Evaporation Memorandum No.26

Climatological data representative of Kew, Surrey, from 1698 to 1970

B.G.Wales-Smith.

Summary. It was shown in Evaporation Memorandum No.24 that useful approximations to monthly estimates of (Penman) potential evaporation can be obtained, for a given station, from values of monthly average air temperature and from long-average values of monthly wind speed at 2 metres above ground and of daily duration of bright sunshine.

In this memorandum attempts are made (i) to assemble a series of monthly averages of air temperature representative of Kew from 1698 to 1870, (ii) to homogenise wind speed averages obtained at Kew Observatory up to 1930 with the later part of the record (to 1970) and (iii) to obtain, from the homogenised wind speed record, estimates run-of-wind at 2 metres above ground. The data used to produce estimates of potential evaporation at Kew for calendar months from 1698 to 1970 are set out in the Appendices to this memorandum. (Early months are in old-style calendar; September 1752 has only 19 days.)

Much of the content of Memoranda 24 and 26 are combined in a paper by the writer, entitled "Evaporation in the London Area 1698-1970".

(unpublished ms as at 9 Apr 1973)

MONTLY AVERAGE (SCREEN) AIR TEMPERATURE AT KEW OBSERVATORY.

Sources of Data and Estimates.

- 1698 - 1722 Manley's Central England Series adjusted to give estimates for the London Region as shown in Fig.1.
Manley, G. "Temperature trends in England 1698-1957"
Archiv. für Meteorologie, Geophysik und Bioklimatologie
Band 9 Heft 3.4 1959.
- 1723 - 1811 Manley, G. Temperatures for the London Region. (Typescript communicated to the Meteorological Office 1967).
- 1812 - Oct 1822 Greenwich Observatory values adjusted to give estimates for Kew as shown in Fig.2.
Eaton, H.S. "Greenwich Temperatures 1811 - 1856" Royal Met. Soc. ms. (Meteorological Office Library).
- Nov 1822 - 1840 Various sites in the Greenwich area. Values adjusted by subtracting 0.2°C (to "correct" from 25 - 40 ft. asl to observatory height, 155 ft.) then adjusted as shown in Fig.2.
Eaton, H.S. (as above).
- 1841 - 1870 Greenwich Observatory temperatures adjusted as shown in Fig.2.
Brazzell, J.H. "London Weather" Meteorological Office London HMSO 1968.
- 1871 - 1920 "London Weather" Brazzell J.H. Kew Observatory Temperatures.
- 1921 "Meteorological and Magnetic Year Book" Kew temperatures.
- 1922 - 1956 "Observatories Year Books" Kew temperatures.
- 1957 - 1970 "Monthly Weather Reports" Kew temperatures.

The above, from 1698 to 1870, are set out on 20-year sheets. (App.4-)
From 1870 to 1970 the values are given on computer print-out. (App.1)

MONTHLY AVERAGES OF DAILY RUN-OF-WIND AT 20 TO 23 METRES (above ground)
AT KEW OBSERVATORY.

Sources of Data.

1870 - Sep 1876	"Wind Tabulations for Kew 1868-1877" (M.O. Archives).
Oct 1876 - 1900	"Reports of the Kew Observatory Committee of the Royal Society" (Meteorological Office Library).
1901 - 1910	"Reports of the National Physical Laboratory and Observatory Department" (Meteorological Office Library).
1911 - 1921	"British Meteorological and Magnetic Year Books" (Meteorological Office Library).
1922 - 1956	"Observatories Year Books" (Meteorological Office Library).
1957 - 1970	"Monthly Weather Reports" of the Meteorological Office.

Notes:

- (1) Data from 1870 - 1925 are from the Robinson anemometer, variously stated to have been at 70 feet (21.3 m) and 20 m above ground.
- (2) Instrumental readings up to 1905 were multiplied by Dr. Robinson's original factor 3 but, from 1906 onwards, the revised factor 2.2 was used. (See p. 23 of the reports for 1905 and 1906, respectively.) 1870-1905 values have been multiplied by 2.2/3 to remove the inconsistency introduced by the change of factor.
- (3) Data from 1926 - 1970 are from the Dines anemograph with head at 23 m above ground.

The above, from 1870 - 1970, are set out on 20-year sheets. (App. 2)

The overall slope of values in Fig. 3 has been coarsely removed in the manner set out on the sheet dealing with run-of-wind at 2 metres by multiplying all values from 1870 to 1900 by 1.128 and all values from 1901 to 1950 by 1.08. These results are set out on 20-year sheets. (App. 3)

MONTHLY AVERAGES OF RUN-OF-WIND AT 2 METRES ABOVE GROUND AT KEW OBSERVATORY.

Estimates based on the measured values at 20 - 23 metres above ground from 1870 to 1956 are given in the computer print-out.

The annual averages of measured winds are plotted in Fig. 3 from which it may be seen that there has been a sustained increase from the beginning of the record to about 1930.

Decadal averages are as follows:

1871	1881	1891	1901	1911	1921	1931	1941	1951	1961
1880	1890	1900	1910	1920	1930	1940	1950	1960	1970
180	178	180	187	188	188	205	200	202	206 miles/day

From this simple table it is easy to derive factors to remove most of the slope from the graph,

1871 - 1900 multiply by 203/180 or 1.128

1901 - 1930 multiply by 203/188 or 1.080

it being assumed that the increase has been mostly due to greater sensitivity of measuring and recording apparatus over the years.

Thus, starting with the raw, published data the following modifications have been made to produce estimates of 2 metre wind-run (monthly average daily run).

1870 - 1900 Multiply by .733 to change instrument factor
multiply by .54 to adjust values from 21 to 2 metres
multiply by 1.128 to allow for apparent low sensitivity of speed measurements. } 1446

1901 - 1905 Multiply by .733 }
Multiply by .54 } * 1427
multiply by 1.08 }

1906 - 1930 Multiply by .54 } * 583 1931 - 1957 Multiply by .54.
multiply by 1.08 }

The values from 1957 onwards are measured run-of-wind at 2 metres.

These estimates and measurements of 2 m run-of-wind are given on computer print-out. (App. I.)

* See Fig. 4.

MONTHLY AVERAGES OF VAPOUR PRESSURE (in the screen) AT KEW OBSERVATORY.

Sources of data and Estimates.

- 1870 - Sep 1876 Estimated from air temperatures, using Fig.2 of Meteorological Office, Met O 8, Evaporation Memorandum No.24.
- Oct 1876 - 1900 "Reports of the Kew Observatory Committee of the Royal Society" (Meteorological Office Library)
- 1901 - 1910 "Reports of the National Physical Laboratory and Observatory Department" (Meteorological Office Library)
- 1911 - 1921 "British Meteorological and Magnetic Year Books" (Meteorological Office Library)
1911 - 1913 values obtained from average temperature and average relative humidity. 1914 - 1920 values are means of vapour pressures at 09 and 21 hr. GMT. 1921 values were computed from daily mean temperature and daily mean relative humidity.
- 1922 - 1956 "Observatories Year Books" (Meteorological Office Library).
Computed as in 1921.
- 1957 - 1970 "Monthly Weather Reports" of the Meteorological Office.
Averages of values at 09, 15 and 21 hr GMT.

The above values are given in computer print-out. (App. 1)

Pre - 1870 estimates may be obtained by the method of Evap. Memo. No.24
as for 1870 - 76.

MONTHLY AVERAGES OF DAILY DURATION OF BRIGHT SUNSHINE AT KEW OBSERVATORY.

Sources of Data and Estimates.

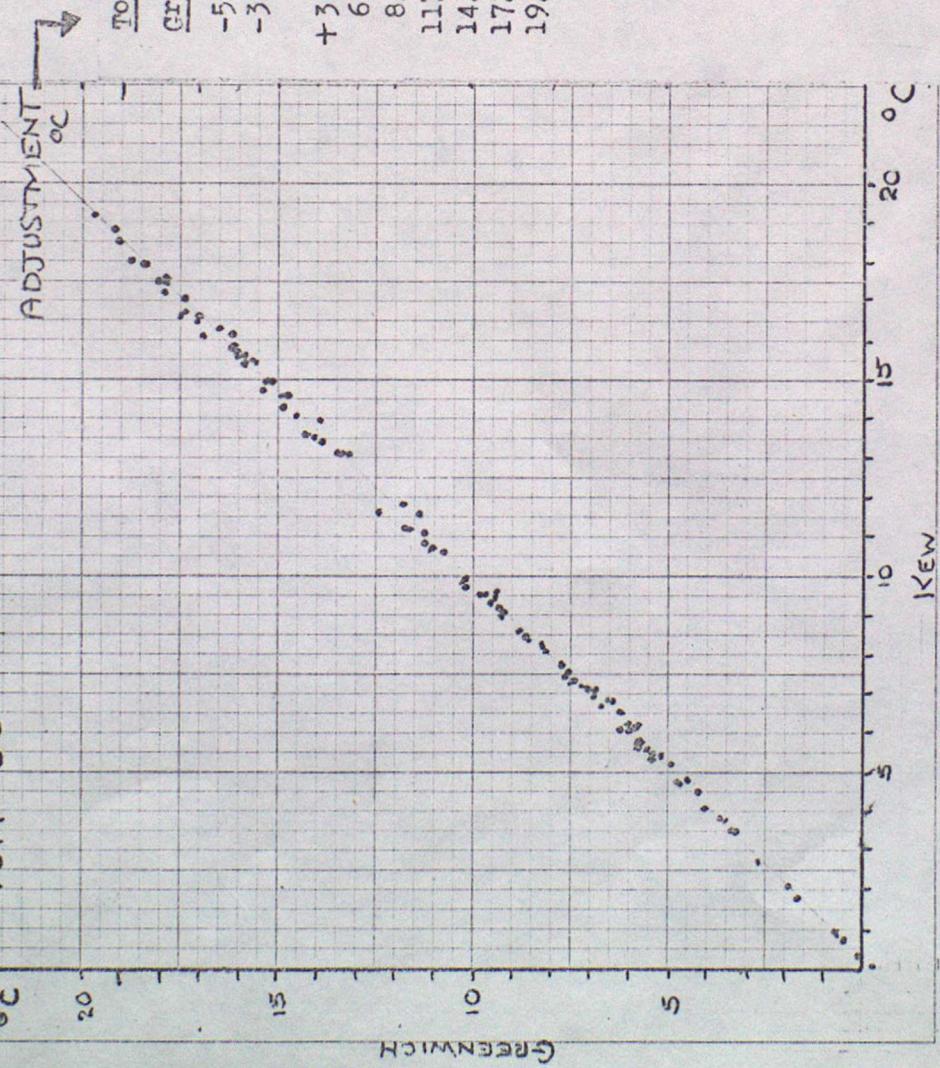

- 1870 - Sep 1876 Estimated as set out in Evaporation Memorandum No.24
(using Fig.1.)
- Oct 1876 - 1880 "Reports of the Kew Observatory Committee of the Royal Society."
- 1881 - 1920 "London Weather" J.H.Brazzell Meteorological Office HMSO
- 1921 "British Meteorological and Magnetic Year Book"
- 1922 - 1956 "Observatories Year Books"
- 1957 - 1970 "Monthly Weather Reports"

The above values are given in computer print-out. (App. I.)

pre - 1870 estimates may be obtained by the method of Evap. Mem. No.24
as fpr 1870-76.
