Daily Weather Summaries for June 2020

If you have any questions or feedback about this product or wish to obtain further data please contact the Met Office.

This document contains daily weather summaries for each day of June 2020. The Met Office National Meteorological Library and Archive holds a continuous record of daily weather summaries or daily weather reports from 1860, and these daily weather summaries form a continuation of that series.

The purpose of each summary is to provide an overview of the weather conditions across the UK on that day, with the historical emphasis mainly based on observations from surface network of weather stations, although the format has varied over the decades. While the emphasis remains on observations from the surface network, the current daily weather summaries supplement these by including satellite and rain-radar imagery to provide a more complete overview. The current format of the daily weather summaries is as follows:

1. Text summary of the main characteristics of the weather during the day, written by an operational meteorologist in the Met Office operations centre.
2. Table of daily extremes for the UK for key climate variables including temperature, rainfall, sunshine and gust speeds.
3. Overview of the synoptic situation at 00 and 12 UTC comprising: analysis charts showing the surface pressure pattern and associated weather fronts; North Atlantic and European infra-red satellite images showing cloud-cover; combined infra-red and rain-radar images of the UK; maps of wind speed and direction at 00 and 12 UTC; observations of pressure, wind speed and direction, cloud cover, air and dewpoint temperature at selected UK and European stations in data tables.
4. UK maps of key climate variables from observing stations including maximum, minimum and grass minimum temperature, rainfall, sunshine, gust speed and snow.
5. Further guidance notes

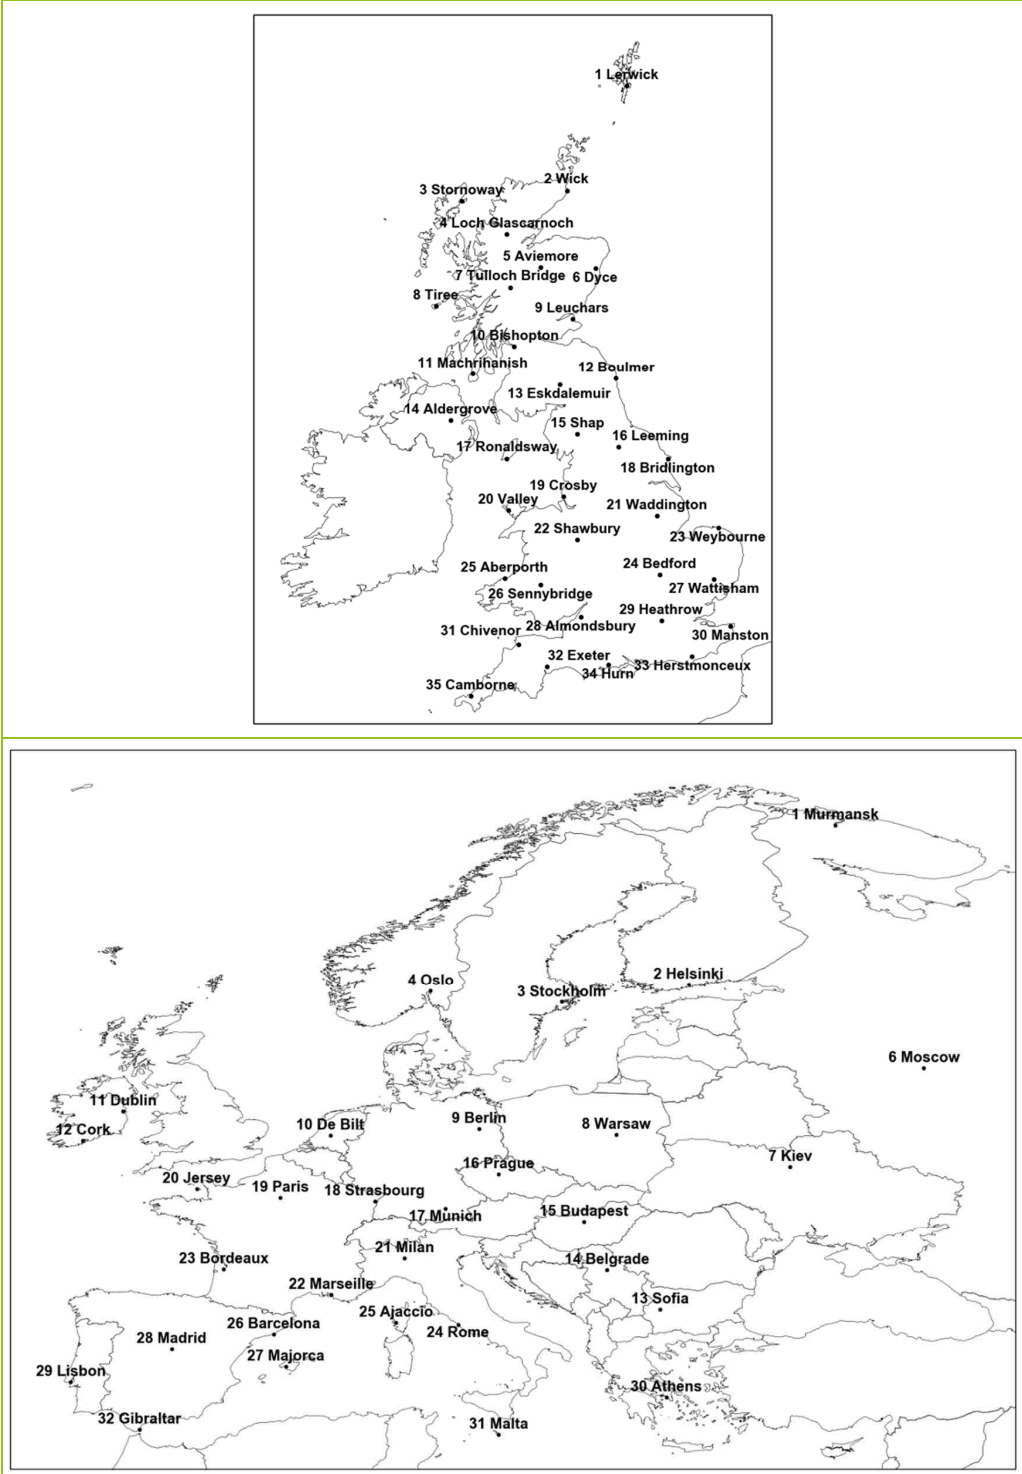

If you spot any data errors or omissions in this product please contact the Met Office.

Daily Weather Summary for Monday 01 June 2020

This day's summary created 08/06/2020 03:00

Summary of the UK Weather for Monday 01 June 2020

Overnight it stayed dry with clear skies and light winds for most. A few mist and fog patches developed during the early hours across parts of eastern Scotland and the coastal counties of northeastern England. The fog soon dispersed in the early morning sunshine, with another dry, sunny and warm day following across the UK. A few patches of cloud bubbled up through the afternoon across the central areas of the UK, but there was still plenty of sunshine to be had here. Towards Scotland, a band of cloud began to encroach into the west of the country through the afternoon, and into Northern Ireland by the early evening. This also began to change the prevailing wind; with the north of the UK seeing northerlies whilst the south remained easterly.

Summary of the UK Weather for Tuesday 02 June 2020

Dry with clear skies across the southern half of the UK overnight. It was cloudier further north with a band of locally heavy rain across the Hebrides slowly sinking southwards through the early hours. Winds remained light. The cloud and rain continued to move southwards through the day, bringing rain to much of Scotland through the morning, and into Northern Ireland and north England by the afternoon. There were cloudier skies further south in the UK, however, there was still plenty of sunshine, with temperatures remaining warm here as well. The rain, which was heavy at times, continued into the evening, slowly spreading into northern England.

This day's summary created 16/07/2020 20:52

Summary of the UK Weather for Wednesday 03 June 2020

It was a cloudy night for most of the UK with some clearer spells across the far south at times. There was rain across much of Scotland at first with a band of heavy rain running through northern England into Wales. Through the course of the night the heavy rain sank further southeast through Wales and towards the south of the country, remaining heavy throughout. The rain eased for many in Scotland with Northern Ireland only seeing a few showers and the far southeast and East Anglia staying dry. After a wet start through most of the UK, the rain began to push southwards, leaving northern regions dry but cloudy. This continued through the afternoon, with Wales seeing drier but cloudy weather, and Northern Scotland seeing some bright or sunny spells. By the early evening it was largely dry but cloudy throughout the UK with some light rain at times. The north, Scotland and Northern Ireland saw some bright or sunny spells. It was generally a much cooler day than of late with a stronger, prevailing northerly, breeze and rain.

Summary of the UK Weather for Thursday 04 June 2020

It was a dry night for many parts of the UK and rather cloudy with a few clear spells across Wales and parts of central England. There was however rain, heavy at times, across southeast England but this largely cleared through the night. There was also some light outbreaks of rain around some coasts with some heavier rain moving into northern Scotland from the east. Windy in places, particularly around southern coasts. It was a cloudy day across the country, and it wasn't particularly bright. Through the day, outbreaks of rain spread southwards across Scotland and Northern Ireland, and into parts of northern England. The south of England and Wales remained mostly dry throughout. It was breezy across the UK, with some stronger gusts along western coastlines. Into the evening and the earlier half of the night, the rain cleared Northern Ireland and northern Scotland, and some heavier bursts continued across southern Scotland and northeast England.

Summary of the UK Weather for Friday 05 June 2020

Early overnight, showers and clear spells dominated the UK with rain largely across the northeast. This began to clear through the small hours leaving Wales and the midlands largely dry, although rain continued to be heavy at times in the northeast of England. The prevailing westerly caused a light breeze but was a touch stronger across the west coast. Towards dawn, heavy rain continued across the northwest, slowing spreading southwards, and parts of the east midlands and East Anglia during the morning. Through the morning, there was a mixture of sunshine and showers. During early afternoon, there were a few thunderstorms across central areas, which pushed into East Anglia and the southeast during the afternoon. The rest of the country continued to see a mixture of sunshine and showers. Through the afternoon, a band of heavy brushed northeastern areas of Scotland and continued to spread southwestwards across the entirety of Scotland. The rain continued into the night.

Summary of the UK Weather for Saturday 06 June 2020

Rain pushed southwards overnight across the UK along with a strengthening westerly wind, crossing the north of England through the early hours. The south remained largely dry, with only the odd shower at times. For most of this morning, rain was observed across NI and north western Scotland. Also, the band of rain from last night reached the East Midlands, north Wales and across parts of the North West by dawn. This continued to move southwards and weaken in intensity during the morning. However, further showers along a trough line developed across central and eastern England, turning thundery and gusty just before noon. These storms travelled south-eastwards, covering East Anglia and parts of the South East later in the afternoon. The rest of England and Wales observed lighter showers, with windy conditions, as well as remnants of the rain band across the far south. The thunderstorms eased by evening, leaving patchy showers behind.

Summary of the UK Weather for Sunday 07 June 2020

A mostly dry night across the UK, barring outbreaks of rain across the southeast of Scotland which pushed southwards into northeast England through the night. There were also outbreaks of rain across the southwest of England, which continued through the night. It was cloudy across most areas, with the clearest spells across the south of England and parts of western Scotland. Winds remained light. By 6am, rain was covering much of northern and eastern England. There were also some patchy rain showers across Cornwall and northern Scotland. The main area of rainfall extended southwards and weakened in intensity (to light rain/drizzle) throughout the morning, to East Anglia and parts of the South East. By mid-afternoon there were a few isolated thunderstorms at the coast, in the far south of England. Early evening also brought some showers across Wales, with light rain lingering in many parts of coastal, eastern England. Winds were light throughout the UK today, although northern Scotland saw winds up to 20 knots this morning.

This day's summary created 17/06/2020 03:00

Summary of the UK Weather for Wednesday 10 June 2020

Overnight a band of rain crossed Scotland, the northwest and north Wales leaving showers and dry spells in its wake. The south stayed largely dry with some scattered showers. Light winds throughout with few clear spells. A cloudy start to the day with overnight rain being confined largely over the eastern half of the country. The west saw a few brighter spells but outbreaks of rain also. Through the morning the rain eased in some eastern areas away from the far north and south with some heavier bursts of rain also developing in Scotland. Outbreaks of rain continued elsewhere but with drier conditions for large parts of Wales and the Midlands. Throughout the afternoon, rain, heavy at times, was seen for many parts of the UK with overcast conditions. The best of any drier weather was in the far north west and central parts of England along with the odd brighter spell. Although remaining cloudy the rain eased across Scotland in the evening and became lighter in places for eastern England. Heavy rain however moved into Wales and the southwest.

Summary of the UK Weather for Thursday 11 June 2020

Heavy rain persisted across northern England, the southwest and Wales overnight. Scattered showers moved westwards across central and eastern England through the early hours. Elsewhere was largely dry and cloudy. It was a cloudy morning for many with sunny spells developing, especially in northern England and the far northwest. The rain eased in the southwest as showers continued to move westwards across central and southern England and into Wales, giving some heavy downpours. Through the afternoon a band of rain moved into the east of England and continued across the country reaching western coasts. Parts of the south saw drier conditions however. Elsewhere showers sank to the south of Wales with some heavy showers and at times thunderstorms developing in the southwest. Scotland and Northern Ireland had a dry day with some good spells of sunshine through the afternoon. The evening saw heavy showers clear the southwest with rain continuing for much of England and spreading to north Wales and parts of southern Scotland and Northern Ireland. Elsewhere in Scotland was largely dry, as was the south with clear spells.

Daily Weather Summary for Friday 12 June 2020

This day's summary created 19/06/2020 03:00

Summary of the UK Weather for Friday 12 June 2020

A band of rain moved westward across Northern Ireland and north Wales overnight whilst locally heavy rain lingered across northern England. Elsewhere it was largely dry and cloudy with some mist and fog patches across East Anglia, the east Midlands and Yorkshire coasts. Much of the rain persisted across northern England and Northern Ireland until dawn but it had started to clear north Wales. Aside from northern England and Northern Ireland, most places saw a dry start with cloudy skies. Through the morning, a band of rain, accompanied by strong winds, began its approach into the south coast. It progressed northwards, turning very heavy at times, spreading across much of Wales and central England by mid-afternoon. Towards evening, this rain became increasingly patchy, though still heavy at times. The rain across northern England continued to push northwards throughout the day with much of western Scotland turning wet through the evening. Behind both bands of rain were drier conditions, though it remained largely cloudy with some brighter spells in southwest England.

This day's summary created 20/06/2020 03:00

Summary of the UK Weather for Saturday 13 June 2020

A rather wet night with rain in the north and some heavy downpours in the far north. There were outbreaks of rain across Wales and northern and southwestern England, though it became drier in most places through the early hours. Heavy and thundery rain reached northeastern coastlines around dawn and continued to push inland and westward. There was a lot of low cloud throughout the night with fog patches in the east but some clear spells in the south. Through the morning, most places remained dry with variable cloud allowing for some sunny spells, especially in eastern and southeast England. Heavy showers across northern England began to push northwards, these gradually easing towards midday. Through the afternoon, a band of showery rain began its approach into southern England. As it moved north, showers turned heavy and at times thundery, particularly across the midlands, northwest England and parts of Wales. Scotland and Northern Ireland stayed largely dry throughout the day with some sunny spells, though there were a few showers in places.

Summary of the UK Weather for Sunday 14 June 2020

Overnight heavy showers and thunderstorms cleared northern Wales and parts of the West Midlands leaving drier weather and some breaks in the cloud. There were a few outbreaks of rain in the south and far north but elsewhere had a largely dry night with clear spells for many, especially the southeast. A rather murky and damp night however for eastern areas, away from the south, with low cloud and fog spreading inland from the coast. Some fog patches also in the southwest. These mist and fog patches lingered into late morning. It was cloudy through the morning with some outbreaks of rain across southern Wales and Somerset which pushed northwards through the afternoon. These turned to thundery showers across central and northern areas of Wales, the West Midlands and also Northern Ireland, continuing into the evening. It was mostly dry and bright with some spells of sunshine barring some rain across Scotland at times. Mist and fog patches started to form in the east through the evening.

Summary of the UK Weather for Monday 15 June 2020

After most showers faded away through the evening, the majority of the UK saw a dry night with variable amounts of cloud. This allowed for some clear spells to develop, especially across the south. Through the early hours, fog and low cloud formed along eastern coasts, lingering here until later in the morning. Through the morning, there were some outbreaks of rain across the far north of England, but elsewhere was mostly dry. The clearest and sunniest spells were seen across the midlands and parts of the south. Once the overnight fog cleared, there was plenty of sunshine across all areas of the UK. Scotland perhaps turning cloudy at times with some outbreaks of rain in the east, pushing westwards during the afternoon. Through the second half of the afternoon, thundery showers spread northwards across Wales, the northwest coast of England and into southwest Scotland. They were also seen across the south of Northern Ireland. These thundery showers become more frequent across the southeast of England and Northern Ireland into the evening.

This day's summary created 23/06/2020 03:00

Summary of the UK Weather for Tuesday 16 June 2020

Most of the UK saw a dry start to the night with a good deal of clear spells. Areas of north Wales and the west midlands continued to see thundery showers into the early hours. Scotland and south Wales also saw some heavy showers, though these were less thundery in nature. Thunderstorms began to fade, but some heavy showers lingered across mid Wales. Elsewhere remained dry with the arrival of fog along eastern coasts towards dawn. With light winds, fog formed through the early hours along the east coast of the UK. Some showers were around in Wales, the southwest and western Scotland. As showers linger into the late morning, some thunderstorms were recorded, across the southwest, northwest, south Wales and central England. This continued through the afternoon, with further thunder recorded in the east of England. Scattered showers were broken by sunny spells, with the south seeing the best of these through the evening while thunder continued to be recorded in the midlands and east Wales.

This day's summary created 24/06/2020 03:00

Summary of the UK Weather for Wednesday 17 June 2020

A dry night for most areas of the UK, barring some heavy rain across the north midlands, north Wales and northwest England. This rain began to clear away during the early hours and push across the Irish Sea to Northern Ireland where it lingered towards dawn. Further rain spread across Scotland during the early hours, becoming heavy at times. Mist and fog patches started to form across the east and parts of Wales through the second half of the night and lingered into the early hours. Winds remained light throughout. The morning was largely dry and cloudy, with showers mostly confined to northern Scotland before clearing westwards through the morning. In the late morning, showers and thunderstorms formed in the southeast, southwest and South Wales. In the early afternoon this spread to the midlands and the northwest, with mid-Wales, Northern Ireland, the northeast and much of Scotland avoiding the showers. This continued through the afternoon, with plenty of heavy showers accompanied by rumbles of thunder, with sunny or bright spells in between. Through the evening, much of these showers cleared although it stayed rather cloudy. Winds remained light throughout.

Summary of the UK Weather for Thursday 18 June 2020

Rain pushed across the southeast of England from the east during the early hours. It brought some heavier bursts at times. It continued to spread eastwards and northwards into the Midlands, East Anglia and across Wales towards dawn. Elsewhere, it remained dry through the night with light winds. It was fairly cloudy in the south, but there were plenty of clear skies across Scotland. Mist and fog patches formed along the northeast and southwest coastlines. The patches of fog and mist gradually cleared through the morning, with some lightning also being observed around this time along the south coast. The occlusion over England and Wales continued to slowly pivot northwestwardly through the day, bringing heavy and persistent rain to much of these areas, with the east of England turning drier through the afternoon. Elsewhere, Scotland was dry with sunny spells whilst Northern Ireland saw a few showers creep in from the occlusion further south.

Summary of the UK Weather for Friday 19 June 2020

Overnight, rain continued to push eastwards into the southwest and South Wales as rain began to clear westward from Northern Ireland. Apart from some showers in parts of Scotland, the rest of the UK saw a largely dry night, with some clear spells. The early morning started with some patches of fog and mist along the east coast of England, which gradually cleared in the morning sunshine. A cloudy day for most, with rain continuing to clear northwards from south and central UK, moving into northern England by the afternoon where it became quite heavy towards the west with some lightning observed at times. There were some brighter spells with a few showers in Scotland and Northern Ireland throughout the day. Towards the evening, cloud began to break up in the south of England, with some spells of sunshine to follow.

Summary of the UK Weather for Saturday 20 June 2020

Overnight saw a few scattered showers, mostly along the west coast, with heavier and longer spells in Scotland. Much of the east of England remained dry. Clear spells and light winds allowed some isolated patches of fog to form through the early hours. It was a predominantly dry day throughout the British Isles, although a few showers fell during the morning. By the afternoon, the vast majority of places stayed fine with sunny spells and light winds. Through the evening, a weather front was approaching from the west, bringing rain to Northern Ireland, and thicker cloud to the far west of England. However, most locations still enjoyed a pleasant evening, before conditions deteriorated overnight.

Summary of the UK Weather for Sunday 21 June 2020

A band of rain spread eastwards across the west of the country overnight. The rain was heavy at times, especially across Northern Ireland and Wales. Eastern regions were generally dry but cloudy at first before rain arrived through the early hours. The rain cleared into The North Sea during the early morning to leave behind a day of scattered showers and sunny spells, though a keen breeze made it feel cool under any showers. There was also one or two rumbles of thunder for central and northwestern parts of England during the heaviest of downpours. The vast majority of the showers subsided by evening time, along with the breeze dropping to give a very pleasant evening for many parts.

Summary of the UK Weather for Monday 22 June 2020

It was a dry night for many parts of the UK with widespread clear spells. It was cloudier however across Northern Ireland with rain, heavy at times, moving eastwards across the country and edging into western Scotland later in the night. Most places saw a dry start to the day with the best of the sunshine in the south. Further north, it remained cloudy with some rain lingering in parts of Northern Ireland and western Scotland. Through the morning, outbreaks of rain pushed further inland, reaching central Scotland and northeast England by midday. Another band of rain arrived into Northern Ireland during the afternoon, turning heavy at times. This continued to spread eastwards into parts of Scotland and northern England towards evening. In the south, it remained largely dry throughout the day with plenty of bright or sunny spells. It was rather breezy in places, but winds started to ease in the evening.

Summary of the UK Weather for Tuesday 23 June 2020

There was a northwest/southeast split overnight with cloudy conditions for Scotland, Northern Ireland and northern England as well as some rain, heavy at times, in places. Elsewhere was mostly dry aside from the odd patch of rain across Wales. Here, it was rather cloudy with some mist, whilst further east and south, there were long clear periods. Throughout the day, the cloud across Wales and the west Midlands began to retreat northwards, leaving the majority of the south dry with plenty of warm sunshine. Further north, most places stayed cloudy with outbreaks of rain lingering across Scotland and Northern Ireland. By evening, much of the cloud had cleared northern England, leaving just the far north with an unsettled end to the day.

Summary of the UK Weather for Wednesday 24 June 2020

It was a predominantly mild and warm night for most parts of the UK. The exception to this was over Northern Ireland and western Scotland, where the band of rain from the previous day was still lingering. Winds were generally light. Through the morning the band of rain in the north moved northeastwards, giving some heavy downpours in places then easing for many towards the afternoon, lingering though in the far northeast. Parts of eastern Scotland stayed dry however. Elsewhere England and Wales had clear skies, with plenty of sunshine. Despite the rain being slow to clear in the far northeast the rest of the UK had a dry afternoon. Cloud across the north began to burn off giving some good spells of sunshine. Elsewhere the cloudless skies continued with lots of strong sunshine on offer, making for a hot day across England and Wales. Rain cleared the northeast by the evening with plenty of clear spells giving some pleasant evening sunshine. Clear conditions persisted in the south with sunshine across England and Wales until dusk.

Summary of the UK Weather for Thursday 25 June 2020

A dry and very warm night across the UK with the majority seeing a good deal of clear spells, especially in the south. Some cloud lingered over Northern Ireland and parts of Scotland, but this gradually retreated northwards through the night. A dry morning with lots of warm sunshine across the majority of the UK. The exception being some western parts of Scotland which saw cloudier conditions as well as some heavy outbreaks of rain. Cloud and rain approached the southwest also. Through the afternoon many parts stayed dry with cloud building a little for some but largely clear skies with lots of sunshine on offer, especially southeast, making for a hot day. Rain in the west of Scotland slowly cleared to the north but still gave some heavy, thundery downpours to parts of northwestern Scotland. Rain in the southwest moved further inland and to parts of Wales, heavy and thundery outbreaks here also. The evening saw heavy, at times thundery, showers become more widespread across parts of the west and south. Elsewhere there were clear periods and evening sunshine.

Summary of the UK Weather for Friday 26 June 2020

Most places saw a dry start to the night with a good deal of clear spells, the best of these across the south. Towards midnight, cloud started to build into western coasts bringing some heavy, thundery showers to west Wales, northwest England and western Scotland. Southwest England also saw some showers, though these weren't as torrential. Thundery showers continued to move northeastwards across England and parts of Northern Ireland and Scotland during the day. Elsewhere was largely dry with sunny spells across central and eastern England. Largely cloudy across the southwest with showers developing towards evening.

Summary of the UK Weather for Saturday 27 June 2020

It was a cloudy night for many with some clear periods developing, especially on the eastern coasts after any heavy, at times thundery, showers cleared. There were outbreaks of heavy showers and longer spells of rain across western and southern areas of the UK also although elsewhere some parts avoided the rain and had a dry night, particularly in the north. Scattered showers persisted across much of the country and were heavy and thundery at times, especially across northern England. Longer spells of rain moved across Northern Ireland during the afternoon.

Summary of the UK Weather for Sunday 28 June 2020

A rather wet and windy night for the UK with some heavy showers, or at times longer spells of rain, for many and more persistent rain for some northwestern parts. The south and east had the best of any drier and clearer spells with mostly cloudy skies elsewhere, although breaks did develop through many parts of England. The rain easing in the south later in the night but continuing in the north. Showers continued through the south in the morning, with rain elsewhere beginning to turn more showery with some clear spells at times. In the early afternoon persistent rain continued in North Wales, the northwest and parts of Scotland, with scattered showers elsewhere. By the evening showers had turned sparser in the south, with the rain remaining in the northwest, and turning rather heavy at times. It stayed windy into the evening, with some coastal gales in the northeast and Wales.

This day's summary created 06/07/2020 03:00

Summary of the UK Weather for Monday 29 June 2020

It was windy with heavy rain lingering across Scotland, northern Wales and Northwestern England overnight. Outbreaks of showery rain developed across Northern Ireland during the early hours whilst the odd showers developed over southern Wales and the Southwest overnight. Elsewhere was largely dry with clear spells across East Anglia and southern England. Some heavy rain was seen through the morning in the northwest, west Scotland and North Wales, with scattered showers elsewhere. It was mostly cloudy, with few clear spells. The rain and showers was clearing through the late morning and early afternoon, but some persisted in the northwest and Scotland. Some clearer spells had developed in the northeast and the southwest in the afternoon, and by the evening it was mostly dry bar the odd shower in Wales and northern England.

Summary of the UK Weather for Tuesday 30 June 2020

It was a largely dry and cloudy night, though there were some clear spells dotted around here and there. Wales. A few outbreaks of rain lingered across northern Scotland and northwestern England until dawn. Southwest England and Wales saw a weak weather system moving in from The Atlantic, giving a few moderate bursts of rain to begin the day. However, by the early afternoon the rain had become very light and patchy as it moved eastwards over more central parts of the south coast. Further north was mainly dry, though the cloud was thick enough for drizzle to fall occasionally. The brightest weather was over parts of East Anglia and Lincolnshire, where temperatures were just about able to reach the early twenties. During the afternoon the rain over the south cleared eastwards away from the southeast, though a renewed pulse did clip parts of Sussex and Kent for a time. Scotland saw a few heavy showers in the afternoon, which continued for much of the evening. The best of any bright spells late in the day were in southern parts of the UK, with occasional drizzle still affecting northern England.

Daily Weather Summary for Tuesday 30 June 2020

Daily Weather Summary for Tuesday 30 June 2020

None of the selected stations observed a day of sleet or snow falling or non-zero snow depth at 0900 UTC.

Guidance Notes

UTC = Universal Coordinated Time. For the UK UTC is the same as GMT (Greenwich Mean Time).

National boundaries shown on the European station map are for illustrative purposes only.

Daily extremes

- Daily extremes have been manually confirmed by Met Office Observations Quality Management as valid observations from the live database at the time of checking. However, more extreme values may still be possible if they occur after the time of production.
- Mountain stations above 500 masl are excluded from lowest temperatures, highest gust speeds and greatest snow depths at 0900 UTC. This is because they are not considered representative of low level areas.
- Counties quoted against each station are based on historical county boundaries pre-1974 and may not reflect current administrative boundaries.

Analysis charts and satellite imagery

- The satellite imagery is infra-red imagery from the geostationary MSG satellite.
- The rainfall image is derived from satellite data from MSG and rain-radar data. This represents a snapshot of instantaneous rain-rates at 0000 UTC and 1200 UTC and so does not necessarily reflect daily accumulations in the rainfall station map.
- Any analysis charts or satellite images which are unavailable will be displayed as white space.

Station maps

- The UK maps show station data for the same set of stations presented UK data table. These stations are selected to provide good spatial coverage across the UK; they represent only a fraction of the overall UK observing network.
- Wind speed maps show wind speed in Kt and direction both averaged over the hour up to the time of observation. 1 Kt = 1.151 mph.

Hourly station data

- The data tables provide spot hourly observations from synoptic messages at 0000 and 1200 UTC. Missing data are denoted by '-'.

- Pressures are mean sea level pressure in hPa.
- For UK stations, Gibraltar and Jersey, the wind speeds and directions are both averaged over the hour up to the time of observation. However, for European stations wind speeds and directions are both averaged over a 10-minute period up to the time of observation.
- Wind speeds are in Kt. Wind directions are stored in the database every 10 degrees and have been converted to the nearest point of the compass. These give the direction the wind is blowing from, not to.
- Cloud amounts are in Oktas from 0 (clear) to 8 (overcast). 9 indicates sky obscured (eg by fog).
- Air temperature and dew point temperature are in Celsius.

Temperature maps

- Daily maximum, minimum and grass minimum temperatures are in Celsius.
- The period for the daily maximum temperature on day D is defined from 0900 UTC day D to 0900 UTC day D+1.
- The period for the daily minimum and grass minimum temperatures on day D is defined as 0900 UTC day D-1 to 0900 UTC day D.
- On any given day D the minimum will typically occur in the early hours of the morning and the maximum in early afternoon.

Rainfall, sunshine and max gust speed maps

- Daily rainfall is in mm from 0900 UTC day D to 0900 UTC day D+1.
- Daily sunshine is in hours from Kipp and Zonen CSD1 automatic sunshine records. Bright sunshine is defined as exceeding 120 W/m².
- Max gust speeds are the daily max gust in Kt from 0000-0000 UTC

Snow maps

- The day of snow falling map displays data from present weather sensors, showing stations which have recorded sleet or snow falling at any point in the day (0000-0000 UTC).
- The snow lying map shows level snow depth as recorded by the automatic snow depth sensors at 0900 UTC. These snow depth sensors do not record snow depth if this is less than 1cm.
- Snow depth sensors are normally operational from October to April, in the event of snow falling outside this period data availability may be limited.
- Snow maps will only be displayed if one or more of the selected stations on that date have recorded either snow falling or non-zero snow depths. If snow maps are not

displayed it is still possible that other stations in the network have recorded a day of sleet or snow falling or non-zero snow depth.
