M.O. 2a.

AIR MINISTRY.

METEOROLOGICAL OFFICE.

TABLES FOR THE COMPUTATION OF THE TELEGRAPHIC CODE FOR RELATIVE HUMIDITY READINGS OF THE DRY BULB AND WET BULB THERMOMETERS.

1. The tables are based on curves drawn from the values given in the "Computer's Handbook," M.O. 223, section 1. The curves were drawn to correspond with humidities of 29·5 ; 39·5 and so on, and the differences between the dry bulb and the wet bulb corresponding with these curves were taken to the nearest tenth of a degree Fahrenheit.

2. To use the tables :

(*a*) Read the dry bulb and the wet bulb thermometers to degrees and tenths.

(*b*) Subtract the reading of the wet bulb from that of the dry bulb ; this gives the "difference dry minus wet."

(*c*) Round off the reading of the dry bulb to the nearest whole degree.

(*d*) Find this reading in the left-hand column of the table.

(*e*) Look along the row opposite until you come to the column in which the difference between the dry bulb and the wet bulb lies.

(*f*) The figure at the top or the bottom of this column is the figure to be telegraphed.

3. For example,

Dry bulb	...	..	...	56·7
Wet bulb	...	...	...	51·8
Difference	...	...	...	4·9

The dry bulb rounded off is 57°. In the row opposite 57° we find that 4·9 lies between 3·3 and 5·1. Therefore the telegraphic figure is 7.

(31620—12) Wt. 30223—445 500 2/21 H. St. G. 3
