Tuesday 1 August 2006

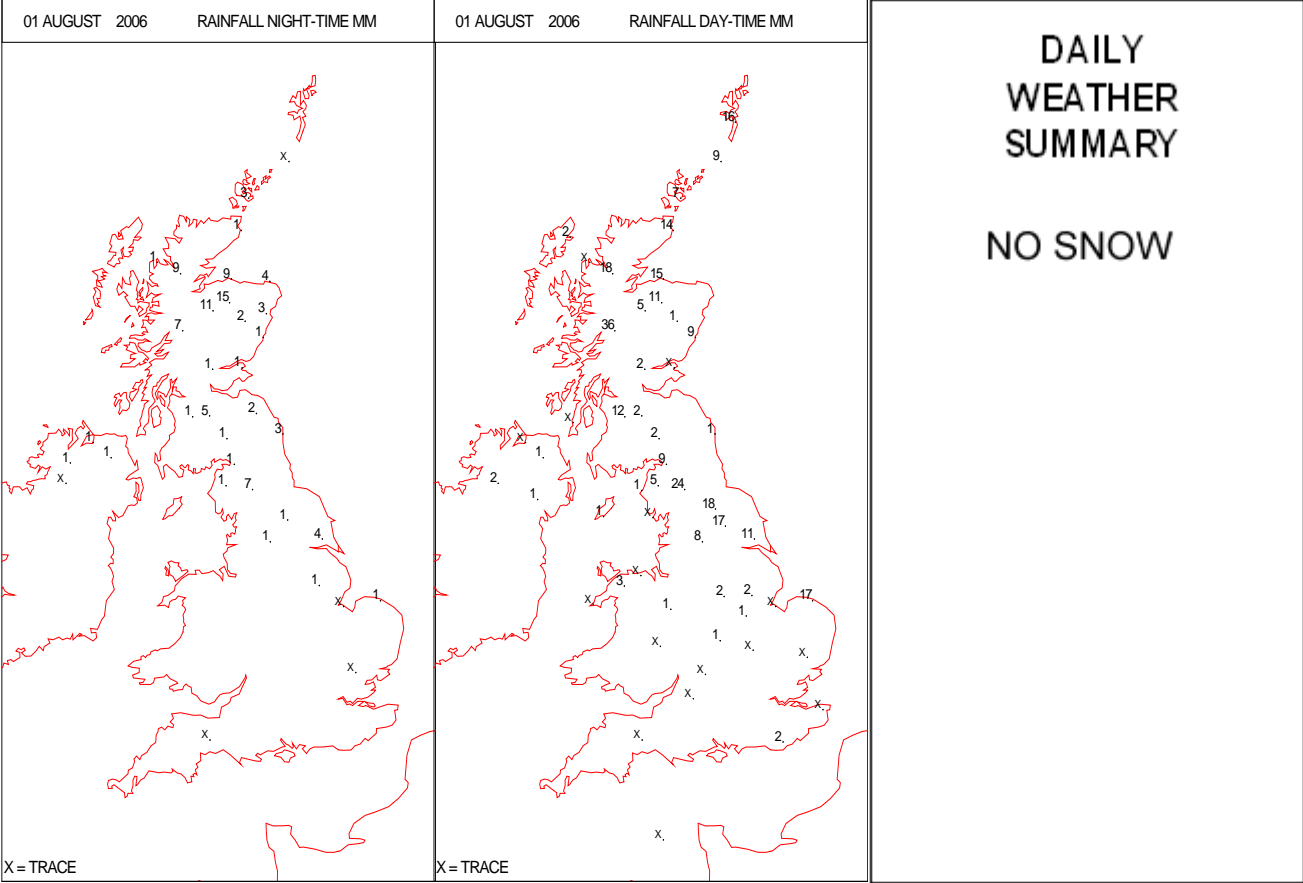

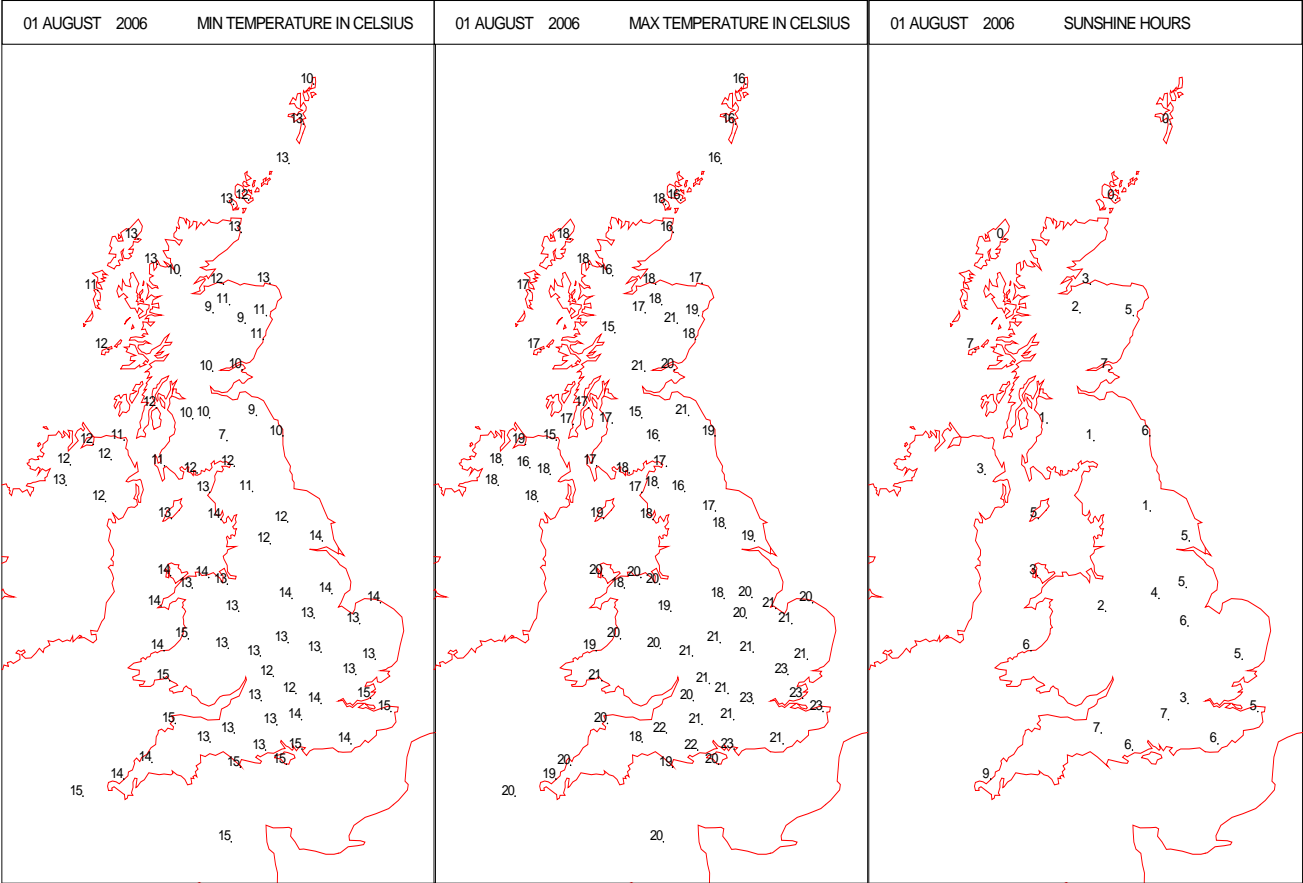

SURFACE REPORTS

SIGNIFICANT WEATHER

0600 GMT 01 AUGUST 2006	SIG WEATHER	1200 GMT 01 AUGUST 2006	SIG WEATHER	<p>Summary of UK Weather for Tuesday 01 August 2006.</p> <p>Showers affected much of England and Wales overnight but gradually became confined to western areas as the night progressed. Scotland had a wet night with some heavy rain in the north and west and thunder over the Inner Hebrides.</p> <p>During the morning showers over Wales and western parts of England slowly pushed eastwards, with thunder over northeast England by late morning. These showers became heavy over northern England and East Anglia during the afternoon with further thunder in places. Northern Ireland also had a fair peppering of showers throughout the day, but it was southern England and south Wales that saw the best of the sunshine with only scattered showers in these regions. Over Scotland the showers merged into longer spells of rain, heavy and thundery at times.</p> <p>Through the evening the showers over northern England and East Anglia became less intense and the rain over Scotland became more confined to central and northern areas. Scattered showers continued to affect Northern Ireland.</p> <p>For much of the UK temperatures were around normal, but a few wetter spots over northern England and the north Midlands were rather cool.</p>
1800 GMT 01 AUGUST 2006	SIG WEATHER	0000 GMT 02 AUGUST 2006	SIG WEATHER	<p>EXTREMES</p> <p>Highest Maximum: 23.3 Shoeburyness, Essex</p> <p>Lowest Maximum: 14.9 Tulloch Bridge, Inverness-Shire</p> <p>Lowest Minimum: 7.4 Eskdalemuir, Dumfriesshire</p> <p>Lowest Grass Minimum: 4.2 Aboyne No 2, Aberdeenshire</p> <p>Most Rain: 42.4 Tulloch Bridge, Inverness-Shire</p> <p>Most Sun: 11.5 St Mawgan, Cornwall</p>

SURFACE REPORTS

SIGNIFICANT WEATHER

0600 GMT 02 AUGUST 2006	SIG WEATHER	1200 GMT 02 AUGUST 2006	SIG WEATHER	<p>Summary of UK Weather for Wednesday 02 August 2006.</p> <p>A large area of low pressure over the northern North Sea maintained cloudy skies and showery outbreaks of rain across Scotland and Northern England overnight, pulsating southwards on a fresh/strong northwesterly wind, with the rain especially heavy down through northwest Scotland into Yorkshire. Further south and west there were a few scattered showers, but with conditions generally drier down towards the southern counties of England, with clear spells here and lighter winds. During the day pulses of rain continued to push inland from the North Sea, across Scotland and then southwards across northern England and eventually down through the east Midlands into East Anglia. The rain remained especially heavy towards the east, with some thunder mixed in, bringing an unseasonably cold, wet and windy day here. Over remaining areas there were a few light showers with more broken cloud, but it was really down across southwest England and along English Channel coasts, that it stayed dry with some good sunny spells. In these brighter spots the temperatures were just around average though still tempered by a blustery northwesterly wind.</p>
1800 GMT 02 AUGUST 2006	SIG WEATHER	0000 GMT 03 AUGUST 2006	SIG WEATHER	
				<p>EXTREMES</p> <p>Highest Maximum: 23.2 Heathrow, Greater London</p> <p>Lowest Maximum: 13.1 Glenlivet, Banffshire</p> <p>Lowest Minimum: 10.1 Tulloch Bridge, Inverness-Shire</p> <p>Lowest Grass Minimum: 7.6 Shobdon Airfield, Hereford & Worcester</p> <p>Most Rain: 26.6 Weybourne, Norfolk</p> <p>Most Sun: 13.6 St Mawgan, Cornwall</p>

SURFACE REPORTS

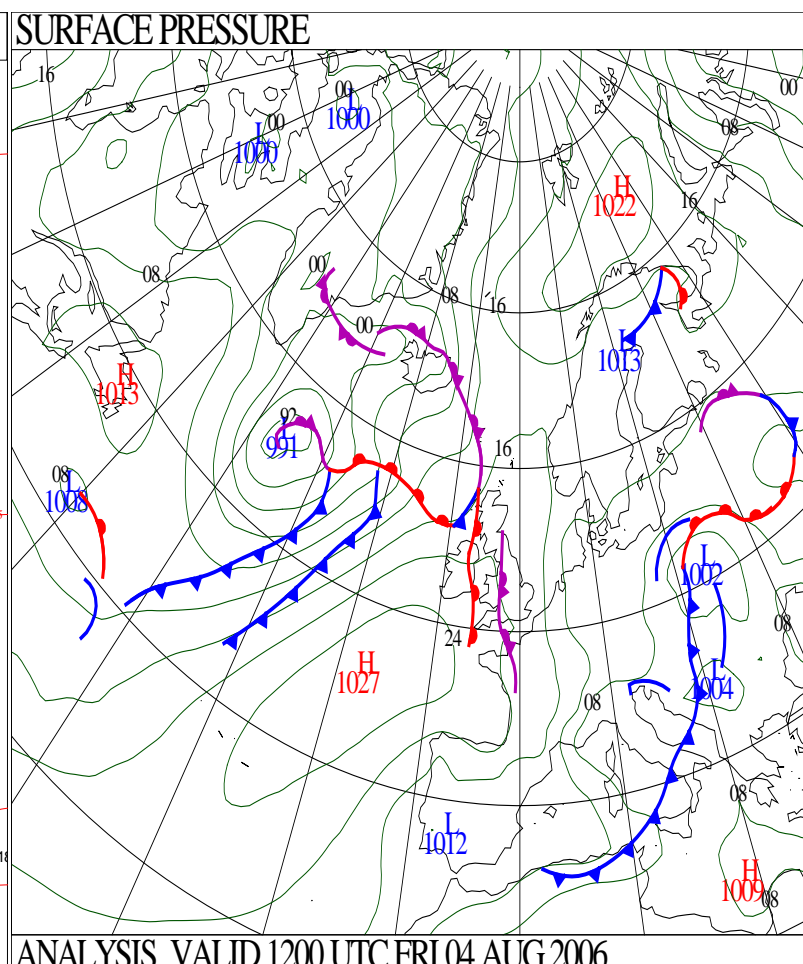

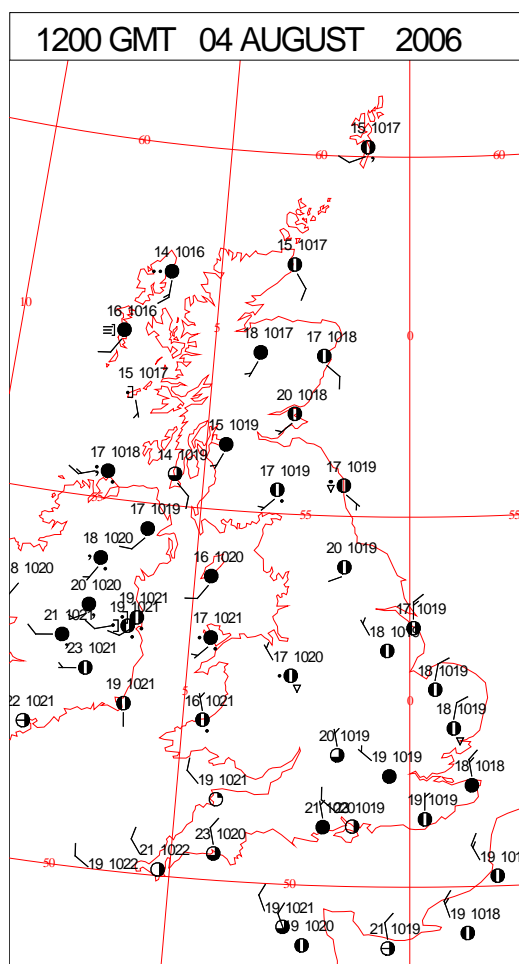

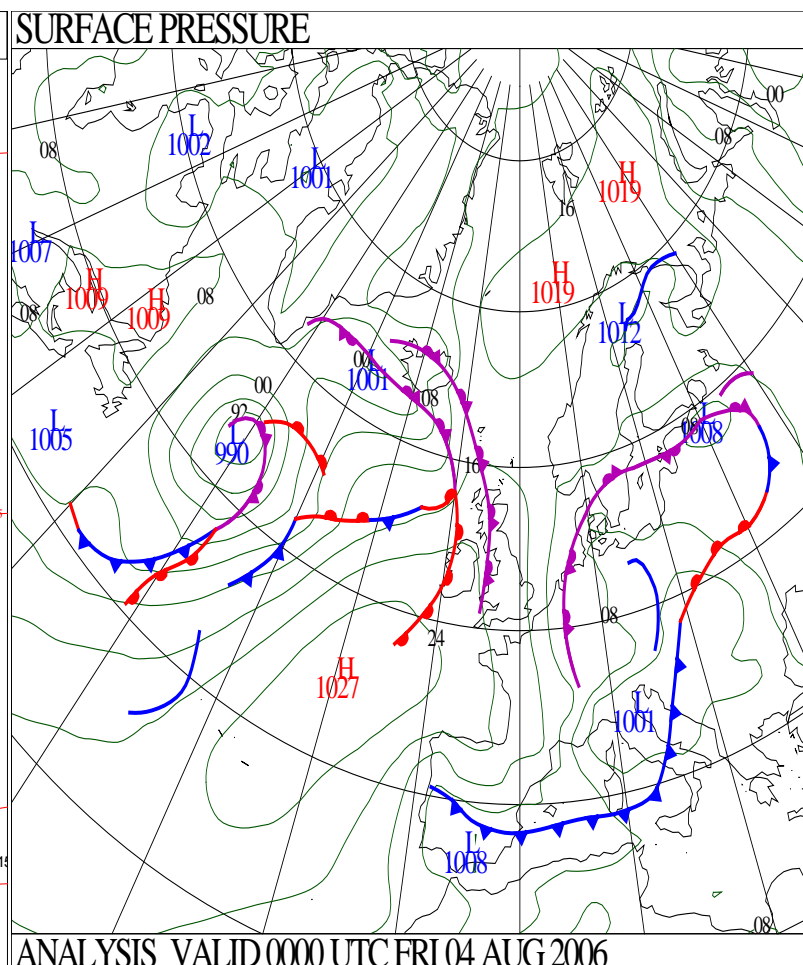

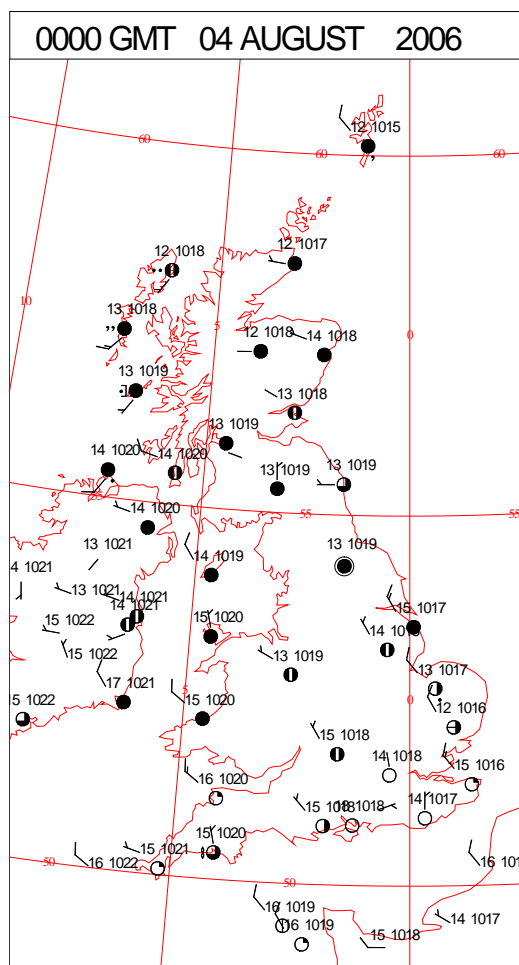

SIGNIFICANT WEATHER

0600 GMT 03 AUGUST 2006	SIG WEATHER	1200 GMT 03 AUGUST 2006	SIG WEATHER	<p>Summary of UK Weather for Thursday 03 August 2006.</p> <p>Across central and southern parts of Scotland and northwest England it was a dry and mostly clear night, but with skies generally cloudy elsewhere. Skies were especially overcast and misty across Wales and towards eastern parts of England, giving some light rain and drizzle in places. It was a breezy night, but more especially down the eastern fringes of England where a narrow band of heavier rain spilled southwards across Yorkshire, Lincolnshire and ultimately into East Anglia. This heavier rain continued to clear across southeast England during the morning, though leaving behind quite overcast conditions, still with a few spots of light rain and drizzle. This persisted across some eastern counties of England well into the day, giving quite a cool day with strong and gusty northerly winds. However, across the rest of England and Wales it was mostly dry with brighter skies spilling slowly east, becoming locally warm in the sunshine. There was some sunshine across Northern Ireland and Scotland, but to the north and west it remained cloudiest, the cloud thickening later as further rain arrived in the Western Isles.</p>
1800 GMT 03 AUGUST 2006	SIG WEATHER	0000 GMT 04 AUGUST 2006	SIG WEATHER	<p>EXTREMES</p> <p>Highest Maximum: 25.8 Great Malvern, Hereford & Worcester</p> <p>Lowest Maximum: 14.2 Lerwick, Shetland</p> <p>Lowest Minimum: 4.9 Tulloch Bridge, Inverness-Shire</p> <p>Lowest Grass Minimum: 0.1 Strathallan Airfield, Perthshire (In Tayside)</p> <p>Most Rain: 3.0 South Uist, Western Isles</p> <p>Most Sun: 12.5 Saughall, Ayrshire</p>

SURFACE REPORTS

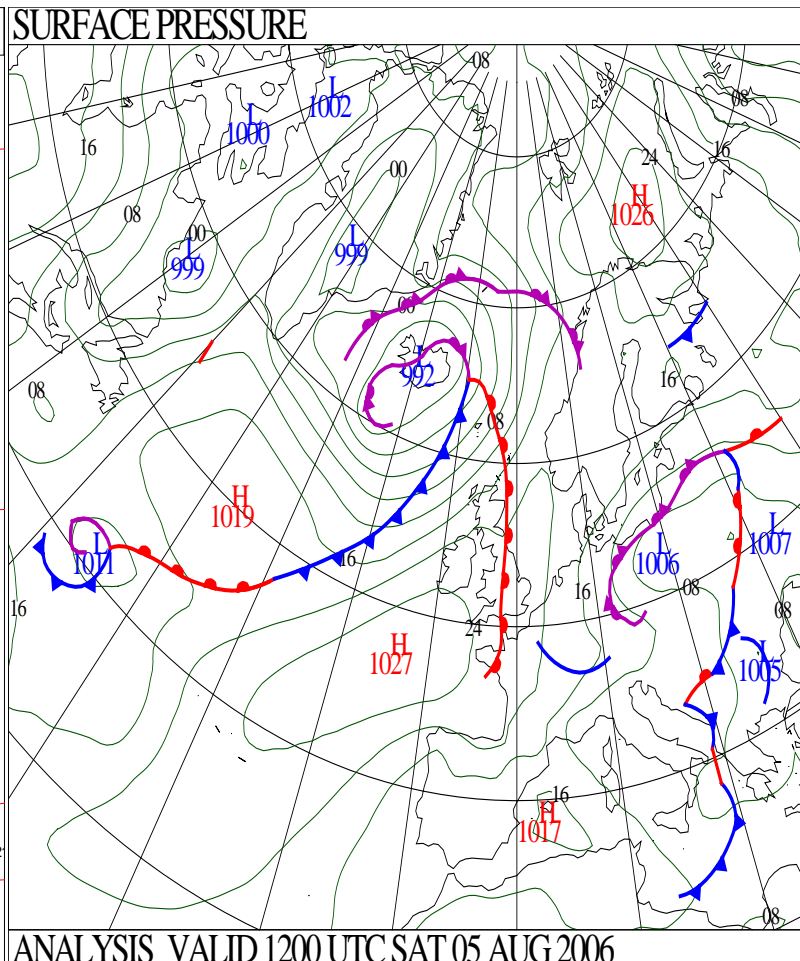

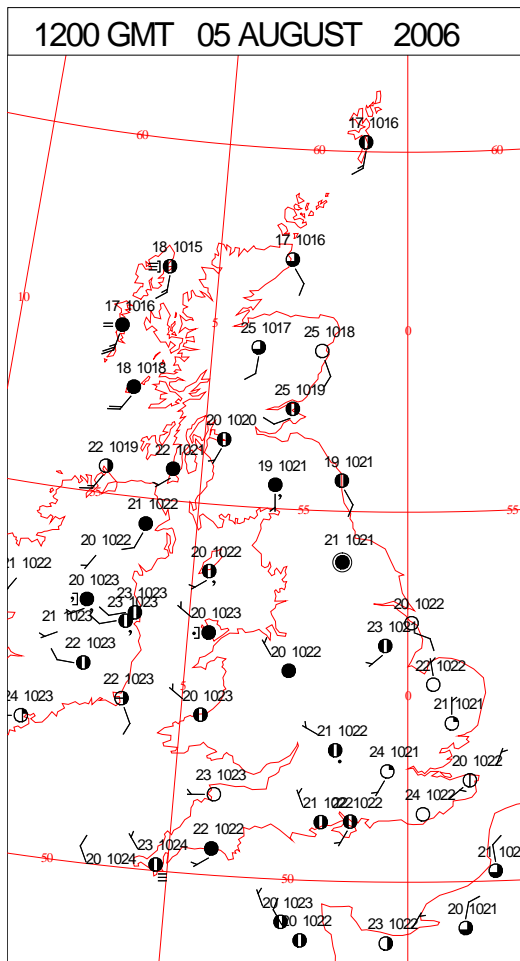

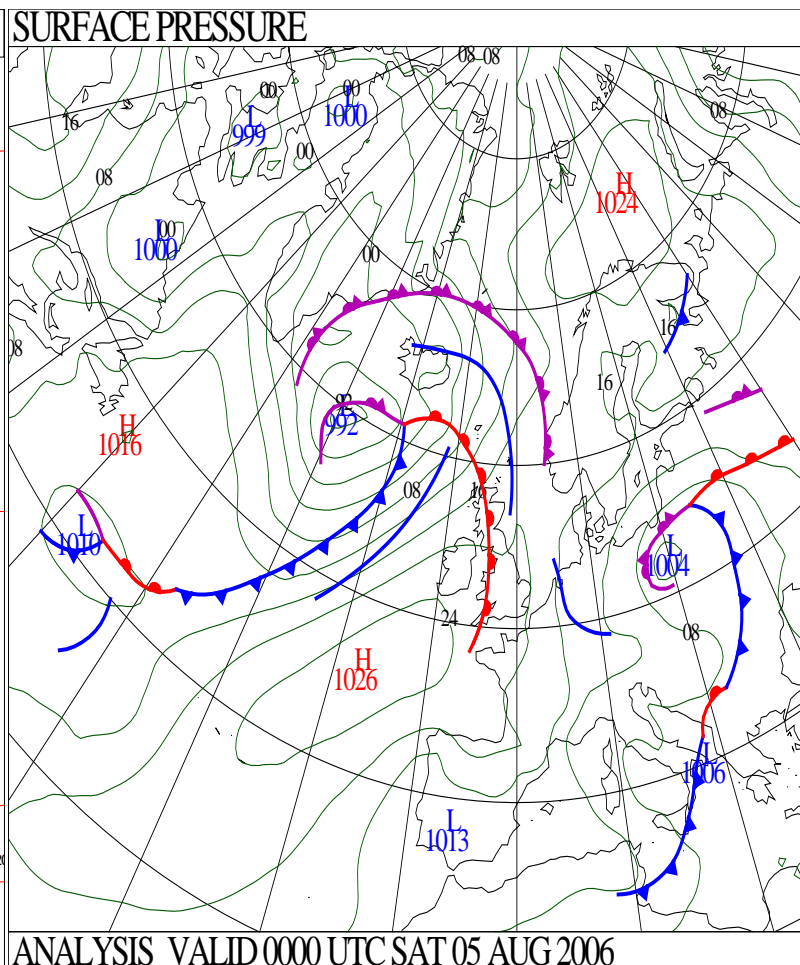

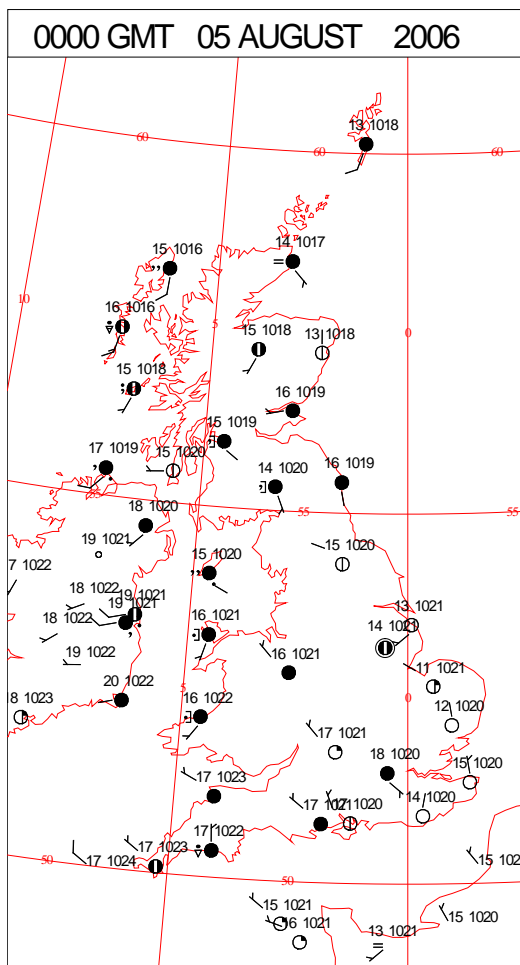

SIGNIFICANT WEATHER

0600 GMT 04 AUGUST 2006	SIG WEATHER	1200 GMT 04 AUGUST 2006	SIG WEATHER	<p>Summary of UK Weather for Friday 04 August 2006.</p> <p>Overnight there were outbreaks of rain across western Scotland and these moved south across Northern Ireland, northwest England, north and east Wales, and parts of southern England by the morning. Elsewhere the weather was mainly dry with a few clear spells.</p> <p>During the morning rain continued to extend south across Northern Ireland, parts of northwest England and Wales and some southwestern counties of England. Isolated light showers cropped up across parts of eastern England, and the Western Isles of Scotland had drizzle, low cloud and patchy fog. Elsewhere there was a good deal of dry weather with sunny spells, the best of these in Cornwall. In the afternoon, rain across parts of Wales drifted over central southern England, clearing the Isle of Wight by mid-afternoon. There was locally heavy rain across parts of Northern Ireland and this drifted southeast reaching northwest Wales by the evening. Elsewhere, the mainly dry conditions persisted with bright or sunny spells, but mist, fog and drizzle continued to plague the Western Isles.</p> <p>Temperatures were generally within a category on either side of normal.</p>
1800 GMT 04 AUGUST 2006	SIG WEATHER	0000 GMT 05 AUGUST 2006	SIG WEATHER	<p>EXTREMES</p> <p>Highest Maximum: 24.8 Thorney Island, West Sussex</p> <p>Lowest Maximum: 15.5 Fair Isle, Shetland</p> <p>Lowest Minimum: 9.0 South Farnborough, Hampshire</p> <p>Lowest Grass Minimum: 4.8 South Farnborough, Hampshire</p> <p>Most Rain: 7.8 Aldergrove, Antrim</p> <p>Most Sun: 10.9 Camborne, Cornwall</p>

SURFACE REPORTS

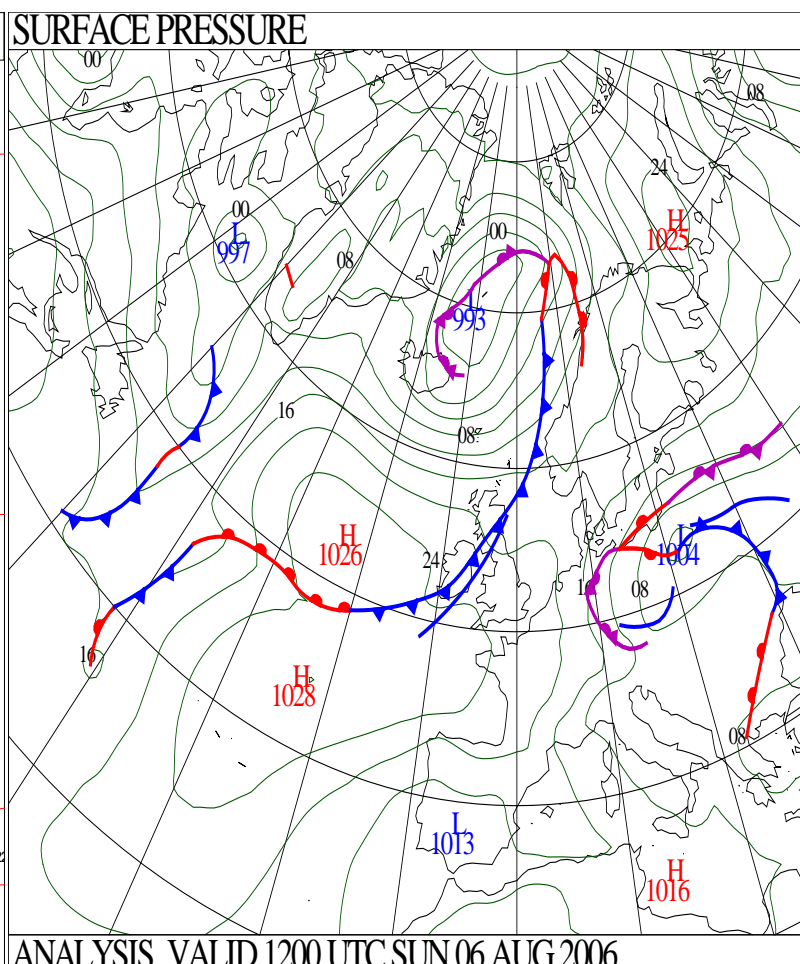

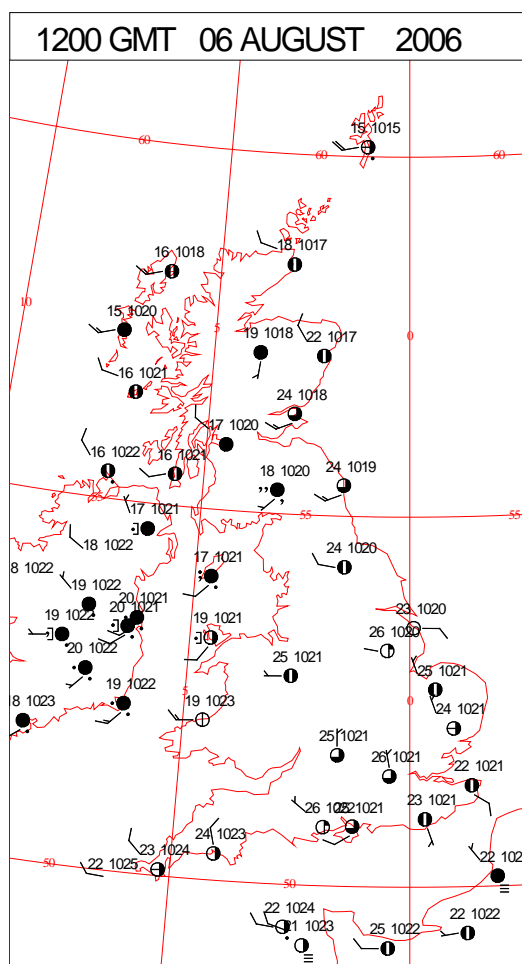

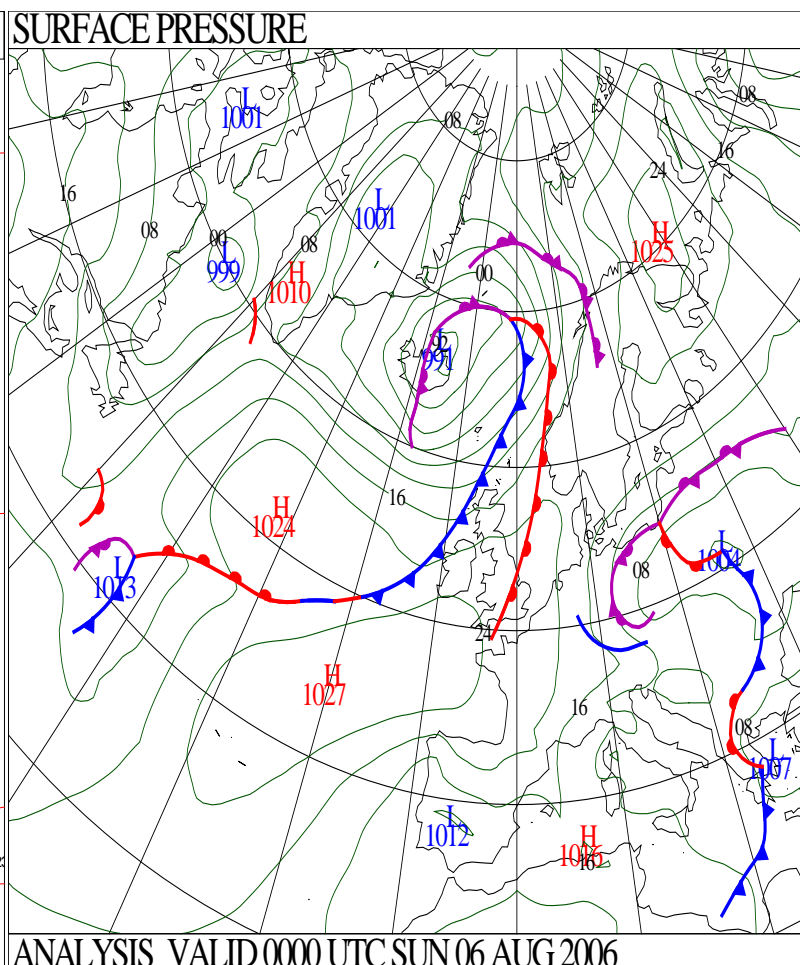

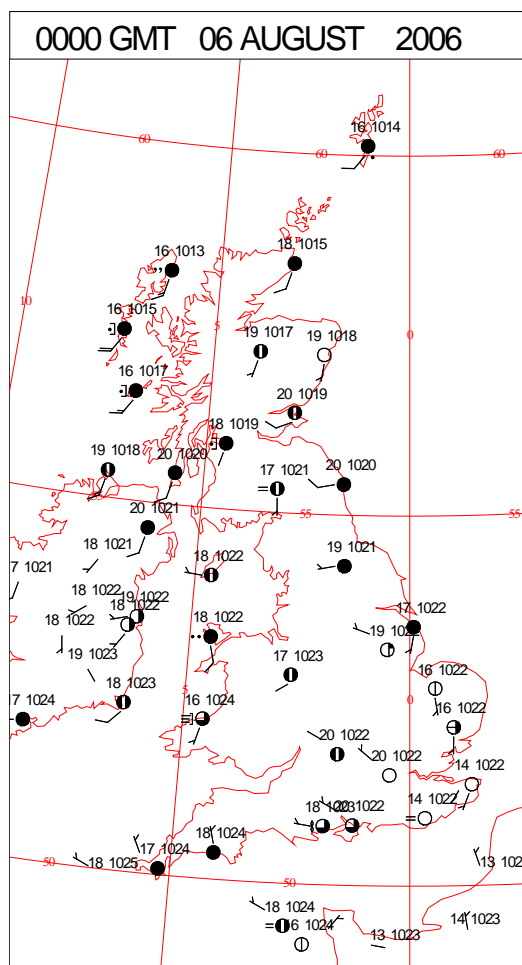

SIGNIFICANT WEATHER

0600 GMT 05 AUGUST 2006	SIG WEATHER	1200 GMT 05 AUGUST 2006	SIG WEATHER	<p>Summary of UK Weather for Saturday 05 August 2006.</p> <p>Overnight the west of the UK was rather cloudy with mainly light rain and drizzle and some mist and fog, especially near windward coasts and hills. The east was drier, and clear spells over eastern England allowed mist and fog patches to form there.</p> <p>During the morning the mist and fog patches in the east dispersed quickly, and much of central and eastern England was dry and fairly sunny. Elsewhere the weather was generally more cloudy and there were further outbreaks of rain and drizzle in the west. During the afternoon there was more dry and sunny weather in East Anglia and southeast England and little change elsewhere, except across the far northwest of Scotland where strengthening winds brought thickening cloud and rain to the Outer Hebrides. These continued to move southeast across northwest Highland during the evening.</p> <p>Temperatures were mostly in the normal or warm category, but it was very hot in some sunnier parts of eastern Scotland.</p>
1800 GMT 05 AUGUST 2006	SIG WEATHER	0000 GMT 06 AUGUST 2006	SIG WEATHER	<p>EXTREMES</p> <p>Highest Maximum: 28.2 Aboyne No 2, Aberdeenshire</p> <p>Lowest Maximum: 16.4 Fair Isle, Shetland</p> <p>Lowest Minimum: 9.2 Shoeburyness, Essex</p> <p>Lowest Grass Minimum: 5.0 Marham, Norfolk</p> <p>Most Rain: 9.0 Tiree, Argyll (In Strathclyde)</p> <p>Most Sun: 7.0 Waddington, Lincolnshire</p>

SURFACE REPORTS

SIGNIFICANT WEATHER

0600 GMT 06 AUGUST 2006	SIG WEATHER	1200 GMT 06 AUGUST 2006	SIG WEATHER	<p>Summary of UK Weather for Sunday 06 August 2006.</p> <p>Rain across northern and western Scotland slowly spread to the rest of Scotland and Northern Ireland overnight. Western parts of England and Wales were cloudy overnight with some drizzle in places and fog affecting coastal areas. Fog patches also developed over East Sussex and Kent.</p> <p>The rain continued southeastwards during the morning into northern parts of England, but its southward progress became very slow. By afternoon, north Wales saw outbreaks of mainly light rain, but during the latter part of the afternoon some heavier bursts developed on a line from Liverpool to Newcastle. Drier and brighter conditions spread into Northern Ireland and western Scotland during the afternoon. For southern England the day was dry and very warm with some good sunny spells.</p> <p>Through the evening the rain slowly crept into the north Midlands and Lincolnshire, with scattered showers arriving across western coastal areas of Scotland.</p> <p>Temperatures over western Scotland and Northern Ireland were around normal but it was warm over southwest England and west Wales. Elsewhere across the UK it was very warm or locally hot.</p>

SURFACE REPORTS

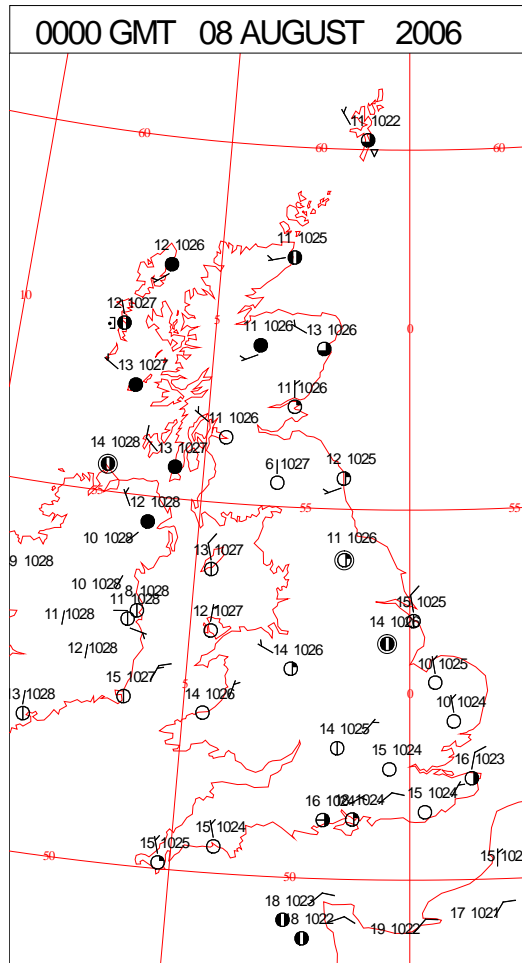

SIGNIFICANT WEATHER

0600 GMT 07 AUGUST 2006	SIG WEATHER	1200 GMT 07 AUGUST 2006	SIG WEATHER	<p>Summary of UK Weather for Monday 07 August 2006.</p> <p>Rain affected East Anglia and southeast England overnight, heavy in places, and outbreaks of rain or drizzle occurred over Wales and southwest England. Scattered showers ran in across The Hebrides and northwest Scotland. Low cloud caused fog over the North York Moors and across Dartmoor and Exmoor. The rain eased away from East Anglia during the morning but continued across Kent and East Sussex, heavy in places. It turned more showery in nature towards midday, and thunderstorms broke out over East Sussex and southwest Kent (a torrential downpour in a thunderstorm caused flooding in Eastbourne town centre). The showers across southern England became lighter and well scattered during the afternoon before dying away by evening. Many western areas of England and Wales and some eastern areas of Scotland had good spells of sunshine during the day, but scattered showers continued to affect the far northwest of Scotland.</p> <p>Most places were dry during the evening with clearing skies, but Northern Ireland and western Scotland remained on the cloudy side.</p> <p>Temperatures were generally around average, but parts of the south coast of England and through the Severn Valley were warm.</p>

SURFACE REPORTS

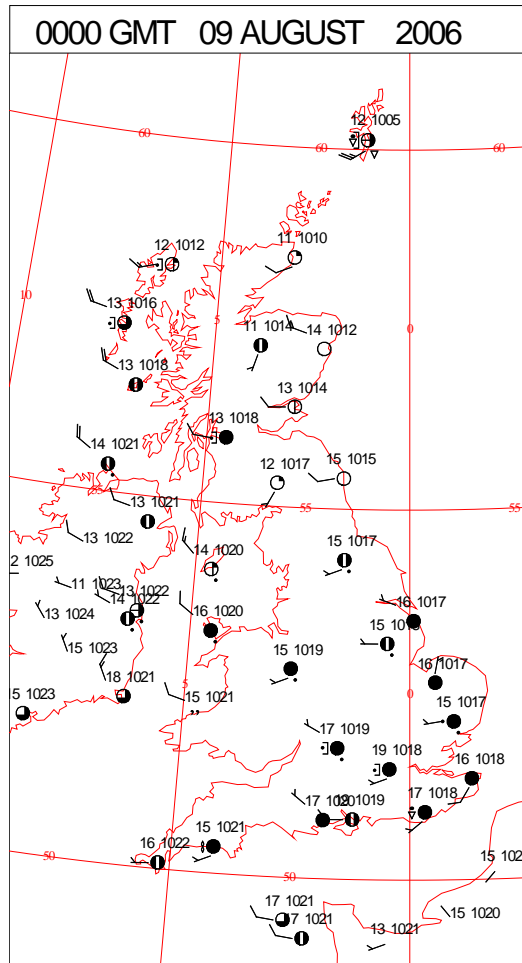

SIGNIFICANT WEATHER

0600 GMT 09 AUGUST 2006	SIG WEATHER	1200 GMT 09 AUGUST 2006	SIG WEATHER	<p>Summary of UK Weather for Wednesday 09 August 2006.</p> <p>Showers and strong winds affected the north of Scotland with gales across the Northern Isles but for the rest of Scotland, Northern Ireland and northern England, it was a largely dry night with variable cloud and clear spells. Across Wales and the rest of England it was initially rather cloudy with outbreaks of rain and drizzle. However, the rain and drizzle became confined to southern counties and the cloud broke across Wales, the Midland and north of East Anglia. During the morning the cloud and lingering rain cleared southeast leaving much of England and Wales fine with sunny periods. However, a few isolated showers filtered across northern parts. Showers also affected Scotland, with the Northern Isles and northwest bearing the brunt of at times frequent showers. However, strong winds carried some showers further south and east across Scotland with a few also filtering across Northern Ireland.</p> <p>Showers continued to plague the northwest during the evening, but it was largely dry elsewhere with clear spells.</p> <p>Temperatures were generally close to normal but it was rather cool across Northern Ireland and locally rather warm across southern England.</p>

SIGNIFICANT WEATHER

0600 GMT 10 AUGUST 2006	SIG WEATHER	1200 GMT 10 AUGUST 2006	SIG WEATHER	<p>Summary of UK Weather for Thursday 10 August 2006.</p> <p>It was a mostly cloudy, showery and breezy night across central and northern Scotland and across Northern Ireland. There were also scattered showers across Wales, northwest England and the Midlands. The rest of the UK had a dry night and there were clear spells especially for eastern England, East Anglia and the Southeast.</p> <p>The showery conditions across the UK continued during the day. The heaviest, occasionally thundery and most frequent showers fell over northeast Scotland and then during the evening across northeast England, Lincolnshire and Norfolk. There were showers too for Northern Ireland, central and northern Scotland, Wales, the Midlands and central southern and southeast England. All parts saw some sunshine too. There were some lengthy spells of sunshine across southeast Scotland and down the eastern side of England during the first half of the morning before cloud bubbled up, but the best of the sunshine was reserved for the Channel Islands.</p> <p>Daytime maximum temperatures were mostly around or a little below normal for the time of year.</p>

SIGNIFICANT WEATHER

0600 GMT 11 AUGUST 2006	SIG WEATHER	1200 GMT 11 AUGUST 2006	SIG WEATHER	<p>Summary of UK Weather for Friday 11 August 2006.</p> <p>A showery northwesterly flow covered the UK during Friday. Overnight there was a good deal of cloud and showers affected northeast Scotland, eastern England and East Anglia. A second stream of showers or patchy rain crossed Northern Ireland, Wales and southwest England but the rest of the UK remained mostly dry. Some clear spells occurred, particularly through central areas stretching from southwest Scotland through northwest England, the Midlands and into southeast England.</p> <p>During the day showers continued across the eastern side of the country with Yorkshire, Lincolnshire and East Anglia bearing the brunt of them. Some of the showers were heavy and merged into longer spells of rain. There were showers in other parts too, particularly across Northern Ireland, Wales and southwest England and these areas saw generally cloudy skies. Most places, though, did see at least a little sunshine with favoured locations being the West Midlands and central southern England.</p> <p>Daytime maximum temperatures were generally a little below normal but just above normal across parts of east and southeast Scotland.</p>

SIGNIFICANT WEATHER

0600 GMT 12 AUGUST 2006	SIG WEATHER	1200 GMT 12 AUGUST 2006	SIG WEATHER	<p>Summary of UK Weather for Saturday 12 August 2006.</p> <p>Northern Ireland and Scotland had a rather cloudy night with a few showers. Southwest England had a few showers early in the night and most of England and Wales had cloudy skies. There were outbreaks of rain in the east mainly from Yorkshire to London and Kent, with some heavier bursts around The Wash and in Norfolk.</p> <p>Northern Ireland had a rather cloudy day with scattered showers. It was cloudy over much of Scotland but largely dry. Some southern and western parts had some sunshine.</p> <p>There was also plenty of cloud over England and Wales but there were sunny periods in southern counties west of Hampshire, parts of Wales, northwest England and into the Midlands. Eastern areas chiefly from Lincolnshire to Kent had further outbreaks of rain with strong to gale-force winds along the coast. There were some heavy pulses of rain especially across parts of Kent in the afternoon and thunder on Romney Marsh. In the evening a heavier band of rain developed on the eastern Pennines with more widespread rain over East Anglia.</p> <p>Temperatures were mostly near average. It was cool or rather cool in Northern Ireland and southeast England.</p>

SIGNIFICANT WEATHER

0600 GMT 15 AUGUST 2006	SIG WEATHER	1200 GMT 15 AUGUST 2006	SIG WEATHER	<p>Summary of UK Weather for Tuesday 15 August 2006.</p> <p>For much of the UK it was a cloudy but largely dry night, with just a few pockets of drizzle, more especially over exposed hills and coasts to the north and west. Across central southern England running east and north towards Kent and up into East Anglia, there were a few clear spells, but these encouraged some mist to form. During the day an area of low pressure, winding up to the west of the UK, drove an associated band of rain slowly east across Northern Ireland and then into other western areas running down through western Scotland to Pembrokeshire, before ultimately swinging into Cornwall towards evening. This gave a fairly wet day across Northern Ireland and parts of western England and Wales, with the rain heavy at times, but especially later in the evening across Cornwall and the Isles of Scilly. Across remaining areas, although there were a few showers, many parts escaped dry with variable often large amounts of cloud. The best of any sunshine was to be found down towards southeast England and across the Channel Islands. Highs ranged from cool in the wetter areas, to near average.</p>

SURFACE REPORTS

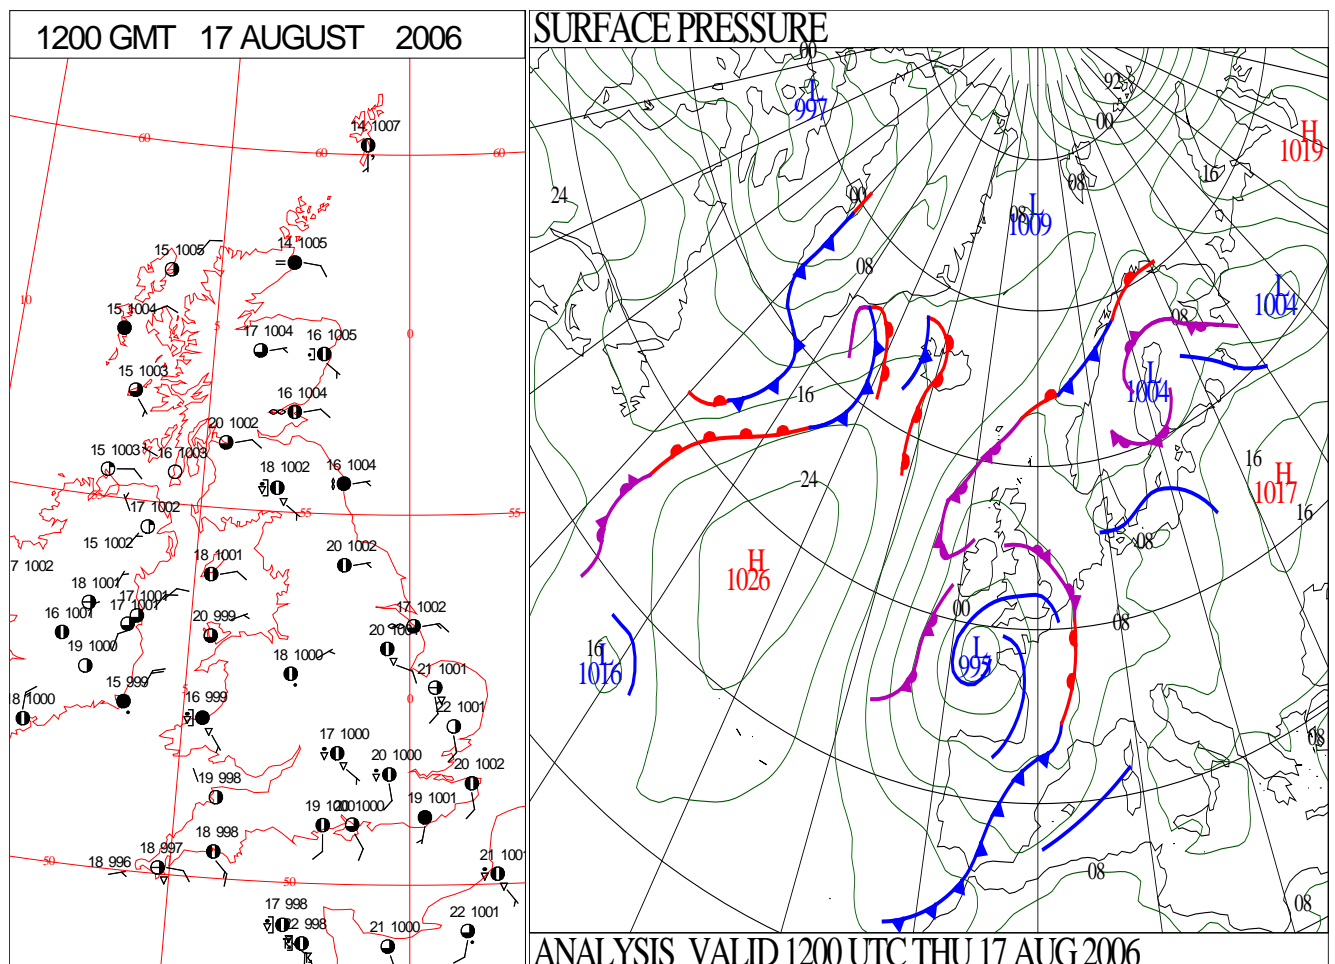

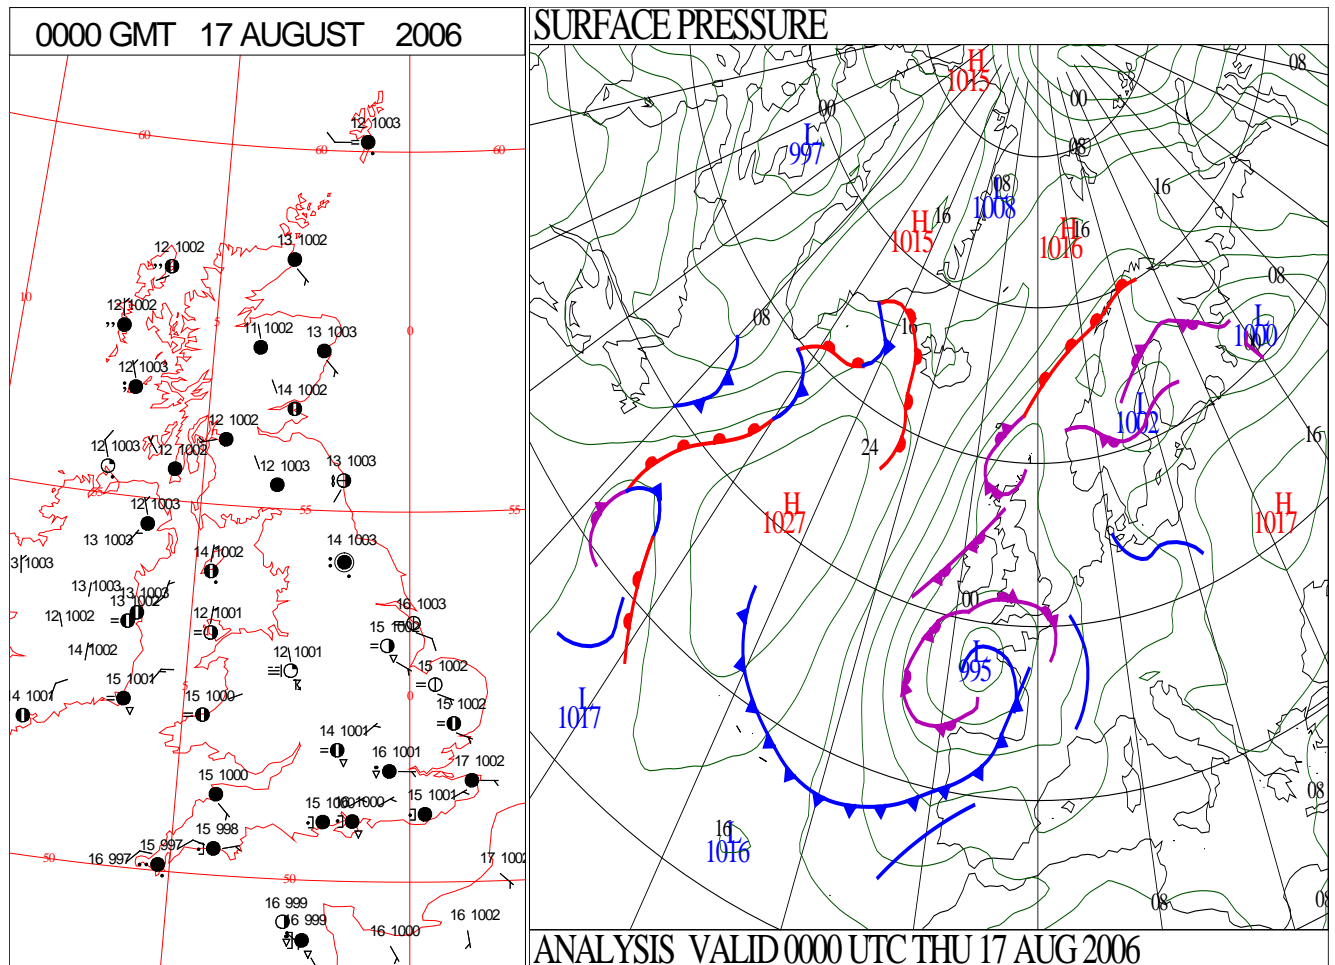

SIGNIFICANT WEATHER

0600 GMT 16 AUGUST 2006	SIG WEATHER	1200 GMT 16 AUGUST 2006	SIG WEATHER	<p>Summary of UK Weather for Wednesday 16 August 2006.</p> <p>There were a few clear spells overnight, mainly across southeastern parts of England, but for many parts it was a cloudy night. Cloud was especially low across Northern Scotland and initially Northern Ireland, giving quite murky and drizzly conditions in places. Low pressure across the Southwest Approaches maintained some showery outbreaks of rain over southwest England, especially heavy at times over Cornwall, with just one or two stray showers running over the West Country and Wales. During the day, low cloud and outbreaks of mainly light rain and drizzle pushed southwards across Scotland, slowly improving into the afternoon. Southern Scotland stayed largely dry though, with any brighter weather here, and with a mainly dry and bright day for Northern Ireland too, with just odd showers here. Most of the shower activity was to be found across England and Wales, though with heavy thundery showers rotating over southwest England and into Wales, whilst further east and north, further thundery showers developed in situ. In between, there were some spells of sunshine. Highs ranged from near average to locally warm in the south.</p>

SIGNIFICANT WEATHER

0600 GMT 17 AUGUST 2006	SIG WEATHER	1200 GMT 17 AUGUST 2006	SIG WEATHER	<p>Summary of UK Weather for Thursday 17 August 2006.</p> <p>During the night, bands of showery rain pushed northwards across central and southern England and East Anglia. The rain was heavy in places and there was the odd rumble of thunder. Showers also occurred across other parts of the UK, particularly across the Western Isles, but there were dry and clearer conditions too. It became misty in many areas and fog patches developed quite widely across northern England.</p> <p>During the morning, an organised band of thundery showers covered central southern and southwest England and these gradually transferred northwards to be located in an east–west line from Lincolnshire to north Wales by mid-afternoon.</p> <p>Severe thunderstorms developed along this band; there were torrential downpours, and a tornado was reported near Leamington Spa in Warwickshire with another one to the northwest of Market Deeping in Lincolnshire.</p> <p>Sunny spells developed across southern England and the Midlands during the afternoon, but further thunderstorms then developed, particularly over southwest England. Across Scotland and Northern Ireland there were spells of sunshine but also some heavy and thundery showers, especially for southwest Scotland.</p> <p>Temperatures were mostly around normal but locally warm where there was any prolonged sunshine.</p>

SIGNIFICANT WEATHER

0600 GMT 18 AUGUST 2006	SIG WEATHER	1200 GMT 18 AUGUST 2006	SIG WEATHER	<p>Summary of UK Weather for Friday 18 August 2006.</p> <p>It was a mostly cloudy and misty night. An area of thundery rain affecting southern coastal counties drifted northwestwards and produced some torrential downpours. In just two hours, almost one inch of rain fell at both Yeovilton in Somerset and at Church Fenton in North Yorkshire. Northwest England, north Wales and the far north of Scotland were mostly dry but a second area of thundery rain fell across central and southern Scotland, and also across Northern Ireland.</p> <p>The disturbed weather continued through the day. Widespread, heavy and thundery showers affected central and southern England and south Wales. Northern England and north Wales saw prolonged thundery rain and these wet conditions spilled into southern Scotland and Northern Ireland during the afternoon and across other parts of Scotland through the evening.</p> <p>Again some torrential downpours occurred and one inch of rain fell in just one hour in Prestwick in South Ayrshire. Most parts saw at least a little sunshine but the best of the sunshine was reserved for the far southeast of England and East Anglia.</p> <p>Temperatures were mostly around normal but warm across Northern Ireland and locally very warm across northwest Scotland.</p>

SIGNIFICANT WEATHER

0600 GMT 19 AUGUST 2006	SIG WEATHER	1200 GMT 19 AUGUST 2006	SIG WEATHER	<p>Summary of UK Weather for Saturday 19 August 2006. Overnight rain, initially across northern and western Scotland, Northern Ireland, west Wales and northwest England, had moved only slowly by dawn. Showers, locally thundery, affected parts of south Wales and southwest England, and a few had developed across some southern counties of England by morning. Elsewhere the weather was mainly dry with clear intervals and patchy haze/mist. During the morning, outbreaks of occasionally heavy rain continued across northern Scotland, Wales and northwest England, but the rain had become more patchy over Northern Ireland. The showers over southern England continued, and some developed over East Anglia and central Scotland. Mainly dry conditions prevailed elsewhere with bright or sunny spells, the best of these across southern coastal counties of England. In the afternoon heavy showers affected East Anglia and southeast England (locally thundery), the southern Highlands and southern parts of Northern Ireland. Rain in northern Scotland became patchy but the rain over Wales edged east reaching the Midlands by dusk and eastern counties of England by midnight. Temperatures were generally in the normal or warm category.</p>

SIGNIFICANT WEATHER

0600 GMT 22 AUGUST 2006	SIG WEATHER	1200 GMT 22 AUGUST 2006	SIG WEATHER	<p>Summary of UK Weather for Tuesday 22 August 2006. Scattered light showers affected coastal parts of Scotland and northeast England overnight with outbreaks of rain spreading into the Outer Hebrides, western parts of Northern Ireland and Cornwall during the early hours of the morning. Patchy fog developed over parts of eastern England and Scotland. During the morning patchy light rain continued over Northern Ireland and Cornwall with scattered light showers over eastern Scotland. Through the afternoon more persistent rain spread across Northern Ireland and into western Scotland, with patchy light rain over south Wales and southwest England. East Anglia, the Midlands and southeast England had a dry and bright day with the best of the sunshine, upwards of 10 hours recorded in places along the south coast as far west as Weymouth. The rain spread northeast during the evening into central and northern parts of Scotland but left outbreaks of light rain over Northern Ireland, Wales and the western counties of England. Temperatures across the whole of the UK were around normal.</p>

SIGNIFICANT WEATHER

0600 GMT 23 AUGUST 2006	SIG WEATHER	1200 GMT 23 AUGUST 2006	SIG WEATHER	<p>Summary of UK Weather for Wednesday 23 August 2006.</p> <p>There were clear spells across central and eastern England overnight. Elsewhere it was cloudy. Light rain affected Northern Ireland at first, and further locally heavier rain spread across Scotland, and many northern and western parts of England and Wales during the night.</p> <p>Persistent rain cleared from northeast Scotland during the morning, to leave a day of sunshine and showers across Scotland and Northern Ireland. Those showers became heavy and thundery across northeast Scotland later, giving almost one inch of rain in one hour in places. There was some bright weather across southeast England in the morning, but the rest of England and Wales held onto cloudy and wet conditions. The rain turned increasingly heavy and thundery here as the day unfolded, giving some flooding problems. Rain extended into southeast England during the afternoon.</p> <p>The wet weather gradually eased across many northern and western areas during the evening, leaving clear spells, but central, southern and eastern England continued to see torrential thundery downpours. Hail and gusty winds accompanied the heaviest rain, which totalled 1–2 inches locally. Temperatures were mostly normal, but locally warm.</p>

SIGNIFICANT WEATHER

0600 GMT 24 AUGUST 2006	SIG WEATHER	1200 GMT 24 AUGUST 2006	SIG WEATHER	<p>Summary of UK Weather for Thursday 24 August 2006.</p> <p>A wet night over much of southeast England and East Anglia with showery (locally thundery) bursts of rain through the night, but the rainfall totals varied a lot from place to place, often over short distances. This showery weather lasted for much of the day in Essex and Kent, giving further bursts of heavy rain in places. Bognor Regis was the wettest place with 47.3 mm in the 24 hours to 1700 UTC. Central London had 9.4 mm overnight. The Midlands, northern and northeast England, and eastern Scotland also had the remnants of rainfall in the early hours but this tended to peter out around dawn, although further bursts of rain affected the far northeast of Scotland at times through the day. Some spells of sunshine developed in these areas during the day. Elsewhere over the UK, and especially in the northwest, there were long spells of sunshine after a fairly clear night, and it was generally dry apart from northwestern Scotland where there were some showers. The Isle of Man had 12.4 hours of sun. Temperatures were somewhat depressed down the eastern side of the UK but otherwise most places reached the seasonal normal. Warmest was Lee-on-Solent with 23.0 °C.</p>

SIGNIFICANT WEATHER

0600 GMT 25 AUGUST 2006	SIG WEATHER	1200 GMT 25 AUGUST 2006	SIG WEATHER	<p>Summary of UK Weather for Friday 25 August 2006.</p> <p>A dry start over most of the UK with clear spells in most areas. It became quite chilly in many places and parts of the Highland and southwestern Scotland fell to 3 °C, and even Bournemouth had a minimum of 4.6 °C. So a sunny start for many, but cloud reached many western areas around dawn, giving some outbreaks of rain over Northern Ireland. This cloud and rain pushed very slowly eastwards to bring some rain to much of western and northern UK during the day, although most of Scotland and also southeast England stayed dry until evening. Through this period Northern Ireland, Wales, and western England were cloudy with outbreaks of rain, this fairly persistent over Northern Ireland where Lough Fea was both the wettest and coldest place in the UK, having 10.6 mm of rain with a maximum of just 14.2 °C. By late evening most of the UK was cloudy, but rain was mostly over Wales eastwards to East Anglia and the southeast. Best of the sunshine was in southern coastal counties with Bournemouth having 12.5 hours of sun in the 24 hours to 1700 UTC. Temperatures were generally down on the seasonal normal, and distinctly cool in the rainy western parts. However, the sunnier south had maxima nearer the late August norm and Central London reached 23.7 °C.</p>

SIGNIFICANT WEATHER

0600 GMT 30 AUGUST 2006	SIG WEATHER	1200 GMT 30 AUGUST 2006	SIG WEATHER	<p>Summary of UK Weather for Wednesday 30 August 2006. Most places had a dry night with clear spells, and there was more prolonged clear weather across many southern and eastern areas. However, some light rain affected Northern Ireland, the north and west of Scotland, along with the northwest of England and north Wales. Barring an isolated light shower, the bulk of central, southern and eastern England, along with the east and northeast of Scotland, enjoyed a dry and bright, if not sunny day. Although most other parts of the UK also started on a dry and reasonably bright note, cloud thickened from the west, bringing locally heavy rain to much of Northern Ireland and patchier rain to westernmost parts of Wales by early afternoon. The rain extended into the southwest of Scotland, the west and northwest of England, along with the remainder of Wales by early evening. It brought hill fog and again produced the odd heavy downpour. The east and northeast of Scotland remained largely dry for the rest of the evening, although it became generally cloudy, with some rain elsewhere. The heaviest rain affected southwest Scotland. Temperatures were mostly normal.</p> <p>EXTREMES Highest Maximum: 21.0 Heathrow, Greater London 21.0 Thorney Island, West Sussex Lowest Maximum: 13.3 Fair Isle, Shetland Lowest Minimum: 5.4 Aboyne No 2, Aberdeenshire Lowest Grass Minimum: -1.4 Aboyne No 2, Aberdeenshire Most Rain: 40.6 Capel Curig No 3, Gwynnedd Most Sun: 9.4 Jersey: Airport, Jersey</p>

SIGNIFICANT WEATHER

0600 GMT 31 AUGUST 2006	SIG WEATHER	1200 GMT 31 AUGUST 2006	SIG WEATHER	<p>Summary of UK Weather for Thursday 31 August 2006.</p> <p>A cloudy and rather misty night with outbreaks of rain and drizzle for many parts. Some of the rain was heavy, especially across north Wales and Merseyside.</p> <p>The south of the UK then started off cloudy and grey, with patchy outbreaks of drizzly rain. The rain was more organised and persistent in a line stretching from north Wales to The Wash. Further north there was plenty of dry and bright weather, although a few showers fed into the west of Scotland. Conversely, the east of Scotland enjoyed long sunny spells.</p> <p>Into the afternoon, and the more persistent band of rain continued across central parts of the UK. Some significant rainfall totals were recorded over the northern Welsh hills. To the south the cloud broke, allowing some warm sunshine to develop. North of the cloud and rain, there continued to be some sunshine, although further showers affected western Scotland as well as Northern Ireland.</p> <p>A breezy day in the south with moderate to fresh, locally strong, southwesterly winds. Temperatures were generally warm, and were very warm across many northeastern areas.</p>
