## Daily Weather Summaries for January 2019

**If you have any questions or feedback about this product or wish to obtain further data please contact the Met Office.**

This document contains daily weather summaries for each day of January 2019. The Met Office National Meteorological Library and Archive holds a continuous record of daily weather summaries or daily weather reports from 1860, and these daily weather summaries form a continuation of that series.

The purpose of each summary is to provide an overview of the weather conditions across the UK on that day, with the historical emphasis mainly based on observations from surface network of weather stations, although the format has varied over the decades. While the emphasis remains on observations from the surface network, the current daily weather summaries supplement these by including satellite and rain-radar imagery to provide a more complete overview. The current format of the daily weather summaries is as follows:

1. Text summary of the main characteristics of the weather during the day, written by an operational meteorologist in the Met Office operations centre.
2. Table of daily extremes for the UK for key climate variables including temperature, rainfall, sunshine and gust speeds.
3. Overview of the synoptic situation at 00 and 12 UTC comprising: analysis charts showing the surface pressure pattern and associated weather fronts; North Atlantic and European infra-red satellite images showing cloud-cover; combined infra-red and rain-radar images of the UK; maps of wind speed and direction at 00 and 12 UTC; observations of pressure, wind speed and direction, cloud cover, air and dewpoint temperature at selected UK and European stations in data tables.
4. UK maps of key climate variables from observing stations including maximum, minimum and grass minimum temperature, rainfall, sunshine, gust speed and snow.
5. Further guidance notes

If you spot any data errors or omissions in this product please contact the Met Office.

## Daily Weather Summary for Tuesday 01 January 2019

This day's summary created 08/01/2019 02:00

### Summary of the UK Weather for Tuesday 01 January 2019

Through the first few hours of 2019, cloud and patchy rain continued to slowly move southwards, reaching central areas of the UK by dawn. To the north of this, skies cleared for many, but with scattered showers across parts of northern Scotland. To the south, it was largely cloudy but mainly dry. Winds remained strongest in northern Scotland, with severe gales across Shetland, but they eased slightly later in the night. It was a mild night for most, but it turned colder across Scotland.

The strong winds across Scotland continued to slowly ease through the day, and here there were some showers, which fell as snow on the mountains. A ragged band of cloud and patchy rain and drizzle lying across central parts of the UK continued to move slowly southwards, with clearing skies to its north, and also some sunny spells across southern England for a time.

This day's summary created 09/01/2019 09:40

### Summary of the UK Weather for Wednesday 02 January 2019

It was a quiet and cold night, with a sharp frost in many northern and western areas. There were a few showers along eastern coasts but for most it was dry. Under the clearest skies temperatures fell far below freezing in Aberdeenshire, but where the cloud stayed thickest in the east and the far west, temperatures held up above freezing.

Scattered light showers continued to affect North Sea coastal areas through the day, but elsewhere it was a dry day. The best of the sunshine was across Devon and Somerset, Wales through to the Scottish Borders and Central Scotland. It was a colder day than Tuesday, with many places only reaching mid single figures. In parts of Scotland, the temperature did not rise above freezing all day.

### Summary of the UK Weather for Thursday 03 January 2019

It was a dry night for most, and while for many it was cloudy, where there cloud did break there was a sharp frost by Thursday morning where the skies were clearest; across Scotland, northern and western England and Wales. A mostly dry and cloudy day then followed across the UK as high pressure continued to dominate. The odd light shower affected the east coast of East Anglia and also the far northwest of Scotland. There were some breaks in the cloud, mainly across eastern Scotland and parts of southwest England and southern Wales. The winds were light across all areas and it was a rather chilly day.

### Summary of the UK Weather for Friday 04 January 2019

It remained dry through the early hours of Friday morning, with large but somewhat variable amounts of cloud. The best of any clearer periods were across Wales, parts of central England and also the east of Scotland. Where the skies did clear temperatures fell below zero, with some freezing fog patches forming. Friday gave rise to a largely cloudy picture across the UK; however areas in southern England, central Wales and parts of the northeast did see some sunny breaks. Despite these it was rather a cold day. High pressure centred over the UK made for very settled and dry weather which continued through Friday evening with little change.

This day's summary created 12/01/2019 02:00

### Summary of the UK Weather for Saturday 05 January 2019

It was a dry and mainly cloudy night across the UK with light winds for most. The cloud was thick enough at times to produce the odd spot of light rain or drizzle, this mainly in the west and particularly the far northwest. There were a few clear spells, especially over the west Midlands, southwest England and eastern Scotland and here a little mist and fog formed. It was a relatively mild night under the cloud, but the temperature fell away under the clearer skies with a hard frost forming in places. Saturday was a largely cloudy day, though with a few sunny spells in places. There were a few spots of light rain on western and northwestern hills, and more persistent rain arrived in the far northwest later. Most areas had another cold day, although it was milder in the northwest. During the evening a band of rain edged in across the north and west of Scotland and Northern Ireland. Elsewhere it stayed mostly dry but generally cloudy.

### Summary of the UK Weather for Sunday 06 January 2019

It was a mostly dry and cloudy night across the UK with light winds and the odd clear spell. Clear spells were mainly across eastern Scotland and northeast England. Patchy outbreaks of light rain and drizzle affected Northern Ireland, western Scotland and northwest England at times.

Through the morning, the best of the brightness was across north Wales and eastern England. For many it stayed cloudy, with light patchy rain and drizzle for Scotland and Northern Ireland, but for many it was dry. Into the afternoon and evening, the cloud thickened for much of the UK, and the rain to the north also sank into northern England and northern Wales.

### Summary of the UK Weather for Monday 07 January 2019

Skies were cloudy across much of the country overnight with hill fog, mist and murk in some areas as well as patchy drizzle. In the early hours, sporadic outbreaks of heavier rain arrived in Scotland and the wind started to strengthen in northern Scotland. There were a few clear spells in southern parts of England and Wales, but overall it was a mild night. During the day it became very windy in northern Scotland and breezy further south. There were some strong gusts to the lee of mountains in Scotland with gales. Bands of light and patchy rain worked southwards affecting most places in the UK at one time or other and skies were largely cloudy.

### Summary of the UK Weather for Tuesday 08 January 2019

It stayed windy across eastern Scotland overnight as an area of low pressure cleared to the east of the country. Elsewhere it was largely dry and breezy with clear spells. A few showers continued over northern Scotland and temperatures for all areas remained above freezing through the night.

Clouds thinned across much of the UK during the day, leading to a dry day for many areas with bright or sunny spells. Blustery showers continued along North Sea coasts where it remained windy through the day. Elsewhere, winds were lighter, with temperatures for most fairly close to the seasonal average.

Many areas were dry and clear through the evening and start of the night leading to temperatures quickly dropping after dark. Showers continued to affect some eastern coastal areas, where it stayed a little milder.

## Daily Weather Summary for Wednesday 09 January 2019

This day's summary created 16/01/2019 02:00

### Summary of the UK Weather for Wednesday 09 January 2019

Showers continued along eastern coastal areas through the night, pushing a little further inland at times. Thicker cloud also pushed towards Northern Ireland to end the night, with the odd spot of rain in the far west of the Province by dawn. Elsewhere, it was dry with variable amounts of cloud and light winds. This led to a cold, frosty night for most, with a hard frost for some.

As the sun came up for much of the UK it stayed rather chilly, with the frost slowly thawing. It was a sunny start for many, with scattered showers along the east coast and thicker, patchy cloud for Northern Ireland. Through the day there was plenty of sunshine for England and Wales, with the showers continuing along the east coast. Early sunshine in Northern Ireland was replaced by cloudy skies and patchy rain by the afternoon, this moving into northwest Scotland too. The wind was light through the day, with temperatures only just getting into double figures in the far southwest.

Through the evening cloud advanced across the north, bringing some outbreaks of rain further into Scotland, while low cloud descended into fog for some parts of Northern Ireland. Further south an early frost was seen in parts of Mid Wales and the south of England where skies remained clear.

This day's summary created 17/01/2019 02:00

### Summary of the UK Weather for Thursday 10 January 2019

Thursday began both cold and dry across much of England and Wales. Clear breaks allowed a hard frost in some areas, the coldest being southern central England. Further north thicker cloud and outbreaks of light rain kept any frost at bay across Scotland, while a mild night for Northern Ireland brought low cloud and areas of fog.

The south and southwest of England started frosty and bright, with some sunshine through the morning before becoming increasingly cloudy during the afternoon. Elsewhere it was cloudy throughout the day, with some very misty and foggy conditions developing across northwest England; and with outbreaks of light drizzle sinking slowly southwards across Wales and the midlands. Outbreaks of rain continued across Scotland throughout the day, with this rain edging into Northern Ireland towards evening. It remained rather cold in parts of the south, but milder in the north; the warmest area was Northern Ireland.

### Summary of the UK Weather for Friday 11 January 2019

Friday began with a band of rain and drizzle slowly sinking south across England and Wales. Further north it was a dry night across northern England and Northern Ireland. The far north of Scotland began to see some showers through the early hours. The widespread cloudy conditions helped to keep any frost at bay. Outbreaks of light rain and drizzle across southern England and parts of Wales cleared southwards during the morning, leaving isolated showers in their wake. Some sunny spells developed across parts of the east midlands and central southern England, but elsewhere it was rather cloudy, with light rain spreading into Northern Ireland and western Scotland by evening.

This day's summary created 19/01/2019 02:00

### Summary of the UK Weather for Saturday 12 January 2019

A band of cloud and outbreaks of rain moved south across Scotland, Northern Ireland and northern England overnight. Some clearer spells with heavy showers followed across parts of northeast Scotland. Meanwhile, it was a cloudy and mild night across England and Wales, with some patchy drizzle at times, mainly on the hills. The cloud and outbreaks of rain in the north moved southwards into England and Wales by the end of the night, turning light and patchy in the process, and it was a windy night across many northern and western parts of the country.

It was a mostly grey and cloudy start to the day, with patchy light rain and drizzle for parts England and Wales. There was some sunshine for Northern Ireland and eastern Scotland, but a band of often heavy rain moved into western Scotland, tracking into northern Scotland into the afternoon. Cloudy skies and patchy rain and drizzle prevailed through the day for many, and it stayed rather windy, with gales in exposed north and northwestern areas, but it was mild for the time of year.

### Summary of the UK Weather for Sunday 13 January 2019

Through the early hours of Sunday morning, it was a cloudy picture across the UK, with outbreaks of rain in northern and eastern parts, as well as strong and gusty winds. The heaviest of the rain remained over western parts of Scotland, especially the hills and mountains. Elsewhere, it was dry and mild with temperatures holding up, keeping the frost at bay. Through the morning, sunny spells began to develop over eastern Scotland and northern England, with a few bright spells developing across Wales and southwest England for a time too. Blustery showers packed into much of Scotland though, with some sleet and snow over the hills, and later to lower levels of Shetland. In between the brighter weather a band of cloud and drizzly rain moved steadily southwards, eventually reaching southern areas, making it become dull and gloomy. Winds remained strong for most areas throughout the day with the highest gust reaching 61 miles per hour at Emley Moor in Huddersfield. Temperatures were above average for many, although it felt colder in the wind, and later in turned colder in Scotland.

## Daily Weather Summary for Monday 14 January 2019

This day's summary created 15/02/2019 14:33

### Summary of the UK Weather for Monday 14 January 2019

Winds eased through the early hours of Monday, but showers continued to affect northern and eastern Scotland, parts of northeast England as well as Northern Ireland and parts of the Cheshire Gap. In the far northeast the air was cold enough for showers to fall as snow over the hills, and even to lower levels for a time across Shetland. Away from this, it was drier and less cold with some clear spells.

During the day, most places in England, Wales and Northern Ireland were dry, cloudy and mild, though there were one or two rain showers on the east coast and also in Cheshire and Shropshire. There were stronger winds and some more significant rain in northwest Scotland. In the Shetland Islands, some of the precipitation continued to fall as snow.

### Summary of the UK Weather for Tuesday 15 January 2019

Through the early hours, yesterday's rain continued in western Scotland. It was a cloudy night for most and under the thickest cloud in the west, there was patchy light rain and drizzle. For many it was a mild night, but where the cloud broke there was a patchy frost in central and southern areas.

Most of the UK had a mild and cloudy day, with a little drizzle here and there, and a few sunny spells to the east of high ground. It was windy in northern Scotland with persistent rain. In the evening the rain began to move southeastwards, covering more of western Scotland.

### Summary of the UK Weather for Wednesday 16 January 2019

Much of England and Wales saw a somewhat cloudy start to the day, with patchy rain and drizzle in places. Meanwhile, rain spread across Scotland and Northern Ireland through the early hours. A rain band continued southeastwards through the day, inching across England and Wales, giving some heavy bursts. Parts of Scotland saw further rain and snow due to a second weather front slowly creeping southward across the country. In addition, some northwestern parts saw sunny spells and occasional showers, some wintry, especially over the hills. Overall, a cold day once the front had passed through, especially in and around any showers.

### Summary of the UK Weather for Thursday 17 January 2019

Overnight there were outbreaks of rain, hill snow and even snow to low levels in some central and northern parts. Meanwhile, occasional showers drifted in from the north throughout the night, largely becoming confined to the north and eastern coasts by dawn. In between the showers and rain bands, there were clear spells, allowing temperatures to drop and a widespread frost to form. It was a windy night in places. Snow showers continued along North Sea coasts during the day. Elsewhere it was a dry cold day with plenty of sunshine apart from a few coastal showers in the Irish Sea.

## Daily Weather Summary for Friday 18 January 2019

This day's summary created 25/01/2019 02:00

### Summary of the UK Weather for Friday 18 January 2019

For much of the UK it was cold and clear through the early hours of Friday morning with a widespread and in places severe frost developing, especially across central, eastern and northern areas. A few icy patches developed across eastern counties after earlier showers, whilst cloud gradually thickened in the west with outbreaks of rain, sleet and snow pushing into Northern Ireland and western parts of England and Wales. Through the day, outbreaks of rain, sleet and hill snow continued to push in across Wales and the South West although the latter region mostly had rain. Winds strengthened in western areas too and it felt cold. Eastern areas remained brighter although cloud steadily thickened here, whilst Scotland remained largely fine and sunny. Into the afternoon rain, sleet and hill snow moved into northern England and the Midlands with some slight accumulations of snow over the Peak District and the Pennines late afternoon and evening. For most places temperatures were below average through Friday, although it later turned slightly milder than average in the southwest.

### Summary of the UK Weather for Saturday 19 January 2019

Overnight it was largely cloudy for much of the UK. The cloud brought some hill fog and there were some outbreaks of rain, sleet and hill snow as an occluded front pushed eastwards across England. The cloud meant it was much milder than the previous night for many, but clear skies across north and west Scotland allowed a harsh frost to form here with some patches of freezing fog. Saturday was a rather cloudy day in most areas with some patchy light rain and a little sleet or wet snow over some of the hills. However, northern Scotland, parts of southeast England and more generally southwest England were brighter. A few showers affected the Northern and Western Isles and some heavier showers developed across southwest England. Winds were generally light and temperatures mostly cold, although milder in the southwest. There was little change during the evening, with most areas holding onto a lot of cloud, giving the odd spot of rain in places. Northern Scotland, along with parts of southeast and southwest England held onto the best of the breaks.

This day's summary created 27/01/2019 02:00

### Summary of the UK Weather for Sunday 20 January 2019

Many parts of the UK were cloudy though the early hours of Sunday. The best of the cloud breaks were across northern Scotland and eastern England. Here it was also coldest, with another hard frost in places. A few showers continued to affect parts of Wales and southwest England. Later in the night, a band of rain moved into western Scotland, with cloud ahead of this leading to a recovery of temperatures here.

It stayed cloudy for many central areas during the day, with a little patchy drizzle over the hills. Elsewhere, it was a cold but sunny day with crisp winter sunshine. However, a few showers affected parts of Cornwall and northern Scotland. Temperatures struggled in low single figures for many areas, giving another chilly day.

## Daily Weather Summary for Monday 21 January 2019

This day's summary created 28/01/2019 02:00

### Summary of the UK Weather for Monday 21 January 2019

Through the early hours there were pockets of mist and fog across much of England and Wales, with a few wintry showers in northwest Scotland, and rain showers along the Welsh coast and towards the Peak District. Towards dawn, the showers across northern Scotland grouped together, and brought some snow down to lower levels. There was a sharp frost for most. The mist and fog gradually cleared through the day, although some dense fog patches lingered in East Anglia. Showers continued in the west, but otherwise it was a largely cloudy day with some brighter spells at times. During the afternoon, a band of rain and hill snow moved into Scotland and Northern Ireland, then moved southeastwards through the evening. Strong winds brought blizzards over the hills in Scotland.

This day's summary created 29/01/2019 02:00

### Summary of the UK Weather for Tuesday 22 January 2019

Through the early hours of Tuesday, a band of rain and hill snow moved eastwards across the UK, with the hill snow becoming less extensive as it spread across central and eastern England. Behind this, temperatures quickly dropped with ice developing across many parts of the UK during the morning, with lying snow remaining in places across parts of Scotland and northern England. As a result, some places saw a sharp drop in temperatures with a hard frost too. During the day there was a mixture of sunshine and showers, with the showers becoming widespread across many areas. The heaviest showers were across western areas at first where there was a mixture of rain, hail, sleet and snow. A more organised band of showers then pushed through Wales, central and southeast England with snow falling to lower levels across southeast England through the afternoon and evening, giving a covering in places. Winds were brisk in the north and west and temperatures were generally below average across all parts of the UK, with a significant wind chill.

This day's summary created 30/01/2019 02:00

### Summary of the UK Weather for Wednesday 23 January 2019

Wintry showers continued to occur through the early hours of Wednesday morning, across western and northwestern parts. Also, some snow continued across the southeast of Kent for much of the night, giving some slight accumulations. For many though, skies were clear and with lighter winds, temperatures tumbled away leading a to widespread frost as well as some icy stretches on the roads and pavements.

The day time started frosty and icy for many. It was sunny and rather cold all day across most of the UK but there were one or two showers near northern, western and eastern coasts. Sleet and snow showers in east Kent were more frequent and continued for most of the morning leaving some accumulations. It was milder and cloudier in Wales and southwest England. Sleet and snow showers also affected the high ground of northwest Scotland. In the evening, temperatures dropped quickly giving a cold and clear evening in many places.

This day's summary created 31/01/2019 09:41

### Summary of the UK Weather for Thursday 24 January 2019

It was a cold night for many parts of the UK with clear spells, especially in the east. A band of light rain, sleet and snow slowly edged southeastwards from southwest Scotland, reaching the East Midlands and East Anglia by morning. Cloud also gradually increased from the west overnight with a little patchy light rain and drizzle arriving across Northern Ireland, western Wales and the far southwest England by morning. It was milder here too under the cloud. There was a cold and frosty start to the day across northern and eastern parts of the country, with some icy patches in places. Showers moved southeastwards across East Anglia and southeast England during the morning, with some sleet and hill snow, but also some freezing rain in a few spots. Elsewhere, the day was cloudy, with patchy light rain and drizzle at times, especially over northern and western hills. It was a much milder day in the west, but it stayed on the cold side in northern and eastern parts of the country.

This day's summary created 01/02/2019 02:00

### Summary of the UK Weather for Friday 25 January 2019

The early hours of Friday morning saw a gradual rise in temperatures as a warm front spread in slowly from the west. Initially, conditions were frosty across many central and eastern areas of England but as the cloud spread in it turned mild, cloudy and murky with fairly extensive low cloud, mist and fog. Some light and patchy rain affected southern and western areas, with more persistent rain across Scotland for a time. Many areas became frost-free by the morning. During the day the warm front continued to spread eastwards, bringing less cold air across most of the country during the day. For many it was cloudy, but mainly dry although some light and patchy drizzle continued to affect the hills and coasts in the north and west. Across northwest Scotland the rain became more persistent through the afternoon with some heavy bursts developing later on, as well as some snow over the West Highlands. On the whole, temperatures were above average and it felt milder than earlier in the week.

This day's summary created 02/02/2019 02:00

### Summary of the UK Weather for Saturday 26 January 2019

Cloud covered much of the UK overnight, with the odd spot of light rain or drizzle in places, especially over hills in the west. There was some more persistent rain across northern Scotland, with some snow over Northern Highland. The cloud kept temperatures up for most, well above average for the time of year, though the northern tip of Scotland was a little cooler.

Cloud and rain, which was heavy at times, persisted across northern and western parts of Scotland, with some snow across the northern Highlands, which started to spread south later in the day. Elsewhere, it has been rather cloudy and mild, with occasional brighter spells across eastern parts of England. Meanwhile, an active cold front moved in from the west during the afternoon to bring a spell of wet and windy weather across Wales, the West Country and the Midlands. This quickly moved eastwards across the rest of England, with brighter spells and heavy showers following on behind from the west. Windy for many, with the winds strengthening in the far northwest of the UK later in the day, with gales in parts of southwest England.

## Daily Weather Summary for Sunday 27 January 2019

This day's summary created 03/02/2019 02:00

### Summary of the UK Weather for Sunday 27 January 2019

Northerly gales became increasingly widespread around parts of Northern Ireland, as well as around Irish Sea coastal areas through the early hours of Sunday morning. A band of rain, with some sleet and hill snow mixed in, move south across much of England and Wales, eradicating the last of the mild air in the southeast by dawn. Further north, frequent snow showers piled into the northern half of Scotland, with snow starting to accumulate in places.

During the day strong northerly winds continued across most parts with gales easing in the west, but becoming more prominent across North Sea coasts. Showers continued to feed in around coasts in the west, north and east, and some of these were wintry especially in Scotland. Away from the coasts many central parts of the UK had a fine day with plenty of sunshine but it felt cold in the wind.

This day's summary created 04/02/2019 02:00

### Summary of the UK Weather for Monday 28 January 2019

The weather was fairly quiet overnight with clear skies and a widespread frost. A few wintry showers affected western areas and the east coast, but elsewhere it stayed dry. Winds were strong along eastern coasts too, but gradually faded towards dawn.

During the day, most places had a cold, crisp and sunny start, followed by a chilly afternoon. There were a few showers near western and eastern coasts, and more substantial showers in northern and western Scotland. Many of these were wintry in nature and there were further accumulations of snow on high ground in the Scottish Highlands.

### Summary of the UK Weather for Tuesday 29 January 2019

There were showers in northwestern areas at the start of the night that became more frequent towards dawn. The showers were a mixture of rain, sleet and snow. Towards dawn, a band of rain began to edge into southwestern areas. It stayed dry elsewhere with clear spells and a patchy frost in the east. A band of rain with some sleet and hill snow pushed southeastwards across England and Wales through the day. As this reached East Anglia and Kent during the evening it readily fell as snow leading to a few centimetres accumulating. Behind the band of rain, sleet and hill snow it turned brighter with some clearer spells but also plenty of showers mainly in the north and west. These were a mixture of rain sleet and snow but the snow started to fall down to lower levels during the evening.

## Daily Weather Summary for Wednesday 30 January 2019

This day's summary created 06/02/2019 02:00

### Summary of the UK Weather for Wednesday 30 January 2019

Outbreaks of sleet and snow across East Anglia and southeastern England slowly edged eastwards during the early hours of Wednesday morning, before clearing out into the North Sea. Elsewhere, there was a mixture of clear periods and occasional wintry showers, these largely confined to the north and west where they left a covering of snow in places, especially in and around the Manchester area. Under clear skies temperatures fell sharply with a widespread frost as well as icy stretches following rain and snow earlier. During the day, wintry showers continued for many northern and western areas, with some turning thundery across the far southwest of England. Otherwise it was a fine but cold day across the rest of the UK, with plenty of sunny spells. The winds were strong in the southwest at first, but these eased and for many become light and variable through the afternoon. There were a few patches of freezing fog around the Salisbury which eventually cleared through the afternoon. Temperatures were below average across most parts and it quickly turned cold and frosty through Wednesday evening.

### Summary of the UK Weather for Thursday 31 January 2019

With clear skies and light winds it was a very cold night across the UK, with a widespread and severe frost as well as patches of ice following Wednesday's showers. It was the coldest night of the winter so far for all four nations and for the UK as a whole since 2012, with a low of -14.4 Celsius at Braemar. Freezing fog formed quite widely across parts of Midlands, eastern and northern England. This then lingered all day across parts of Lincolnshire and Yorkshire, with temperatures remaining subzero.

In the southwest, rain arrived and then readily turned to snow across parts of southwest England and south Wales through the afternoon and early evening. There were numerous reports of incidents on the road as a result. Temperatures also remained well below freezing all day across parts of Scotland, with further snow showers feeding in from the north.

## Daily Weather Summary for Thursday 31 January 2019

# Daily Weather Summary for Thursday 31 January 2019

## Guidance Notes

UTC = Universal Coordinated Time. For the UK UTC is the same as GMT (Greenwich Mean Time).

National boundaries shown on the European station map are for illustrative purposes only.

### Daily extremes

- Daily extremes have been manually confirmed by Met Office Observations Quality Management as valid observations from the live database at the time of checking. However, more extreme values may still be possible if they occur after the time of production.
- Mountain stations above 500 masl are excluded from lowest temperatures, highest gust speeds and greatest snow depths at 0900 UTC. This is because they are not considered representative of low level areas.
- Counties quoted against each station are based on historical county boundaries pre-1974 and may not reflect current administrative boundaries.

### Analysis charts and satellite imagery

- The satellite imagery is infra-red imagery from the geostationary MSG satellite.
- The rainfall image is derived from satellite data from MSG and rain-radar data. This represents a snapshot of instantaneous rain-rates at 0000 UTC and 1200 UTC and so does not necessarily reflect daily accumulations in the rainfall station map.
- Any analysis charts or satellite images which are unavailable will be displayed as white space.

### Station maps

- The UK maps show station data for the same set of stations presented UK data table. These stations are selected to provide good spatial coverage across the UK; they represent only a fraction of the overall UK observing network.
- Wind speed maps show wind speed in Kt and direction both averaged over the hour up to the time of observation. 1 Kt = 1.151 mph.

### Hourly station data

- The data tables provide spot hourly observations from synoptic messages at 0000 and 1200 UTC. Missing data are denoted by '-'.

- Pressures are mean sea level pressure in hPa.
- For UK stations, Gibraltar and Jersey, the wind speeds and directions are both averaged over the hour up to the time of observation. However, for European stations wind speeds and directions are both averaged over a 10-minute period up to the time of observation.
- Wind speeds are in Kt. Wind directions are stored in the database every 10 degrees and have been converted to the nearest point of the compass. These give the direction the wind is blowing from, not to.
- Cloud amounts are in Oktas from 0 (clear) to 8 (overcast). 9 indicates sky obscured (eg by fog).
- Air temperature and dew point temperature are in Celsius.

### **Temperature maps**

- Daily maximum, minimum and grass minimum temperatures are in Celsius.
- The period for the daily maximum temperature on day D is defined from 0900 UTC day D to 0900 UTC day D+1.
- The period for the daily minimum and grass minimum temperatures on day D is defined as 0900 UTC day D-1 to 0900 UTC day D.
- On any given day D the minimum will typically occur in the early hours of the morning and the maximum in early afternoon.

### **Rainfall, sunshine and max gust speed maps**

- Daily rainfall is in mm from 0900 UTC day D to 0900 UTC day D+1.
- Daily sunshine is in hours from Kipp and Zonen CSD1 automatic sunshine records. Bright sunshine is defined as exceeding 120 W/m<sup>2</sup>.
- Max gust speeds are the daily max gust in Kt from 0000-0000 UTC

### **Snow maps**

- The day of snow falling map displays data from present weather sensors, showing stations which have recorded sleet or snow falling at any point in the day (0000-0000 UTC).
- The snow lying map shows level snow depth as recorded by the automatic snow depth sensors at 0900 UTC. These snow depth sensors do not record snow depth if this is less than 1cm.
- Snow depth sensors are normally operational from October to April, in the event of snow falling outside this period data availability may be limited.
- Snow maps will only be displayed if one or more of the selected stations on that date have recorded either snow falling or non-zero snow depths. If snow maps are not

displayed it is still possible that other stations in the network have recorded a day of sleet or snow falling or non-zero snow depth.
