| 0600 GMT 05 JUNE 2016 SIG WEATHER | 1200 GMT 05 JUNE 2016 SIG WEATHER | <p><b>Summary of UK Weather for Sunday 05 June 2016.</b><br/>                     It was quiet during the early hours across the U.K., with plenty of dry and calm weather around. Low cloud with some mist and fog pushed back into many eastern and central areas, whilst the remnants of a warm front continued to bring thicker cloud across south-west England, Wales and Northern Ireland.</p> <p>There was an east - west split in the temperatures, with many western areas having a mild and muggy night, however further east it was chilly, particularly under clear skies across Scotland.</p> <p>During the morning, cloud across central and eastern areas gradually burnt off, leaving most of the U.K. fine with plenty of sunshine.</p> <p>However, across south-west England cloud continued to persist, before eventually burning off in the afternoon.</p> <p>It became warm for many away from the immediate east coast, particularly given the strong sunshine and light winds.</p> <p>Across western areas the afternoon warmth gave rise to some isolated thundery showers, mainly in north-west England, and parts of western Scotland.</p> <p>Overall, temperatures were well above average, although they stayed closer to the average along North Sea coasts.</p> |

# SIGNIFICANT WEATHER

## Summary of UK Weather for Friday 10 June 2016.

It stayed largely dry but cloudy across central and eastern parts of England, Northern Ireland and Scotland overnight. Meanwhile, rain and low cloud gradually spread into the south-west of the U.K.

A band of showers ahead of the main rain band affected northern England and the central belt of Scotland.

Temperatures stayed in the mid-teens Celsius widely across the country, making for a mild end to the night.

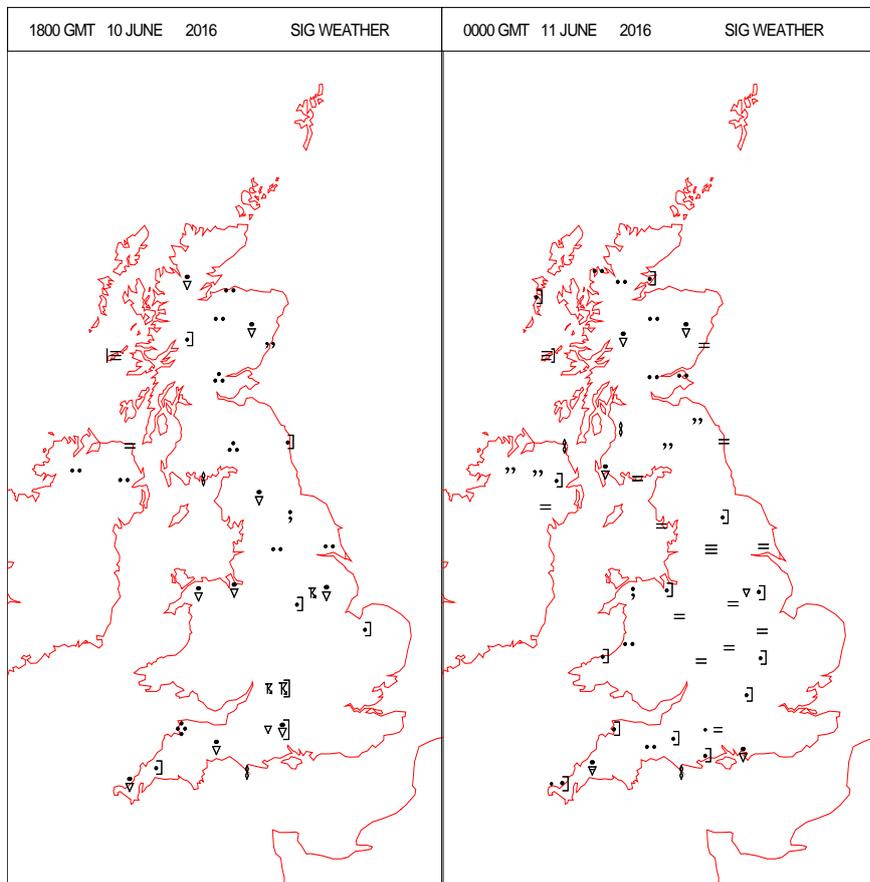

Far eastern parts of the country saw the best of the brightness to start the day.

Through the morning, the band of rain continued to push into the south-west and Northern Ireland, turning heavy in places, and bringing isolated thunderstorms. The showers affecting northern England also turned heavy and thundery, spreading into parts of Wales and the Midlands, by mid afternoon.

Meanwhile, outbreaks of rain continued across north-east England and Scotland, bringing a dull and damp end to the day.

Through the evening the heavy thundery showers eased, leaving a largely cloudy end to the day.

It felt humid, and temperatures were slightly above average for the time of year.

## EXTREMES

### Highest Maximum:

24.6 St. James's Park, Greater London

### Lowest Maximum:

11.3 Fair Isle, Shetland

### Lowest Minimum:

4.6 Loch of Hundland, Orkney

### Lowest Grass Minimum:

1.5 Kirkwall, Orkney

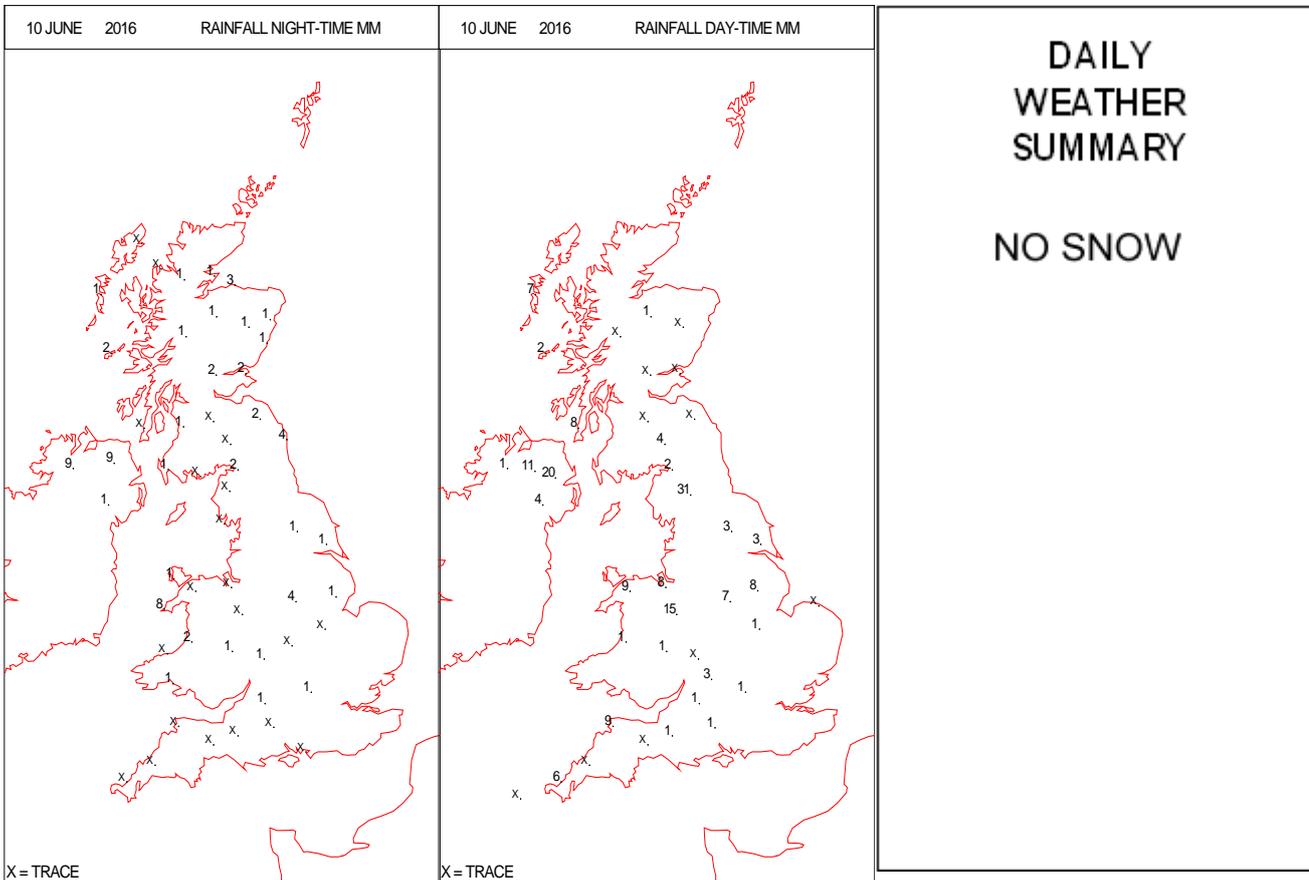

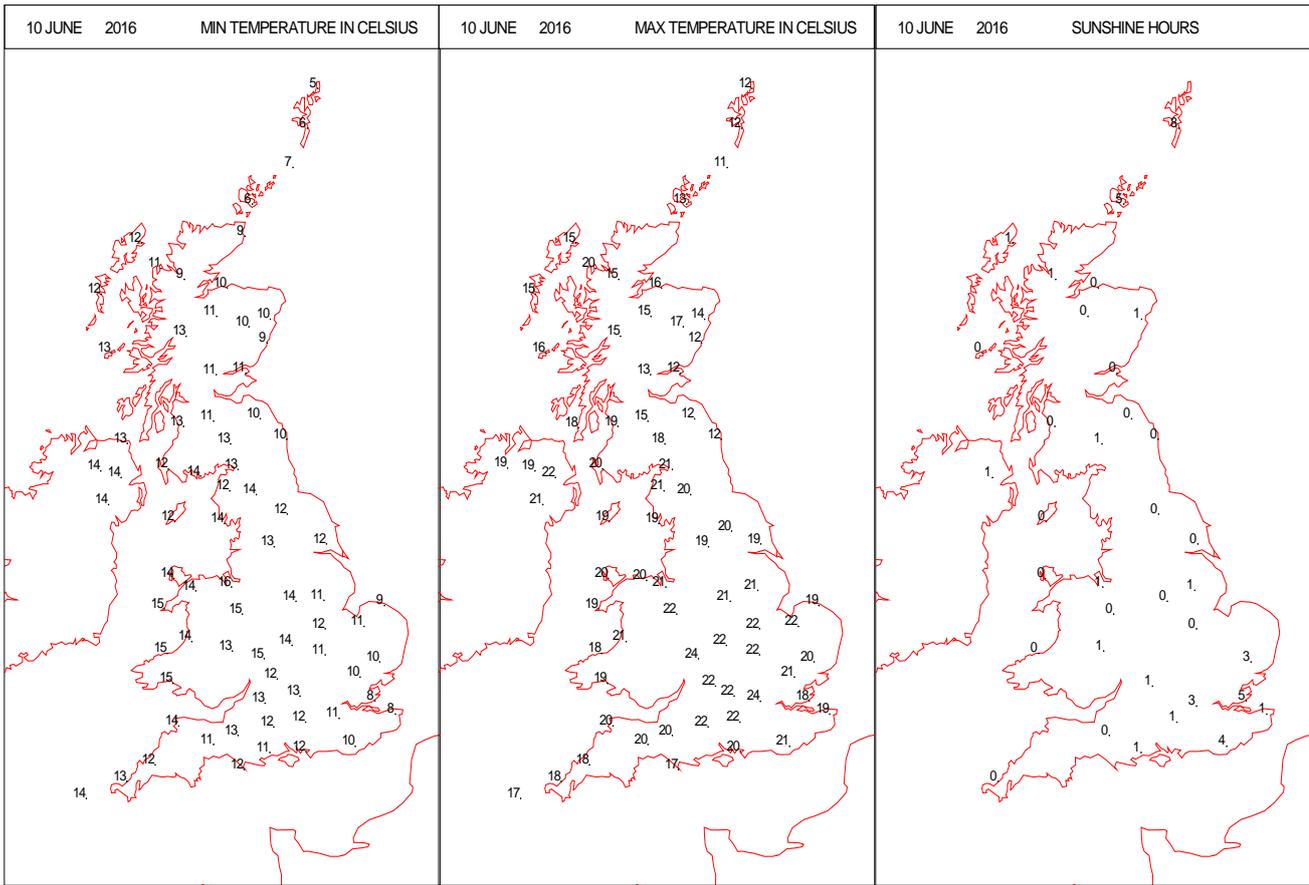

### Most Rain:

31.2 Warcop Range, Cumbria

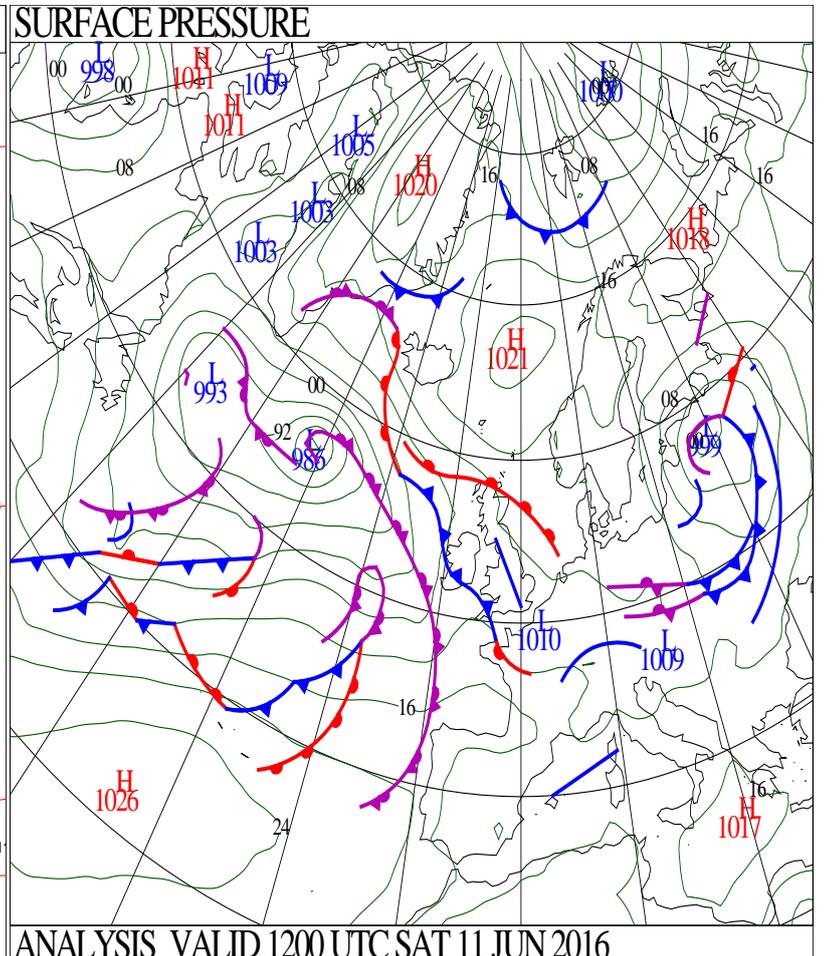

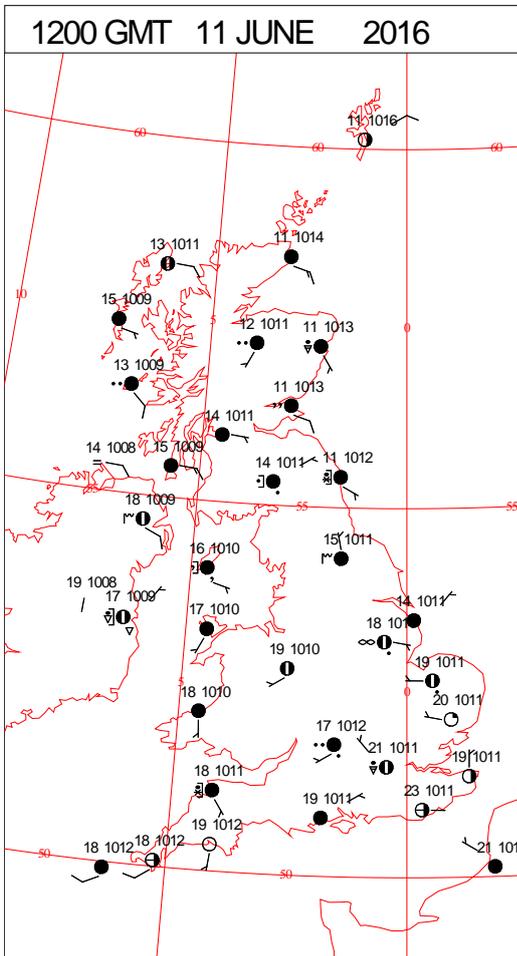

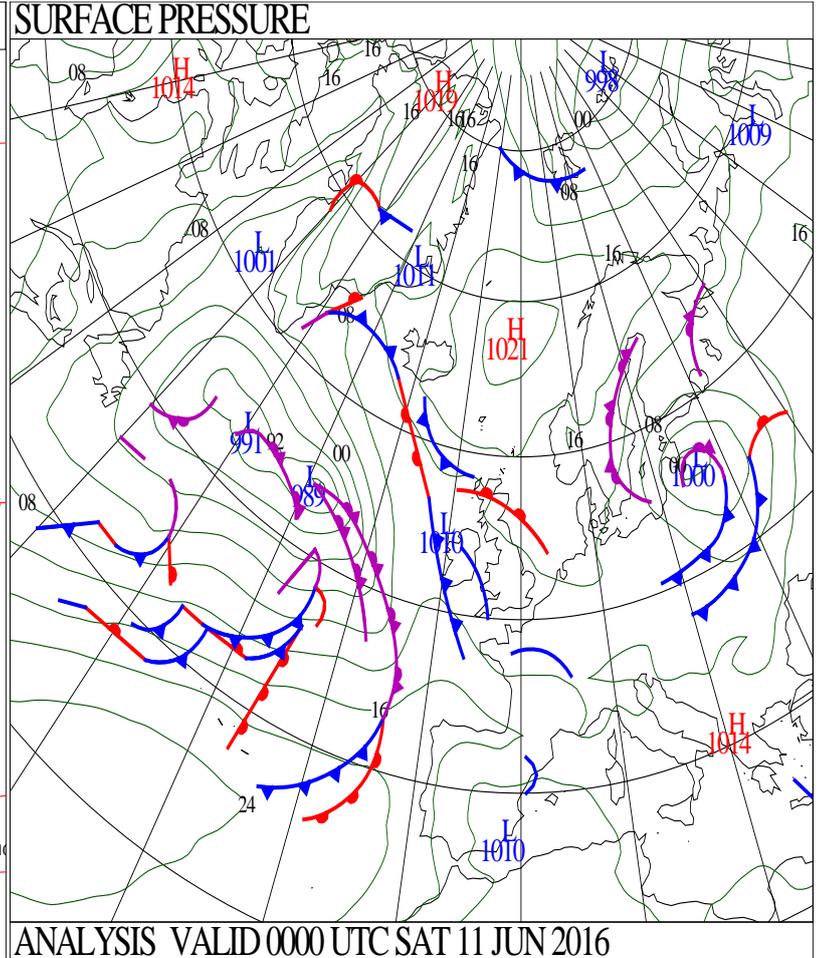

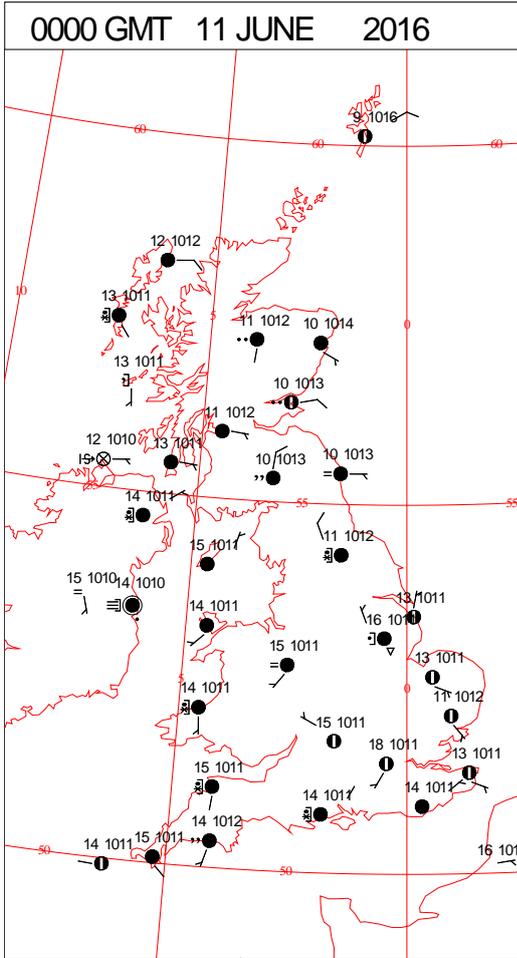

### Most Sun:

11.6 Fair Isle, Shetland

## Summary of UK Weather for Sunday 12 June 2016.

During the early hours of the morning, low cloud, rain and drizzle affected parts of north and east Scotland, as well as along the eastern coast of England. Meanwhile, a band of more organised showery rain pushed into Northern Ireland, Wales and the south-west of England.

In central and southern parts of England it remained mostly dry, with some cloud breaks.

It was another muggy night, with minimum temperatures mostly in double figures Celsius.

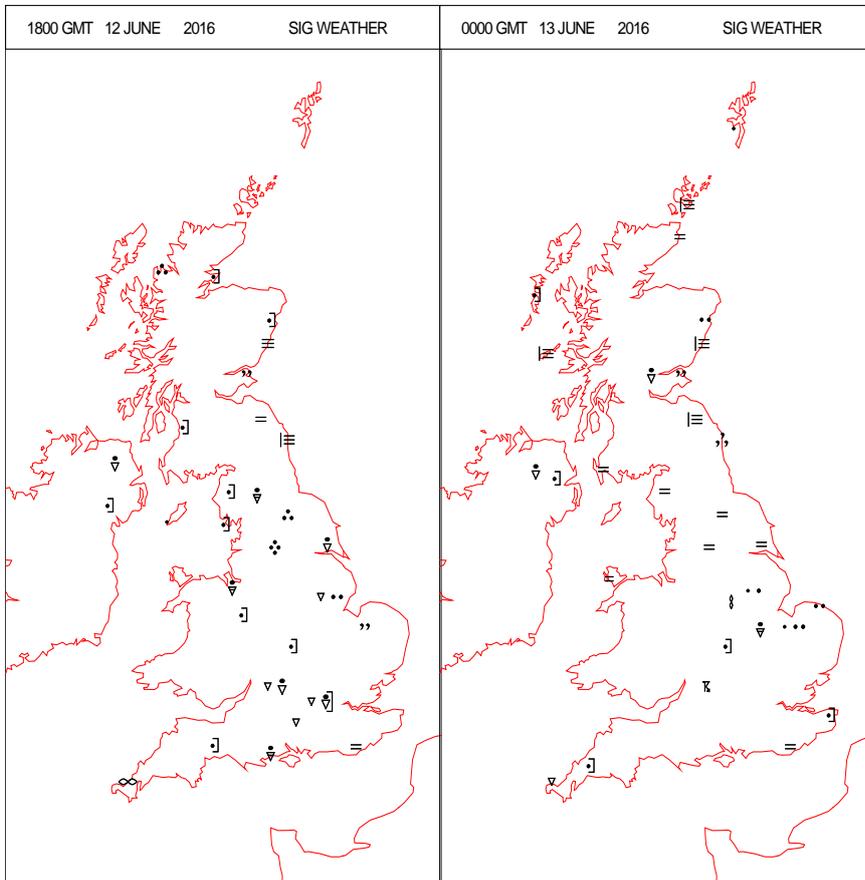

Through the morning, the band of rain across the west continued to move eastwards, affecting Northern Ireland, the Midlands, and south-east England by midday. Rain continued to affect parts of north-east England and south-east Scotland.

Through the afternoon, the rain continued to break up, but as some sunny spells developed, this led to some heavy, thundery and slow-moving showers.

By the evening, the focus of the heavy showers were to the north of London.

The Northern Isles remained dry throughout, with some sunshine. In the sunnier parts of England and Wales, it was warm and muggy.

Through the evening, thunderstorms continued at first, but towards midnight, the heaviest of the showers tended to ease into light rain. Elsewhere, much of the country stayed cloudy with rain, low cloud, hill and sea fog.

### EXTREMES

#### Highest Maximum:

22.2 Hereford, Credenhill, Hereford & Worcester

#### Lowest Maximum:

10.9 Crombie Country Park, Angus

#### Lowest Minimum:

4.0 Kindrogan, Perthshire

#### Lowest Grass Minimum:

4.0 Mickleham, Surrey

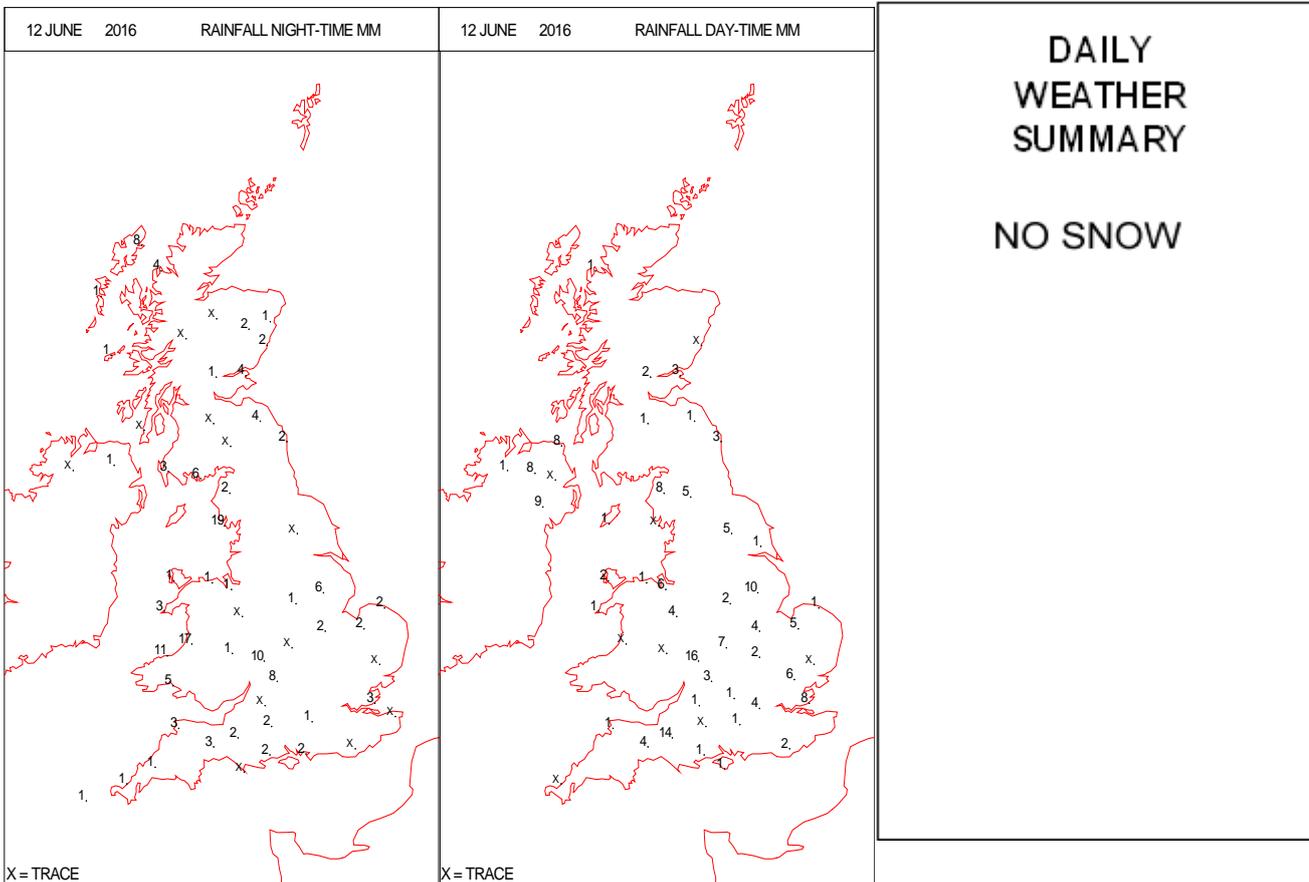

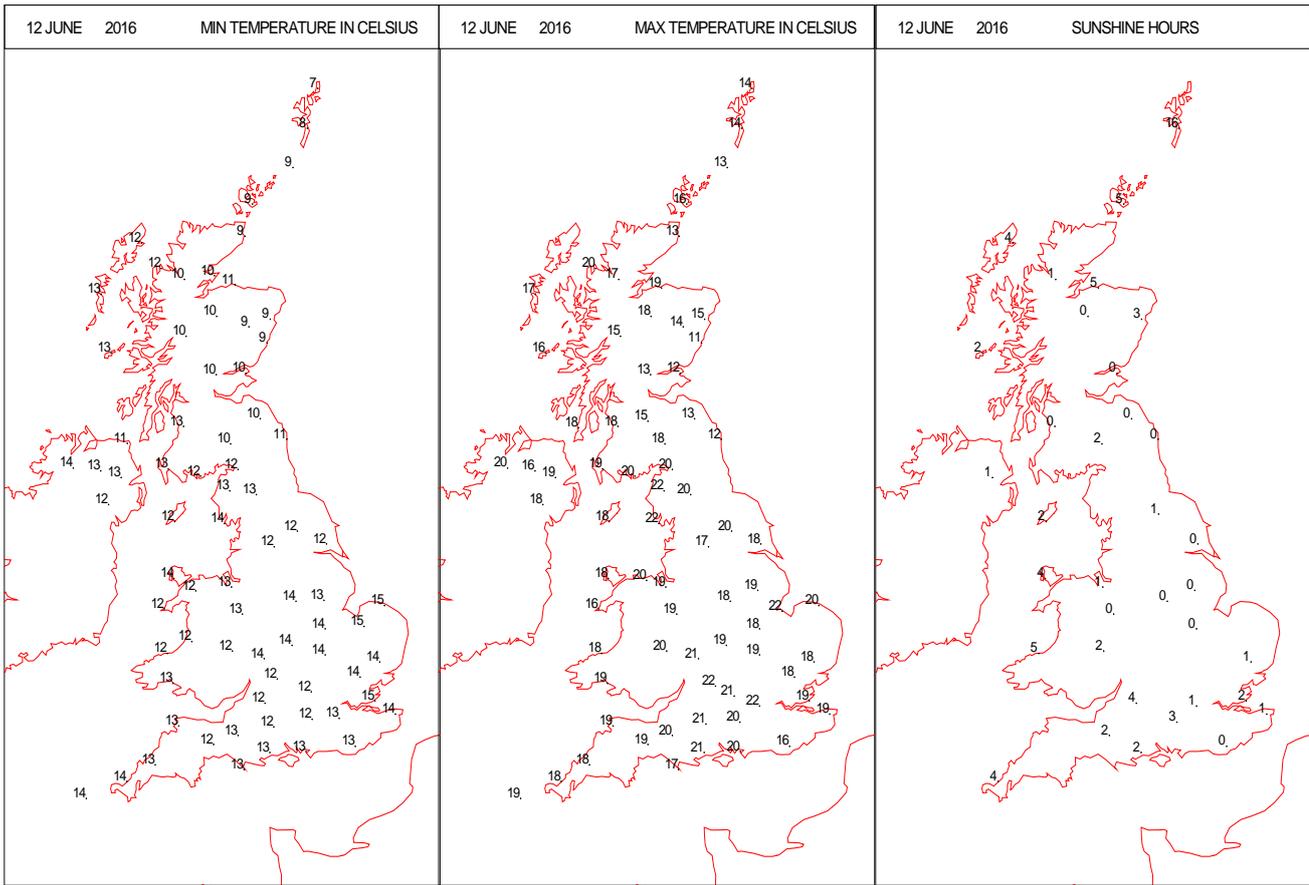

#### Most Rain:

46.0 Glencaple No2, Dumfriesshire

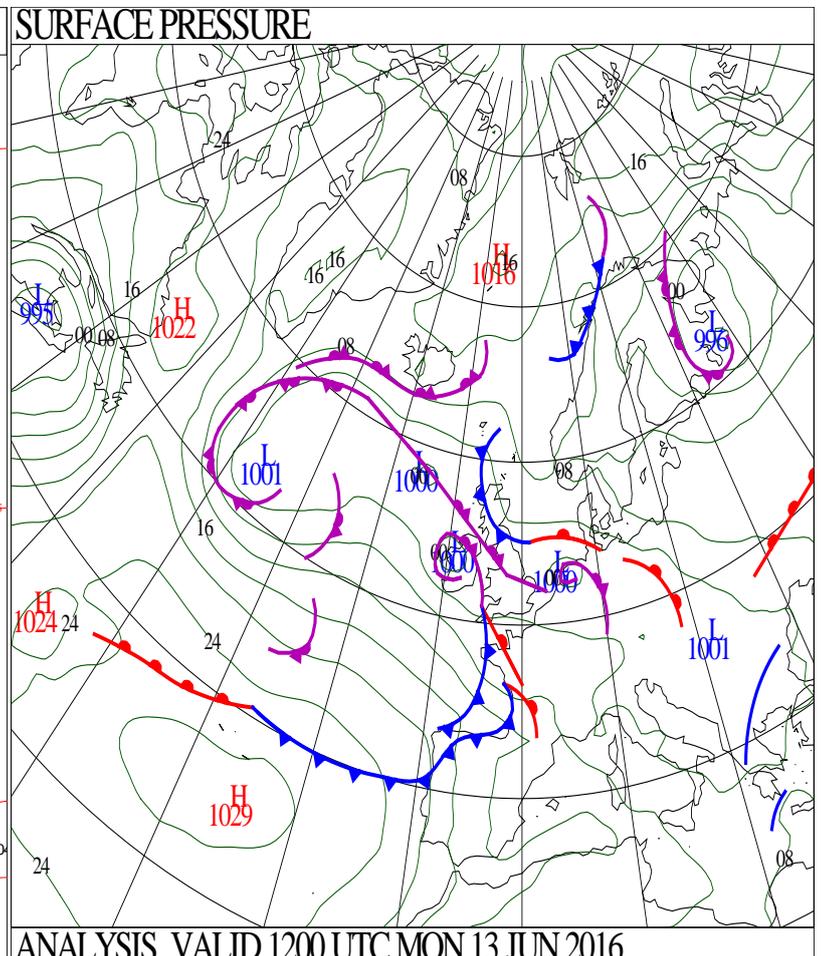

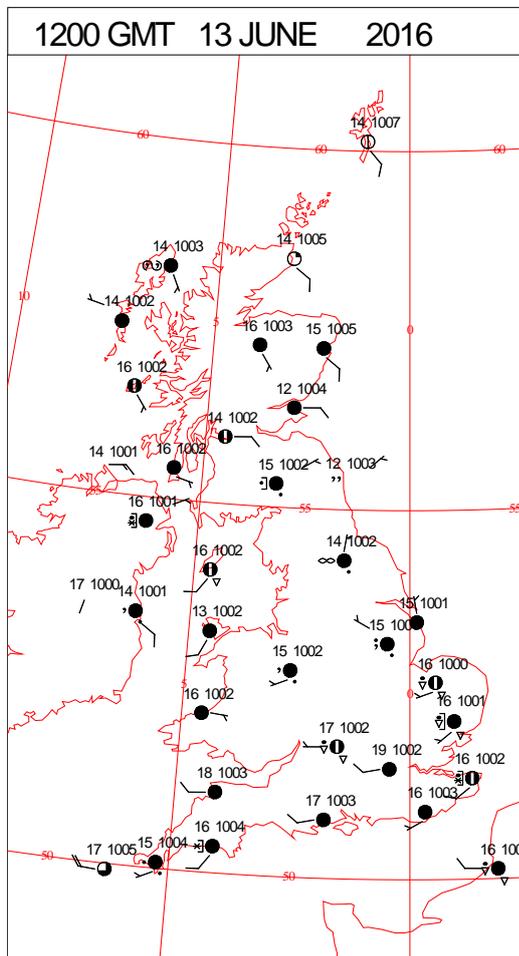

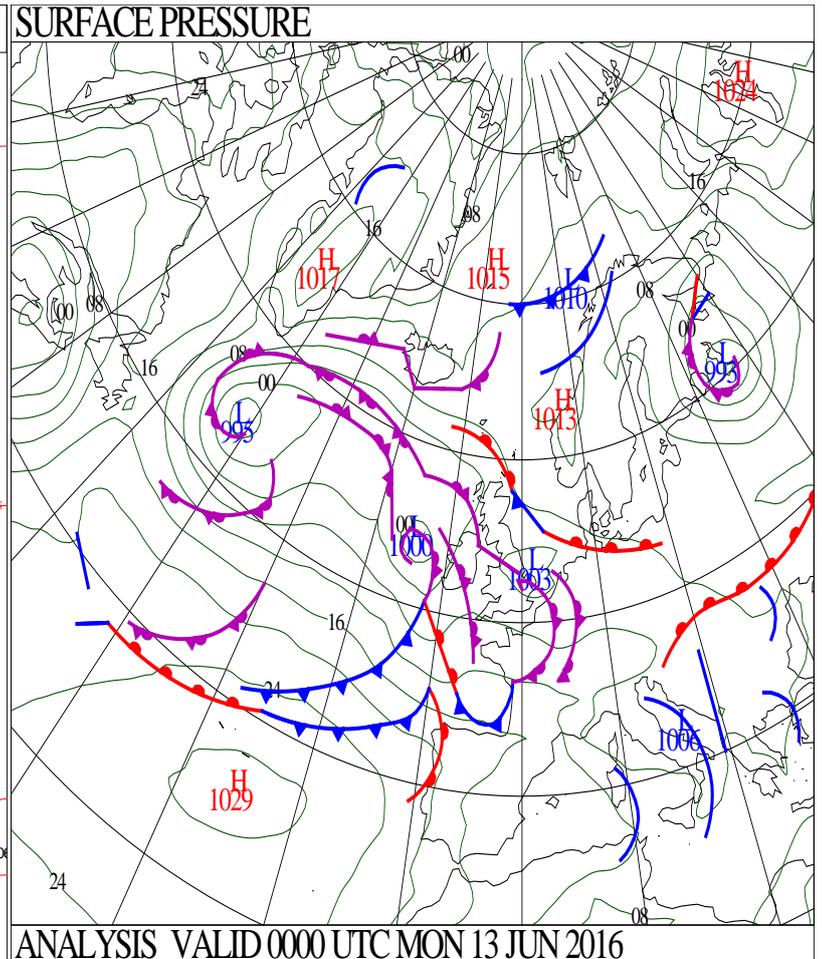

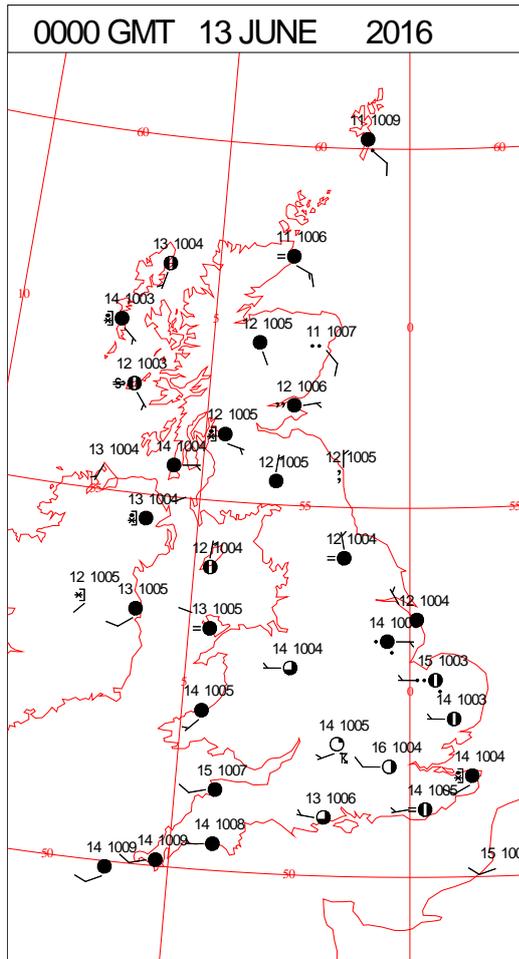

#### Most Sun:

15.7 Lerwick, Shetland

| 0600 GMT 13 JUNE 2016 SIG WEATHER | 1200 GMT 13 JUNE 2016 SIG WEATHER | <p><b>Summary of UK Weather for Monday 13 June 2016.</b><br/>                     It was another unsettled day across the U.K., with a band of locally heavy rain arriving through the early hours across Northern Ireland, Wales and southern England.<br/>                     A separate area of rain also affected parts of Northern England and Scotland, whilst elsewhere it remained largely cloudy with some extensive low cloud, mist and sea fog, particularly in north-east England. Despite this there were some clearer skies across the Northern Isles, but it remained fairly mild for all areas.<br/>                     During the day the low cloud and sea fog lingered across north-east England and south-east Scotland, maintaining a fairly cool feel.<br/>                     Elsewhere the early rain gradually fragmented as it moved north-eastwards. However a few bright spells developed, triggering some heavy showers across many parts of England, Wales and Northern Ireland. These showers continued to build through the day, with some heavy and thundery downpours at times.<br/>                     The best of the sunshine remained across the Northern Isles, where it was a fine summers day, although breezy.<br/>                     Temperatures were fairly close to average, however it continued to feel humid at times.</p> |

# DAILY CLIMATE DATA

# DAILY WEATHER SUMMARY

# SURFACE REPORTS

# SIGNIFICANT WEATHER

## Summary of UK Weather for Wednesday 22 June 2016.

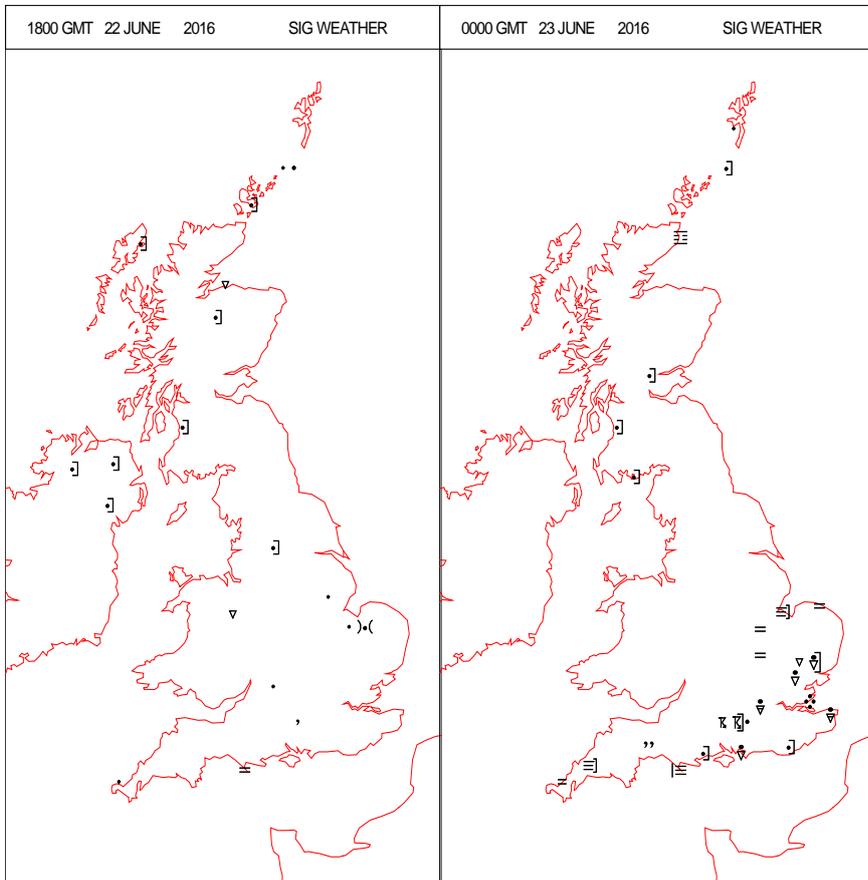

Through the early hours, there were scattered showers across Scotland and parts of Northern Ireland.

Over much of England and Wales skies were rather cloudy, but it stayed dry for most. There were some mist and fog patches across the south, with rain and drizzle falling in some areas.

Through the day, a band of cloud and pulses of showery rain, locally heavy in places, extended from south-west England, through Wales to eastern England. However, there were some brighter interludes.

Meanwhile, in the north and west it remained mostly dry and bright, with good spells of sunshine, but with some scattered showers across Northern Ireland and western Scotland.

The south-east of England saw hazy sunshine as it gradually turned increasingly warm and humid. However, some torrential and thundery downpours tracked across the channel from northern France, into the south-east of England during the evening.

## EXTREMES

**Highest Maximum:**

23.9 Manston, Kent

**Lowest Maximum:**

## Summary of UK Weather for Saturday 25 June 2016.

Many areas had a calm night with light winds and clear spells, especially towards the south-east. However, it was a cloudier picture for Scotland, and for Wales and the south-west of England.

Heavy showers continued through the night in parts of Scotland, and scattered showers also affected parts of Wales and the south-west.

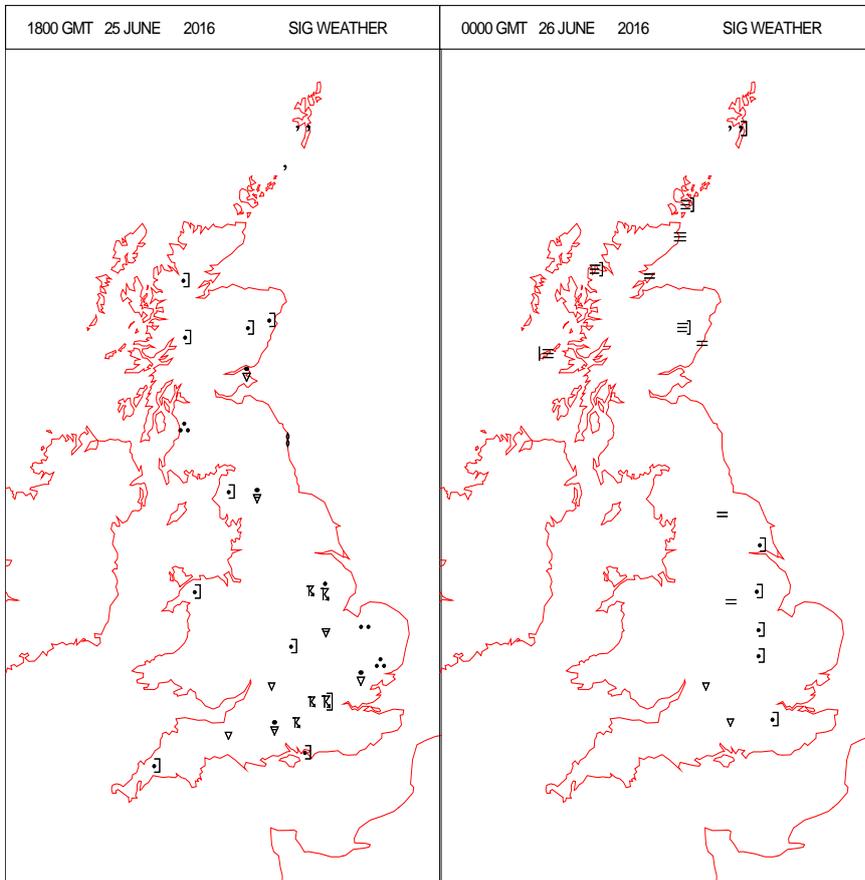

It was another relatively cool night.

Parts of northern and eastern England enjoyed some morning sunshine, although showers began to develop across much of England and Wales as the morning progressed.

The showers continued to build across much of the U.K. throughout the afternoon, turning heavy and thundery in places, especially on the eastern side of the country. With light winds across the country, the showers were often slow-moving.

However, Northern Ireland, saw a mostly dry but cloudy day. Western parts of Wales and the south-west of England became dry in the afternoon, with some sunny periods.

Temperatures were around average for the time of year.

## EXTREMES

# SIGNIFICANT WEATHER

## Summary of UK Weather for Sunday 26 June 2016.

A scattering of showers persisted across the Midlands and East Anglia overnight, but for many it was dry with clear spells.

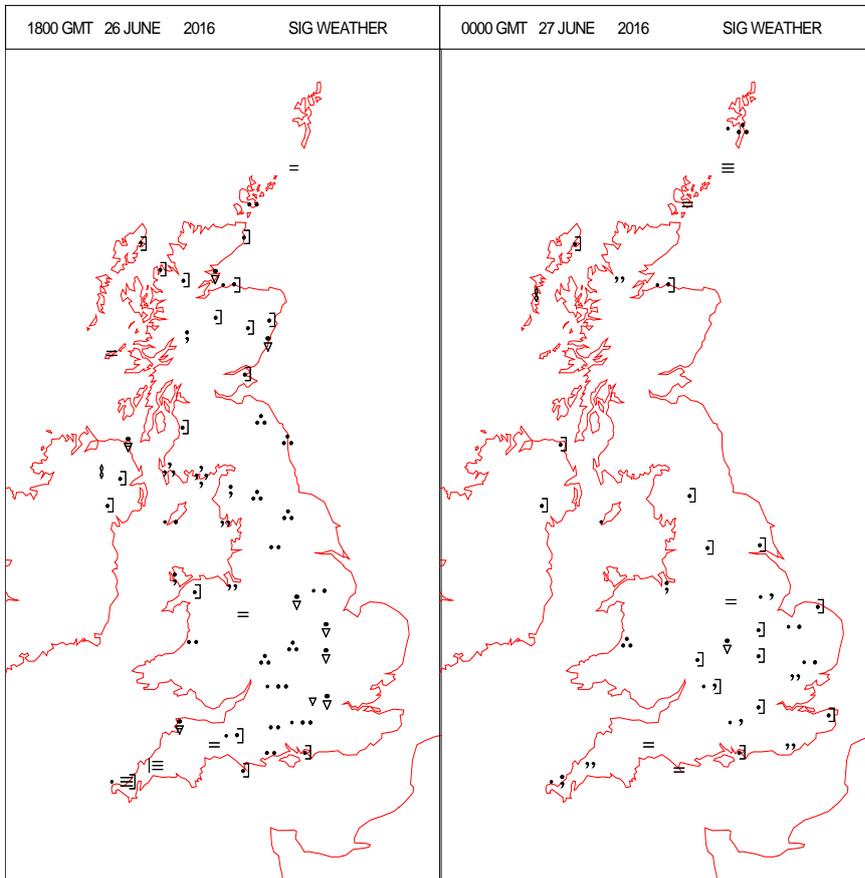

However, cloud started to filter in from the west, bringing rain with it. This rain reached western parts of Northern Ireland and the far west of Scotland by dawn.

During the day the band of cloud and rain moved steadily eastwards, reaching north-west England, Wales and south-west England by the middle of the day.

It was a drier, brighter and warmer day across eastern parts of the U.K., but a few showers developed along eastern coasts; these were locally thundery across parts of East Anglia.

During the afternoon, the rain eased from the west of the country, but many places stayed cloudy and damp. A little sunshine broke through across Northern Ireland, though.

By evening, the band of rain had reached all but the far south-east of England. Cloud eventually started to break up across Wales, Scotland and south-west England, and after dark there were only a few spells of drizzle left across the southern half of the country.

## EXTREMES

### Highest Maximum:

21.8 Writtle, Essex

### Lowest Maximum:

12.8 Lerwick, Shetland

### Lowest Minimum:

4.6 Loch Glascarnoch, Ross-Shire

### Lowest Grass Minimum:

0.9 Kinlochewe, Ross-Shire

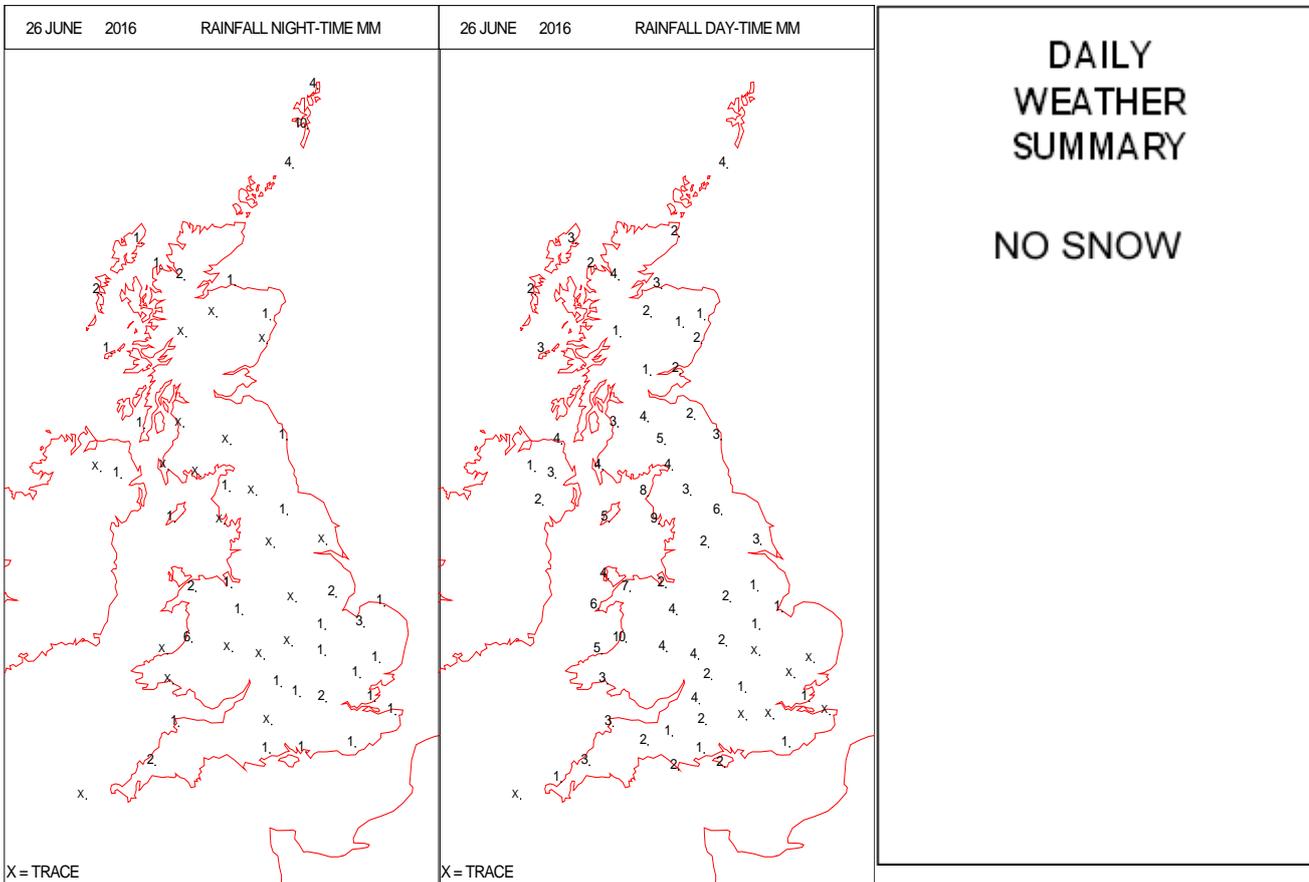

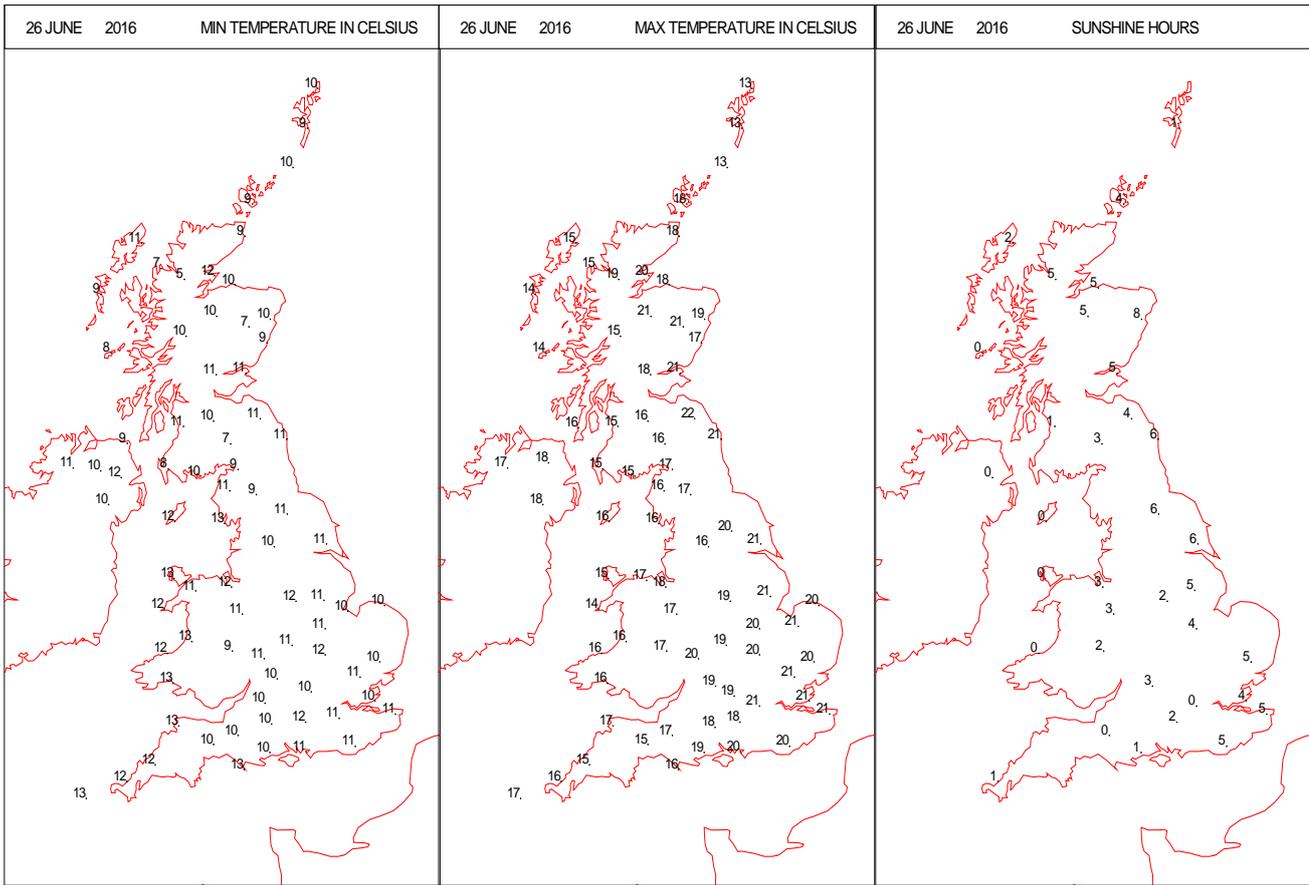

### Most Rain:

16.4 Porthmadog, Gwynedd

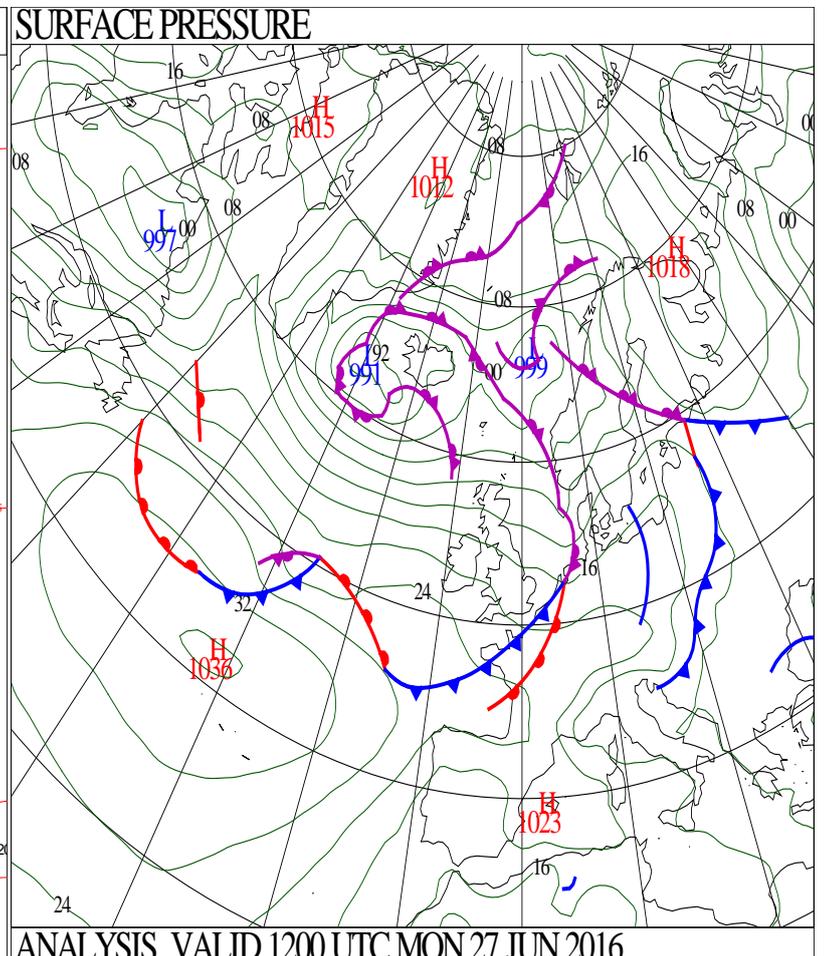

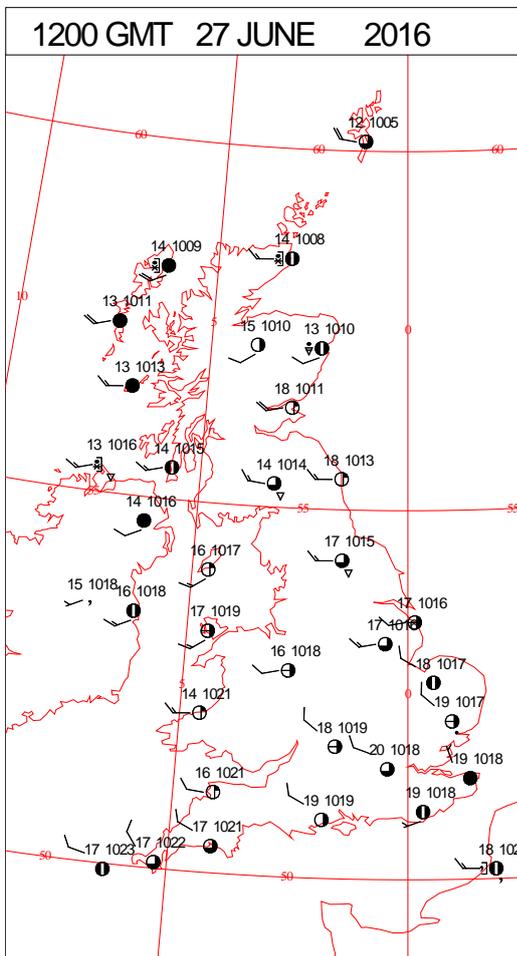

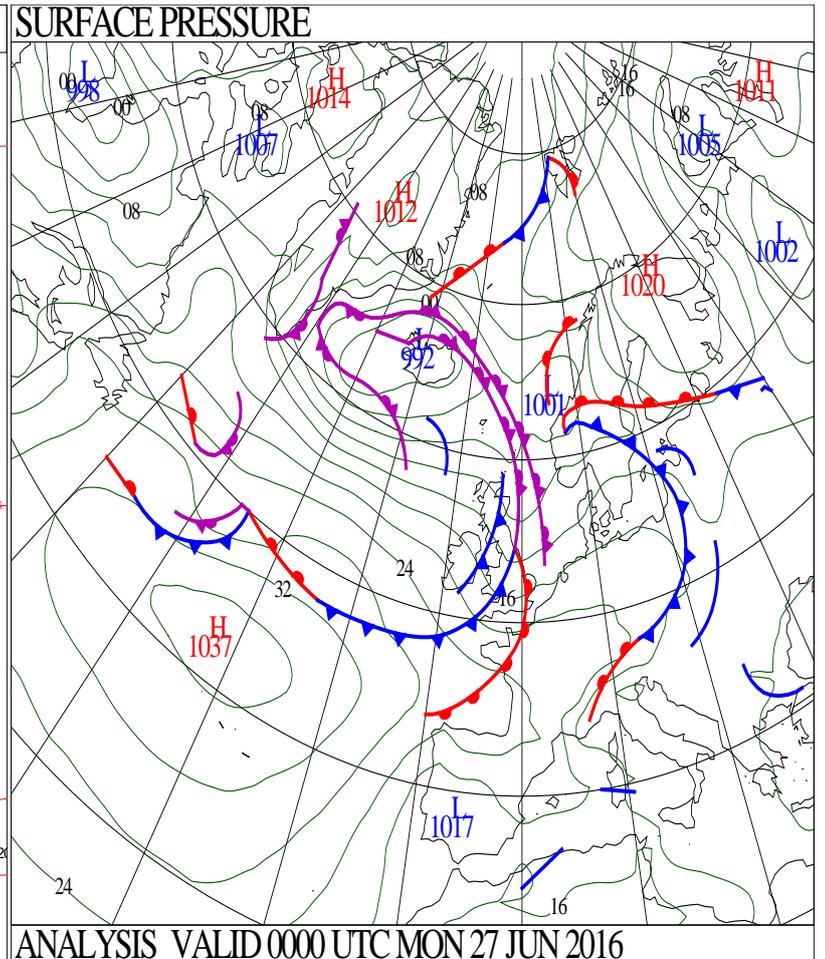

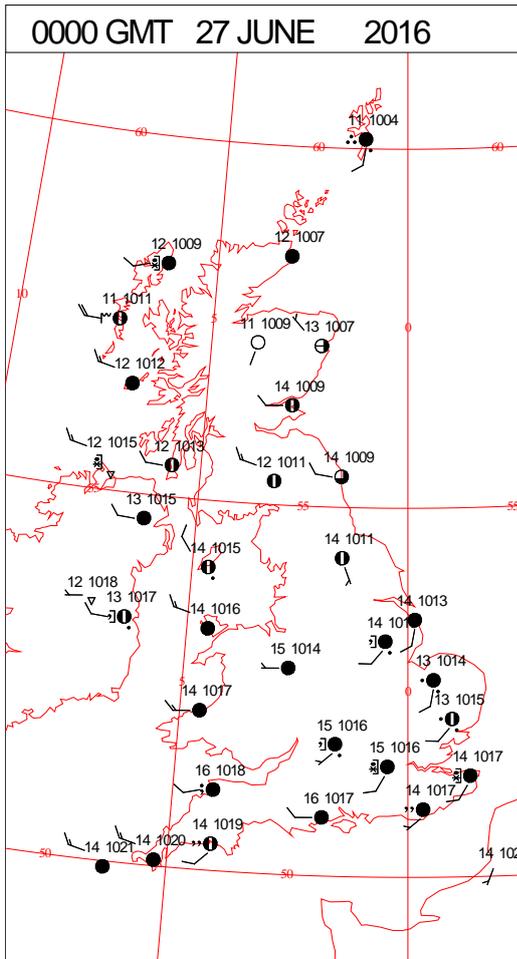

### Most Sun:

7.7 Dyce, Aberdeenshire

# SIGNIFICANT WEATHER

## Summary of UK Weather for Wednesday 29 June 2016.

It was a dry and partly clear night for much of England and Wales, whilst heavy showers fed into western Scotland.

During the early hours more organised rain pushed into Northern Ireland and Wales, with some heavier bursts mixed in.

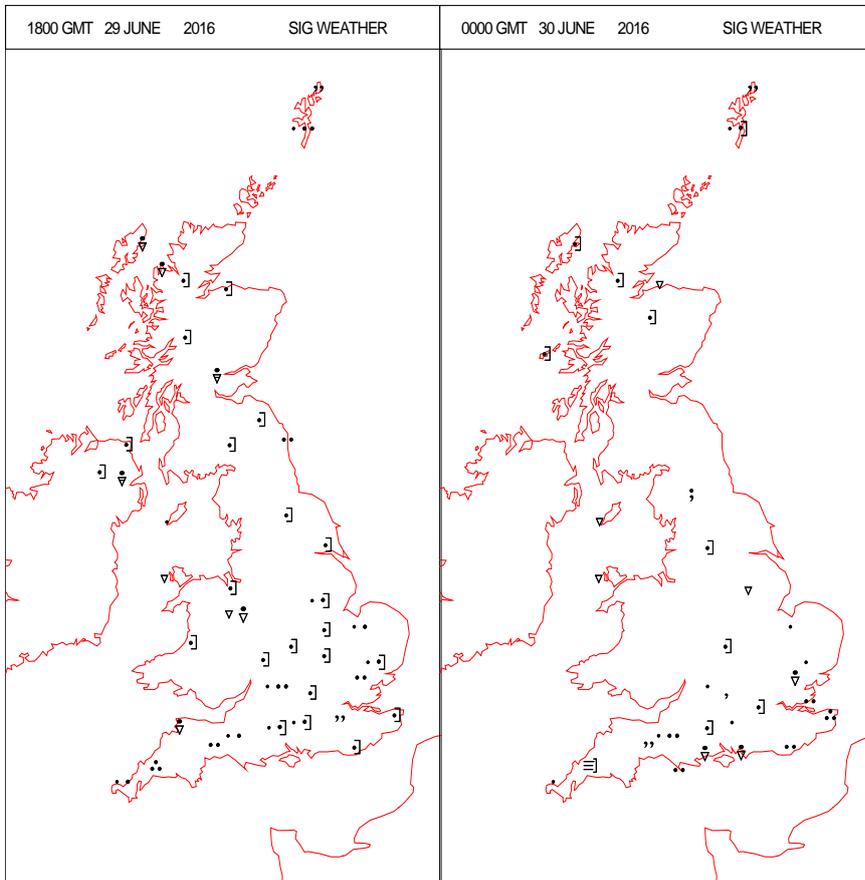

It was a chilly night in places, with temperatures in mid single figures Celsius.

Through the day, the wet conditions in the west moved eastwards across England, Wales and southern Scotland, with heavy rain in many areas. Whilst the first area of rain cleared most areas by the middle of the afternoon, two further areas of heavy rain and showers pushed down from the north.

By the evening, persistent rain continued to affect south-western parts, with the wet weather running into the Midlands.

Across more northern areas of the U.K., there was more in the way of sunshine, but also heavy and frequent showers across much of Scotland and Northern Ireland.

With largely cloudy skies, it was a fairly cool day for most. It was also a windy day, especially across western and southern coastal areas.

## EXTREMES

### Highest Maximum:

19.1 Writtle, Essex

### Lowest Maximum:

12.1 Eskdalemuir, Dumfriesshire

### Lowest Minimum:
