISH WEATHER

Thunderstorms moved northeast across Norfolk and Suffolk during the middle of the night and passed away over the North Sea. It was then a mostly dry night over England and Wales.

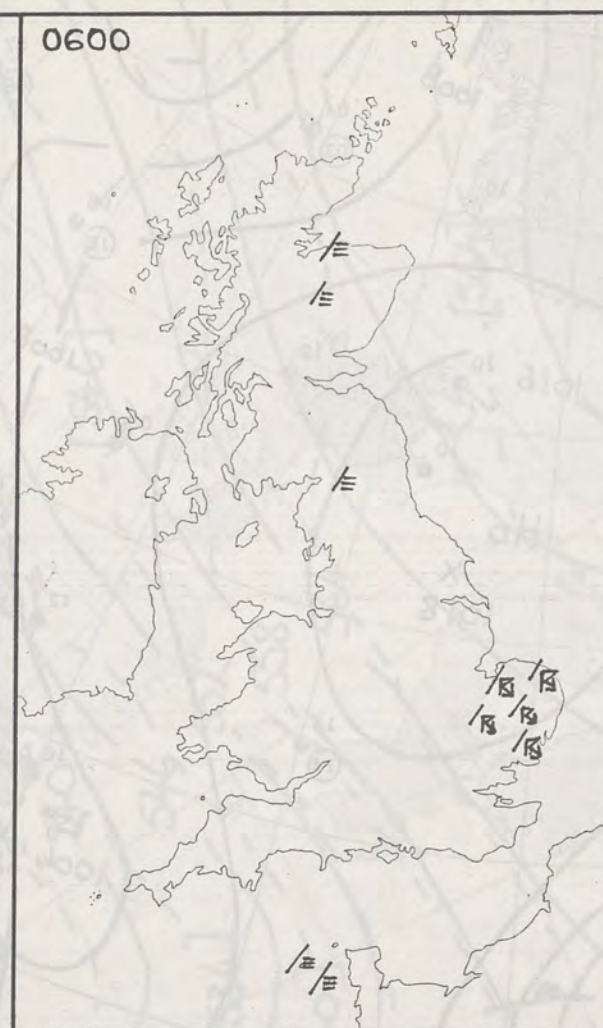

Scotland and Northern Ireland kept a lot of cloud throughout the night and day with rain in places and some more persistent rain in Northern Ireland and southern Scotland. During the afternoon though it did become generally drier and brighter from the northwest.

Southern, central and eastern areas of England and South Wales had a dry day and it was quite sunny in the southeast but cloud and rain was falling in parts of northern England and North Wales during the morning and this became heavier and spread to the rest of England and Wales during the evening, when there were gales along English Channel coasts. (29mm of rain fell between 1900 and 2200 GMT at Leeming in North Yorkshire).

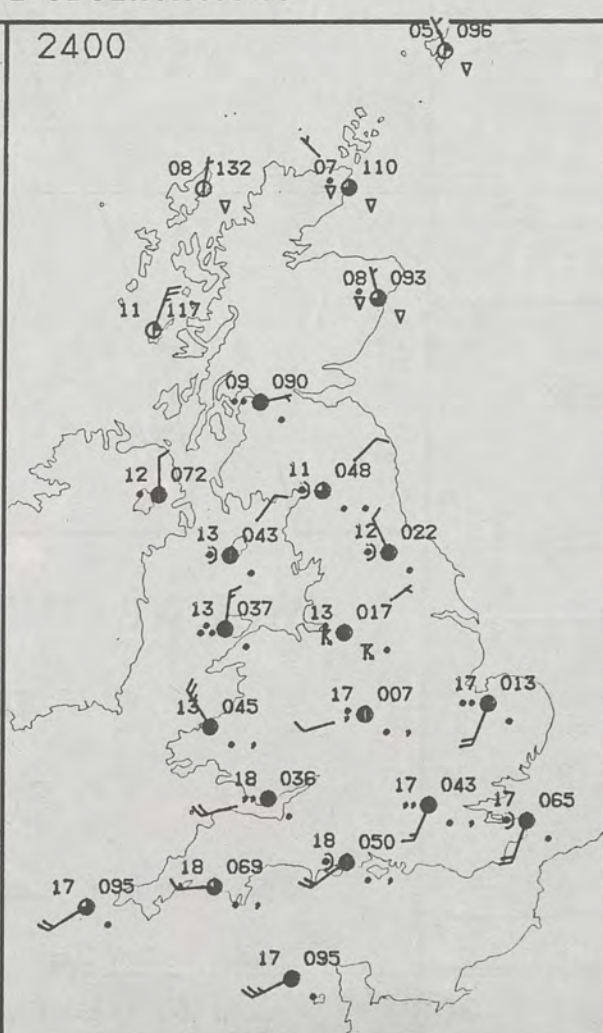

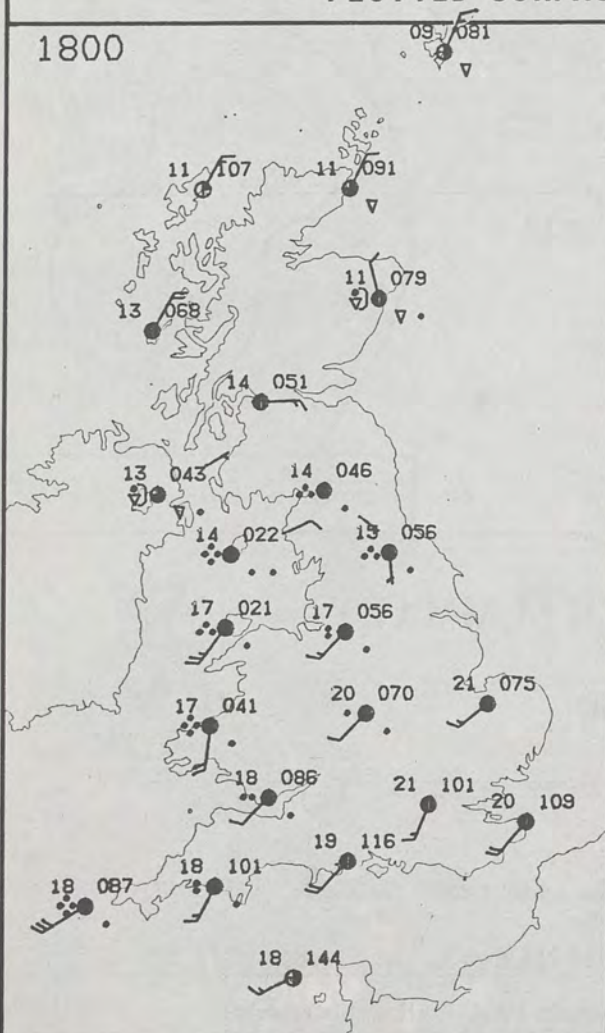

Temperatures ranged from rather cool in the north of Scotland to very warm in the southeast of England.

TUESDAY
4 SEPTEMBER 1984SUMMARY
OF
BRITISH WEATHER

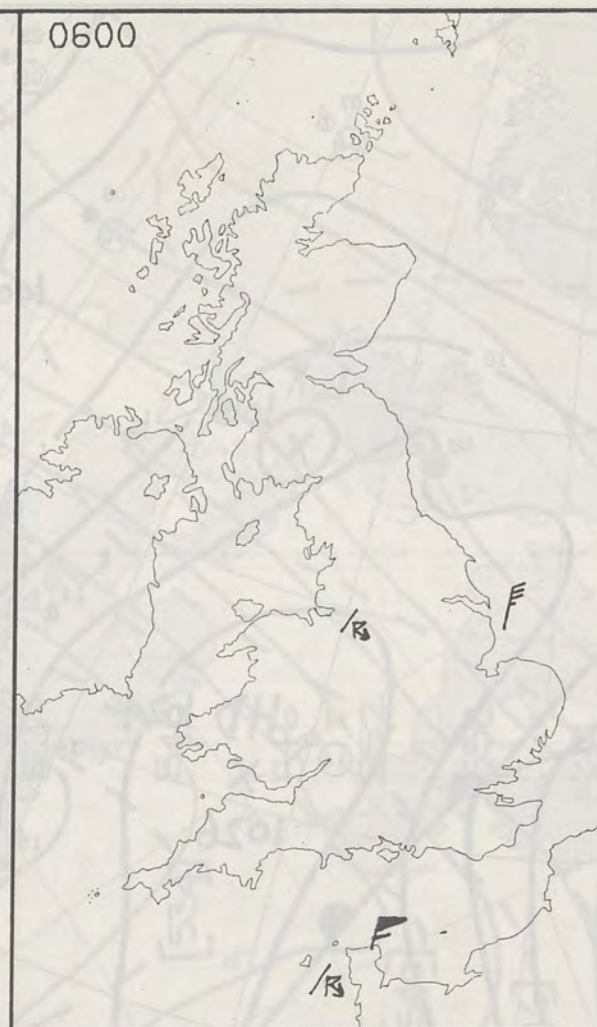

A depression centred over south Yorkshire at 0000 moved quickly east into the North Sea, with its associated fronts moving southeast across England and Wales to clear the south coast around midday. There were some quite heavy falls of rain close to the depression, with some thunder reported.

Showery and much cooler weather already into Scotland followed to reach all of Britain during the afternoon. During the evening the showers tended to die away in all but Orkney and Shetland, northeast Scotland and East Anglia, but not before producing a late burst of heavy rain, hail and thunder in the Channel Islands. It was the coolest day in Britain since June 29th. In Scotland and Northern Ireland the day was rather cool, while in England and Wales it was cool.

WEDNESDAY
5 SEPTEMBER 1984

SUMMARY
OF
BRITISH WEATHER

Most inland areas had a clear, dry night. It was cold in parts of the Highlands and southern England, with a ground frost in places.

Showers continued on most coasts, and one or two came inland along the Welsh Border. Most places had a fair amount of sunshine, however Northern Ireland and northern Scotland were mostly cloudy. By afternoon most of the showers were confined to East Anglia and southwest England. There were reports of thunder in East Kent during the early evening. Scotland and Northern Ireland were mostly rather cool while England and Wales were mostly on the cool side.

SUMMARY
OF
BRITISH WEATHER

Much of Britain was dry overnight, but there were showers in the Northern Isles of Scotland and in East Anglia and southeast England. In many places it was a very cold night and there was frost here and there.

There was some sunshine everywhere in England and Wales and most places had a dry day, but there were showers in East Anglia and southeast England and in Sussex there was a thunderstorm.

Northern Ireland had a dry, but mainly cloudy day, although the weather did brighten up a little at times.

Mainland Scotland stayed dry and there was some sunshine in many places, especially in eastern Scotland. In the Western and Northern Isles there was a little rain and drizzle.

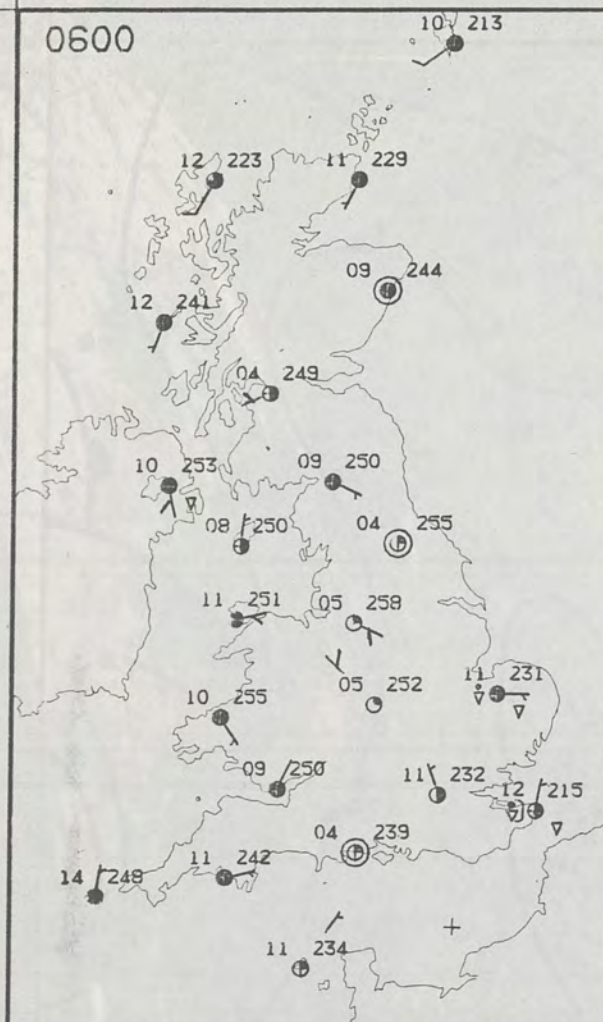

In many places it was rather cool and in parts of East Anglia it was a cold day. Scotland had mostly near normal temperatures.

FRIDAY
7 SEPTEMBER 1984

SUMMARY
OF
BRITISH WEATHER

Much of Britain had a dry night, but in the Western and Northern Isles of Scotland there was a little rain and drizzle and on the coast of southeast England there were a few showers. Many places were very cold.

Over England and Wales there was a lot of cloud during the day, but most places had some sunshine, and parts of southwest England were fairly sunny. Most places stayed dry, but there were a few showers in East Anglia.

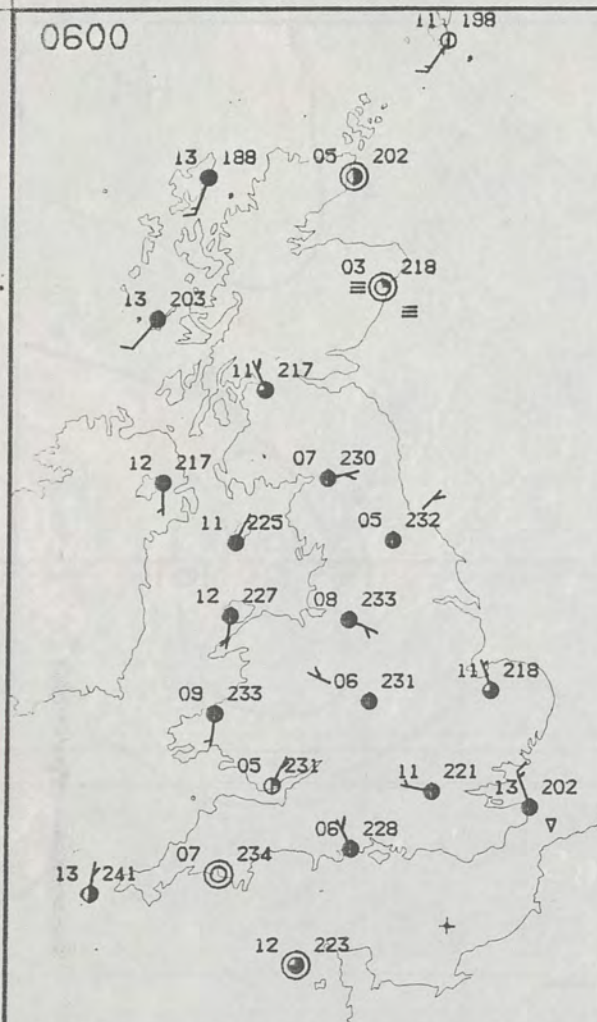

Northern Ireland and western and northern Scotland were mainly cloudy and there was some rain and drizzle but east and north-east Scotland had a fairly warm day with some sunshine.

Over England and Wales temperatures were below normal and some places had a cold day. In Scotland and Northern Ireland temperatures were close to or a little above normal in most places.

SUMMARY
OF
BRITISH WEATHER

Over most of Britain it was a dry cloudy night but in some northern and western regions there were patches of light rain or drizzle.

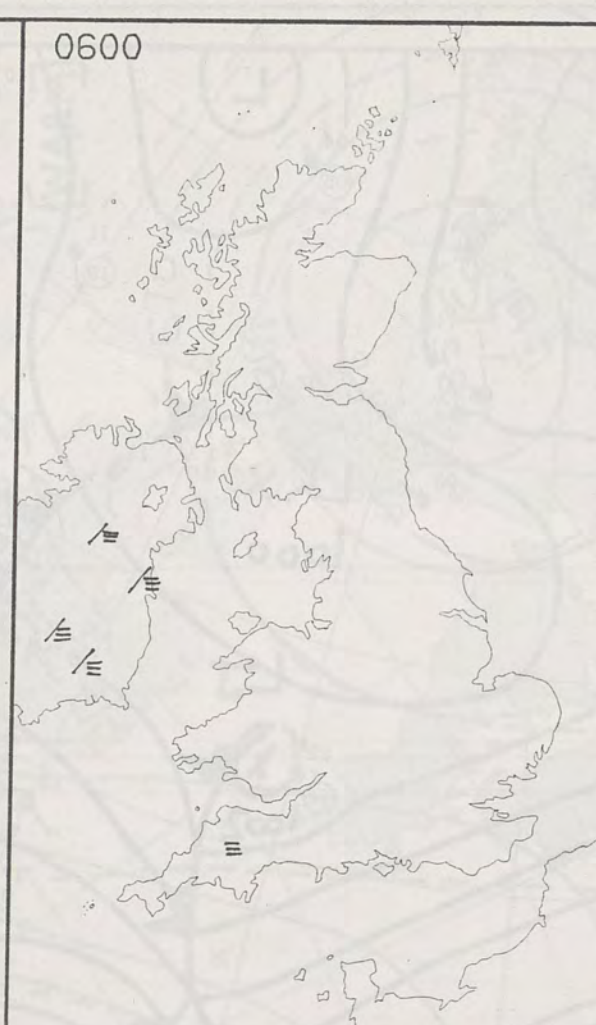

During the day this mainly cloudy but predominantly dry weather continued over much of the country with nothing more than a little drizzle or a brief light shower here and there. In southern England however, there were one or two heavier showers, and in parts of northern and western Scotland rain was more persistent and heavier at times. There were some sunny intervals especially in southeast England.

Temperatures were generally near or a little below normal.

SUMMARY
OF
BRITISH WEATHER

Overnight there were outbreaks of rain in many places. The rain was heaviest and most persistent in Scotland, elsewhere rain was light and patchy. Clearer showery weather reached Northern Ireland and much of western Britain by dawn.

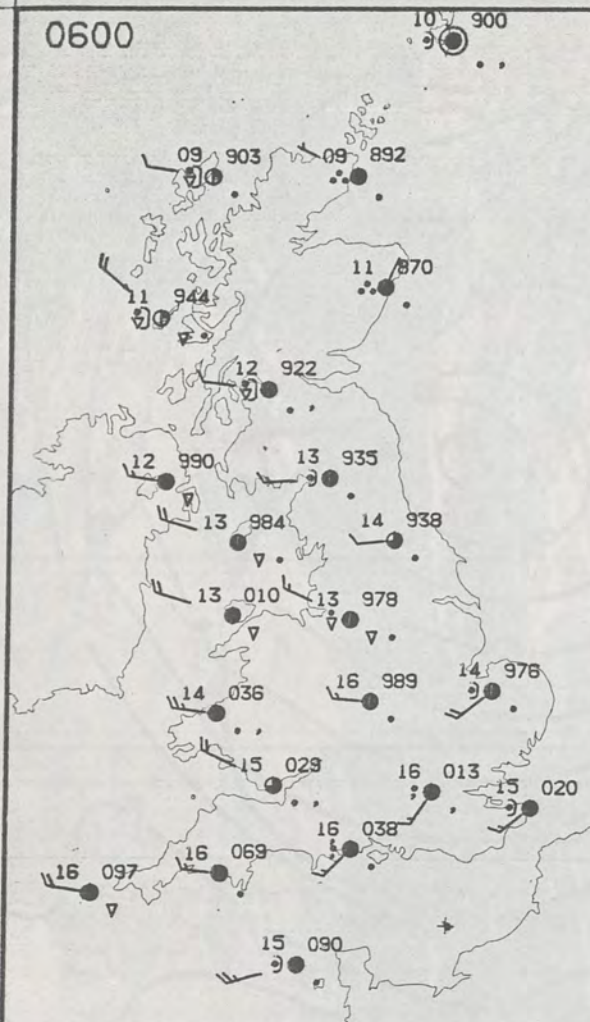

During the day in northeast Scotland rain persisted into the afternoon before turning showery. Over the rest of Britain and Northern Ireland strong westerly winds brought a mixture of showers and sunshine, some of the showers were heavy with hail and thunder especially in central and southern parts of England and Wales during the afternoon and evening.

Temperatures were near normal in many places but in parts of the west and north it was rather cool.

SUMMARY
OF
BRITISH WEATHER

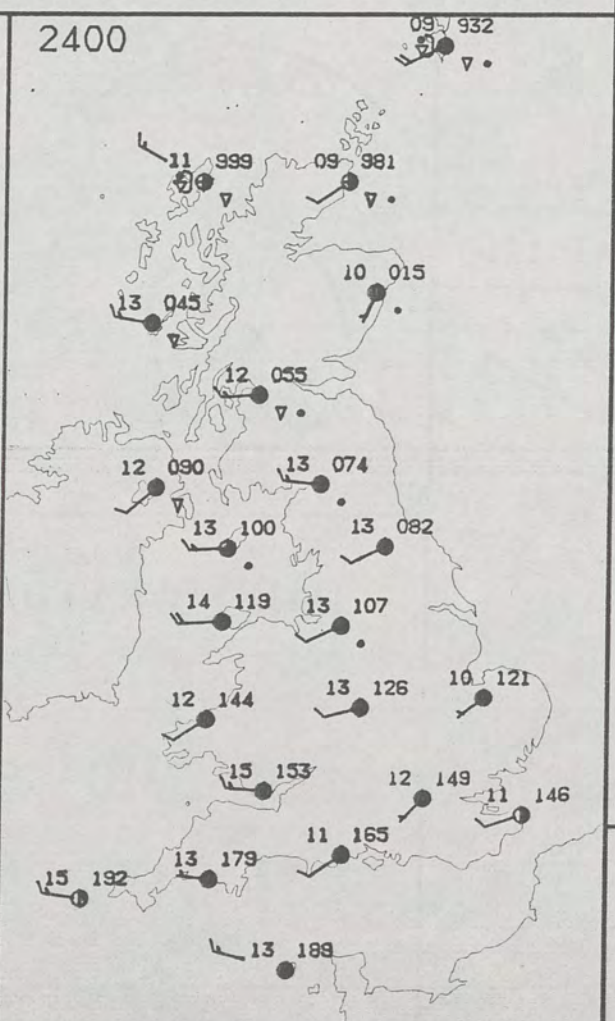

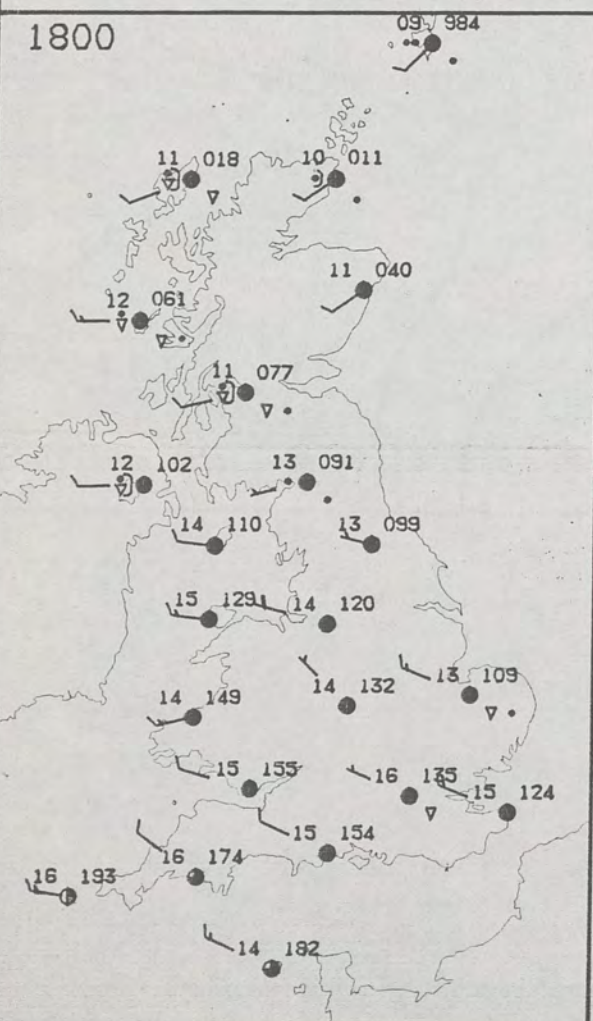

A strong west to northwest airstream covered the whole of the British Isles.

Overnight there were showers over most parts of the country and many places had more showers during the day with bright or sunny spells inbetween. Most of the showers were light, with South Wales, southwest England and the Channel Islands having quite a sunny day.

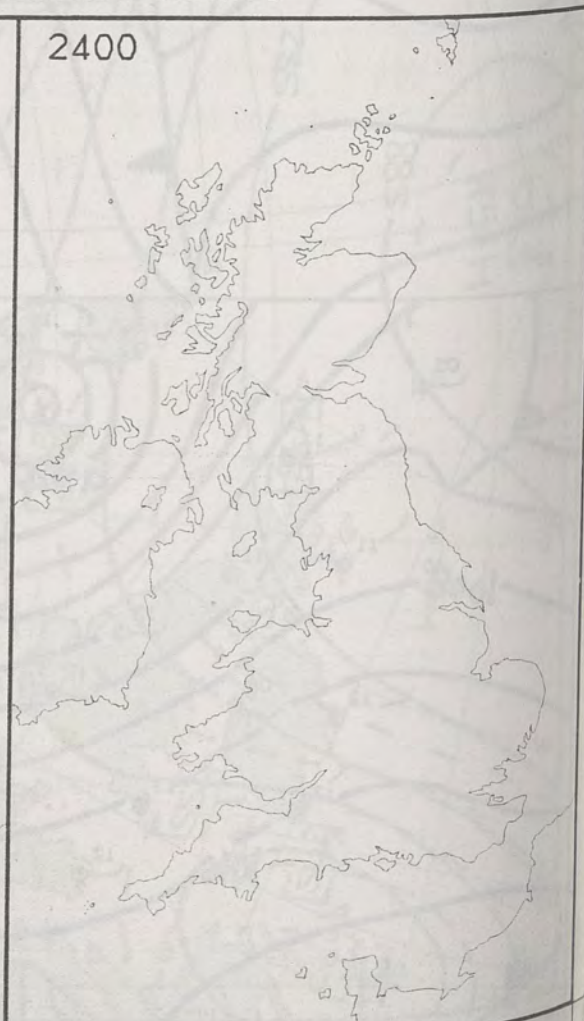

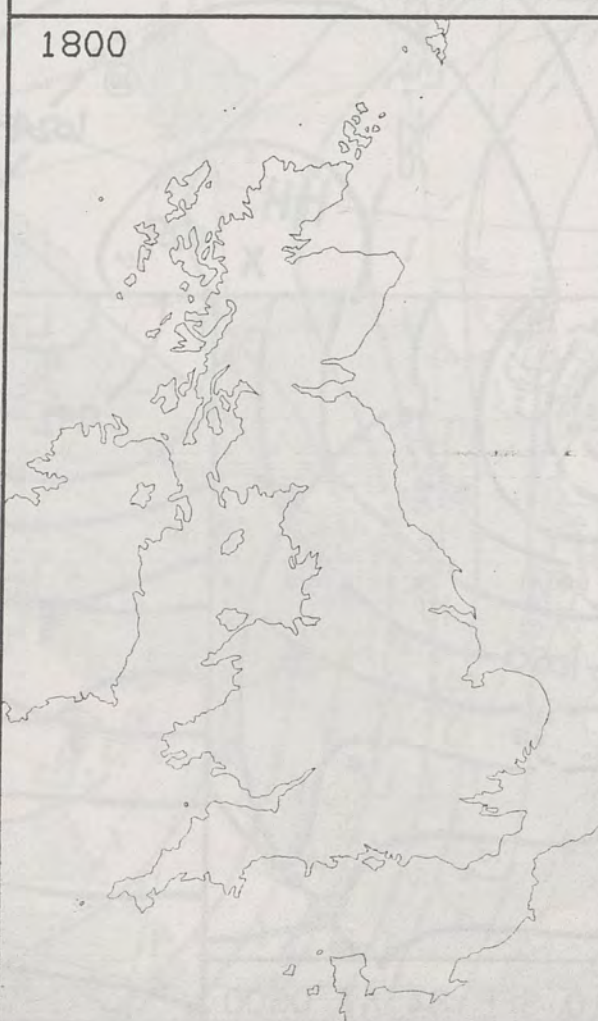

It was rather cool almost everywhere.

SUMMARY
OF
BRITISH WEATHER

Northern Scotland and the Orkney and Shetland Isles had a day with sunshine and showers. Northwesterly winds were quite strong and over Shetland they touched gale force for much of the day. For Northern Ireland and the rest of Scotland it was mostly dry and bright.

England and Wales started generally cloudy with rain here and there. Towards dawn a belt of mostly light rain moved into southwest England and Wales. During the morning much of southern England and East Anglia had rain at times. By afternoon most places were dry with bright or sunny spells.

It was mostly warm over southern England, other places in the UK had mostly near normal temperatures. Northern Scotland was rather cool as were the Channel Islands and windward coasts of southwest England where it stayed rather cool all day.

SUMMARY
OF
BRITISH WEATHER

The night was clear and cold in central and northeast Scotland with ground frost in places, but mostly warm with a lot of cloud elsewhere. Some drizzly rain fell in central regions of the British Isles

During the day, the area of thick cloud with some rain and drizzle moved slowly northeast over Scotland and the east and northeast of England, though the extreme northeast of Scotland stayed dry and fairly sunny.

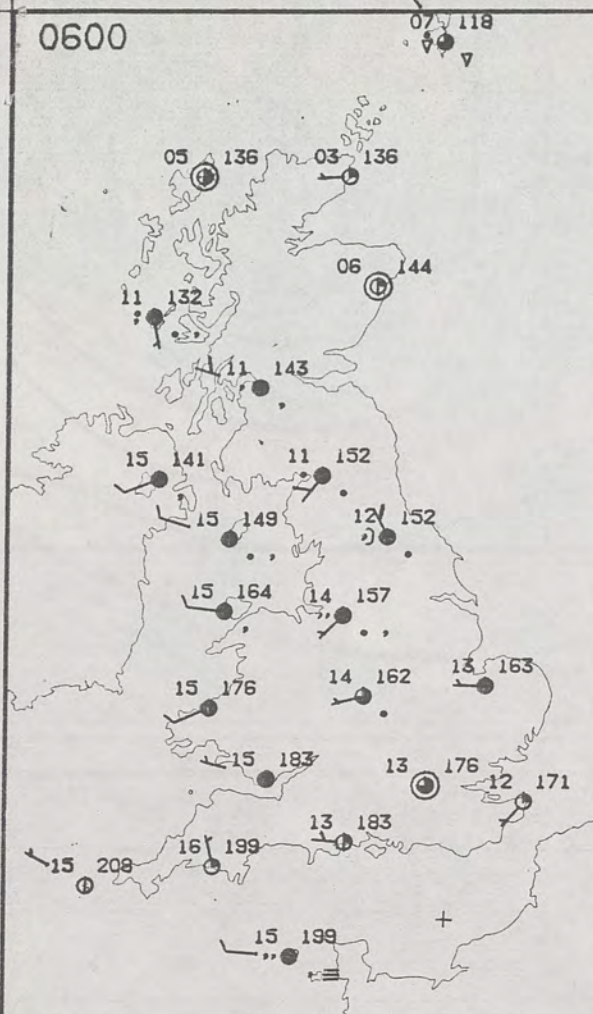

Northern Ireland, the extreme southwest of Scotland, Wales and England except the east and northeast became warm, though there was generally a lot of cloud. Some places had a shower or two, but southern and southwest England stayed dry and most districts here had good sunny spells.

Most of Scotland away from the southwest along with northeast England were rather cool.

THURSDAY
13 SEPTEMBER 1984

SUMMARY
OF
BRITISH WEATHER

Scotland and Northern Ireland were mostly cloudy with rain at times, though it was morning before the rain reached Shetland. There were some drier, and in places slightly brighter, intervals during the day, but Northern Ireland and southern Scotland had some heavy rain during the afternoon and evening.

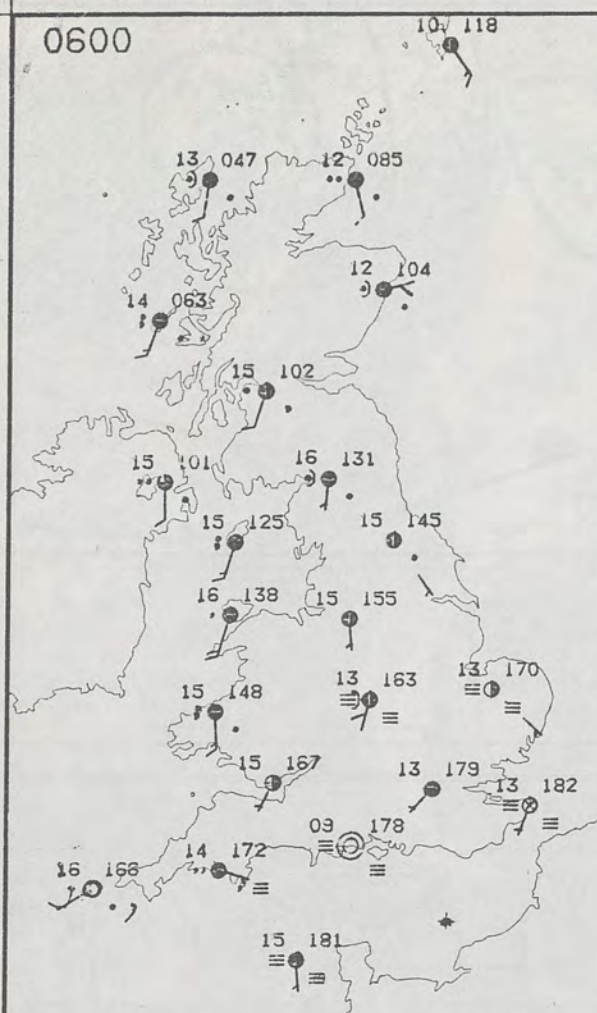

England and Wales were generally dry at first with some clear intervals and patchy thick fog formed for a time in parts of the south and east. Central southern and southeast England and East Anglia had a bright day. Elsewhere it was mostly cloudy, but with a little sunshine in places. Some drizzly rain fell near western coasts and hills, and during the afternoon and evening heavy rain spread across many parts of Cornwall, Wales, the north and west Midlands and northern England, with one or two thunderstorms.

Temperatures were near normal in western parts of Britain, elsewhere it was warm.

FRIDAY
14 SEPTEMBER 1984

SUMMARY
OF
BRITISH WEATHER

During the night a belt of rain moved east across all parts with clear showery weather following. Some of the rain was heavy and later in the night a few of the showers turned thundery.

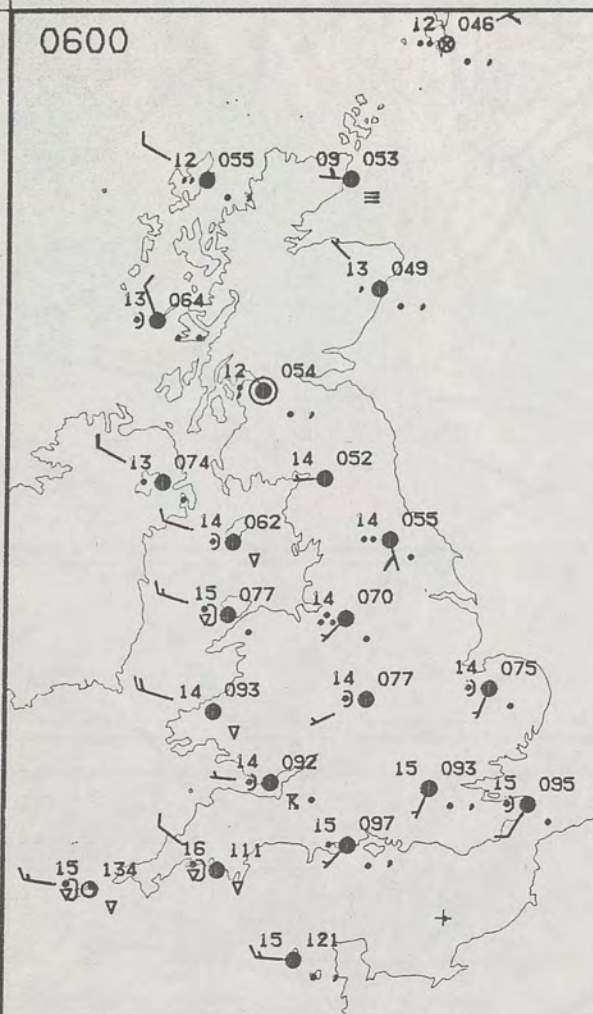

During the day most central and eastern parts of England stayed mostly cloudy with outbreaks of rain, much of it heavy and thundery. Western and northern areas were brighter with some sunshine although still with showers, these however tending to die out and become lighter.

It was slightly cooler than of late with temperatures close to or a little above normal, however East Anglia was rather cool.

SATURDAY 15 SEPTEMBER 1984

SUMMARY OF BRITISH WEATHER

Western areas had a dry night with clear periods. Eastern parts were fairly cloudy with rain or drizzle in places. The same east-west split prevailed during the day. Eastern areas stayed mostly cloudy with rain or drizzle in places and some coasts were dull and misty. Western parts were brighter with some sunshine and apart from the odd light shower dry as well. It was rather cool in the east but temperatures were around normal in the west.

SUNDAY 16 SEPTEMBER 1984

SUMMARY OF BRITISH WEATHER

A cloudy 24 hours for much of Britain, with only South Wales and the southwest seeing much in the way of clear skies.

Over Scotland and Northern Ireland the cloud brought rain into the west overnight and this spread steadily southeastwards, and by late evening the belt of rain, by now mostly light, stretched from Cornwall and West Wales to the Scottish Borders.

Elsewhere most places stayed dry, apart from some drizzle or light rain along eastern coasts and in East Anglia and Kent.

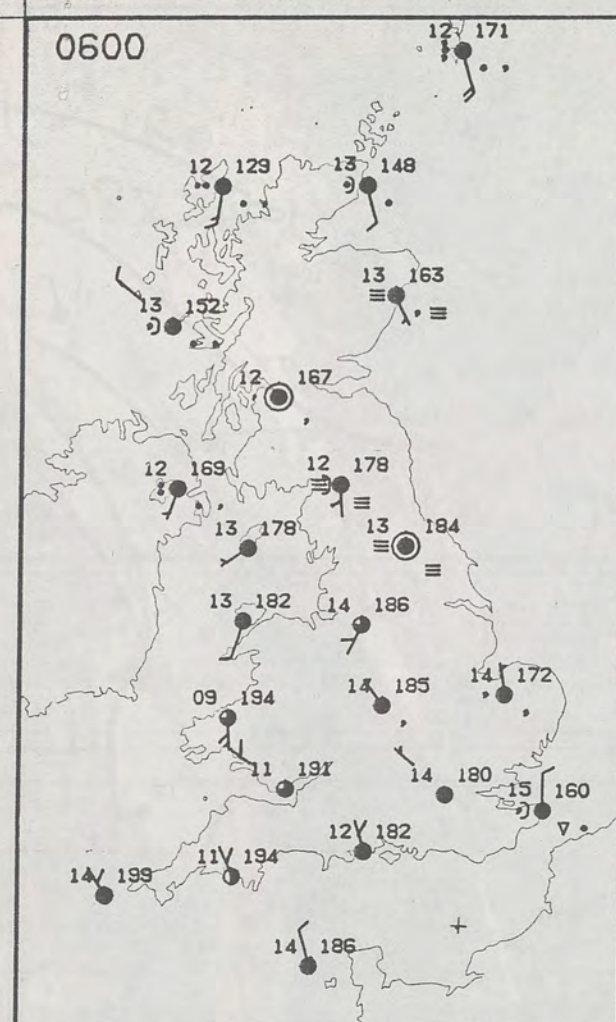

Much of England and Wales started the day misty, and there were fog patches reported from most districts. Many eastern coastal areas stayed misty for much of the day.

Most of the country had a mild night, followed by near normal daytime temperatures in most places. However East Anglia and southeast England were rather cool.

MONDAY
17 SEPTEMBER 1984

SUMMARY
OF
BRITISH WEATHER

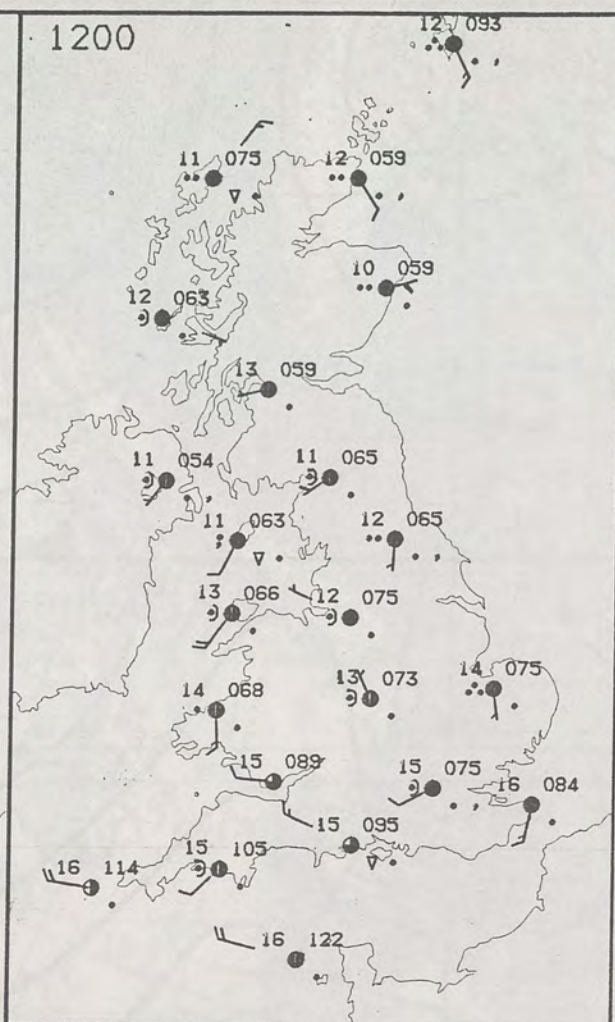

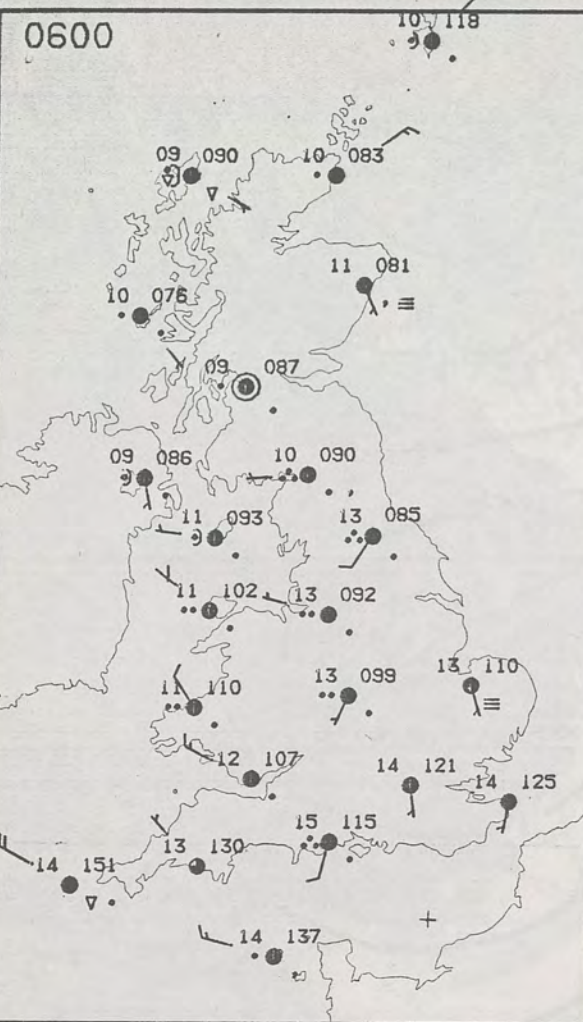

The day started with most of Britain cloudy, and a belt of rain from Cornwall through Wales, northern England and southern Scotland. There were only a few heavy bursts on it at first, but as the night wore on and the rain moved east it expanded and became more active. Quite widespread heavy falls of rain occurred in the late part of the night and through the day. By evening it had cleared all but northeast Scotland, where the rain was now light.

A second belt of rain moved into Northern Ireland and western Scotland during the night, but this was less active until afternoon, when a thundery low formed near Bristol, producing heavy rain and thunderstorms in South Wales, and central southern England during the evening.

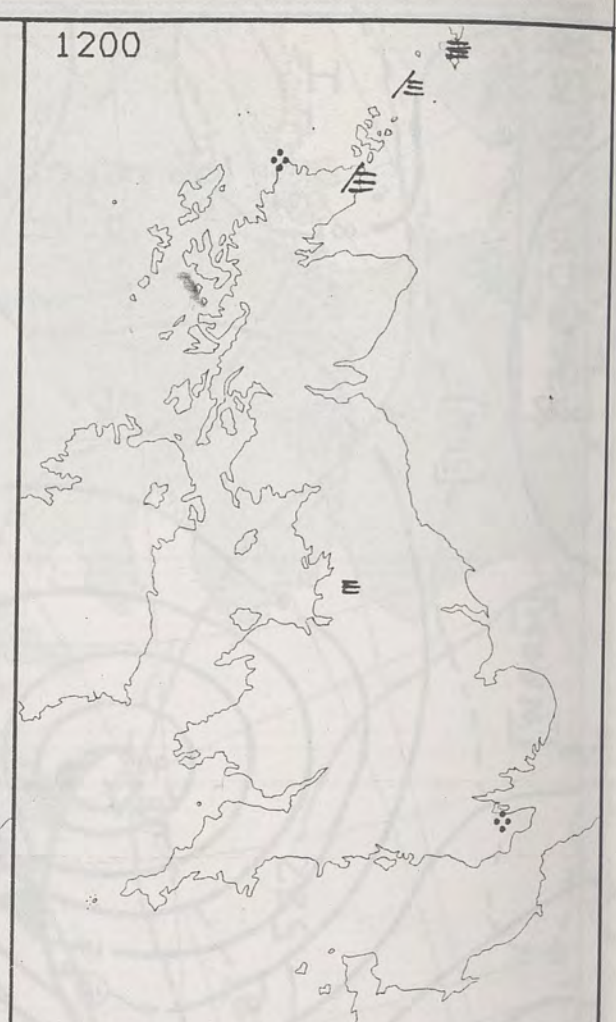

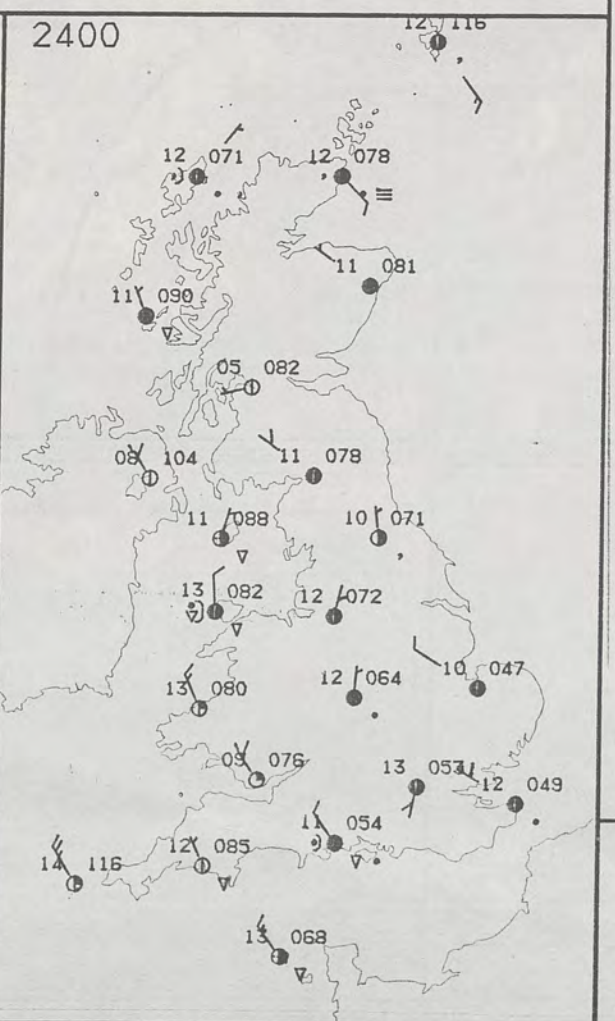

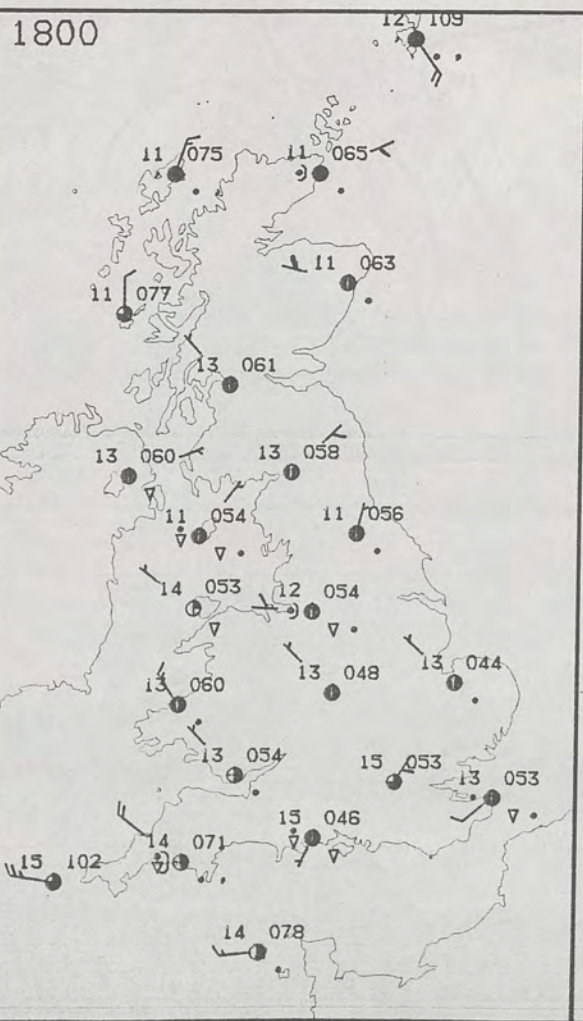

After a mild night over much of the country, daytime temperatures were generally in the rather cool category, even cool in many places in eastern Britain.

TUESDAY
18 SEPTEMBER 1984

SUMMARY
OF
BRITISH WEATHER

Overnight thundery rain soon cleared from central southern England and most regions had a dry night with clear skies but in parts of eastern England there were outbreaks of rain.

During the day over most of England and Wales it was dry with sunny periods, but in East Anglia and Lincolnshire there were some showers during the evening. There was light rain in a few western coastal regions but most places remained dry.

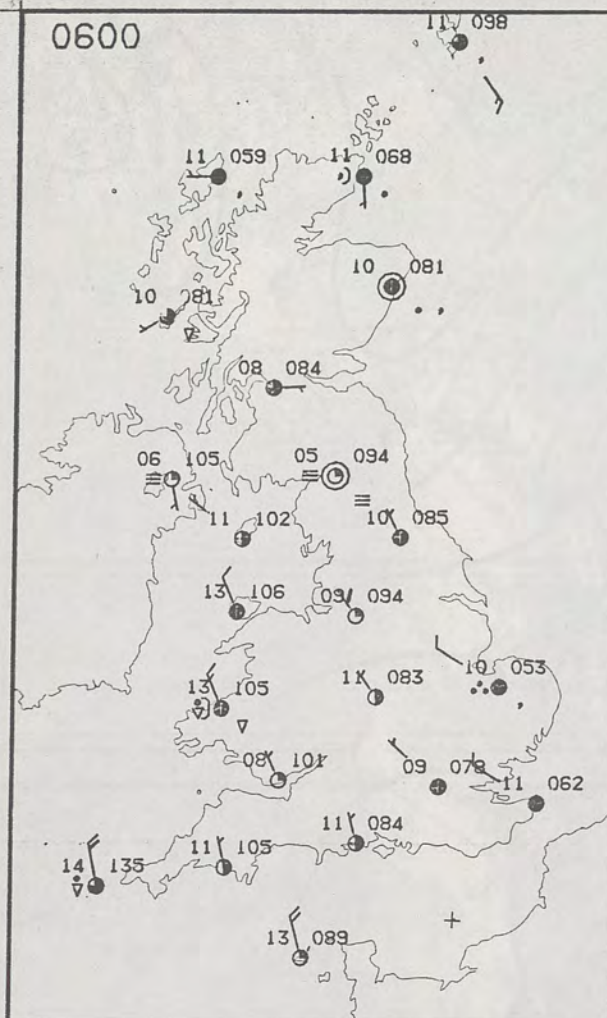

In Scotland and Northern Ireland it was a mainly dry bright morning but showery rain reached some northwestern parts before midday. During the afternoon and evening there was a light shower in many areas and in parts of northwest Scotland and the Northern Isles there were some heavier and longer outbreaks of rain.

Temperatures were generally near normal, but East Anglia was rather cold or cold.

WEDNESDAY
19 SEPTEMBER 1984

SUMMARY OF BRITISH WEATHER

Overnight there were scattered showers in northern and western Scotland. Elsewhere it was a mainly dry night with only isolated light showers.

During the day there were sunny intervals and isolated showers in England and Wales. In Northern Ireland, southern and eastern Scotland most places had one or two brief showers but there was a good deal of dry sunny weather especially in southeast Scotland. In northern Scotland showers were frequent and often heavy and in the Northern Isles showers were prolonged at times.

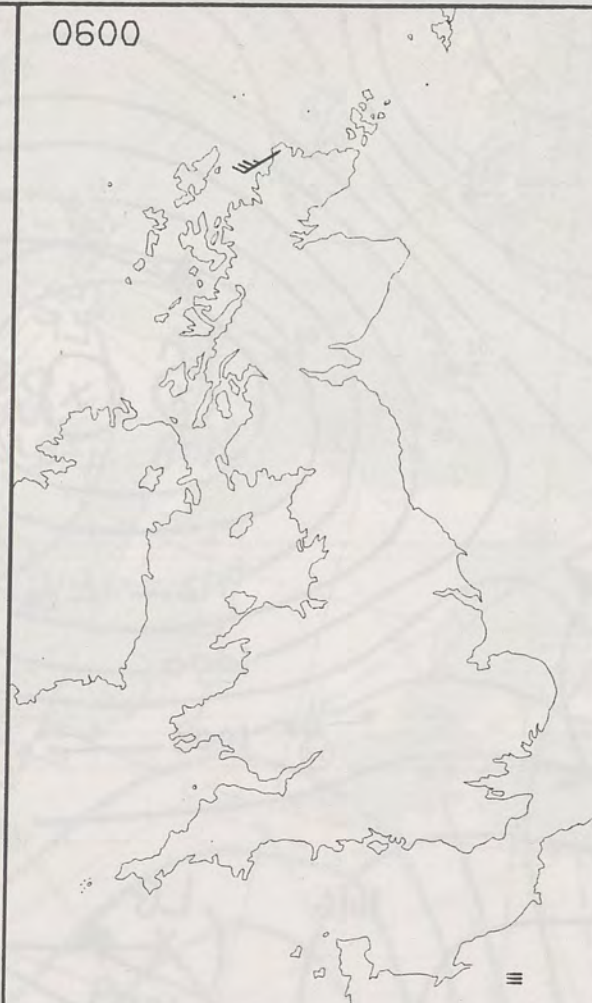

Westerly winds were strong with gales in exposed northwestern coastal regions of Scotland.

Temperatures were generally near normal.

SUMMARY
OF
BRITISH WEATHER

In northern and western Scotland there were showers overnight, but eastern Scotland, Northern Ireland and much of northern England had a dry, clear, cold night. Wales, central and southern districts of England had a very wet night. Wales, central and southern England had more heavy rain during the day, but by midday the weather in Wales had brightened up and the mainly dry weather with some sunshine slowly spread eastwards, but it was evening before the persistent rain finally cleared away from East Anglia. Northern England and eastern Scotland had a dry, fairly sunny day and in northern and western Scotland and Northern Ireland there was some sunshine, but here there were showers and a few hours more persistent rain.

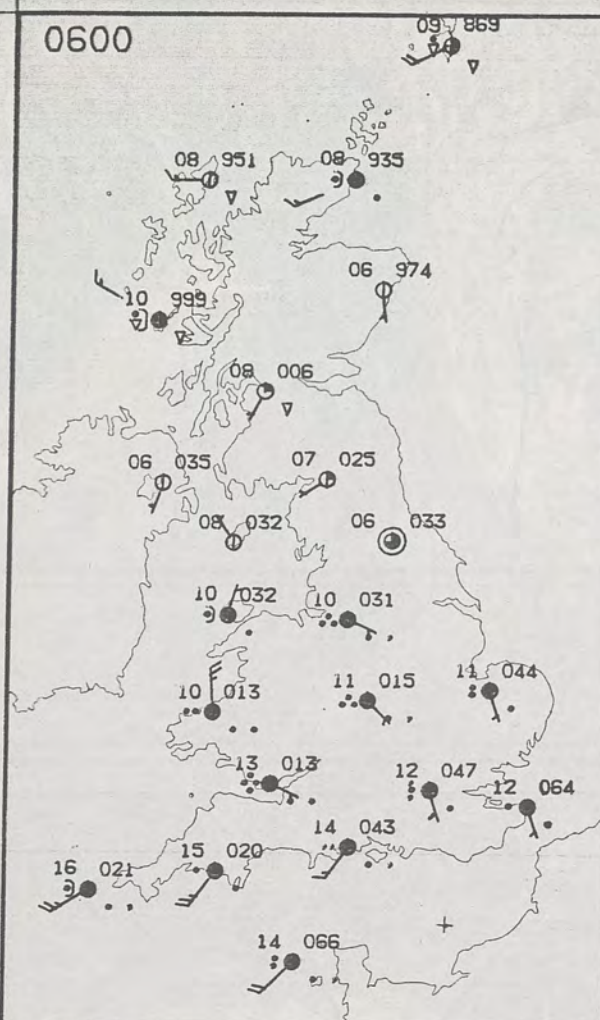

Over much of Britain temperatures were close to or a little below normal, but in the Midlands, East Anglia and Lincolnshire it was a cold day.

A gust of 60 knots was recorded at the Needles (Isle of Wight) during the late morning.

FRIDAY
21 SEPTEMBER 1984

SUMMARY
OF
BRITISH WEATHER

Scotland and Northern Ireland had showers overnight and it was a cold night, especially in north-east Scotland. Over England and Wales most places had a few hours heavy rain, followed by clearer weather, with just a few showers.

The persistent rain cleared away from southeast England and East Anglia during the morning and then over nearly the whole of Britain it was a showery day. There were showers in most places and in England and Wales there were heavy showers and over England quite a few thunderstorms. However, there was some dry, sunny weather nearly everywhere and some places had a dry day.

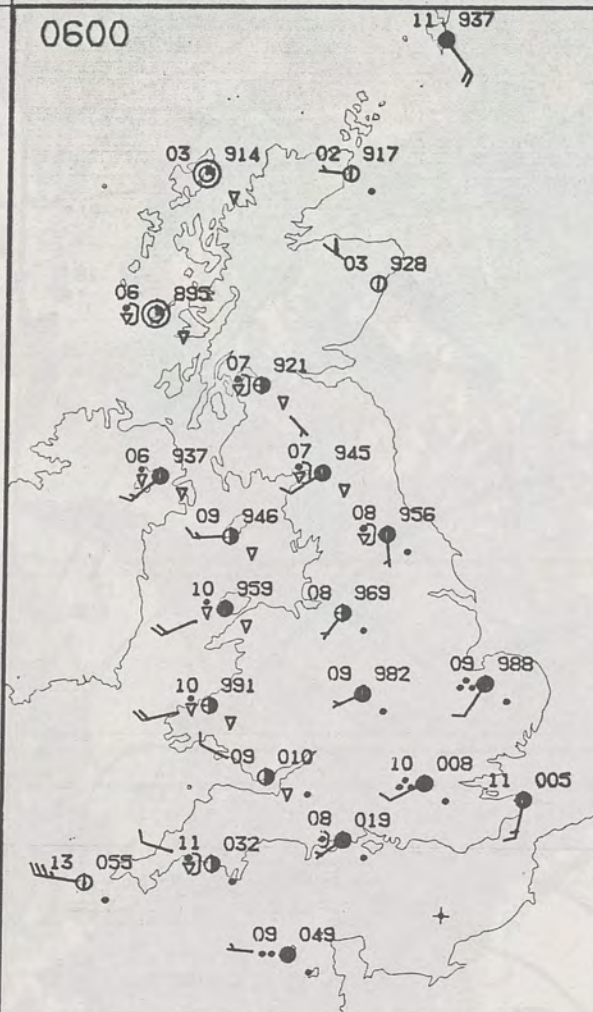

Shetland stayed cloudy all day, with periods of rain, occasionally heavy.

Over much of Britain temperatures were in the rather cold category.

SATURDAY
22 SEPTEMBER 1984

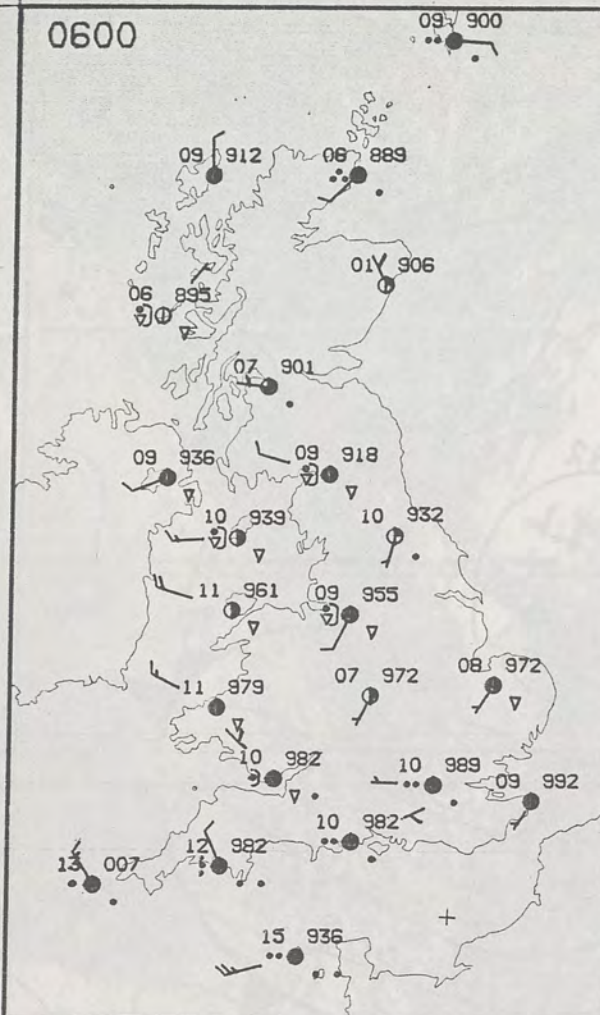

SUMMARY
OF
BRITISH WEATHER

Southwest, central southern England and South Wales had some rain during the early hours. By dawn, much of southern England was dull and wet, but it wasn't long before bright or sunny spells spread back into the southwest, continuing eastwards during the morning. It was early afternoon however before the rain cleared from parts of Kent and the southern half of East Anglia. Elsewhere over Britain it was a cold night with some showers - more especially over western coasts. Inland Scotland was dry and clear with quite a lot of frost. During daytime most places had sunny intervals and showers with thunderstorms reported as far apart as East Anglia and southeast Scotland. It was a rather cold day generally with only a few places in southern England having near normal temperatures. In parts of central Scotland it was a cold or very cold day.

23 SEPTEMBER 1984

SUMMARY
OF
BRITISH WEATHER

The whole of Britain was covered by a north to northwest air-stream. Showers were quite frequent over the eastern half of the country, some of them were heavy with a thunderstorm reported in East Anglia during the afternoon. Over northeast Scotland the showers often merged to give periods of moderate rain. Between the showers there were some bright or sunny intervals, however, this didn't help temperatures very much, with practically all parts staying below the late September average.

Parts of central Scotland were cold, while East Anglia and southeast England were cold or very cold.

It was also very windy, with near gale force winds over north Scotland and the coasts of north and west Wales.

MONDAY
24 SEPTEMBER 1984

SUMMARY
OF
BRITISH WEATHER

Many places had a dry night, but there were showers near, and some way inland from, north and north-west facing coasts.

The day was generally quite cold and fairly cloudy, though, at least away from the exposed coasts and hills, winds were rather lighter than they had been on Sunday.

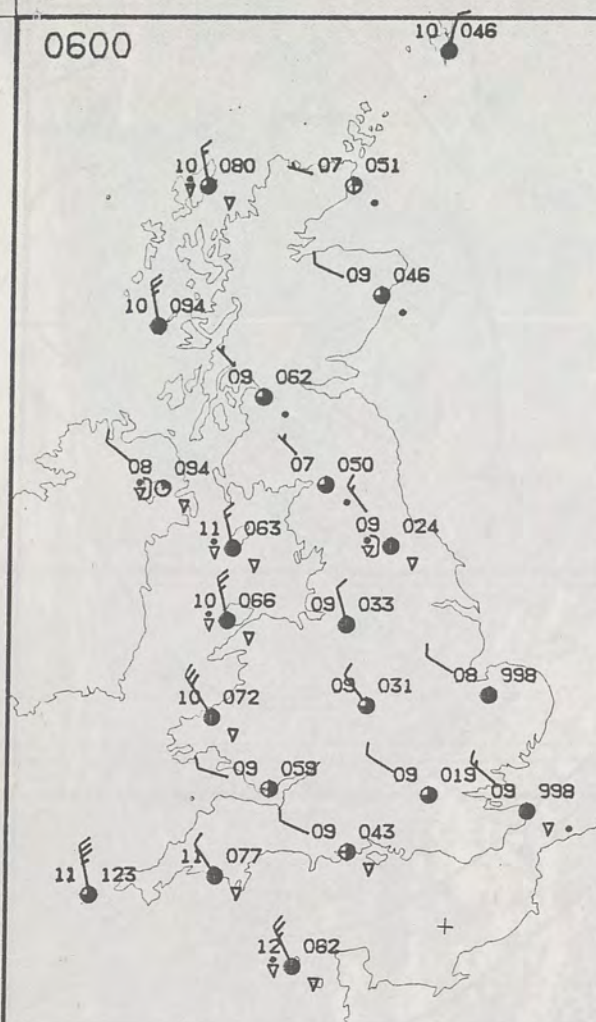

Most places had some sunshine, but showers developed inland, as well as continuing to affect most coastal areas. However, much of southern Scotland and northwest England had a dry day. The heaviest showers tracked across parts of Wales into Avon, Somerset and Dorset during the day, and south from Humberside and Lincolnshire across East Anglia and into London. There was a fair amount of thundery activity, accompanied by squally winds, in these eastern counties. The showers died out away from exposed coasts in the evening.

Scotland and Northern Ireland had temperatures near or rather below normal, while England and Wales had a rather cold or cold day.

TUESDAY
25 SEPTEMBER 1984

SUMMARY
OF
BRITISH WEATHER

Although there was generally a lot of cloud, it was a drier, slightly brighter and, at least in the south, rather less cold day for most places.

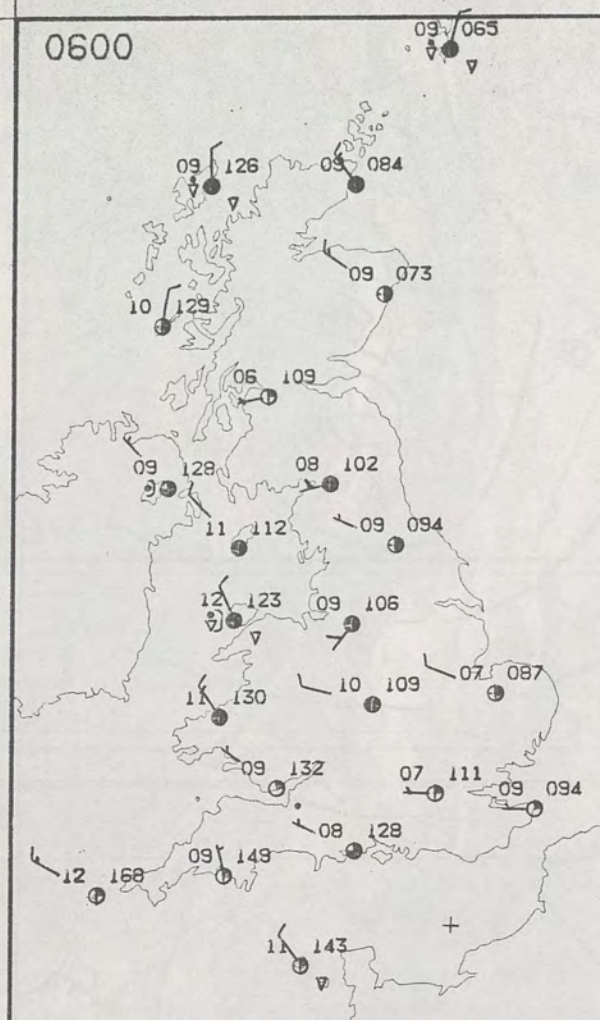

Showers still occurred, but were chiefly confined to coastal regions in the north and few amounted to much. Winds were generally lighter, though still quite strong at times in some coastal areas. The best of the sunshine was in southwestern Britain, though these areas had a little rain in the evening.

It was mostly rather cold, even cold in parts of East Anglia, eastern England and Grampian.

WEDNESDAY
26 SEPTEMBER 1984

SUMMARY
OF
BRITISH WEATHER

Coastal counties from Norfolk to the Shetlands had a cloudy night with occasional light showers. During the morning this cloud started to break and by afternoon many places were having some sunny intervals, with the showers dying away until by evening they were confined to Shetland.

Meanwhile much of southwest England, South Wales, and central southern England had a wet night as a shallow depression moved slowly southeast from Cornwall into France. It kept this area cloudy for much of the day, with a little light rain or drizzle at times.

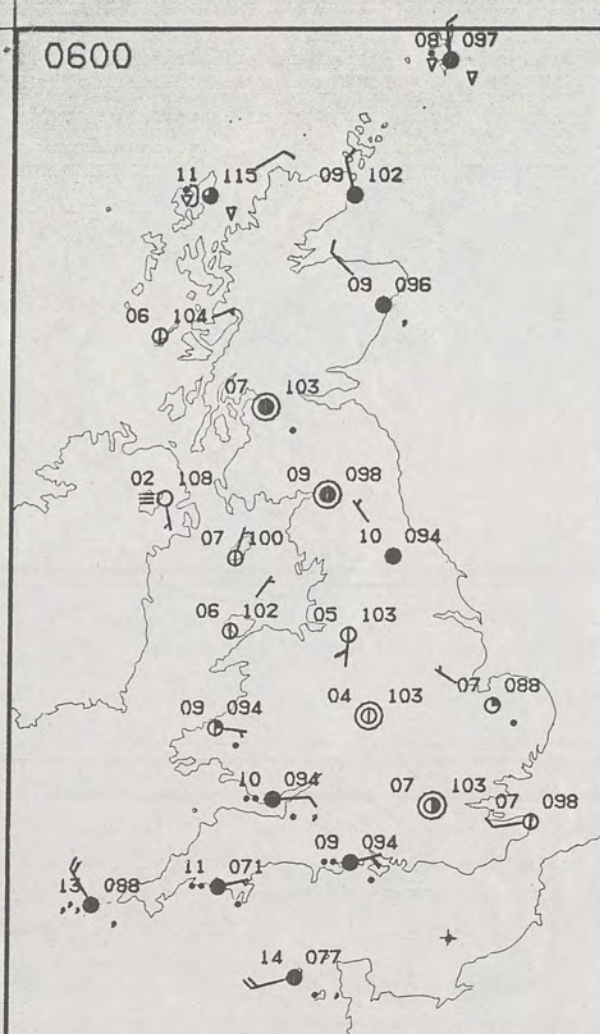

From southeast England through the Midlands, North Wales, and northwest England to Northern Ireland and western Scotland, skies were clear overnight. There was an air frost in Northern Ireland, and many places had some patchy fog around day-break. A dry, sunny day followed, although cloud and rain reached Northern Ireland during the evening.

Temperatures generally were near or rather below normal.

THURSDAY
27 SEPTEMBER 1984

SUMMARY
OF
BRITISH WEATHER

The day opened with rain in parts of Northern Ireland and the Hebrides. Wales and most western parts of England and Scotland were cloudy and dry, whilst the east was dry and largely cloudless, with a few fog patches already forming. These cleared quite readily after sunrise and many eastern parts of Scotland and England had a bright start before cloud spread from the west.

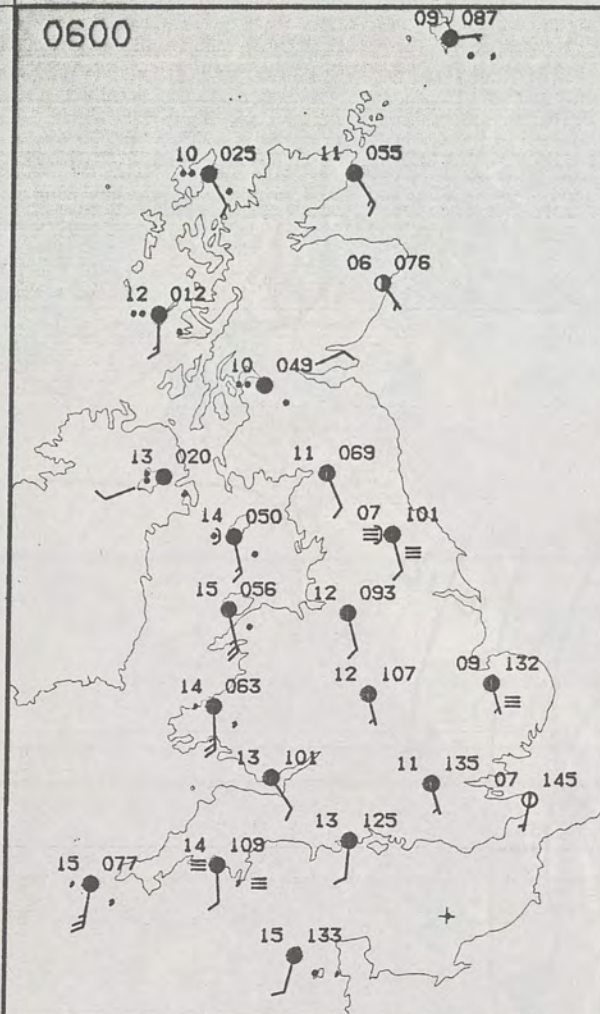

During this first part of the day the rain made steady eastward progress into much of Scotland, Wales and southwest England, and around the middle of the day there was a little light rain over central England. Eastward progress of the main rain belt then virtually ceased, but during the afternoon and evening pulses of heavier rain ran northwards over Cornwall and Wales into southwest Scotland. Meanwhile drier, clearer conditions with a few showers moved into Northern Ireland and most of Scotland.

Temperatures everywhere were not far from the late September normal.

FRIDAY
28 SEPTEMBER 1984

SUMMARY
OF
BRITISH WEATHER

Over most of central and eastern England it was a dry day with sunny periods. During the late afternoon and evening there were outbreaks of rain and one or two thunderstorms in central and southeastern counties.

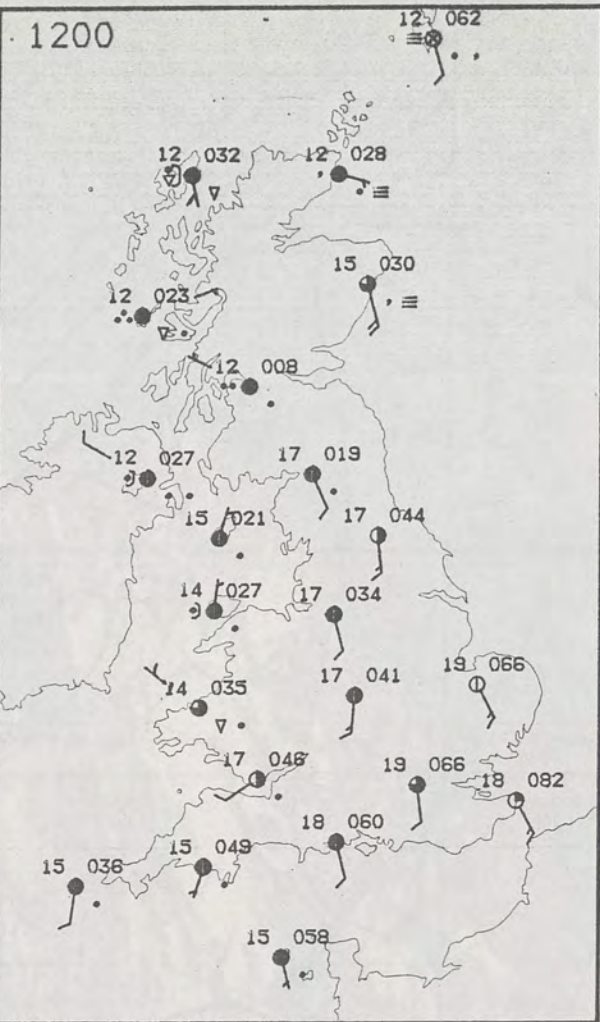

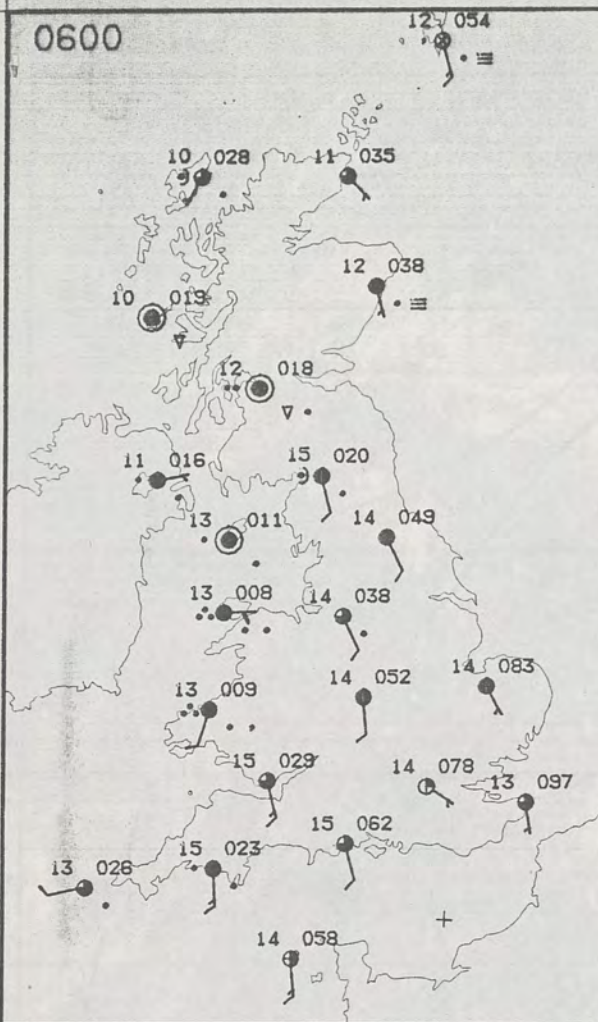

In Wales, western England and Northern Ireland there was rain, heavy at times, during the night and morning. Brighter, mainly dry weather reached most parts by afternoon, but in southwest England and southeast Wales there was more rain later.

In Scotland rain was persistent and heavy at times, especially in southern and central regions. During the late afternoon and evening it became dry in most places.

Temperatures were near normal in most western regions, while in central and eastern areas of Scotland and England it was rather warm. Lincolnshire and East Anglia were warm.

METEOLOGICAL OFFICE

SATURDAY 29 SEPTEMBER 1984

SUMMARY OF BRITISH WEATHER

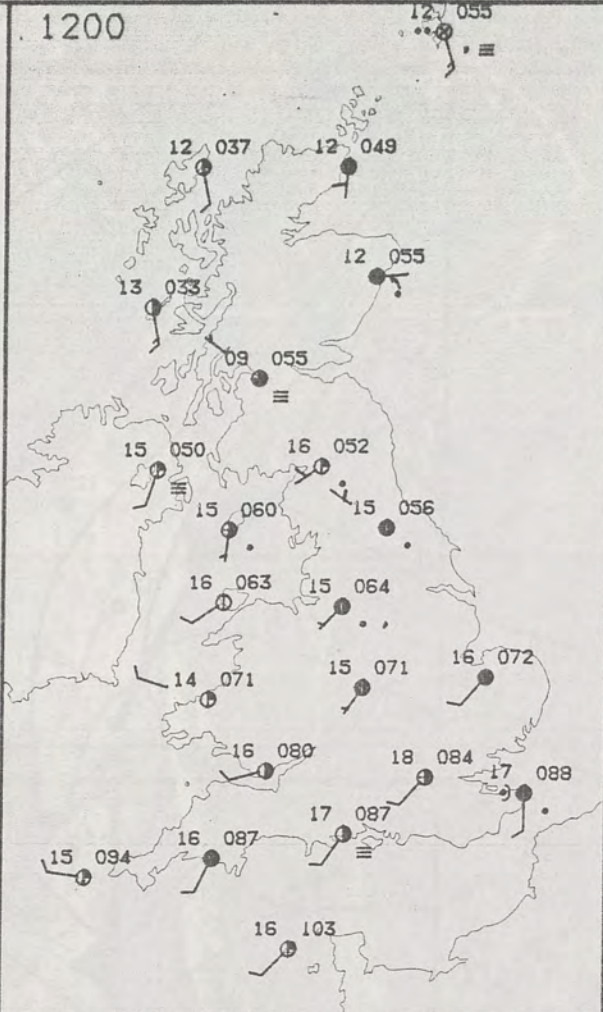

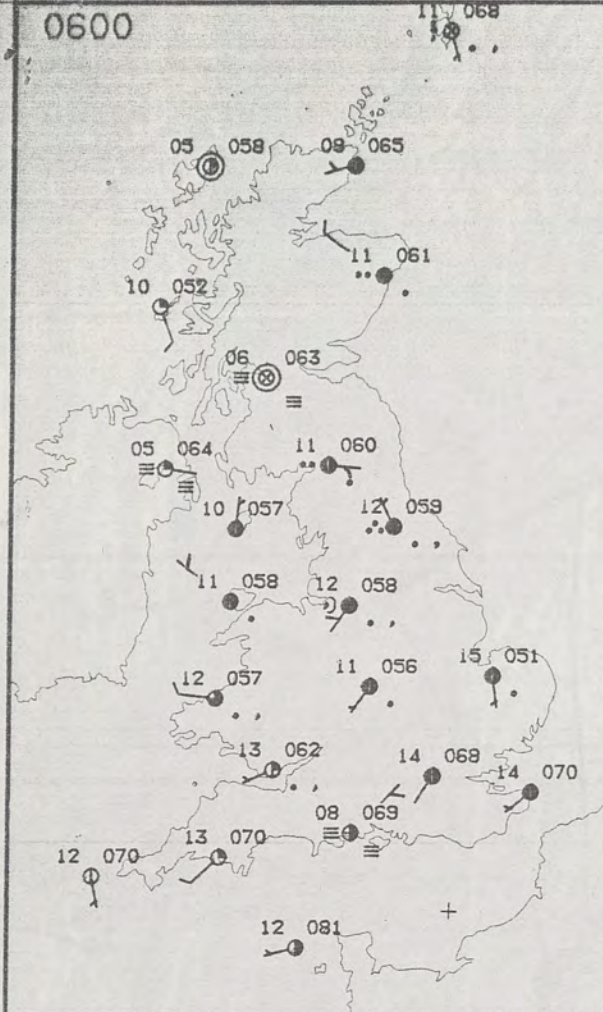

In central and northern parts of England and Wales and in eastern Scotland there were outbreaks of rain at first. The rain was heavy locally with isolated thunderstorms in Humberside and northeast Yorkshire around dawn. Brighter, mainly dry weather spread from the southwest to reach most parts before midday, then there were sunny periods, isolated thundery showers developed later in south Lancashire. In Shetland it remained dull and misty with rain at times.

Over the rest of Britain and Northern Ireland early mist soon cleared and the day was dry with sunny periods. During the evening rain reached Northern Ireland and parts of western Britain.

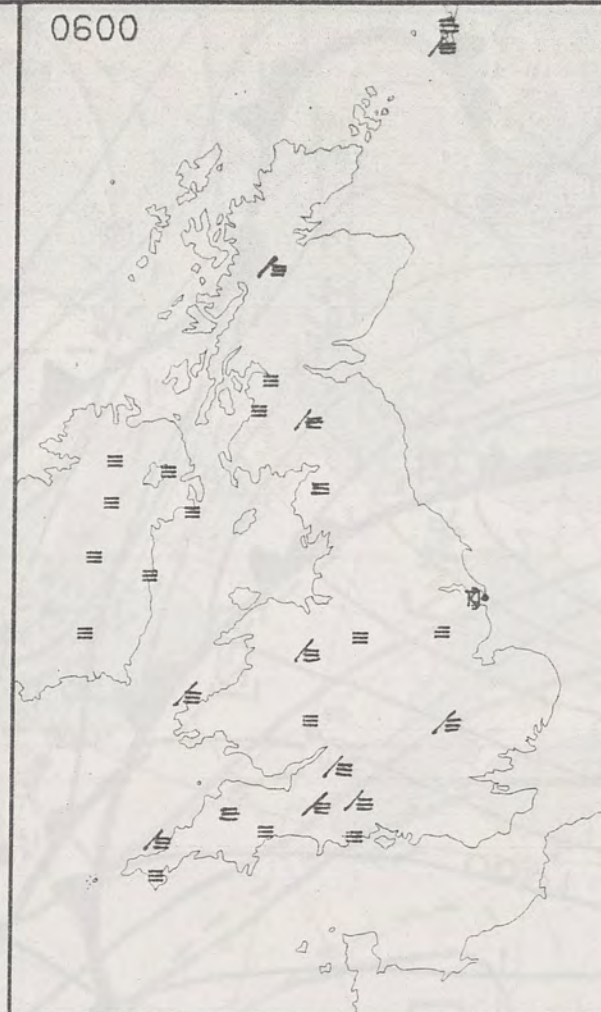

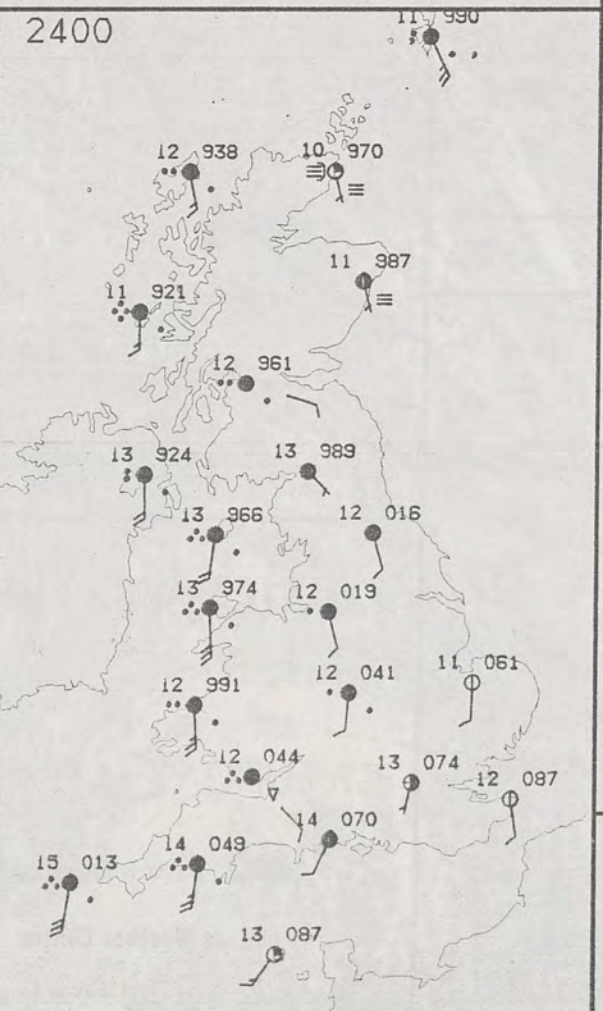

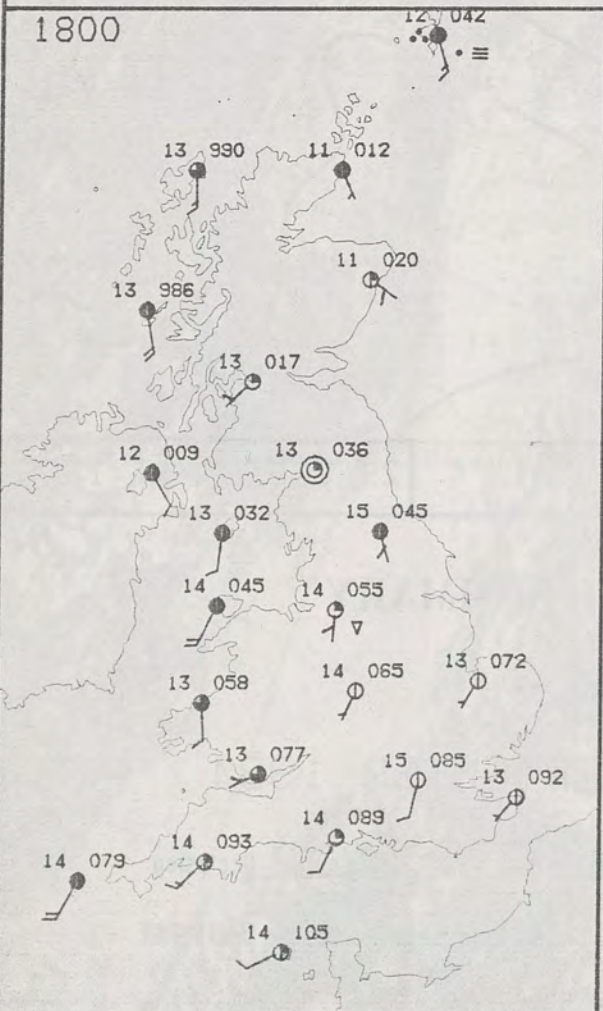

It was rather warm in most regions.

SUNDAY
30 SEPTEMBER 1984

SUMMARY
OF
BRITISH WEATHER

There were several hours of heavy rain everywhere overnight, but western Britain had cleared up before morning.

Central and eastern areas of both England and Scotland had more heavy rain in the morning, but by lunchtime most places were brighter, but Shetland stayed wet will into the afternoon.

In Northern Ireland, Wales and the west of England there was quite a lot of dry, sunny weather, but a few places had a shower. During the evening heavy rain and thunderstorms reached West Wales and West Cornwall.

Central and eastern England had a sunny afternoon and a clear evening.

Over Scotland there was some sunshine, but there were showers in most places.

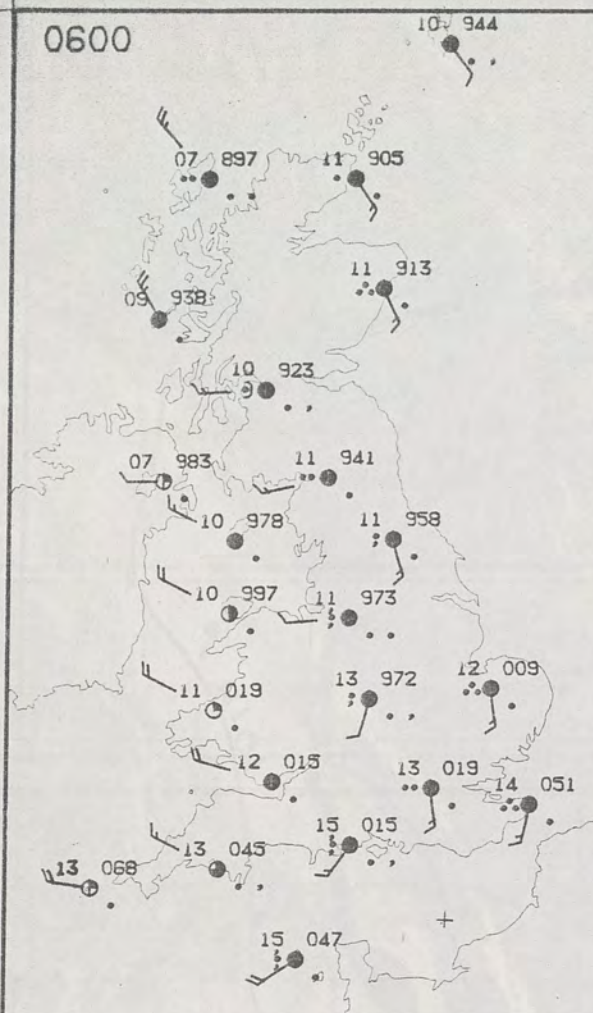

In northern Scotland and the Northern Isles it became very windy, with gale or severe gale force westerly winds.

Temperatures over Britain were mostly near or rather below normal. A gust of 62 knots was reported from Lerwick during the late evening.
