TUESDAY
1 DECEMBER 1987SUMMARY
OF
BRITISH WEATHER

Scotland, Northern Ireland and Wales were mainly clear and frosty, over Scotland there was a sharp frost and some patchy fog and in southern Scotland one or two snow showers late in the night.

The west of England was dry and clear, but most places were cloudy. There was fog, especially in East Anglia and southern England and showers too, most of them in northeast England.

During the day a few places in Scotland stayed foggy and frosty all day, but most places in Scotland and Northern Ireland were sunny, although eastern Scotland was more cloudy at times with a few showers.

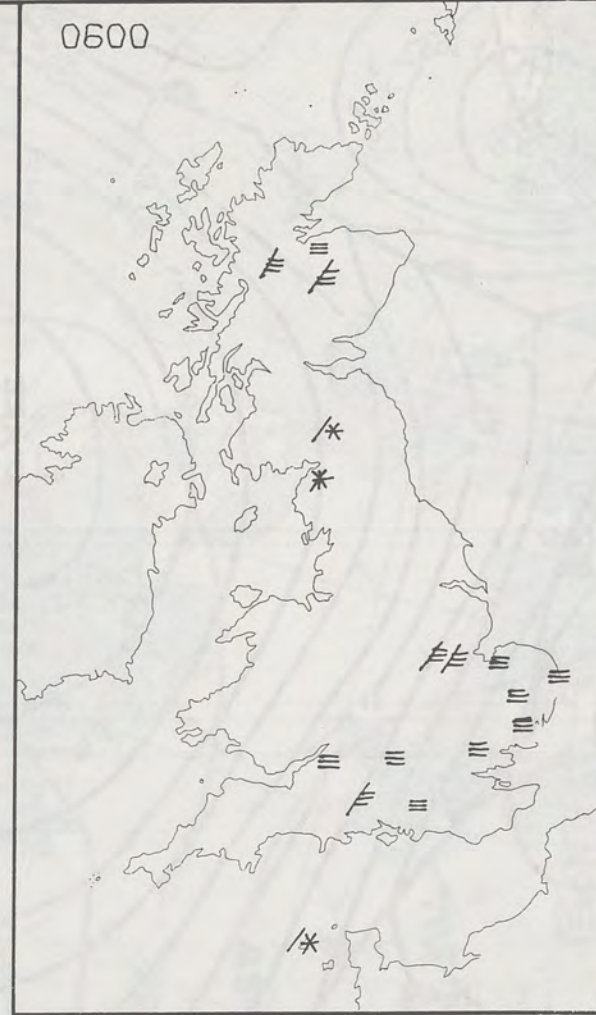

Cornwall and West Wales were sunny, but much of England and Wales were cloudy, there were showers mainly in England and in East Anglia and Kent some more persistent and heavy rain.

Temperatures were generally close to normal, although parts of inland Scotland had a cold day.

PLOTTED SURFACE OBSERVATIONS

1800

2400

WEDNESDAY
2 DECEMBER 1987SUMMARY
OF
BRITISH WEATHER

The night was clear and frosty over many parts of Scotland, and there were one or two fog patches. A fresh wind and, in most places, a cloud cover kept frost away from most of England, Wales and Northern Ireland, and there were light showers in places.

Much of Scotland, Northern Ireland, northwest England and North Wales had a sunny day. The rest of England and Wales had mostly a lot of cloud, though with some brighter intervals. There were some further light showers.

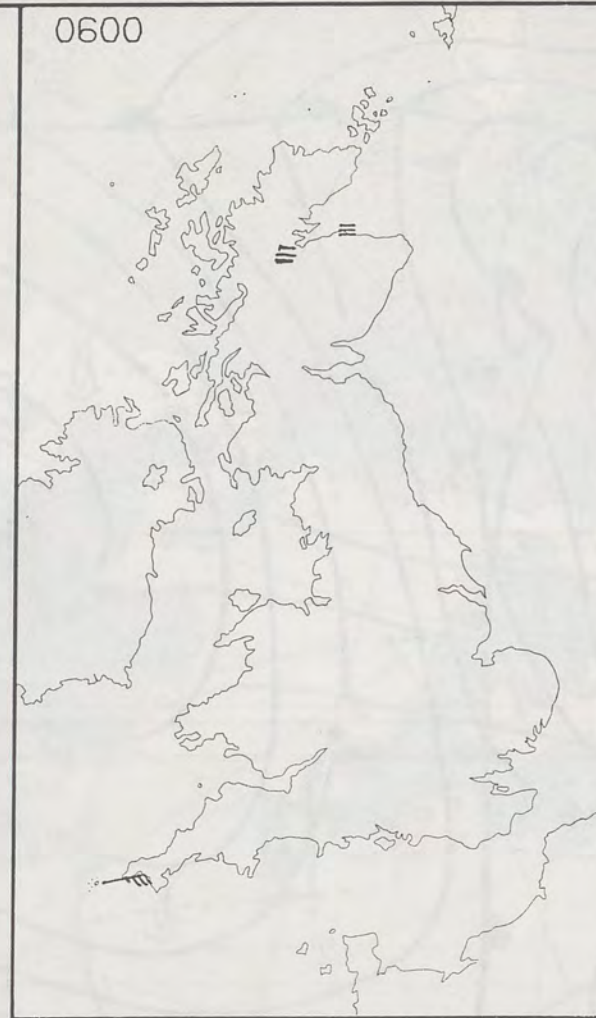

Temperatures in many places were not far from the seasonal normal, but it was a cold day in central Scotland, where the frost became severe again in the evening. Nevertheless, this cold weather was accompanied by largely clear skies and very little wind; coldness of a different character was experienced over southern Britain where temperatures a couple of degrees or so below normal were accompanied by a strong easterly wind, giving a distinctly raw 'feel' to the day.

Pressure reached 1048 mb in central Scotland, a reading that has only been exceeded on some half dozen occasions in the British Isles this century.

THURSDAY
3 DECEMBER 1987

SUMMARY
OF
BRITISH WEATHER

England, Wales, Northern Ireland and southern Scotland were mostly dry and cloudy through the period but rain reached southwest England in the afternoon and spread to South Wales in the evening with some snow over higher ground. Western parts of Cumbria and northwest Wales had some sunny spells.

Central and northern Scotland had clear periods overnight with a frost in many inland areas, severe in some upland valleys.

Patchy fog formed and persisted all day in a few places. Sunny spells developed but in the east and the Northern Isles it remained rather cloudy.

Temperatures were close to normal over northern England, Northern Ireland and much of Scotland but some central parts of Scotland remained very cold with temperatures below freezing all day. Most of England and Wales were cold.

FRIDAY
4 DECEMBER 1987

SUMMARY
OF
BRITISH WEATHER

Fog persisted in a few places in the north of Scotland, including the Highlands, with an air frost much of the day in some glens. However, apart from showers in the Shetland Isles, much of mainland Scotland had a dry day, with large amounts of cloud, though some sunshine was reported from sheltered western districts.

PLOTTED SURFACE OBSERVATIONS

Southwest England, south and west Wales had an overcast day, with periods of rain, preceded by a little sleet or snow in some places.

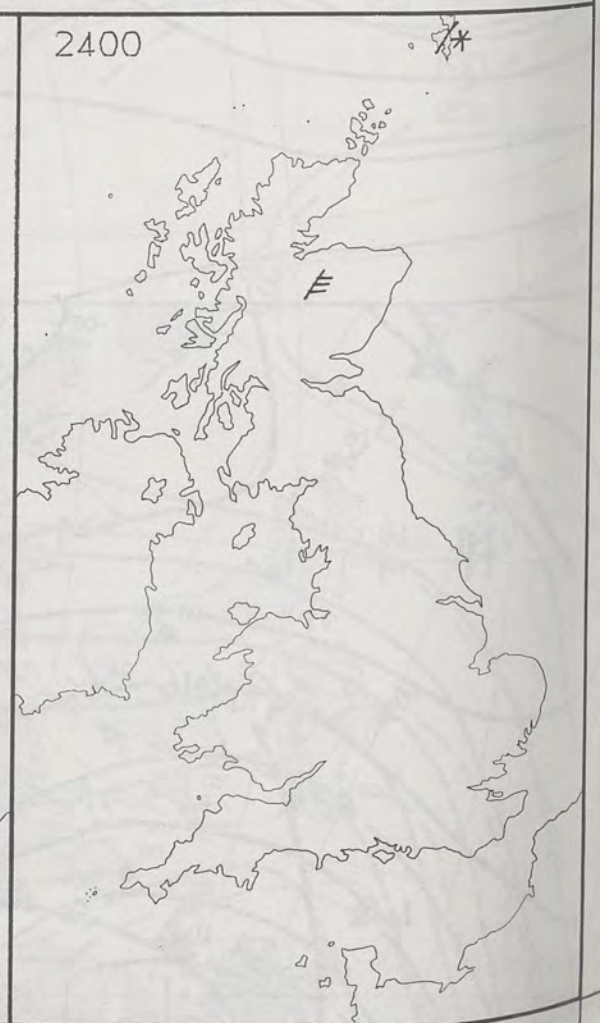

The remainder of England, along with Northern Ireland had a mostly dry, but cloudy day, though the cloud thinned and broke in some east and southeastern areas for a time.

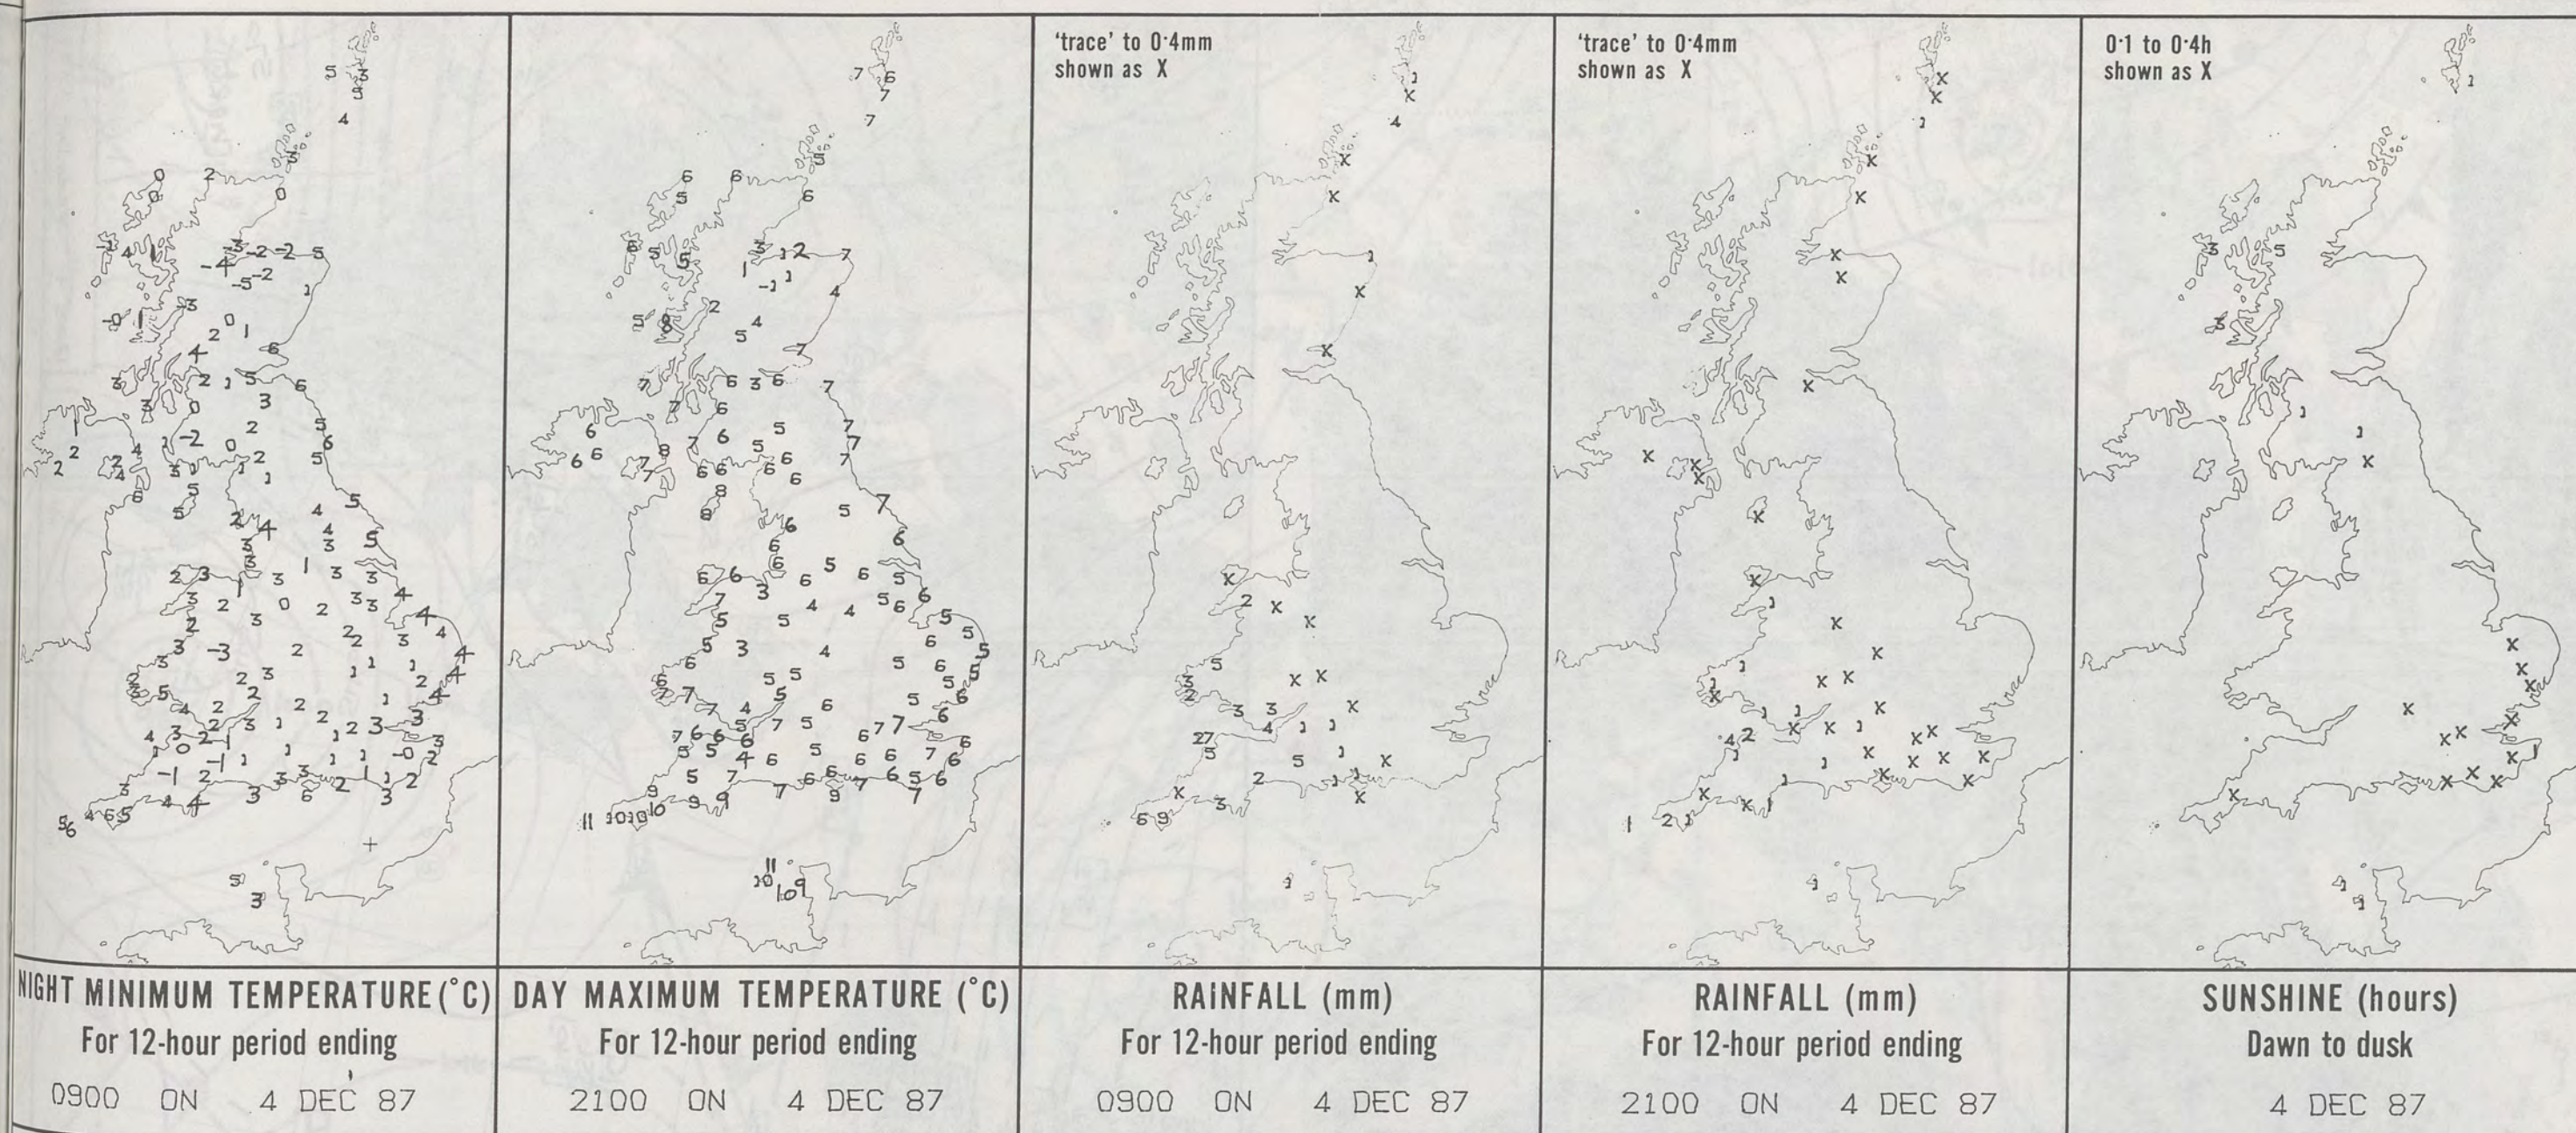

Temperatures were not too far below normal, though accompanied in many central and southern areas by a brisk and cold east wind.

PLOTTED SURFACE OBSERVATIONS

SATURDAY
5 DECEMBER 1987

**SUMMARY
OF
BRITISH WEATHER**

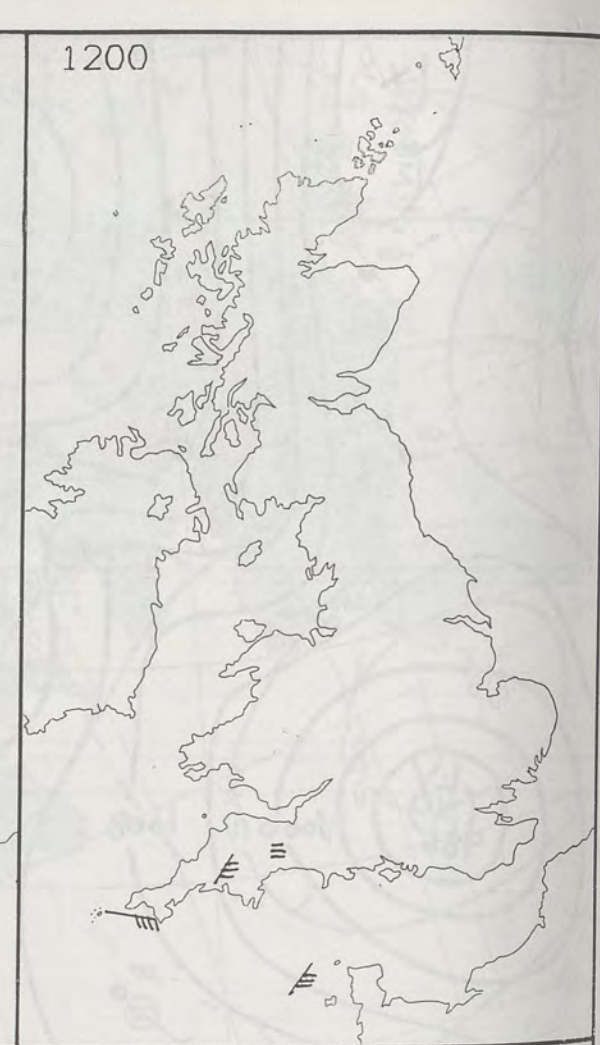

Apart from some clear or sunny breaks in the cloud cover in west and northwest Scotland, most of northern and central Britain, including Northern Ireland, had cloudy skies, with a little coastal and hill drizzle on the eastern side of the mainland of Britain. A few more definite showers were reported, however, from the northeastern parts of Scotland, along with Orkney and Shetland.

Remaining southern areas, that's southern England and South Wales, together with the Channel Islands, had thick overcast cloud cover, producing outbreaks of rain, with some persistent rain in the far southwest and the Channel Islands. Amounts of rain elsewhere were quite small.

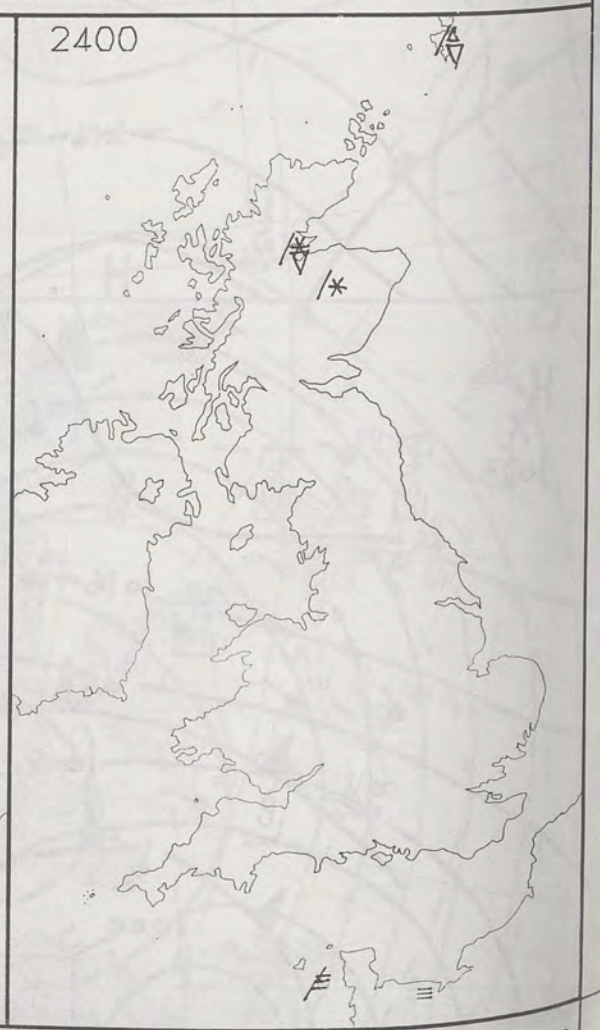

Temperatures not very far from normal anywhere, with the exception of parts of the Midlands, where afternoon temperatures were a couple of degrees below normal.

SUNDAY
6 DECEMBER 1987

SUMMARY
OF
BRITISH WEATHER

Overnight England and Wales were mostly cloudy with patchy light rain. During the day southern and central England, and Wales, were cloudy and mainly dry but there was rain most of the day in the far southwest and Channel Islands. Northeast England had scattered showers, while in northwest England there was locally some sunshine. During the evening rain mostly died out from the southwest and Channel Islands but scattered light showers spread south through most parts.

Northern Ireland was fairly cloudy throughout with one or two showers in the evening.

Scotland had a few clear then sunny spells, chiefly in the west, and scattered showers, mostly in the east. Some of the showers were of hail and in the northeast some were of snow.

Many places, especially in the south and far northeast, had a rather cold day. A few places saw temperatures reach average.

SUMMARY
OF
BRITISH WEATHER

Southern and central England, Wales and Northern Ireland had a mostly cloudy night, with a little rain at times in many places, whilst heavier and more persistent rain affected Kent and East Sussex. Most of Scotland and northern England had a clear, frosty night, though there were some coastal showers.

Southern Britain had another generally dull day with some showers, though some places brightened a little. It was mostly progressively brighter further north, with quite a lot of sunshine over West and North Wales, northern counties of England, southern and eastern Scotland, though northern Scotland and Northern Ireland had a lot of cloud. There were some coastal showers, with a little snow in places.

It was mostly rather cold, with a fresh easterly wind again in the south.

TUESDAY
8 DECEMBER 1987

SUMMARY
OF
BRITISH WEATHER

The night was mostly clear and frosty, though the Western and Northern Isles of Scotland were more cloudy with a little sleet in places. By daybreak, one or two wintry showers had reached the Norfolk coast and there was a patch of freezing fog in the Glasgow area.

Most of the British Isles had a dry and fairly sunny day, with the best of the sunshine in the south. It was more cloudy towards eastern and southeastern coasts of England with some showers, giving snow in places. Many of these showers were very light, but they were more noticeable in east Kent. It was also fairly cloudy over much of the northern half of the British Isles. It stayed misty in the Glasgow area, and there was a little rain or snow in parts of northern Scotland, with a few heavier bursts of rain in the extreme northwest.

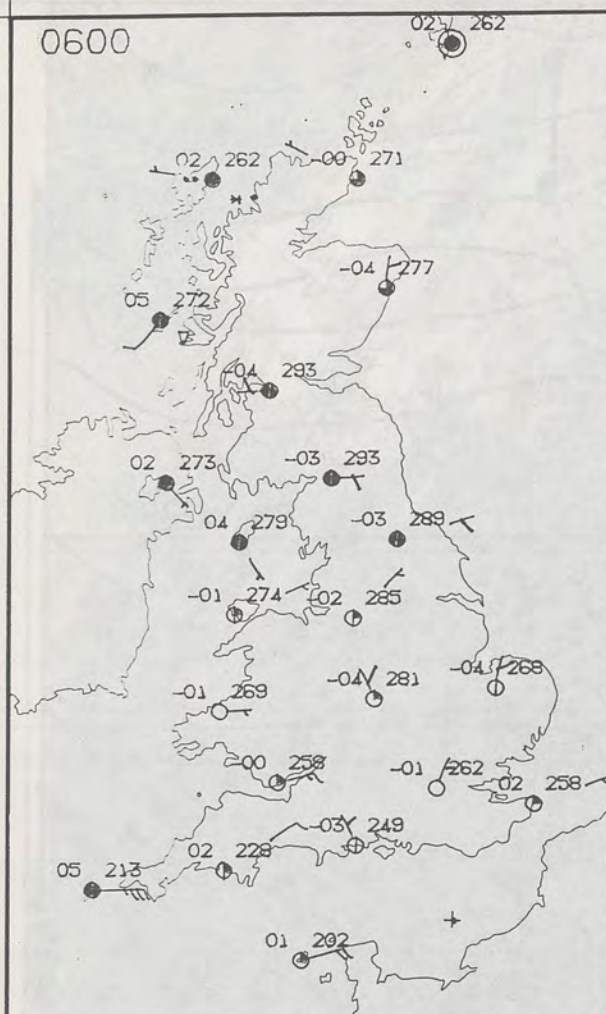

Most places were cold, and some inland areas were very cold. However, it probably felt coldest in the extreme south, especially the Channel Islands, where a strong easterly wind was combined with very dry air.

Most of the country quickly became frosty again in the evening.

WEDNESDAY
9 DECEMBER 1987

SUMMARY
OF
BRITISH WEATHER

Northern parts of Scotland had a cloudy night with rain in places. Over the rest of the UK it was a mostly clear and frosty night but with patchy freezing fog in Northern Ireland and the central lowlands of Scotland. South-eastern parts of England had some cloud overnight with some light snow flurries.

England, Wales and Northern Ireland had a generally dry day with sunny spells, though some areas had rather persistent cloud with isolated wintry showers in the southeast.

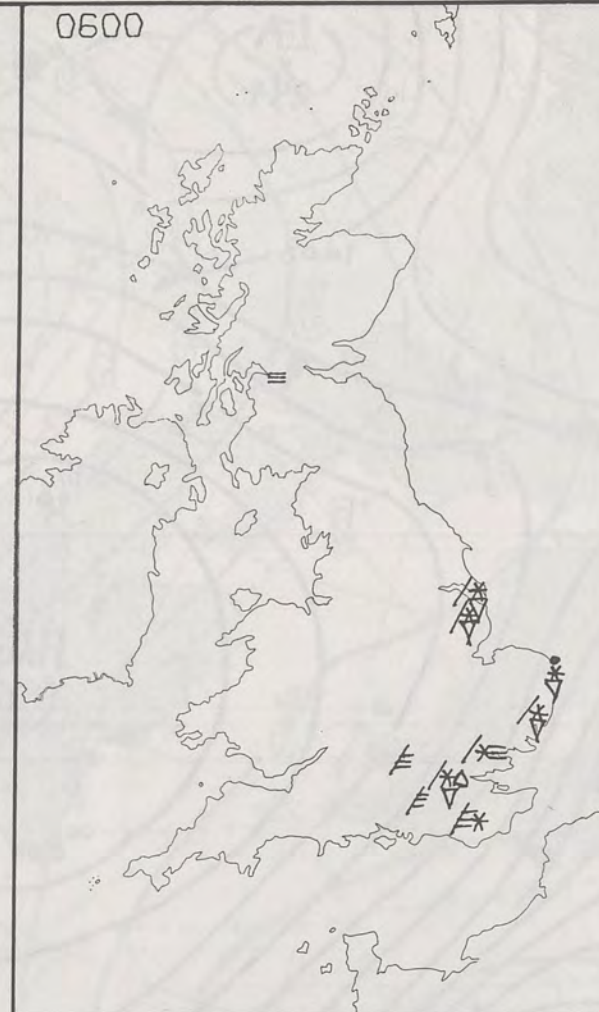

Scotland was mostly cloudy with some light rain in the north but western areas became sunny during the day.

It was a generally cold day with parts of Northern Ireland and the English/Scottish borders remaining below freezing all day.

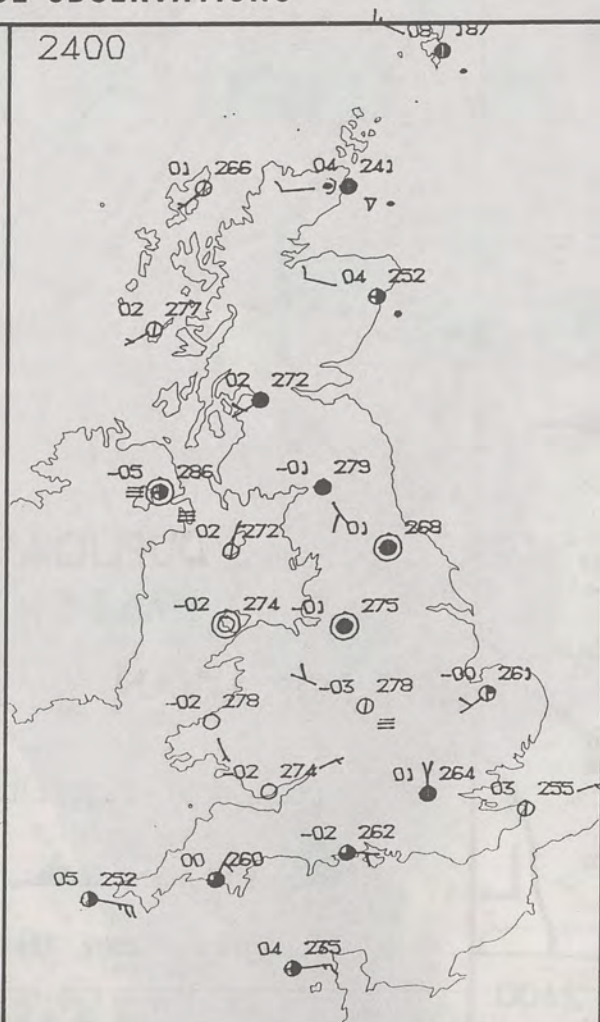

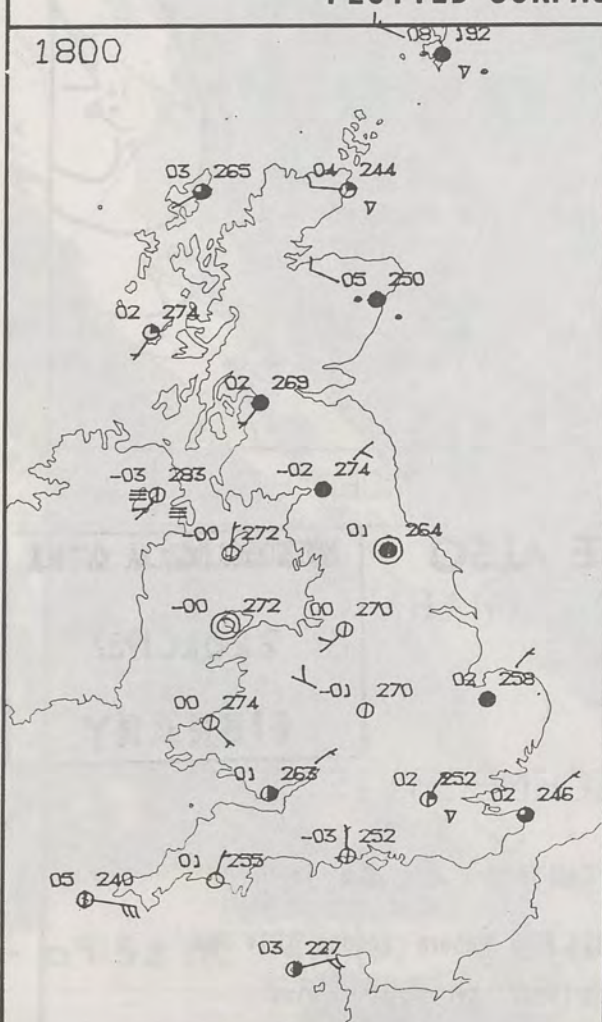

The extreme north and west of Scotland had temperatures near normal.

SUMMARY

OF
BRITISH WEATHER

It was frosty again in most places overnight and there were a few patches of freezing fog, especially in Northern Ireland. Some northern and eastern areas were cloudy, and escaped without frost; there was a little rain, too, chiefly in northern Scotland.

During the day, the cloudy areas tended to grow, though there were long periods of sunshine in places, especially over central southern and parts of southeast England, Wales, Northern Ireland and southwest Scotland. In parts of Northern Ireland, though, it stayed foggy and fog became more widespread over the province again in the evening, with a severe frost.

A little rain or sleet fell in parts of eastern England, with rain here and there in northern Scotland as well.

It was another cold day generally, and very cold in some inland regions. Coastal areas in the north had temperatures near or rather above normal.

SUNDAY
13 DECEMBER 1987

SUMMARY
OF
BRITISH WEATHER

It was a dry night over most of the UK with frost widespread in inland regions. Patchy fog in northern parts of England and Scotland persisted all day in parts of the Scottish lowlands.

The day was dry in most parts but with variable cloud cover. The sunniest areas were in southern parts of England and into Wales together with central and eastern parts of Scotland.

Southwest England, eastern parts of Ulster, western and northern Scotland were rather cloudy. Northern and eastern England was also cloudy with some light showers in Norfolk and Lincolnshire.

Temperatures were mostly a degree or two below the mid-December average but in some central parts of Scotland it was very cold with temperatures remaining below freezing all day.

SUMMARY
OF
BRITISH WEATHER

Much of the United Kingdom had a frosty night with a severe frost in Scotland where there was freezing fog in many places.

Northern Ireland and much of England were cloudy and in Cornwall there was a little drizzle.

During the morning the fog cleared in Scotland and many places were fairly sunny but the south was more cloudy.

Over Northern Ireland, England and Wales most places had a dry cloudy day but in North Wales and in parts of England, especially the northwest, some places were quite sunny.

It was a dry day nearly everywhere but in northeast England there were a few showers and in parts of southwest and central southern England there was a little rain and drizzle.

It was a cold or very cold day in most places in England and Wales and in parts of central Scotland it was frosty all day. Northern Ireland and coastal regions of Scotland were only rather cold.

TUESDAY
15 DECEMBER 1987SUMMARY
OF
BRITISH WEATHER

Most places had a dry night, except for a little drizzle in southwest England and some other southern areas later. Eastern and southern areas were mostly cloudy but northern parts had a sharp frost and some fog patches.

Around dawn some heavier rain reached the southwest and by the end of the day this had spread as far north as southern Scotland, preceded in a few places by a little sleet. Central and northern Scotland stayed dry with some sunshine, apart from a few lingering fog patches. Somewhat drier weather also reached southwestern parts in the evening. It was rather cold or cold everywhere away from the southwest.

WEDNESDAY
16 DECEMBER 1987

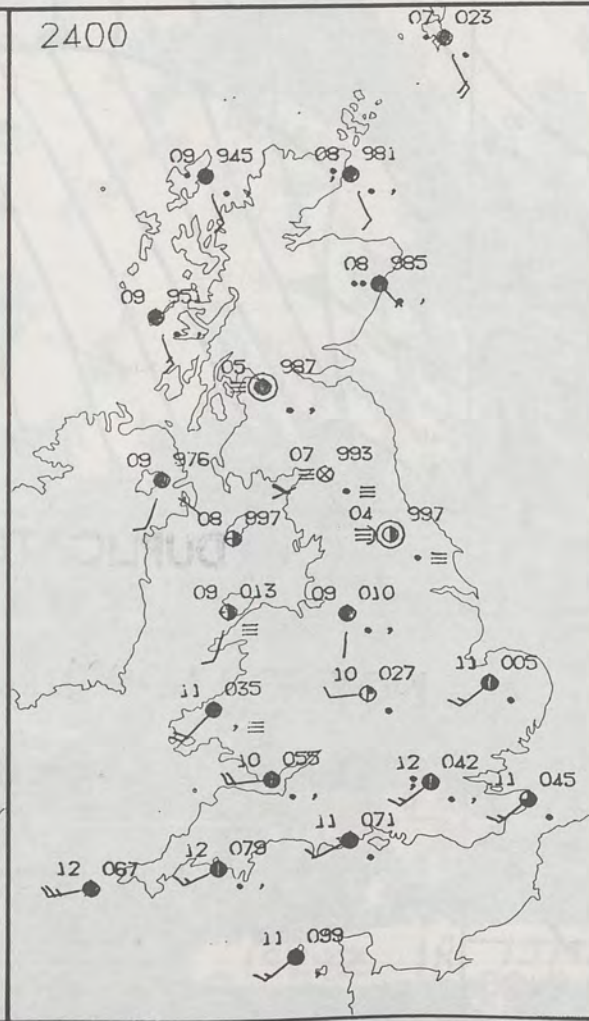

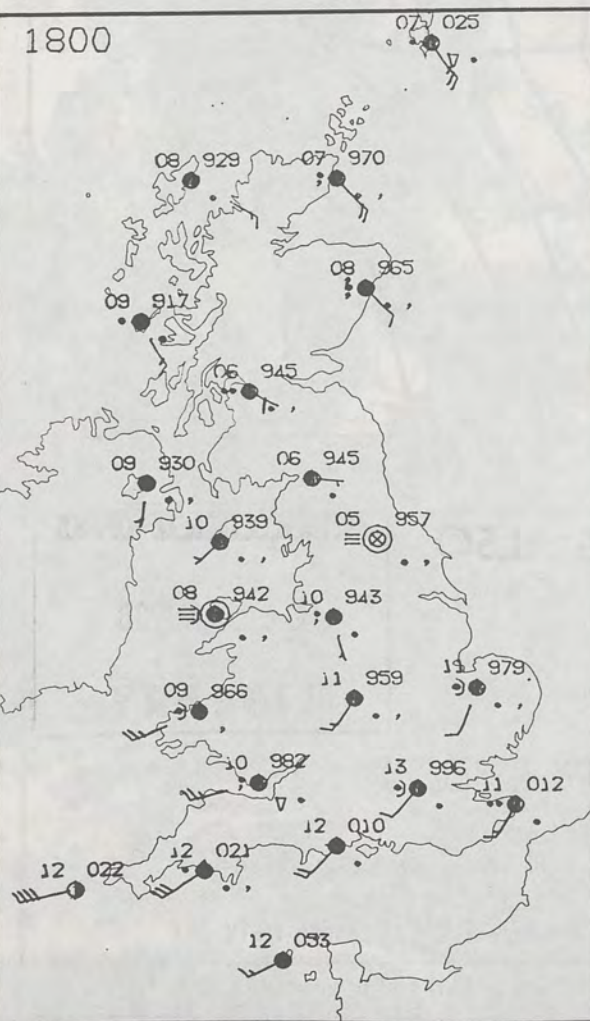

SUMMARY OF BRITISH WEATHER

Overnight most places were cloudy and misty with rain at times and it turned milder. Southern Scotland had some sleet or freezing rain and in northern Scotland skies stayed clear to give another severe frost in places.

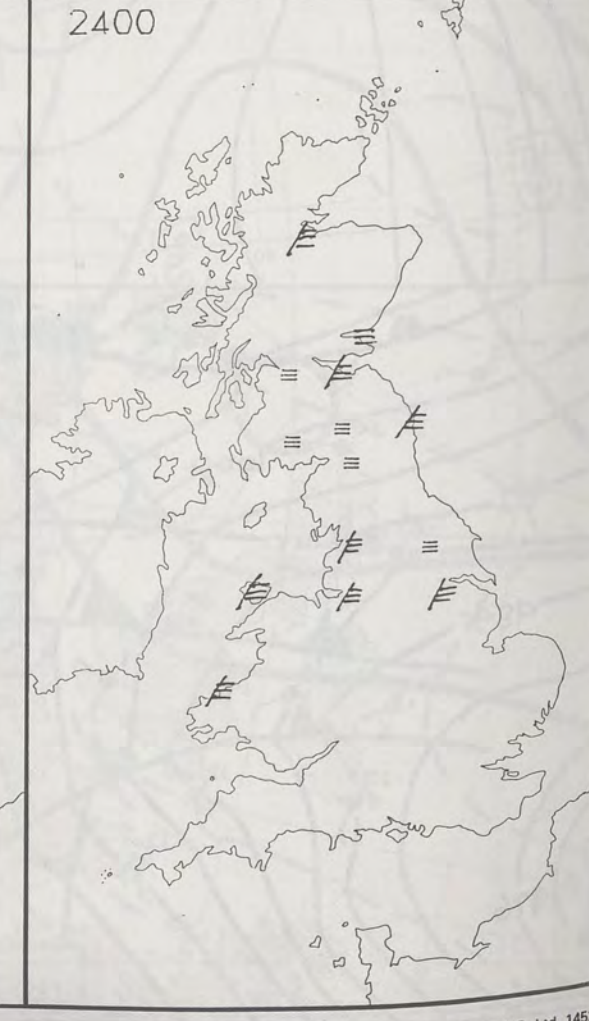

The rain pushed up into northern Scotland during the morning and then the whole country had a fairly cloudy day with rain at times. There were, however, some drier and brighter intervals especially in Wales and southern England. It was quite foggy for much of the time in northeast England. Temperatures continued to rise and it ended up very mild in Northern Ireland, Wales and England south of a line from Morecambe Bay to the Humber. Elsewhere normal temperatures prevailed.

THURSDAY
17 DECEMBER 1987SUMMARY
OF
BRITISH WEATHER

Mild conditions over southern districts continued to make slow but steady progress northwards overnight so that frost became confined to the Great Glen early in the night. There was rain at times over northeast Scotland and a little rain in southern and western parts of England and Wales.

By the morning an area of rain had returned to Northern Ireland and these wet conditions extended to much of southern and western Scotland during the day. Northern Ireland became dry with a little sunshine.

England and Wales had a mainly overcast day with a little rain in most places and a period of more persistent and fairly heavy rain for a time from North Wales to Lincolnshire. Southern and western coasts and hills were often foggy.

It was very mild in most places and exceptionally mild in a few, but Inverness was disappointingly chilly.

FRIDAY
18 DECEMBER 1987

SUMMARY
OF
BRITISH WEATHER

Much of Wales and northern England had a wet night with heavy rain in places but it had become mainly dry by the morning. The rest of England was very mild but breezy with occasional light rain. Over eastern Scotland the cloud was well-broken but western Scotland, the Northern Isles and Northern Ireland were more cloudy with a little rain.

A fresher westerly airstream was quickly established over the whole of Britain on Friday and for many parts of England daytime temperatures were no different to overnight.

It as another very mild day with a little sunshine in many places though it was those areas in the shelter of high ground that had most of the sun. Eastern Scotland and northeast England were well-favoured but many western areas remained cloudy with occasional showers, a few being heavy in Northern Ireland and western Scotland. Some of the showers filtered across to eastern parts of both Scotland and England but they were brief and light overall.

SUMMARY
OF
BRITISH WEATHER

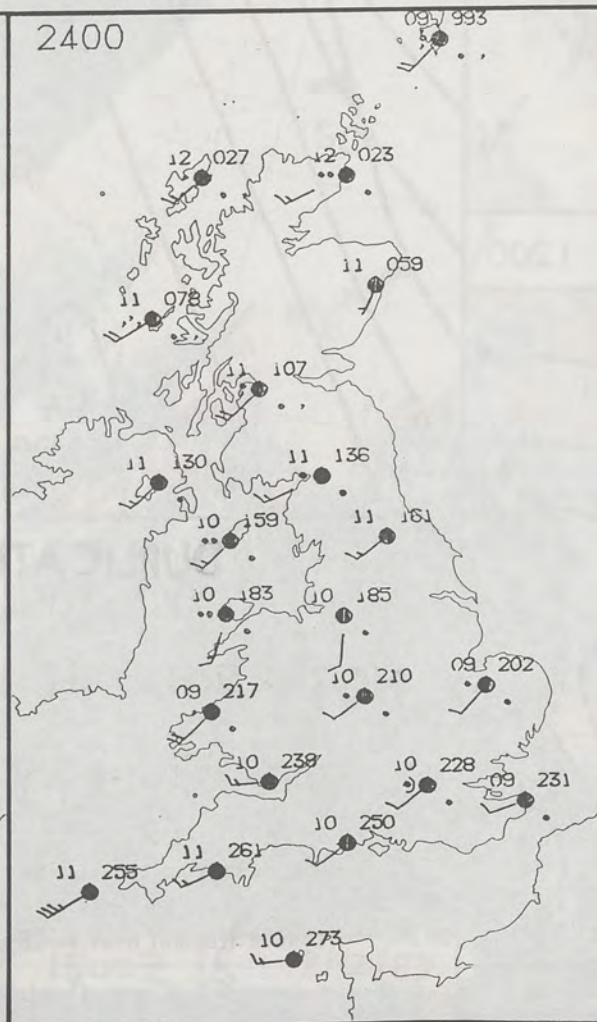

After a mostly dry night in England and Wales, with clear spells, cloud quickly spread across from the west in the early morning. Rain soon followed, and was across most of northern England and North and West Wales by midday. During the afternoon there were odd patches of rain elsewhere but many places in southern England stayed dry with some weak sunshine. During the evening there was further rain in western parts and East Anglia.

PLOTTED SURFACE OBSERVATIONS

1800

2400

In Scotland overnight there were one or two showers but mostly dry weather till rain reached Northern Ireland and the Western Isles towards dawn. Rain spread across most areas by midday, some heavy rain in northwest Scotland. Later in the afternoon and evening it became drier in Northern Ireland and eastern Scotland but rain continued in western Scotland.

It was a very mild day in most places.

SUMMARY
OF
BRITISH WEATHER

It was a cloudy night in England and Wales with rain at times in northwest England, Wales, the Midlands and East Anglia. During the day and evening there was further rain and drizzle, chiefly in western parts. It stayed mostly cloudy, the best of the brightness in northeast England.

Northern Ireland and north and west Scotland had some rain overnight, heaviest in western Scotland. There were clear spells in eastern Scotland. During the morning the rain died out in Northern Ireland, but patchy rain persisted into the afternoon in southern Scotland and Shetland. There were sunny intervals in northern Scotland, the best of these in the northeast. During the evening there were clear spells but rain spread from the south into Northern Ireland.

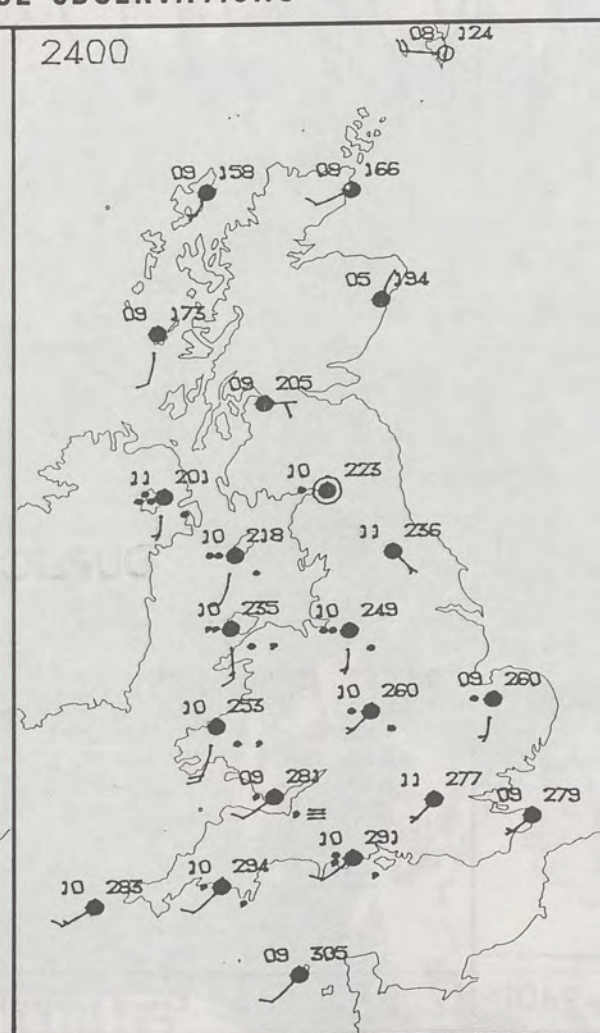

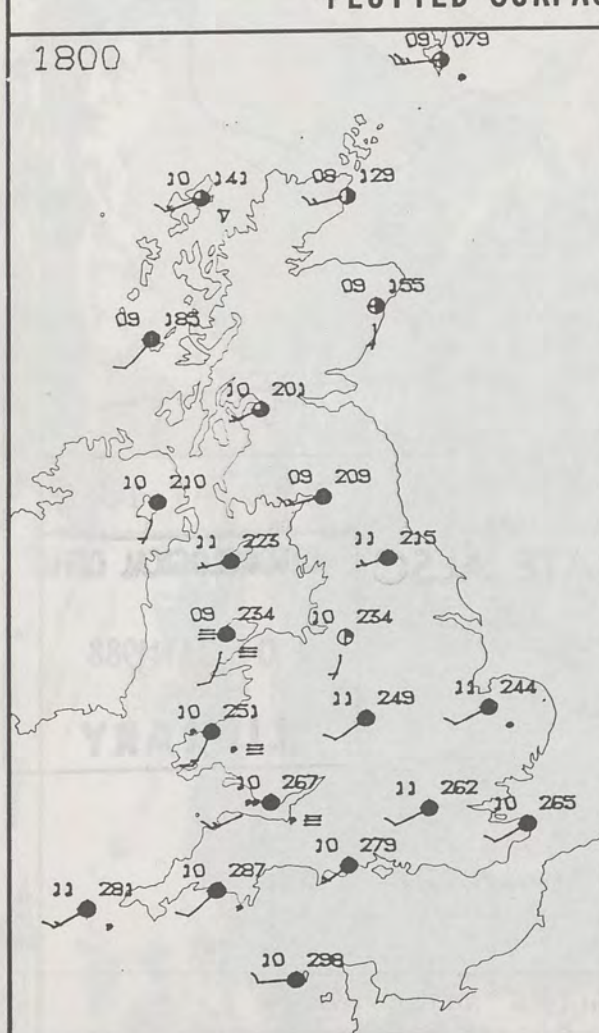

It was generally a very mild day and exceptionally mild in a few places, notably the sunnier spots in northeast England and eastern Scotland.

SUMMARY
OF
BRITISH WEATHER

England and Wales had a cloudy, mild night with some drizzle on southern and western coasts and a spell of more persistent rain over northern districts. Many central, northern and eastern districts remained dry through daylight hours with a few sunny intervals, but southernmost counties and much of Wales were rather dull with some drizzle and fog over coastal hills.

Northern Ireland had a wet night, this rain spreading to most of mainland Scotland by dawn and to the Northern Isles in the afternoon. Drier weather then spread to all parts in the late afternoon and evening.

Temperatures were in the mild or very mild categorys everywhere but it was quite windy near northwestern coasts.

A gust of 65 knots was reported from Butt of Lewis (Outer Hebrides) as gales affected north Scotland, Orkney and Shetland in the evening.

TUESDAY
22 DECEMBER 1987SUMMARY
OF
BRITISH WEATHER

Most of the United Kingdom had a dry night with clear periods, cloud and drizzle in southern parts clearing away by dawn.

There were some short-lived fog patches as the cloud cleared and there was a frost in some central parts of England, Wales and Northern Ireland.

Northern parts of Scotland had showers overnight and in the Northern Isles there were storm force westerly winds, with a gust of over 90 knots recorded at Saxa Vord on Unst, overnight showers continued in the Northern Isles during the day, some falling as hail but over the rest of Scotland and Northern Ireland it was a dry, bright day but with increasing high cloud making sunshine weak.

England and Wales had a dry and mainly sunny day, but the Channel Islands remained dull and misty and these conditions spread to parts of Cornwall and Devon in the afternoon and evening.

Fog and frost formed in parts of the Midlands and East Anglia in the evening.

Temperatures were near or slightly above the late December average.

SUMMARY
OF
BRITISH WEATHER

Over England and Wales, despite mostly cloudy conditions, many places had a dry day. However, some patchy rain and drizzle was reported from western hilly and coastal regions, and later from counties near the south coast. In eastern and central counties of England, overnight fog generally lifted into low cloud well before dawn, however, some fog patches persisted in East Anglia, and isolated areas of fog lingered right through the day. Near the east coast, with a gentle drift off the North Sea, some reasonable amounts of sunshine were reported.

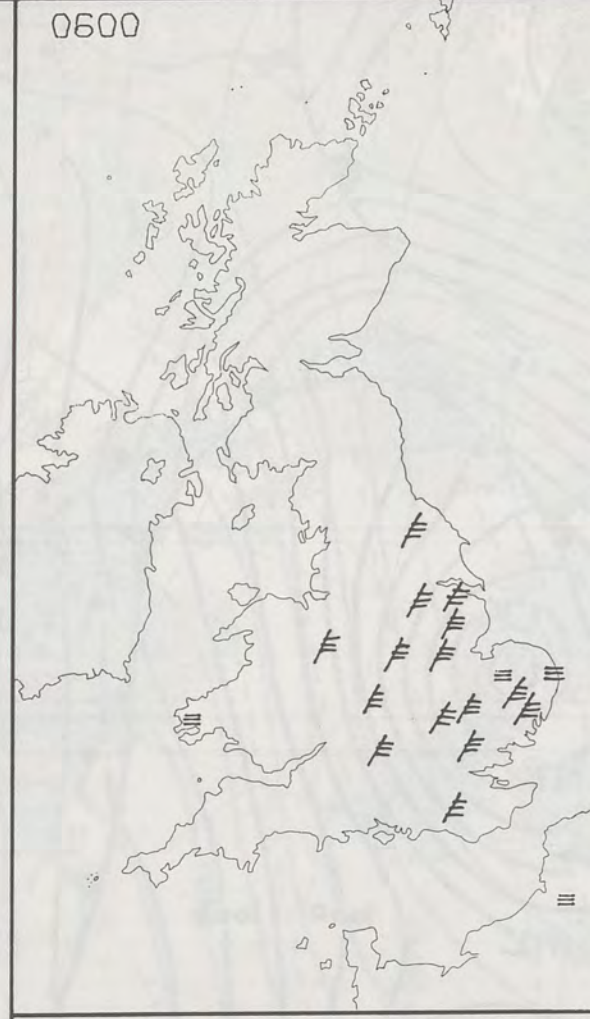

Scotland and Northern Ireland had largely cloudy skies, with brisk, and in the west, strong southerly winds. Rain was reported from Northern Ireland and western Scotland, and parts of north-western Scotland had persistent rain, but in eastern Scotland, the weather remained dry and fairly bright.

Temperatures in the more western and northern areas were well up to or somewhat above normal. In remaining districts, temperatures were colder than normal, with some fog-bound areas very cold.

THURSDAY
24 DECEMBER 1987SUMMARY
OF
BRITISH WEATHER

Although many parts of the United Kingdom had a dry morning, skies were largely overcast, with some extensive and quite thick low cloud affecting eastern, central and southern areas of England, which lifted only slowly, and produced some persistent drizzle across southern England. Some rain moved into the far southwest of England and West Wales, together with western areas in Northern Ireland late morning, and during the afternoon and evening, this rain made steady progress northeastwards, reaching the east coast towards midnight. Some heavy bursts of rain were reported on this rain belt at first, but activity decayed somewhat with time. Showery conditions followed this rain into the west in the evening. It was windy at times in western areas.

Temperatures in eastern and central England rose only slowly, after a cold start, but by evening, most places had achieved temperatures somewhat above normal. In the west though, temperatures were well above normal most of the day.

FRIDAY
25 DECEMBER 1987

SUMMARY
OF
BRITISH WEATHER

At the start of the period it was very mild and fairly cloudy across the country, with rain in places. Showery rain continued through the night over Scotland, but most other districts became dry with clearing skies. The temperature then fell sufficiently to give ground frost in parts of England and East Wales by dawn. More significantly, though, fog formed in several places, with some dense patches in parts of southern England for a time in the morning.

Over most of the British Isles, there was quite a lot of sunshine during the day, though it was rather cloudy and showery in the north, where indeed some places did not see the sun at all; it was also windy in northern regions. Most of England and Wales had a fine day, though in parts of the south fog or low cloud was rather slow to clear.

In the evening, there was some more patchy fog and ground frost in parts of the southeast; elsewhere, it clouded over from the west, with some rain spreading slowly east.

It was a mild day nearly everywhere.

SATURDAY
26 DECEMBER 1987

SUMMARY
OF
BRITISH WEATHER

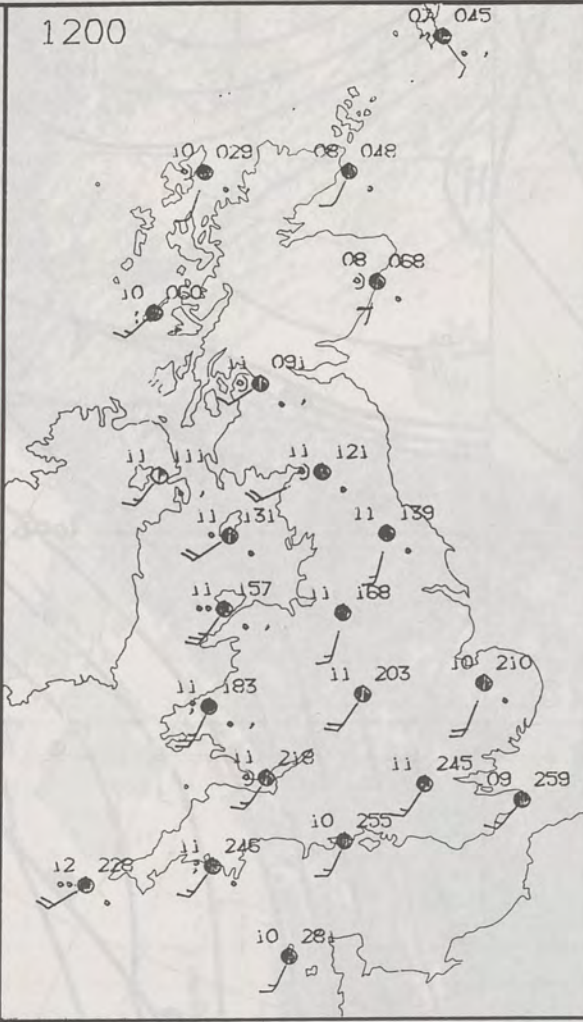

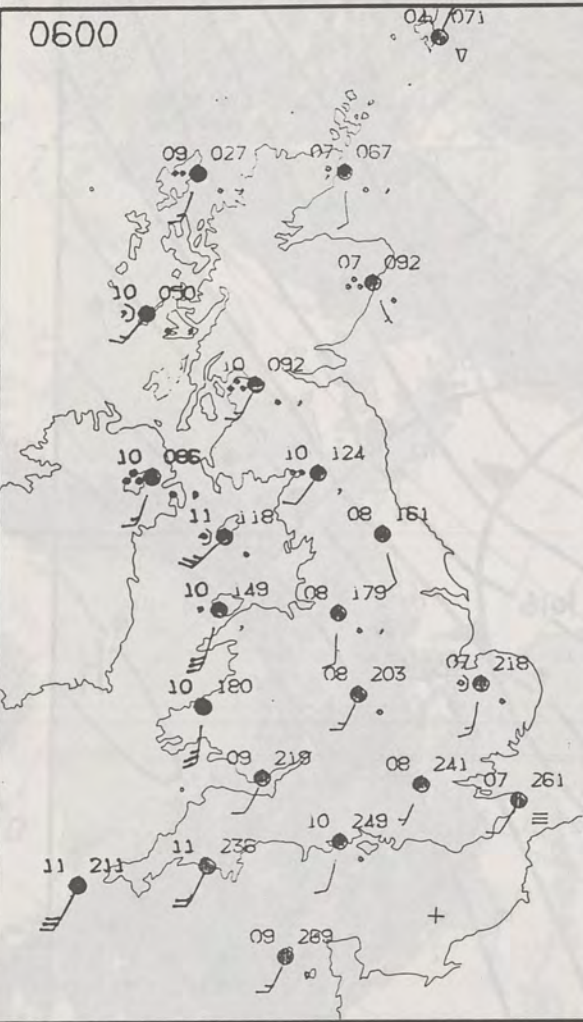

Patchy fog and ground frost in parts of southeast England early in the day soon cleared as mild, cloudy weather spread to all districts from the southwest. Most of southeastern Britain had no more than a little rain or drizzle every now and then, but more persistent and quite heavy rain spread northeast across many northern and western districts during the first part of the day.

Many parts of Scotland and Northern Ireland became drier and a little brighter during the day, though there were still some showers. The hills of Wales and the Moors of southwest England were affected by fog and persistent drizzle.

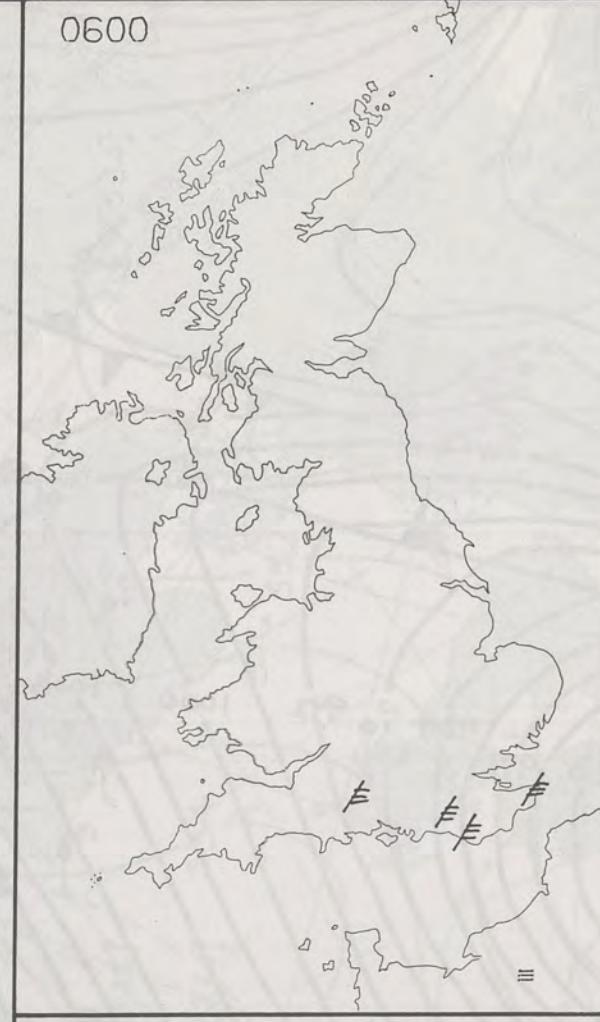

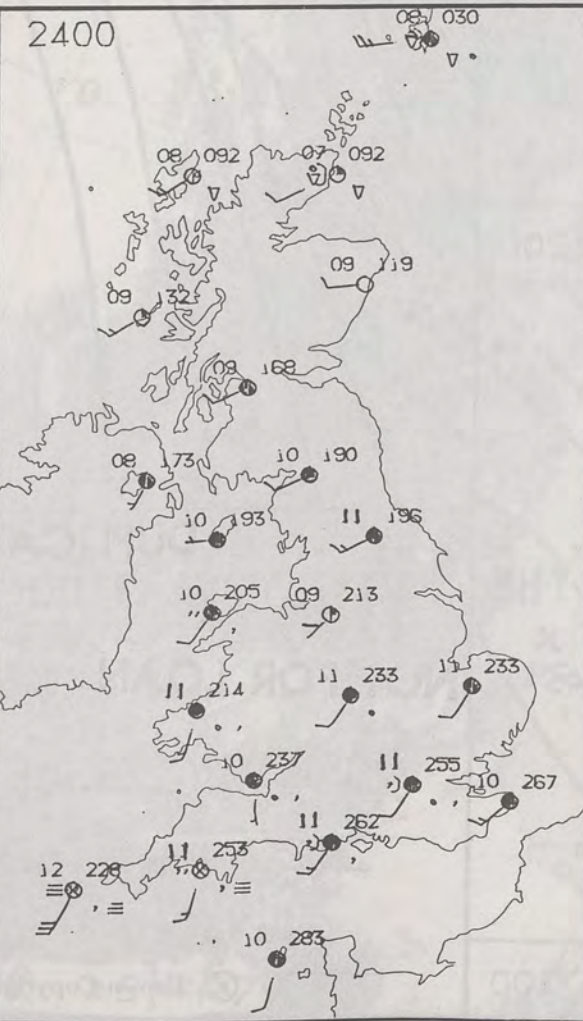

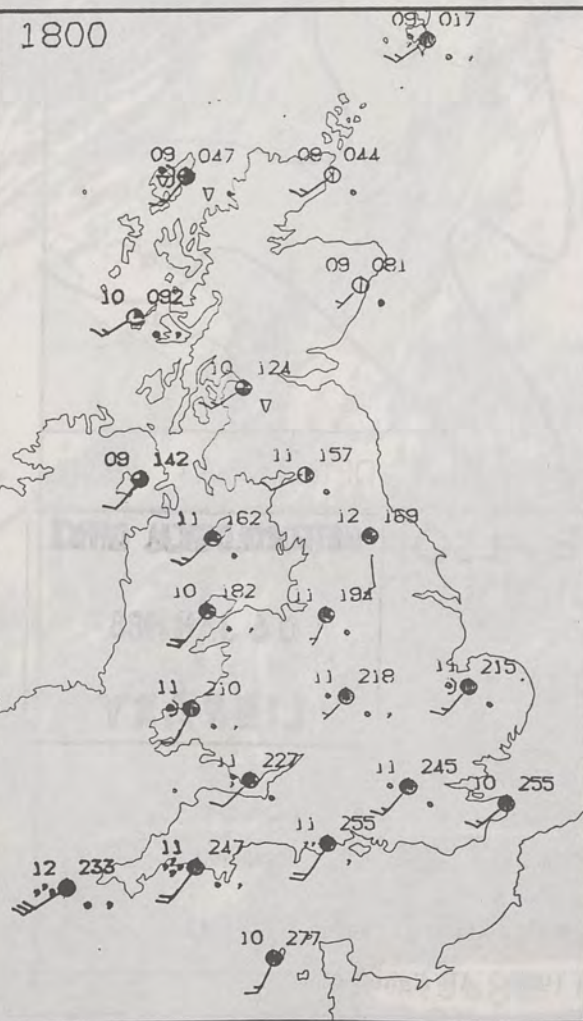

It was very mild everywhere.

SUNDAY
27 DECEMBER 1987

SUMMARY
OF
BRITISH WEATHER

Most places had a mild, cloudy night, but clearer skies led to lower temperatures over Scotland. There was some drizzle in the south, and southwestern coasts and hills were damp and foggy. More general rain spread north-east across north Devon, Wales, Northern Ireland and central England before morning. During the morning, the rain spread on across the rest of northern England and southern Scotland, whilst it became drier further south, away from the southwestern coasts and hills.

In the afternoon, the rain moved into northern Scotland. Drier, slightly brighter weather spread from the west across Northern Ireland and into southern Scotland and northwest England. It also became a little brighter over much of southern England. During the evening, most places became dry.

Many places were exceptionally mild, though temperatures were nearer normal in northern Scotland. It was quite windy, with gales in exposed western regions.

MONDAY
28 DECEMBER 1987SUMMARY
OF
BRITISH WEATHER

Most of England and Wales stayed cloudy through the 24 hours with patchy rain and drizzle. Much of the rain and drizzle was in the west, particularly the northwest, and rain became more persistent in the west during the evening. The only significant sunshine was in the Channel Islands.

Scotland and Northern Ireland were mainly dry at first but outbreaks of rain spread through Northern Ireland in the early hours and had reached most places by dawn. During the day pulses of rain crossed northern Britain with the wettest place being in western and southern Scotland. Rain gradually petered out from the northwest during the evening.

It was a very mild day everywhere, and locally exceptionally mild. It was windy in Wales and the southwest.

TUESDAY
29 DECEMBER 1987

SUMMARY OF BRITISH WEATHER

England and Wales had a largely cloudy night and day with patchy rain and drizzle. The heaviest and most persistent rain was in the west, and especially south-west. After dark, clearer, drier weather spread down from the northwest to all but the extreme south.

Rain in southeast Scotland cleared in the early hours to leave clear spells in Scotland and Northern Ireland. In the morning though, there was a spell of rain in Northern Ireland and the far south of Scotland. This rain cleared and Northern Ireland had a fairly sunny afternoon. Most of Scotland had bright or sunny intervals and scattered showers. One or two of the showers were of hail. During the evening there were clear spells in all regions, and a scattering of showers; and thunder was heard in the Western Isles in the late evening.

It was mild in northern Scotland and exceptionally mild in remaining areas of the UK.

WEDNESDAY
30 DECEMBER 1987

SUMMARY OF BRITISH WEATHER

Cloud and with some drizzle cleared from all but the south coast of England overnight and then most parts were dry with clear spells apart from a few showers in the west and north of Scotland.

North and east Scotland and some eastern parts of England started the day dry and bright with a little sunshine, but cloud spread quickly from the west to reach all but the Northern Isles by early afternoon.

Rain spread into southwestern parts of England and Wales by midday and then extended across the rest of England, Wales, Northern Ireland and southwest Scotland by the end of the afternoon and to the rest of Scotland in the evening.

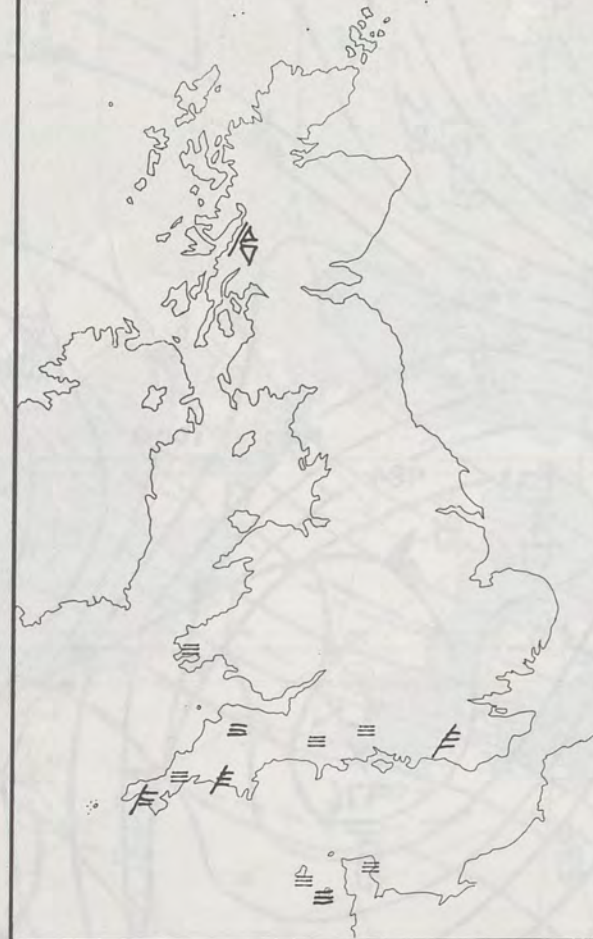

Drier conditions then followed across much of England in the evening.

It became very mild over most parts by the end of the day, but over Scotland temperatures were only 2 or 3 degrees above the average.

A gust of 65 knots was reported from Gwennap Head (Lands End) during the evening.

THURSDAY
31 DECEMBER 1987

SUMMARY
OF
BRITISH WEATHER

Cloudy weather across all parts with outbreaks of rain in the early part of the night gave way to more broken cloud in western districts with showers before daybreak.

Cloud over southeastern parts of England cleared during the morning and then England and Wales had a bright day with sunny spells but with further showers in western and northern regions.

Scotland and Northern Ireland had a rather cloudy and showery day with some longer outbreaks of heavier rain in central and western parts of Scotland.

It was a windy day in the west and north.

Temperatures ranged from mild in the north to very mild in the south.
