PLOTTED SURFACE OBSERVATIONS

1800

2400

MONDAY
1 FEBRUARY 1988

Scotland had a period of continuous rain or sleet, with snow in places overnight, the snow principally across higher ground but for a time, snowfall was reported from lower levels. By the end of the night, the weather had turned dry in most places, though heavy rain continued in the far north and extreme east. During the day, as the depression crossed from the southwest, periods of heavy rain developed, with further snow over the mountains.

Across Northern Ireland, England and Wales, heavy overnight rain, with a short period of sleet and snow in the north, had all but cleared by dawn, then the daytime weather was dominated by clusters of heavy, squally showers, these accompanied by hail and thunder. The showers during the morning were most prominent in Wales and the west, but by afternoon, all areas were at risk, with large clusters of heavy showers and squally, stormy winds.

Winds were very strong across England and Wales, with gales or severe gales widespread, with gusts reported widely 45 to 60 knots, and around exposed western and southwestern coasts, gusts above 80 knots, with report of 90 knots from Lands End Coastguard. (Plymouth/Mountbatten reported a gust of 70 knots, the highest February value on record.)

Temperatures were generally above normal, notably so in the southern half of the country, though the mildness was tempered by the strength of the wind.

TUESDAY
2 FEBRUARY 1988SUMMARY
OF
BRITISH WEATHER

Most of the United Kingdom had a showery day, with many of the showers heavy, and accompanied by hail and thunder. During the day, as progressively colder air spread in from the west, the showers produced some heavier falls of snow over hilly regions, and towards evening, snow was reported from lower levels in Wales, Northern Ireland, central and southern England.

Temperatures were not far from normal but most areas would have experienced a considerable wind chill.

Strong west or southwest winds affected many areas, with gales in places.

Highest gusts reported :- 86 knots Gwennap Head (Lands End) during the late morning. Several gusts from exposed southern and western stations in the morning/early afternoon in the range 60 to 75 knots. Winds tended to ease somewhat towards dusk.

WEDNESDAY
3 FEBRUARY 1988

SUMMARY OF BRITISH WEATHER

Showers in northern and eastern parts of England died out overnight but they continued in the southwest. During the day there was a good deal of sunshine in northern England but cloudier weather with showers spread slowly northeastwards. During the evening a band of heavier rain spread eastwards through England and Wales, with showers following in the southwest.

Over Scotland there were scattered showers and clear then sunny intervals. During the day most of the showers were in the west with the best of the sunshine in southeast Scotland. During the evening a band of more persistent rain spread north through southern Scotland giving snow for a time in places.

Northern Ireland had a largely clear night and sunny morning followed by a cloudy afternoon with rain and sleet after dark.

Temperatures were generally near or a little above average but it was very mild in parts of the extreme south.

THURSDAY
4 FEBRUARY 1988SUMMARY
OF
BRITISH WEATHER

Overnight a band of rain spread eastwards across England and Wales, followed by some heavy showers. During the day there was a little sunshine and scattered showers in most areas, with some of hail, sleet or snow, and with thunder in one or two places. Northeast England, though, had some more persistent rain early in the morning, which turned to sleet in places and then, in the extreme northeast, there were a few hours of snow around the middle of the day. During the evening a lot of the showers died out and there were clear spells but rain reached the Channel Islands before midnight.

During the night a band of rain moved north through Scotland and gave a wet day in the far north. Over southern Scotland there was generally a lot of cloud and one or two showers but in Northern Ireland there was sleet or snow in the morning, clearing to leave one or two wintry showers in the afternoon. Rain continued in the far north during the evening, while elsewhere clear spells developed.

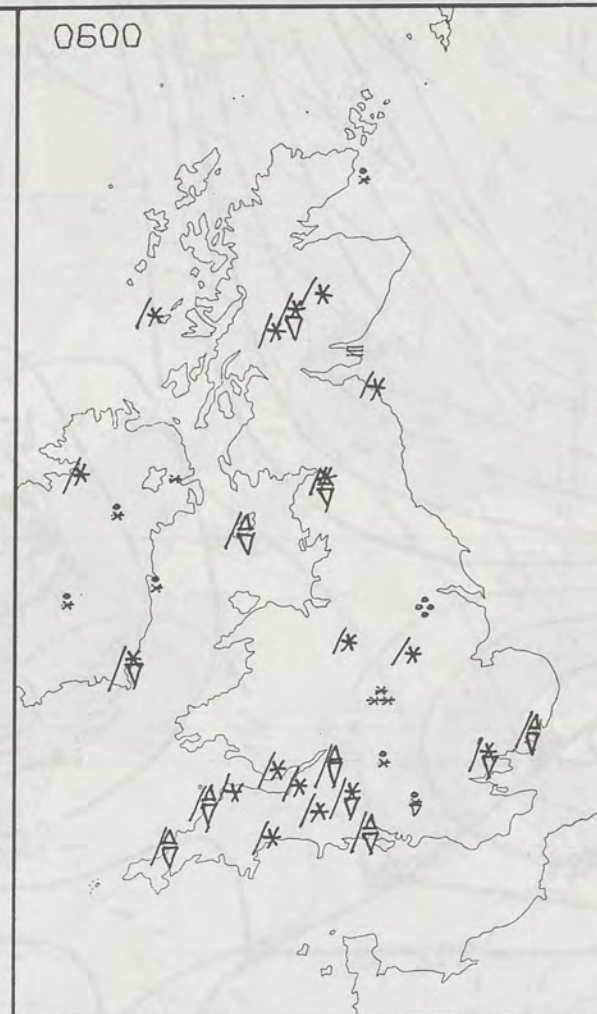

Temperatures were generally within a degree or so of average. Winds were quite blustery near the south coast though, with a gust of 76 knots at Gwennap Head near Lands End in the early hours.

FRIDAY
5 FEBRUARY 1988

SUMMARY
OF
BRITISH WEATHER

Many places had a dry, clear, cold night with some frost, but there were showers scattered about.

Northern Ireland, Wales and southwest England had rain and sleet before daybreak and this rain, which was heavy at times, spread across England and Wales and into southern Scotland in the morning and on to central Scotland in the afternoon. In the border counties of northern England and southern Scotland there was some sleet or snow, especially on hills.

Over England, Wales and Northern Ireland the weather brightened up, with some sunshine, but there were showers too, some heavy with hail, and it was cold enough for snow showers in the extreme north of England and in southern Scotland.

Some places in northern Scotland stayed dry and sunny but there were showers in many places.

Temperatures were generally close to or a little above normal, but it was quite cold in the border areas of northern England and southern Scotland.

SATURDAY
6 FEBRUARY 1988

SUMMARY
OF
BRITISH WEATHER

North Wales and central and northern England had a clear, frosty night, but southern districts were more cloudy and in southern England and the Channel Islands there was some heavy rain, with sleet here and there and snow on the moors.

In Northern Ireland there were snow showers and in Scotland there were a few showers of hail, sleet or snow, with some persistent snow on the southern uplands, but much of Scotland had a clear, frosty night.

In southern England and the Channel Islands there was rain for a time, but most places in England and Wales were sunny, although there were a few snow showers.

Over Northern Ireland and Scotland there was some sunshine nearly everywhere, but there were quite a few sleet or snow showers and more continuous and heavy snow on the Scottish mountains.

Temperatures in most places were within a degree or so of normal.

SUNDAY
7 FEBRUARY 1988

SUMMARY
OF
BRITISH WEATHER

The night was frosty over most of the United Kingdom, except on some western coasts where temperatures stayed just above freezing with some wintry showers.

England and Wales then started the day dry and sunny and in southeastern districts it stayed bright for most of the day. Scotland and Northern Ireland had a mostly cloudy day with a little sleet or snow in places in the morning, before a band of more general rain and snow crossed in the afternoon, the snow mostly over high ground but falling at lower levels for a short while.

Rain pushed into Wales and many western parts of England before dusk and as it spread east it turned to sleet and snow over northern parts of England for a time. Some of the rain was quite heavy, with thunder reported from the Bristol area and over parts of East Anglia and southeast England in the evening.

Daytime temperatures were close to normal over most parts but Scotland was rather cold.

It became quite windy as the wet weather arrived, with gusts over 70 knots on some southwestern coasts.

8 FEBRUARY 1988

SUMMARY
OF
BRITISH WEATHER

Southern counties of England and Wales became cloudy overnight with a spell of rain and sleet and some wet snow in places before dawn.

Elsewhere there were clear spells and scattered sleet and snow showers with a slight air frost in parts of Scotland.

Daylight hours saw a good deal of sunshine over most of the UK with many central and southern counties largely dry and sunny.

There were wintry showers over Northern Ireland and northern England with the most frequent showers in the west and north of Scotland.

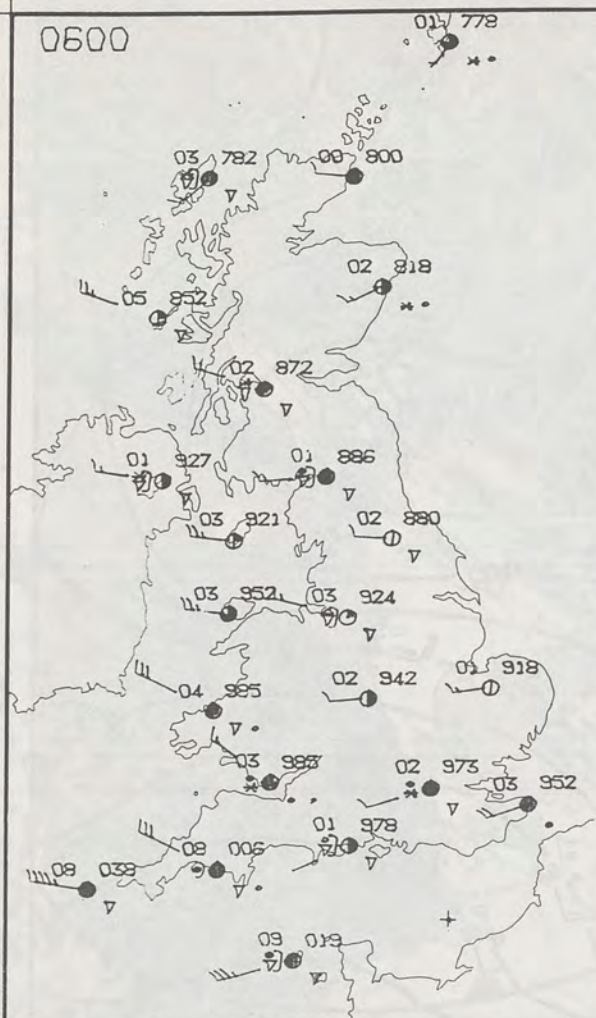

During the evening, thickening cloud brought some light rain to Northern Ireland, parts of Wales and the southwest of England.

Temperatures were near average generally.

TUESDAY
9 FEBRUARY 1988SUMMARY
OF
BRITISH WEATHER

The main feature of the weather was the very strong wind, much of the United Kingdom had winds up to gale or severe gale force at times, with Wales and the west of England having the strongest winds, reaching storm force and at Gwennap Head near Lands End the wind gusted to 96 knots, 111 mph.

There was rain overnight everywhere, although this had cleared from all districts by daybreak or soon afterwards.

Scotland had a lot of cloud and there was rain and sleet in most places, the rain and sleet heavy at times.

Over England, Wales and Northern Ireland there was some sunshine but there were showers as well, some heavy with hail and sleet and in the evening some snow showers.

Temperatures in most places were close to or a little above normal, however the strong winds made it feel cold particularly in the evening.

WEDNESDAY
10 FEBRUARY 1988SUMMARY
OF
BRITISH WEATHER

There were showers of rain, hail, sleet or snow in most places overnight with some more persistent rain and sleet here and there. It was a windy night, the wind up to gale force at times over much of the United Kingdom.

It was windy for a while during the day with gales or severe gales in most places and storm force winds on coasts and hills and at Gwennap Head the wind gusted to 88 knots. Later on the wind moderated.

There was at least a little sunshine everywhere, indeed some places were sunny for much of the day, but there were a lot of showers, the showers fell as rain, sleet and snow and there were a few thunderstorms near the Channel coast. In the afternoon and evening over South Wales, southern England, the Midlands and East Anglia more persistent and heavy rain, sleet and snow occurred.

Temperatures were close to normal.

THURSDAY
11 FEBRUARY 1988

SUMMARY
OF
BRITISH WEATHER

Many places had a clear, cold night with a frost, at least on the ground. There were some showers, mostly of sleet or snow, and chiefly in the north. A longer outbreak of snow deposited a few inches in the Grampians.

There was generally a fair amount of sunshine during the day, with the temperature rising to near the seasonal normal. Further wintry showers fell in the north, and parts of the west. Cloudy weather spread across Cornwall and Devon early in the day, and then across other southern coastal counties during the day; it stayed dry on the mainland, but the Channel Islands (especially Jersey) had rain during the afternoon and early evening.

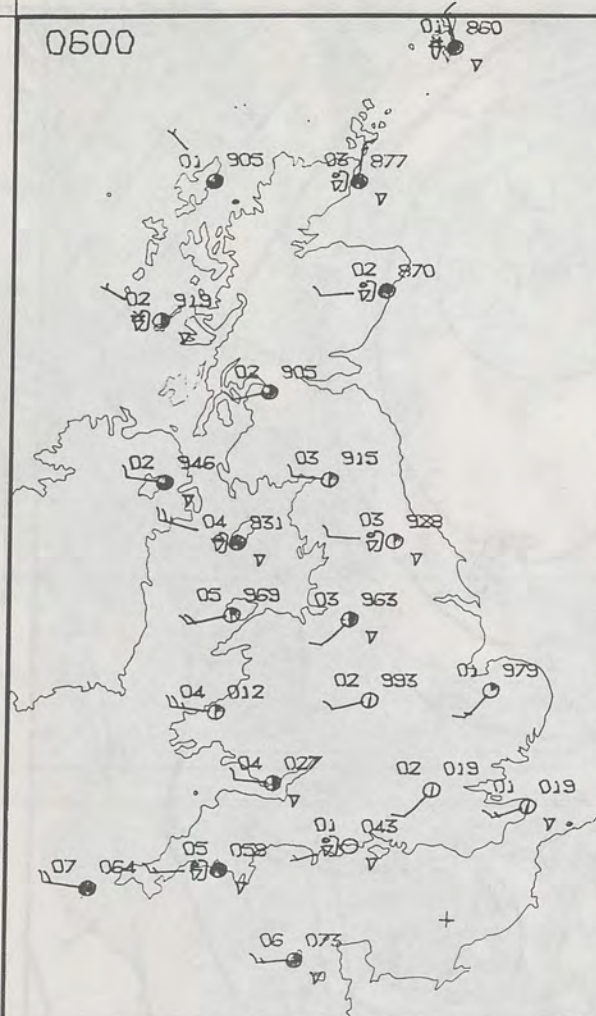

Frost became fairly general across the British Isles during the evening.

Temperatures were mostly near normal in the south but a degree or so below in the north.

SUMMARY
OF
BRITISH WEATHER

Overnight, cloud in southeast England moved away to leave skies largely clear over most regions. Frost was widespread over the UK, mostly slight but moderate or severe in parts of the Central Highlands. There were a few wintry showers around, these mostly in the far north and west.

During the day there was a good deal of sunshine. Sunshine was almost unbroken in some sheltered southern and eastern districts but Northern Ireland had a rather cloudy start to the day, and there were scattered showers around.

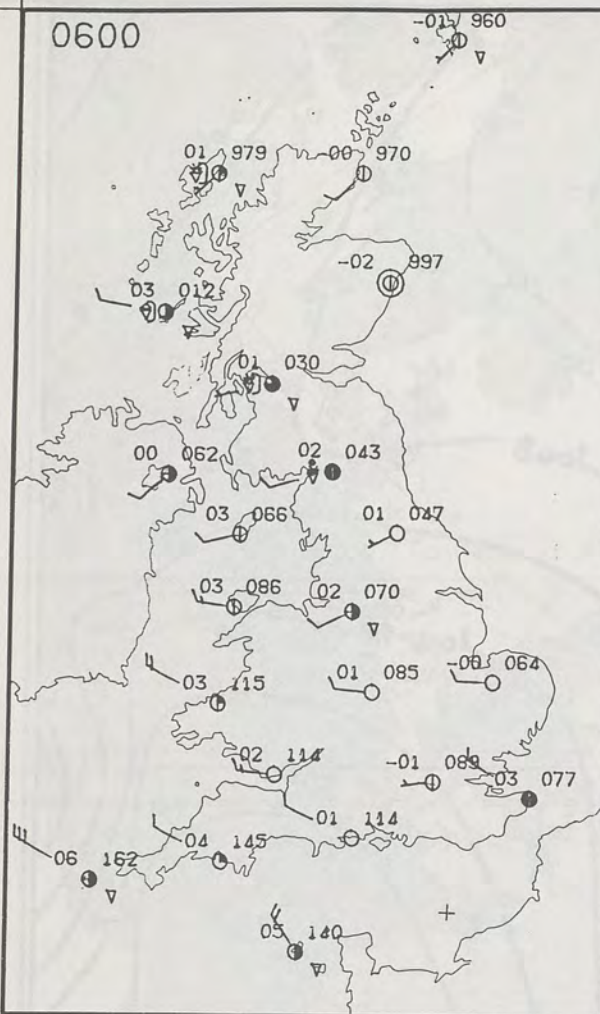

Most of the showers were in northern and western parts and in north and west Scotland most of the showers were of hail or snow and some were heavy. A thunderstorm was reported in southwest Scotland around dawn. During the day isolated showers occurred in central and eastern parts too but showers died out in the evening except in Shetland. Cloud and rain reached Northern Ireland and the extreme southwest towards midnight.

Temperatures were close to average but a fraction below in the north.

SATURDAY 13 FEBRUARY 1988

SUMMARY OF BRITISH WEATHER

During the night clear skies were replaced from the west by cloud, and all but a few eastern counties had rain by dawn. There was a little sleet in north-eastern parts for a time but this turned to rain.

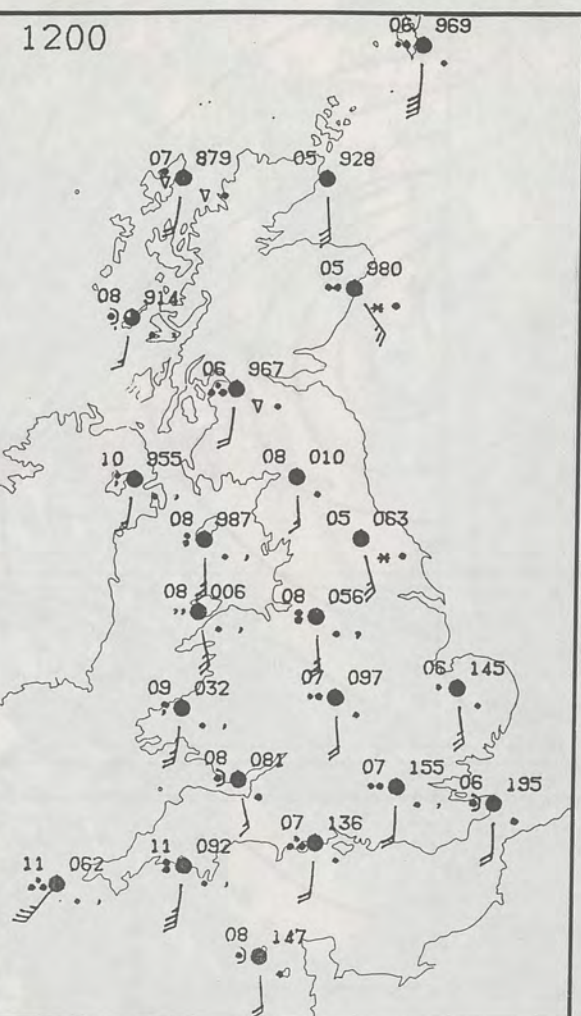

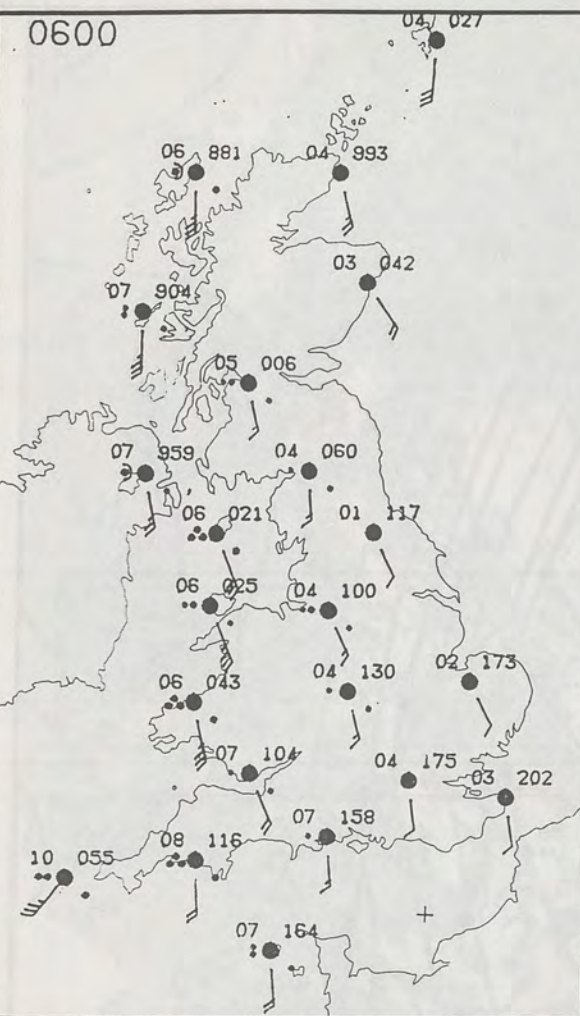

During the day amounts of rain were very variable, the heaviest generally along the south coast. Slightly brighter skies spread through Northern Ireland and parts of Scotland during the day, this drier weather spreading through all of Scotland, Northern Ireland and North Wales in the early evening. In the late evening though, outbreaks of rain in southern parts started to return northwards. In the brighter weather there were scattered showers in northwest Scotland, the odd one wintry.

It was a mild day generally and very mild in one or two places in the west.

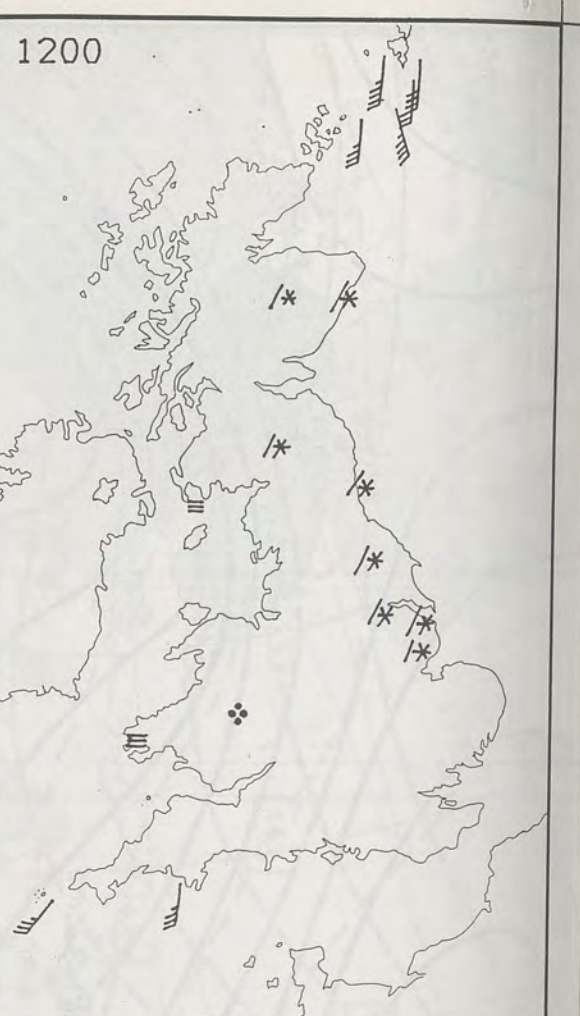

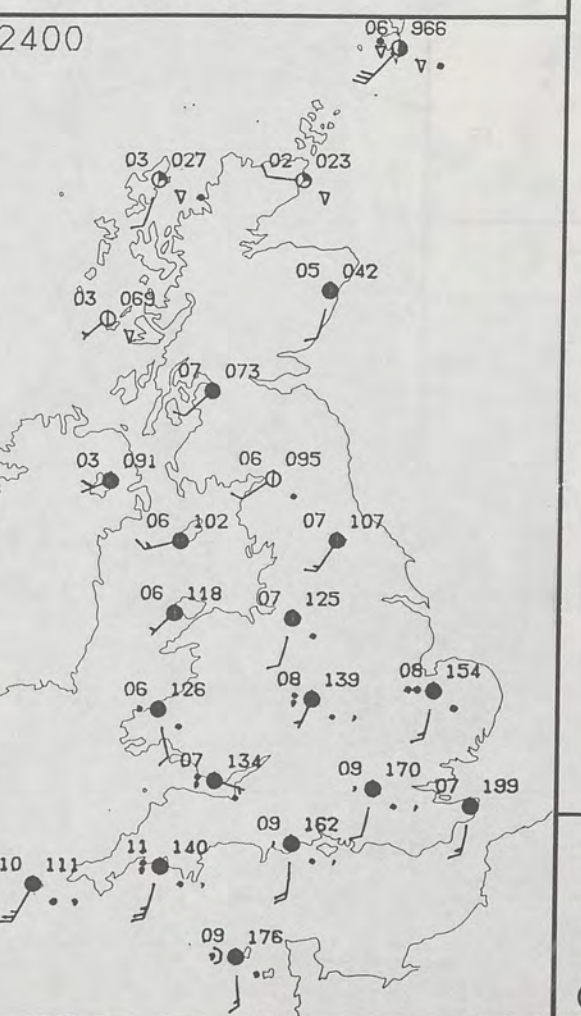

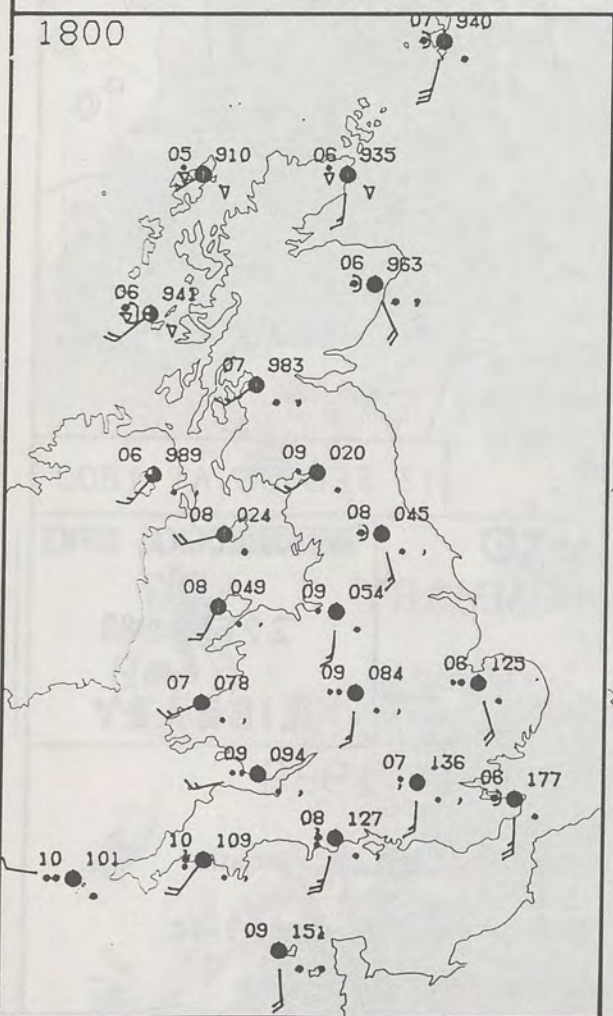

Gales affected western parts of the UK in the early morning, with a gust of 74 knots reported from Benbecula (Outer Hebrides).

SUNDAY
14 FEBRUARY 1988

SUMMARY
OF
BRITISH WEATHER

England and Wales were cloudy overnight with rain at times. Scotland and Northern Ireland were mostly dry apart from some showers near western coasts. Clear spells led to a frost in many inland regions.

Central and southern parts of England and Wales started the day cloudy and damp but cloud thinned during the day and it became brighter with some sunshine, the best of the sunshine in southernmost counties and the Channel Islands.

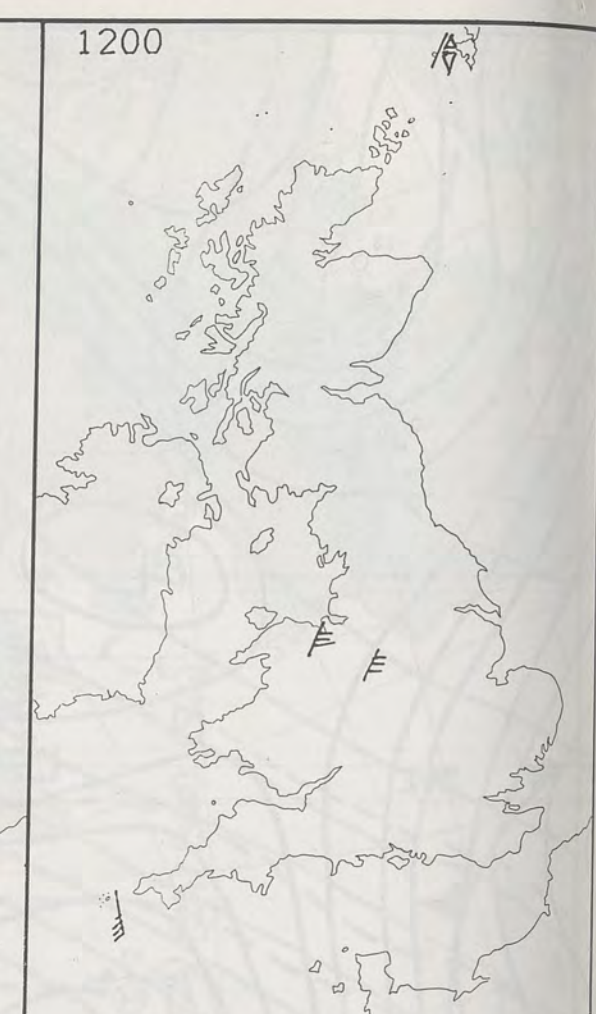

Northern parts of England and Wales had a cloudy wet morning, but drier weather spread from the south in the afternoon.

Northern Ireland and southern Scotland started dry but rain arrived by the afternoon. Northern Scotland was dry for much of the day with the rain arriving in the evening.

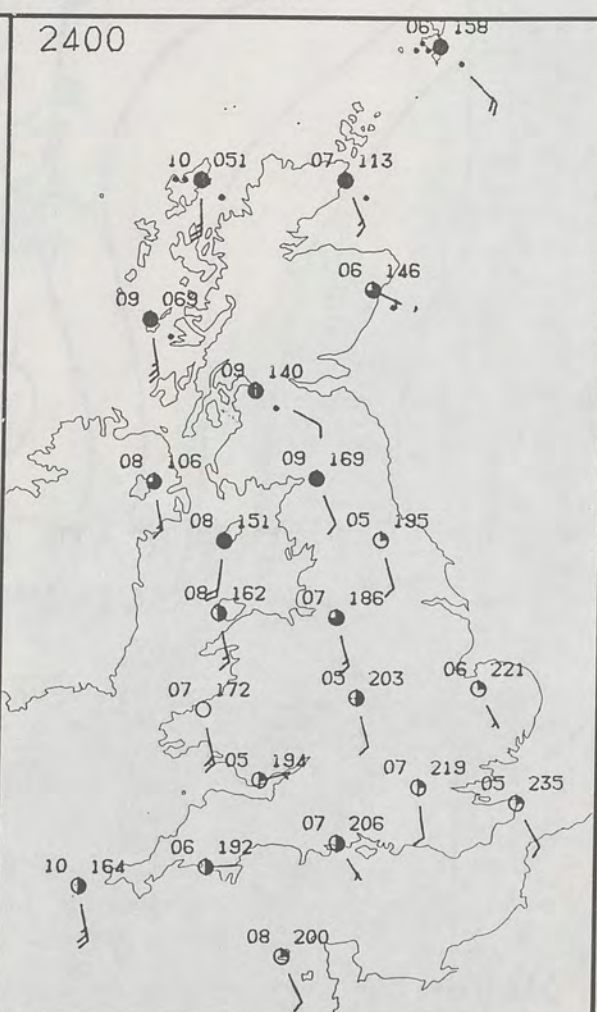

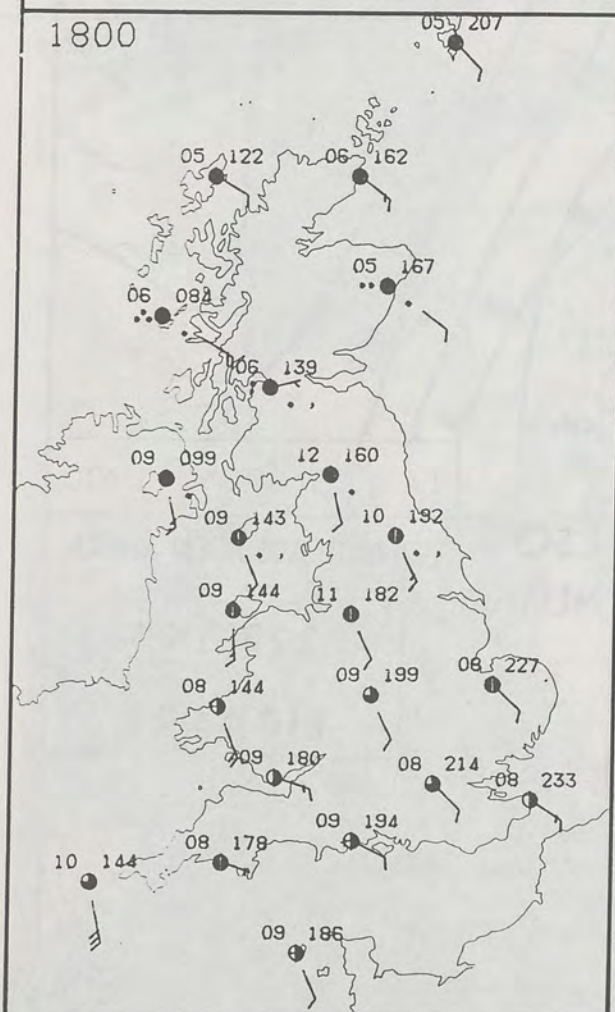

England and Wales had a very mild day. Southern Scotland and Northern Ireland were also mostly very mild, but over the remainder of Scotland temperatures were nearer to the average.

15 FEBRUARY 1988

SUMMARY
OF
BRITISH WEATHER

After a slight frost in central and eastern parts of England and Wales it was a dry, mainly sunny day. Northwestern parts of England and Wales became cloudy with rain in the late afternoon and this spread to the rest of Wales and northeastern England in the evening.

Scotland and Northern Ireland were mostly cloudy with a band of rain moving slowly eastwards during the day with prolonged rain in southwest Scotland and eastern parts of the province. Brighter weather reached the extreme north and west of Scotland later.

It was very mild over England and Wales and southeast Scotland and exceptionally mild in many areas in the south. Scotland and Northern Ireland started the day mild but became colder during the day.

TUESDAY
15 FEBRUARY 1988

SUMMARY
OF
BRITISH WEATHER

Northern Ireland and much of Scotland had a clear, frosty night, but in northern and western Scotland there were a few showers with snow showers on hills, and in southern Scotland some rain around midnight with snow on hills.

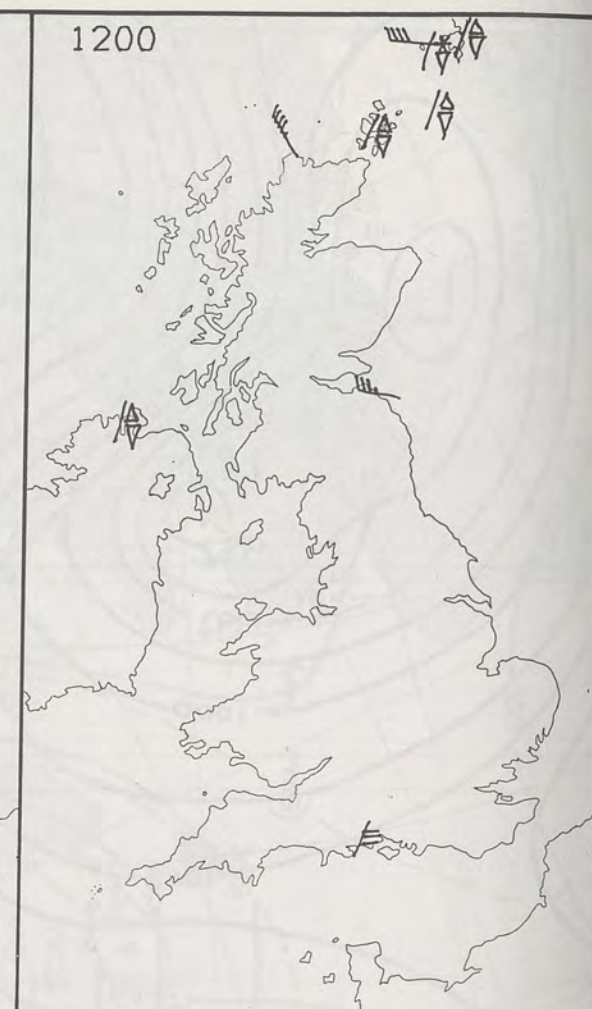

Wales stayed dry and clear but most places in central and northern England had rain for a few hours, with some heavy rain, and in the northeast sleet.

England and Wales had a sunny day and in Scotland and Northern Ireland there was some sunshine as well, indeed in southern and eastern Scotland there was a lot of dry, sunny weather with just a few showers. In Northern Ireland there were showers but the showers were most frequent in northern and western Scotland, where there was snow on hills, and here it was quite a windy day.

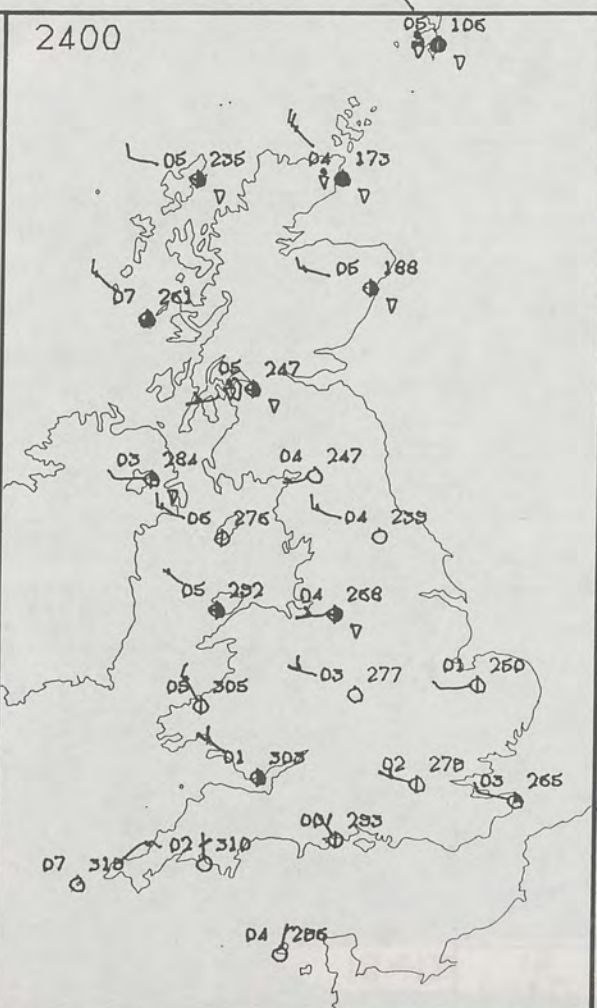

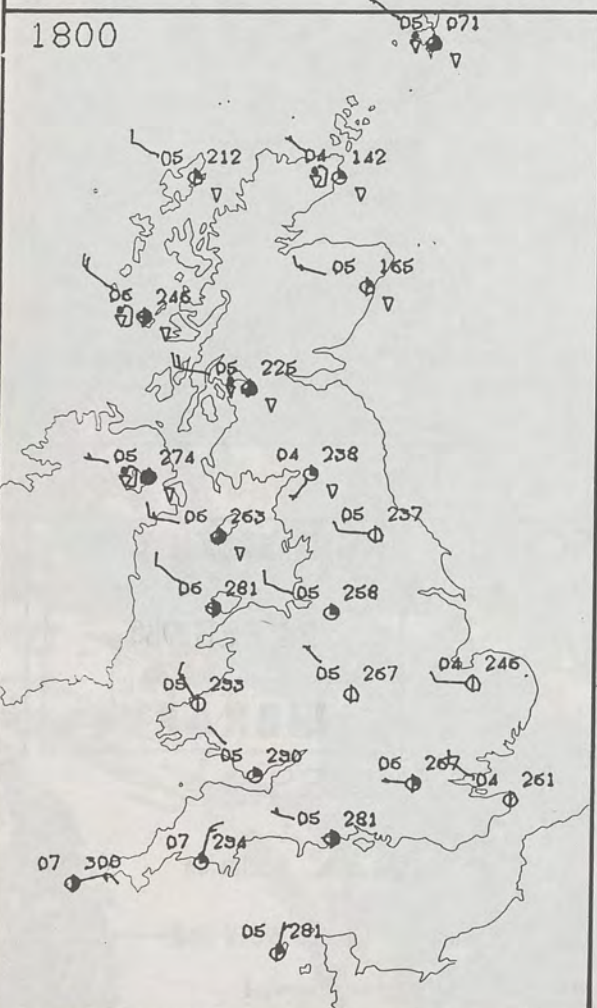

Temperatures were generally a little above normal.

SUMMARY
OF
BRITISH WEATHER

Much of the United Kingdom had a clear, cold night and over England many places were frosty. In Northern Ireland and northern and western Scotland there were showers.

During the day the weather stayed dry in England and Wales and most places were sunny all day, but some places did turn more cloudy for a while.

Northern Ireland had a little sunshine, but there was a lot of cloud and a few showers.

Eastern Scotland was mainly dry and sunny, although most places in Scotland were cloudy and there were showers, mainly in the north and west, while Shetland had heavy and persistent rain in the late afternoon and evening.

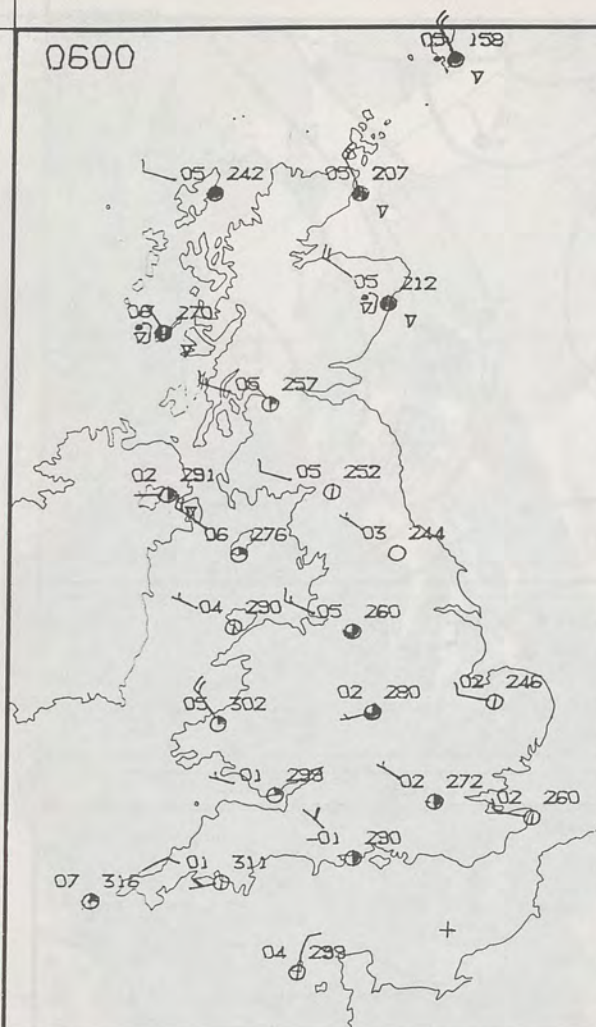

It was quite windy in northern Scotland overnight and early in the morning, with winds close to gale force on coasts.

Temperatures were in the mild category nearly everywhere.

THURSDAY
18 FEBRUARY 1988

SUMMARY
OF
BRITISH WEATHER

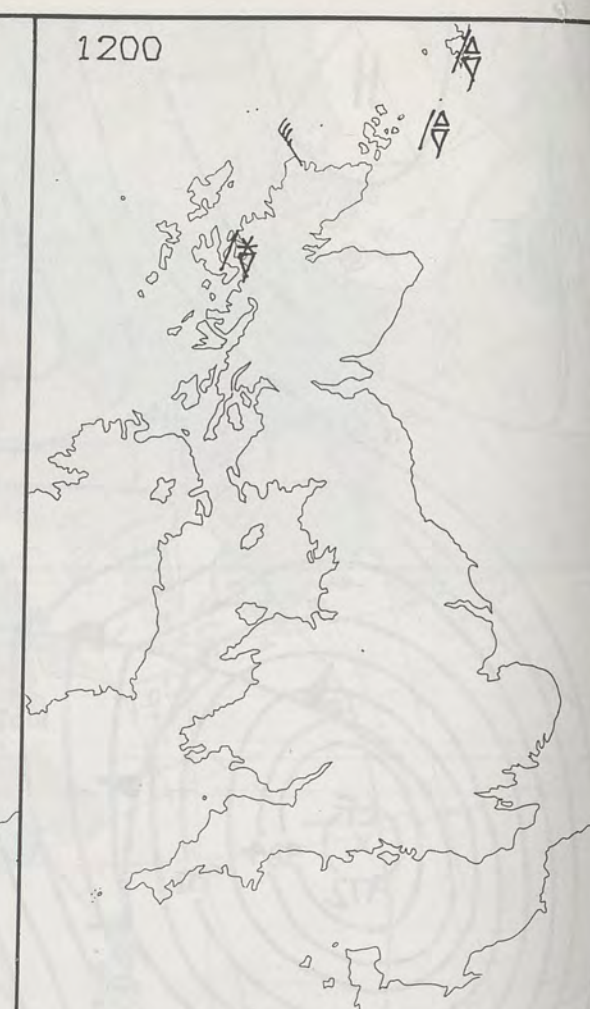

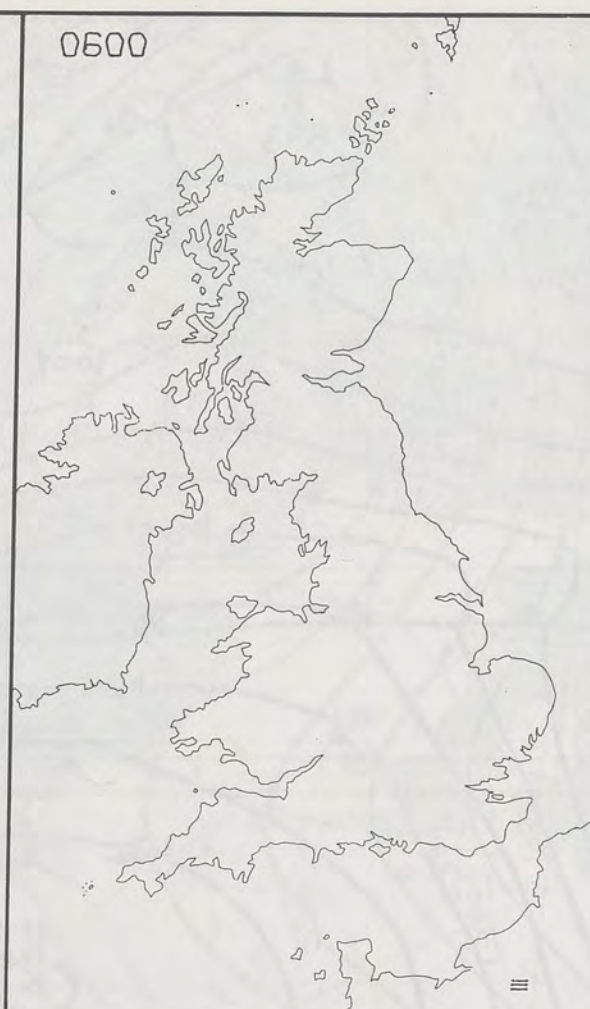

Many parts of England and Wales had a dry day, though patchy drizzle was reported from hilly and coastal regions in northern England and parts of North Wales. Although cloud was well broken in some places at the start of the day, the trend to cloudier anticyclonic conditions continued in most areas, and the best of any prolonged sunshine was to be found in the far south of England.

Some sunshine was reported from Scotland and Northern Ireland more especially from the northeastern half of Scotland in the afternoon. Most areas had some rain though, and during the afternoon scattered showers of hail were reported in clearer air across northeast Scotland, with a strong, locally gale force northwest wind.

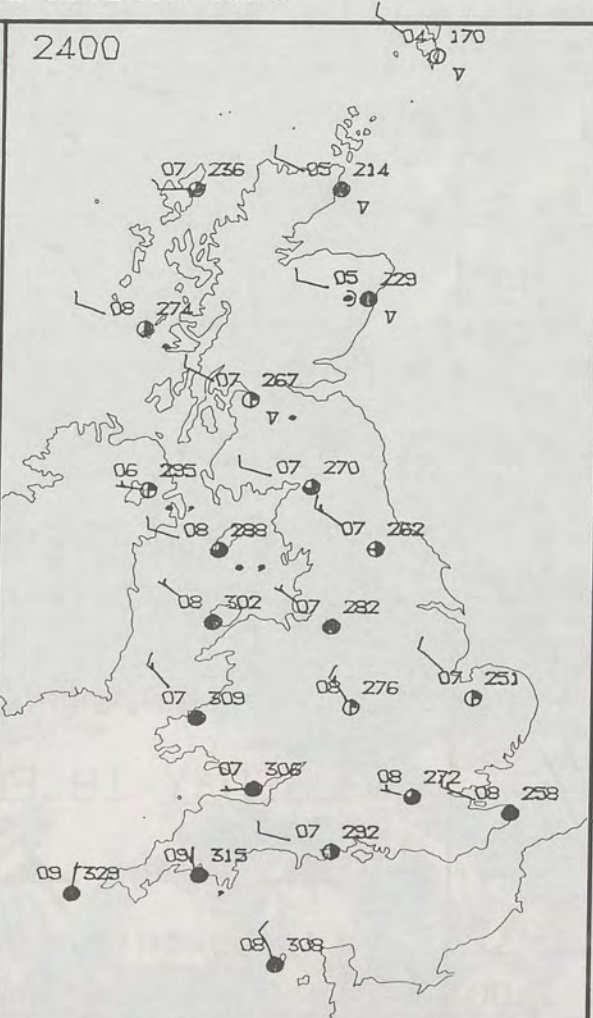

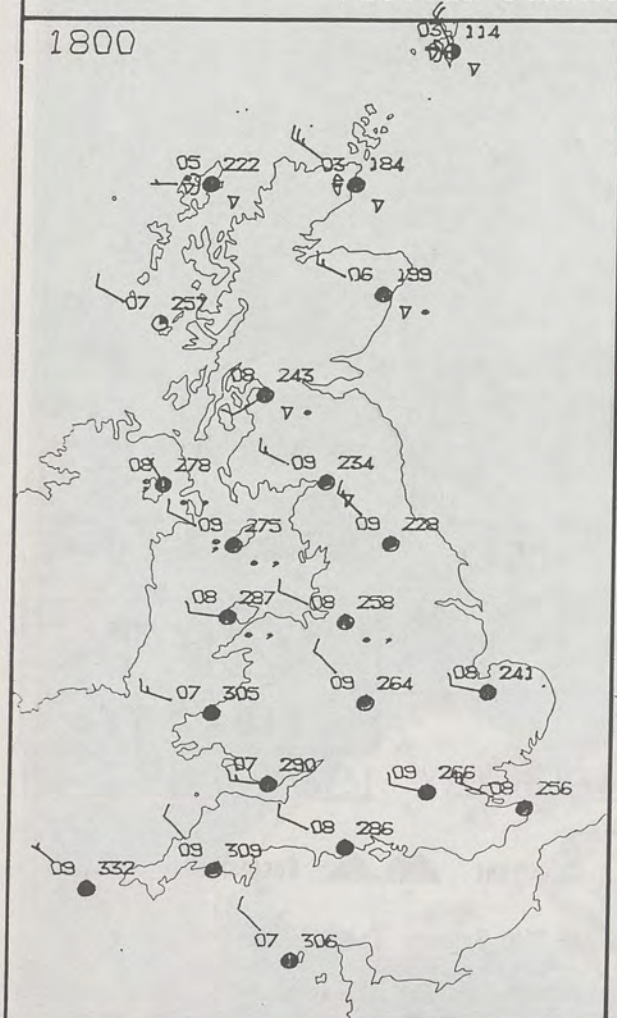

Temperatures once again were generally well in excess of normal values, except in the northeast of Scotland.

FRIDAY
19 FEBRUARY 1988SUMMARY
OF
BRITISH WEATHER

Most of the United Kingdom had a dry period, with any patchy rain or drizzle in western coastal areas very light. However, rain was rather more significant across the north of Scotland, with a combination of periods of rain, followed by scattered showers.

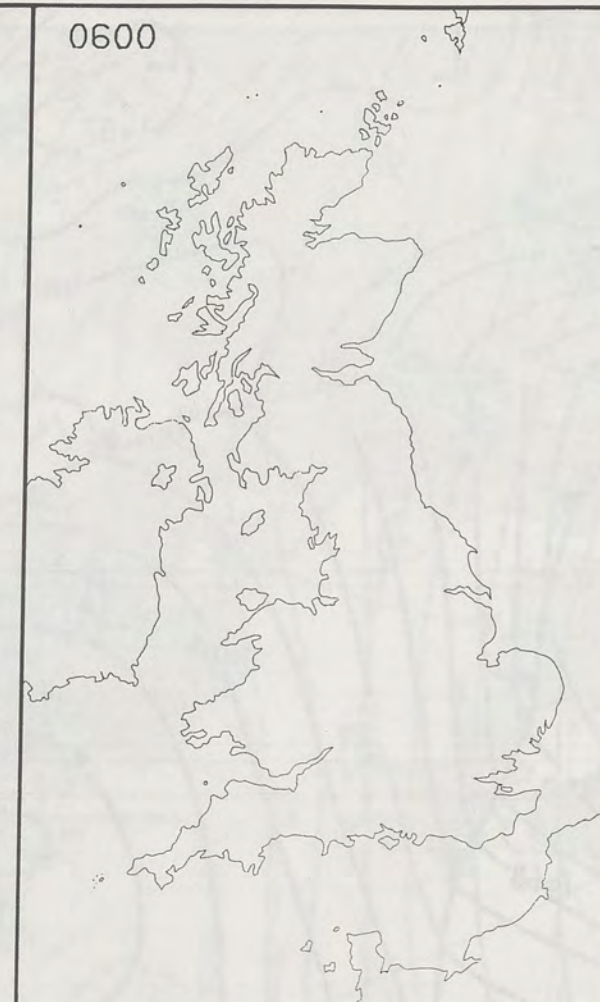

Although large amounts of cloud were reported from many places, especially in the west, good sunny periods developed in many eastern and southern areas of England and sheltered districts elsewhere.

It was very mild in most parts of the UK.

TUESDAY
23 FEBRUARY 1988

SUMMARY
OF
BRITISH WEATHER

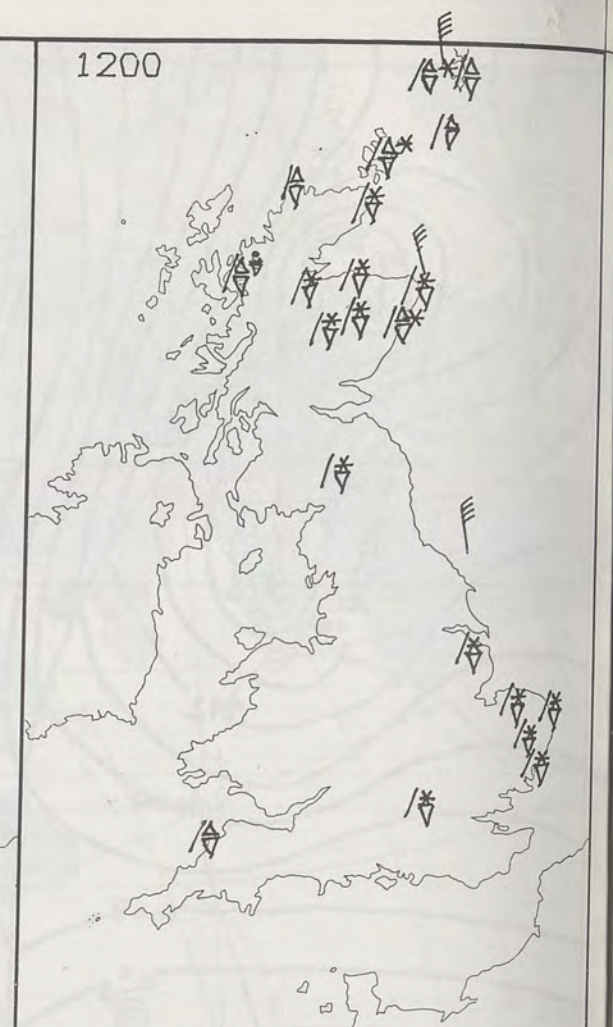

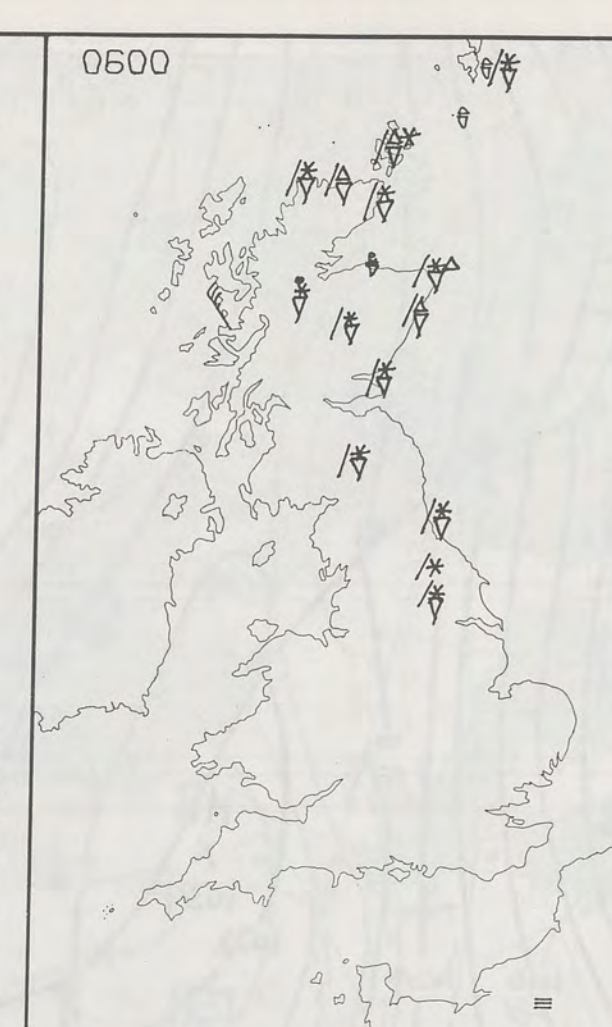

An area of cloud and a little rain moved south across central and southern England in the early hours, with clearing skies following. Wintry showers affected some northern regions during the night. There was a frost in places by the morning.

Most places had a fair amount of sunshine during the day, with a few mostly light showers. There were rather more showers in northern Scotland and eastern England, and snow fell in some of them. It was quite a windy day, too, in the east, and near North-facing coasts in the west.

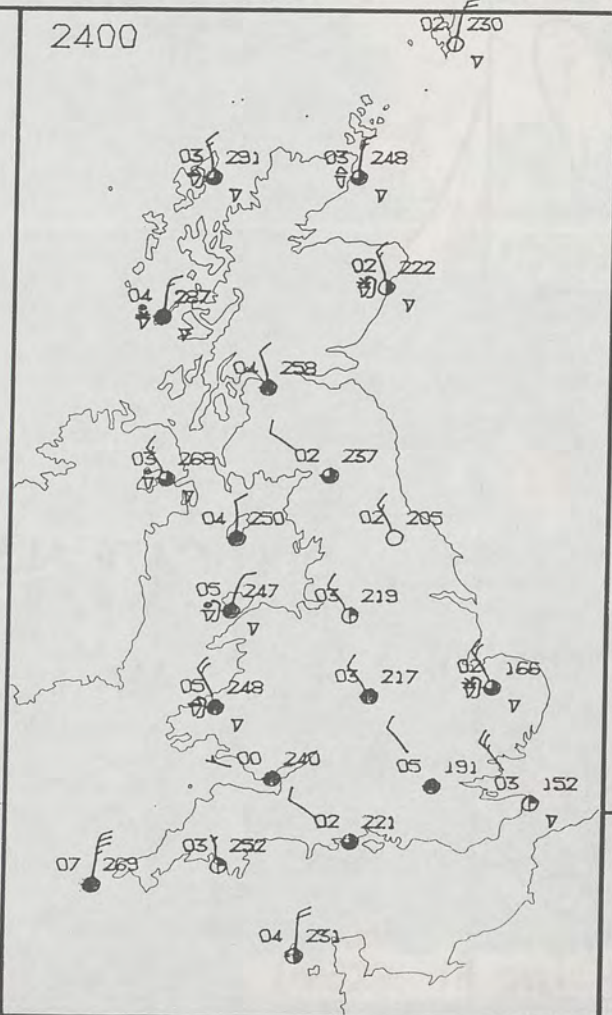

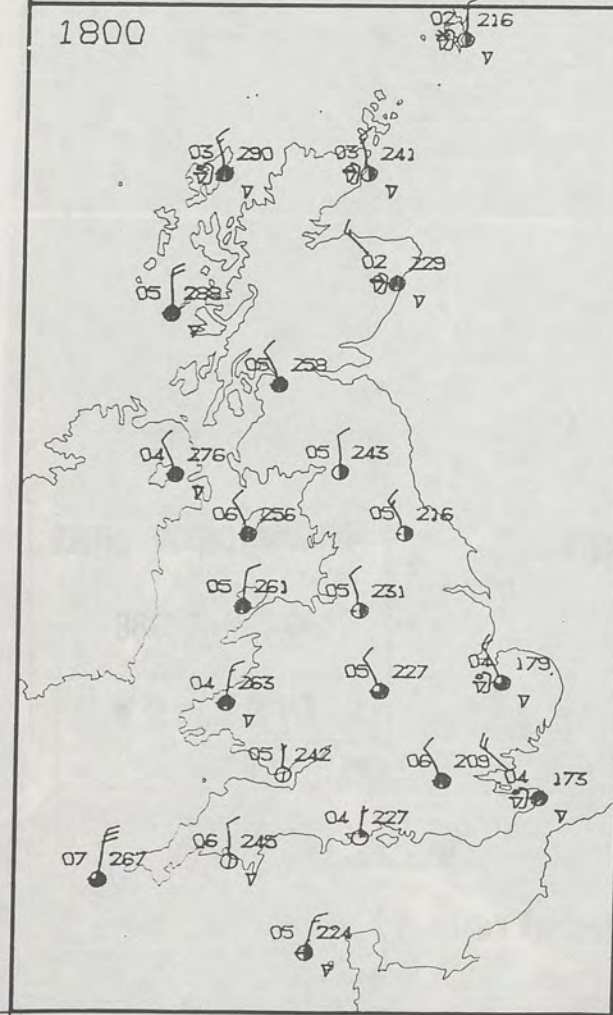

Temperatures were within a degree or so of normal - and thus lower than for some time.

BRITISH WEATHER

There were showers, often of snow, in many eastern and northern districts overnight. The showers were particularly frequent in Norfolk and Suffolk, and an inch or so of snow accumulated in places away from the coast - though it soon melted in the morning. Most of the rest of the British Isles had a fine night, with a slight frost in many places.

During the day, wintry showers developed further inland over eastern and central England, and continued to affect northern Scotland. The heaviest showers fell as snow, and settled briefly in places. There was also a report of thunder from east Berkshire in the late afternoon. Most places had some sunshine as well, and most of Northern Ireland, Wales, southwest and northwest England had a fine, sunny day. Southern and western Scotland had some sunshine, but with cloudier spells and a few light showers.

It was generally cold and rather windy, though in one or two places in the west the temperature approached the seasonal normal.

THURSDAY
25 FEBRUARY 1988

SUMMARY
OF
BRITISH WEATHER

Most places had a frosty night and in central and eastern areas of England there were snow showers, with more persistent and heavier snow late in the night.

Most places in Wales and Northern Ireland turned cloudy and in Dyfed there were sleet and snow showers.

Scotland was mainly cloudy. In northern Scotland there were snow showers, while the extreme west had some persistent and heavy rain.

By day Scotland and Northern Ireland were mostly cloudy, there was rain at times in most places and some sleet or snow in Scotland, especially on hills.

In Wales there was some sunshine but most places clouded over in the afternoon and in the west there was rain and sleet in the evening.

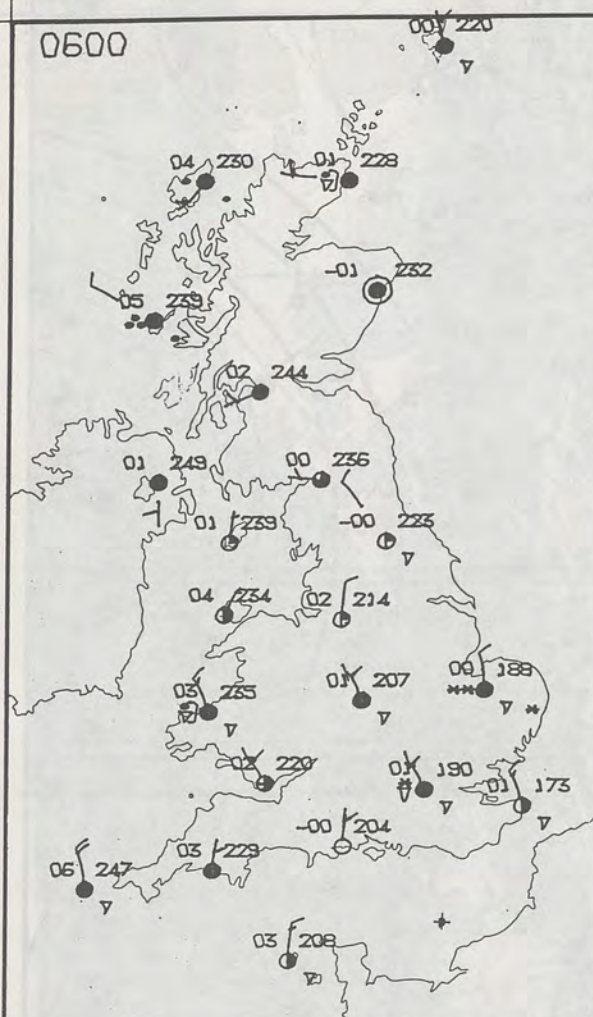

The west of England was mainly dry and bright but eastern areas had more snow showers.

Much of the United Kingdom was rather cold.

FRIDAY
26 FEBRUARY 1988

SUMMARY
OF
BRITISH WEATHER

Much of the United Kingdom had a clear, frosty night, but Scotland and Northern Ireland and later Wales and northern England were mainly cloudy with some rain, sleet or snow. East Anglia had a few snow showers.

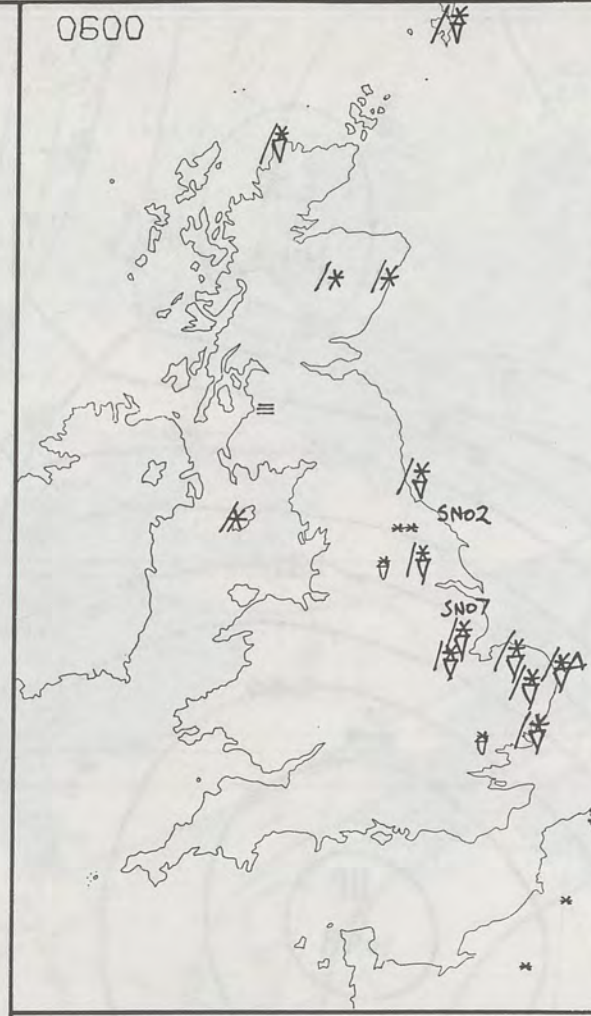

Scotland and Northern Ireland had a cloudy day with a spell of rain and some snow on the Scottish hills. Later on the weather turned drier but there was still a little drizzle here and there.

Over England and Wales there was some sunshine nearly everywhere with many places having a dry, sunny day. There were some snow showers, mainly in East Anglia and southeast England and, later on Wales and the west and north of England clouded over with rain in northern England and north and west Wales in the evening.

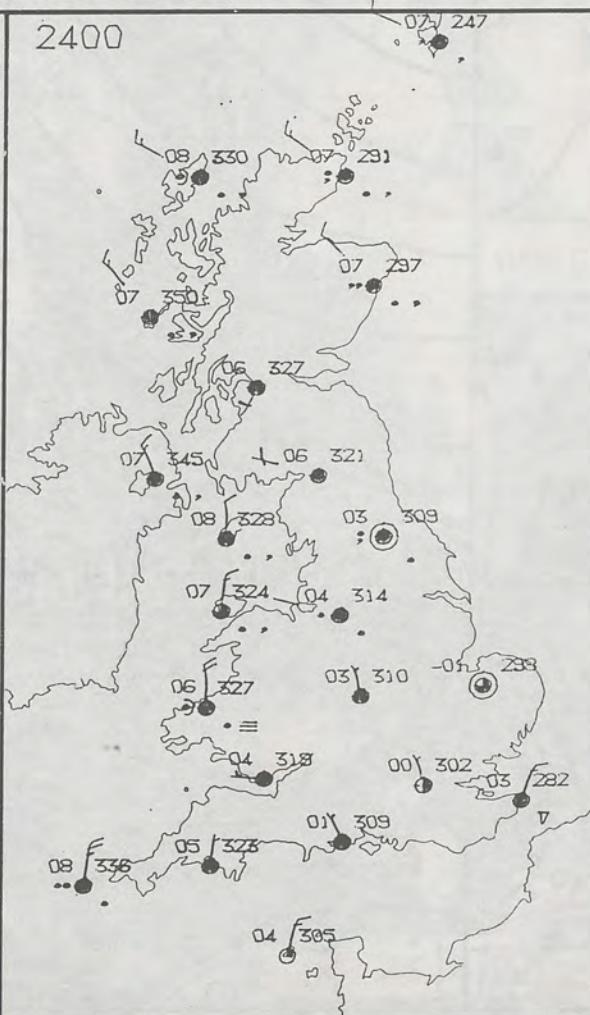

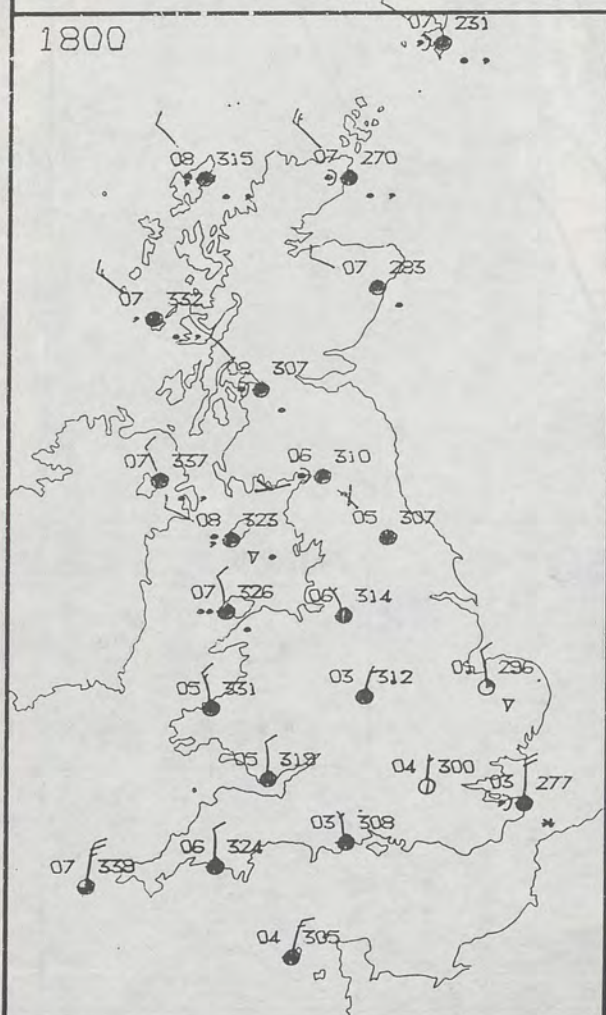

Central and eastern England were rather cold again, but in many places the temperatures picked up to normal or a little above.

SATURDAY
27 FEBRUARY 1988

SUMMARY
OF
BRITISH WEATHER

Much of the United Kingdom had a cloudy, reasonably mild night with some rain and drizzle, but East Anglia and parts of southern England were clear and frosty.

During the day the extreme south-east of East Anglia and southeast England stayed sunny for much of the day and in the west of England there was some sunshine, but many places in England and Wales were cloudy and there was some light rain and drizzle.

Northern Ireland was cloudy with a little rain here and there and northern Scotland was cloudy too and there was rain at times, although during the evening the extreme north turned drier and clearer.

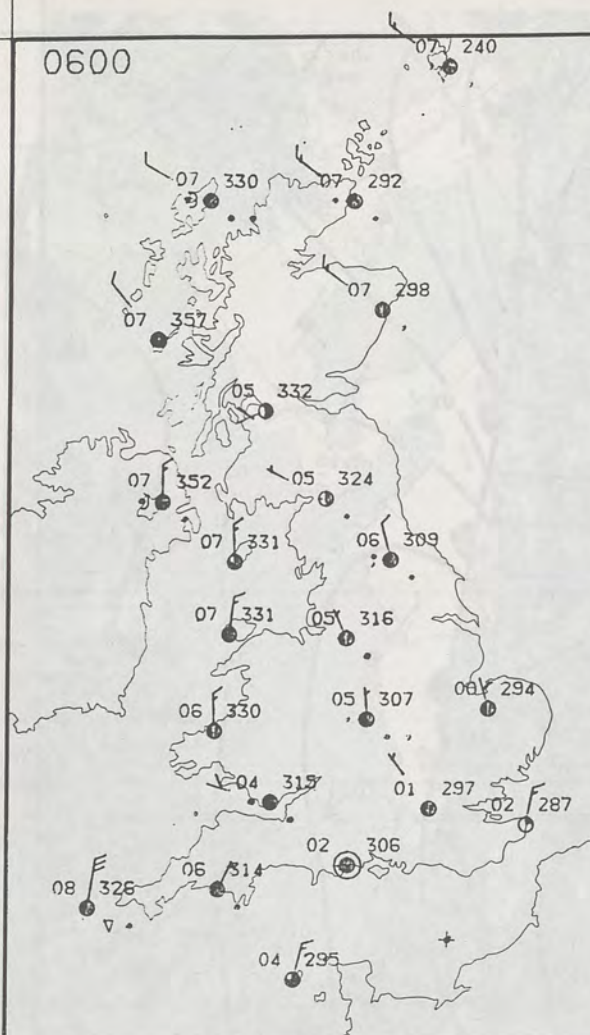

Over southern Scotland much of the day was dry and bright, indeed some places had a sunny day, but there was rain and drizzle in the evening.

Most places had a mild or very mild day, but it was still rather cold in parts of East Anglia and southeast England.

SUNDAY
28 FEBRUARY 1988

SUMMARY
OF
BRITISH WEATHER

England, Wales and Northern Ireland had a mild and mostly dry night but with a little rain in some eastern counties.

There were sunny spells by day with the best of the sun on the Lancashire coast and in south-western parts of England, while many central and southeastern districts were rather cloudy.

There were scattered showers over Northern Ireland and some northern parts of England as far south as Norfolk. During the evening a more organised band of rain and sleet moved southwest over central and southern counties.

Scotland had clear spells overnight but snow showers reached the Northern Isles by morning and extended south over central and northern parts of the mainland during the day. Southern parts of Scotland were mainly dry with sunny spells.

Temperatures were a little below normal in the far north but elsewhere maxima were several degrees above, though it turned markedly colder in most parts during the evening.

It was a very windy day on exposed northern and eastern coasts with a gust of 85 knots recorded at St Abbs Head late in the evening.

MONDAY
29 FEBRUARY 1988

SUMMARY
OF
BRITISH WEATHER

The northern half of Scotland, together with eastern coastal counties of England, had variable cloud amounts through the period with snow showers giving a temporary covering in places with persistent lying snow restricted to high ground.

Elsewhere clear periods overnight led to a frost except on some western coasts where there were also sleet or snow showers which persisted through the day.

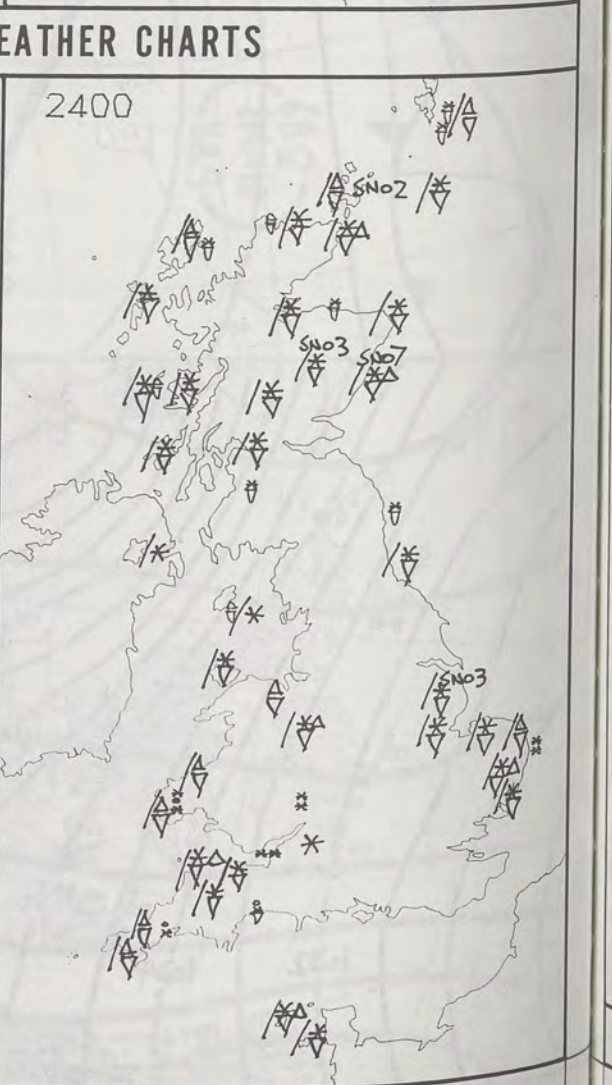

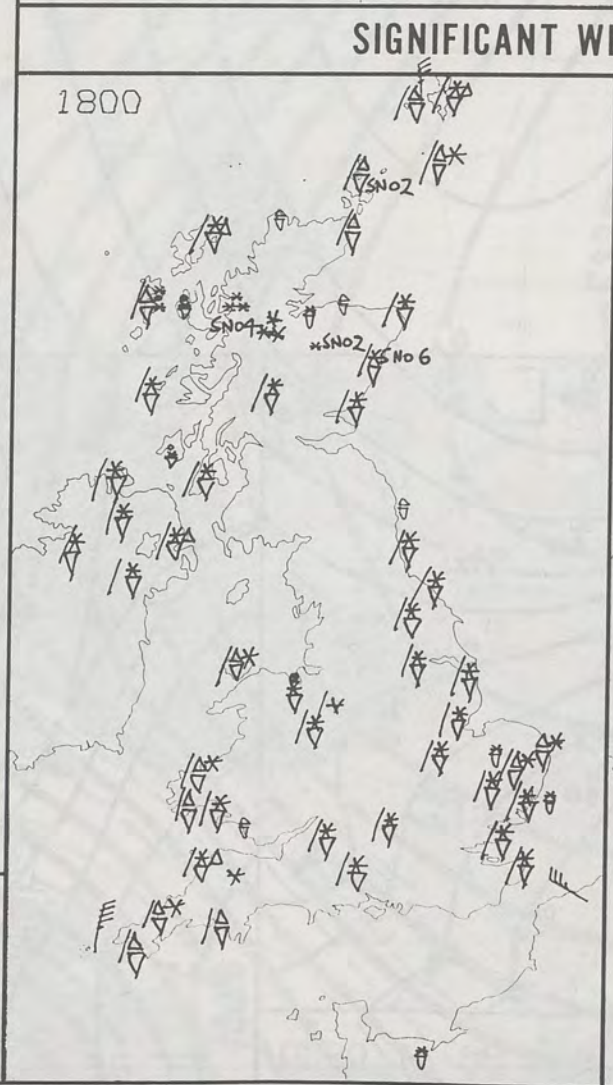

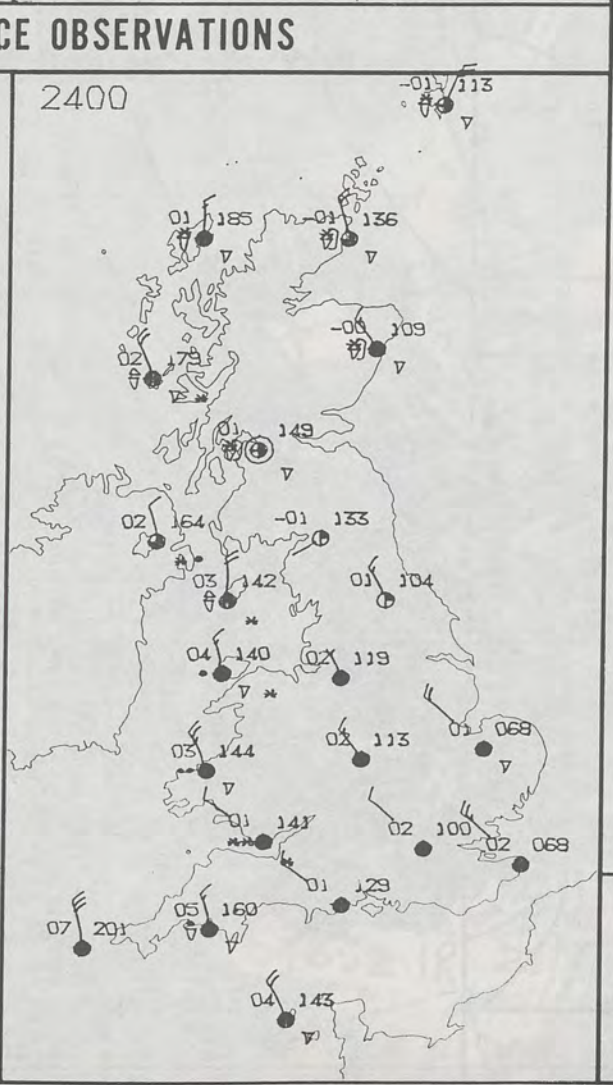

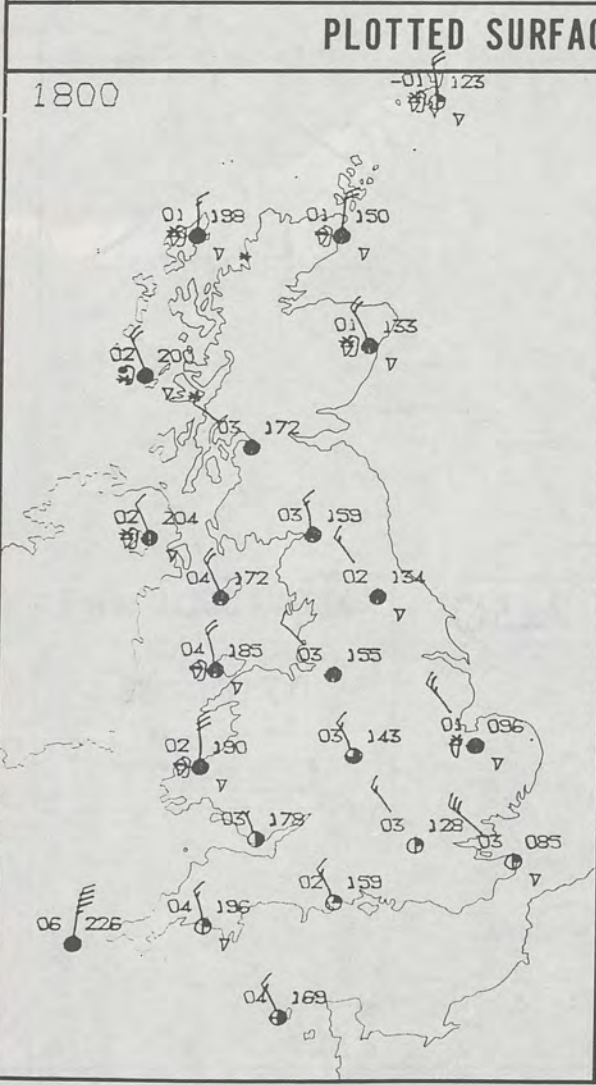

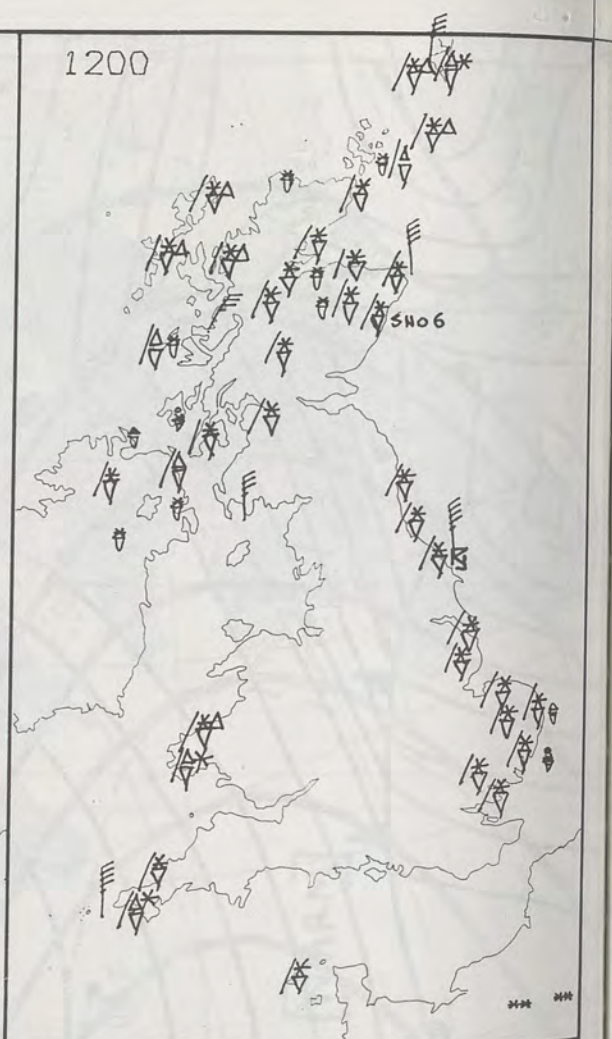

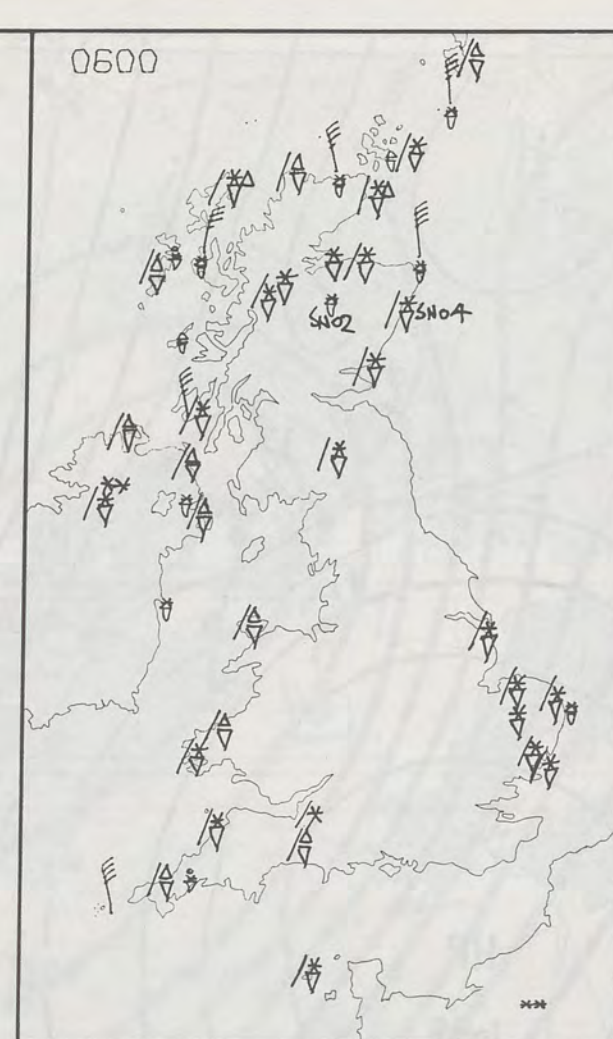

Many central and southern parts of England and Wales were mostly dry with long sunny spells.

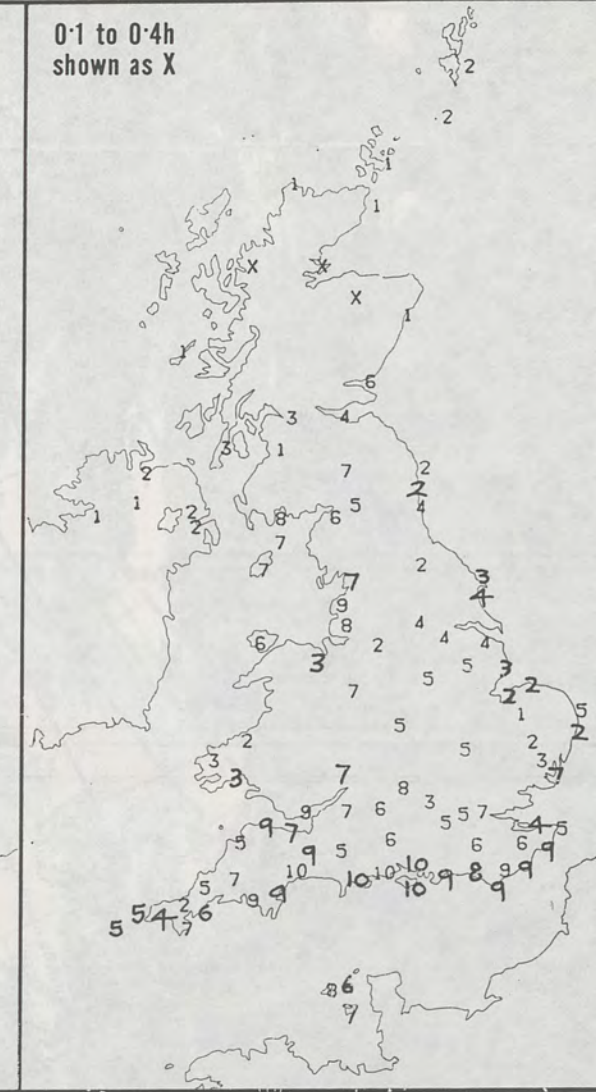

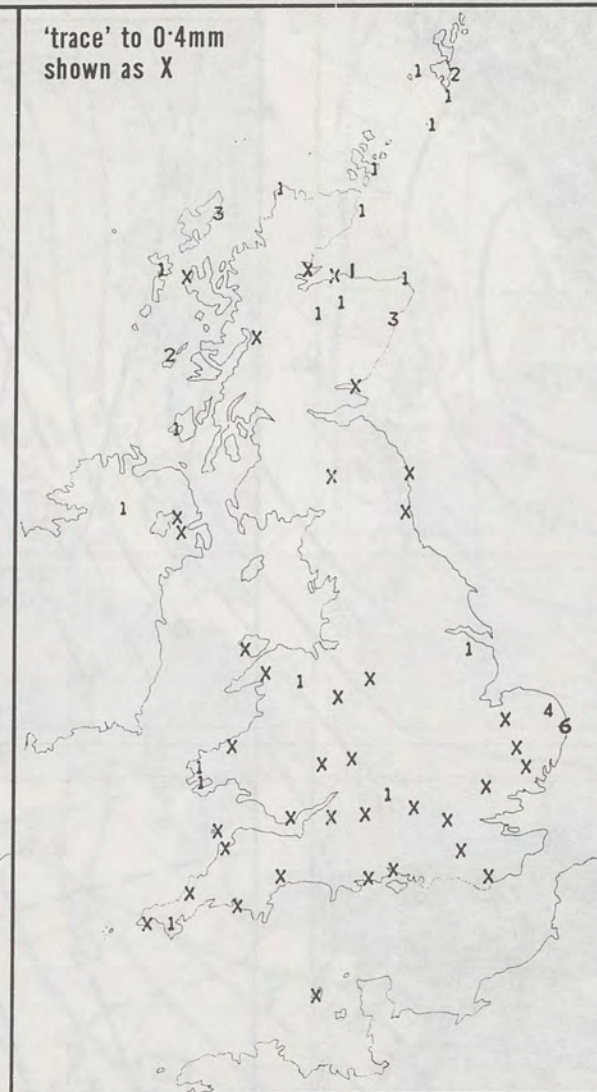

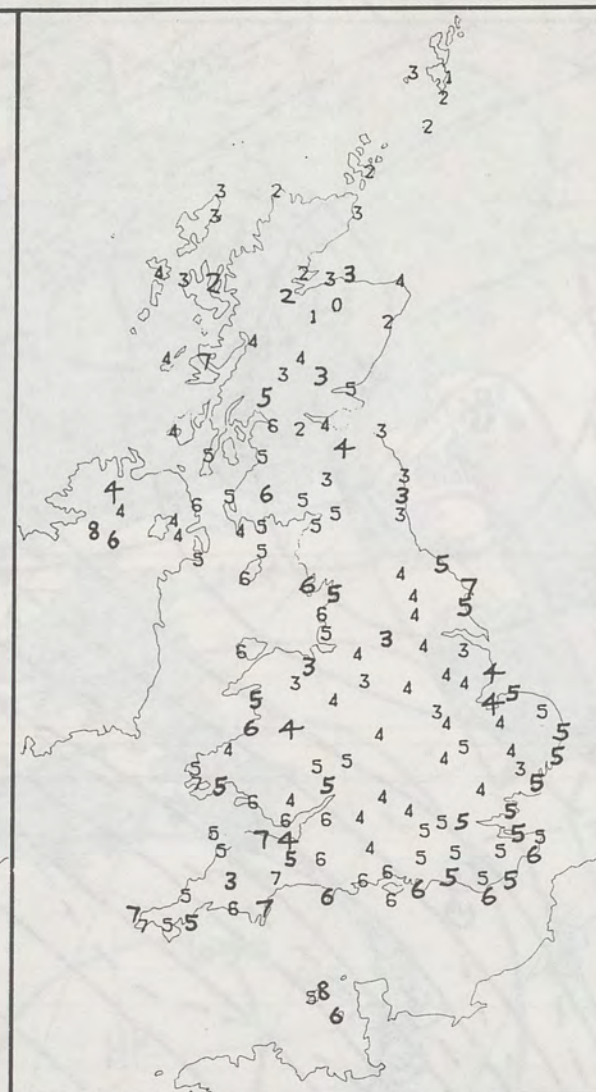

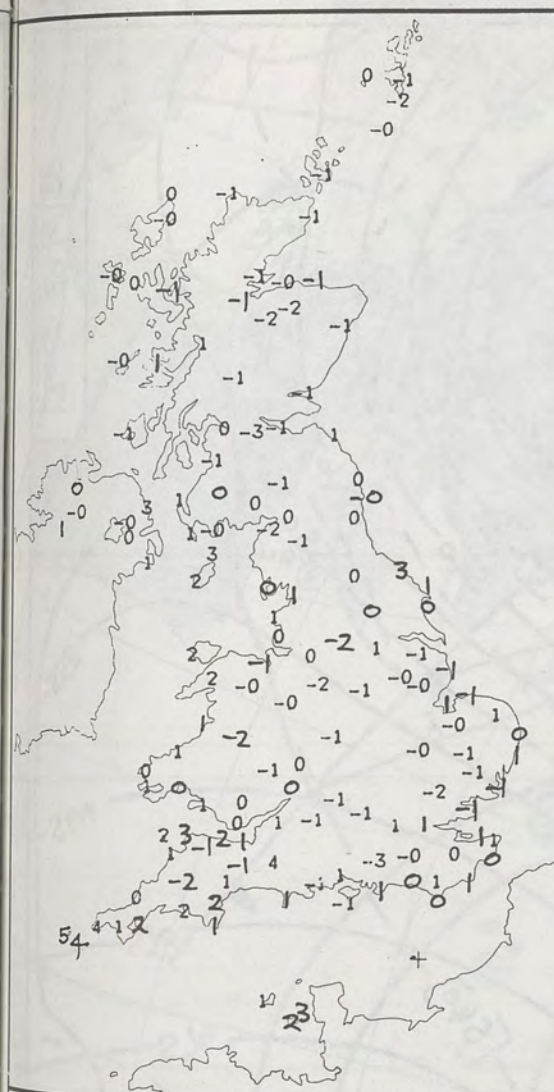

Over Northern Ireland and western Scotland it turned cloudier during the day with sleet or snow showers and during the evening this cloud spread south over England and Wales with some patchy rain or snow spreading to Wales and the southwest.

Temperatures were generally a degree or two below the average and it was a windy day with severe gales at times on exposed North Sea coasts. A gust of 86 knots was reported from St Abbs Head (Borders) before dawn.
