

## A map of the United Kingdom with the study area in central Scotland highlighted in yellow. The map shows the outlines of the British Isles, with Scotland, England, Wales, and Northern Ireland visible. The highlighted area is located in the central part of Scotland, near the border with England.

Warm, moisture laden air from the south will meet cold air to the north, generating an active frontal system later on Friday and into Saturday. Rainfall will be enhanced by air rising up southeast facing slopes in the strong flow, with over 40 mm of rain in places, and the potential for locally more than 60 mm in higher river catchments. This is likely to give enhanced river levels within, and downstream of, the wettest areas.

Valid from **00:05 on Sat, 19th Oct 2013** until **23:00 on Sat, 19th Oct 2013**

**For more details please go to:**
