SUNDAY
1 FEBRUARY 1987

SUMMARY
OF
BRITISH WEATHER

Much of the United Kingdom had a dry, clear, frosty night. There was patchy fog and in Northern Ireland, West Wales and southwest England, The weather turned cloudy with a little rain in the west of Northern Ireland.

Most places in England and Scotland had a bright start to the day with some sunshine and in eastern England there was a lot of sunshine, but during the day the cloudy weather in the west spread slowly eastwards.

Rain reached Cornwall, Dyfed and western parts of Northern Ireland in the morning and this too spread eastwards and northwards and by late evening had reached much of the west of England and Scotland, as well as Wales and Northern Ireland. There was heavy rain in quite a few places and around Glasgow sleet for a few hours.

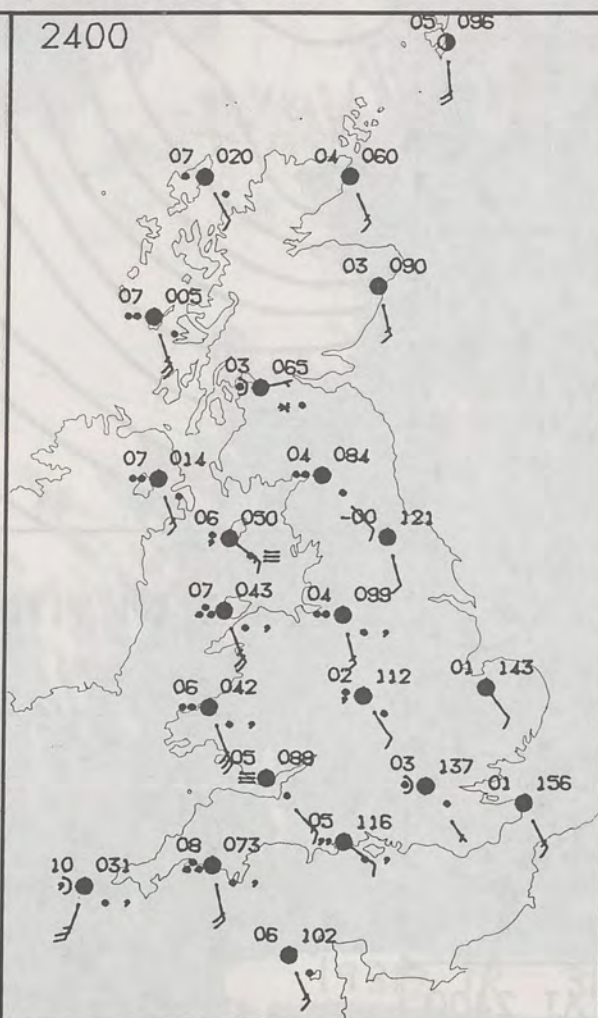

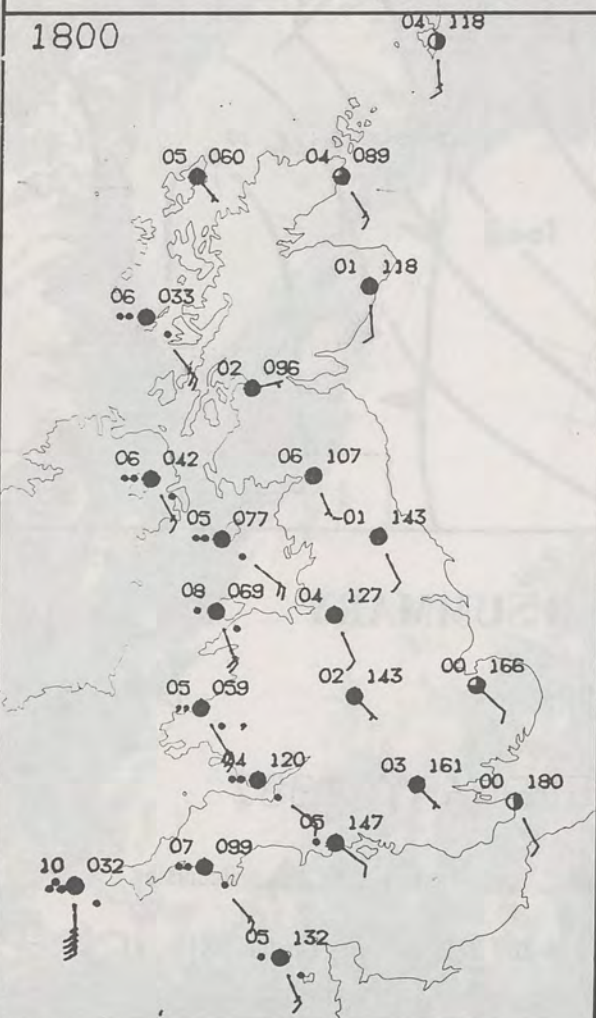

Some western areas had temperatures around normal but most places had another rather cold day.

MONDAY
2 FEBRUARY 1987SUMMARY
OF
BRITISH WEATHER

Many places had rain overnight with heavy rain in Wales and the west of England. In northeast England quite a few places had some freezing rain causing very icy roads and pavements. There was a touch of frost in eastern England but in most places temperatures stayed above freezing.

In Northern Ireland the weather cleared up before morning and then it was a bright day, sunny at times, with no more than one or two places getting a light shower.

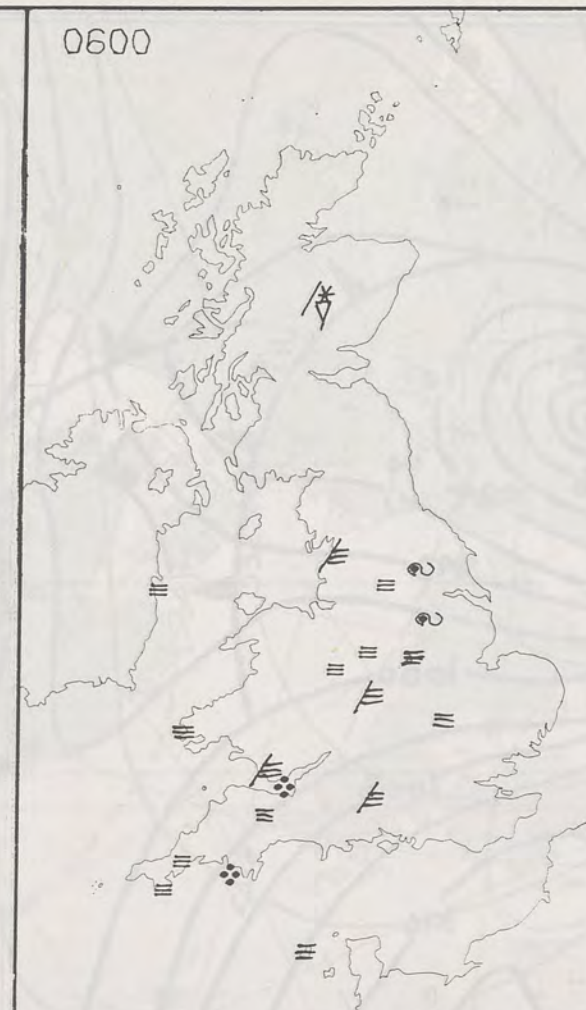

Over England and Scotland it was a cloudy, misty day with fog on coasts and hills. In Scotland there was rain or drizzle at times in most places, while Wales and much of England had a wet day, although East Anglia and southeast England were mostly dry.

Eastern areas of England and Scotland were rather cold again but many western districts were mild.

TUESDAY
3 FEBRUARY 1987SUMMARY
OF
BRITISH WEATHER

Most of England and Wales had a cloudy, misty night with some areas of thick fog and drizzle. A belt of rain moved southeast across Scotland and Northern Ireland, followed by clearer skies here by morning.

There was some sunshine during the day over southern Scotland and Northern Ireland, and this improvement in the weather spread down across northern England by midday. The best of the sunshine was in the border regions of England and Scotland.

A lot of cloud developed over the northern half of Scotland, with some showers - especially in Shetland.

Wales and the southern half of England stayed generally cloudy and murky, with the thicker fog taking a while to clear. However, some sunny intervals developed in the extreme south.

Temperatures were mostly near or rather above normal, though a few places in eastern England were still rather cold. Some of the brighter spots in the south were mild.

WEDNESDAY
4 FEBRUARY 1987

SUMMARY
OF
BRITISH WEATHER

Much of southern England, East Anglia and South Wales were foggy in the early hours, though with temperatures well above freezing. North Wales, northern England and southern Scotland were colder with a slight frost in places and one or two fog patches. There was rain here and there in northern Scotland.

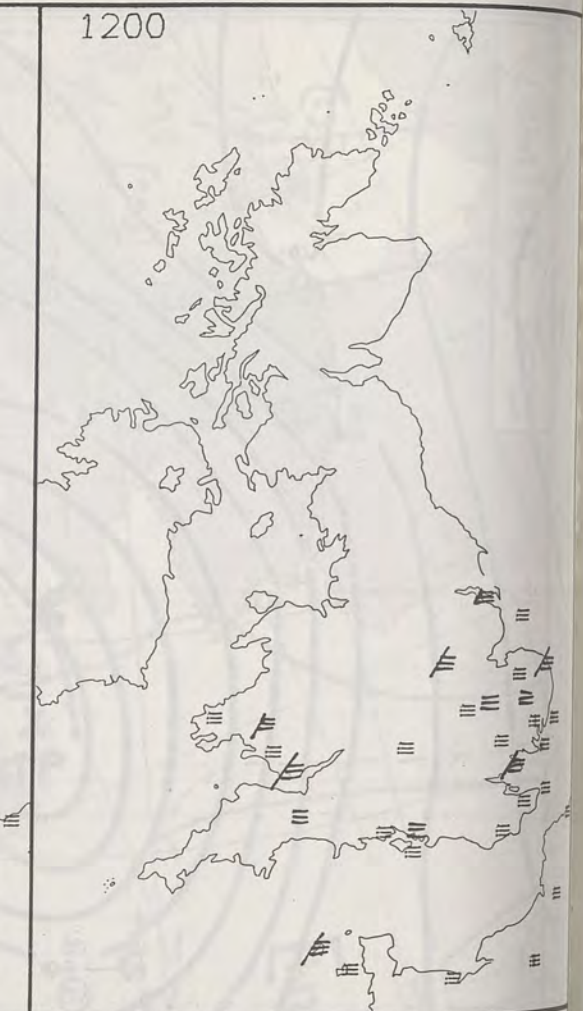

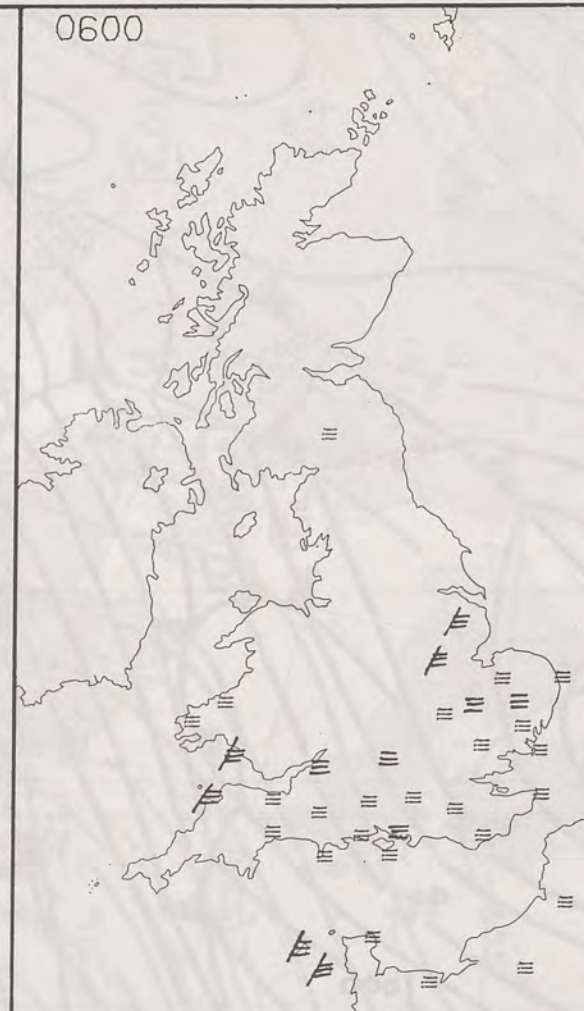

Southern Britain stayed generally dull and misty through the day, with areas of thick fog thinning only slowly. There was a little drizzle here and there. With some increase in the wind, visibility generally improved somewhat in the evening.

Central and northern regions of the British Isles had some bright weather, though with mostly quite a lot of cloud. There was rain here and there in the Western and Northern Isles of Scotland, and some rain spread to Northern Ireland and into mainland western Scotland in the evening. It became windy in many northern districts.

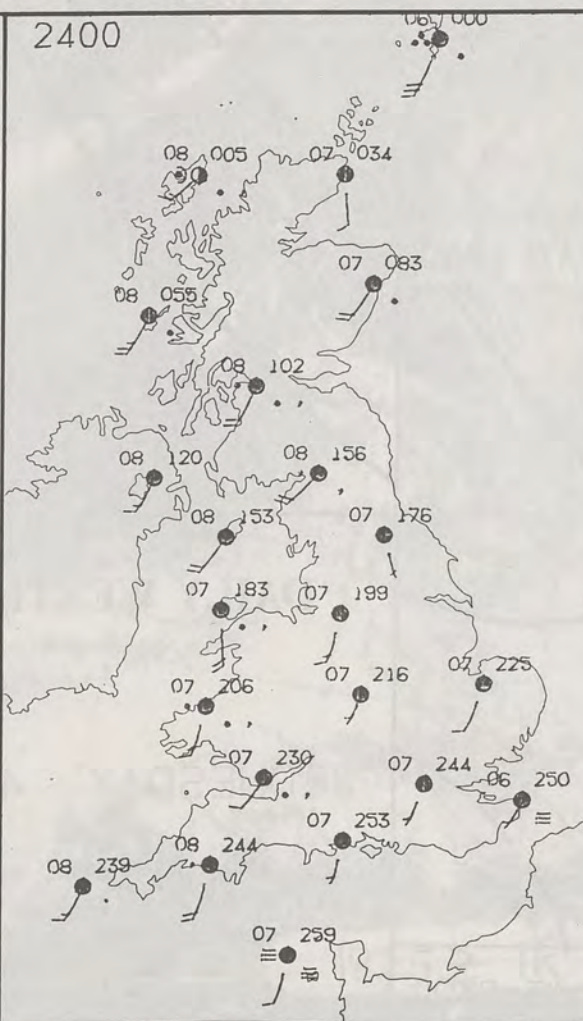

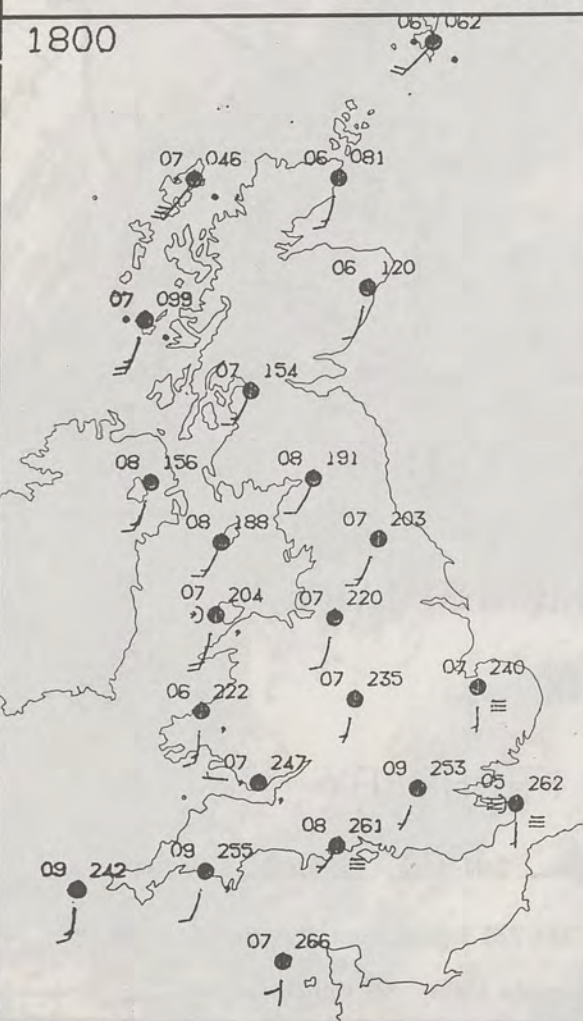

It was generally mild, though temperatures were still only near normal towards the east and southeast coasts of England - areas affected by the thickest fog.

PLOTTED SURFACE OBSERVATIONS

THURSDAY
5 FEBRUARY 1987

SUMMARY OF BRITISH WEATHER

A band of rain crossed Scotland and Northern Ireland overnight reaching northwest England and West Wales by the morning. The rest of England and Wales had a cloudy, dry night and as south-westerly winds freshened it cleared away the fog from eastern parts of the English Channel and the Thames Estuary.

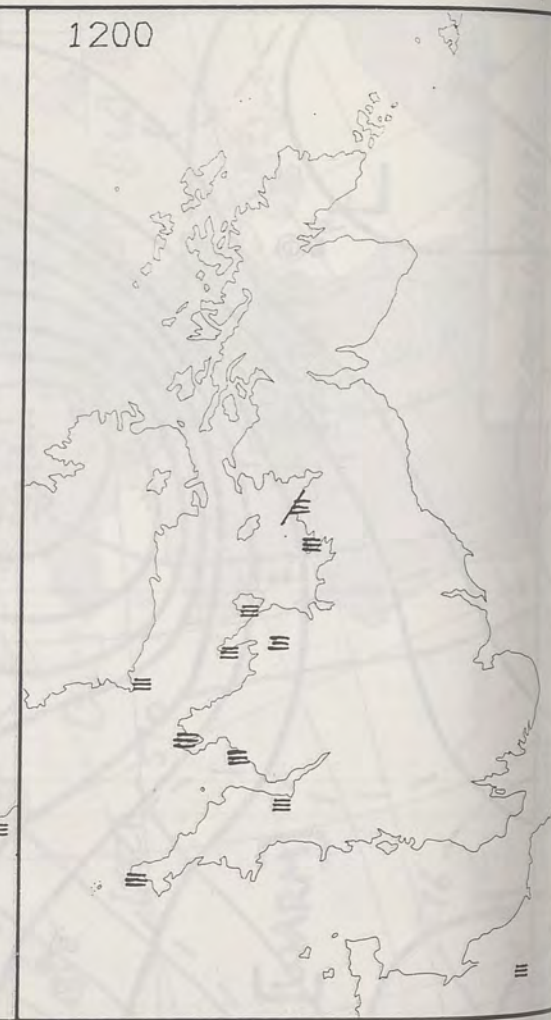

During the day central and southern parts of England and Wales stayed cloudy with some drizzly rain, especially around southwestern coasts and hills.

Over northern England, and much of Scotland, it was a brighter day - places to the east of high ground having the best of the sunshine. Northern Ireland and western parts of Scotland had a showery day with some longer spells of rain.

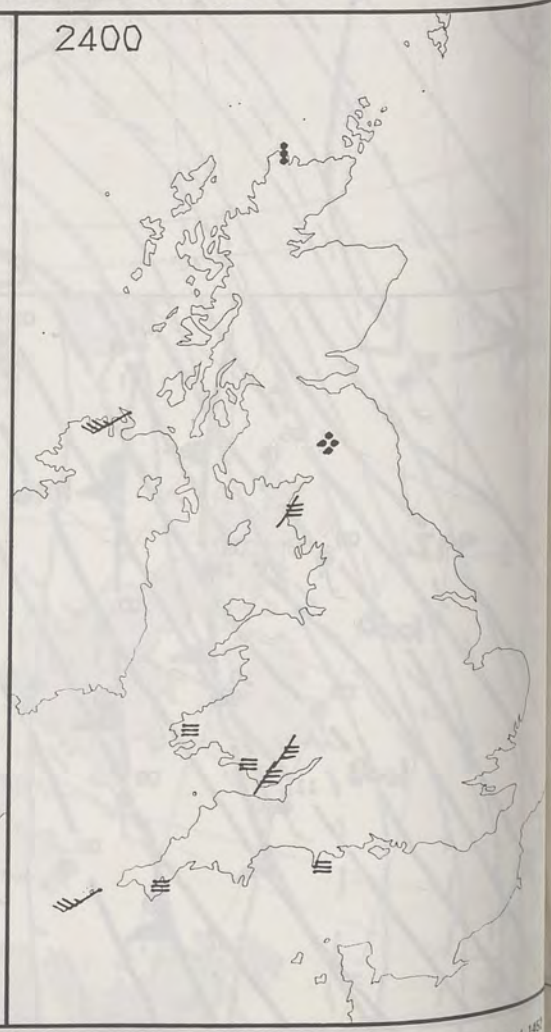

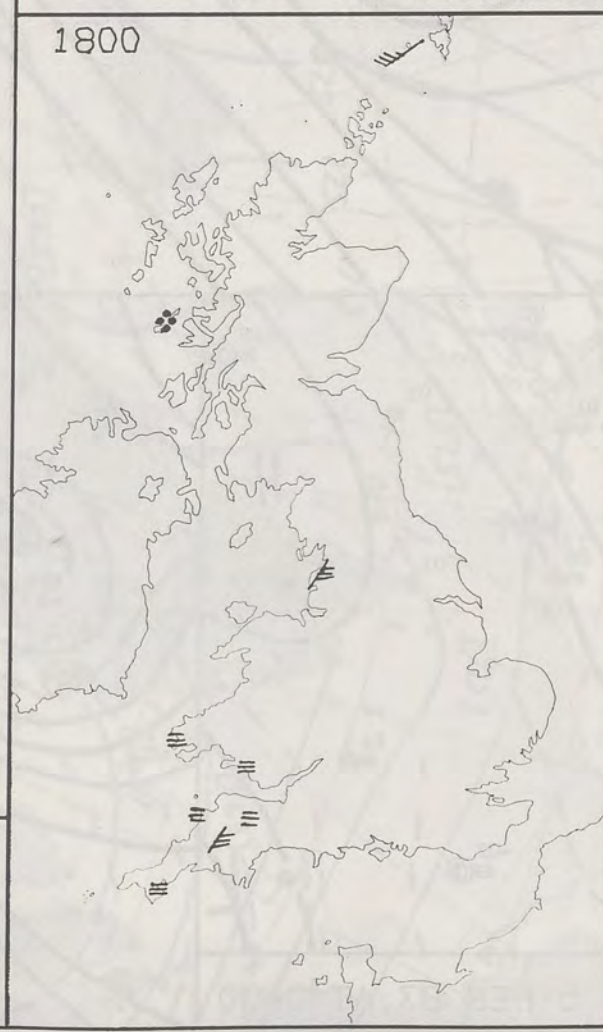

It was mild or very mild in most districts but temperatures were nearer normal in the extreme southeast of England.

FRIDAY
6 FEBRUARY 1987

SUMMARY OF BRITISH WEATHER

It was a cloudy, mild night over all of Britain with some outbreaks of rain, especially in the north and west.

During the day southern parts of England and Wales stayed cloudy with light rain at times. The rest of England and Wales were mostly dry with some sunny spells, especially to the east of high ground.

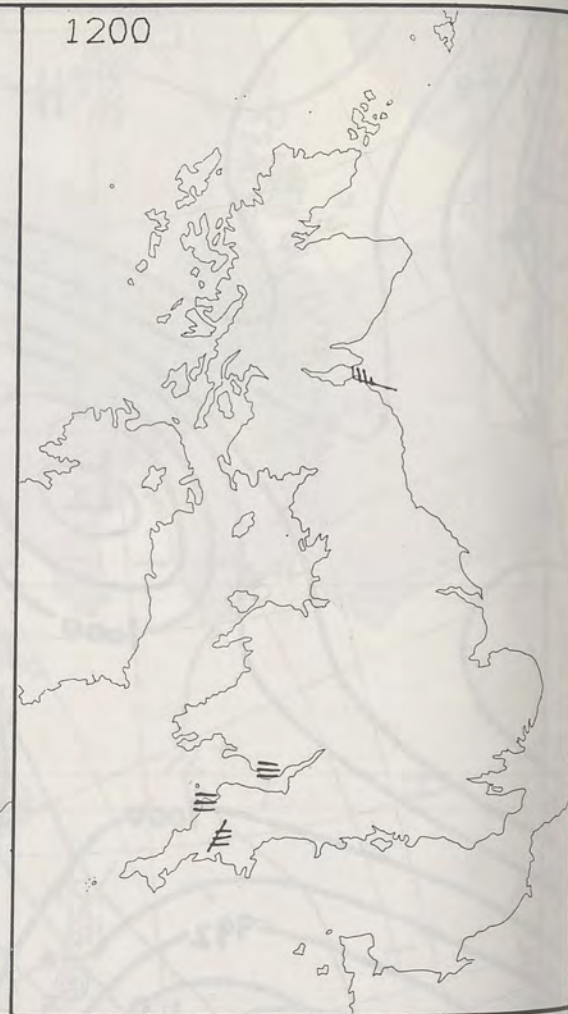

Scotland and Northern Ireland had a showery day with some longer spells of rain in the north of Scotland. There were some sunny spells, especially in the south-east of Scotland.

It was a day of strong westerly winds generally, especially in the north in the morning. At Leeds a gust of 72 knots (83 mph) was recorded.

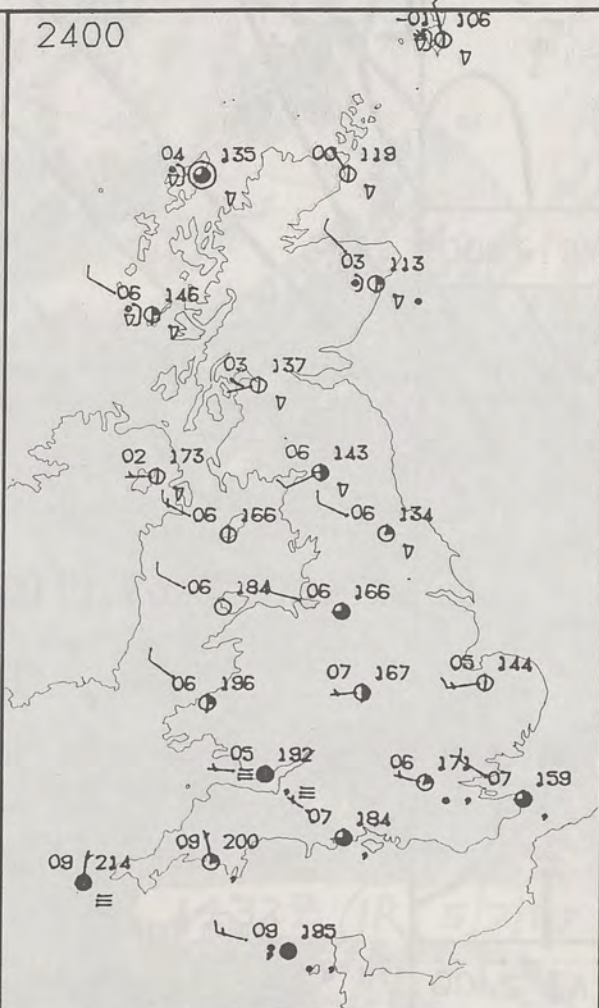

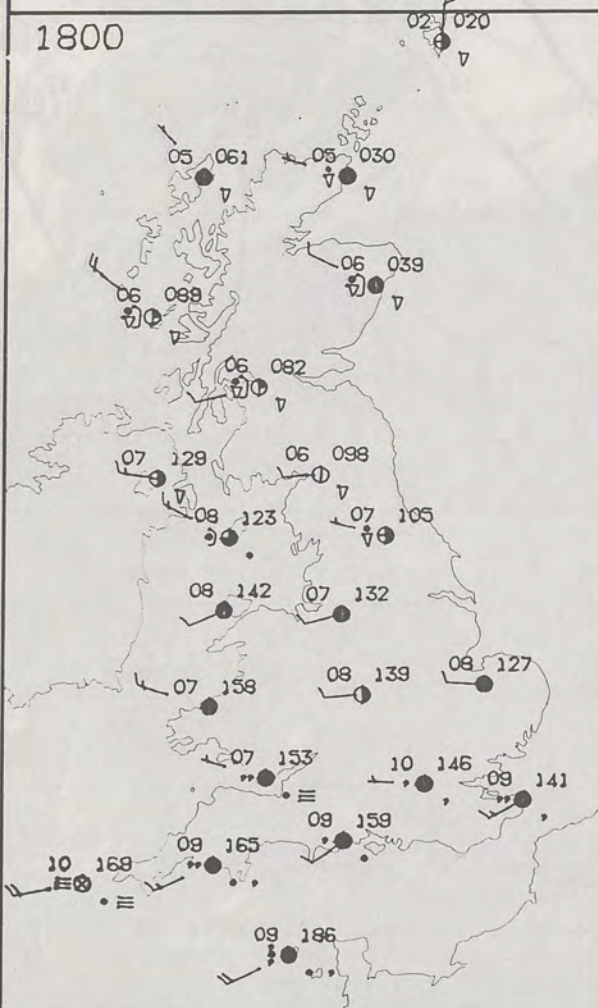

It was a mild or very mild day in most parts but in the Northern Isles it turned colder in the evening.

SATURDAY
7 FEBRUARY 1987

SUMMARY OF BRITISH WEATHER

Apart from a few mist patches in the southwest and one or two light showers in the northeast it was a fine night over most of the United Kingdom.

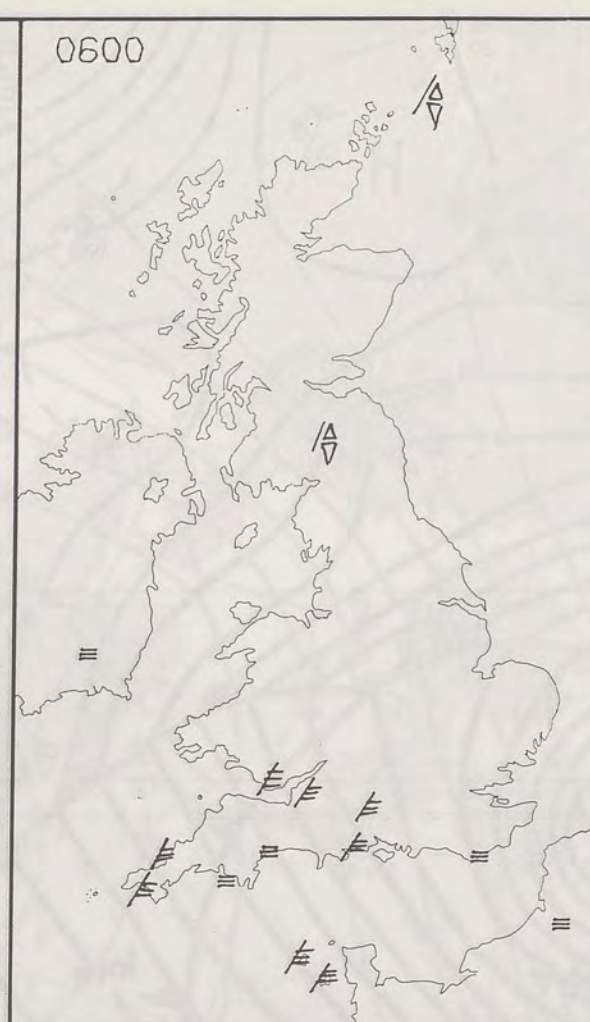

In eastern regions it was a dry day with sunny periods but cloud increased during the afternoon and outbreaks of rain spread from the west during the evening. In Northern Ireland and western Britain the morning was dry and bright but rain reached southwest England by midday and rain extended to all western parts by dusk or soon after.

Temperatures were near normal in the north and it was mild in the south.

SUMMARY
OF
BRITISH WEATHER

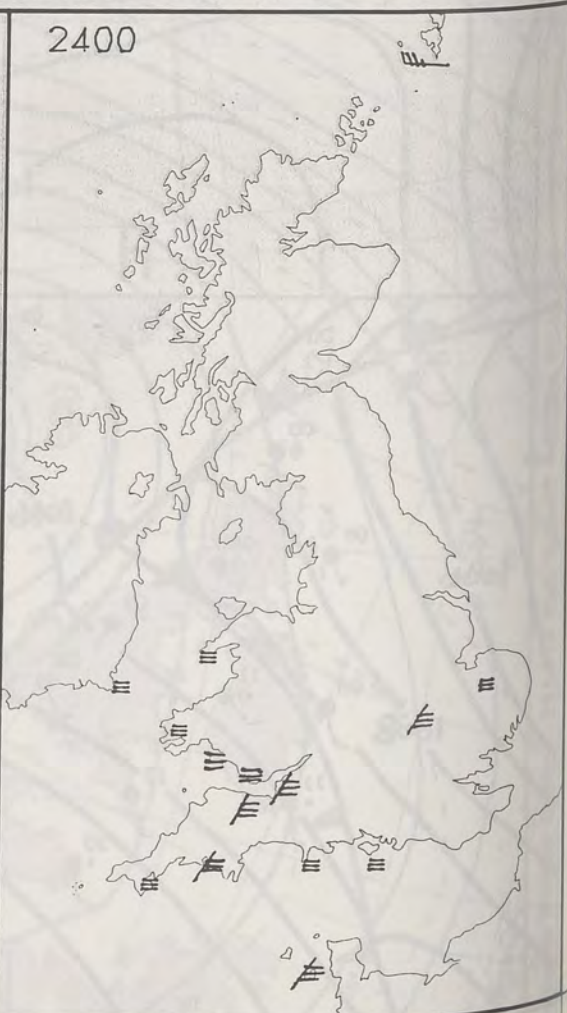

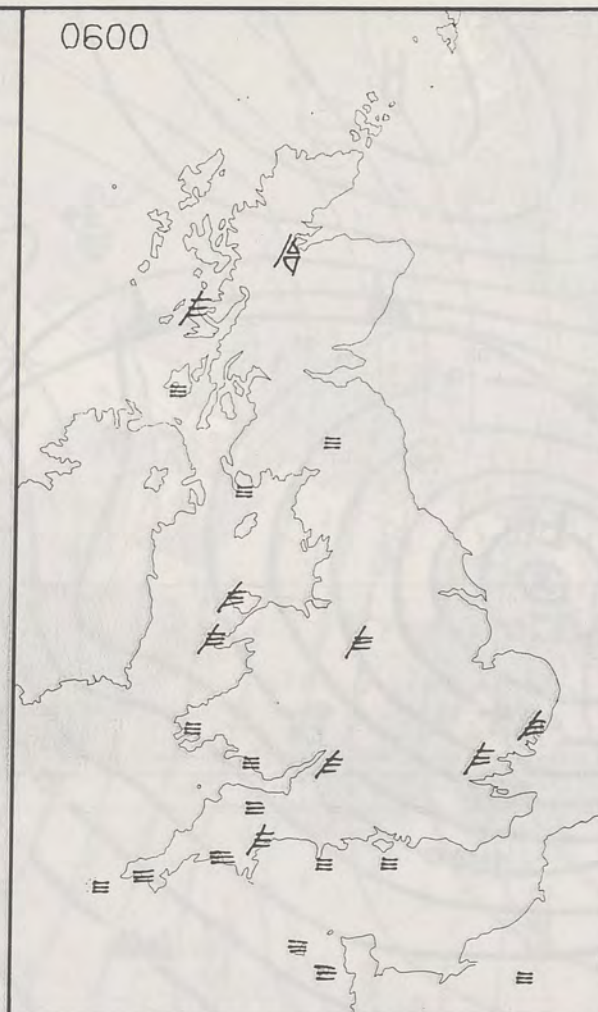

It was generally cloudy with out-breaks of rain or drizzle at first. By daybreak it was dry in Scotland and Northern Ireland and most places remained dry with bright or sunny intervals but in western Scotland there were a few light showers.

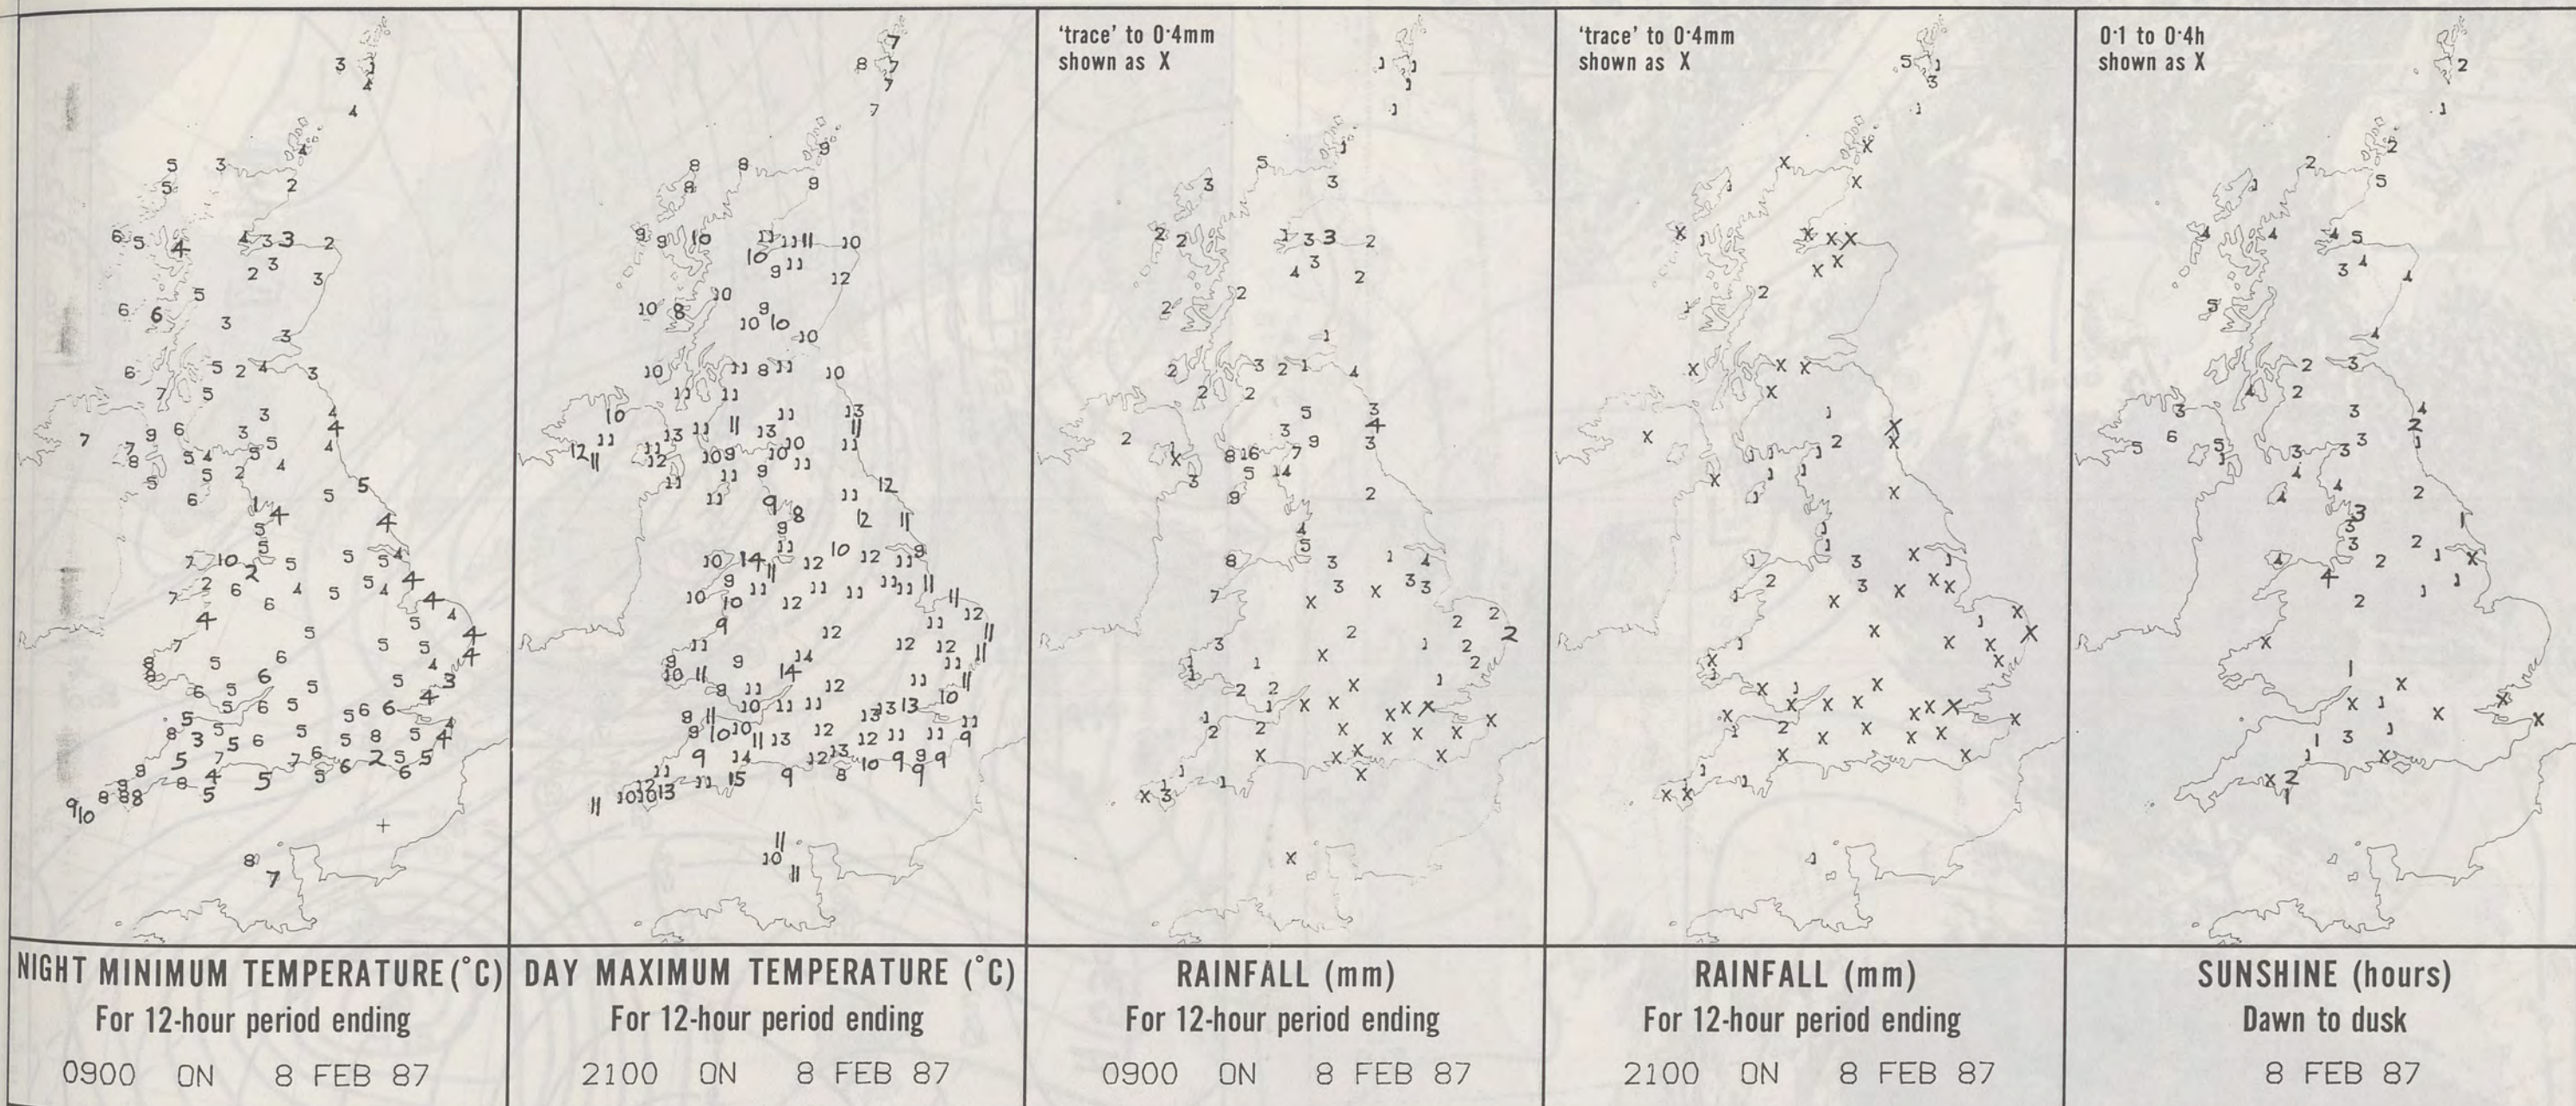

In northern England patches of light rain and drizzle died out and the afternoon was dry and bright. In central and southern England and Wales much of the day was dull and damp with drizzle at times but it turned brighter later in the afternoon; in southern and western coastal regions misty weather persisted.

It was mostly very mild.

PLOTTED SURFACE OBSERVATIONS

MONDAY
9 FEBRUARY 1987

**SUMMARY
OF
BRITISH WEATHER**

In northern and western Scotland there were a few showers overnight, but much of Scotland had a clear frosty night. Northeast England was clear for a while too but wet weather with heavy rain spread to much of England and to Wales and Northern Ireland before daybreak.

There was a little sunshine, mainly on Shetland but most places had a cloudy day. England had rain and drizzle with heavy rain in the north.

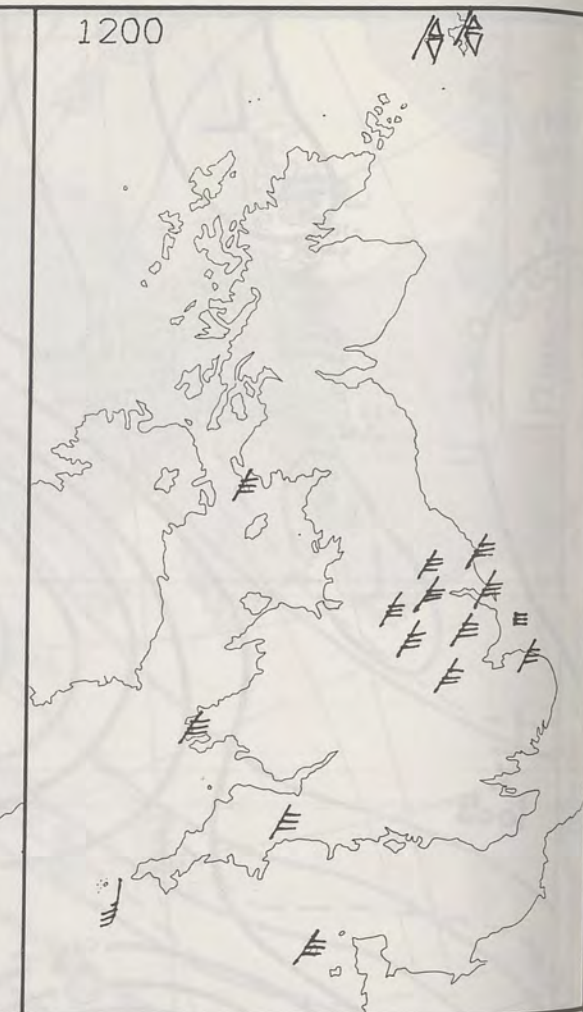

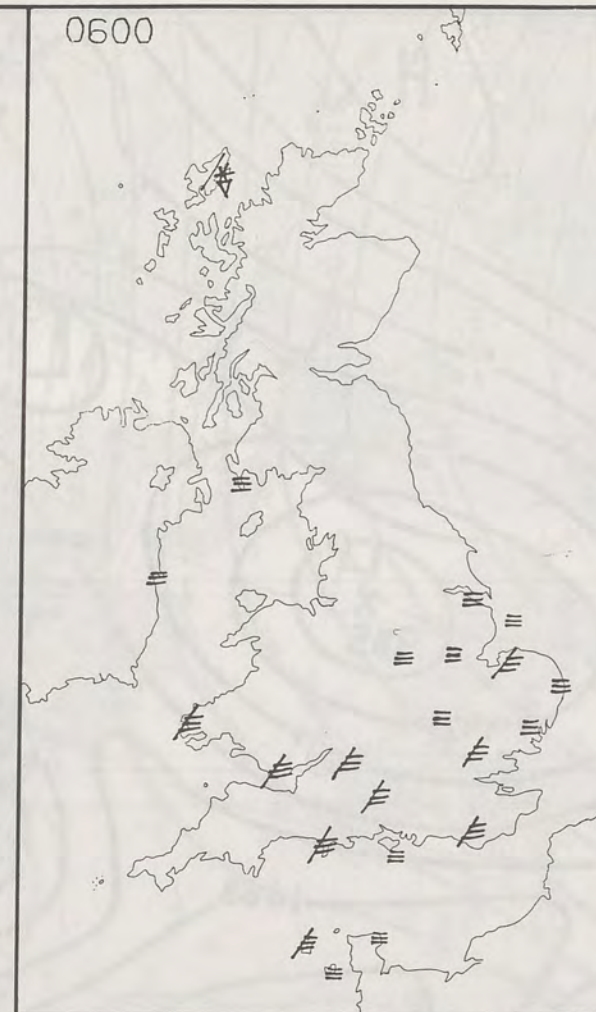

Wales and Northern Ireland were wet for most of the day, with a lot of heavy rain and this wet weather spread to most places in Scotland during the day but the extreme north of Scotland had only a few showers.

England and Wales were mild or very mild but Scotland and Northern Ireland had temperatures close to normal.

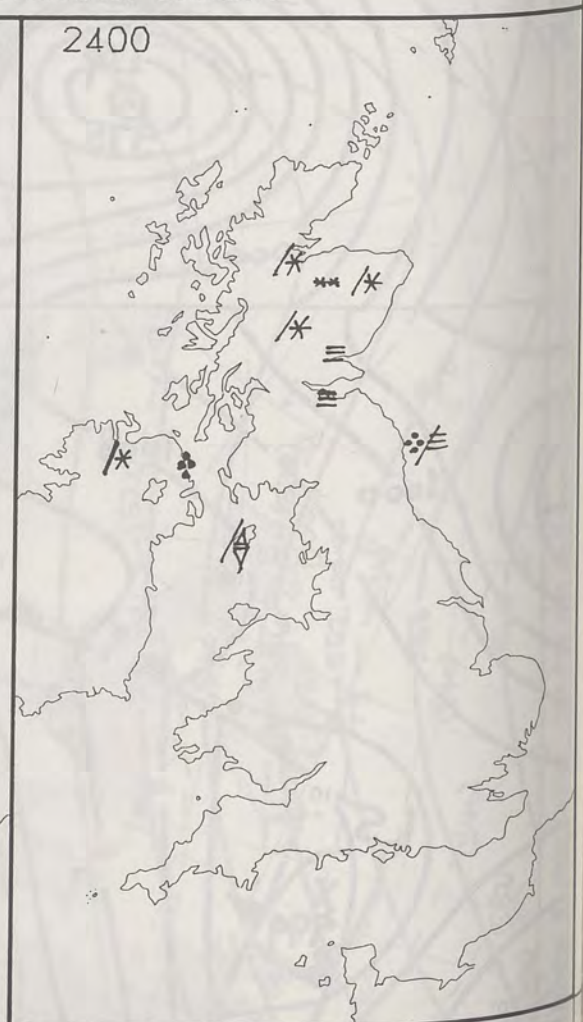

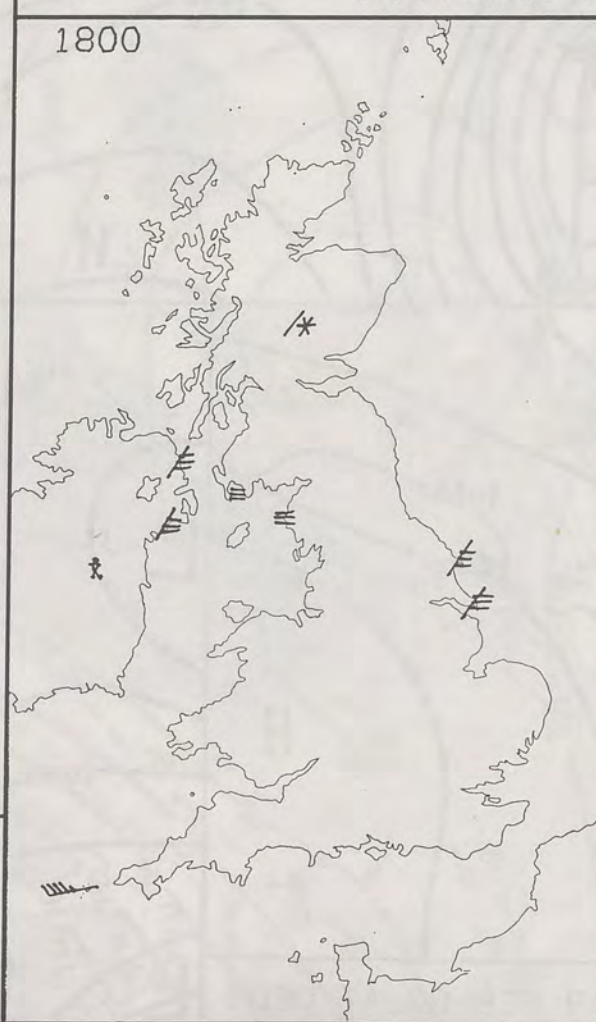

In southwest England and South Wales the winds reached gale force.

TUESDAY
10 FEBRUARY 1987

SUMMARY
OF
BRITISH WEATHER

Northern England, Wales and most of Scotland had a wet night, with heavy rain and sleet and snow, especially on hills.

Northern Ireland had showers and central and southern England had a few showers as well.

Wales, central and southern England had a lot of dry, sunny weather, no more than a few scattered showers.

Northern England and Northern Ireland were sunny at times, there were showers, although in northern England it turned dry nearly everywhere in the afternoon.

Most places in Scotland were wet for a while, with some heavy rain and sleet as well. Much of Scotland brightened up during the day and turned mainly dry and quite sunny, but the extreme northeast along with Orkney and Shetland stayed dull and wet all day with sleet and snow at times.

Temperatures in most places were close to or a little above normal however parts of Scotland were rather cold and many places were windy in the morning.

11 FEBRUARY 1987

SUMMARY
OF
BRITISH WEATHER

Northeast Scotland was cloudy throughout with further outbreaks of rain or sleet, and some snow in the mountains.

Southern and western Scotland and much of northern England, as well as Anglesey, were generally dry, with sunny spells during the day, though there were one or two showers.

Most of East Anglia, southeast England and the south coast along to Dorset was dry and bright, but, again, there were isolated showers. There was patchy fog at first, and this proved rather persistent until late in the day along parts of the East Anglian coast. Fog affected some areas again in the evening.

Over much of Wales, central and southwest England it was cloudy with outbreaks of rain, though the extreme southwest brightened up later.

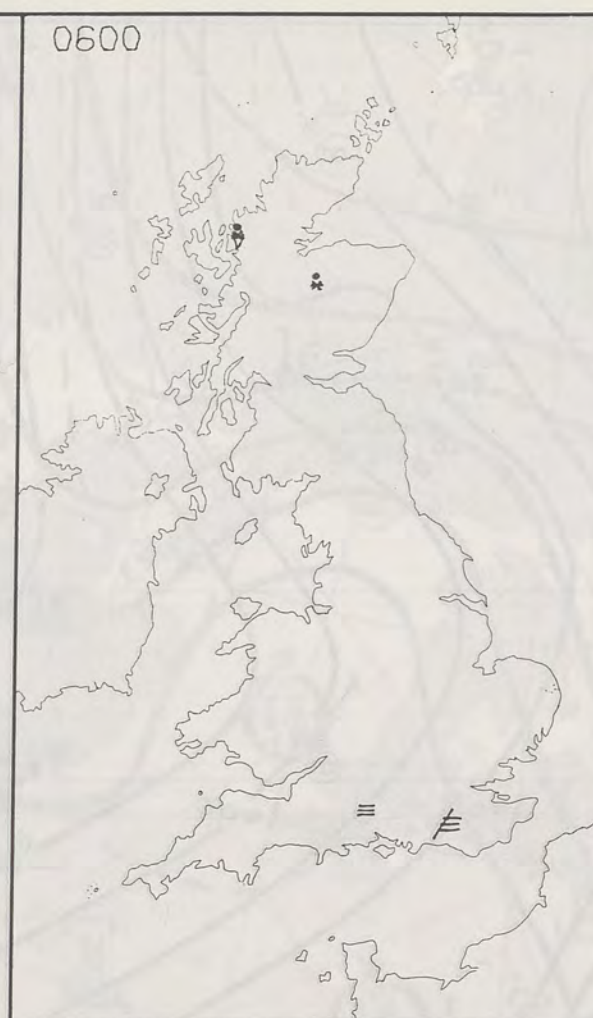

Temperatures were near or rather above normal in the brighter areas, and mostly rather below normal in the wetter areas.

Northern Ireland was cloudy and cold, but mostly dry. It became foggy in the evening.

THURSDAY
12 FEBRUARY 1987SUMMARY
OF
BRITISH WEATHER

It was a wet night in most areas in a zone extending from west Sussex through west London up to Lincolnshire and Humberside, with the heaviest and most persistent rain in the more northern areas.

The rain area edged a little eastwards and gradually petered out during the day, but it was still damp around the Wash in the late evening. Wet snow fell for a time in the morning in parts of the East Midlands and Lincolnshire, settling briefly in some areas.

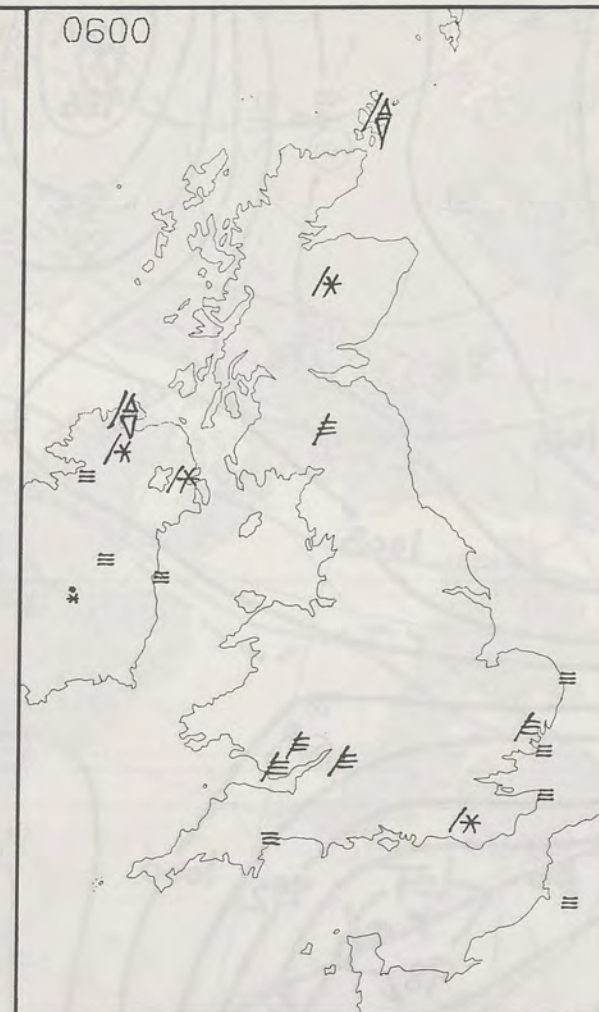

Elsewhere over the British Isles there was a good deal of dry weather, though there were some showers, with a little snow in places. There were a few patches of fog and some slight frost at first; the fog was chiefly in the extreme southeast of England, where there were then some brighter intervals during the day. Generally, though, it was western Britain and Northern Ireland that had the best of the sunshine during the day.

Temperatures were mostly not far from normal, but it was rather cold in parts of eastern England.

PLOTTED SURFACE OBSERVATIONS

FRIDAY
13 FEBRUARY 1987

SUMMARY
OF
BRITISH WEATHER

Most of the country had a dry, frosty night with some fog patches in a few inland parts. Eastern parts of Scotland and northeast England kept some cloud with some light rain or snow in places.

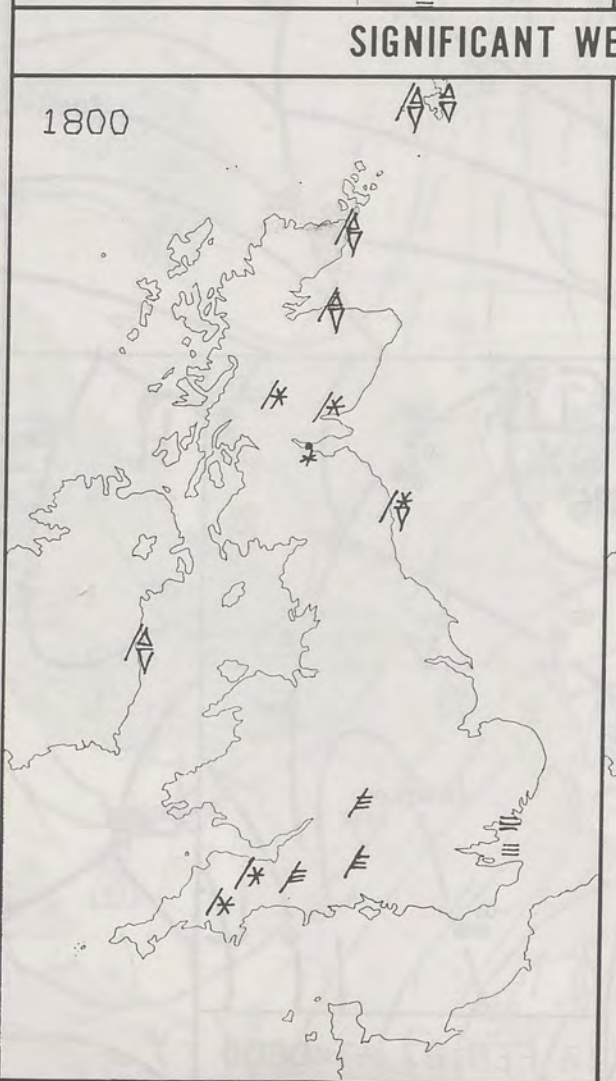

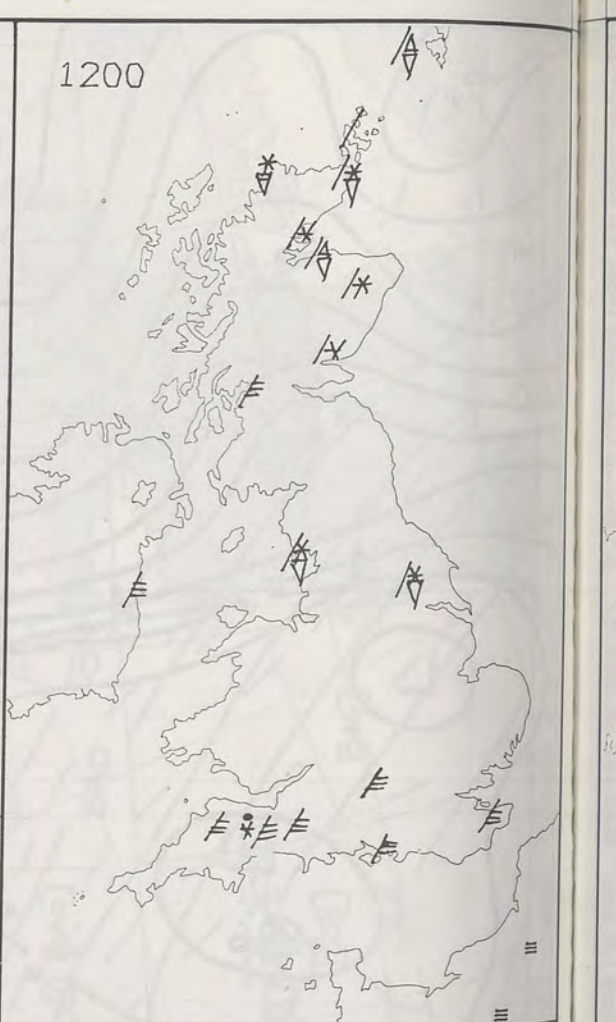

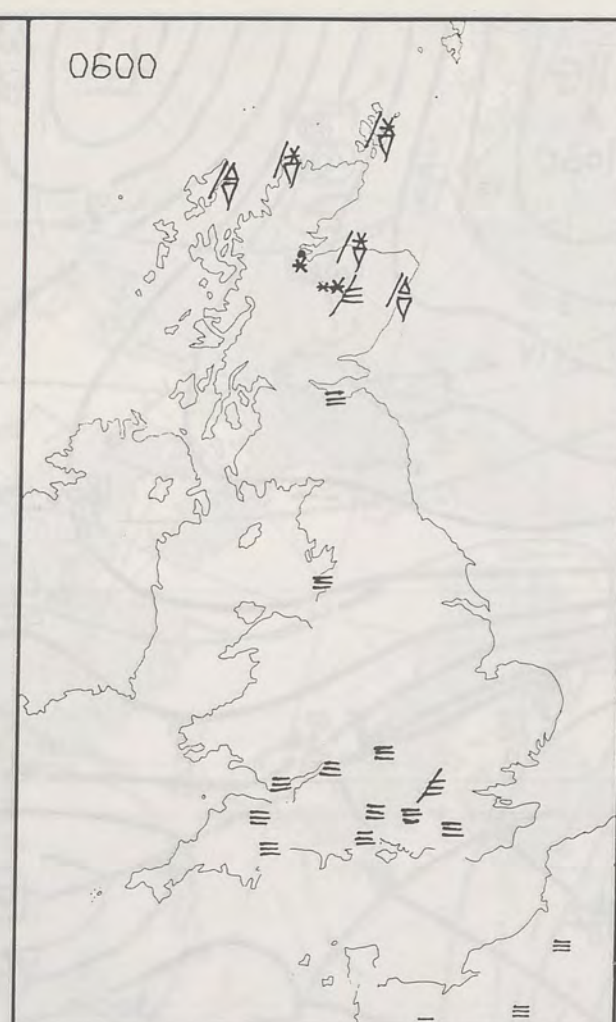

Cloud increased in the southwest with some rain into Cornwall by dawn. This rain spread to South Wales and the West Country during the day and across the Midlands and the rest of southern England in the evening.

Southeast Scotland and the extreme northeast of England had some wintry showers, but for most remaining parts it was a dry day with some sunny spells - the best of the sunshine in the east and north - though sunshine amounts were very variable.

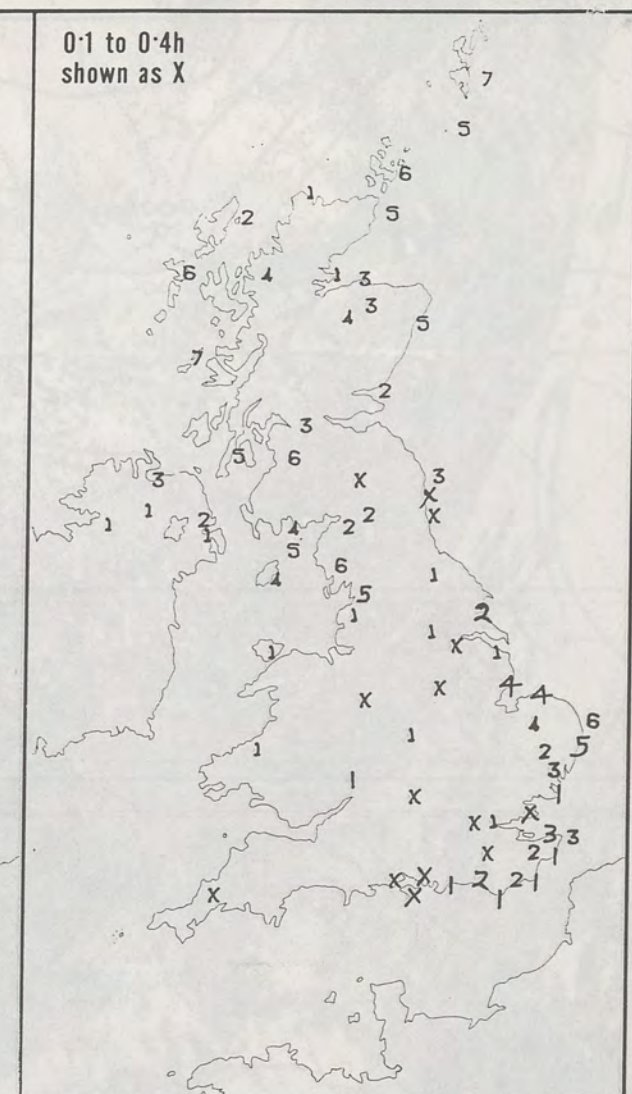

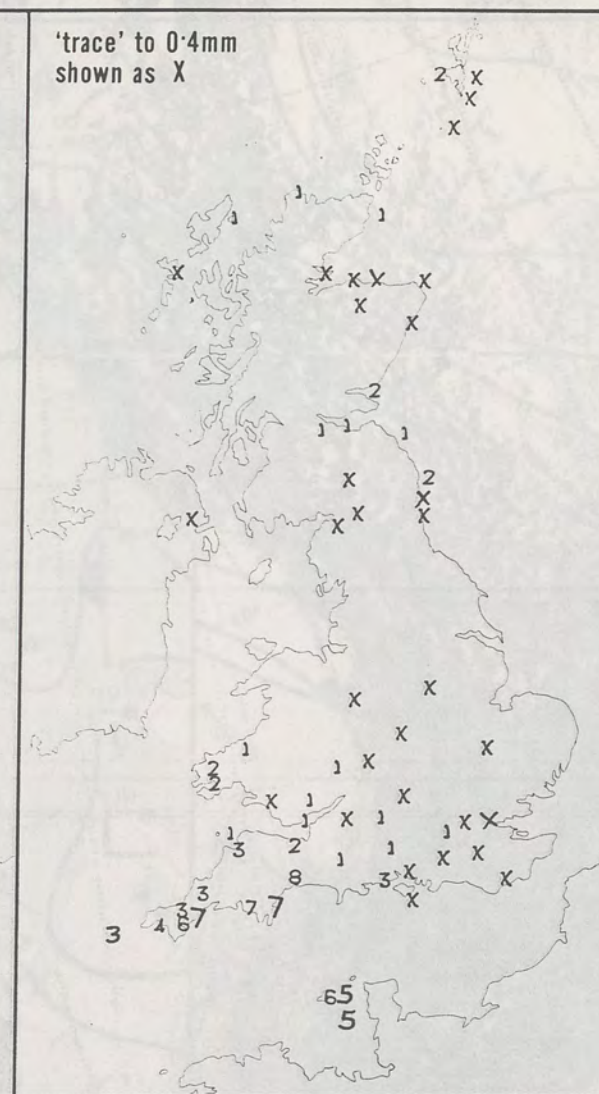

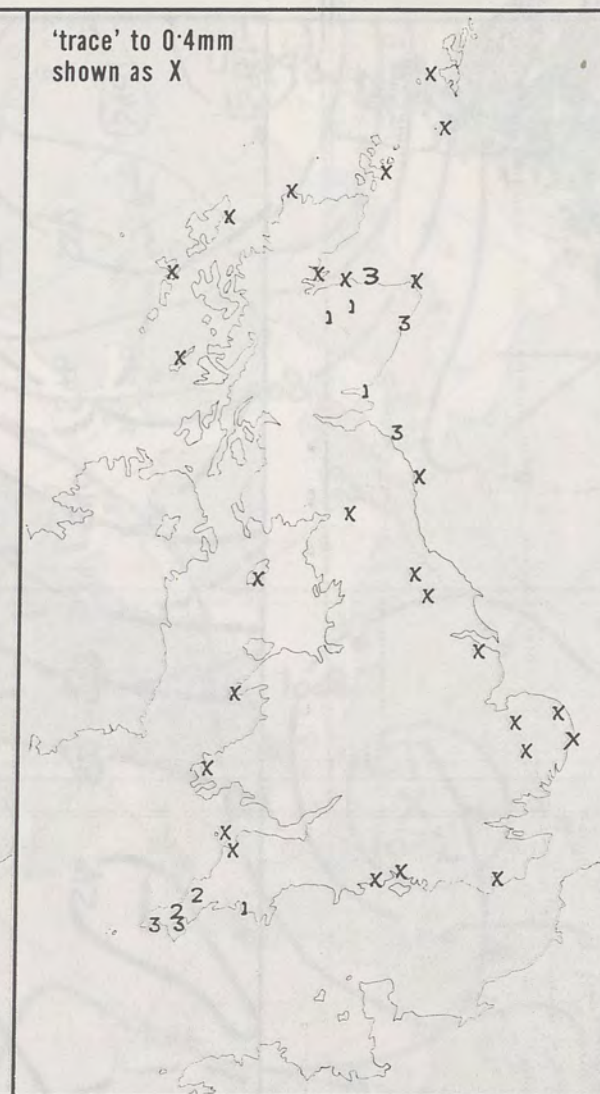

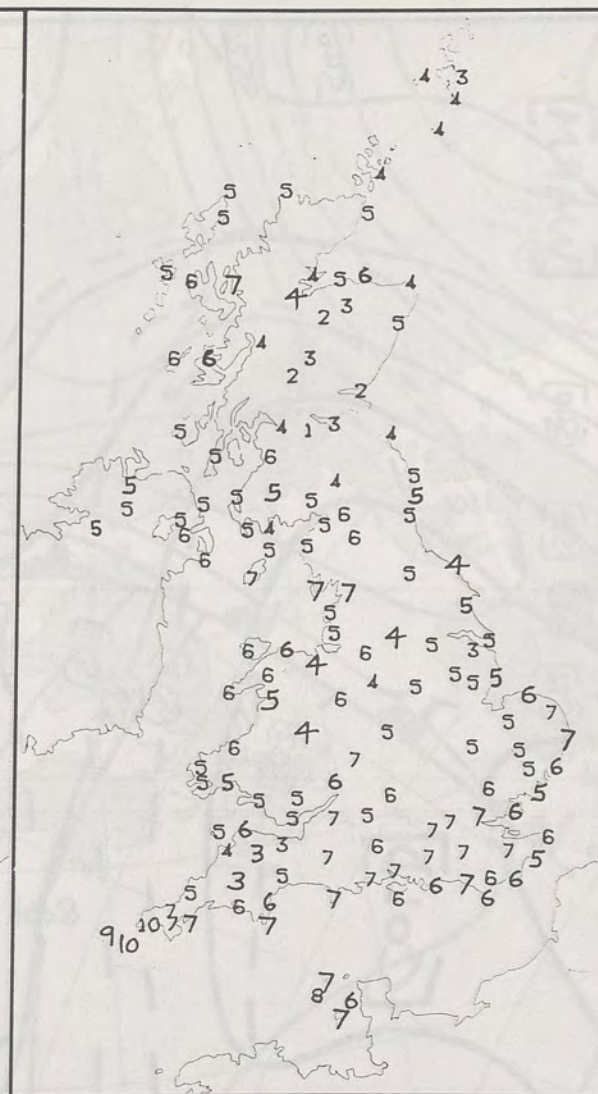

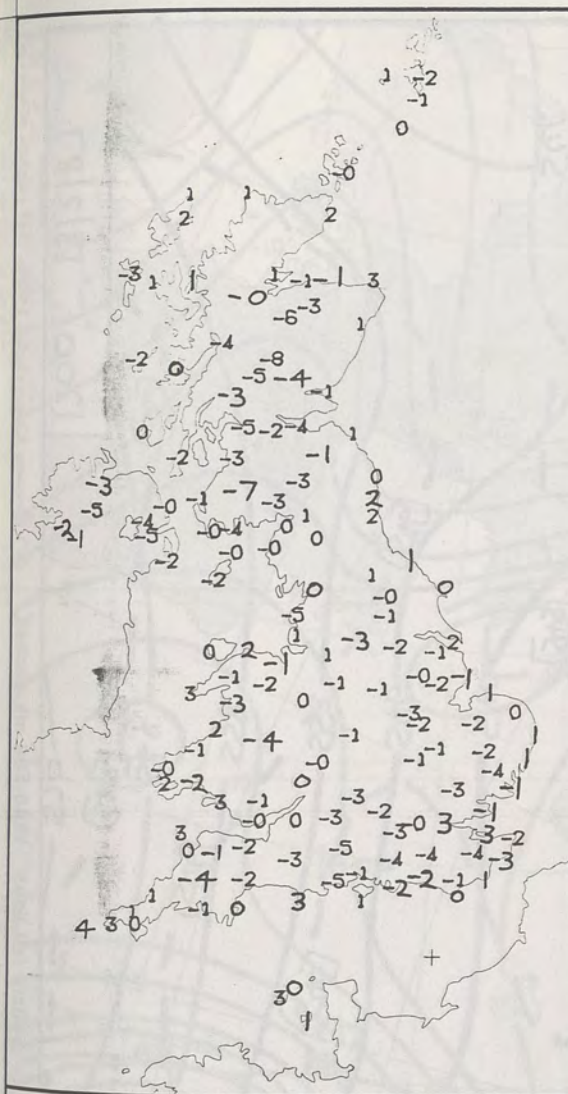

Temperatures were near or a little below normal.

PLOTTED SURFACE OBSERVATIONS

SATURDAY
14 FEBRUARY 1987

SUMMARY
OF
BRITISH WEATHER

It was a wet night in the Midlands and southern parts of England, with some wet snow over higher ground in the morning. It turned drier in these southern parts but in east Kent rain continued into the evening.

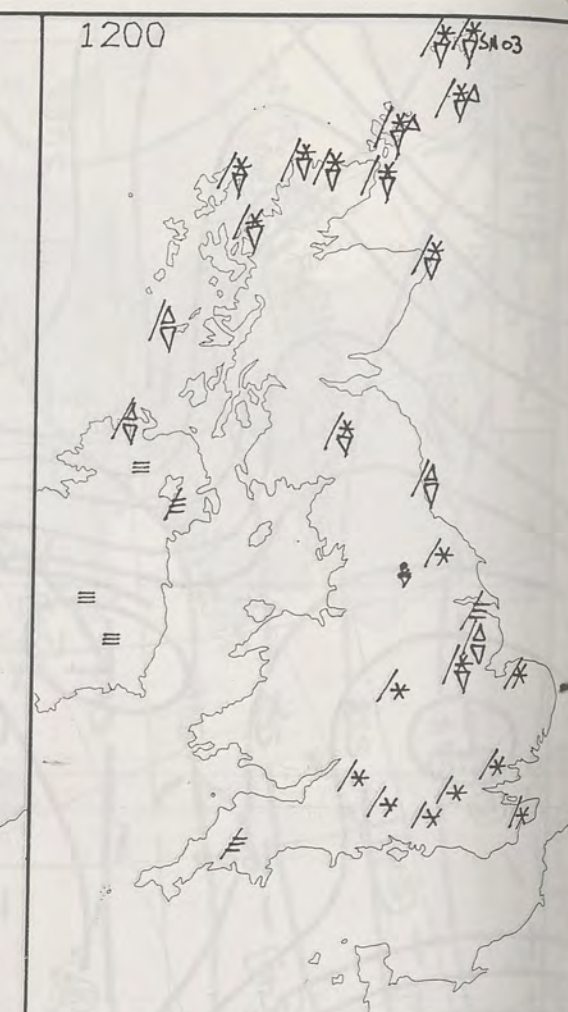

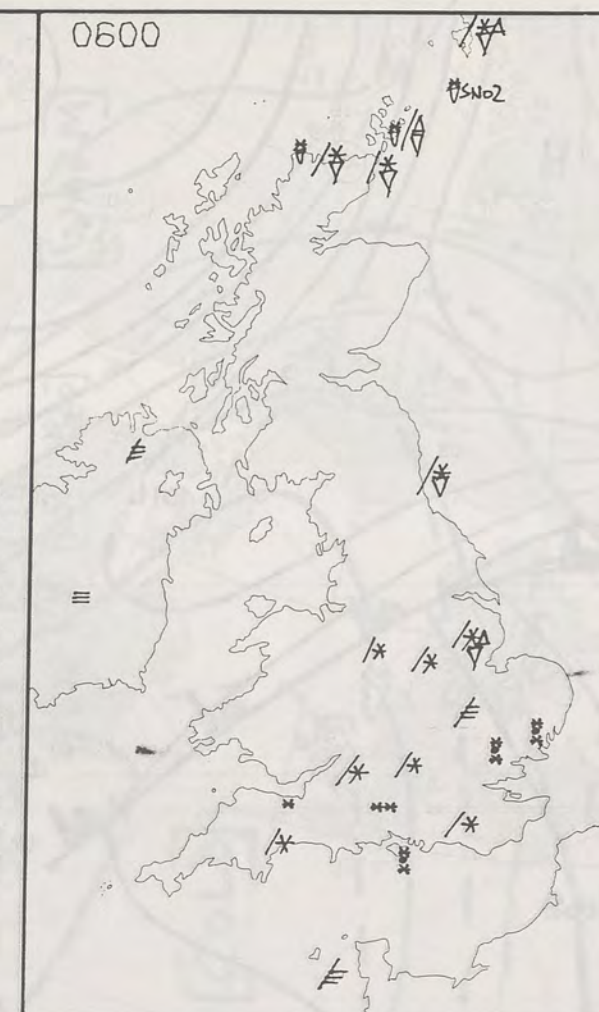

Over the rest of England and Wales there was a lot of cloud overnight but it brightened up in most places during the day - the best of the sunshine in Devon, Cornwall and western parts of Wales.

Scotland and Northern Ireland had a mostly dry and frosty night. The far north of Scotland had snow showers right through the day giving a covering of snow in places by the evening, but the rest of Scotland and Northern Ireland had a dry and mainly sunny day.

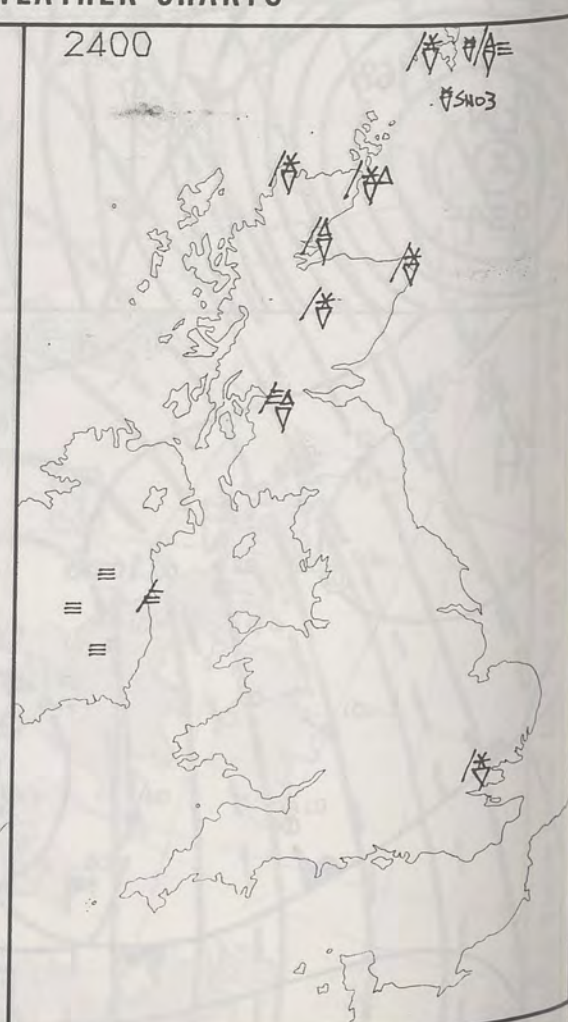

It was a rather cold day in many central and eastern areas but in the sunnier western regions temperatures rose to near average.

SUNDAY
15 FEBRUARY 1987

**SUMMARY
OF
BRITISH WEATHER**

In Scotland brief snow showers were mostly confined to north-eastern parts.

In eastern counties of England there were isolated wintry showers and in the Isle of Man there were several showers in the morning.

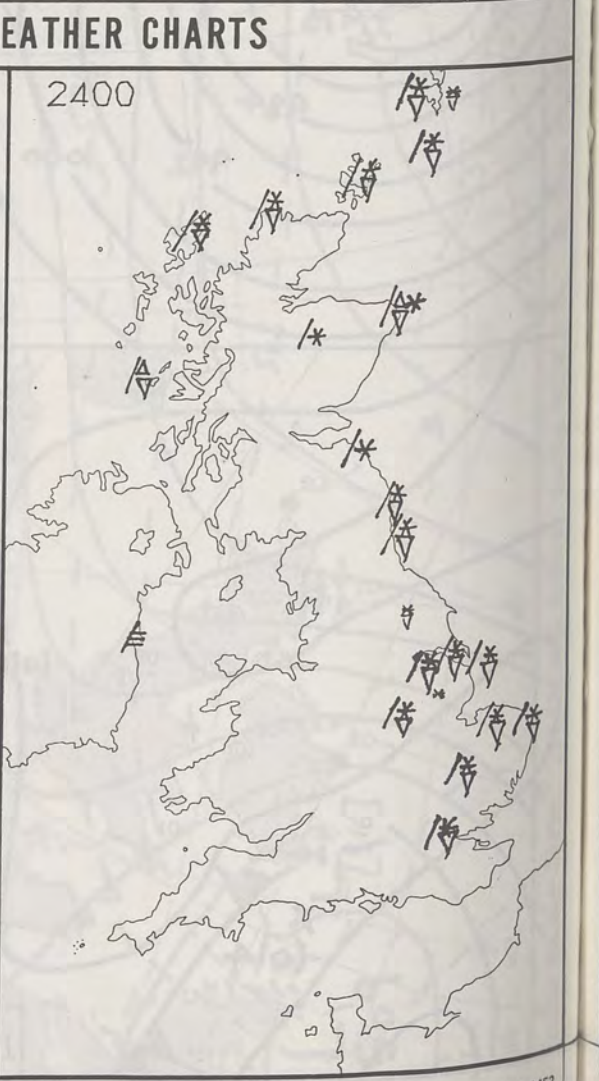

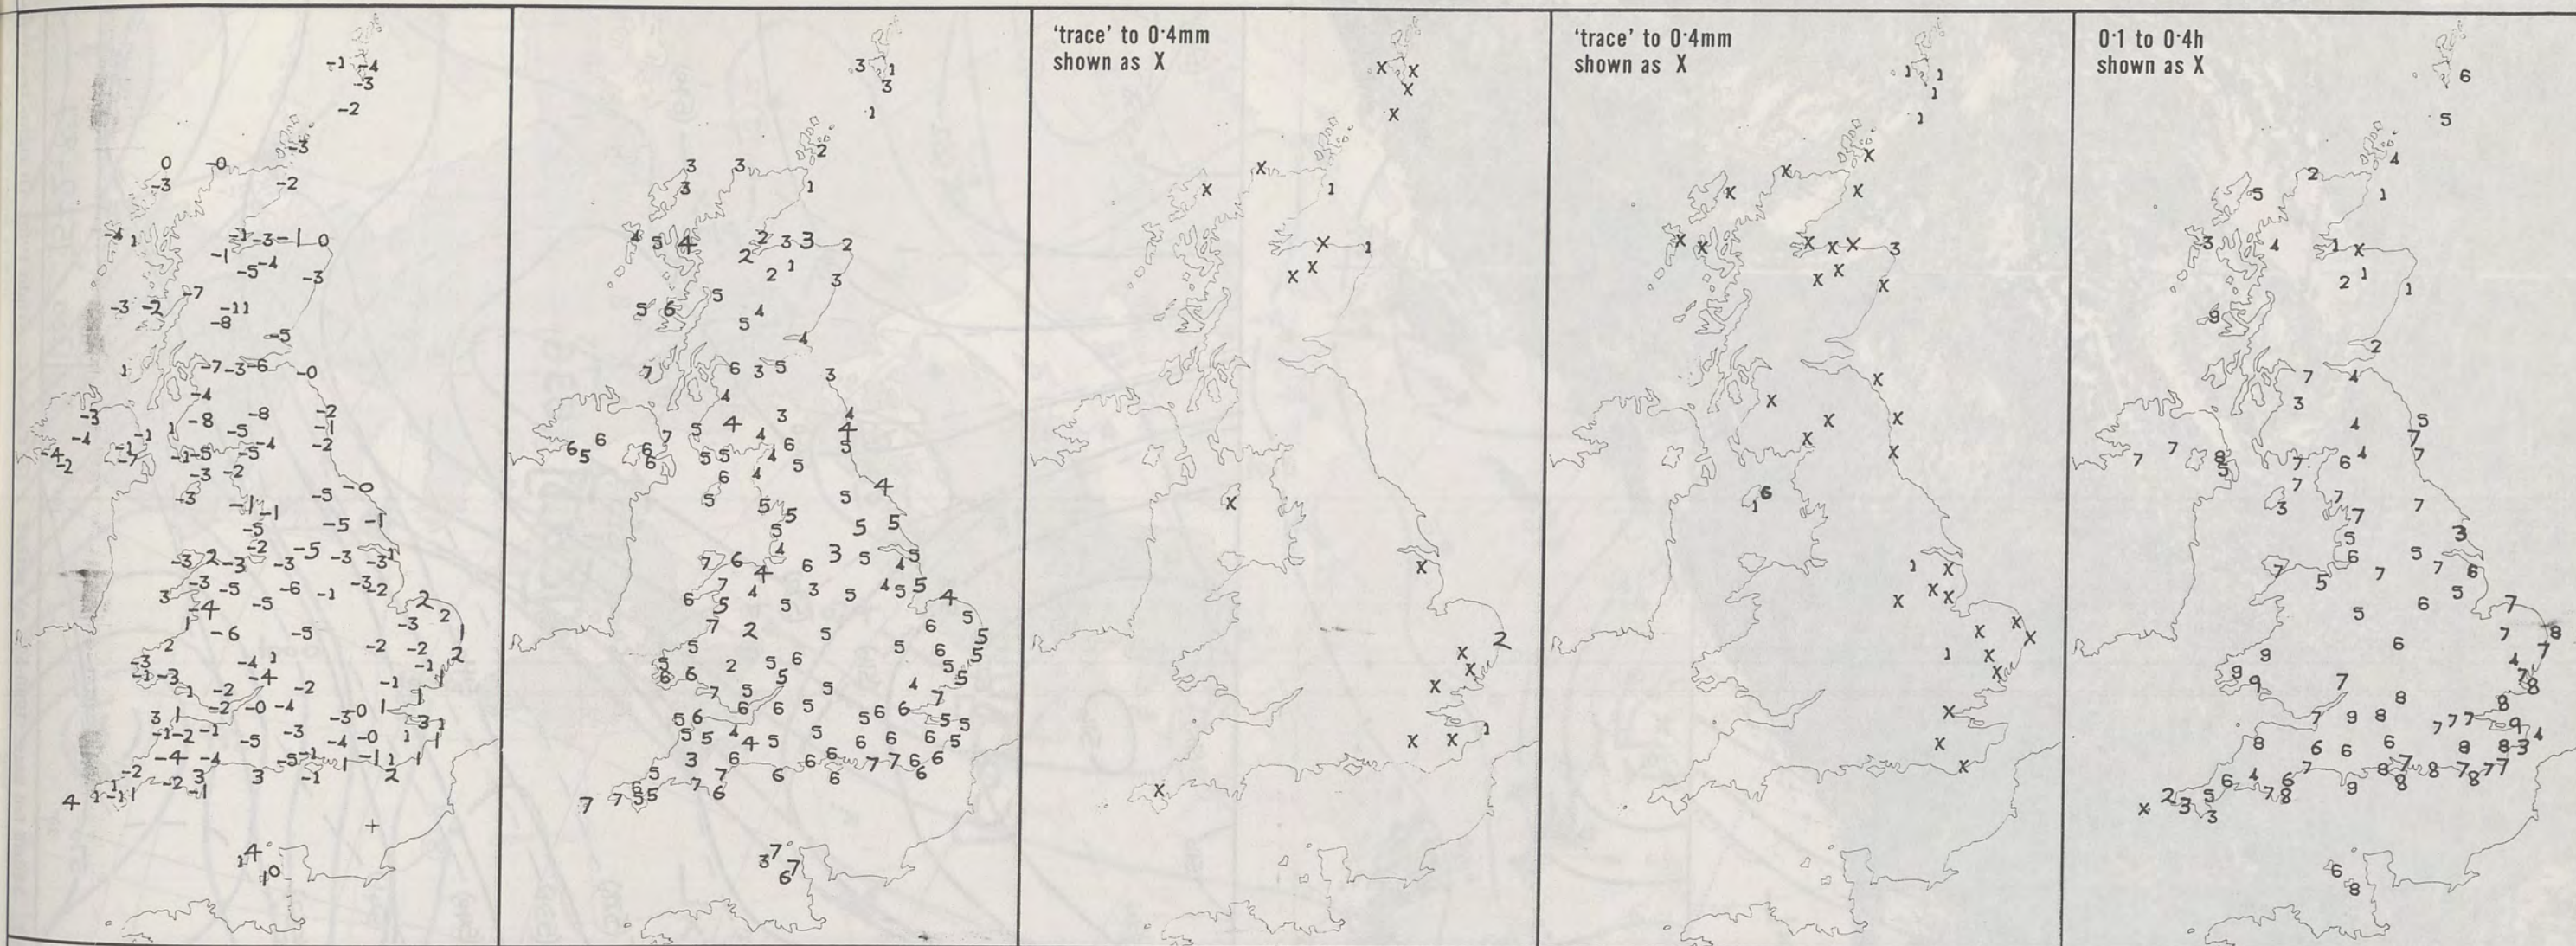

Over much of the United Kingdom it was dry with mainly clear skies. Patchy cloud developed during the day but most places had a good deal of sunshine.

There was a widespread frost overnight, severe in places, and it was a rather cold day generally.

SUMMARY
OF
BRITISH WEATHER

It was a fine, frosty night in most regions but in Scotland and eastern England there were snow showers, especially in coastal regions.

During the day there were scattered snow showers in east and north facing coastal areas and some light snow showers developed further inland in northern and central England, where it was rather cloudy. Elsewhere there were sunny spells and most southern and western districts had a mainly sunny day.

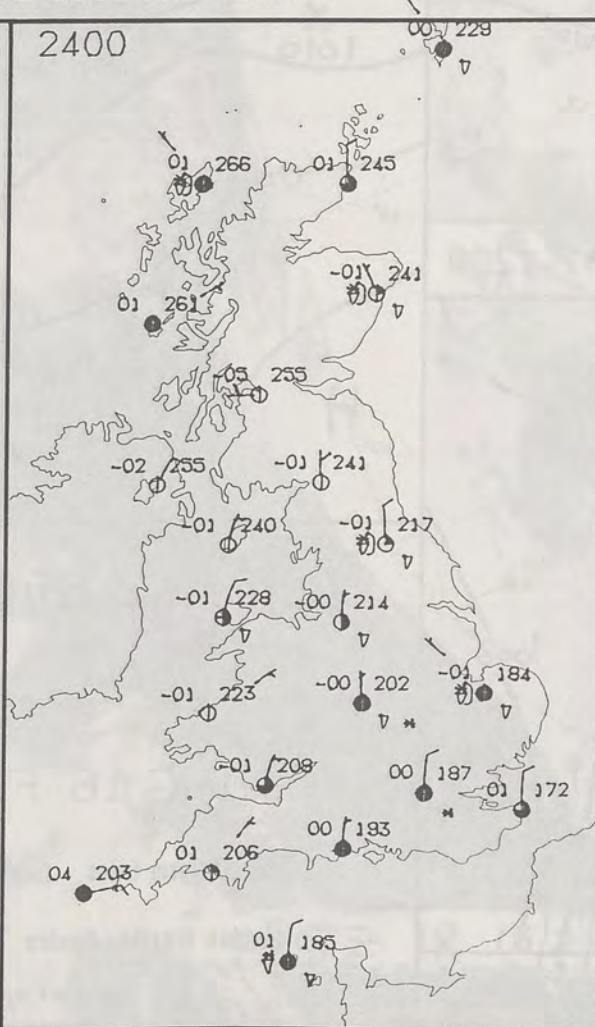

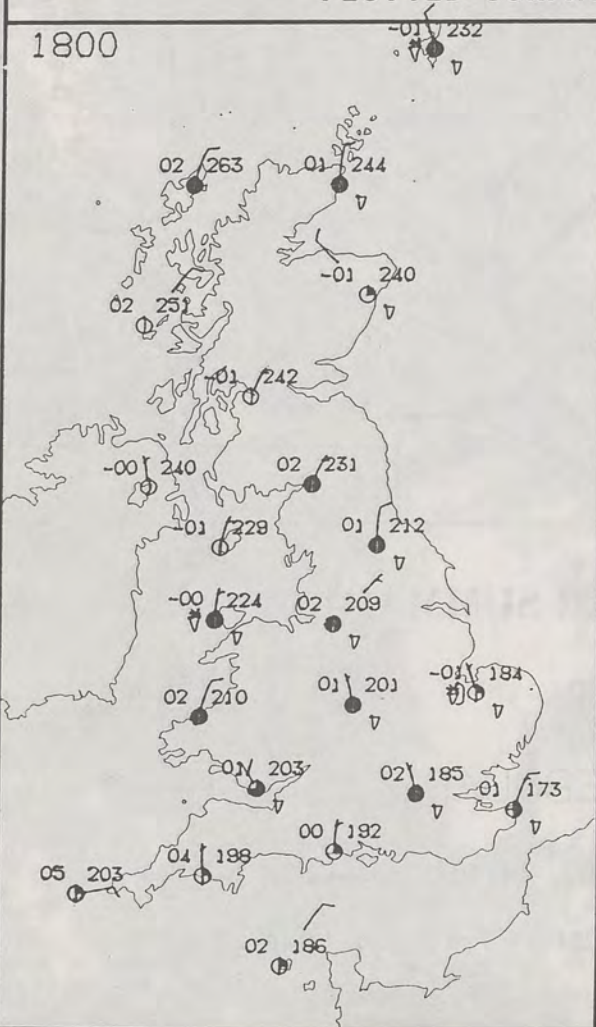

It was a cold day in most places, with frost soon returning in the evening.

PLOTTED SURFACE OBSERVATIONS

WEDNESDAY
18 FEBRUARY 1987

SUMMARY OF BRITISH WEATHER

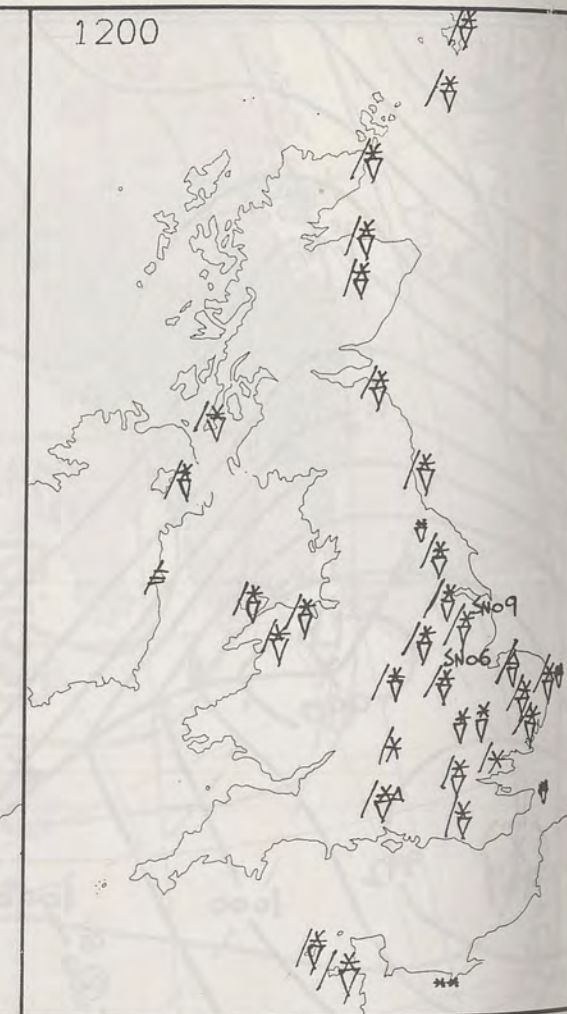

Eastern parts of England had some patchy cloud overnight with some snow showers, the rest of England and Wales having a dry, frosty night. Scotland was rather cloudy with some snow showers in the Northern Isles. Northern Ireland had a frosty night with some patchy fog - this clearing soon after dawn.

During the day, east and south-eastern parts of England had further snow showers with a few heavy ones. Remaining parts were mostly dry and quite sunny, especially in the west and north. Western parts of Scotland turned cloudy during the afternoon with some rain, sleet and snow in places during the evening. In England, Wales and Northern Ireland it became frosty again in the evening.

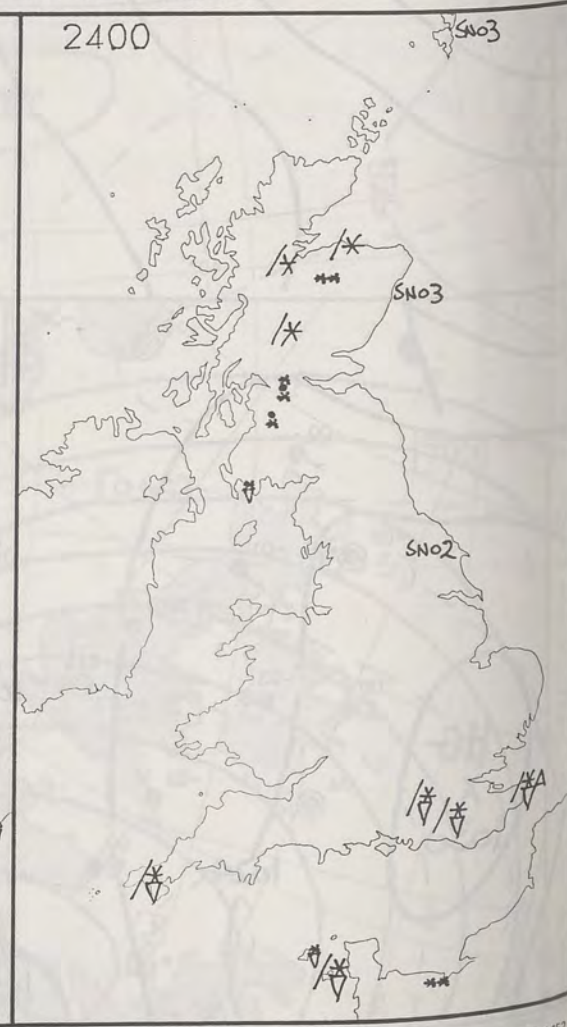

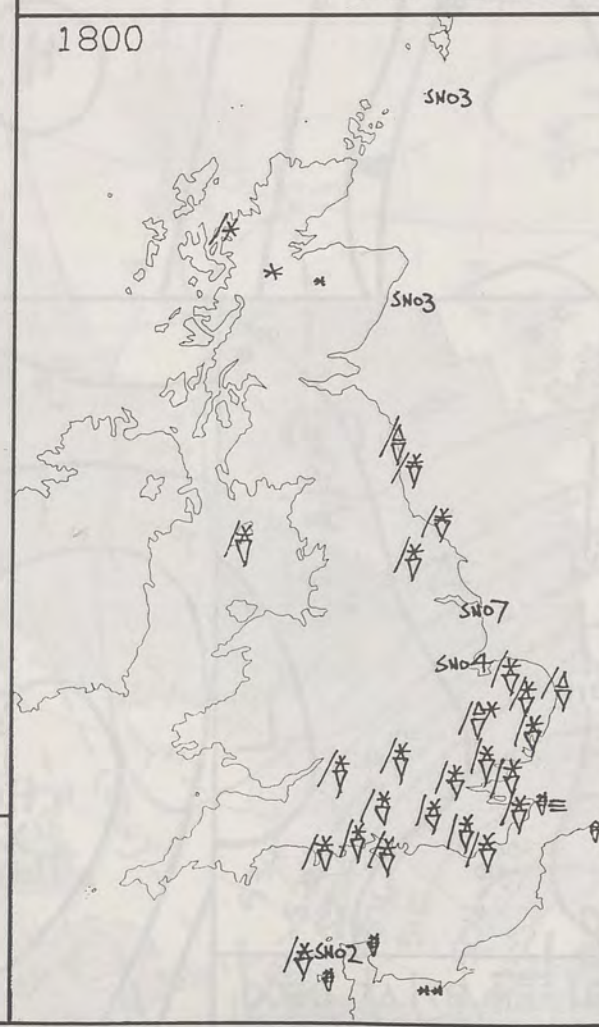

It was a cold day generally, though temperatures were near normal in western Scotland.

THURSDAY
19 FEBRUARY 1987SUMMARY
OF
BRITISH WEATHER

Mild Atlantic air moved slowly down across Scotland and Northern Ireland, after a frosty start to the night over southern and eastern Scotland. The change was accompanied by rain and drizzle, which was preceded by snow in places.

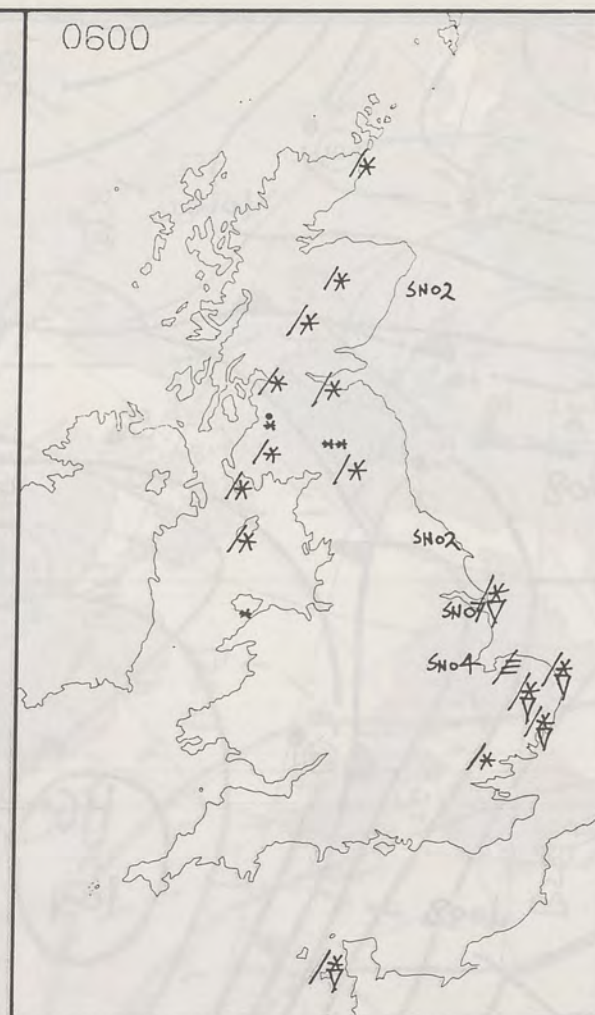

Day-time temperatures generally rose rather above normal, with some further rain in places, though there were some brighter intervals too.

It stayed rather cold or cold over most of England and Wales, and the night was very frosty. By day most places, more especially the south, had spells of sunshine. However, there were some further snow showers in the east and southeast, whilst an area of rain, sleet and snow moved south across extreme western regions.

FRIDAY
20 FEBRUARY 1987SUMMARY
OF
BRITISH WEATHER

Although there was a slight frost in places at first, most of Scotland and Northern Ireland had a reasonably mild day with some sunshine, though generally rather a lot of cloud. There was just a little rain here and there.

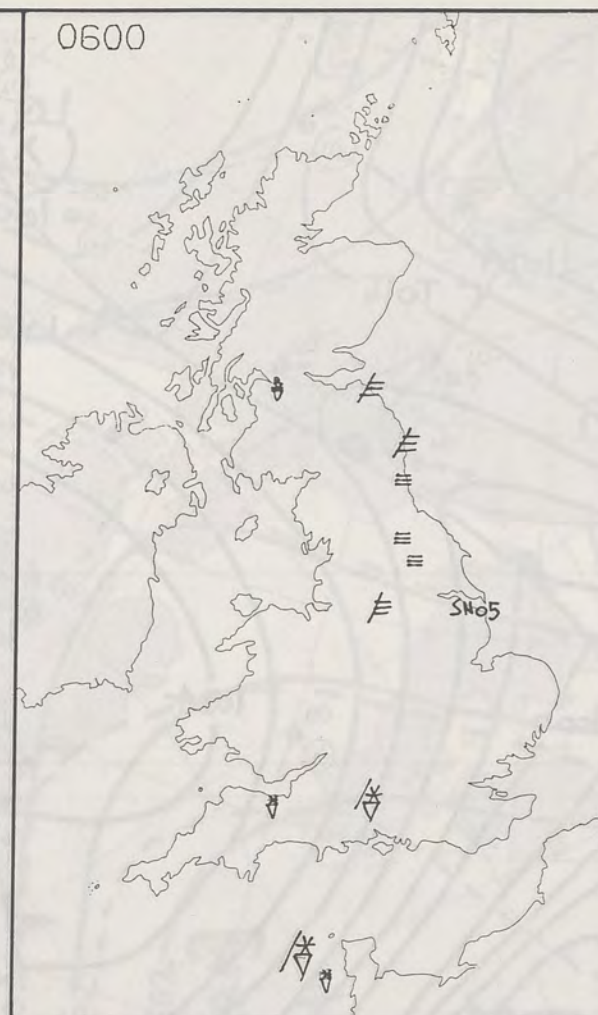

Much of northeast England had a foggy start to the day. Generally, though, northern England was fairly sunny and mostly rather cold.

Most of Wales and the southern half of England had plenty of sunshine, but with a fresh north-easterly wind and temperatures 5-6 degrees below normal it was a cold or very cold day. South Essex and Kent became mostly cloudy later. The Channel Islands were generally cloudy too, with a little snow at times.

SATURDAY
21 FEBRUARY 1987

SUMMARY
OF
BRITISH WEATHER

Much of Britain had a frost over-night. In northern Scotland there were a few showers and later in the night in northeast England there was a little rain or sleet.

During the day Scotland had a lot of cloud, but most places had some bright weather and there was sunshine too, especially in the east and north.

England, Wales and Northern Ireland were mainly sunny in the morning, but the weather turned more cloudy, although in south-west Wales and parts of southern England it was sunny for much of the day. Northeast and east England were cloudy most of the day.

It was a dry day nearly everywhere, but northern Scotland had a few showers and over England, especially East Anglia and the southeast, there was a little rain and drizzle.

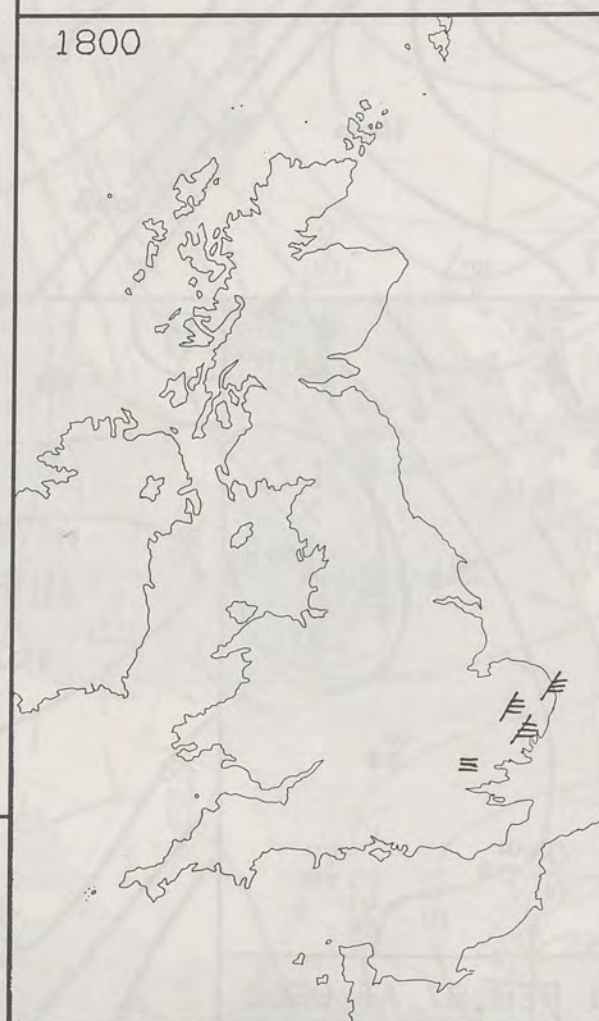

It was rather cold over much of England and Wales, but much of Scotland had temperatures close to or a little above normal.

SUNDAY
22 FEBRUARY 1987

SUMMARY
OF
BRITISH WEATHER

Much of Britain had a dry night, but over England there was a little drizzle and in northern Scotland some showers, with snow in Shetland. There was frost in parts of southwest England and in Scotland.

During the day most places were cloudy, but there was some sunshine in Northern Ireland and western Scotland, and in parts of southwest Scotland it was sunny for much of the day.

Many places had a dry day, but there was rain and drizzle in England and Scotland, mainly in eastern districts. In northern Scotland there were snow showers later on, while on Shetland there were snow showers on and off all day.

Temperatures in most places were close to normal, but Shetland had a cold day.

23 FEBRUARY 1987

SUMMARY
OF
BRITISH WEATHER

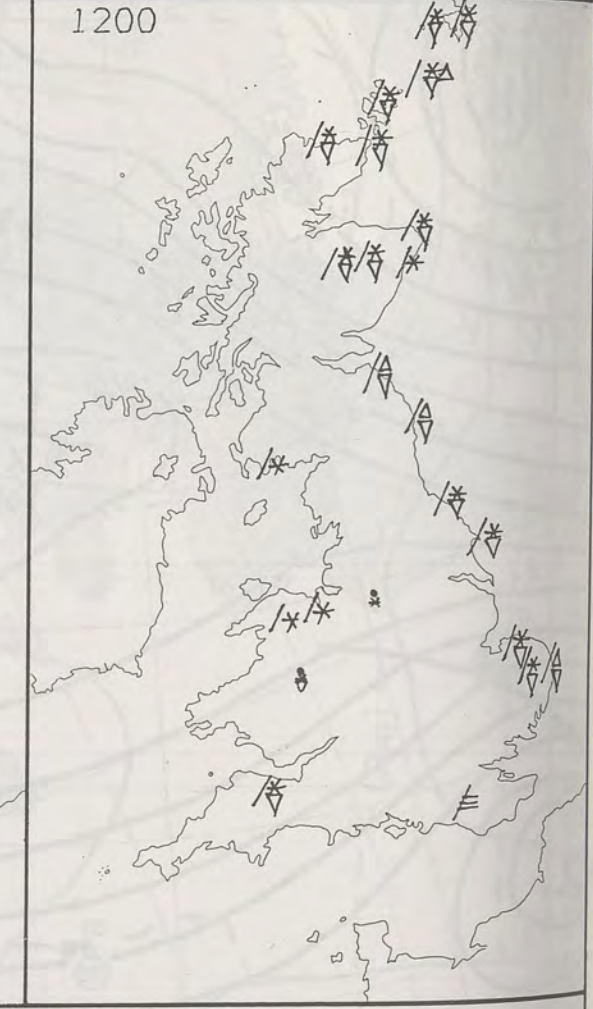

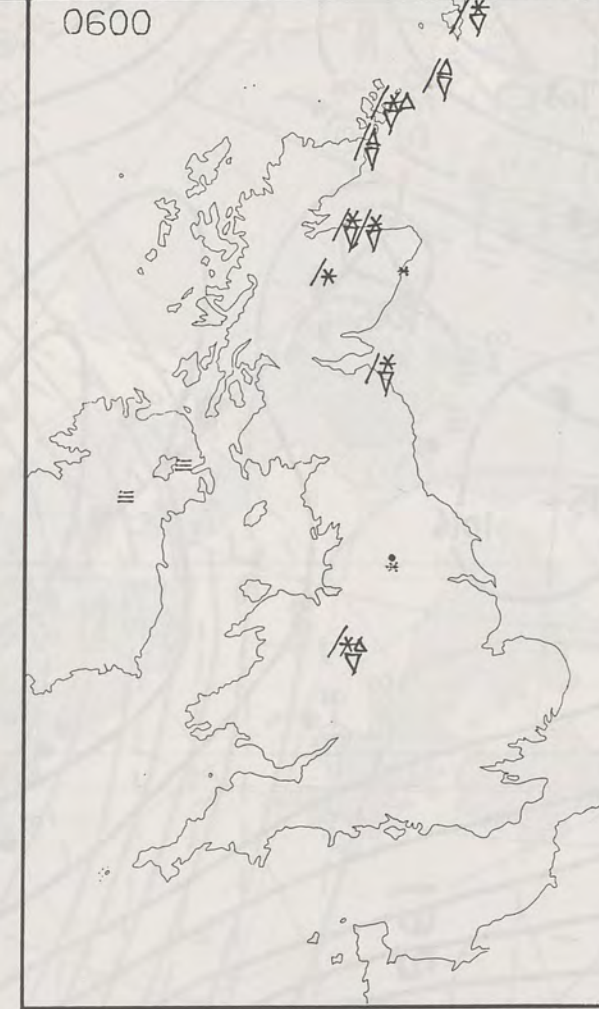

Northern parts of Scotland and the Outer Hebrides had good sunny periods, however, over most of the United Kingdom the weather was dry and mainly cloudy. In the Northern Isles and northeast Scotland there were a few hail and snow showers which became isolated during the day before dying out altogether later.

In central and northwestern parts of England there were patches of light rain or snow grains and near eastern coasts there were isolated light showers of rain or sleet. In southeast England it was quite sunny for a time, especially in the morning.

Over most of Scotland and south-east England there was a frost overnight and over most of Britain it was a rather cold or cold day.

PLOTTED SURFACE OBSERVATIONS

TUESDAY
24 FEBRUARY 1987

**SUMMARY
OF
BRITISH WEATHER**

In most western regions cloud was persistent and although many places had a dry day, there were patches of light rain or snow, especially in northwest England, Northern Ireland and western Scotland.

In central and eastern parts of England and Scotland there were isolated light wintry showers but most places remained dry with some bright spells.

In northeast Scotland and the Northern Isles it was quite sunny at times.

Southern coastal regions of England and the Channel Islands had a mainly sunny day.

There was a frost in most places overnight, and it was a rather cold or cold day everywhere.

WEDNESDAY
25 FEBRUARY 1987

SUMMARY
OF
BRITISH WEATHER

Frost was quite widespread at dawn, some of it severe, and only the cloudier and windier areas of southwest Britain, Northern Ireland and parts of Scotland escaped.

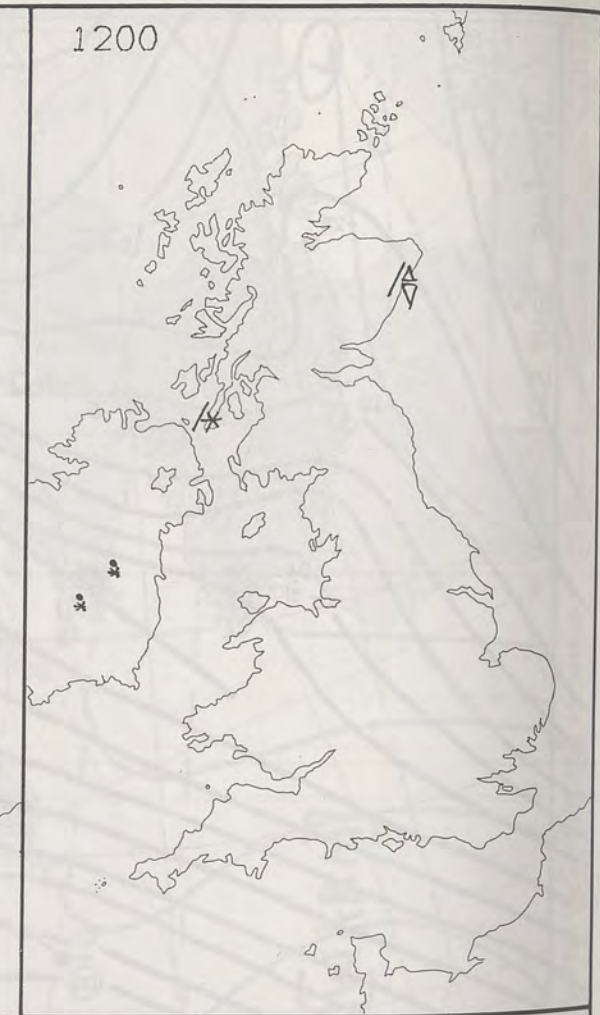

Rain had just reached the Isles of Scilly at dawn, and this rain pushed slowly northeastwards through the day, reaching all of Northern Ireland, Wales, southwest and parts of central southern England by nightfall, though the rain-belt did become fragmented late in the day.

The remaining eastern and northern areas of Britain had a largely dry and bright day, some areas having plenty of sunshine, notably Lincolnshire East Anglia and Kent, though a few light wintry showers were reported near coasts of Scotland.

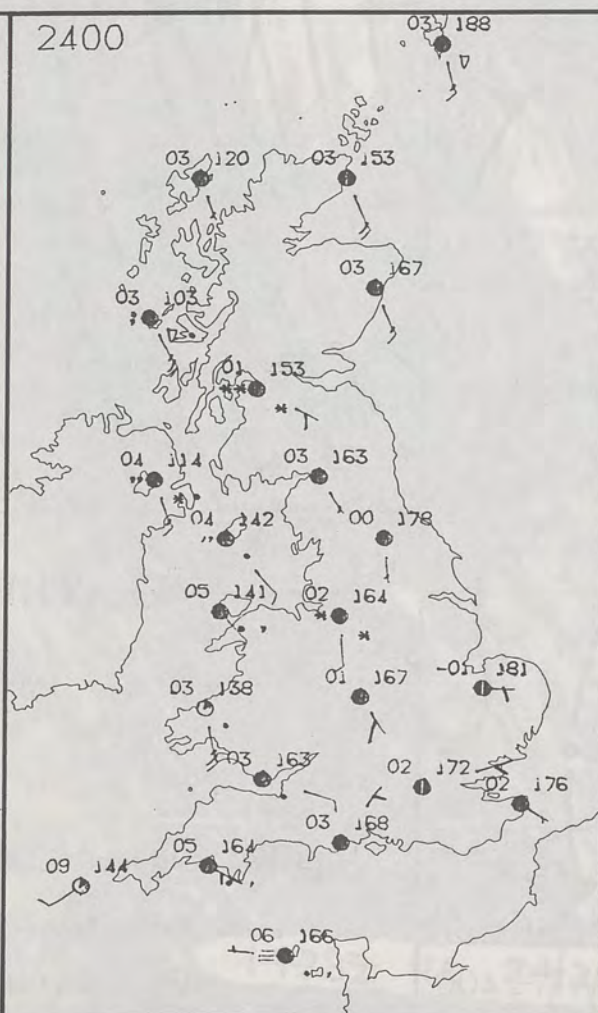

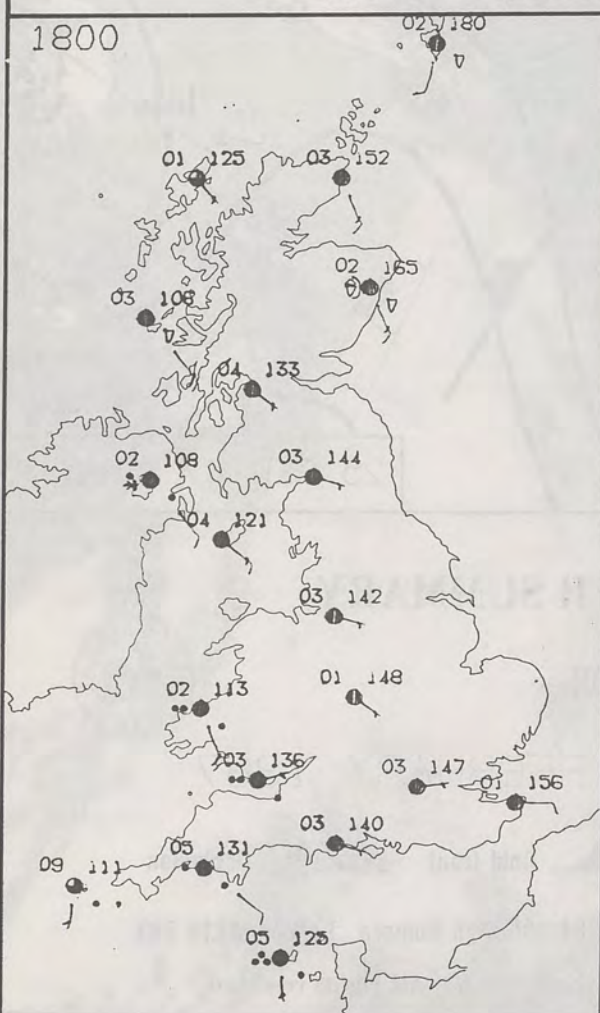

Temperatures again several degrees below normal over most of the country, making it rather cold or cold, but milder conditions did creep into the far southwest.

THURSDAY
26 FEBRUARY 1987

SUMMARY
OF
BRITISH WEATHER

Some sleet and snow was reported overnight, mainly from the North Midlands, northwest England, the Central Lowlands and southwest of Scotland. Amounts of snow were small. It was quite frosty as well in eastern and central areas of the country.

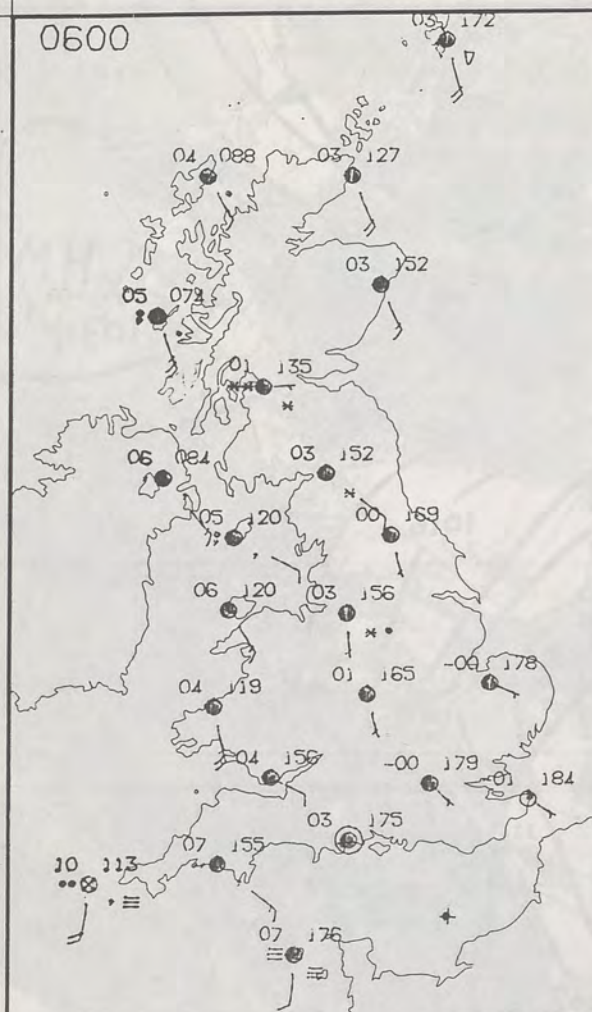

Soon after dawn rain reached the far southwest and parts of Northern Ireland, and through the day heavy and prolonged rainfall pushed steadily across to all parts, though not reaching the extreme northeast until night-fall. Meanwhile, the rearward edge of the heavy rain progressed into the far west early in the afternoon, and by midnight much of the prolonged rain had cleared the United Kingdom. It became very misty, with some hill and coast fog, especially in the west, and light outbreaks of rain continued in places, with showers over Ireland.

After the cold start, temperatures rose ahead of the main rain belt, then rose even more markedly with the passage of the heaviest rain, ending up in many places in the mild category. However, in much of Scotland and northeast England temperatures were still only just approaching normal by midnight.

FRIDAY
27 FEBRUARY 1987

SUMMARY
OF
BRITISH WEATHER

In Scotland most places had rain overnight, with some heavy rain. England and Wales were cloudy with hill and coastal fog and rain here and there, occasionally heavy, while Northern Ireland had a few showers. Much of Britain had a mild night.

During the day the extreme north-east of Scotland along with Orkney and Shetland were dull, misty and quite wet. The rest of Scotland turned a little brighter during the afternoon, but there were showers in many places.

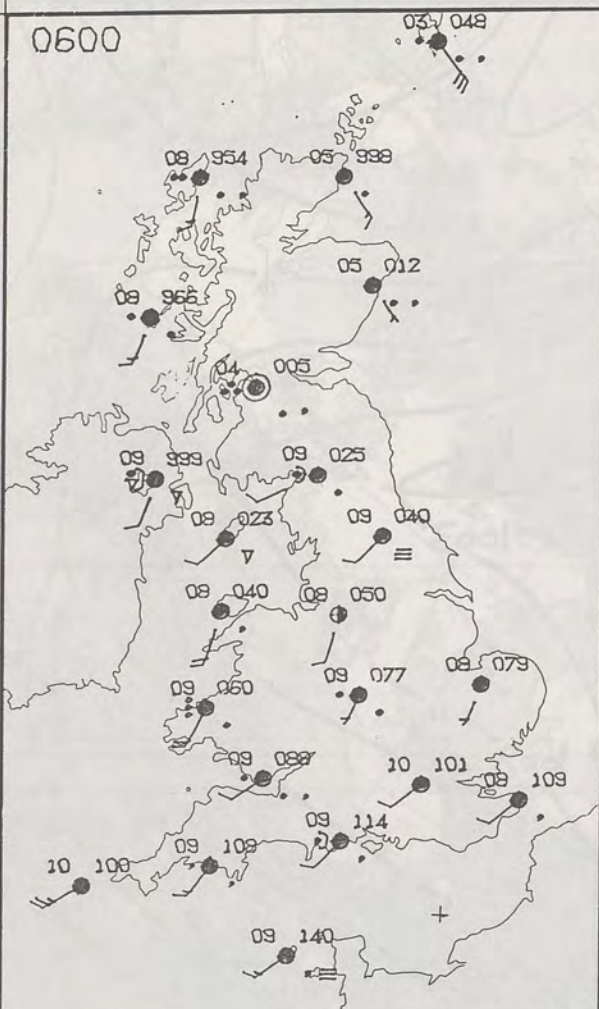

Northern Ireland had a little sunshine, but there were showers as well. England and Wales were mostly cloudy but there was some bright weather here and there. Most places had some rain or drizzle, occasionally heavy, and many hills and coasts were foggy.

Apart from the extreme northeast of Scotland and Orkney and Shetland, it was a very mild day, indeed exceptionally mild in a number of places.

SATURDAY
28 FEBRUARY 1987

SUMMARY
OF
BRITISH WEATHER

Many places in Scotland had rain overnight, but the west was clearer before morning. Northern Ireland had a few showers, while England and Wales were mainly cloudy, with a little rain and drizzle here and there. Hills and coasts in the south and west were foggy.

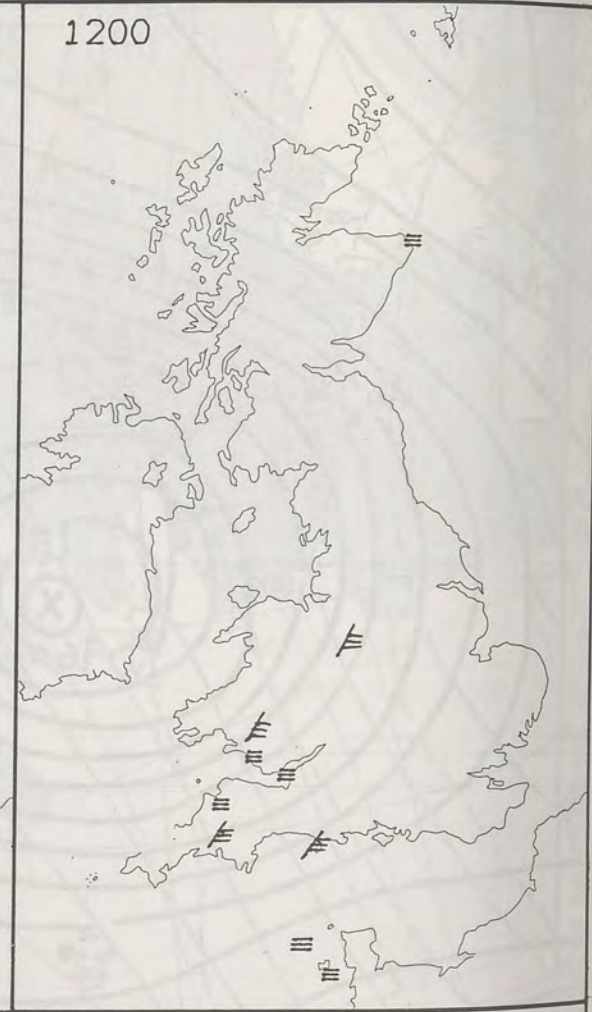

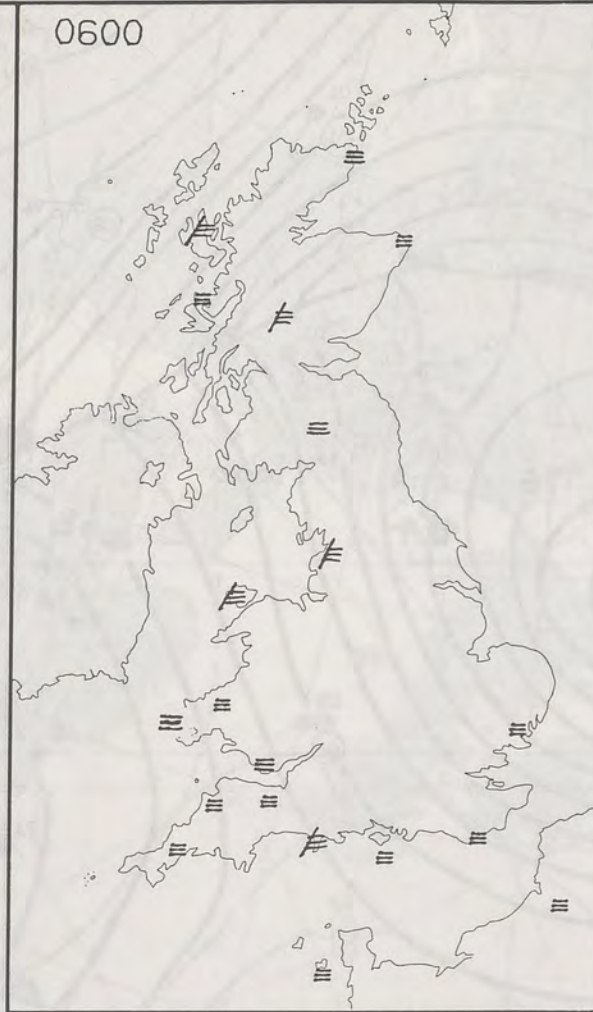

During the day the weather brightened up over much of the United Kingdom so that most places had at least a little sunshine. There was a lot of dry weather, but in Scotland there were a few showers, while over England and Wales a few places had a little rain and drizzle. More rain reached southwest England late in the afternoon.

Parts of the south coasts of England and Wales stayed dull and misty all day and Shetland too was dull and fairly wet for much of the day and quite cold with a strong southeasterly wind.

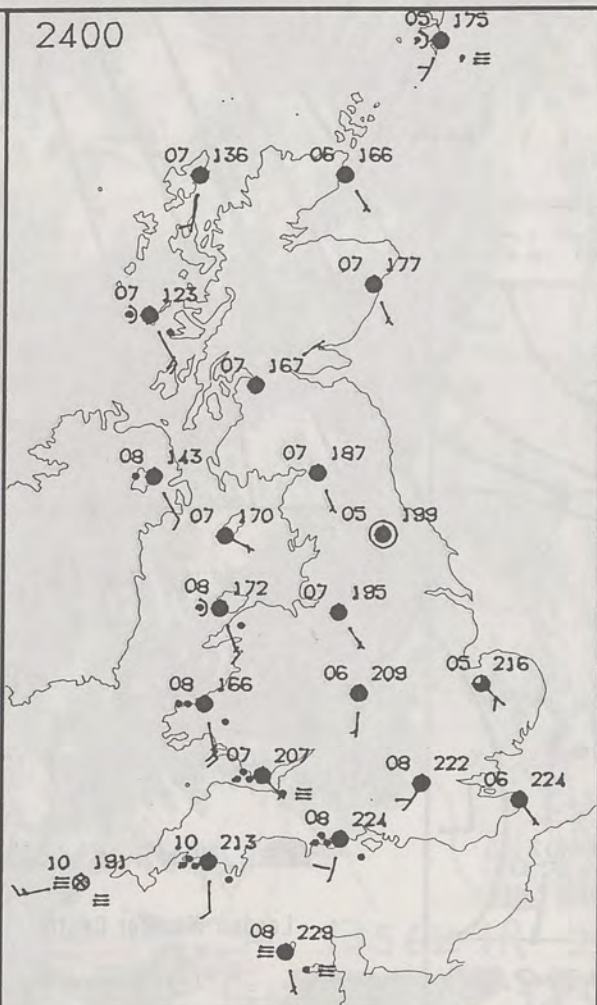

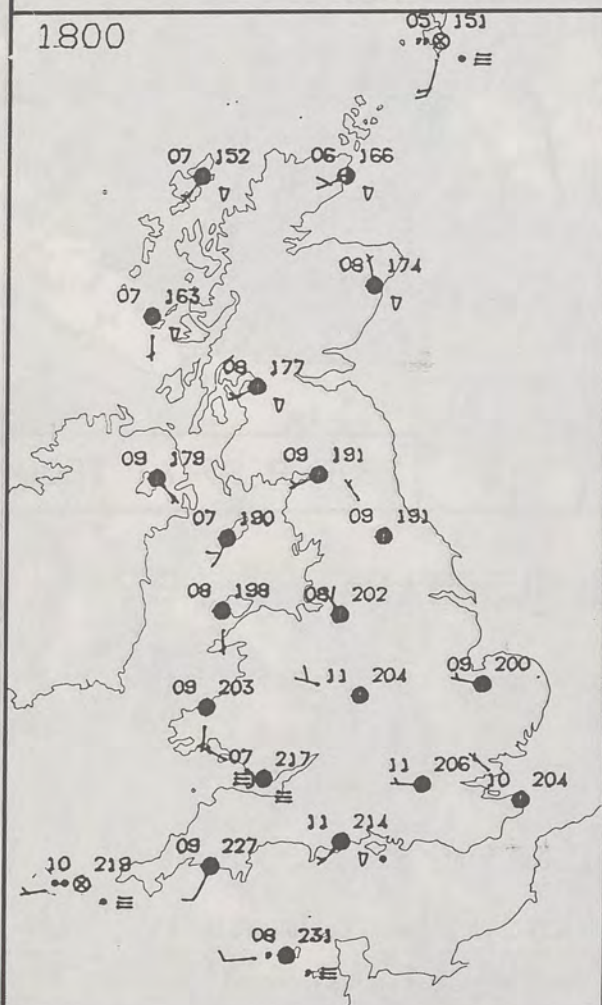

It was a very mild day almost everywhere.
