

THE DAILY WEATHER REPORT

BRITISH SECTION

1st April to 30th June,

1945

AIR MINISTRY, METEOROLOGICAL OFFICE,
LONDON, W.C.2

INTRODUCTION

The Daily Weather Report has been issued in three sections since April 1st, 1919, the British and International Sections consisting of four pages and the Upper Air Section of two pages. On 1st January, 1942, all three sections were modified. The International Section was reduced to two pages of charts supplemented at eight-day intervals by a four page tabular statement of foreign observations. The Upper Air Section was increased to four pages giving two pages of charts and diagrams and two pages of observations in tabular form. The British Section of which this forms the Introduction was modified by increasing the scale of the chart on page 2 so that it occupied the whole page, and in consequence the weather forecasts were transferred to the front page and the table of auxiliary reports to the back page. The increased scale of the chart on page 2 makes it possible to show the observations from a selection of stations in full, the data being set out in accordance with the "station model" adopted by the International Meteorological Conference at Warsaw in September, 1935.

On 1st January, 1944, the British Section was again modified, the whole of pages 1 and 4 being taken up with observations from reporting stations, the reports from auxiliary stations being no longer included. The London observations were transferred to page 2 and the General Inference, Further Outlook and Gale Warnings to page 3. Forecasts by Districts ceased to appear. The stations are arranged according to Forecast Districts as described on p. 4 of this Introduction.

Whenever it is possible to do so, without occupying too much space, the decoded values are set out in full in the table; in other cases, code figures are entered; these are interpreted by reference first to the number printed at the head of the column, and then to the Explanation printed below where the column numbers are shown in connexion with each of the separate classes of observation.

Barometer Readings.—The readings are in millibars and tenths with the initial 9 or 10 omitted. Thus readings of 989.4 and 1021.5 are printed as 89.4 and 21.5.

Barometric Tendency.—(Columns 2 and 18)
The Barometric tendency is expressed in tenths of a millibar.

Code for state of ground (E)—Column 33

0 ... Ground dry.	7 ... Ground covered with snow, less than 6 ins. deep but ground not frozen.
1 ... " wet.	8 ... " covered with snow, less than 6 ins. deep but ground frozen.
2 ... " flooded.	9 ... " covered with snow greater than 6 ins. deep.
3 ... " frozen hard and dry.	0 ... Fresh snow has fallen on the mountains.
4 ... " partly covered with snow or hail.	
5 ... " covered with ice or glazed frost.	
6 ... " covered with thawing snow.	

THE BEAUFORT SCALE OF WIND FORCE [F] Columns 4, 9

Beaufort Number.	Admiral Beaufort's General Description of Wind.	Specification for use on Land, based on observations made at British Land Stations.	Limits of Mean Velocities Statute Miles per Hour as recorded by well exposed anemometers about 30 to 40 feet above ground.
0	Calm ...	Calm; smoke rising vertically...	Less than 1
1	Light air ...	Direction of wind shown by smoke drift ...	1-3
2	Slight breeze ...	Wind felt on face; leaves rustle ...	4-7
3	Gentle breeze...	Leaves and small twigs in constant motion; wind extends light flag ...	8-12
4	Moderate breeze	Raises dust and loose paper; small branches are moved ...	13-18
5	Fresh breeze ...	Small trees in leaf begin to sway; crested wavelets on inland waters...	19-24
6	Strong breeze...	Large branches in motion; whistling heard in telegraph wires ...	25-31
7	Moderate gale...	Whole trees in motion; inconvenience felt when walking against wind ...	32-38
8	Fresh gale ...	Breaks twigs off trees; generally impedes progress...	39-46
9	Strong gale ...	Slight structural damage occurs (chimney pots and slates removed) ...	47-54
10	Whole gale ...	Seldom experienced inland; trees uprooted...	55-64
11	Storm ...	Very rarely experienced; accompanied by widespread damage ...	65-73
12	Hurricane	74-82
13	83-92
14	93-103
15	104-114
16	115-125
17	126-136

Form of Low Cloud (CL) — Columns 9, 25.

- 0 No low cloud.
- 1 Fair weather Cu.
- 2 Large Cu without anvil.
- 3 Cb.
- 4 Sc formed by the spreading out of Cu.
- 5 Layer of St or Sc.
- 6 Ragged low clouds of bad weather (or fractonimbus).
- 7 Fair weather Cu and Sc.
- 8 Large Cu (or Cb) and Sc.
- 9 Large Cu (or Cb) and ragged low clouds of bad weather.

Form of Medium Cloud (CM) — Columns 10, 26.

- 0 No medium cloud.
- 1 Typical As (thin).
- 2 Typical As (thick) (sun or moon invisible) (or Ns)
- 3 Single layer of Ac or high Sc.
- 4 Ac in isolated patches. Individually decreasing (often lenticular).
- 5 Ac in bands (increasing).
- 6 Ac formed from the spreading out of Cu.
- 7 Ac associated with As, or As with parts resembling Ac.
- 8 Ac Castellatus (or Ac in ragged fragments).
- 9 Ac in several layers generally associated with fibrous veils and a chaotic appearance of the sky.

Form of High Cloud (CH) — Columns 11, 27

- 0 No cirriform cloud.
 - 1 Fine Ci not increasing: sparse.
 - 2 Fine Ci not increasing: abundant but not a continuous layer.
 - 3 Anvil Ci (usually dense).
 - 4 Fine Ci increasing: usually in tufts.
 - 5 Ci or Cs increasing: still below 45° altitude: often in polar bands.
 - 6 Ci or Cs increasing and reaching above 45° altitude: often in polar bands.
 - 7 Veil of Cs covering whole sky.
 - 8 Cs not increasing and not covering whole sky.
 - 9 Cc predominating, and a little ci.
- (Cc may occur with any of the types 1 to 8).

Cloud Form Abbreviations

Cirrus,—Ci:	Stratocumulus,—Sc:
Cirrocumulus,—Cc:	Stratus,—St:
Cirrostratus,—Cs:	Nimbostratus,—Ns:
Altostratus,—As:	Cumulus,—Cu:
	Cumulonimbus,—Cb:

Code for Horizontal Visibility (V)—Columns 8, 24.

Objects not visible at	
0 Dense fog	55 yards
1 Thick fog	220 "
2 Fog	550 "
3 Moderate fog	1,100 "
4 Mist or haze	1½ miles
5 Poor visibility	2½ "
6 Moderate "	6½ "
7 Good "	12½ "
8 Very good "	31 "
9 Excellent "	beyond 31m.

Code for State of Sea (S)—Column 34

- 0 Calm—glassy. 5 Rough.
- 1 Calm—rippled. 6 Very rough.
- 2 Smooth. 7 High.
- 3 Slight. 8 Very high.
- 4 Moderate. 9 Phenomenal.

Rainfall—Columns 35, 3

Tr: = rain has fallen, but amount less than 0.1 mm.

Beaufort Notation and Symbols for Weather—Columns 5 and 21 and 35, 36, 37, 38 on page 1, and 5 and 21 on page 4

b, blue sky (not more than a quarter covered with cloud).
bc, sky partly cloudy (one half covered)... c, generally cloudy.
d, drizzle. e, wet air. g, gloom.
f, fog, visibility 220-1100 yds.
F, thick fog " less than 220 yds.
fs, low fog over sea (coast station).
fg, low fog over land (inland station).
m, mist, visibility 1100-2200 yds.
h, hail. i, intermittent.
jf, fog at a distance, but not at station.
jp, precipitation within sight of station.
ks, storm of drifting snow.
k/s, slight storm of drifting snow (generally low).
k/S, heavy storm of drifting snow (generally low).
s/k, slight storm of drifting snow (generally high).
S/k, heavy storm of drifting snow (generally high).
KQ, line squall. l, lightning.
o, overcast sky. p, passing showers.

q, squalls. r, rain. s, snow.
rs, sleet. t, thunder.
u, ugly, threatening sky.
v, unusual visibility. w, dew.
x, hoar frost. y, dry air.
z, dust haze: the turbid atmosphere of dry weather.
h(r), "hail" or "rain and hail."
Capital letters indicate intense; suffix, indicates slight; repetition of letters indicates continuity: thus R, heavy rain. r, slight rain. rr, continuous rain.
<, less than (for cloud height).
g, gale.
Solar halo. lunar halo. Aurora.
With present weather is combined, whenever possible, the general character of the weather.
A "solidus" divides actual existing weather from preceding conditions thus:—bc/r, fair weather after rain; —, has decreased; +, has increased.

Explanations of the symbols used in the chart ch p. 2, will be found in Form 2459, Instructions for the Preparation of Weather Maps, H.M. Stationery Office. Price 1/6 net.

GALE WARNINGS

Details of gale warnings issued by the Meteorological Office are given below the Further Outlook on page 3 of the Report. In peace-time the receipt of a gale warning at ports and fishing stations is indicated by the hoisting of a black canvas cone. The signals remain hoisted after the receipt of a warning telegram until danger of a gale has passed.

The North Cone (point upwards) is hoisted for gales commencing from a Northerly point.

For gales commencing from East or West the North Cone will be hoisted if the gale is expected to change to a Northerly direction.

The South Cone (point downwards) is hoisted for gales commencing from a Southerly point. Such gales often veer, sometimes as far as Northwest.

For gales commencing from East or West the South Cone will be hoisted if the gale is expected to change to a Southerly direction.

In continuation of peace-time practice, the symbols ▲ (North Cone) and ▼ (South Cone) are appended to the details of warnings given on page 3 of the Report.

Hours at which the observations shown
on the
Northern Hemisphere Chart are taken.

NOTES ON THE INFORMATION CONTAINED IN THE DAILY WEATHER REPORT

Standard of Time.—Greenwich Mean Time is exclusively used throughout the Report.

Hours of Observation.—From 1st August, 1944, the times of the observations published in the Report were changed to 0000, 0600, 1200 and 1800 G.M.T., and from the same date the morning readings of minimum and grass minimum temperature and rainfall have been made at 0600 G.M.T. instead of at 0700 G.M.T.

Stations.—*Kew.*—Temperature readings at Kew are taken in a large louvered screen placed against the north wall of the observatory. The thermometer bulbs are at a height of 10 feet above the ground immediately surrounding the building. This ground is raised a few feet above the general level of the Old Deer Park in which the observatory stands.

London Observations.—The rainfall measurements at all the London stations where rain gauges are maintained, refer to two periods, day and night. The day period is 0h. to 21h. G.M.T. and the night period 21h. to 09h. G.M.T. at all stations except Kensington where the periods are 9h. to 18h. and 18h. to 9h.

Heights of Stations.—The heights of British Stations above M.S.L. refer to the plot of ground on which the rain gauge is situated.

Pressure.—The distribution of barometric pressure at Mean Sea Level is shown by means of isobars which are drawn for intervals of 2 millibars on page 2 of the Report and for intervals of 4 millibars on Page 3.

The wind at a height of 1,500–2,000 feet above ground usually blows along the isobars and, for the same temperature, pressure and latitude, the speed of the wind is inversely proportional to the distance between the isobars, e.g., for isobars 1 inch apart for the chart on Page 2 the speed of the upper wind is about 20 knots in latitude 55°, with a temperature of 50° F. and a pressure of 1,000 mb.; if, however, the isobars are ½ inch apart the corresponding speed is 40 knots.

The scales below can be used to determine the theoretical wind as deduced from the pressure distribution on either chart. On the assumption that the path of the air is straight this theoretical wind is called the Geostrophic Wind.

If the distance between consecutive isobars is measured along the scale from the left-hand extremity the geostrophic wind is shown by the scale in knots.

GEOSTROPHIC WIND SCALES

Upper Scale—8 mb. isobars on 1:4 × 10⁷ Charts.

Lower Scale—2 mb. „ „ 1:5 × 10⁶ „

Knots.

This scale applies under the following conditions:—

Pressure, 1,000 mb. Temperature, 50° F. Latitude, 55°.

Corrections.—For an increase of 10 mb. pressure, subtract 1% from velocity; for an increase of 10° F. add 2%. From Latitude 55° to Latitude 65° subtract 1% for each degree above 55°. From Latitude 55° to Latitude 45° add 1½% for each degree below 55°.

Temperature.—Temperature is specified in degrees Fahrenheit, and is shown on the charts by means of figures written alongside the positions of the stations.

Relative Humidity.—Relative Humidity at British stations is calculated from the following hygrometric formulae:—

$$\text{Relative humidity} = \frac{100x}{F}$$

$$x = f - .444 (t - t') \text{ for wet bulb readings above } 32^\circ \text{ F.}$$

$$x = f - .400 (t - t') \text{ for wet bulb readings below } 32^\circ \text{ F.}$$

where x is the vapour pressure in mb.

F the saturation vapour pressure at the temperature of the dry bulb;

For air temperatures below 32° F. the value of F used is that appropriate to an ice surface.

f the saturation vapour pressure at the temperature of the wet bulb;

For wet bulb temperatures below 32° F. the value of f used is that appropriate to an ice surface.

t the dry bulb temperature; and

t' the wet bulb temperature.

The values of Dew Point given in columns (8) and (23) are derived from the original readings of dry—and wet—bulb temperature and are correct to one degree Fahr. Values below 32° F. give the "Hoar Frost Point," that is to say the temperature for which the actual vapour pressure is equal to the saturation pressure over ice.

Wind.—All wind directions specified in the reports are "true," as distinguished from "magnetic." The arrows indicating wind direction are drawn to fly with the wind. Each feather denotes two steps on the Beaufort Scale; thus force 5 is indicated by two whole feathers and one half feather.

Adjusted Readings.—Where an instrumental reading is found to be in error and some adjustment is necessary, such adjusted reading is published in brackets thus (59).

N.B.—Readers of the Report who are unacquainted with the method of construction and the use of weather charts are recommended to read "The Weather Map. An introduction to Modern Meteorology," (3rd Edition, 1939), to be purchased from H.M. Stationery Office, York House, Kingsway, W.C.2, price 3s. 2d. post free.

Corrections and additions can be obtained, if required, on application to the Meteorological Office.

Mainly unsettled, particularly in the North.

Centres of low pressure or their associated frontal systems, moved across the British Isles, mostly in the North, up to the 17th, while pressure remained high to the South. Rather cool weather prevailed, mainly of a showery type, although heavier rainfall occurred in the Southwest on the 3rd and again on the 5th. (23 mm. at Plymouth.) During the night of the 16-17th minimum temperature became rather low at some stations, 34°F at Howarden, and ground frosts were recorded. A ridge of high pressure developed over Southern England on the 18th, and warmer, more settled conditions spread to most districts. Day maxima between 80°-82°F occurred at a number of inland stations on the 19th and 20th and during the night of 19-20th it remained very mild in the South. It did not fall below 64°F at Thorney Island, Lymington and Fairwood and the midnight (D.B.S.T.) reading at Exeter was 75°F.

A complex depression moving in over South Ireland on the 20th caused fairly widespread thunderstorms in the South and these thundery outbreaks gradually extended to the North. Weak troughs continued to move across the country until the 24th and then a pronounced anticyclone spread in from the Southwest and gave two fine rather warm days over most of England and Wales. The anticyclone quickly collapsed and from the

26th until the end of the month depressions influenced the country and weather became cool and less settled generally.

Thundery activity was below average and except on 20th there were only occasional local outbreaks. Mean temperature and pressure showed little deviation from the normal except in Scotland where the latter was somewhat below.

Rainfall for the month was in excess in Scotland, Ireland, Wales and Southwest England. The remaining English stations were variable and in extreme Southeast England less than one third of the normal amount was registered.

Sunshine was below average in Ireland, Central Scotland and certain other places in the South, otherwise about the usual amounts were recorded. A few gales were reported at exposed coastal stations in Scotland.

Daily Rainfall at KEW Observatory.

• = less than 0.5 mm.

RAINFALL. Total for Month. 43 mm.

Daily Sunshine at KEW Observatory.

SUNSHINE. Total for Month. 186 hrs.

Daily Range of Temperature at KEW Observatory.

TEMPERATURE. The pecked curves indicate the maximum temperature recorded each day, and the minimum temperature each night throughout the month. The chain lines show normal values.

MEAN VALUES FOR THE MONTH.*

STATIONS.	PRESSURE		TEMPERATURE	
	Mean	Difference from average	Mean	Difference from average
Kew	mb 1017.5	mb. +0.8	°F. 60.3	+0.4
Aberdeen	1011.8	-3.9	54.5	+1.3
Valentia	1015.9	-0.8	56.1	-0.4

* Pressure—The mean is for the 24 hours. It is derived from values at 6 h. and 18 h. duly corrected.
Temperature—mean of Max. and Min.

WIND FREQUENCIES at 6 hr.

Forces 1-3 — ; forces 4-7 — ; force 8 or above — . Scales: — 10 m. to 10 observations.
The figure in the centre of the circle gives the number of calms.

"RUN" of WIND, or total displacement of air relative to the anemographs.

GENERAL INFERENCE

A complex depression is centred northwest of the British Isles, and a trough of low pressure will move east across the country. Weather will be cool with showers and scattered thunderstorms in all districts.

FURTHER OUTLOOK

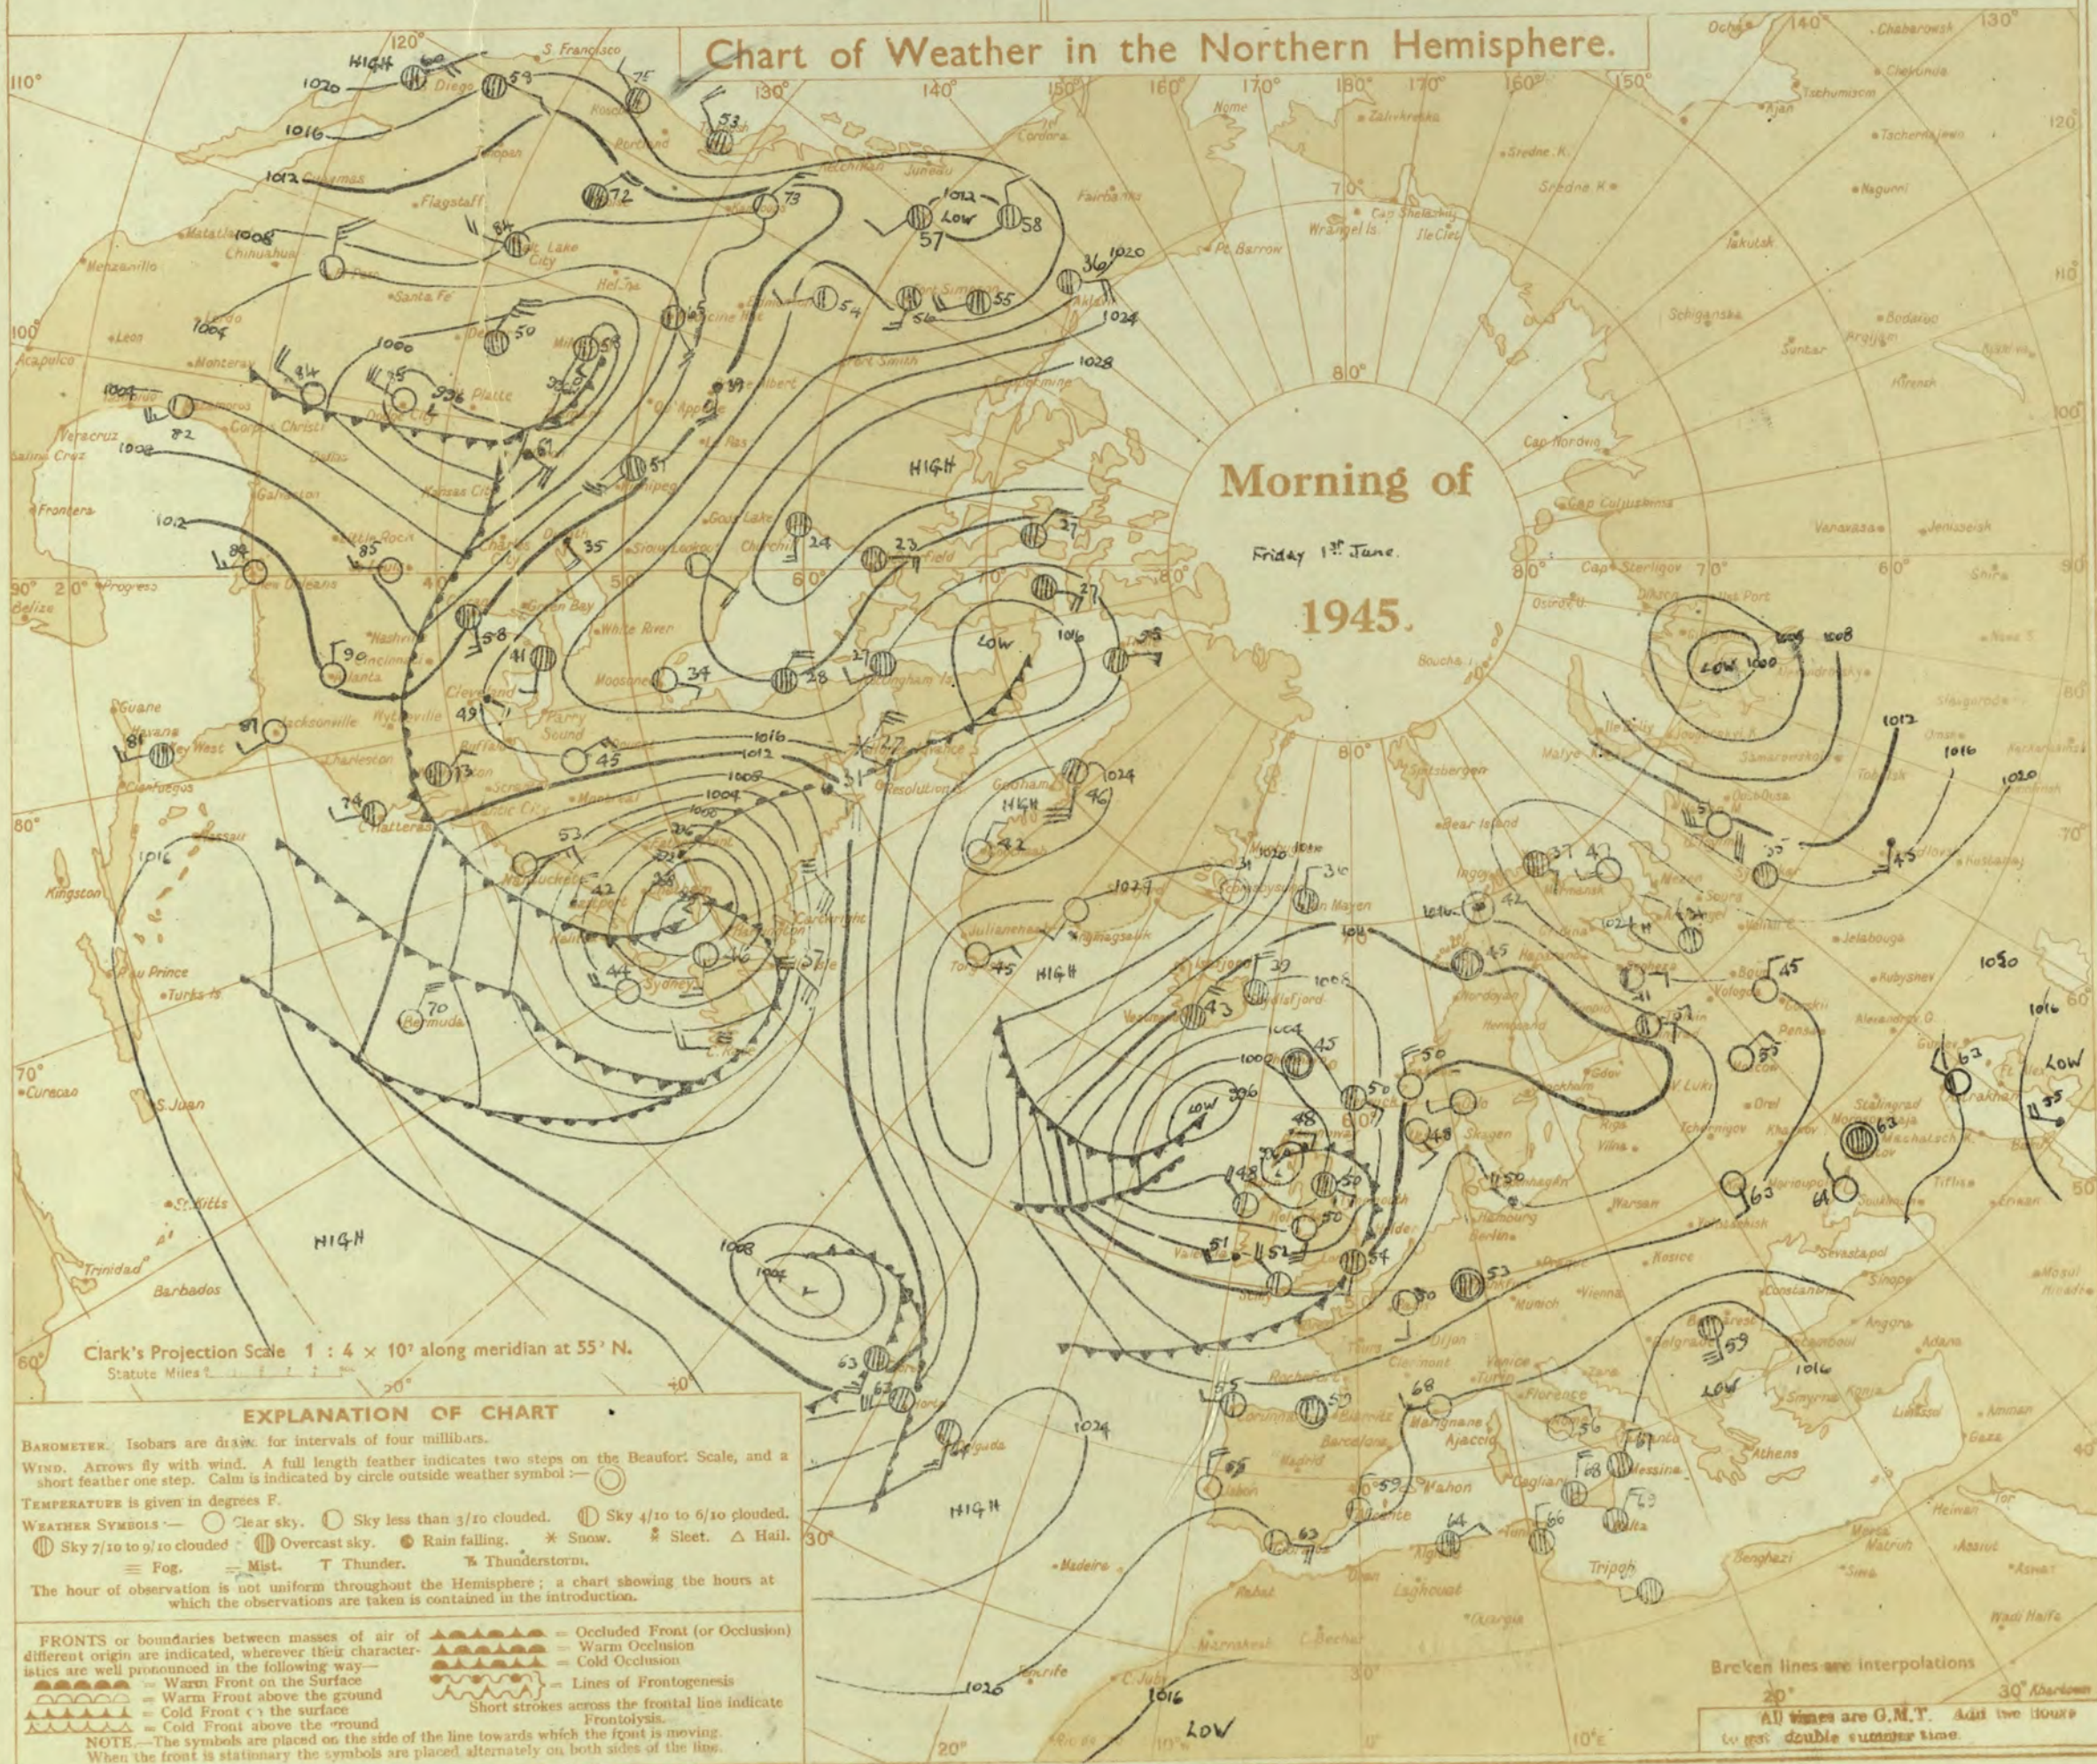

Showers and bright intervals. Local thunderstorms.

Chart of Weather in the Northern Hemisphere.

Morning of

Friday 1st June.

1945.

<

0 = Nil 2 = $\frac{1}{10}$ 4 = $\frac{1}{2}$ 6 = $\frac{9}{10}$
1 = Trace 3 = $\frac{1}{2}$ 5 = $\frac{3}{4}$ 7 = More than 9 but with openings.

8 = Completely covered.
9 = Sky obscured by fog, etc.

Columns 13, 14, 15; 16, 29, 30, 31, 32.
A = Lowest cloud present.
B = Next lowest cloud.

* Information not usually received.
† Second figure in col. (33) gives depth of snow in inches.

Atmospheric Pollution Miligrams of solid impurity per cubic metre.

Kew 24 hours ended 6h. Max. 101.9 5°E. 101.6

GENERAL INFERENCE

A depression off West Scotland is almost stationary. There will be occasional showers and local thunderstorms in Scotland, Ireland, Wales and North England.

In South England it will be mainly fair with scattered showers, becoming cloudy in the South West Later to-morrow with occasional rain.

FURTHER OUTLOOK

Unsettled, with occasional rain or showers.

Chart of Weather in the Northern Hemisphere.

Morning of
Saturday, June 2nd.
1945.

Clark's Projection Scale 1 : 4 × 10⁷ along meridian at 55° N.
Statute Miles 1 2 3 4

EXPLANATION OF CHART

BAROMETER. Isobars are drawn for intervals of four millibars.
WIND. Arrows fly with wind. A full length feather indicates two steps on the Beaufort Scale, and a short feather one step. Calm is indicated by circle outside weather symbol.
TEMPERATURE is given in degrees F.
WEATHER SYMBOLS — ○ Clear sky. ◐ Sky less than 3/10 clouded. ◑ Sky 4/10 to 6/10 clouded. ◒ Sky 7/10 to 9/10 clouded. ◓ Overcast sky. ● Rain falling. * Snow. † Sleet. △ Hail.
☁ Fog. ☂ Mist. ☃ Thunder. ☄ Thunderstorm.
The hour of observation is not uniform throughout the Hemisphere; a chart showing the hours at which the observations are taken is contained in the introduction.

FRONTS or boundaries between masses of air of different origin are indicated, wherever their characteristics are well pronounced in the following way—
— Warm Front on the Surface
— Warm Front above the ground
— Cold Front on the surface
— Cold Front above the ground
NOTE.—The symbols are placed on the side of the line towards which the front is moving. When the front is stationary the symbols are placed alternately on both sides of the line.

— Occluded Front (or Occlusion)
— Warm Occlusion
— Cold Occlusion
— Lines of Frontogenesis
Short strokes across the frontal line indicate Frontolysis.

Broken lines are interpolations

All times are G.M.T. Add two hours to get double summer time.

NELSON K. JOHNSON, K.C.B., D.Sc., Director,
Meteorological Office, Air Ministry, Kingsway, London, W.C.2.

GENERAL INFERENCE
 A depression centred to W of the British Isles is almost stationary and secondaries will move NE across Gt. Britain. There will be rain in most districts of Gt. Britain but the extreme SE & NW will probably escape for a good deal of the next 24 hours. Some improvement is possible in the Western half of Gt. Britain during tomorrow. It will be mainly rather cool.

FURTHER OUTLOOK
 Remaining unsettled with a further rain belt spreading NE across the British Isles.

GENERAL INFERENCE
 A complex depression extends from west of Scotland, to South Norway. A small depression in Mid Atlantic will move quickly East-northeast across the British Isles during the night and tomorrow. There will be showers in the North but rather will be fair in the South at first; rain will reach Southwest and West districts of the British Isles this evening and spread East and Northeast during the night; it will be rather cool.

Unsettled. Occasional rain and showers

Stations	Max.	Time	Min.	Time	Whole Period.
Kew	1008	5.1	1006	12.5	1006

GENERAL INFERENCE
A depression is centered to West of Ireland and a trough of low pressure is moving North East across the British Isles.

A belt of rain will move North East across the country and behind it much cloud will persist with local drizzle on West and South coasts.

Rather cool in the North and West.
Rather warm in the South East.

FURTHER OUTLOOK
Mainly fair and rather warm in the South East.
Cloudy with occasional rain or snows in the North and West.
Rather cool.

Atmospheric Pollution: Milligrams of solid impurity per cubic metre.

Kew 24 hours ended 6h. 6h Max. Time Min. Time 0-1 Whole period

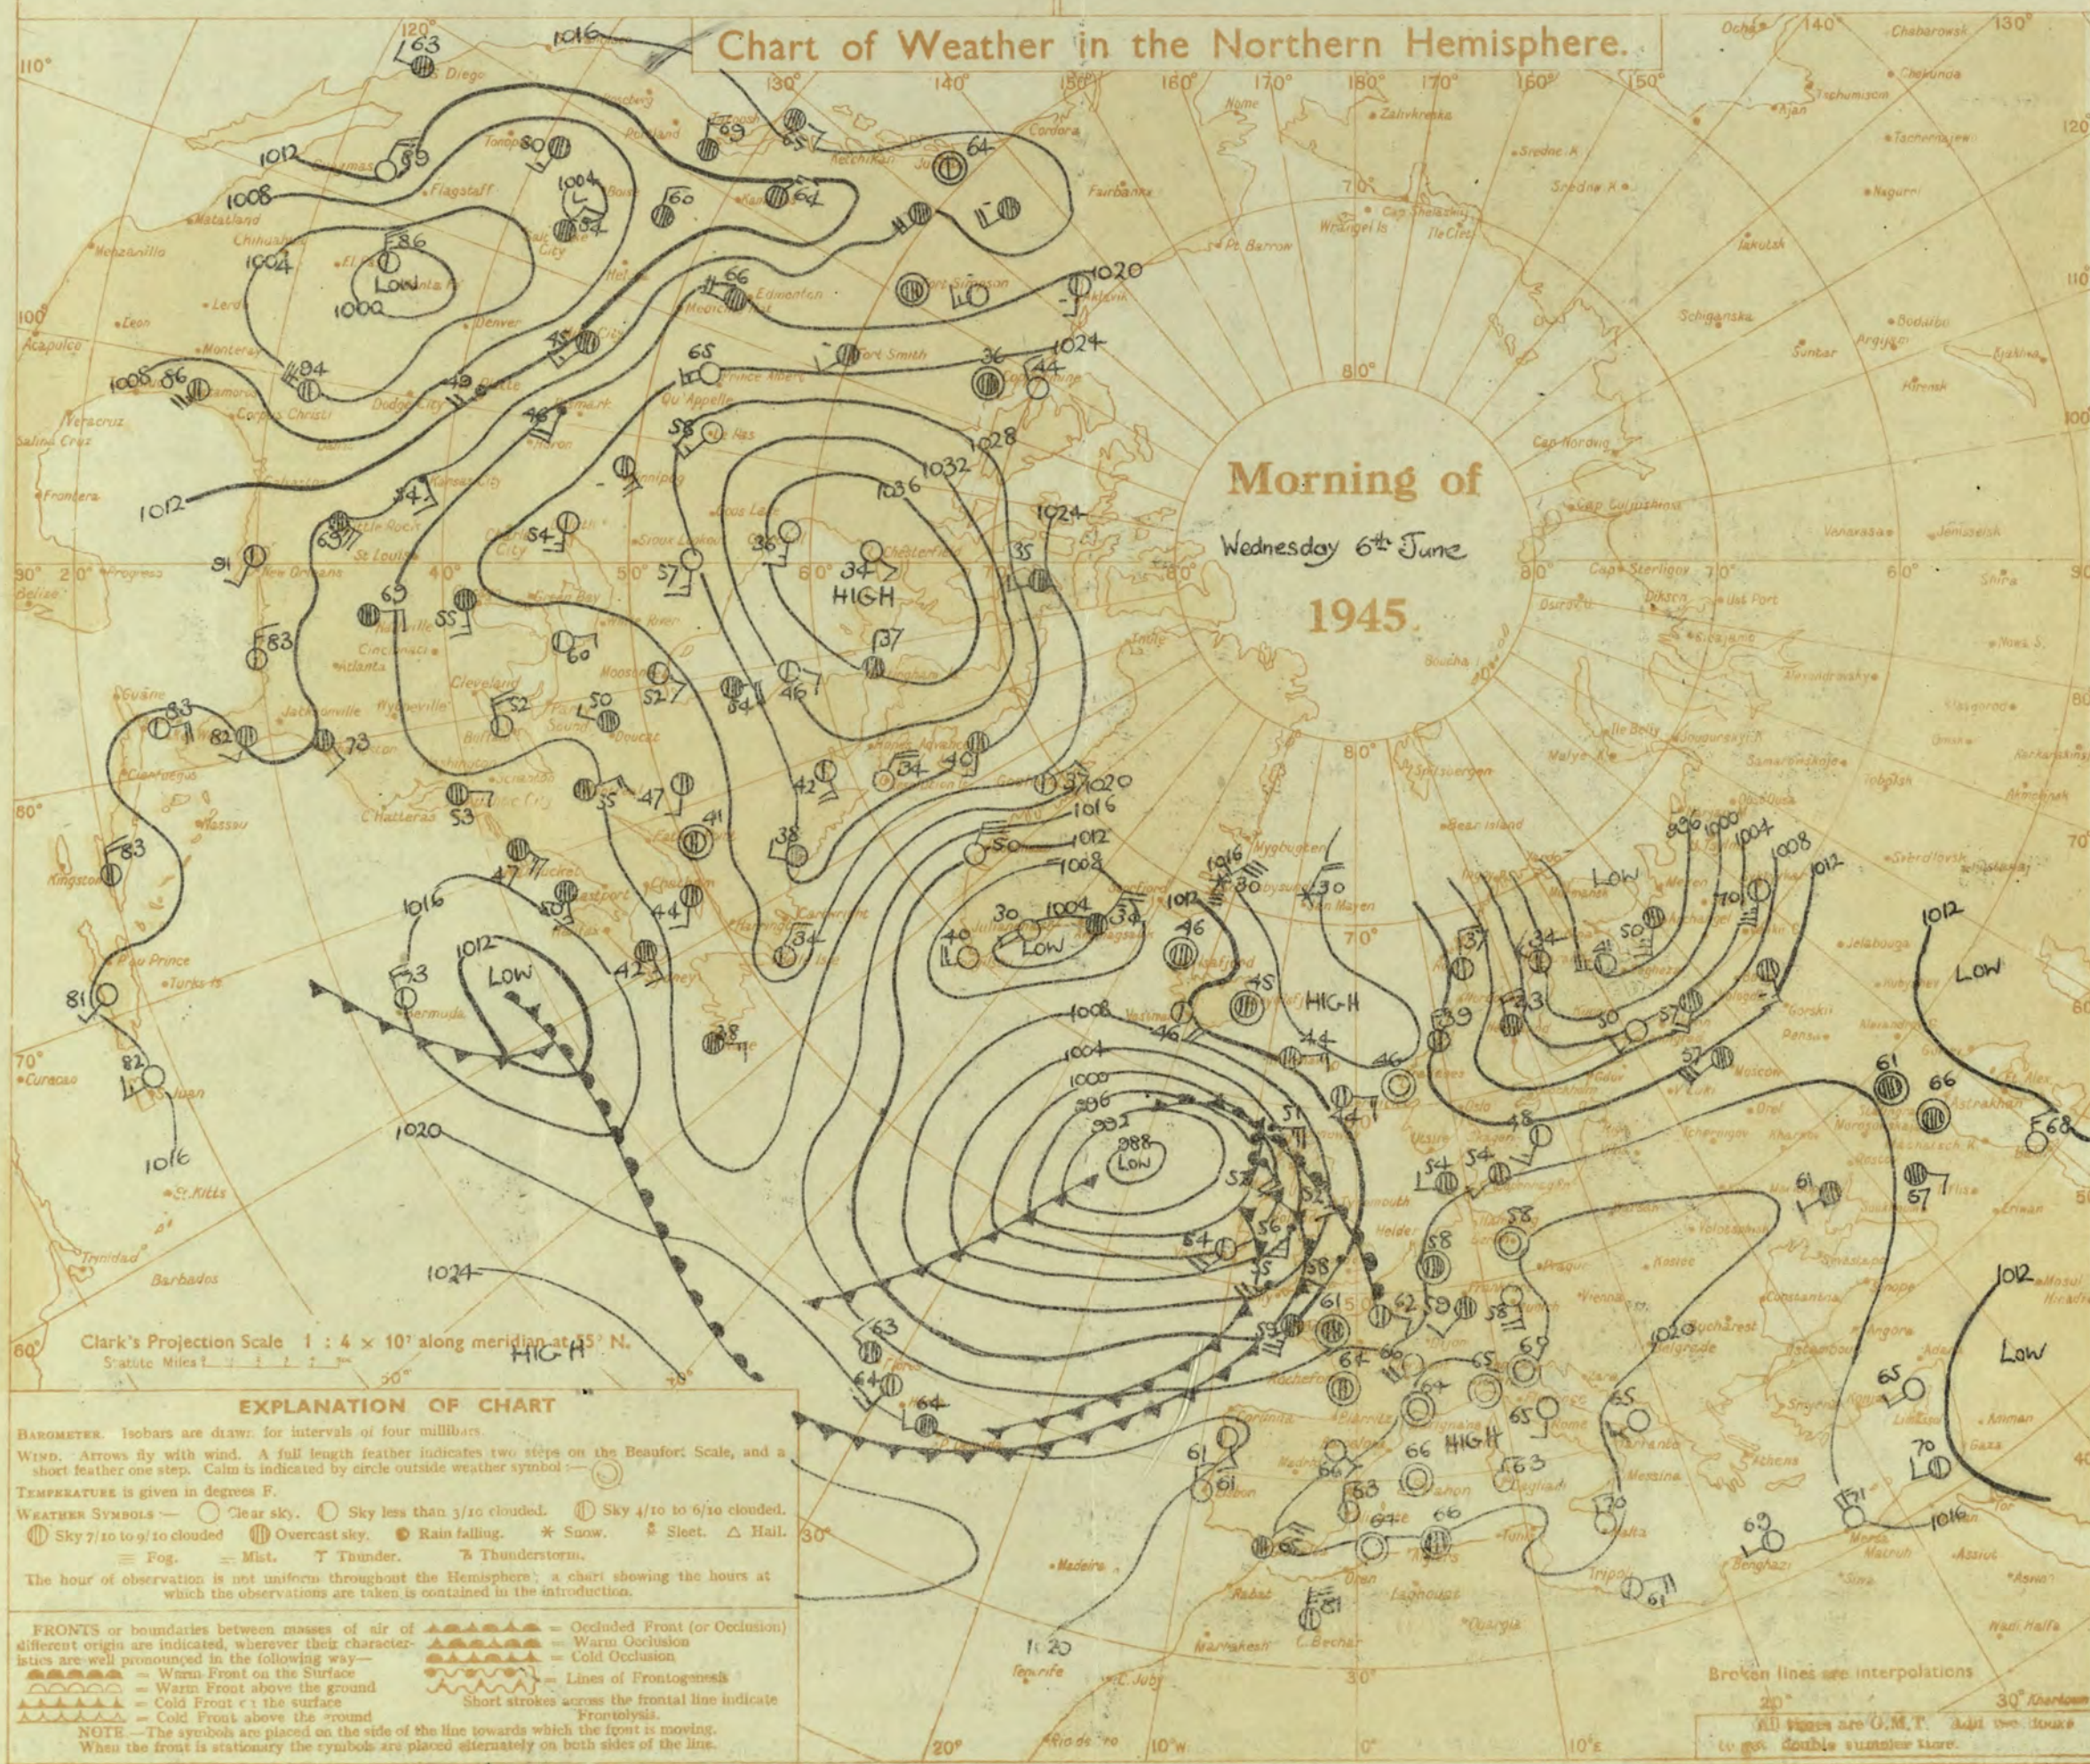

GENERAL INFERENCE
A deep depression is almost stationary West of Scotland, and troughs of low pressure are crossing the British Isles. A further trough is approaching Ireland from the West. The weather will be rather unsettled with moderate to fresh Southwesterly winds over most of the British Isles with rain at times, cooler.

Shawery, cool.

FURTHER OUTLOOK

Chart of Weather in the Northern Hemisphere.

Morning of
Wednesday 6th June

Atmospheric Pollution: Milligrams of solid impurity per cubic metre.
Kew 24 hours ended 6h. Max. $\frac{1}{2}$ all of Period

GENERAL INFERENCE

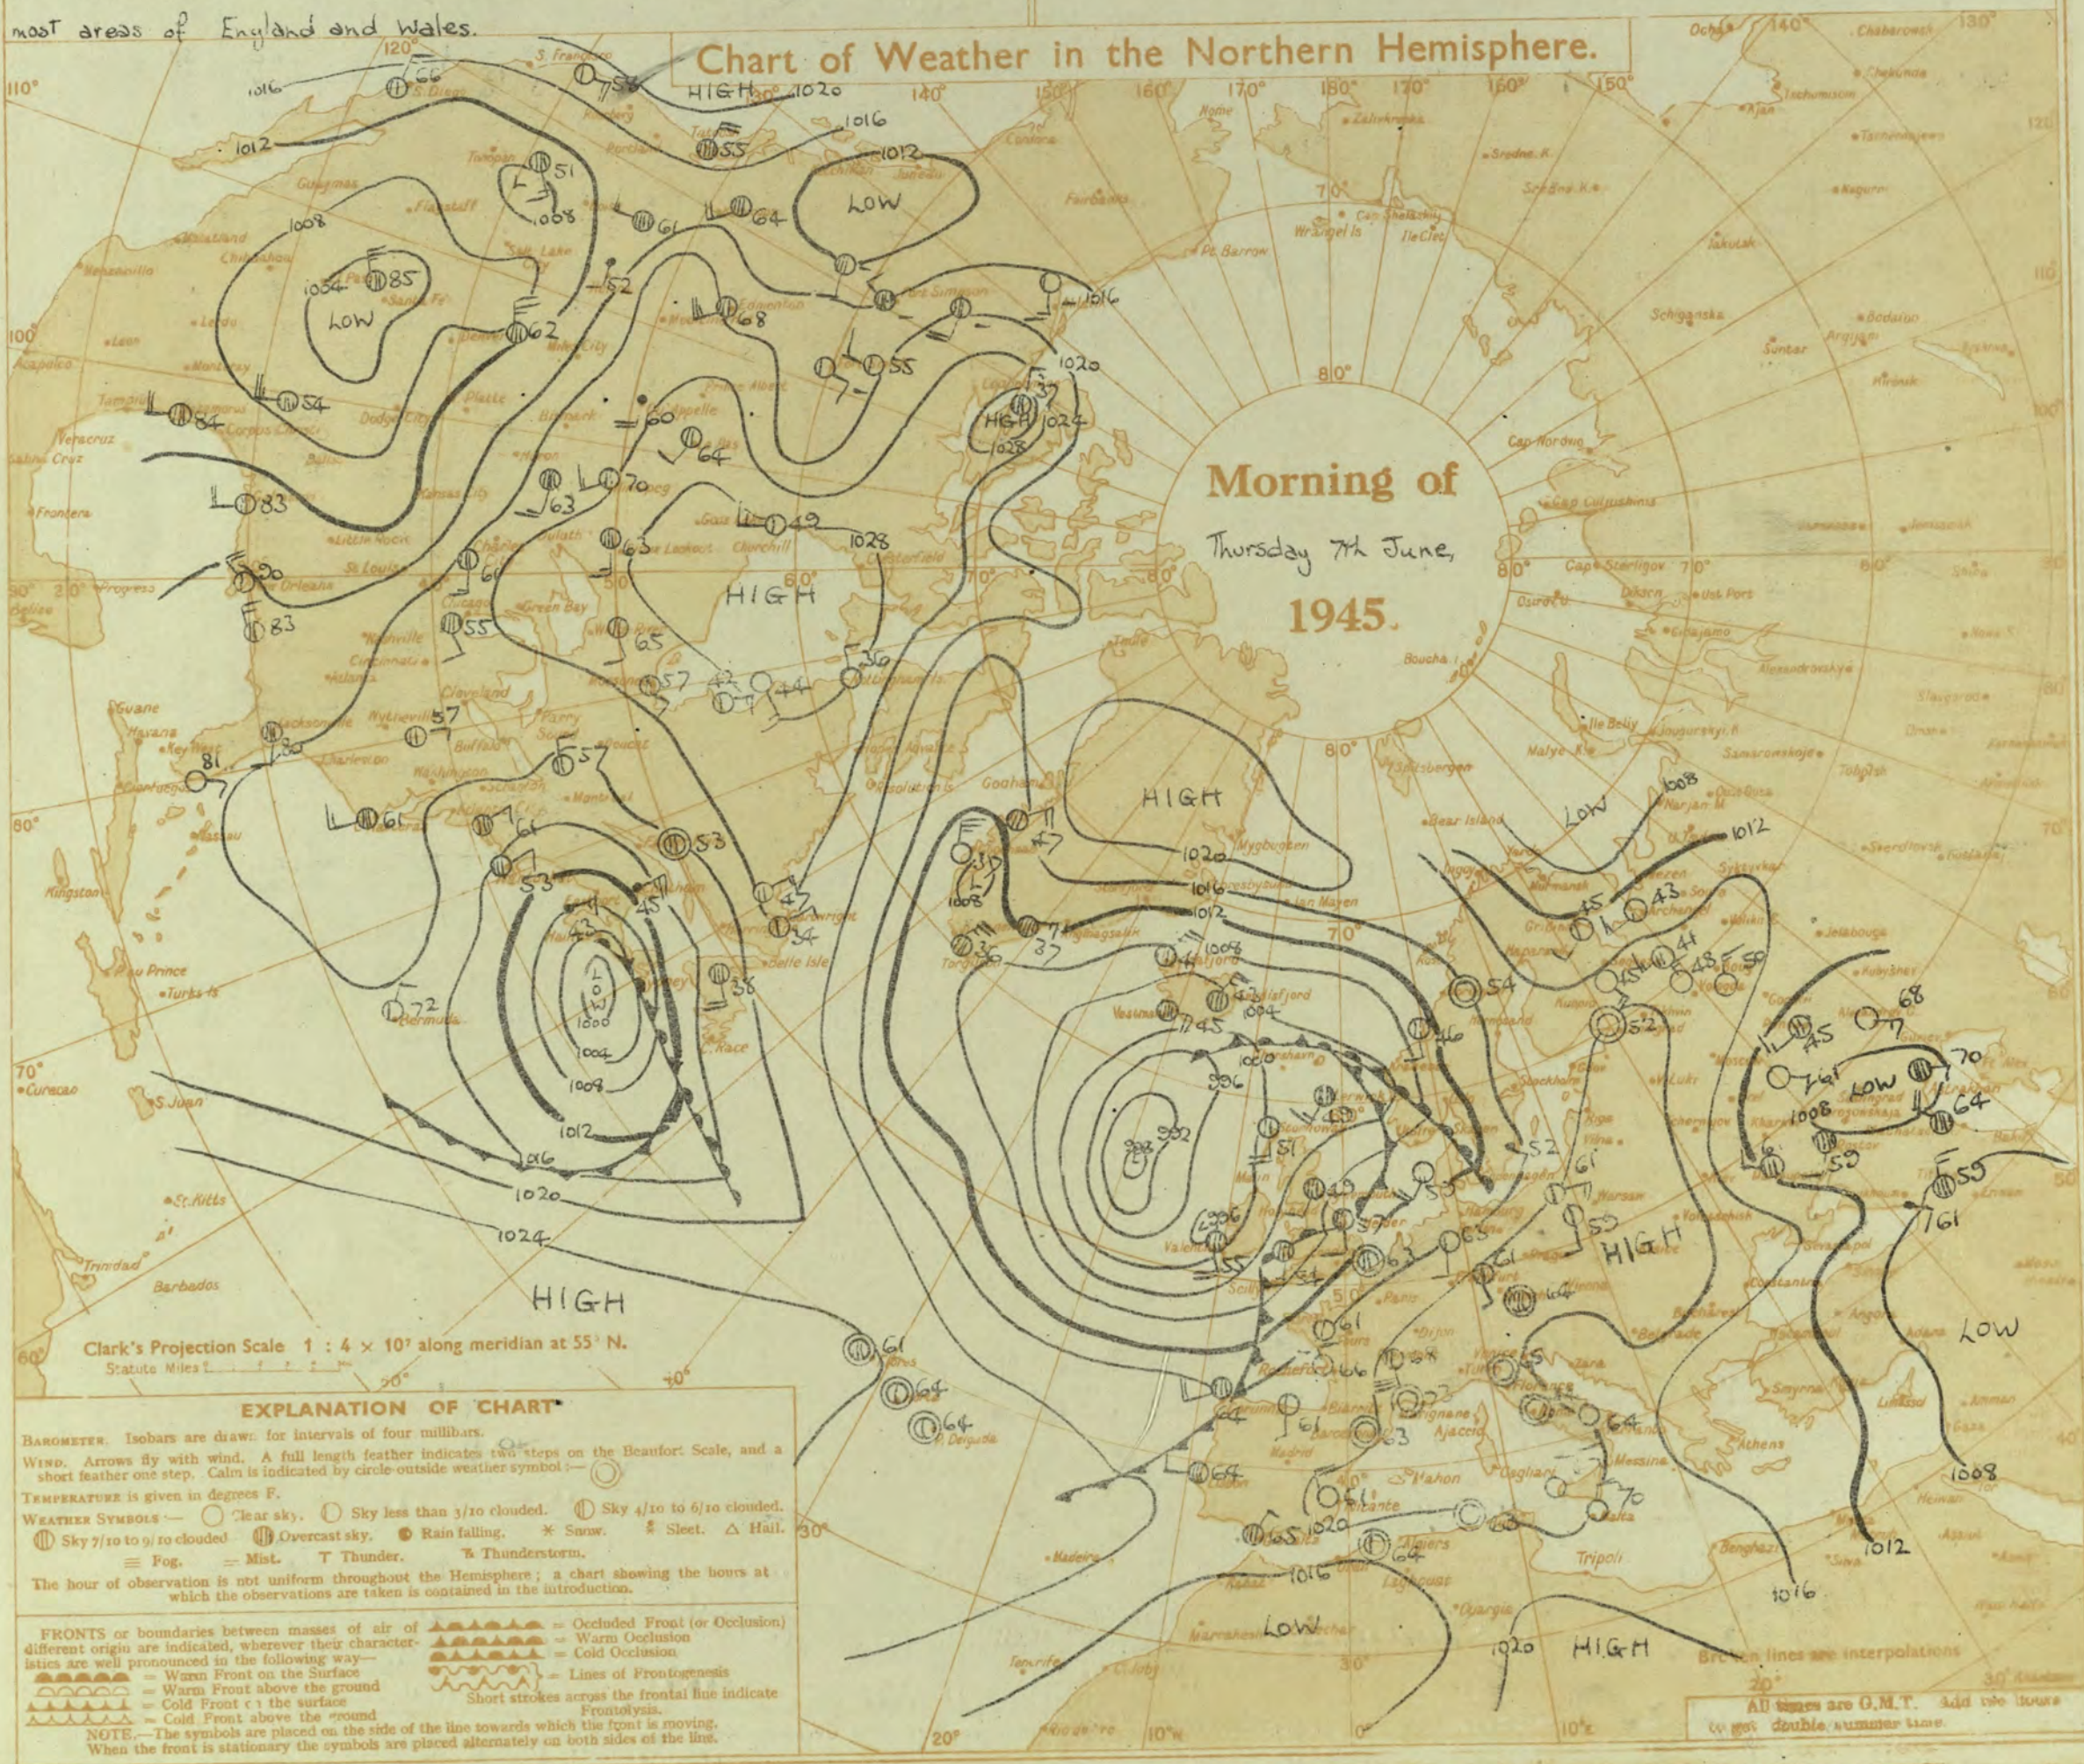

Pressure continues low to west of Scotland and a secondary disturbance over northwest Ireland is moving north. There will be occasional rain or showers over most of the British Isles but especially in western districts and in Scotland, but there will be bright intervals in most areas of England and Wales.

FURTHER OUTLOOK

Bright intervals and showers.

Chart of Weather in the Northern Hemisphere.

Morning of
Thursday 7th June,
1945.

No. 30514

NELSON K. JOHNSON, K.C.B., D.Sc., Director,
Meteorological Office, Air Ministry, Kingsway, London, W.C.2.

GENERAL INFERENCE

A ridge of high pressure is developing to south of the British Isles. And a depression off northwest Scotland is filling up slowly. Weather will be showery in the North with local thunderstorms. In the South there will be bright intervals and showers. It will be rather cool.

FURTHER OUTLOOK

Mainly fair in the South. Showers in the North.

Chart of Weather in the Northern Hemisphere.

Morning of
Friday 8th June,
1945.

Clark's Projection Scale 1 : 4 x 10⁷ along meridian at 55° N.
Statute Miles

EXPLANATION OF CHART

BAROMETER. Isobars are drawn for intervals of four millibars.
WIND. Arrows fly with wind. A full length feather indicates two steps on the Beaufort Scale, and a short feather one step. Calm is indicated by circle outside weather symbol.
TEMPERATURE is given in degrees F.
WEATHER SYMBOLS — ○ Clear sky. ○ Sky less than 3/10 clouded. ○ Sky 4/10 to 6/10 clouded. ○ Sky 7/10 to 9/10 clouded. ○ Overcast sky. ● Rain falling. * Snow. * Sleet. △ Hail. = Fog. = Mist. T Thunder. T Thunderstorm.
The hour of observation is not uniform throughout the Hemisphere; a chart showing the hours at which the observations are taken is contained in the introduction.

FRONTS or boundaries between masses of air of different origin are indicated, wherever their characteristics are well pronounced in the following way —
— Warm Front on the Surface
— Warm Front above the ground
— Cold Front on the surface
— Cold Front above the ground
— Occluded Front (or Occlusion)
— Warm Occlusion
— Cold Occlusion
— Lines of Frontogenesis
Short strokes across the frontal line indicate Frontolysis.
NOTE — The symbols are placed on the side of the line towards which the front is moving. When the front is stationary the symbols are placed alternately on both sides of the line.

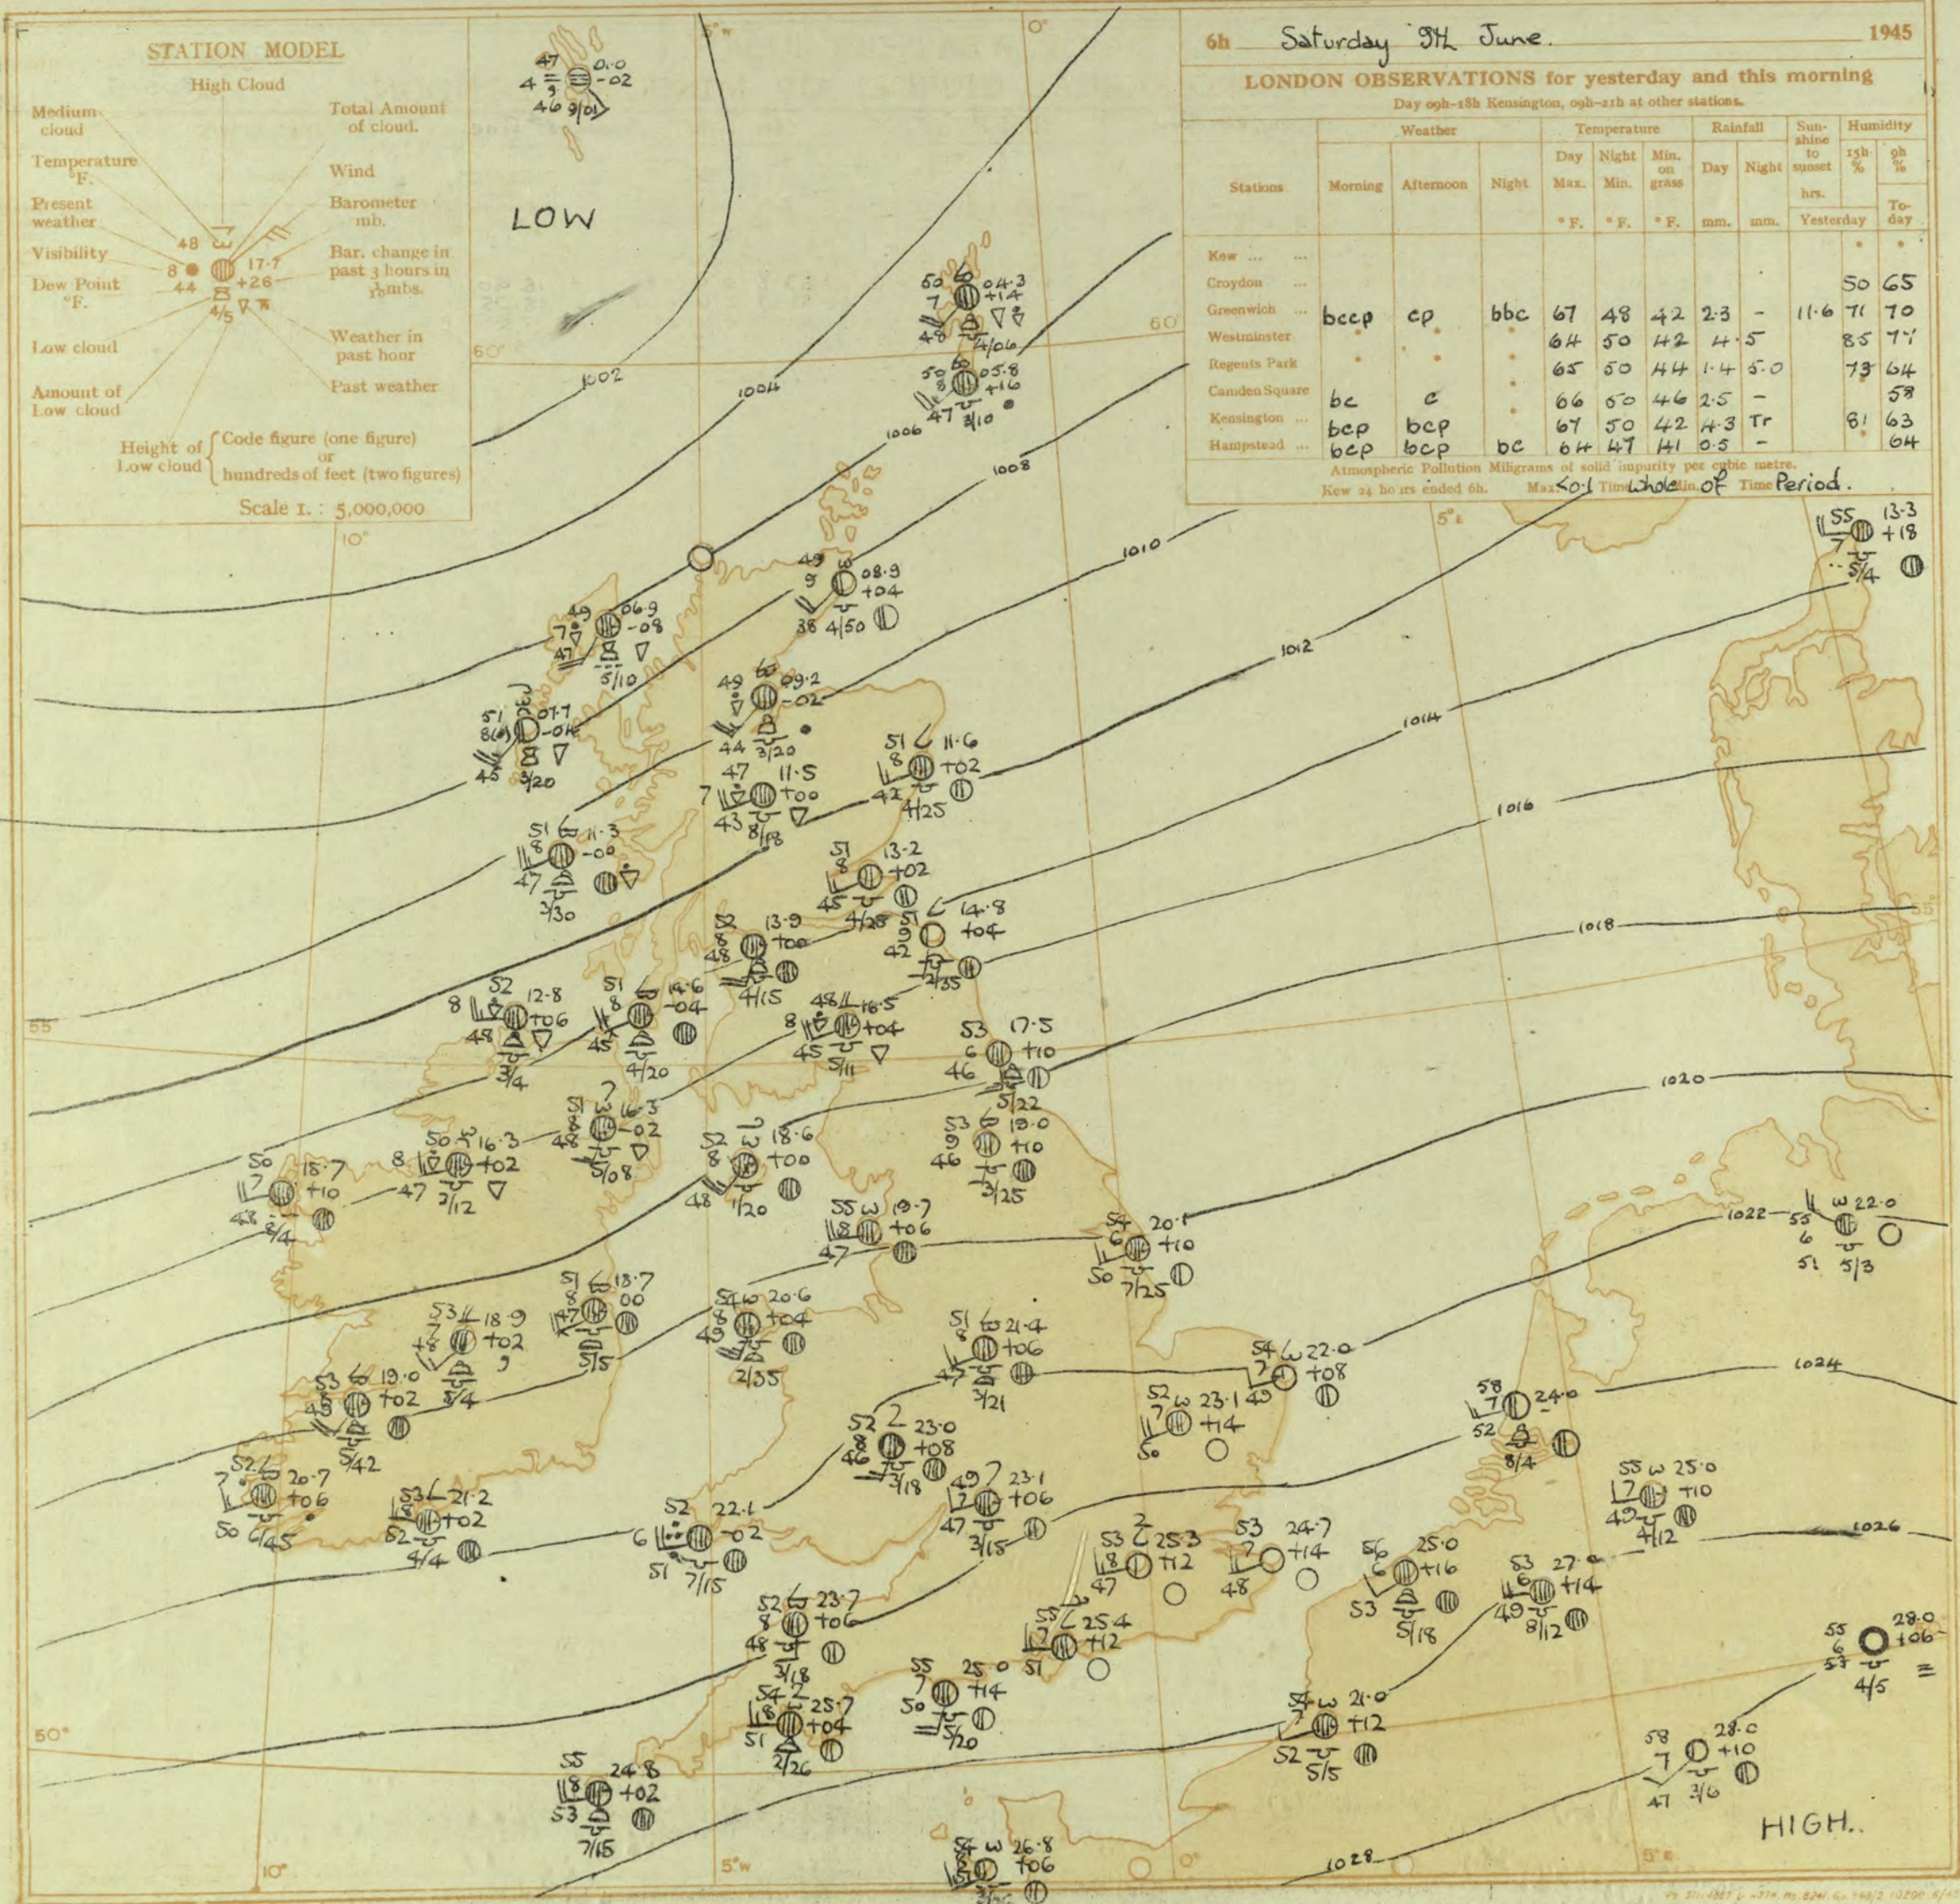

Broken lines are interpolations
20° 30°
All times are G.M.T. Add two hours in double summer time

GENERAL INFERENCE
 Pressure high to south and low to north of the British Isles.
 Secondary disturbances will move east over North Ireland and
 South Scotland during the night and tomorrow with associated trough
 moving across England and Wales. Variable cloud most areas at first
 with local slight rain in the south and showers in the north but good
 bright intervals in most areas. Low cloud and intermittent rain spreading
 east across Ireland, Wales, England and South Scotland during the
 night

FURTHER OUTLOOK
 Mainly fair at first except in South.
 Further rain spreading Northeast to most areas later.

Chart of Weather in the Northern Hemisphere.

Morning of
 Saturday 9th June
 1945.

Clark's Projection Scale 1 : 4 x 10⁷ along meridian at 55° N.
 Statute Miles

EXPLANATION OF CHART

BAROMETER. Isobars are drawn for intervals of four millibars.
WIND. Arrows fly with wind. A full length feather indicates two steps on the Beaufort Scale, and a short feather one step. Calm is indicated by circle outside weather symbol.
TEMPERATURE is given in degrees F.
WEATHER SYMBOLS: — Clear sky, ☁ Sky less than 3/10 clouded, ☁☁ Sky 4/10 to 6/10 clouded, ☁☁☁ Sky 7/10 to 9/10 clouded, ☁☁☁☁ Overcast sky, ☔ Rain falling, * Snow, * Sleet, △ Hail, ☁☁☁☁ Fog, ☁☁☁☁ Mist, T Thunder, T Thunderstorm.
 The hour of observation is not uniform throughout the Hemisphere; a chart showing the hours at which the observations are taken is contained in the introduction.

FRONTS or boundaries between masses of air of different origin are indicated, wherever their characteristics are well pronounced in the following way:
 — Warm Front on the surface
 — Warm Front above the ground
 — Cold Front on the surface
 — Cold Front above the ground
 — Occluded Front (or Occlusion)
 — Warm Occlusion
 — Cold Occlusion
 — Lines of Frontogenesis
 Short strokes across the frontal line indicate Frontolysis.
NOTE.—The symbols are placed on the side of the line towards which the front is moving. When the front is stationary the symbols are placed alternately on both sides of the line.

Broken lines are interpolations

All times are G.M.T. Add two hours to get double summer time.

[illegible]

CODE FOR CLOUD AMOUNT (Cols. 12, 13, 14, 28, 29, 30).

GENERAL INFERENCE
 A belt of high pressure extends from the Azores to South Germany and a trough will move east and northeast across the country. Cloudy conditions with rain or drizzle at times will obtain in England, Wales and Ireland; it will be mainly fair in Scotland at first but cloudy conditions with local rain in the Southwest will extend slowly northeastwards; mainly rather cool.

Little change

GENERAL INFERENCE

A depression centered northwest of the British Isles is moving northeast and troughs of low pressure will move east-northeast across the country. Rain in the North at first will be followed by a temporary improvement but further rain is likely again tonight. Elsewhere weather will be mainly cloudy with local rain or drizzle and some fog in western districts. Mainly rather cool but close in southeast districts.

FURTHER OUTLOOK

Shower in North; mainly fair in the South.

Atmospheric Pollution Milligrams of solid impurity per cubic metre.
Kew 24 hours ended 6h. Max. 4.0 mg/m³ whole period.

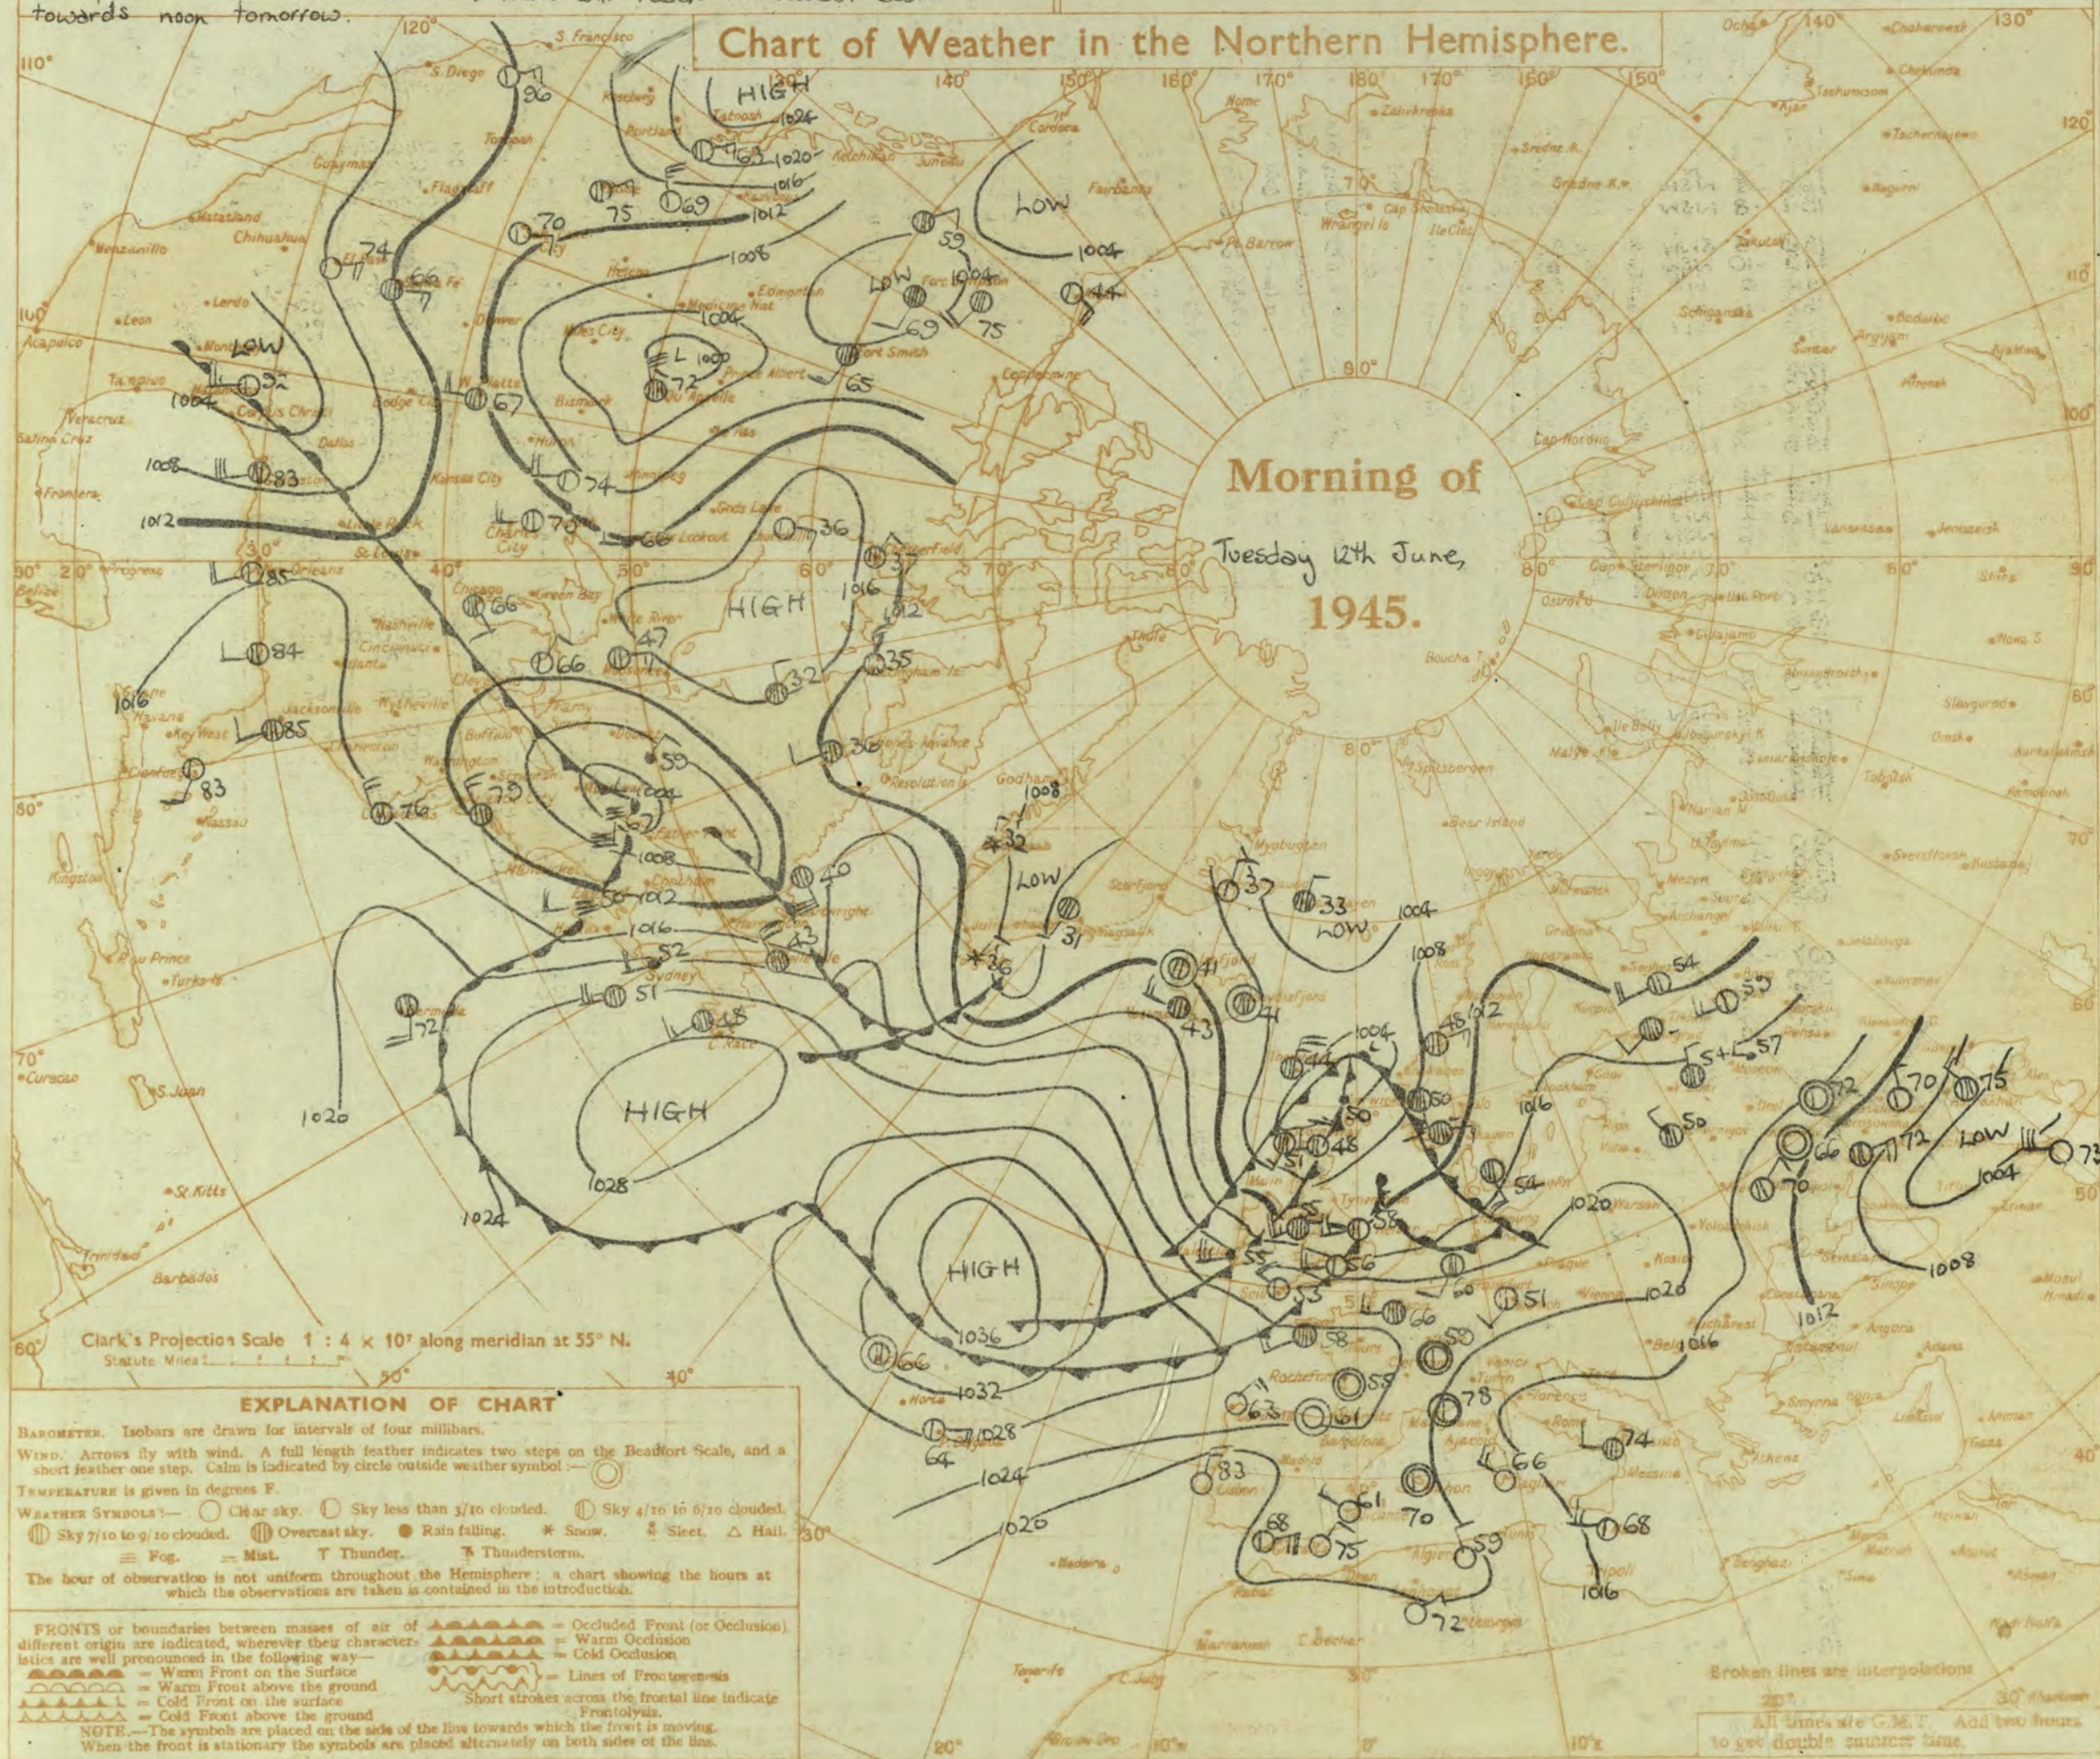

GENERAL INFERENCE

Troughs of low pressure are moving southeast across the British Isles, and a ridge of high pressure, followed by another trough, is approaching from the north west. Weather will be rather cool generally. There will be showers in most districts today, with risk of local thunder in the North; there will be appreciable clear skies in Central and southern districts tonight, but showers will persist in the North and West. Rain will reach northwest Scotland towards noon tomorrow.

FURTHER OUTLOOK

Mainly cloudy and rather cool, with occasional rain or showers in most districts.

Chart of Weather in the Northern Hemisphere.

Atmospheric Pollution Milligrams of solid impurity per cubic metre.
Kew 24 hrs ended 6h. Max 2.1 Time 4.4h. Min 0.1 Time 6.15h.

Pressure is high to the southwest of the British Isles and a trough of low pressure will move southeast across our northern and eastern districts. Weather will be cloudy in Scotland with occasional rain followed by scattered showers. In Northern Ireland, North and East England, the Midlands and North Wales weather will be fair at first but there will be occasional slight rain in most districts later. Weather will be fair in the South and Southwest. Gales will occur in Northern Ireland and Scotland. Rather cool generally.

Unsettled northwesterly type. Cloudy in most districts with occasional rain in the West and North.

↓ Gale warning in operation in districts 13A, 13B, 14, 15, 16, and part of 17 & 18.
Issued at 1410 G.M.T. 12.6.45 and at 0230, 0400, & 0745 on 13.6.45.

Chart of Weather in the Northern Hemisphere.

Morning of Wednesday 13th June 1945.

EXPLANATION OF CHART

BAROMETER. Isobars are drawn for intervals of four millibars.

WIND. Arrows fly with wind. A full length feather indicates two steps on the Beaufort Scale, and a short feather one step. Calm is indicated by circle outside weather symbol.

TEMPERATURE is given in degrees F.

WEATHER SYMBOLS: — Clear sky. — Sky less than 3/10 clouded. — Sky 4/10 to 6/10 clouded. — Sky 7/10 to 9/10 clouded. — Overcast sky. — Rain falling. — Snow. — Sleet. — Thunderstorm. — Fog. — Mist. — Thunder.

The hour of observation is not uniform throughout the Hemisphere; a chart showing the hours at which the observations are taken is contained in the introduction.

FRONTS or boundaries between masses of air of different origin are indicated, in the following way: — Warm Front on the Surface — Warm Front above the ground — Cold Front on the surface — Cold Front above the ground

— Occluded Front (or Occlusion) — Warm Occlusion — Cold Occlusion — Lines of Frontogenesis — Short strokes across the frontal line indicate Frontolysals.

NOTE.—The symbols are placed on the side of the line towards which the front is moving. When the front is stationary the symbols are placed alternately on both sides of the line.

Broken lines are interpolations

All times are G.M.T. Add two hours to get double summer time.

† Birr Castle reports at 1300. Maximum temperature and rainfall read at 1800.

CODE FOR CLOUD AMOUNT (Cols. 12, 13, 14, 28, 29, 30).

0 = Nil 2 = $\frac{1}{10}$ 4 = $\frac{1}{5}$ 6 = $\frac{2}{5}$ 8 = Completely covered.
 1 = Trace 3 = $\frac{1}{5}$ 5 = $\frac{1}{2}$ 7 = More than 9 but with openings. 9 = Sky obscured by fog, etc.

Columns 13, 14, 25; 16, 29, 30, 31, 32.

A = Lowest cloud present.

B = Next lowest cloud. † See footnote p. 4.

* Information not usually received.

NELSON K. JOHNSON, K.C.B., D.Sc., Director.
Meteorological Office, Air Ministry, Kingsway, London, W.C.2.

Atmospheric Pollution Milligrams of solid impurity per cubic metre.
Kew 24 hours ended 6h. Max. 40.1 Time 12.00h. of Time Period.

GENERAL INFERENCE

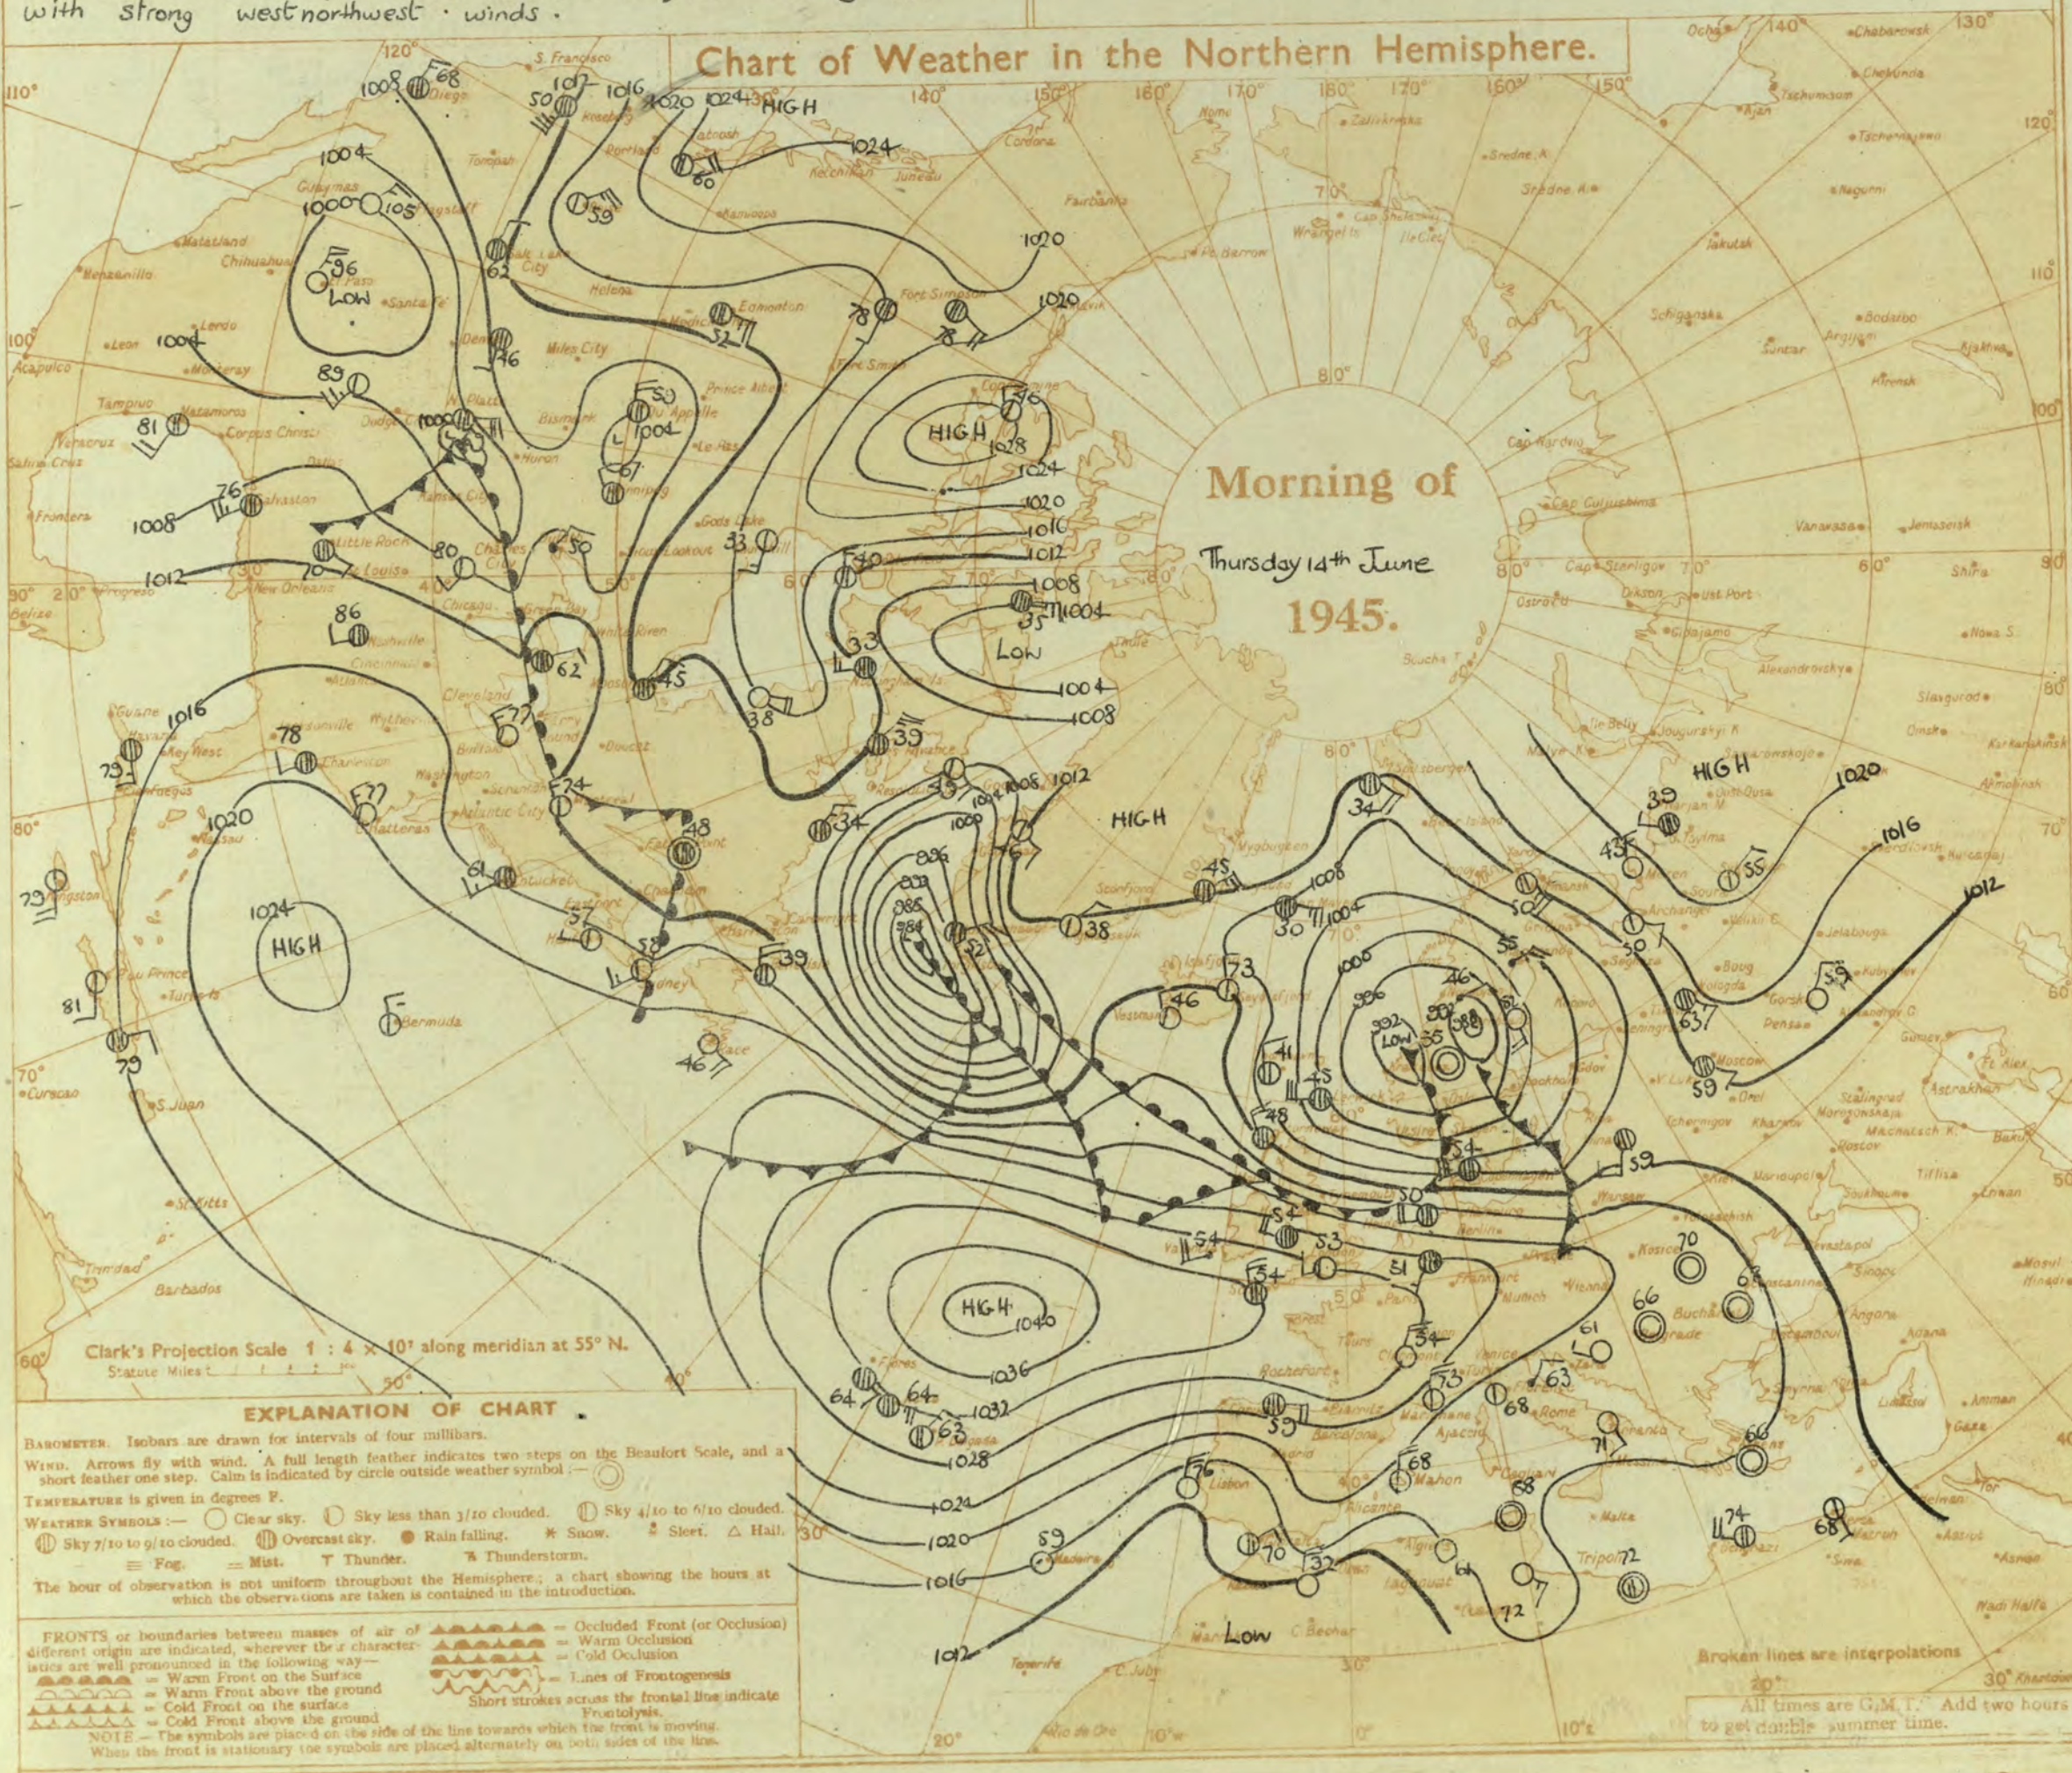

Pressure is high to the southwest and low to Northeast of the British Isles. A deep depression southeast of Greenland is moving quickly east; weather will be generally cloudy with occasional slight rain in the South, and more general rain later in the North; a narrow belt of rain will move Southeast across the country tomorrow, followed by bright periods and showers; it will be rather cool at first becoming cool with strong west-northwest winds.

FURTHER OUTLOOK

Remaining unsettled, probably cooler.

Chart of Weather in the Northern Hemisphere.

Morning of
Thursday 14th June
1945.

GENERAL INFERENCE

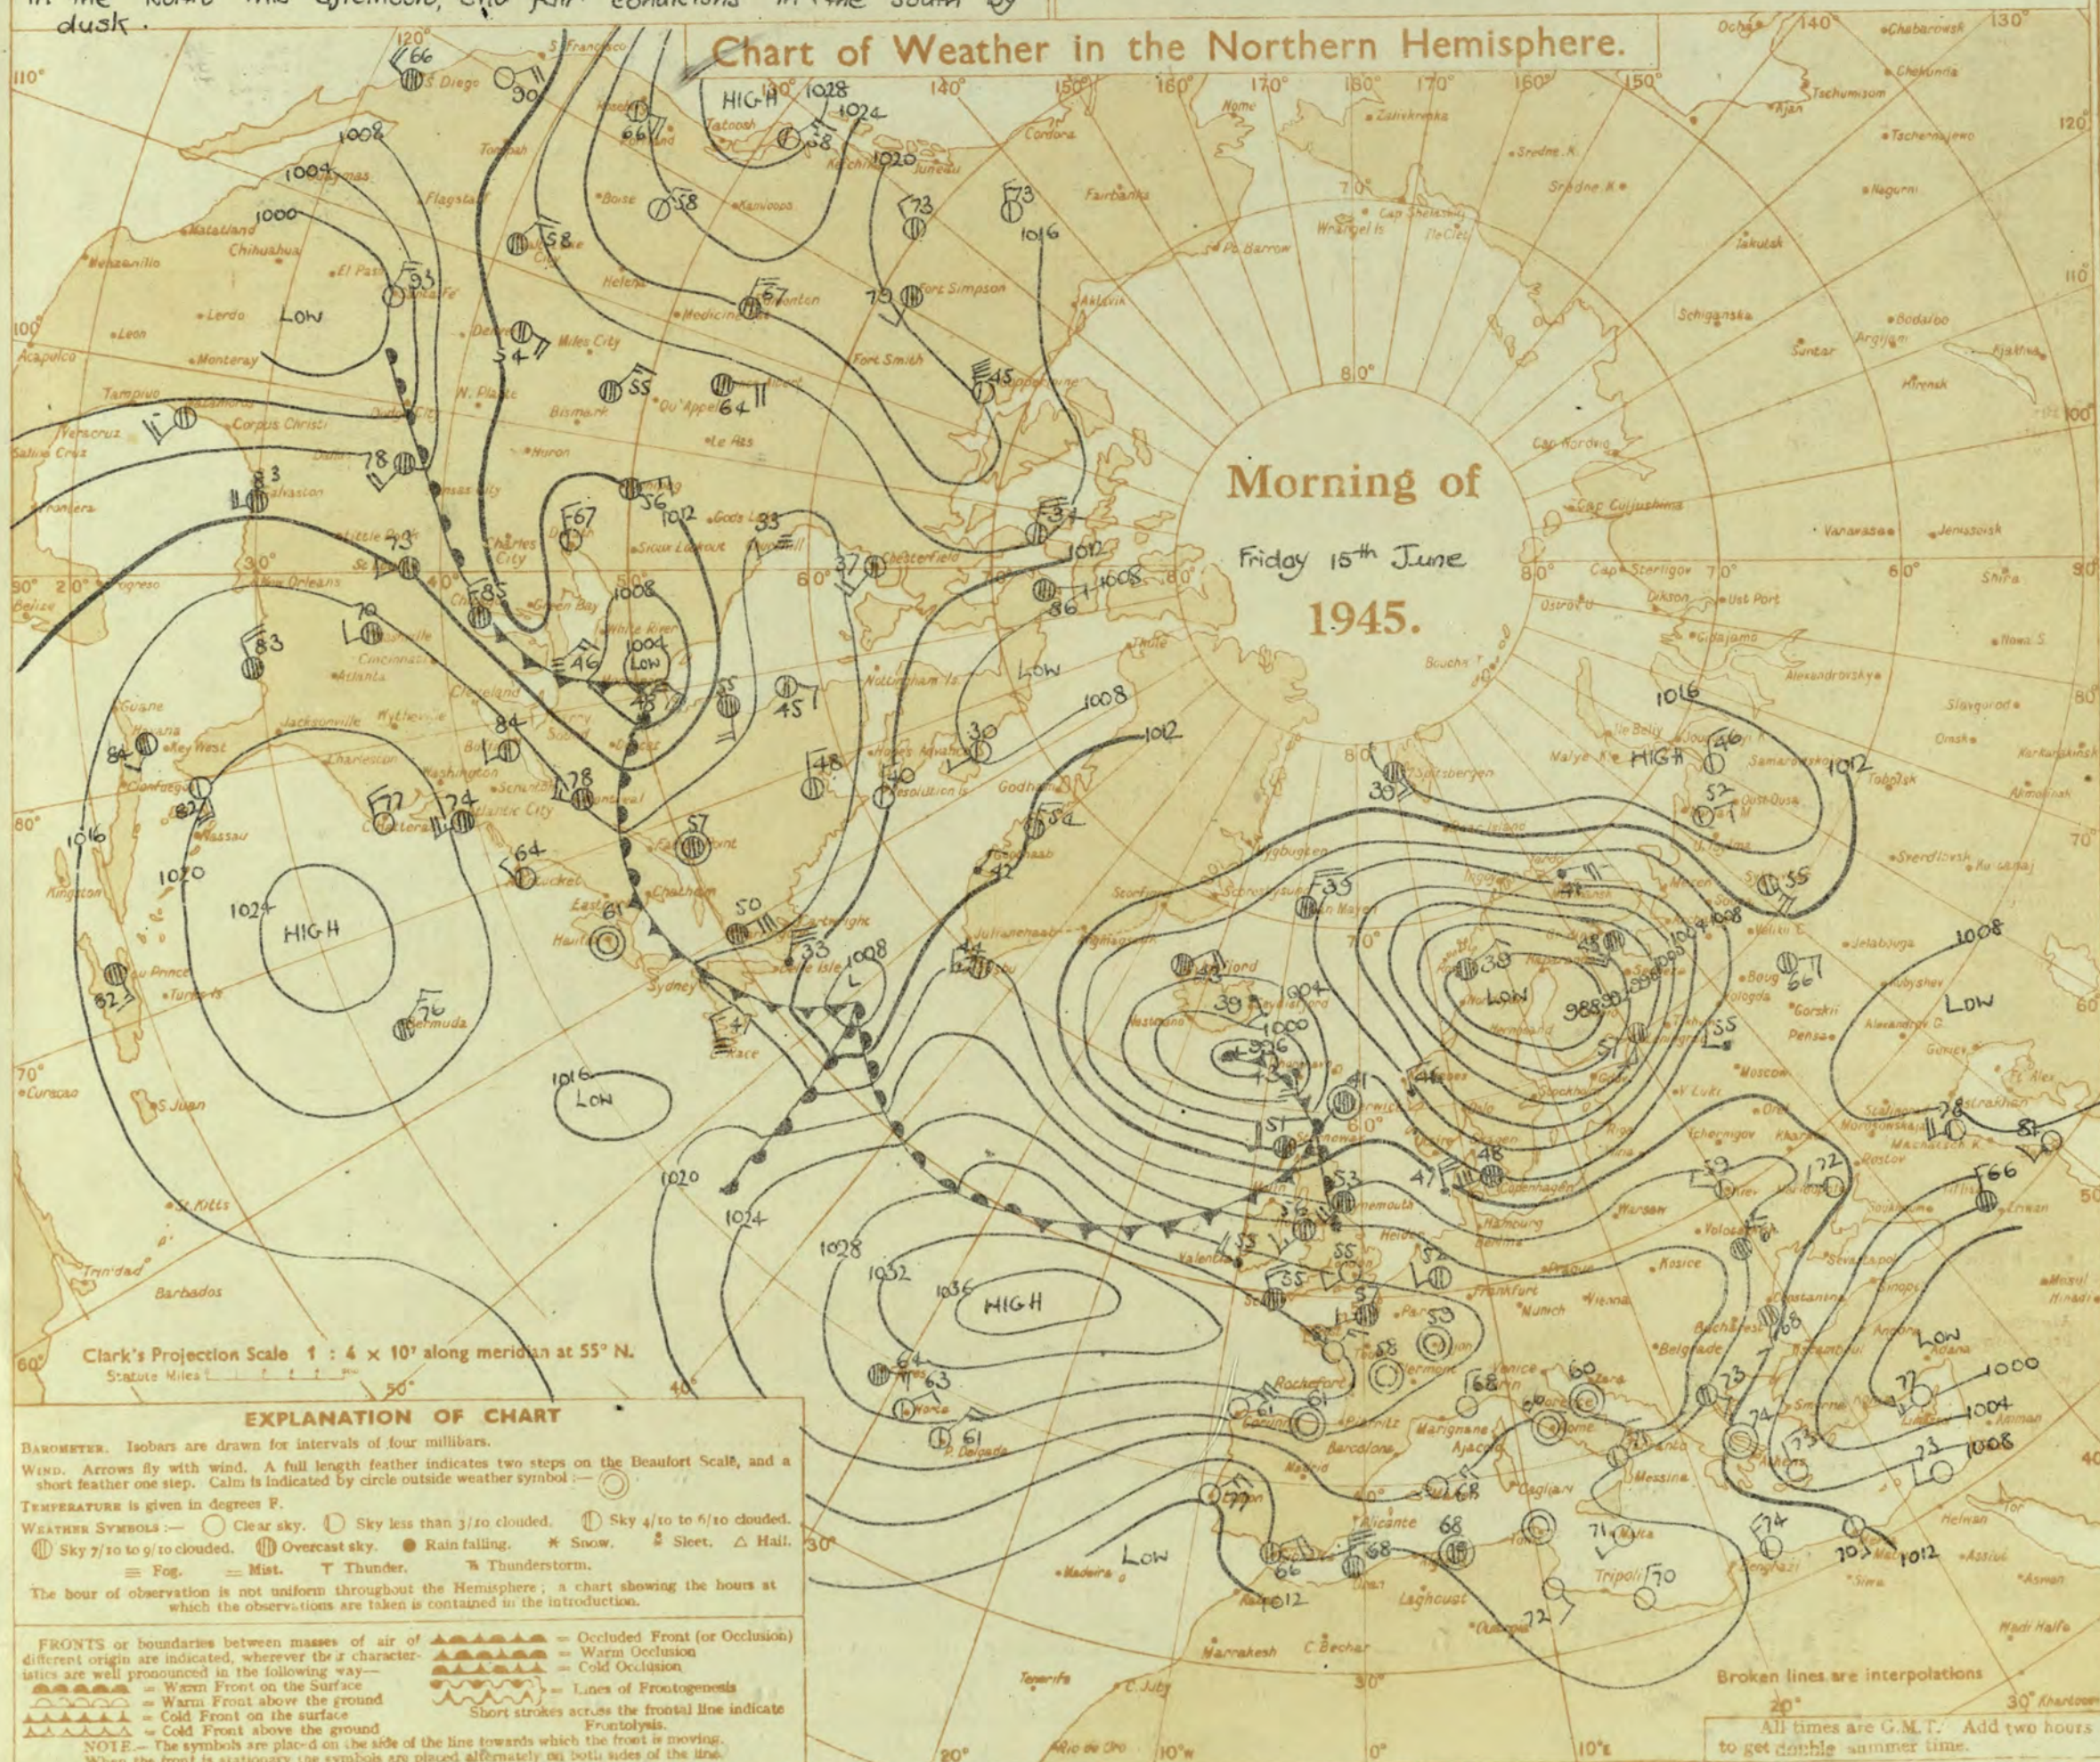

A depression centred north of Scotland is moving east, and a trough of low pressure is moving southeast across the British Isles. Weather will be rather cool and showery in Scotland and Ireland, with local thunderstorms in Scotland; mainly cloudy and rather cool conditions in England and Wales, with hill and local coast fog in the West and South, and local rain or drizzle will give way to showery conditions in the North this afternoon, and fair conditions in the South by dusk.

FURTHER OUTLOOK

Showers in the North and East, fair in the South and West.

Chart of Weather in the Northern Hemisphere.

Morning of
Friday 15th June
1945.

Atmospheric Pollution: Milligrams of solid impurity per cubic metre.
Kew 24 hours ended 6.0.1 Max. Min. Period.

GENERAL INFERENCE

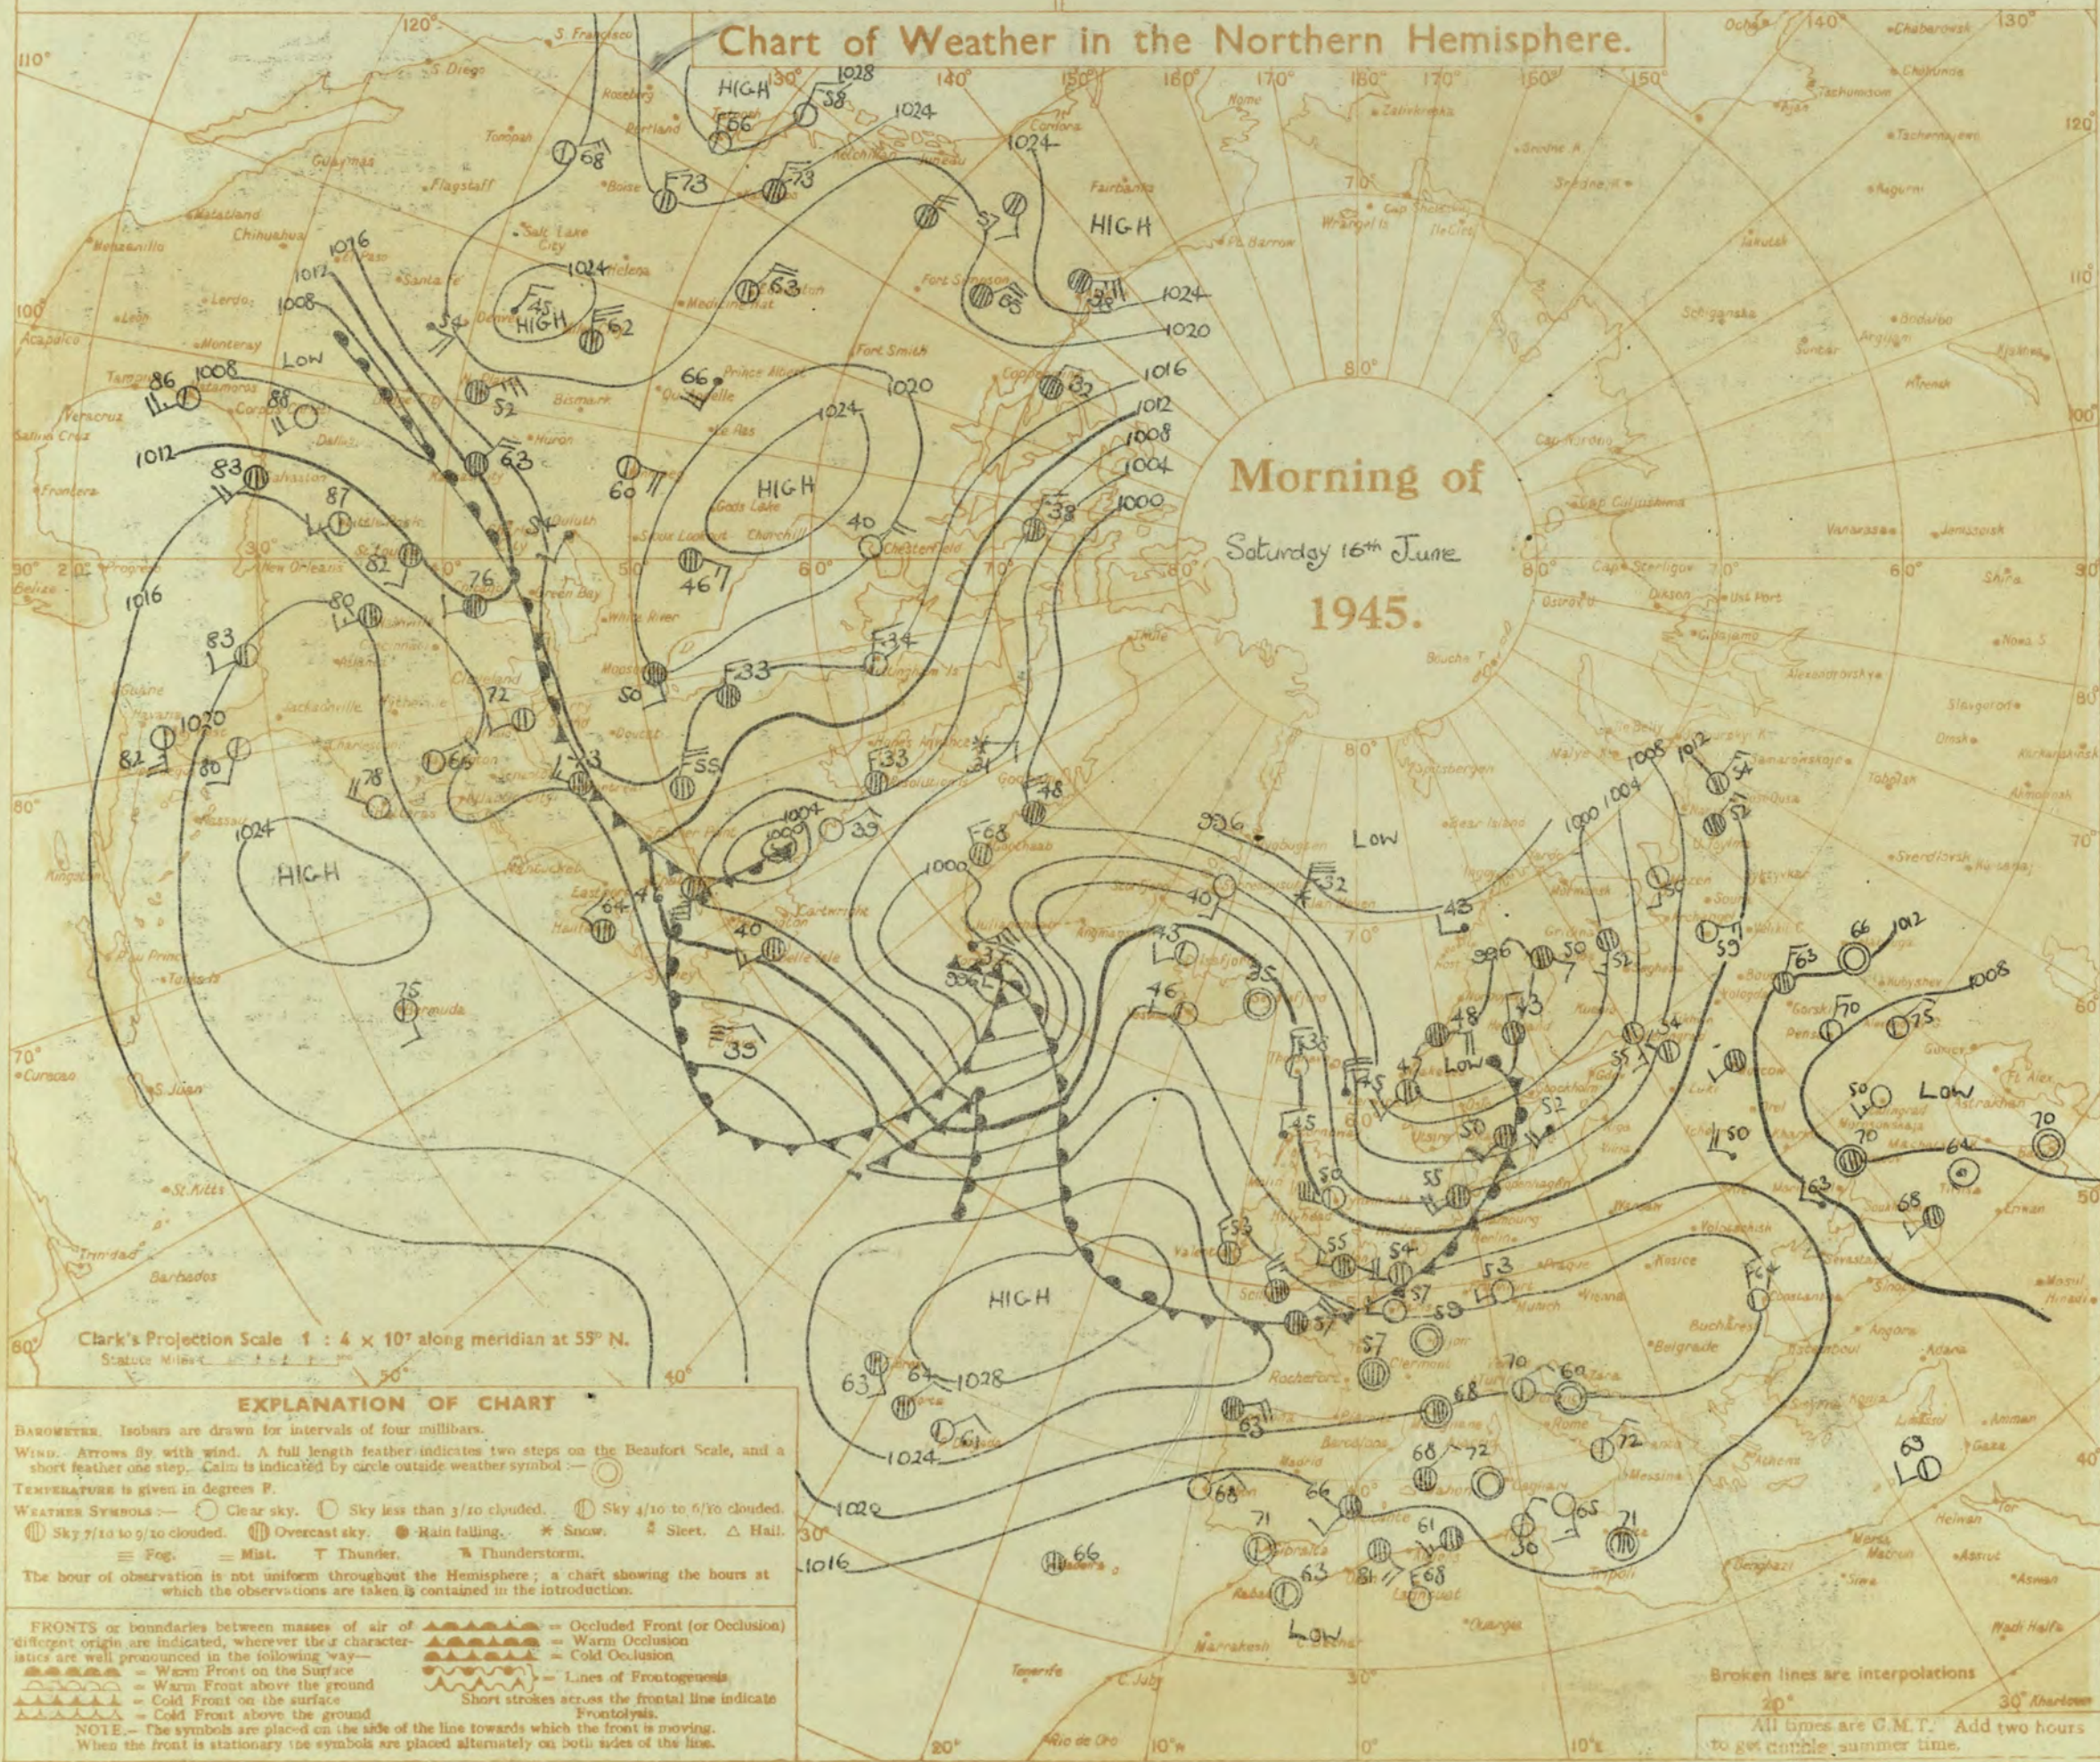

A ridge of high pressure west of Ireland is moving east and increasing in intensity. Weather will be mainly fair in the South and Midlands; in the North it will be fair at first but rain will occur later; it will be cool.

FURTHER OUTLOOK

Mainly fair in the South; occasional rain in the North

Chart of Weather in the Northern Hemisphere.

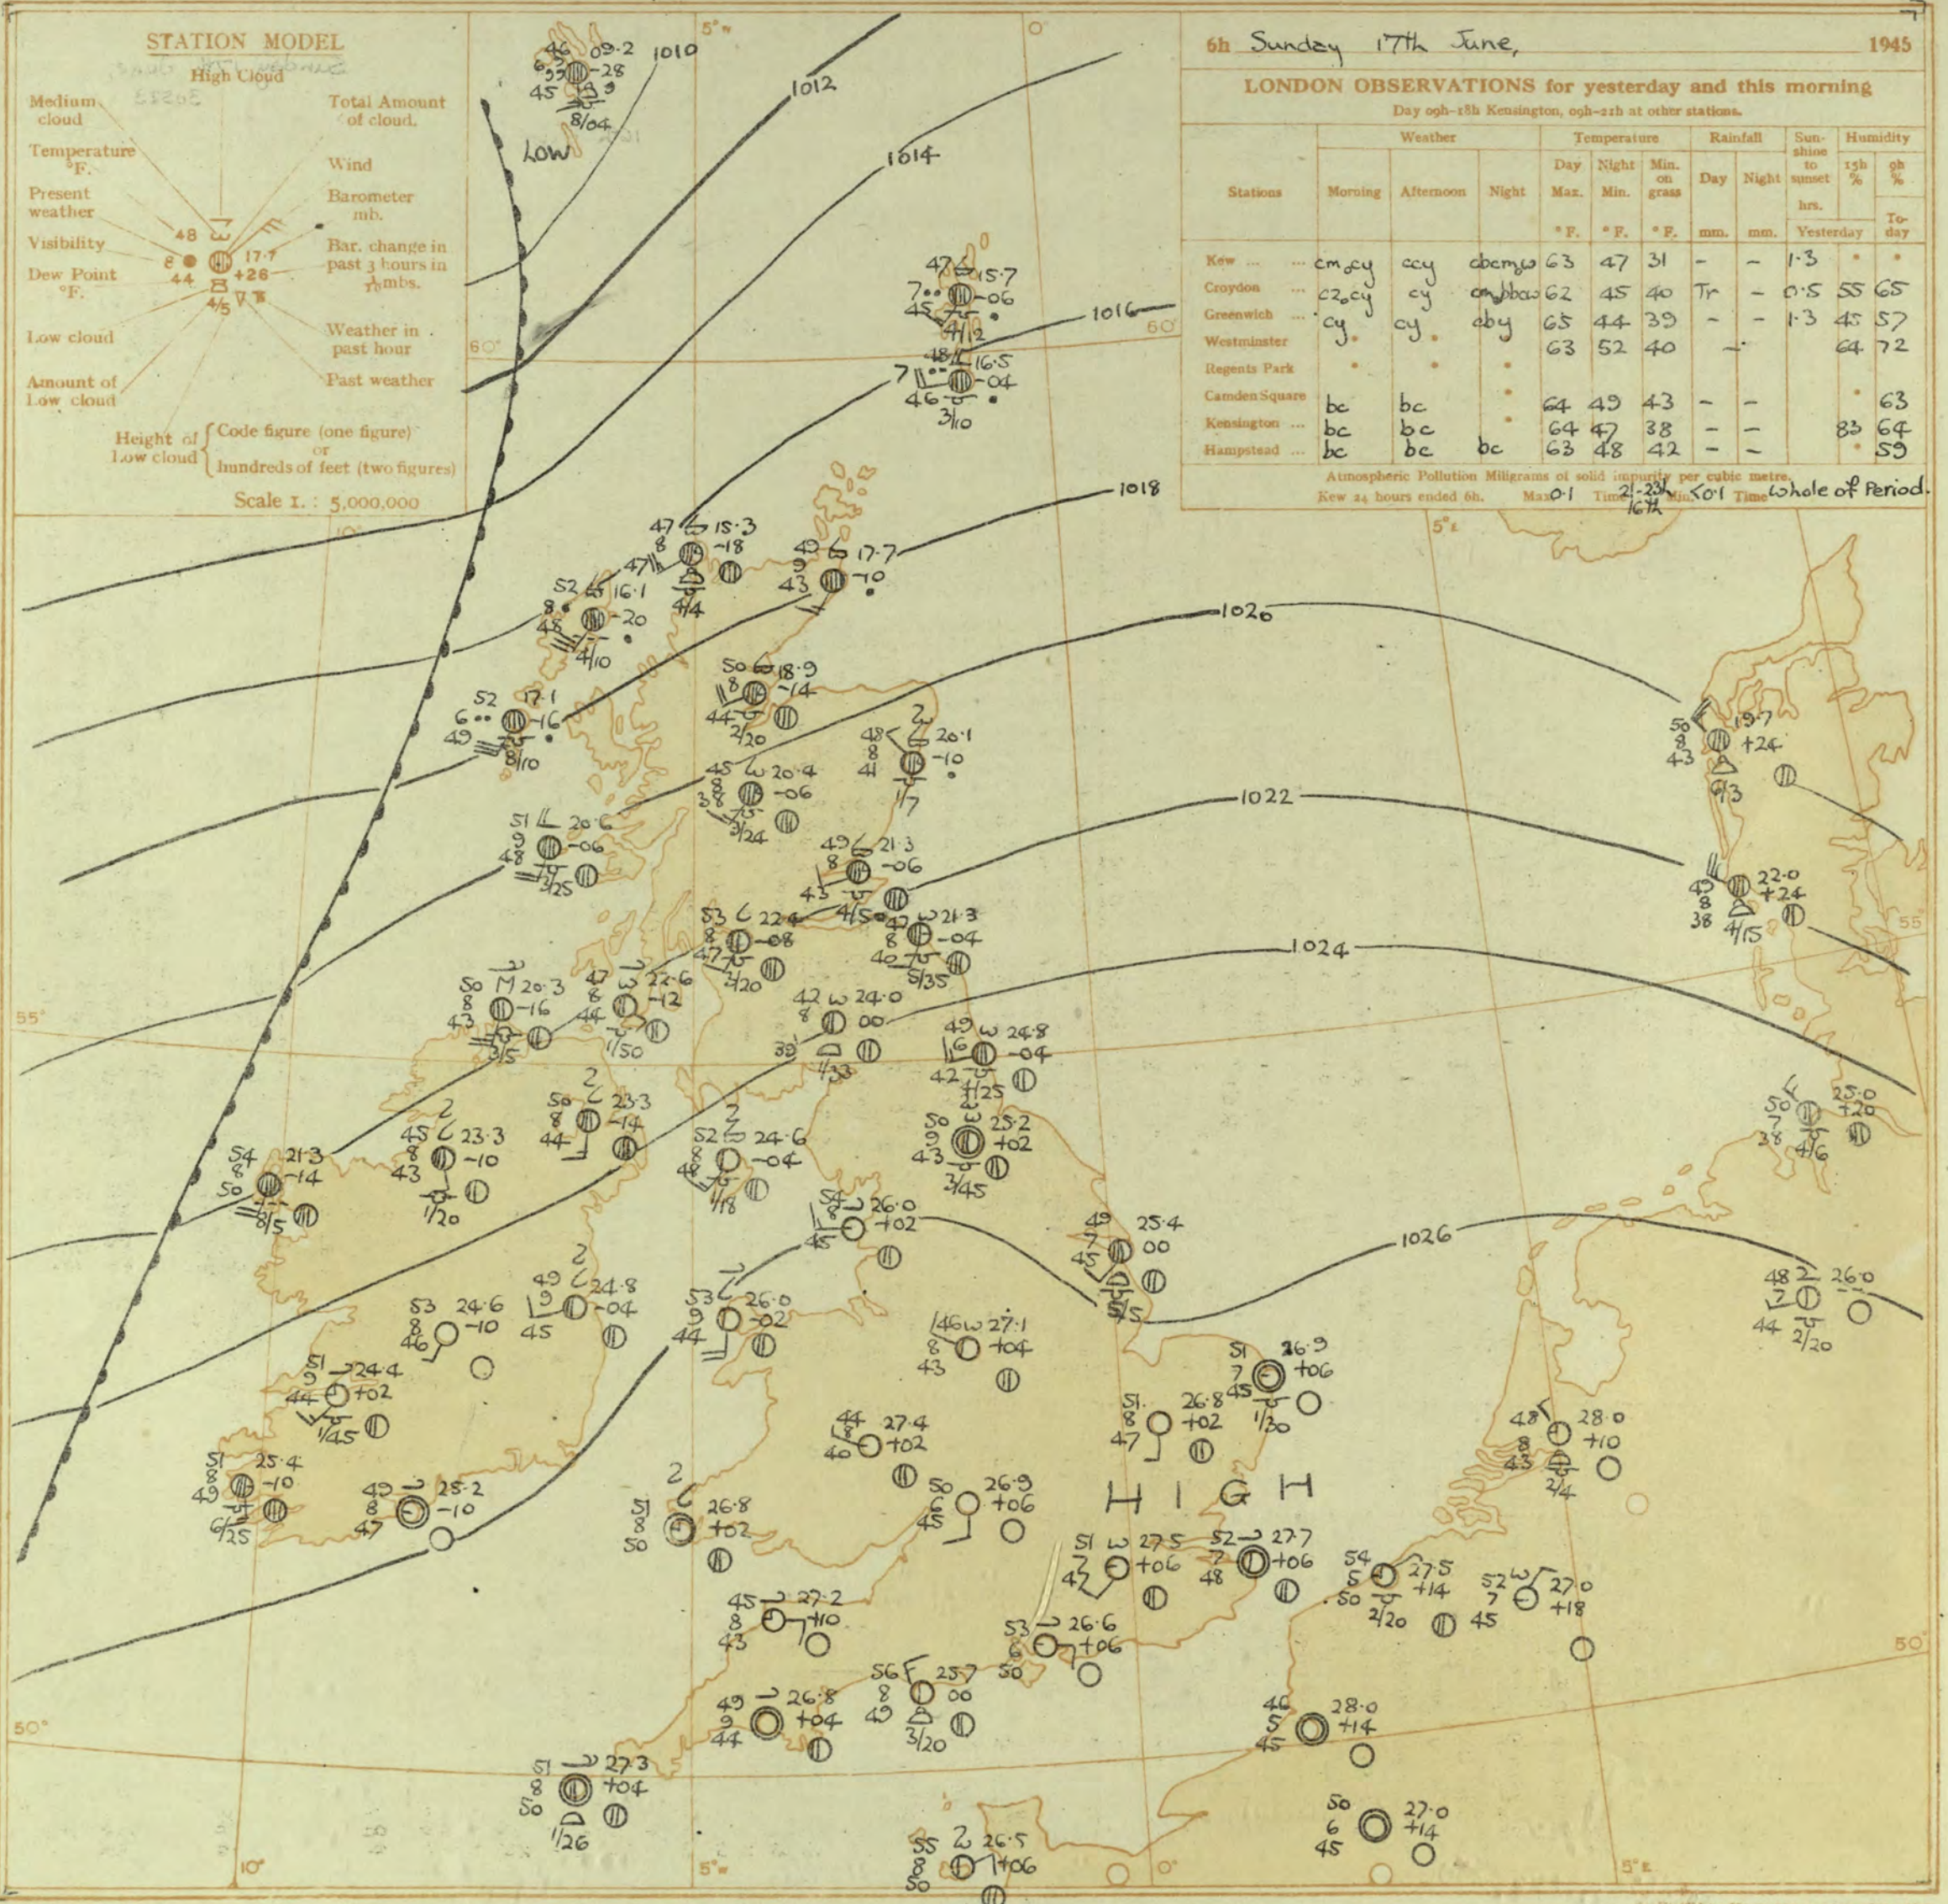

Morning of
Saturday 16th June
1945.

GENERAL INFERENCE

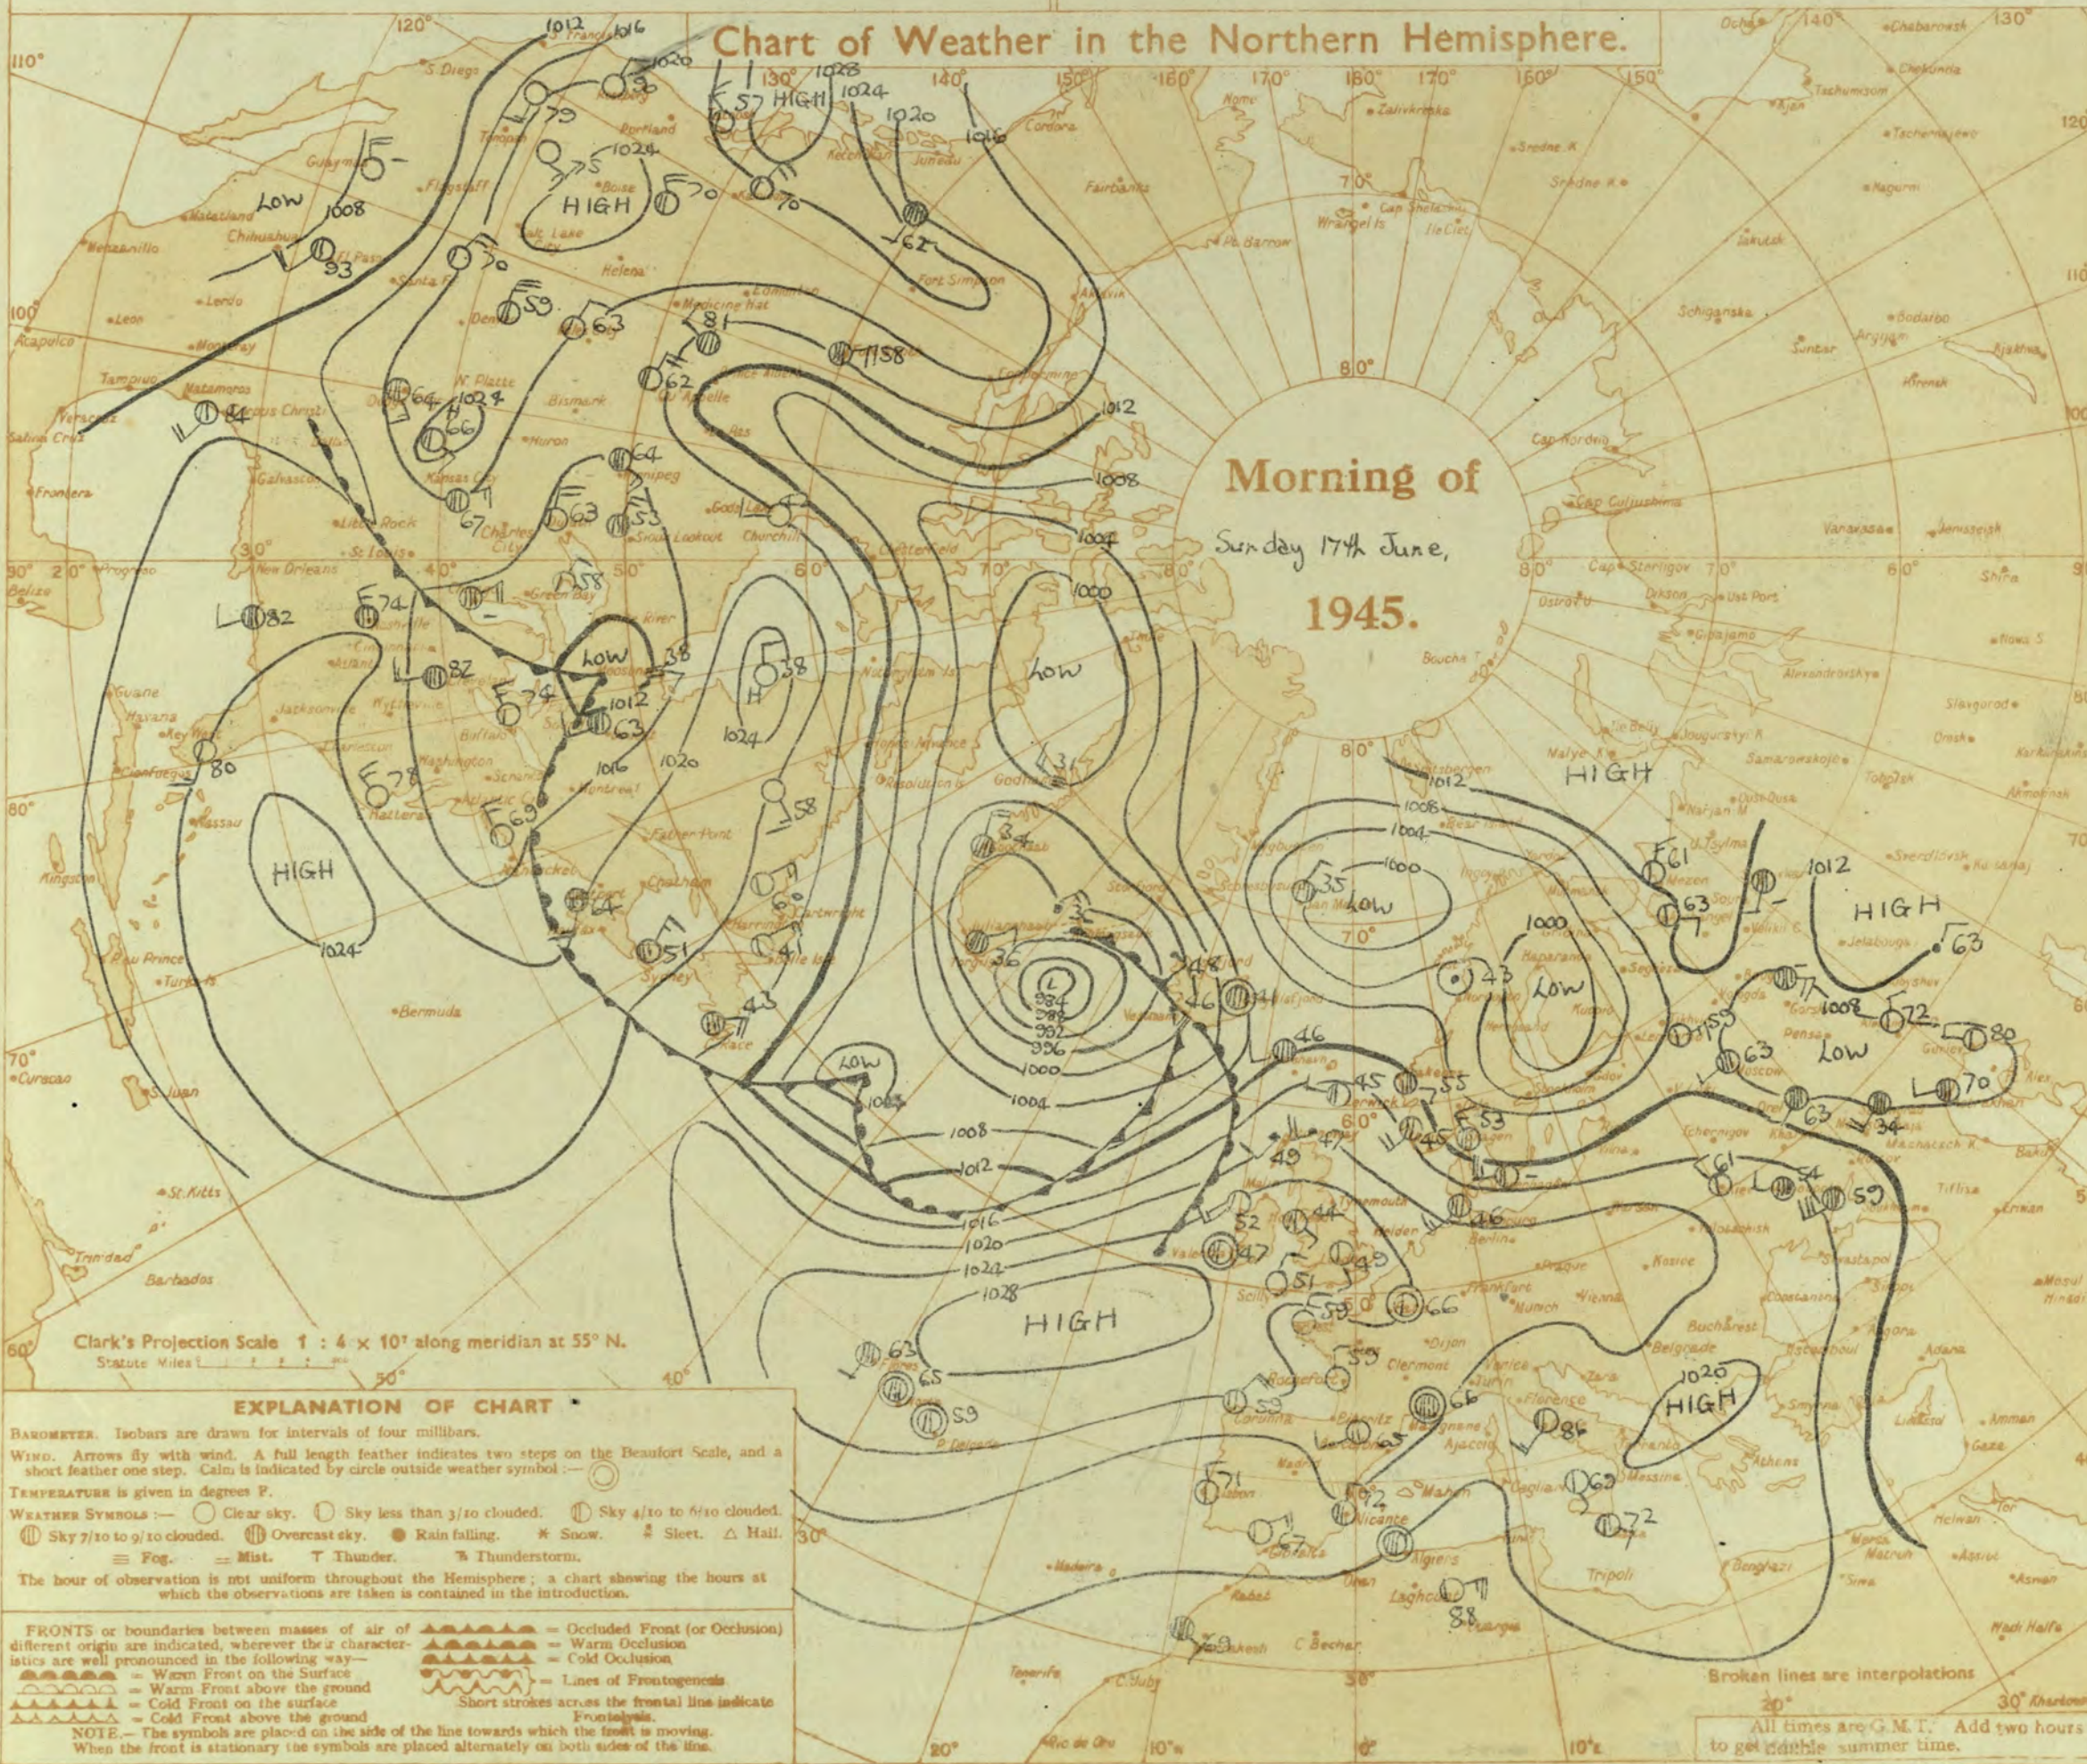

Pressure is high from the Azores to the Low Countries and low to the northwest of the British Isles. Weather will be fair and rather warm over much of England and Wales today, but it will become dull in most western coastal districts tonight with local drizzle. Weather will be fair in Southeast Scotland but elsewhere in Scotland it will be cloudy with occasional rain in the north, and drizzle in the west. There will be much hill and coast fog in the west. In Ireland weather will be fair at first in most districts but it will become dull generally, with local drizzle in West and North. It will be rather cool over most of Scotland and Ireland.

FURTHER OUTLOOK

Cloudy in North and West with occasional rain, fair in the Southeast.

Chart of Weather in the Northern Hemisphere.

Morning of
Sunday 17th June,
1945.

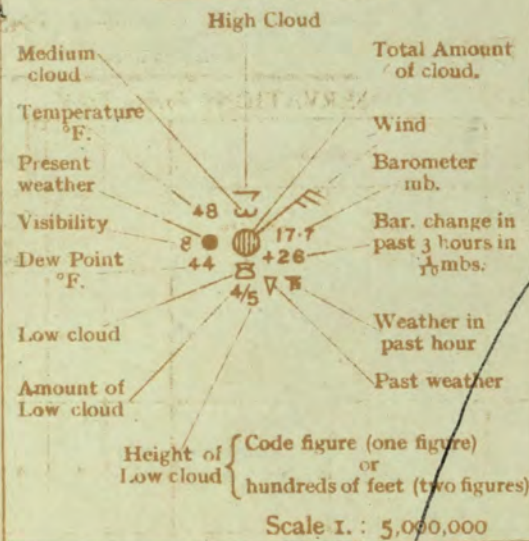

† Second figure in col. (33) gives depth of snow in inches.

Kew 24 hours ended 6h. Max 0.1 Time 7/8 Min 0.0 Time 1/2 of period

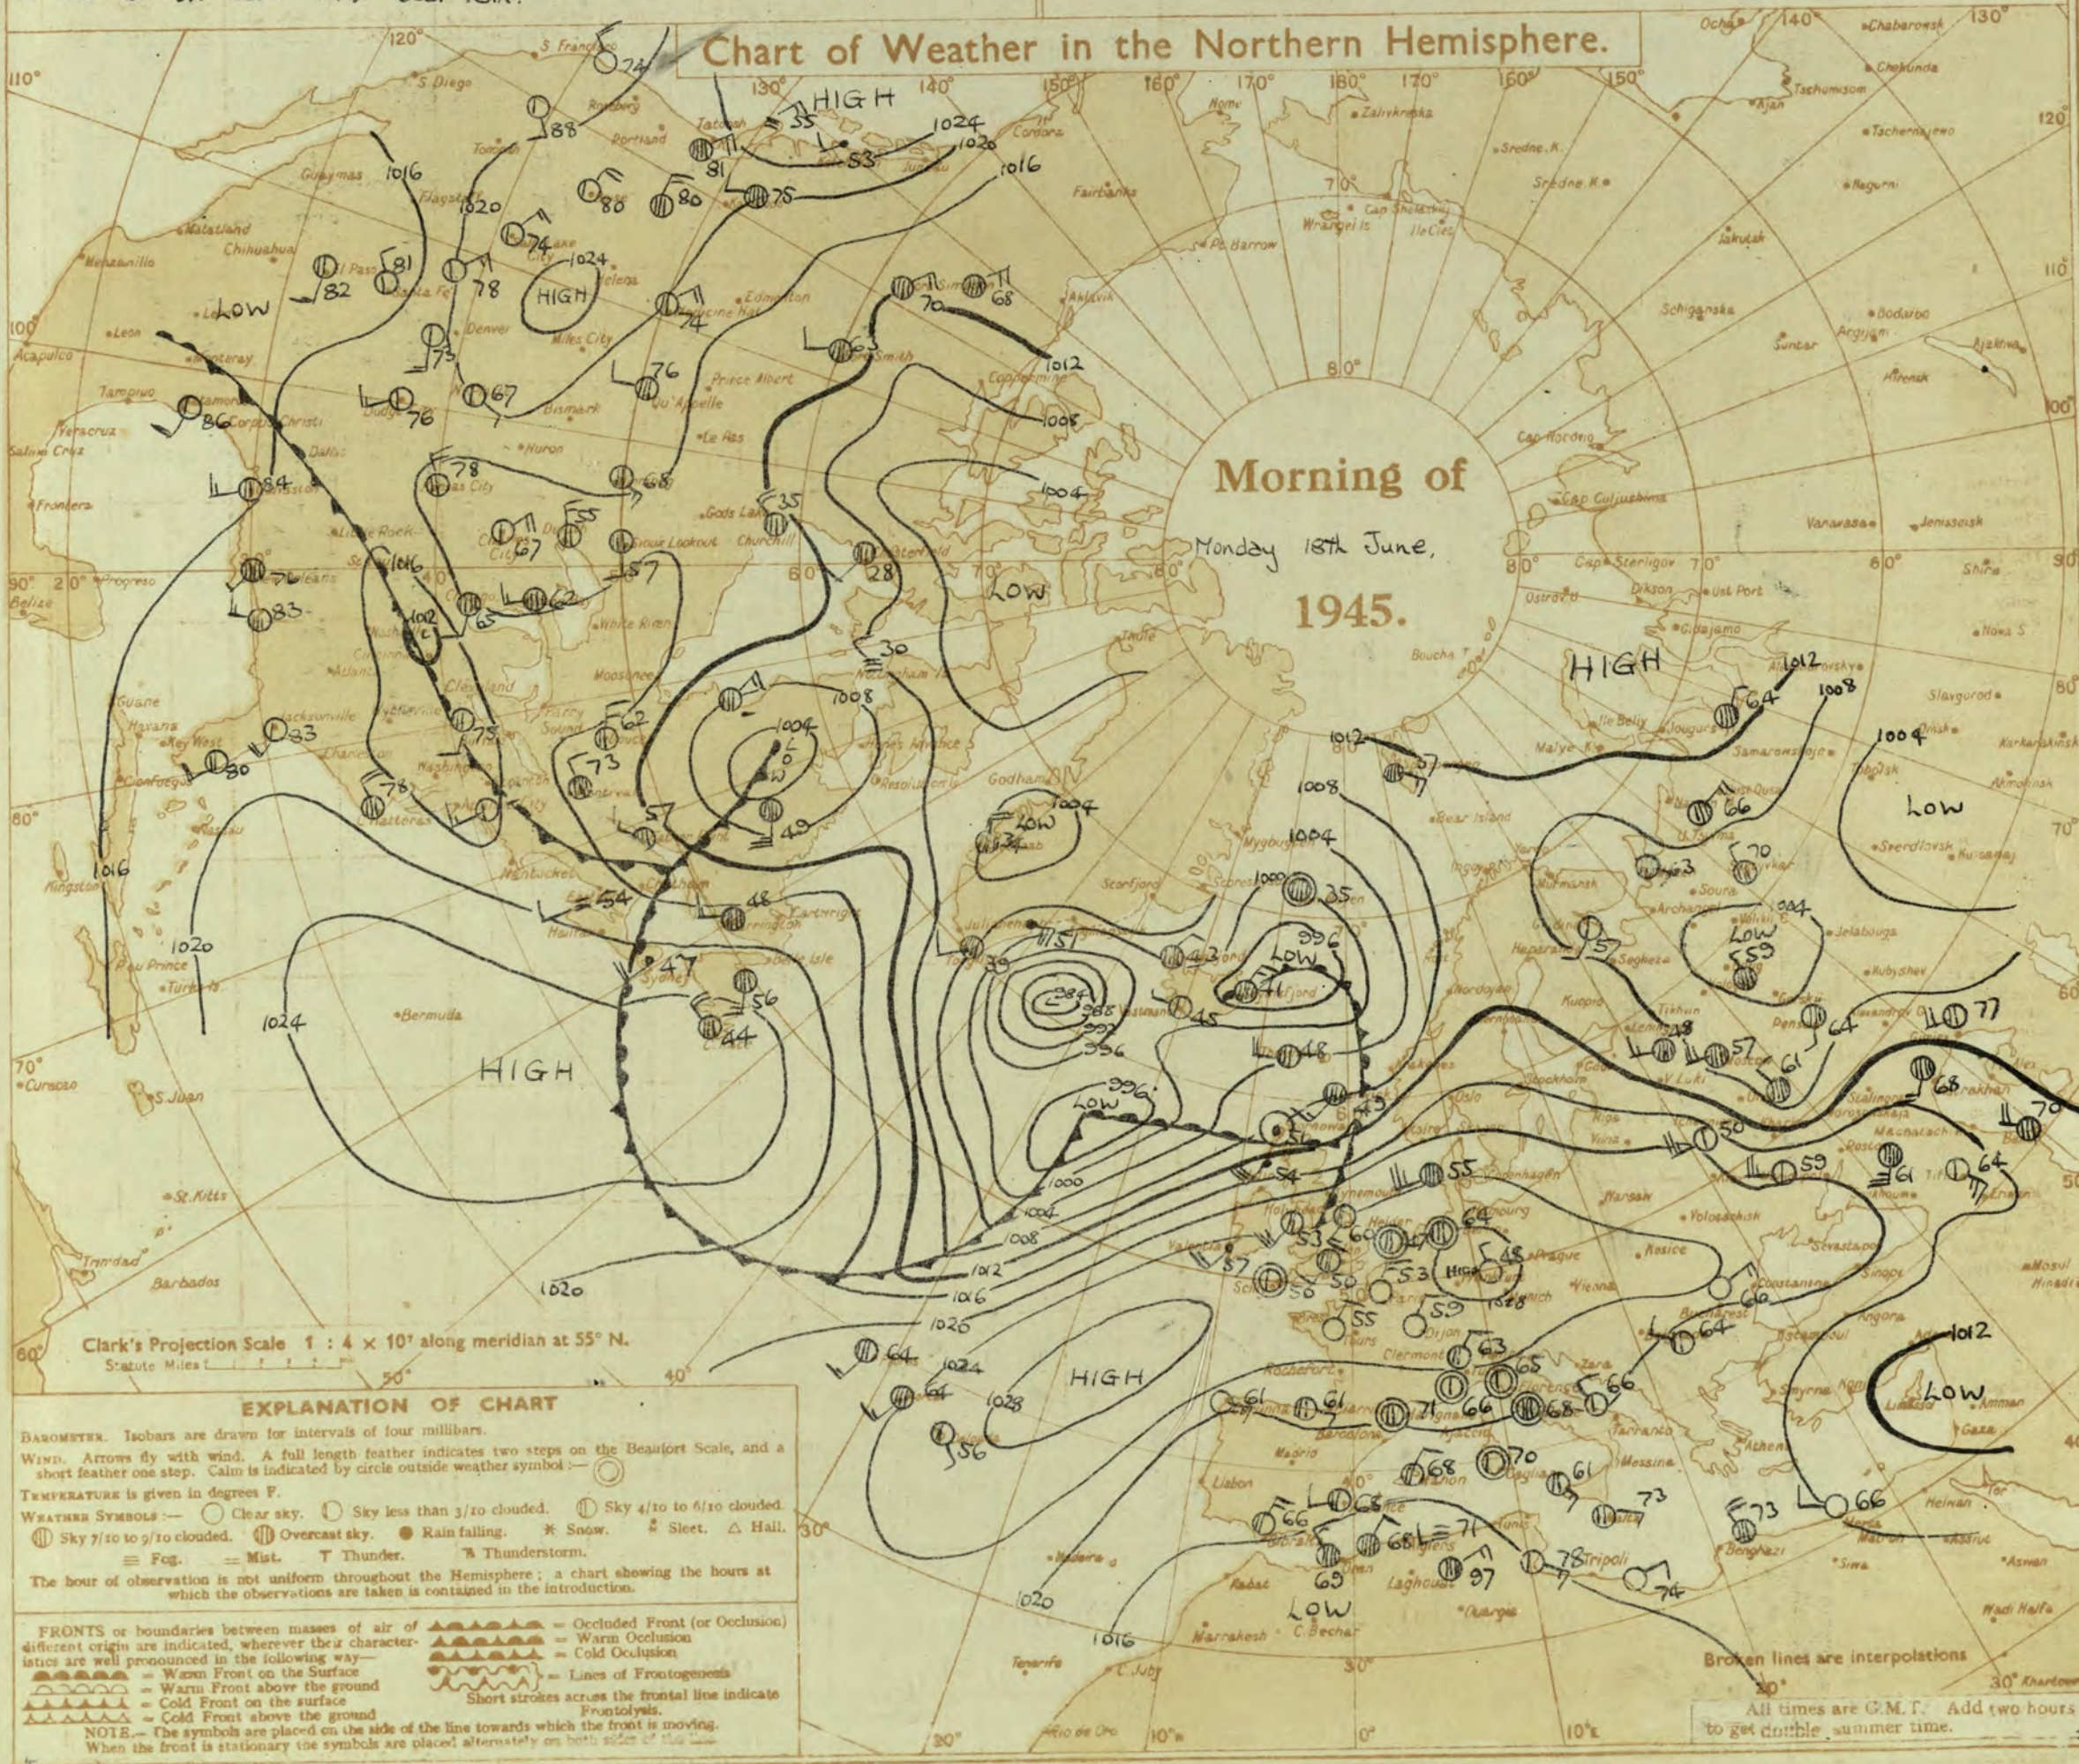

GENERAL INFERENCE

A ridge of high pressure covers South England, and pressure is low to north of the British Isles. Weather will be fair or fine and warm in the South and midlands, but it will be cloudy in the North of the British Isles with local rain.

FURTHER OUTLOOK

Mainly fine and very warm in the South. Cloudy with local rain in the North.

Chart of Weather in the Northern Hemisphere.

Kew 24 hours ended 6h. Max. 6.3 Time 6/18 Min. 5.0 Time 12/20

GENERAL INFERENCE

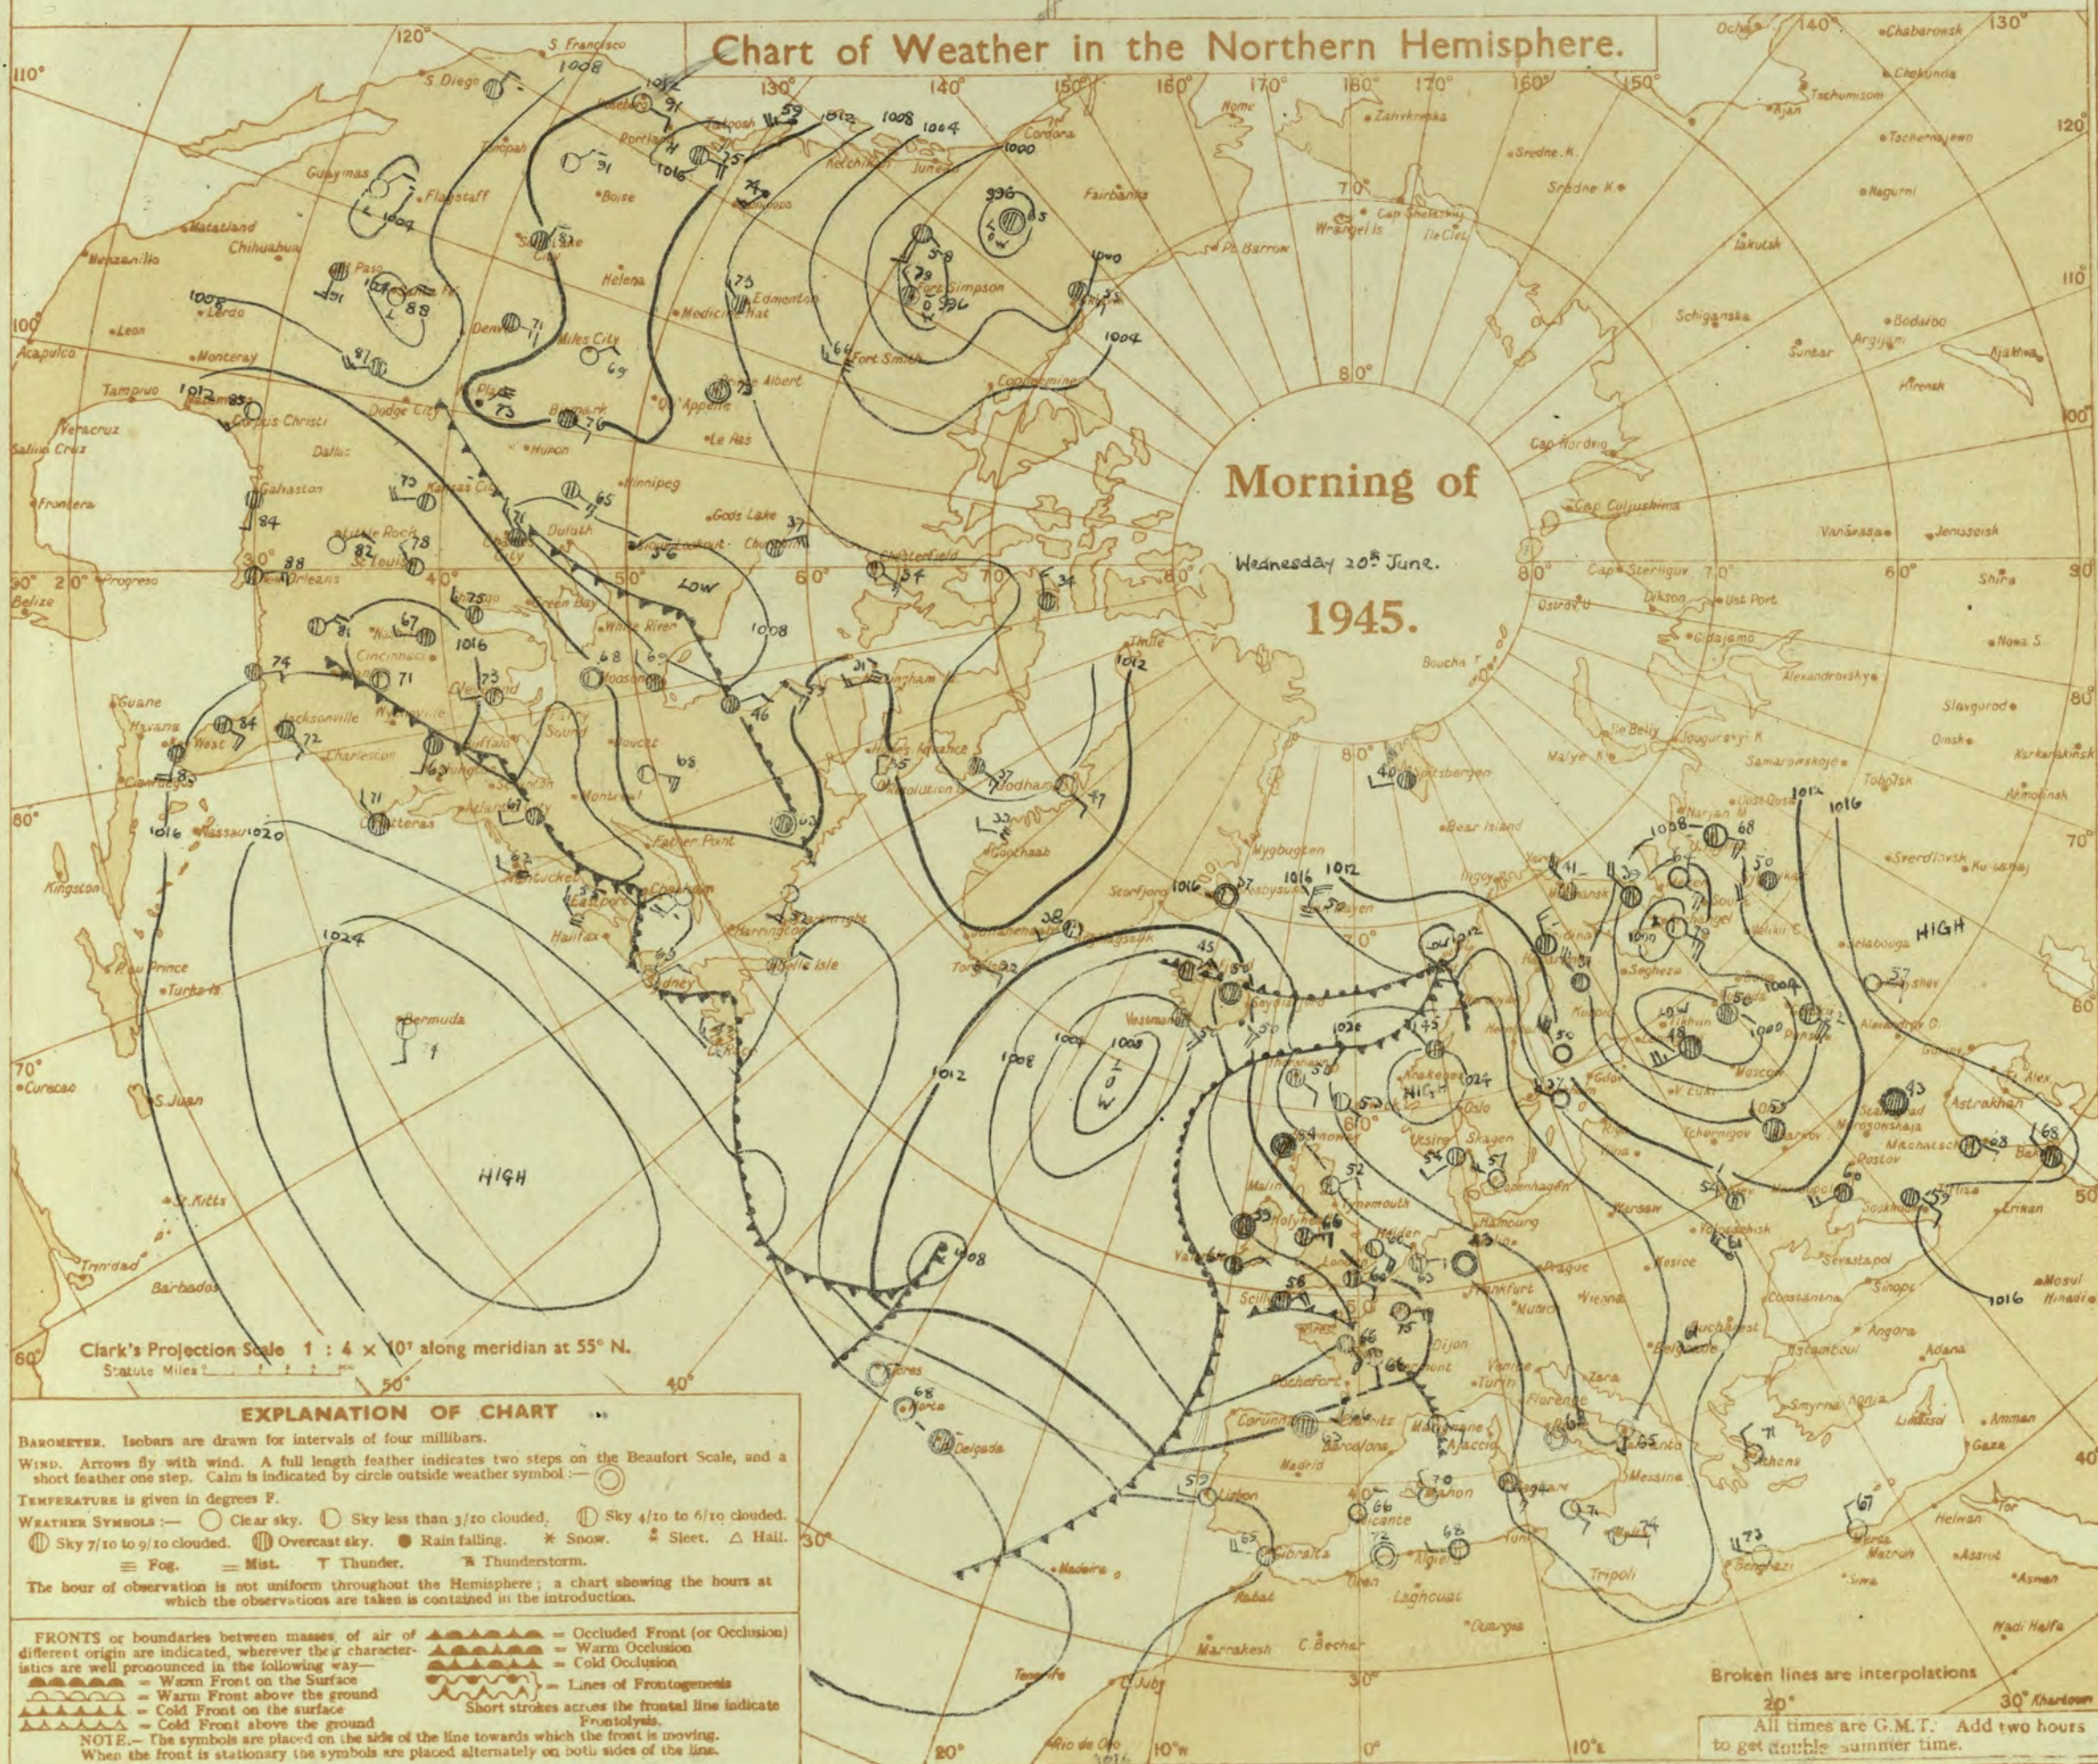

A complex depression just southwest of the British Isles is moving northwest and associated fronts are moving northeast and north across the country. There will be local thunderstorms in England and Wales today, becoming mainly fair. Local thundery rain and scattered thunderstorms in Scotland will become more general to-night. Rather general rain with local thunderstorms in Ireland will give way to variable cloud and showers. Coastal fog will occur at times in the northeast and southwest. Warm becoming somewhat cooler.

FURTHER OUTLOOK

Unsettled showers in the North. Rain in the South.

Chart of Weather in the Northern Hemisphere.

Kew 24 hours ended 6h. Max. 0.3 Time 1.5h Min. 0.1 Time 7.24h

GENERAL INFERENCE

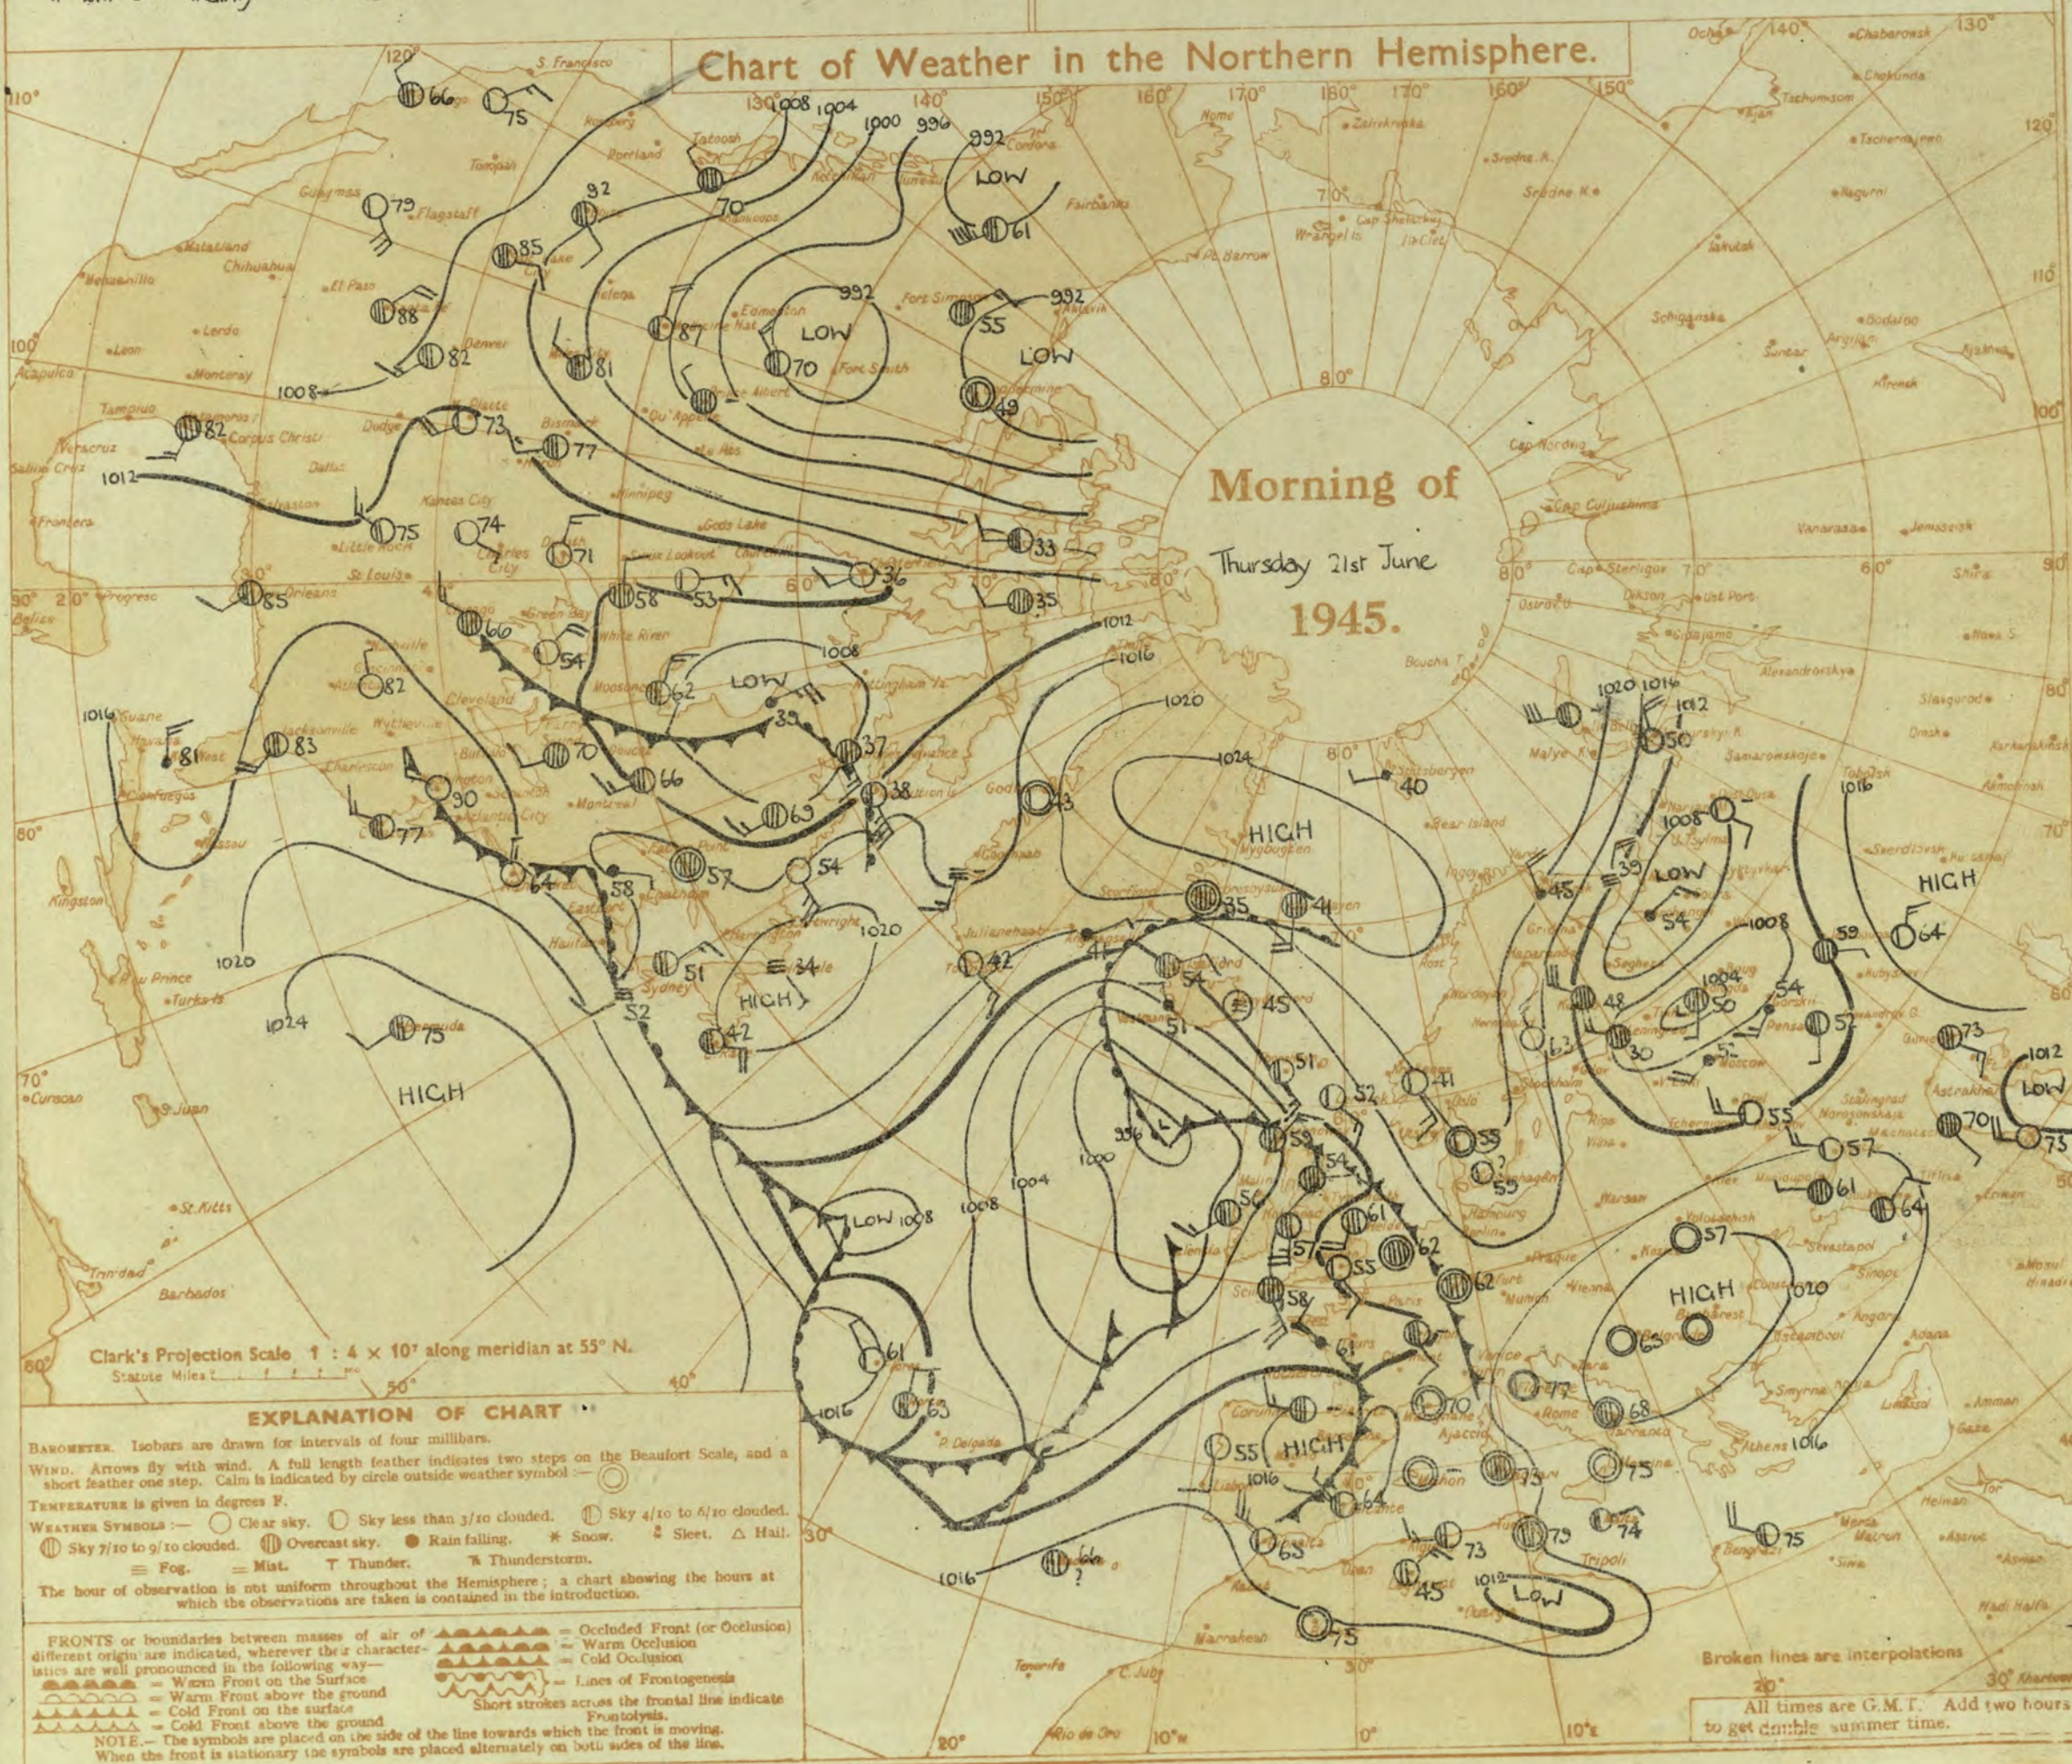

Pressure is low to the west of the British Isles and disturbances will move north across the country. A rain area over the Midlands will move rather quickly northwards and affect most of the country by dawn. Fair conditions in rear will have spread to all England by midnight and will subsequently reach Scotland. Further rain spreading from southwest is expected in our south and southwest districts later to-night and will spread north across the country later. It will be mainly rather warm.

FURTHER OUTLOOK

Unsettled southerly type confining.

Chart of Weather in the Northern Hemisphere.

Morning of
Thursday 21st June
1945.

Barometer
Bar. change in past 3 hours in mbs.
Weather in past hour
Past weather

Height of Low cloud
Code figure (one figure)
or
hundreds of feet (two figures)

Scale 1 : 5,000,000

GENERAL INFERENCE

Pressure is low to the west of the British Isles and disturbances will move north near our western districts. There will be long fair periods but also local rain in west of the British Isles; elsewhere it will be mainly fair though there is some risk of local thunderstorms developing in Midlands and North England later this afternoon, moving northwards across Scotland later. It will be warm or very warm.

FURTHER OUTLOOK

Little change.

Chart of Weather in the Northern Hemisphere.

Morning of
Friday 22nd June
1945.

Clark's Projection Scale 1 : 4 x 10⁷ along meridian at 55° N.
Statute Miles

EXPLANATION OF CHART

BAROMETER. Isobars are drawn for intervals of four millibars.
WIND. Arrows fly with wind. A full length feather indicates two steps on the Beaufort Scale, and a short feather one step. Calm is indicated by circle outside weather symbol.
TEMPERATURE is given in degrees F.
WEATHER SYMBOLS — ○ Clear sky. ○ Sky less than 3/10 clouded. ○ Sky 4/10 to 6/10 clouded. ○ Sky 7/10 to 9/10 clouded. ○ Overcast sky. ● Rain falling. * Snow. * Sleet. △ Hail.
≡ Fog. = Mist. T Thunder. ⚡ Thunderstorm.
The hour of observation is not uniform throughout the Hemisphere; a chart showing the hours at which the observations are taken is contained in the introduction.

FRONTS or boundaries between masses of air of different origin are indicated, wherever their characteristics are well pronounced in the following way —
— Warm Front on the surface
— Warm Front above the ground
— Cold Front on the surface
— Cold Front above the ground
— Occluded Front (or Occlusion)
— Warm Occlusion
— Cold Occlusion
— Lines of Frontogenesis
Short strokes across the frontal line indicate Frontolysis.
NOTE. — The symbols are placed on the side of the line towards which the front is moving. When the front is stationary the symbols are placed alternately on both sides of the line.

Broken lines are interpolations

All times are G.M.T. Add two hours to get double summer time.

GENERAL INFERENCE

A complex depression covers the Atlantic and small secondaries are moving north across the British Isles. It will be rather warm and mainly fair over the whole country but some rain, mainly light, will occur at times especially in Western districts.

FURTHER OUTLOOK

Mainly fair and rather warm or warm.

Chart of Weather in the Northern Hemisphere.

Morning of
Saturday 23rd June
1945.

Clark's Projection Scale 1 : 4 x 10⁶ along meridian at 55° N.
Statute Miles

EXPLANATION OF CHART

BAROMETER. Isobars are drawn for intervals of four millibars.

WIND. Arrows fly with wind. A full length feather indicates two steps on the Beaufort Scale, and a short feather one step. Calm is indicated by circle outside weather symbol.

TEMPERATURE is given in degrees F.

WEATHER SYMBOLS: ☉ Clear sky. ☁ Sky less than 3/10 clouded. ☂ Sky 4/10 to 6/10 clouded. ☃ Sky 7/10 to 9/10 clouded. ☄ Overcast sky. ☔ Rain falling. ❄ Snow. ❄ Sleet. ⚡ Hall.

☁ Fog. ☁ Mist. ⚡ Thunder. ⚡ Thunderstorm.

The hour of observation is not uniform throughout the Hemisphere; a chart showing the hours at which the observations are taken is contained in the introduction.

FRONTS or boundaries between masses of air of different origin are indicated, wherever their characteristics are well pronounced in the following way—

☞ Warm Front on the surface

☞ Warm Front above the ground

☞ Cold Front on the surface

☞ Cold Front above the ground

NOTE.—The symbols are placed on the side of the line towards which the front is moving.

When the front is stationary the symbols are placed alternately on both sides of the line.

☞ Occluded Front (or Occlusion)

☞ Warm Occlusion

☞ Cold Occlusion

☞ Lines of Frontogenesis

Short strokes across the frontal line indicate Frontolysis.

Broken lines are interpolations

20° 30° Kharlow

All times are G.M.T. Add two hours to get double summer time.

GENERAL INFERENCE

A belt of high pressure extends from the Azores to the North Sea and is moving slowly Southeast. It will be fair and rather warm or warm in the South but unsettled with some rain in the North.

FURTHER OUTLOOK

Mainly fair in the South; unsettled in the North.

Chart of Weather in the Northern Hemisphere.

Morning of
Monday 25th June
1945.

Clark's Projection Scale 1 : 4 x 10⁴ along meridian at 55° N.
Statute Miles

EXPLANATION OF CHART

BAROMETER. Isobars are drawn for intervals of four millibars.

WIND. Arrows fly with wind. A full length feather indicates two steps on the Beaufort Scale, and a short feather one step. Calm is indicated by circle outside weather symbol.

TEMPERATURE is given in degrees F.

WEATHER SYMBOLS: ☉ Clear sky. ☁ Sky less than 1/10 clouded. ☁ Sky 1/10 to 4/10 clouded.

☁ Sky 4/10 to 9/10 clouded. ☁ Overcast sky. ☁ Rain falling. * Snow. * Sleet. Δ Hail.

☁ Fog. ☁ Mist. T Thunder. ⚡ Thunderstorm.

The hour of observation is not uniform throughout the Hemisphere; a chart showing the hours at which the observations are taken is contained in the introduction.

FRONTS or boundaries between masses of air of different origin are indicated, wherever their characteristics are well pronounced in the following way—

— Warm Front on the surface

— Warm Front above the ground

— Cold Front on the surface

— Cold Front above the ground

NOTE.— The symbols are placed on the side of the line towards which the front is moving. When the front is stationary the symbols are placed alternately on both sides of the line.

— Occluded Front (or Occlusion)

— Warm Occlusion

— Cold Occlusion

— Lines of Frontogenesis

Short strokes across the frontal line indicate Frontolysis.

Broken lines are interpolations

20° 30°
All times are G.M.T. Add two hours to get double summer time.

GENERAL INFERENCE

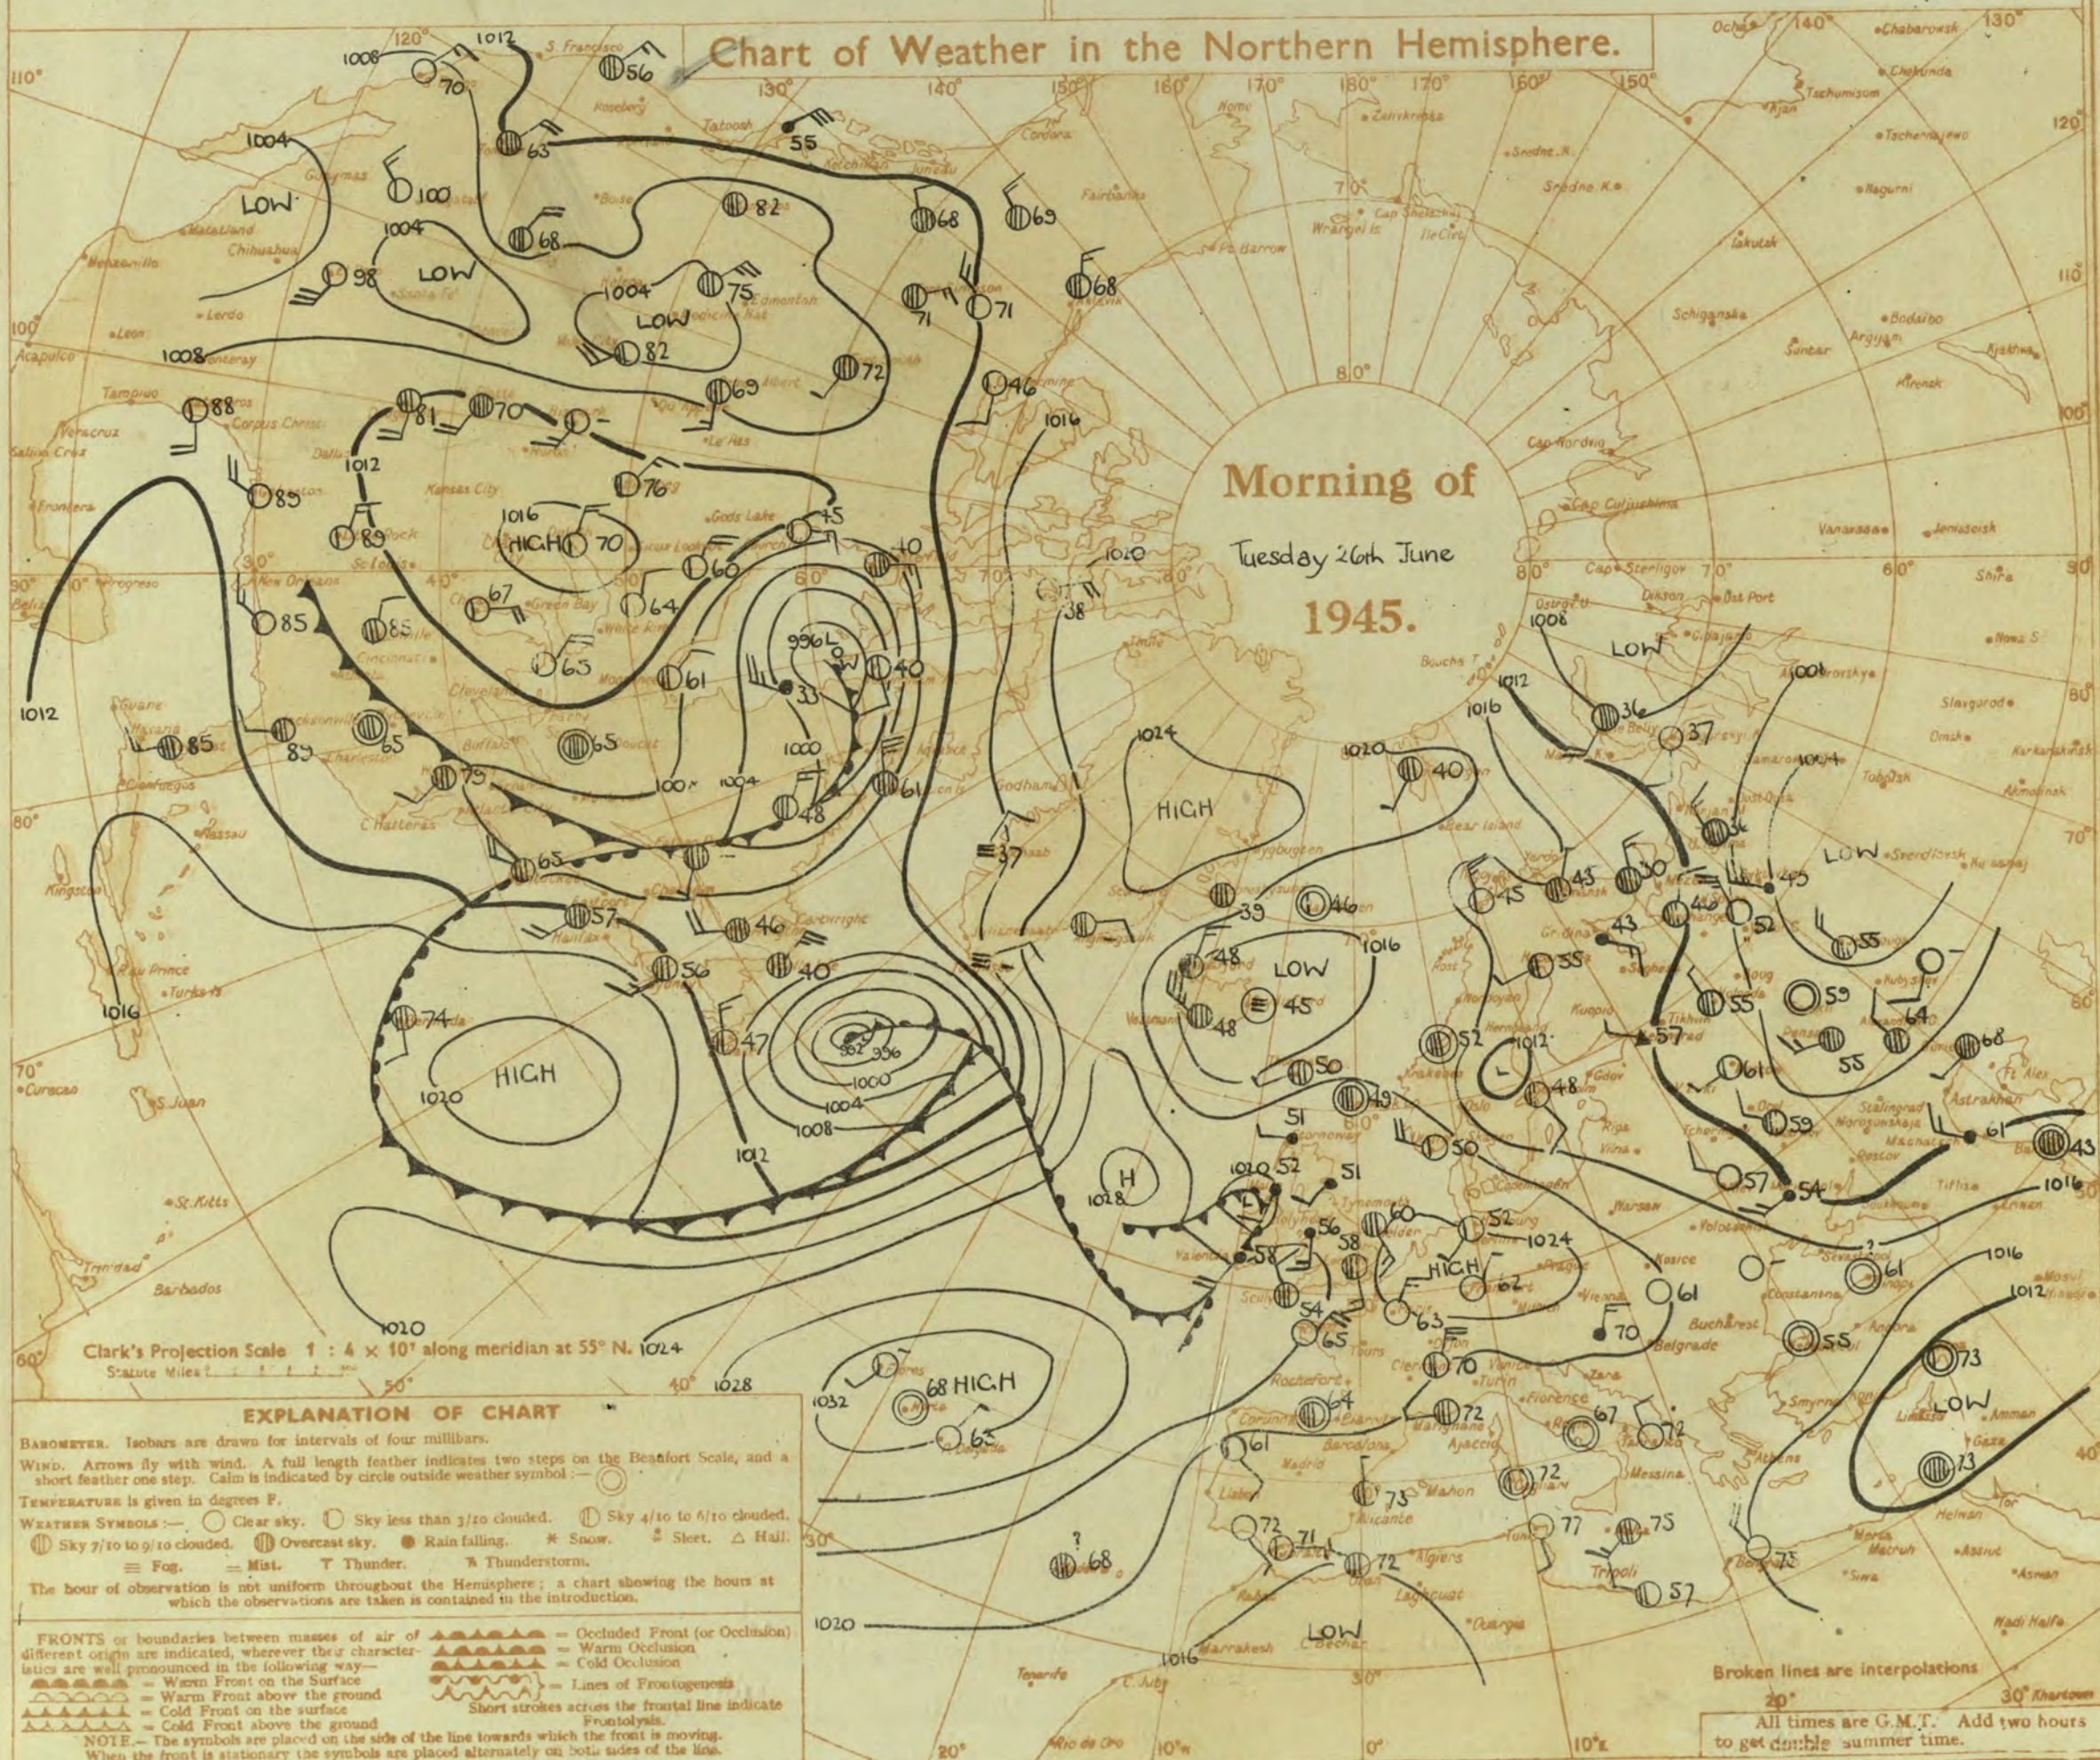

Troughs of low pressure are moving southeast across the British Isles and pressure is high to the west. It will be rather cool generally. Weather will be cloudy at first in the South with occasional rain in most districts, becoming fair late to-day. In Scotland and North England there will be bright intervals and showers with risk of local thunderstorms. In Ireland there will be bright intervals, with scattered showers in the Northeast.

FURTHER OUTLOOK

Showers in North and East; fair in the Southwest; rain later in the Northwest.

Chart of Weather in the Northern Hemisphere.

Morning of
Tuesday 26th June
1945.

[illegible]

CODE FOR CLOUD AMOUNT (Cols. 12, 13, 14, 28, 29, 30).

0 = Nil	2 = $\frac{1}{5}$	4 = $\frac{1}{2}$	6 = $\frac{3}{5}$	8 = Completely covered.
1 = Trace	3 = $\frac{2}{5}$	5 = $\frac{4}{5}$	7 = More than 9 but with openings.	9 = Sky obscured by fog, etc.

Columns 13, 14, 15; 16, 29, 30, 31, 32.
A = Lowest cloud present.
B = Next lowest cloud.

* Information not usually received.
† Second figure in col. (33) gives depth of snow in inches.

GENERAL INFERENCE

A depression south west of Iceland is moving east-southeast and a trough of low pressure approaching our Western districts will move south-east across the country tomorrow. There will be occasional rain or showers in the East at first and a belt of rain will reach Ireland during the afternoon and spread southeast across most of the country except northeast Scotland tomorrow. It will be cool.

FURTHER OUTLOOK

Unsettled with rain at times in the East, becoming mainly fair apart from scattered showers in the West. Cool.

Chart of Weather in the Northern Hemisphere.

Morning of
Wednesday 27 June.
1945.

Clark's Projection Scale 1 : 4 x 10⁷ along meridian at 55° N.
Statute Miles 1 2 3 4 5 6 7 8 9 10

EXPLANATION OF CHART

BAROMETER. Isobars are drawn for intervals of four millibars.
WIND. Arrows fly with wind. A full length feather indicates two steps on the Beaufort Scale, and a short feather one step. Calm is indicated by circle outside weather symbol.
TEMPERATURE is given in degrees F.
WEATHER SYMBOLS: ☉ Clear sky. ☁ Sky less than 3/10 clouded. ☂ Sky 4/10 to 6/10 clouded. ☃ Sky 7/10 to 9/10 clouded. ☄ Overcast sky. ☔ Rain falling. * Snow. * Sleet. △ Hail.
☁☁ Fog. ☁☁☁ Mist. T Thunder. T Thunderstorm.
The hour of observation is not uniform throughout the Hemisphere; a chart showing the hours at which the observations are taken is contained in the introduction.

FRONTS or boundaries between masses of air of different origin are indicated, wherever their characteristics are well pronounced in the following way—
— Warm Front on the surface
— Warm Front above the ground
— Cold Front on the surface
— Cold Front above the ground
NOTE.— The symbols are placed on the side of the line towards which the front is moving. When the front is stationary the symbols are placed alternately on both sides of the line.

— Occluded Front (or Occlusion)
— Warm Occlusion
— Cold Occlusion
— Lines of Frontogenesis
Short strokes across the frontal line indicate Frontolysis.

Broken lines are interpolations

All times are G.M.T. Add two hours to get double summer time.

OBSERVATIONS during NIGHT

* Information not usually received.
† Second figure in col. (33) gives depth of snow in inches.

GENERAL INFERENCE

A depression off NW Ireland is almost stationary and a developing depression over the Southwest Approaches will move southeast and later east. It will be cloudy and rather cool generally with a period of rain at first over Wales, the Midlands, East Anglia and Southern England. There will be local rain and showers in Ireland, and occasional drizzle in Northeast Scotland.

FURTHER OUTLOOK

Rather cool and cloudy; occasional rain in the west and south.

WEATHER SYMBOLS: ○ Clear sky. ◐ Sky less than 3/10 clouded. ◑ Sky 4/10 to 6/10 clouded. ◒ Sky 7/10 to 9/10 clouded. ◓ Overcast sky. ● Rain falling. * Snow. * Sleet. △ Hail.
= Fog. = Mist. T Thunder. * Thunderstorm.
The hour of observation is not uniform throughout the Hemisphere; a chart showing the hours at which the observations are taken is contained in the introduction.

FRONTS or boundaries between masses of air of different origin are indicated, wherever their characteristics are well pronounced in the following way—
— Warm Front on the surface
— Warm Front above the ground
— Cold Front on the surface
— Cold Front above the ground
NOTE.— The symbols are placed on the side of the line towards which the front is moving. When the front is stationary the symbols are placed alternately on both sides of the line.

— Occluded Front (or Occlusion)
— Warm Occlusion
— Cold Occlusion
— Lines of Frontogenesis
Short strokes across the frontal line indicate Frontolysis.

Broken lines are interpolations

All times are G.M.T. Add two hours to get double summer time.

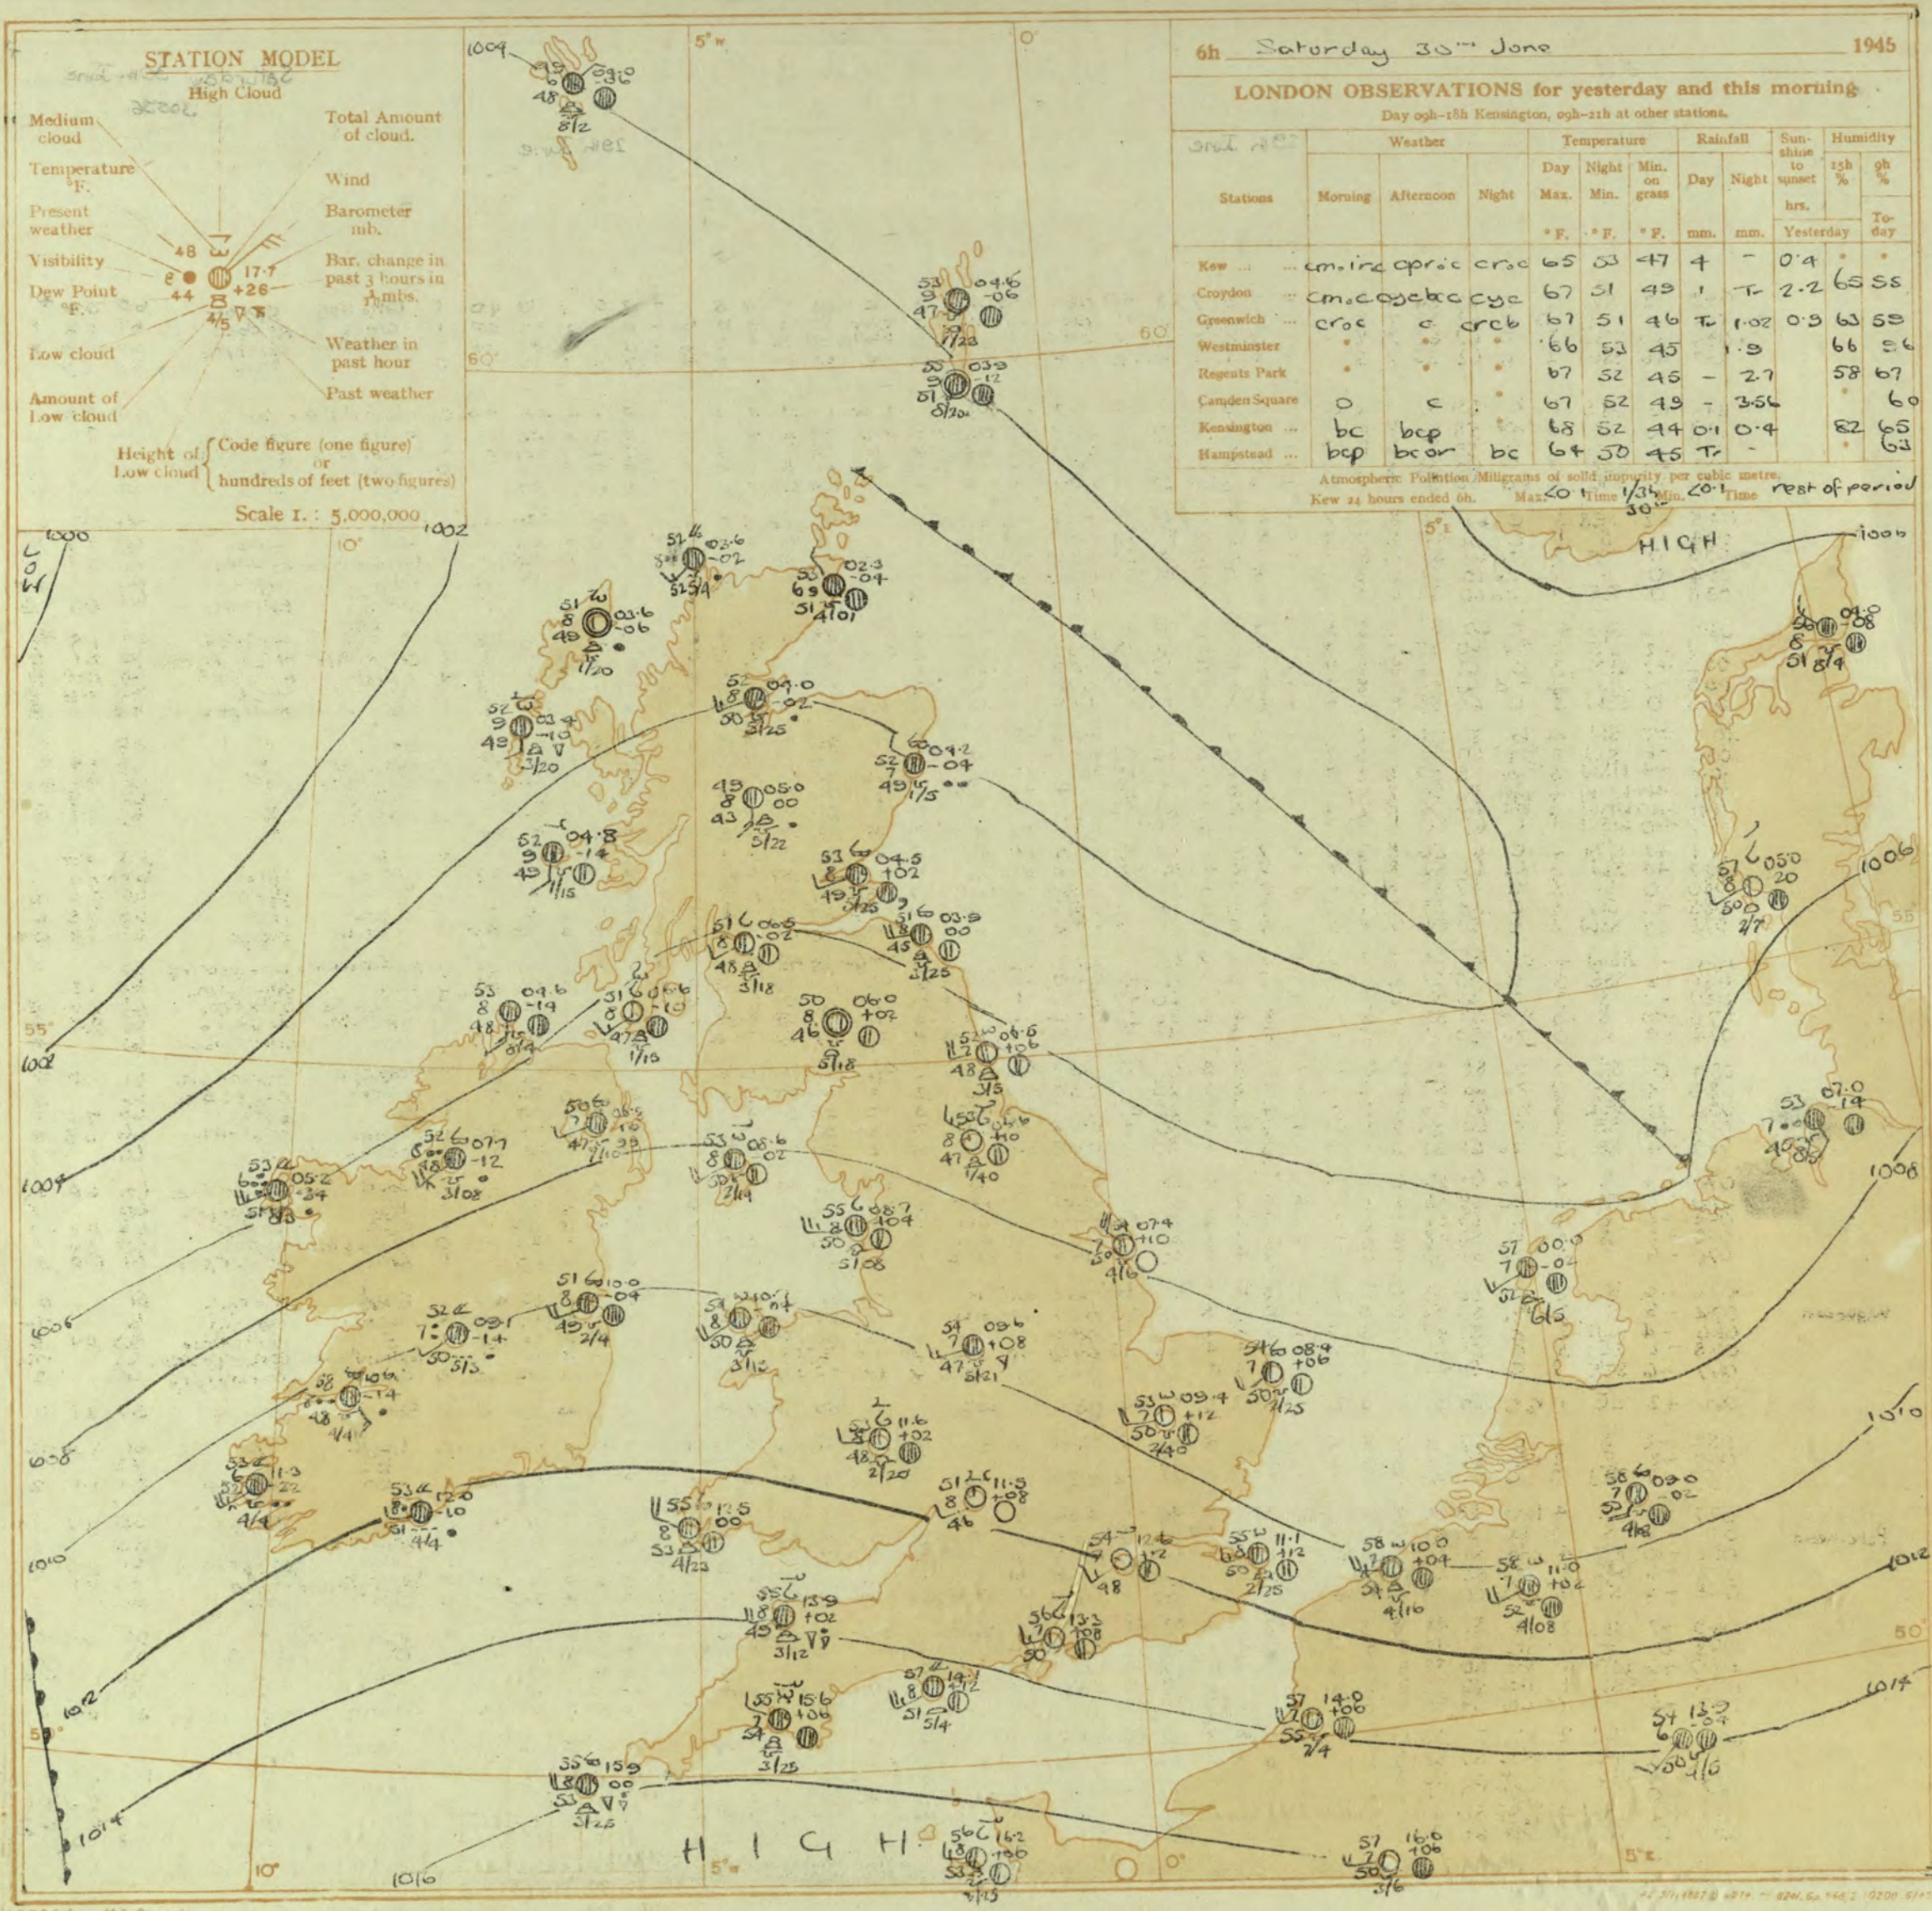

† Second figure in col. (33) gives depth of snow in inches.

Atmospheric Pollution: Milligrams of solid impurity per cubic metre.
Kew 24 hours ended 6h. Max. 20 Time 1/31 Min. 20 Time rest of period

GENERAL INFERENCE

A trough of low pressure, west of Ireland is moving rather quickly East. A belt of rain over Ireland and West Scotland will spread East across the whole country today and will be followed by bright periods and occasional showers with a risk of local thunder in the North.

Unsettled.

FURTHER OUTLOOK

Chart of Weather in the Northern Hemisphere.

Morning of
Saturday 30th June.
1945.

Clark's Projection Scale 1 : 4 x 10⁷ along meridian at 55° N.

EXPLANATION OF CHART

BAROMETER. Isobars are drawn for intervals of four millibars.
WIND. Arrows fly with wind. A full length feather indicates two steps on the Beaufort Scale, and a short feather one-step. Calm is indicated by circle outside weather symbol.
TEMPERATURE is given in degrees F.
WEATHER SYMBOLS: ☉ Clear sky. ☁ Sky less than 3/10 clouded. ☁☁ Sky 4/10 to 6/10 clouded. ☁☁☁ Sky 7/10 to 9/10 clouded. ☁☁☁☁ Overcast sky. ☔ Rain falling. * Snow. * Sleet. Δ Hail.
☁☁☁☁ Fog. ☁☁☁☁ Mist. ⚡ Thunder. ⚡☁☁☁☁ Thunderstorm.
The hour of observation is not uniform throughout the Hemisphere; a chart showing the hours at which the observations are taken is contained in the introduction.

FRONTS or boundaries between masses of air of different origin are indicated, wherever the characteristics are well pronounced in the following way:
— Warm Front on the Surface
— Warm Front above the ground
— Cold Front on the surface
— Cold Front above the ground
NOTE.— The symbols are placed on the side of the line towards which the front is moving. When the front is stationary the symbols are placed alternately on both sides of the line.

☁☁☁☁ — Occluded Front (or Occlusion)
☁☁☁☁ — Warm Occlusion
☁☁☁☁ — Cold Occlusion
☁☁☁☁ — Lines of Frontogenesis
Short strokes across the frontal line indicate Frontolysis.

Broken lines are interpolations

All times are G.M.T. Add two hours to get double summer time.
