NOTE: The Sunshine for London given in this Table is recorded on the Tower of the Wesleyan Training College, Westminster; the Sunshine entered to Dungeness is recorded at Littlestone-on-Sea.

* Observations for this column not generally received.

+ Observations received too late for insertion in Tables in next issue.

WEATHER CHARTS

FOR *Wednesday, 1st November, 1905.*

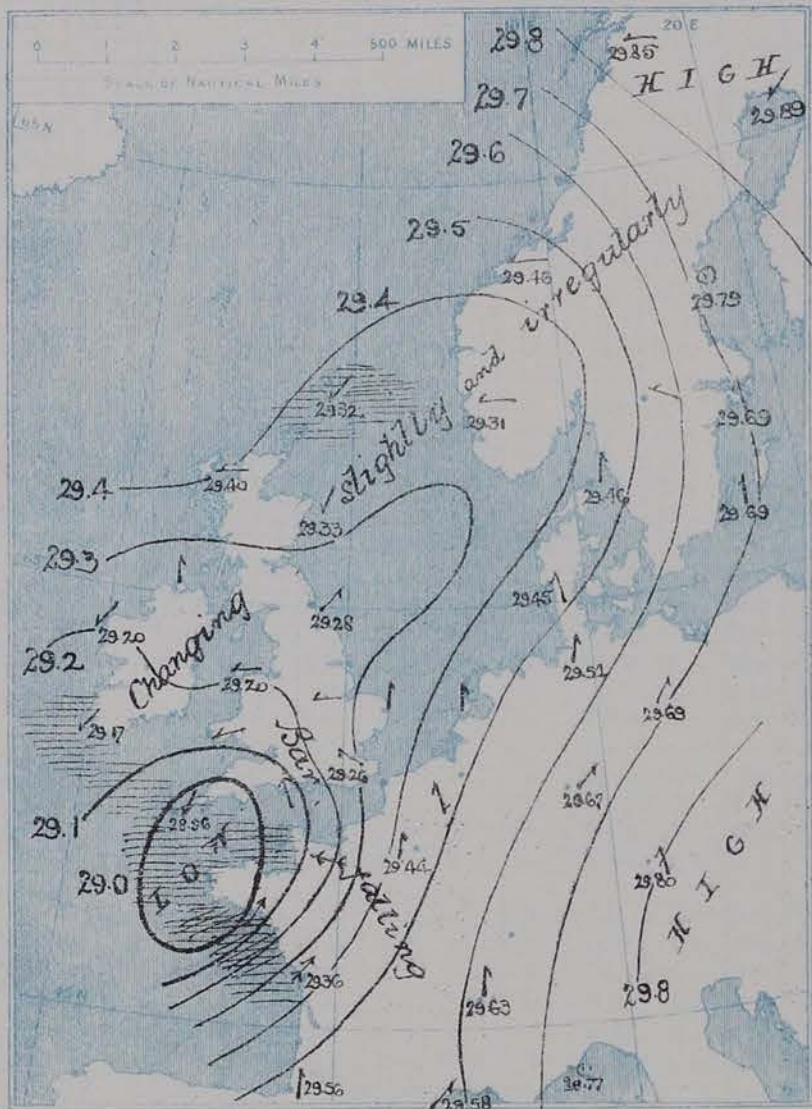

I. BAROMETER, WIND AND SEA. *This Morning.*

BAROMETER.—Isobars are drawn for each tenth of an inch.

WIND.—Arrows show Directions and Force, flying with the wind.

Force above 10 → Force 5 to 7 → } Calm ☉
Force 8 to 10 → Force 1 to 4 → }

SEA.—Rough High

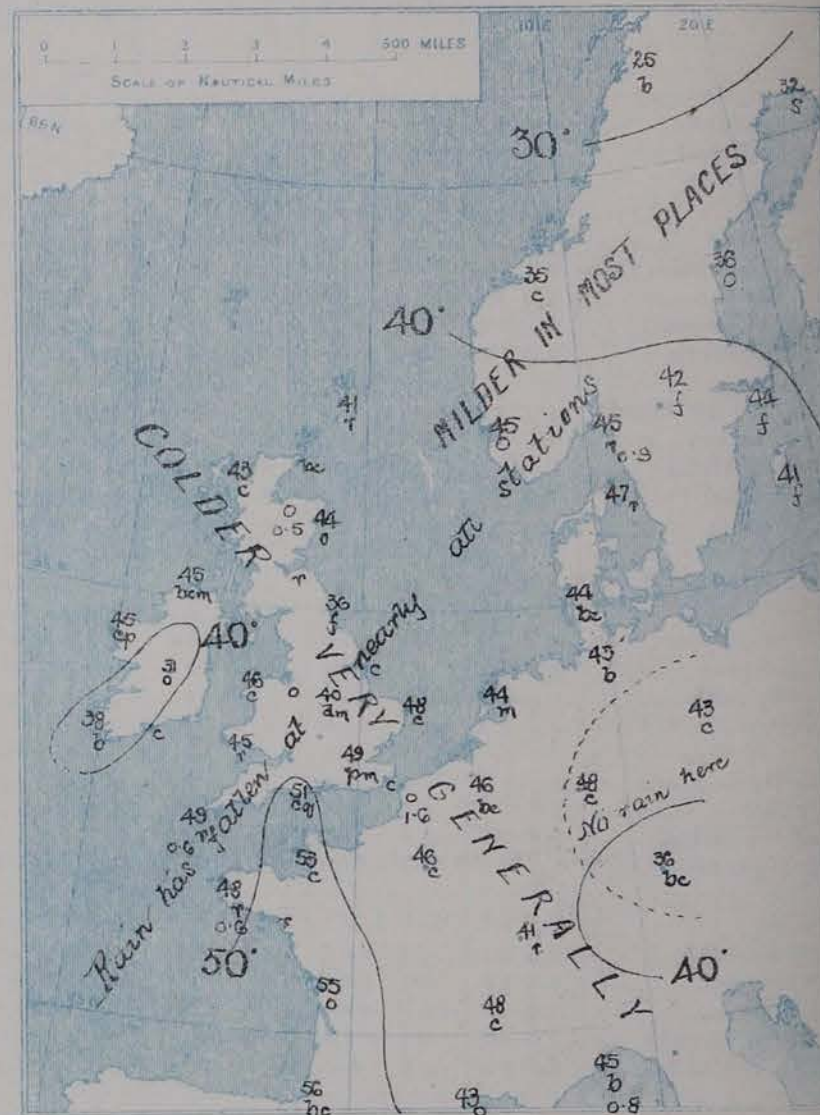

II. TEMPERATURE AND WEATHER. *This Morning.*

TEMPERATURE.—Isotherms are drawn for each 10°.

WEATHER.—Shown by Letters of the Beaufort Scale. (See P. 4.)

RAINFALL.—A dotted line separates areas where rain has fallen from those without rain. The fall in past 24 hours when exceeding half an inch is shown thus - 0.6

III. BAROMETER AND WIND

Yesterday morning.

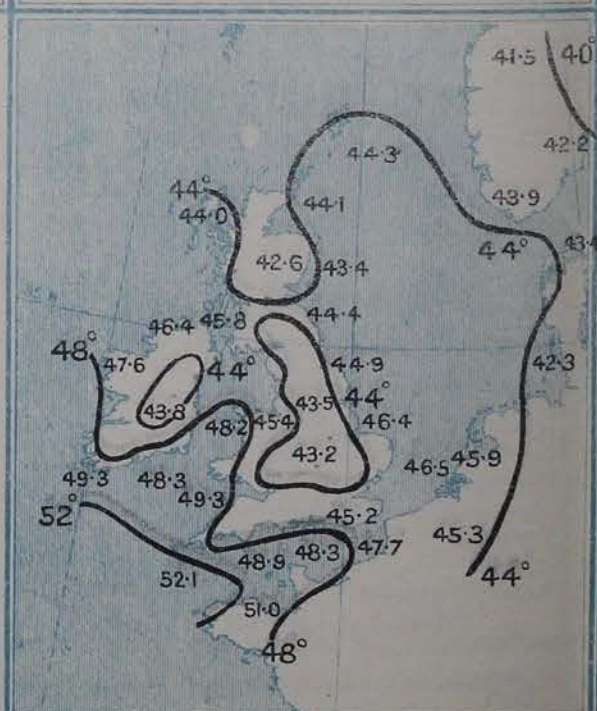

IV. LAST WEEK'S RAINFALL.

Amount recorded in various districts of the United Kingdom during the week ended Saturday, 28th Oct., with the percentage of the average amount for the corresponding week.

V. Means of DAILY TEMPERATURE at 8 A.M. for the Two monthly period OCTOBER-NOVEMBER. (1871-1900)

GENERAL SITUATION AT 8 A.M.

PRESSURE

The distribution of pressure remains of a very unsettled type. A deep minimum of pressure, with readings below 29 ins., is shown off the mouth of the Channel and is causing a steep gradient over the Bay of Biscay. Over the British Isles the gradient is slight, but the pressure distribution shows many minor irregularities. Readings are now highest, above 29.8 ins., in the extreme north of Scandinavia.

WIND

TEMPERATURE

WEATHER

AND

SEA

Gales from the S.W.nd are reported from the Bay of Biscay and strong winds from between S and S.E. prevail over the northeast of France and the southeast of England. To the westward of the region of lowest pressure, at Pembroke, Scilly and Brest, a fresh N.th wind has made its appearance. Over the northern portion of the British Isles and on the west coast of Norway moderate to fresh E.^{ly} to N.E.^{ly} breezes prevail. Steady rain is falling in the southwest of England and the extreme northwest of France, and over our area generally conditions are very unsettled with rain at several stations. Temperature has fallen somewhat in the north and west of the British Isles; this morning's readings range from 31° at Birr Castle to 51° at Dungeness and Portland Bill and 53° at Jersey. The sea is rather rough at several stations in the English Channel and very rough in the Bay of Biscay, and it is also rough off Sumburgh Head and Valencia, moderate to slight elsewhere.

During the previous 24 hours rain was again experienced at almost all British stations; the largest total reported is 0.63 inch at Scilly; over 1.5 inch is again reported from Cape Gris Nez. The amounts of bright sunshine reported vary up to 6 hours at Valencia and Scilly.

PROBABLE CHANGES IN SYSTEM NOW PREVALENT

The disturbance over the mouth of the Channel is likely to remain stationary or to move slowly eastward. Under its influence, gales or strong winds are probable over the south of England, from the S.th in the eastern counties and from the N.th in the west. In the north, moderate E.^{ly} to N.E.^{ly} winds are expected. The weather will continue very unsettled with considerable rainfall in the south and some reduction in temperature.

FORECASTS*

For the 24 hours ending at NOON on 2nd November, 1905.

DISTRICTS.

FORECASTS.

0	SCOTLAND NORTH	Moderate or fresh E. ^{ly} to N.E. ^{ly} winds; cloudy, with occasional rain; rather cooler.
1	SCOTLAND EAST	Moderate S.E. ^{ly} to E. ^{ly} or N.E. ^{ly} winds; cloudy, occasional rain.
2	ENGLAND N.E.	
3	ENGLAND EAST	S. ^{ly} to S.E. ^{ly} winds, strong to a gale on coast, less strong inland; backing slowly; cloudy or dull with rain; becoming cooler.
4	MIDLAND COUNTIES	
5	ENGLAND SOUTH	

DISTRICTS.

FORECASTS.

6	SCOTLAND WEST	Same as nos. 0 & 1.
7	ENGLAND N.W.	E. ^{ly} to N.E. ^{ly} breezes; unsettled, occasional rain; rather cooler.
8	ENGLAND SW	N.E. ^{ly} to N. th winds, a gale in places; dull, rainy; rather cooler.
9	IRELAND NORTH	E. ^{ly} to N.E. ^{ly} breezes; fair intervals, some showers.
10	IRELAND SOUTH	
WARNINGS		(At 9.30 a.m. today to part of District 8, "Hoist North Cone", and to the remainder of 8, 5 and part of 3, "Hoist South Cone".)

* The South Cone, point downwards (⏚), means that gales, or strong winds, are probable at first from the Southward (from S.E. round by S. to N.W.). Should it appear likely that a gale beginning from between W. and N.W. is likely to veer towards N. or N.E., the North Cone is hoisted in preference to the South Cone.

The North Cone, point upwards (⏚), means that gales, or strong winds, are probable at first from the Northward (from N.W. round by N. to S.E.). Should it appear likely that a gale beginning from between E. and S.E. is likely to veer towards S. or S.W., the South Cone is hoisted in preference to the North Cone.

* For terms for transmission of Forecasts by Telegraph, see next page.

SUBSCRIPTIONS both for the Daily and Weekly Weather Reports may be paid, in advance, to the Meteorological Office.

TERMS: For Daily Weather Report, forwarded by Book Post, £1 0 0 per annum.

" Weekly " " " £1 10 0

Single Copies, 6d.

Single Copies of the Daily Weather Report (price 1d.) may be obtained after 3 p.m. on the day of issue at the Meteorological Office, and at Messrs. W. H. SMITH & SONS' Bookstalls at the following terminus Railway Stations:—Victoria, Charing Cross, King's Cross, St. Pancras, Euston.

FORECASTS OF WEATHER for one day in advance are drawn up at the Meteorological Office at 11 a.m., and between 7 and 8 p.m. The latest forecast can be had by Reply Telegram, on paying at any Post Office in the United Kingdom Sixpence in addition to the cost of the inquiry and reply Telegram. Information as to the Terms on which Forecasts can be sent, daily, for a long or short period, may be obtained on application to the Meteorological Office, 63, Victoria Street, S.W., either personally or by post.

* At Oxford the observations are taken at 8 p.m.

DAILY WEATHER REPORT

for 8 a.m. on *Thursday, 2nd November, 1905.*

Issued by the METEOROLOGICAL OFFICE, 63, Victoria Street, London. W. N. SHAW, Director.

NOTE: The Sunshine for London given in this Table is recorded on the Tower of the Wesleyan Training College, Westminster; the Sunshine entered to Dungeness is recorded at Littlestone-on-Sea.

* Observations for this column not generally received.

* Observations received too late for insertion in Charts on next page.

WEATHER CHARTS

FOR Thursday, 2nd November, 1905.

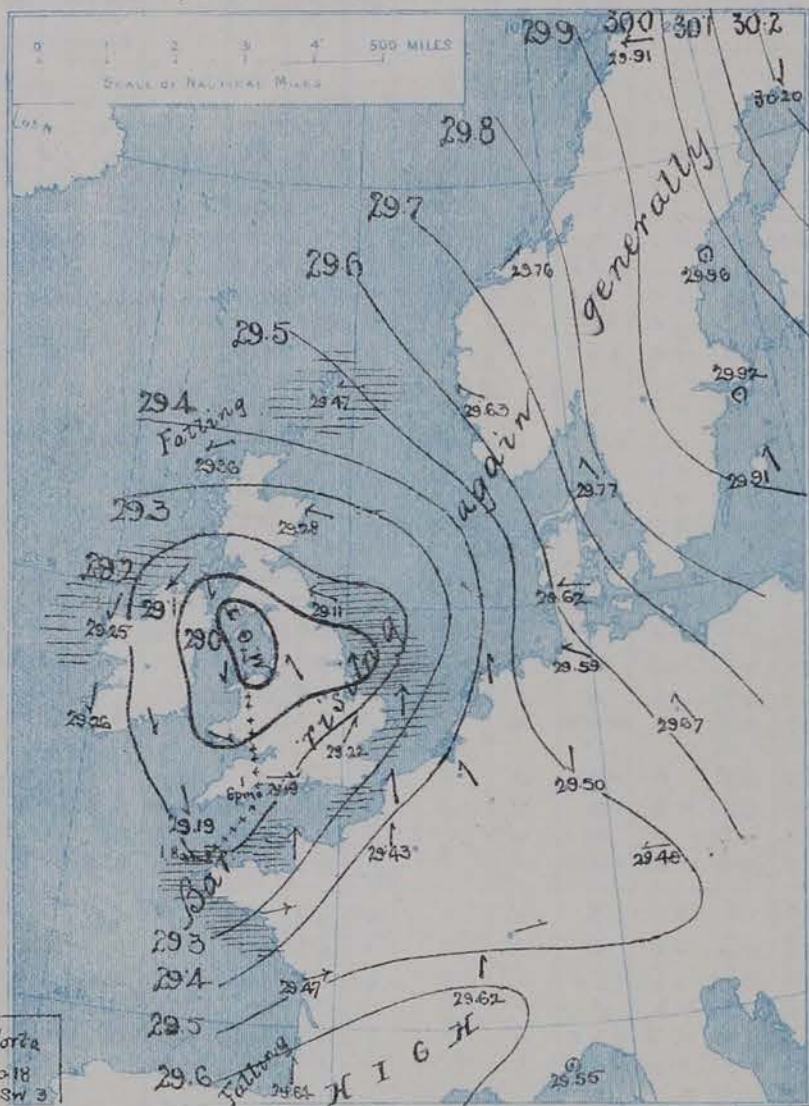

I. BAROMETER, WIND AND SEA. This Morning.

BAROMETER.—Isobars are drawn for each tenth of an inch.

WIND.—Arrows show Directions and Force, flying with the wind.

Force above 10 → Force 5 to 7 → } Calm ☉
Force 8 to 10 → Force 1 to 4 →

SEA—Rough High

II. TEMPERATURE AND WEATHER. This Morning.

TEMPERATURE.—Isotherms are drawn for each 10°

WEATHER.—Shown by Letters of the Beaufort Scale. (See P. 4.)

RAINFALL.—A dotted line separates areas where rain has fallen from those without rain. The fall in past 24 hours when exceeding half an inch is shown thus - 0.8

III. BAROMETER AND WIND

Yesterday morning.

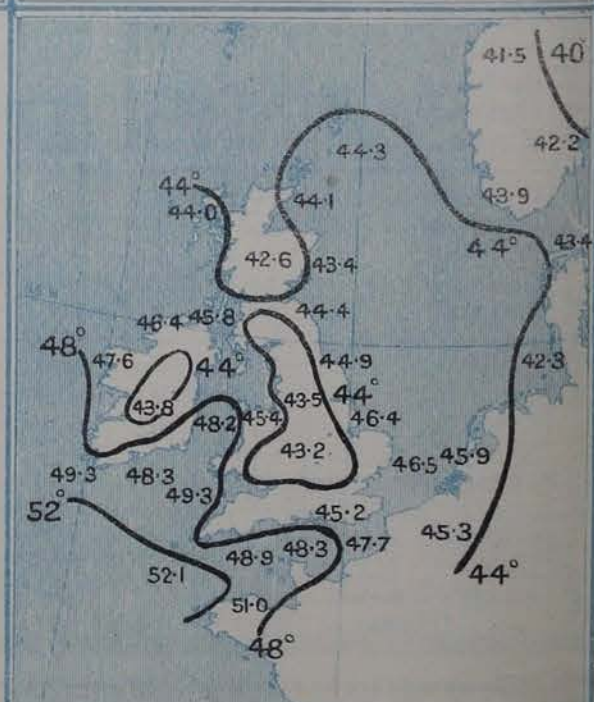

IV. LAST WEEK'S SUNSHINE.

Amount recorded in various districts of the United Kingdom during the week ended Saturday, 28th Oct., with the percentage of the average duration for the corresponding week.

V. Means of DAILY TEMPERATURE

at 8 A.M. for the Two monthly period OCTOBER-NOVEMBER. (1871-1900)

GENERAL SITUATION AT 8 A.M.

PRESSURE

The cyclonic depression over Northwestern Europe this morning shows an extensive area of minimum pressure over the north of England, the Irish Sea and Wales. The lowest readings are slightly below 29.0 ins. A rather brisk rise of pressure has occurred over Scandinavia, and at Haparanda the barometer now stands at 30.20 ins. A well marked "secondary" has formed over Western Germany.

WIND

TEMPERATURE

WEATHER

AND

SEA

The increase of pressure in the northeast has caused an increase in the strength of the E. wind over Scotland and the North Sea. The strong S. to S.W. winds which prevailed during the night over France and the eastern counties of England have moderated, but the wind still blows strongly at several east coast stations. Moderate or fresh N. breezes are reported from Ireland and the west of England. The weather continues dull generally and rain is still falling at several northern stations, but in the eastern part of the Channel the sky has cleared. On the Continent the "secondary" mentioned above is giving rise to dull, rainy weather over a considerable part of France and Germany. Temperature continues mild, and over Scotland today's readings are rather higher than those reported yesterday. The British readings range from 53° to 51°. Temperature is also mild over Scandinavia, in spite of the relatively high pressure which prevails there. The lowest reading is 30° at Haparanda. Temperatures of between 40° and 50° are reported from the majority of French and German stations. The sea is rather rough very generally.

During the previous 24 hours the depression over the British Isles has caused rain at all home stations with the exception of Yarmouth. The heaviest fall reported is 1.02 in. at Scilly. The development of the "secondary" over the Continent gave rise to over an inch of rain at Lyons and thence. Practically no bright sunshine was registered in England but small amounts were experienced in Scotland, Ireland and the Channel Islands; the largest total is 7.1 hours at Valencia.

PROBABLE CHANGES IN SYSTEM NOW PREVALENT

The depression in the north will probably fill up slowly, but the rise of the barometer over Scandinavia points to the continuation of fresh or strong E. winds over the North Sea and the northern part of our Islands.

FORECASTS*

For the 24 hours ending at NOON on 3rd November, 1905.

DISTRICTS.

FORECASTS.

- | | | |
|---|------------------|--|
| 0 | SCOTLAND NORTH | Fresh or strong E. winds; |
| 1 | SCOTLAND EAST | cloudy or dull, rain at times; rather milder. |
| 2 | ENGLAND N.E. | Fresh or strong S. to E. winds; |
| 3 | ENGLAND EAST | cloudy or dull, some rain, improving gradually; rather mild. |
| 4 | MIDLAND COUNTIES | S.E. to S.W. winds, strong in places; weather improving gradually, occasional rain still probable; mild. |
| 5 | ENGLAND SOUTH | |

DISTRICTS.

FORECASTS.

- | | | |
|----|---------------|---|
| 6 | SCOTLAND WEST | Same as Nos. 0 & 1. |
| 7 | ENGLAND N.W. | Light variable breezes; dull, some rain, improving later; mild. |
| 8 | ENGLAND S.W. | Moderate N.W. to W. winds; fair as a whole, some showers; mild. |
| 9 | IRELAND NORTH | Moderate or fresh N.E. to N.W. winds; |
| 10 | IRELAND SOUTH | cloudy or dull, occasional rain; rather mild |

WARNINGS

At 9.45 am. to part of District 8, "Lower Cone." The South Cone is still up in Districts 1, 2, 3, 5 and part of 0.

* The South Cone, point downwards (⌵), means that gales, or strong winds, are probable, at first from the Southward (from S.E. round by S. to N.W.). Should it appear likely that a gale beginning from between W. and N.W. is likely to veer towards N. or N.E., the North Cone is hoisted in preference to the South Cone.
The North Cone, point upwards (⌴), means that gales, or strong winds, are probable, at first from the Northward (from N.W. round by N. to S.E.). Should it appear likely that a gale beginning from between E. and S.E. is likely to veer towards S. or S.W., the South Cone is hoisted in preference to the North Cone.

Valencia	7.39	12.25	5.11

SUBSCRIPTIONS both for the Daily and Weekly Weather Reports may be paid, in advance, to the Meteorological Office.

TERMS: For Daily Weather Report, forwarded by Book Post, £1 0 0 per annum.

 " Weekly " " " " £1 10 0 " Single Copies, 6d.

Single Copies of the Daily Weather Report (price 1d.) may be obtained after 3 p.m. on the day of issue at the Meteorological Office, and at Messrs. W. H. SMITH & SONS' Bookstalls at the following terminus Railway Stations:—Victoria, Charing Cross, King's Cross, St. Pancras, Euston.

FORECASTS OF WEATHER for one day in advance are drawn up at the Meteorological Office at 11 a.m., and between 7 and 8 p.m. The latest forecast can be had by Reply Telegram, on paying at any Post Office in the United Kingdom Sixpence in addition to the cost of the inquiry and reply Telegram. Information as to the Terms on which Forecasts can be sent, daily, for a long or short period, may be obtained on application to the Meteorological Office, 63, Victoria Street, S.W., either personally or by post.

* At Oxford the observations are taken at 8 p.m.

DAILY WEATHER REPORT

for 8 a.m. on Friday, 3rd November,

1905.

Issued by the METEOROLOGICAL OFFICE, 63, Victoria Street, London. W. N. SHAW, Director.

NOTE: The Sunshine for London given in this Table is recorded on the Tower of the Wesleyan Training College, Westminster; the Sunshine entered to Dungeness is recorded at Littlestone-on-Sea.

* Observations for this column not generally received.

† Observations received too late for insertion in Charts on next page.

WEATHER CHARTS

FOR Friday, 3rd November, 1905.

I. BAROMETER, WIND AND SEA. This Morning.

BAROMETER.—Isobars are drawn for each tenth of an inch.

WIND.—Arrows show Directions and Force, flying with the wind.

Force above 10 →→→→→

Force 5 to 7 →→→→→

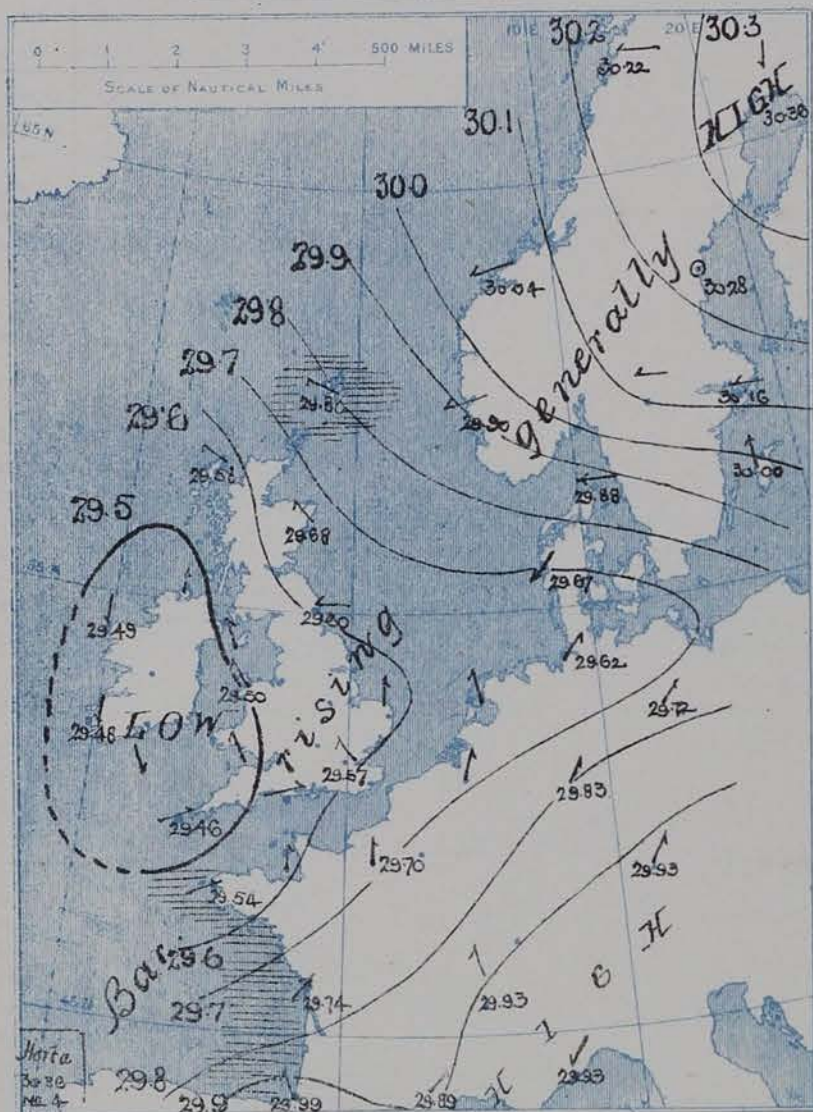

Calm ☉

Force 8 to 10 →→→→→

Force 1 to 4 →→→→→

SEA—Rough

High

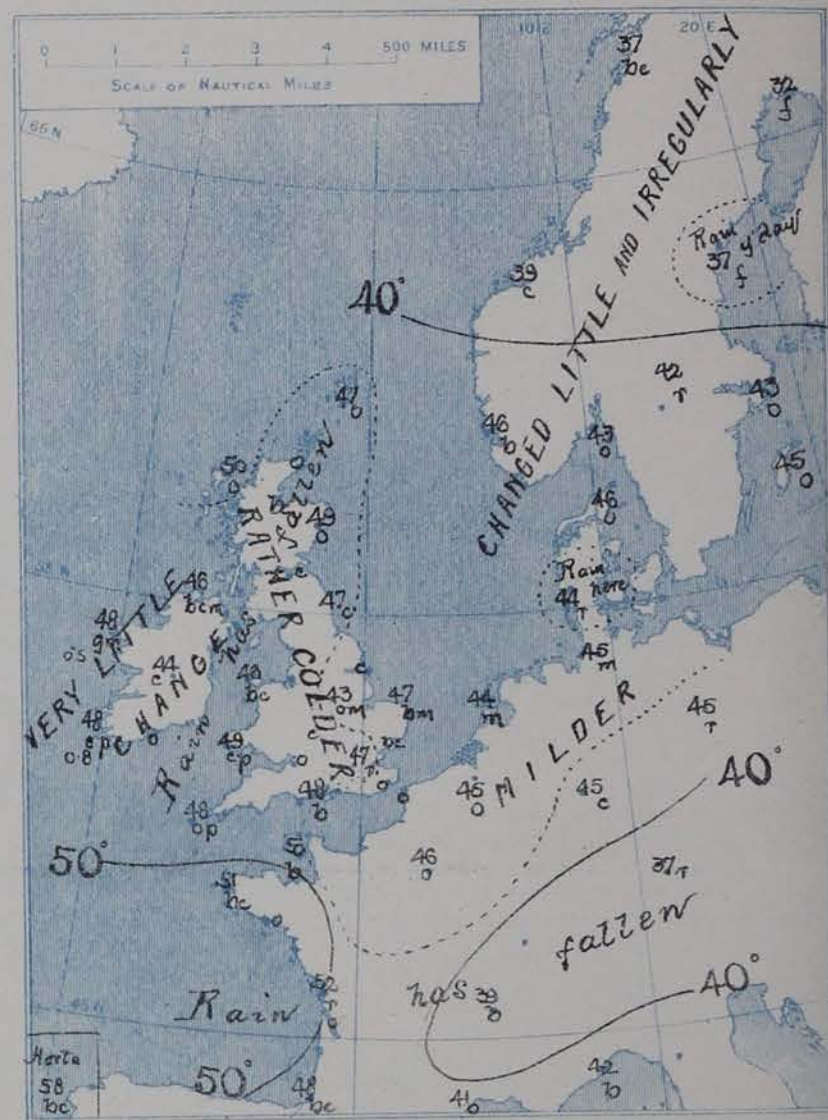

II. TEMPERATURE AND WEATHER. This Morning.

TEMPERATURE.—Isotherms are drawn for each 10°.

WEATHER.—Shown by Letters of the Beaufort Scale. (See P. 4.)

RAINFALL.—A dotted line separates areas where rain has fallen from those without rain. The fall in past 24 hours when exceeding half an inch is shown thus - 0.6

III. BAROMETER AND WIND

Yesterday morning.

IV. RAINFALL IN 1905.

Total Amount recorded in various districts of the United Kingdom in the 43 weeks ended Saturday, Oct. 28th, with the percentage of the average amount for the corresponding period.

V. Means of DAILY TEMPERATURE

at 8 A.M. for the Two monthly period OCTOBER-NOVEMBER. (1871-1900)

GENERAL SITUATION AT 8 A.M.

PRESSURE

The barometer has risen decidedly throughout our area during the previous 24 hours. The lowest readings, which are shown over Central Ireland, are now slightly below 29.5 ins. A moderately steep gradient for E.^s winds is still shown over Scandinavia, the Baltic, and the northern part of the German Ocean, and over the Bay of Biscay there is still a moderate gradient for S.W.^s winds. Over the British Isles the differences of pressure have become slight.

WIND

TEMPERATURE

WEATHER

AND

SEA

The gradient in the northeast is giving rise to a brisk E.^s wind in that quarter and a fresh S.W.^s winds are still reported from the Bay of Biscay. Further eastward, over the inland portions of France and Germany, light S.^s to S.W.^s breezes prevail. Over the British Isles the wind is generally light, the prevailing direction being SE.^s. There is a complete circulation of light airs round the region lying between London, Bath and Portland Bill, suggesting the existence of a very shallow cyclonic disturbance in that neighbourhood. This is probably associated with the heavy rain which is falling in London. Over the remainder of the country a decided improvement has taken place in the weather; showers are still reported from several southwestern stations. On the Continent conditions are still unsettled, rain is falling at Rochefort, Munich, Berlin and several stations in the south of Scandinavia. Temperature remains mild; the British readings range from 41° to 50°, and the Continental values from 32° at Haparanda to 52° at Rochefort. The sea is still rather rough in the Bay of Biscay, on the British coasts it is moderate to slight.

During the previous 24 hours rain fell very generally in the north and west of our Islands, the heaviest fall being 0.79 inch at Valencia. London is the only station in the southeastern portion of the country at which rain was measured. The amounts of sunshine reported are generally small, but at Selly as many as 7 hours were recorded.

PROBABLE CHANGES IN SYSTEM NOW PREVALENT

The depression over the British Isles is likely to continue to fill up. The steady increase of pressure in the north of Scandinavia will cause E.^s to SE.^s winds to predominate during the ensuing 24 hours. The improvement in the weather which has taken place over the greater part of the country is likely to be maintained, but occasional rain is still probable.

FORECASTS*

For the 24 hours ending at NOON on 4th November, 1905.

DISTRICTS.

FORECASTS.

0	{ SCOTLAND NORTH	Moderate to fresh E. ^s to SE. ^s winds; fair generally, but cloudy; some showers; continuing mild.
1	{ SCOTLAND EAST	
2	{ ENGLAND N.E.	
3	{ ENGLAND EAST	Moderate or light SE. ^s breezes; cloudy or dull, some showers; mild.
4	{ MIDLAND COUNTIES	
5	{ ENGLAND SOUTH	

DISTRICTS.

FORECASTS.

6	{ SCOTLAND WEST	Moderate or light SE. ^s breezes; fair intervals, some showers; mild.
7	{ ENGLAND N.W.	
8	{ ENGLAND S.W.	S.W. ^s to SE. ^s breezes; fair as a whole, some showers; mild.
9	{ IRELAND NORTH	
10	{ IRELAND SOUTH	Moderate or light NE. ^s to SE. ^s winds; weather improving, some showers still probable.

WARNINGS

{ at 9.30 am. today to Districts 1, 2, 3, 5 and part
of 0, "Lower Cone"

Note.—The South Cone, point downwards (⌣), means that gales, or strong winds, are probable, at first from the Southward (from S.E. round by S. to N.W.). Should it appear likely that a gale beginning from between W. and N.W. is likely to veer towards N. or N.E. the North Cone is hoisted in preference to the South Cone.
The North Cone, point upwards (⌢), means that gales, or strong winds, are probable, at first from the Northward (from N.W. round by N. to S.E.). Should it appear likely that a gale beginning from between E. and S.E. is likely to veer towards S. or S.W. the South Cone is hoisted in preference to the North Cone.

* For terms for transmission of Forecasts by Telegraph, see next page.

TERMS: For Daily Weather Report, forwarded by Book Post, £1 0 0 per annum.
" Weekly " " " £1 10 0 " " Single Copies, 6d.

Single Copies of the Daily Weather Report (price 1d.) may be obtained after 3 p.m. on the day of issue at the Meteorological Office, and at Messrs. W. H. SMITH & SONS' Bookstalls at the following terminus Railway Stations:—Victoria, Charing Cross, King's Cross, St. Pancras, Euston.

FORECASTS OF WEATHER for one day in advance are drawn up at the Meteorological Office at 11 a.m., and between 7 and 8 p.m. The latest forecast can be had by Reply Telegram, on paying at any Post Office in the United Kingdom Sixpence in addition to the cost of the inquiry and reply Telegram. Information as to the Terms on which Forecasts can be sent, daily, for a long or short period, may be obtained on application to the Meteorological Office, 63, Victoria Street, S.W., either personally or by post.

* At Oxford the observations are taken at 8 p.m.

DAILY WEATHER REPORT

for 8 a.m. on *Saturday, 4th November,* 1905.

Issued by the METEOROLOGICAL OFFICE, 63, Victoria Street, London. W. N. SHAW, Director.

NOTE: The Sunshine for London given in this Table is recorded on the Tower of the Wesleyan Training College, Westminster; the Sunshine entered to Dungeness is recorded at Littlestone-on-Sea.

* Observations for this column not generally received.

+ Observations received too late for insertion in Charts on next page.

WEATHER CHARTS

FOR Saturday, 4th November, 1905.

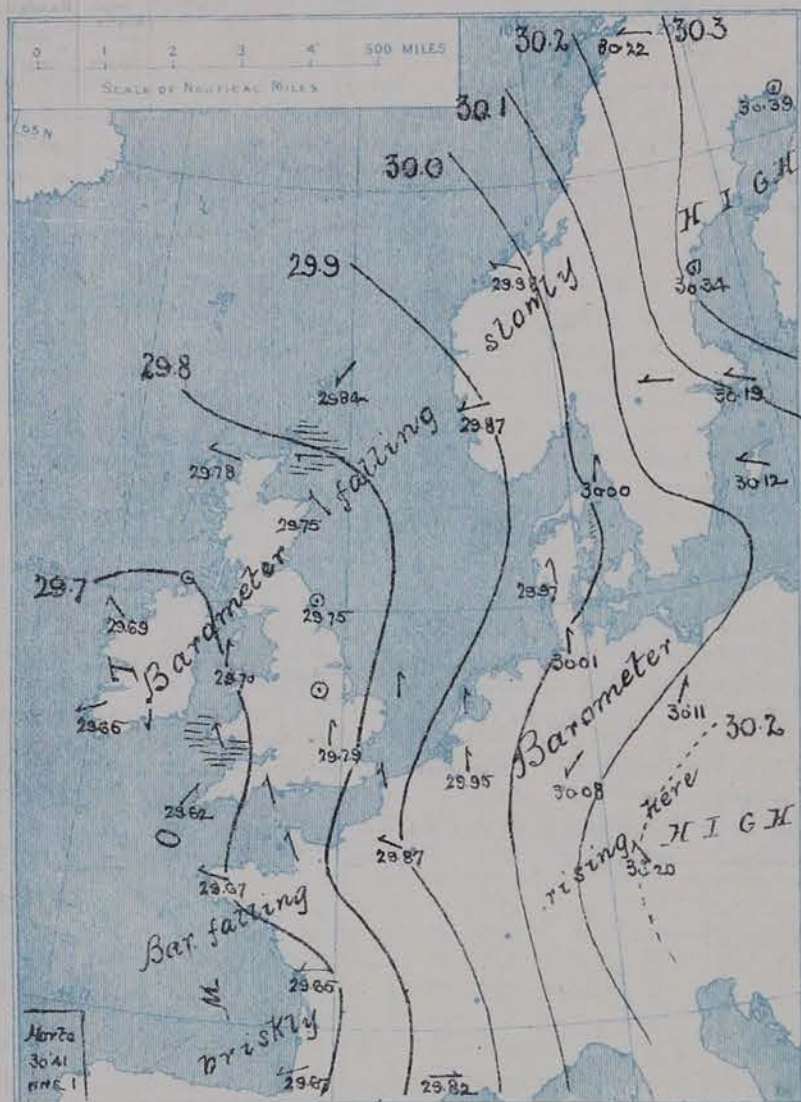

I. BAROMETER, WIND AND SEA. This Morning.

BAROMETER—Isobars are drawn for each tenth of an inch.

WIND—Arrows show Directions and Force, flying with the wind.

Force above 10 → Force 5 to 7 → } Calm ⊙
Force 8 to 10 → Force 1 to 4 →

SEA—Rough High

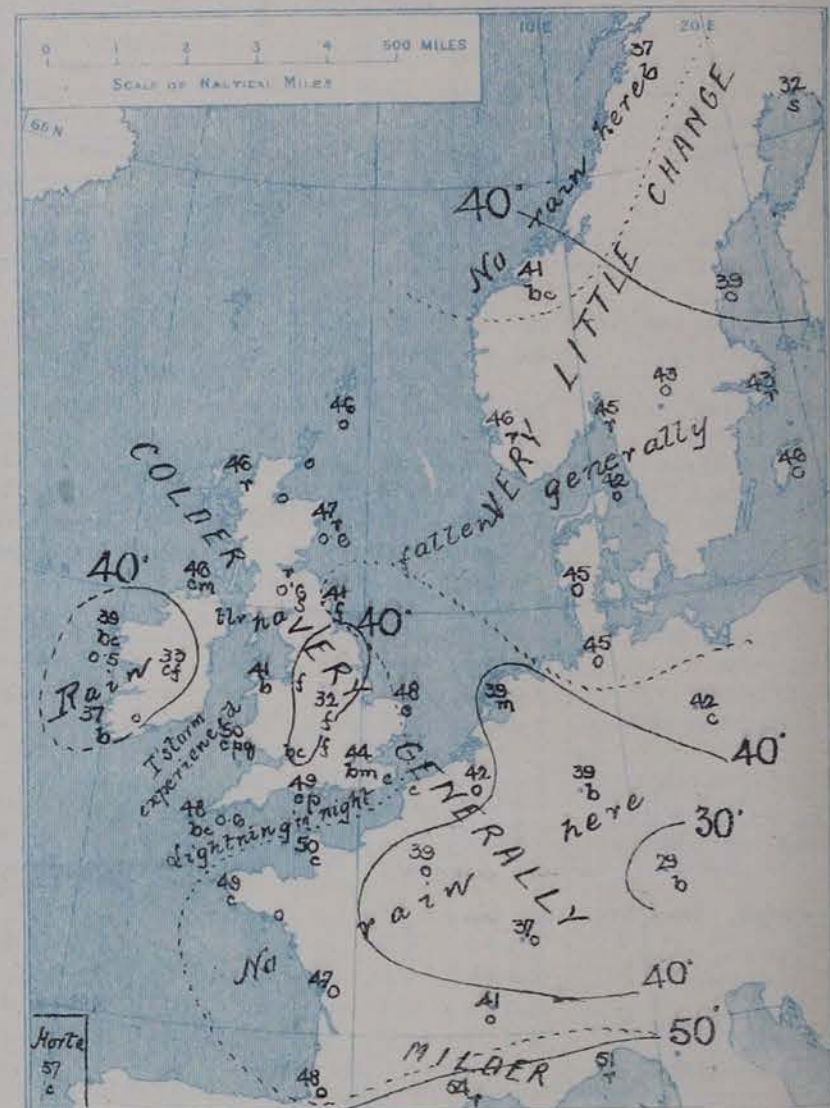

II. TEMPERATURE AND WEATHER. This Morning.

TEMPERATURE—Isotherms are drawn for each 10°.

WEATHER—Shown by Letters of the Beaufort Scale (See P. 4.)

RAINFALL—A dotted line separates areas where rain has fallen from those without rain. The fall in past 24 hours when exceeding half an inch is shown thus - 0.6

III. BAROMETER AND WIND

Yesterday morning.

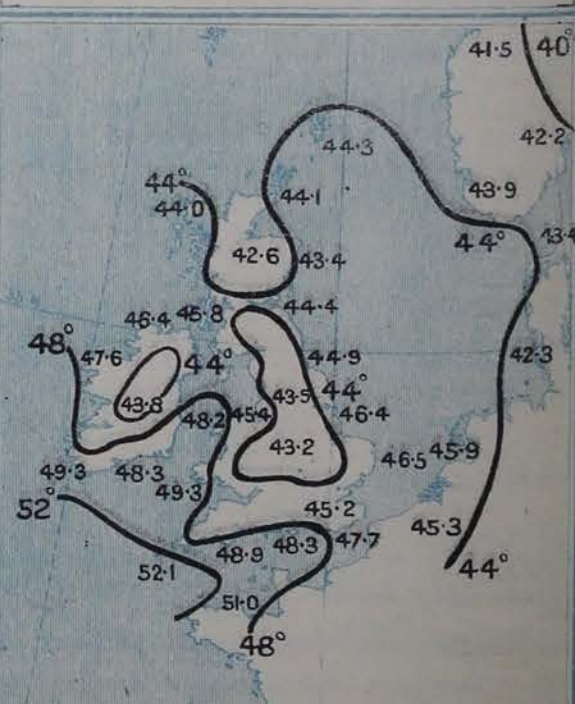

IV. BRIGHT SUNSHINE IN 1905.

Total Duration recorded in various districts of the United Kingdom in the 43 weeks ended Saturday, Oct. 28th with the percentage of the average duration for the corresponding period.

V. Means of DAILY TEMPERATURE

at 8 A.M. for the Two monthly period OCTOBER-NOVEMBER. (1871-1900)

GENERAL SITUATION AT 8 A.M.

PRESSURE

Pressure continues lowest in the west of our area, and highest in the extreme northeast, whence Haparanda reports 30.39 ins. Since yesterday morning a brisk increase of pressure has occurred over the south of Germany and at Munich the barometer stands at 30.20 ins. A decided fall of the barometer has, on the other hand, taken place in the southwest of France in consequence of the advance northward of a rather deep disturbance shown to the westward of the Spanish Peninsula yesterday morning. The barometer now stands below 29.7 ins. throughout Ireland, the southwest of England and on the west coast of France.

WIND

TEMPERATURE

WEATHER

AND

SEA

Moderate or light E^s winds prevail at the Swedish, Norwegian and Scottish stations, but from Denmark, Germany and the majority of English stations light S^s breezes are reported. The advance of the low pressure system from the Spanish Peninsula has caused the wind to become E^s or SE^s over France. The line of separation between the E^s current in the extreme north of the map and the S^s current to the south of it extends from Stockholm to Donaghadee and rain is falling at almost all stations which lie near it; at Donaghadee a thunderstorm is in progress. Further south the weather is fine generally though occasional showers are still reported from a few stations. A fine night proved favourable to radiation, and this morning's temperature readings are generally lower than those reported yesterday. At many inland stations changes have been large and accordingly fog is very prevalent over the midlands and on the northeast coast of England where the wind is off shore. Fog is also reported from Liverpool and Birr Castle. Within the region of the E^s current temperature remains rather mild; most Scandinavian readings are above 40°. The sea is moderate or slight generally, but it is still rather rough off Pembroke and Wick.

During the previous 24 hours rain fell at the majority of home stations; over half an inch is again reported from Scilly and from the southeast of Scotland. Over the Midland and eastern portions of England rainfall was in general confined to a few light showers, but in London 0.30 inch has again been measured. Bright sunshine amounts were again small. Temperature was mild during the day, reaching 56° at Jersey. Attention has already been called to the fall of temperature that has been experienced during the night. The thermometer fell below the freezing point at both Nottingham and Birr Castle.

PROBABLE CHANGES IN SYSTEM NOW PREVALENT

Fair weather is likely to continue today in the southern part of the British Isles, but it is probable that the fall of the barometer which is in progress in the southwest of France will spread N^{ws} and cause conditions to become unsettled during tomorrow. A slight fall of the barometer is also taking place in the west of Scotland and rather unsettled conditions must accordingly be expected to continue in the north of the British Isles.

FORECASTS*

For the 24 hours ending at NOON on 5th November, 1905.

DISTRICTS.

FORECASTS.

0	SCOTLAND NORTH	Moderate E ^s or SE ^s winds; dull and unsettled with some rain.
1	SCOTLAND EAST	
2	ENGLAND N.E.	Light SE ^s winds; fair as a whole, some showers.
3	ENGLAND EAST	Light SE ^s winds; fair generally today, less settled tomorrow.
4	MIDLAND COUNTIES	
5	ENGLAND SOUTH	

DISTRICTS.

FORECASTS.

6	SCOTLAND WEST	Same as Nos. 0 & 1.
7	ENGLAND N.W.	Light SE ^s winds; fair as a whole, some showers.
8	ENGLAND S.W.	Light to moderate SE ^s or E ^s winds; fair at first, some rain later.
9	IRELAND NORTH	E ^s or NE ^s breezes; fair intervals, some showers.
10	IRELAND SOUTH	

WARNINGS

NONE ISSUED

Note.—The South Cone, point downwards (⌋), means that gales, or strong winds, are probable at first from the Southward (from S.E. round by S. to N.W.). Should it appear likely that a gale beginning from between W. and N.W. is likely to veer towards N. or N.E., the North Cone is hoisted in preference to the South Cone.
The North Cone, point upwards (⌋), means that gales, or strong winds, are probable at first from the Northward (from N.W. round by N. to S.E.). Should it appear likely that a gale beginning from between E. and S.E. is likely to veer towards S. or S.W., the South Cone is hoisted in preference to the North Cone.

NOTE: The Sunshine for London given in this Table is recorded on the Tower of the Wesleyan Training College, Westminster; the Sunshine entered to Dungeness is recorded at Littlestone-on-Sea.

* Observations for this column not generally received.

+ Observations received too late for insertion in Charts on next page.

WEATHER CHARTS

FOR SUNDAY, 5th NOVEMBER, 1905.

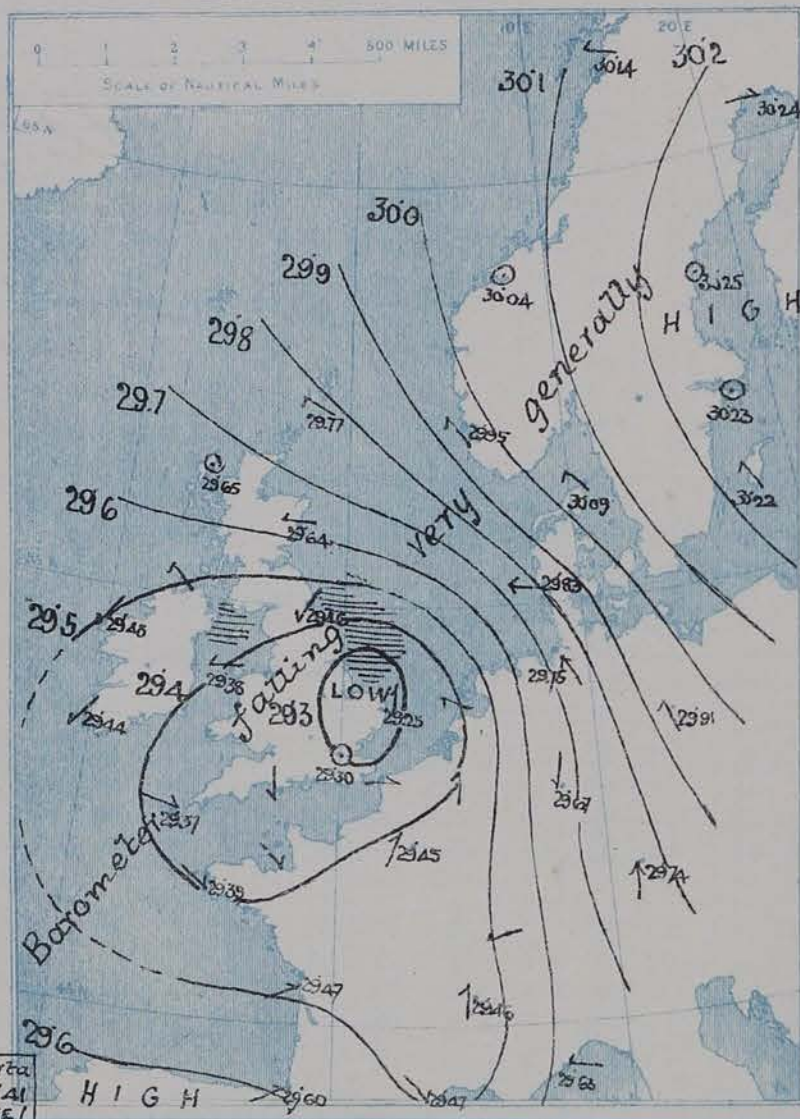

I. BAROMETER, WIND AND SEA. This Morning.

BAROMETER.—Isobars are drawn for each tenth of an inch.

WIND.—Arrows show Directions and Force, flying with the wind.

Force above 10 → : Force 5 to 7 → : } Calm ☉
Force 8 to 10 → : Force 1 to 4 → :

SEA.—Rough High

II. TEMPERATURE AND WEATHER. This Morning.

TEMPERATURE.—Isotherms are drawn for each 10°.

WEATHER.—Shown by Letters of the Beaufort Scale (See P. A.)

RAINFALL.—A dotted line separates areas where rain has fallen from those without rain. The fall in past 24 hours when exceeding half an inch is shown thus - 0.6

III. BAROMETER AND WIND

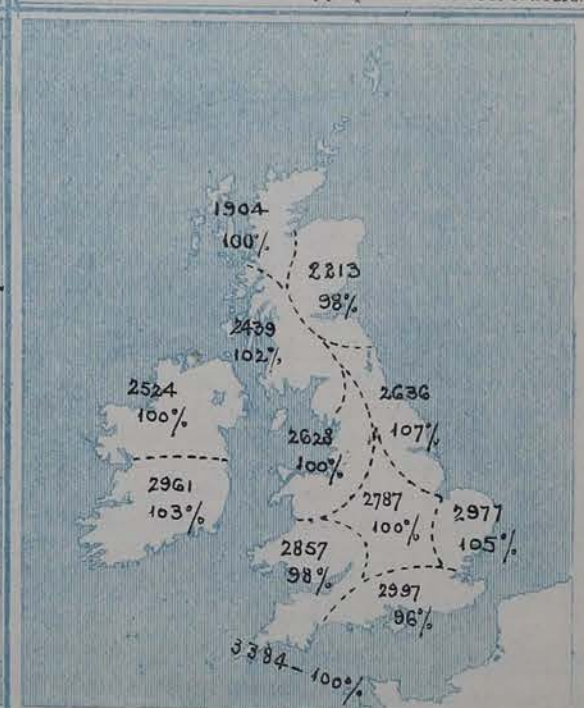

Yesterday morning.

IV. ACCUMULATED TEMPERATURE ABOVE 42°.

Amount recorded in various districts of the United Kingdom during the 43 weeks ended October 28th, with the percentage of the average for the corresponding period.

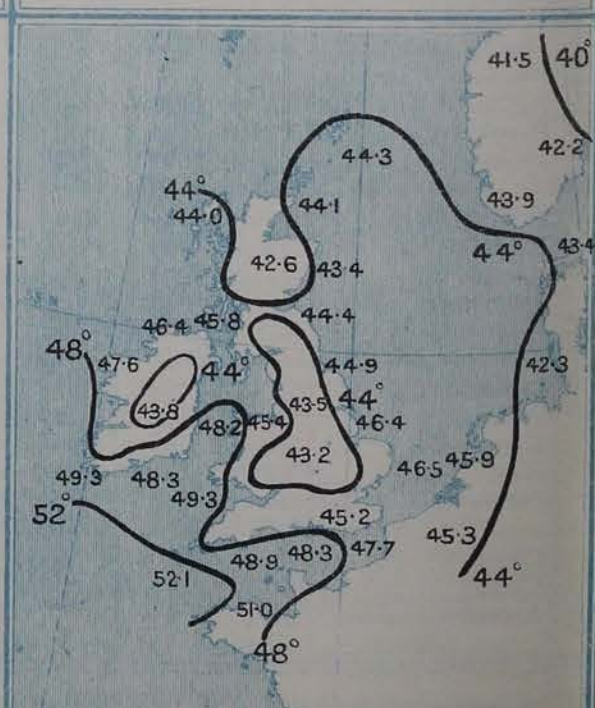

Accumulated values are expressed in Day Degrees—a "Day Degree" signifying 1° continued for 24 hours, or any other number of degrees for an inversely proportional number of hours.

V. Means of DAILY TEMPERATURE

at 8 A.M. for the Two monthly period

OCTOBER-NOVEMBER. (1871-1900.)

GENERAL SITUATION AT 8 A.M.

PRESSURE

An anticyclone of moderate intensity lies over Scandinavia and Northern Russia, the barometer being above 30.2 ins from Wisby up the Gulf of Bothnia. The central space of a low pressure system of increasing depth is shown over the eastern counties of England, where the mercury has fallen below 29.3 ins., and a shallow secondary depression, barometer below 29.5 ins., has appeared over the south of France. The gradients are steep over the North Sea, slight in other regions.

WIND

TEMPERATURE

WEATHER

AND

SEA

A cyclonic circulation of light to moderate breezes is reported generally over the British Isles and their neighbourhood, but the Easterly current blows freshly at Donaghadee and Bushhaven, strongly at Farnö. Temperature has fallen locally in the north of Scotland and in the southwest of England, scarcely changed over Scandinavia, risen in nearly all other districts, decidedly at some stations, a rise of 14° at Nottingham, 16° at Lyons and 22° at Munich. The values range from 34° at Nairn and 40° at Stromway to 48° at Aberdeen, Leith, Donaghadee and Jersey and 49° at Farnmouth; from 34° at Haparanda and 35° at Bodö to 57° at Lyons and 64° at Nice. Cloudy to overcast weather prevails at home and abroad, with rain in many parts of England, at Lyons and Haparanda. Rather a rough sea is running between the Wash and the Tyne and outside Belfast Lough, moderate to very smooth on all other coasts.

Temperature rose yesterday to 50° and upwards in most parts of the country, to 54° at Bournemouth and 55° at Portland Bill, but only to 45° at Liverpool. Rain fell very generally, but no station reports as much as half an inch. Thunder and lightning occurred over the northeast of Ireland, lightning alone at Blackrock Point. The duration of bright sunshine amounted to 8 hrs. at Scilly and 4.5 hrs. at Valencia, the records elsewhere being much smaller, none at all in several instances.

PROBABLE CHANGES IN SYSTEM NOW PREVALENT

FORECASTS*

For the 24 hours ending at NOON on 6TH NOVEMBER, 1905.

DISTRICTS.

FORECASTS.

- 0 SCOTLAND NORTH
- 1 SCOTLAND EAST
- 2 ENGLAND N.E.
- 3 ENGLAND EAST
- 4 MIDLAND COUNTIES
- 5 ENGLAND SOUTH

None issued.

DISTRICTS.

FORECASTS.

- 6 SCOTLAND WEST
- 7 ENGLAND N.W.
- 8 ENGLAND S.W.
- 9 IRELAND NORTH
- 10 IRELAND SOUTH

None issued.

WARNINGS

NONE ISSUED.

Note: The South Cone, point downwards (⌵), means that gales, or strong winds, are probable, at first from the Southward (from S.E. round by S. to N.W.). Should it appear likely that a gale beginning from between W. and N.W. is likely to veer towards N. or N.E., the North Cone is hoisted in preference to the South Cone. The North Cone, point upwards (⌴), means that gales, or strong winds, are probable, at first from the Northward (from N.W. round by N. to S.E.). Should it appear likely that a gale beginning from between E. and S.E. is likely to veer towards S. or S.W., the South Cone is hoisted in preference to the North Cone.

SUBSCRIPTIONS both for the Daily and Weekly Weather Reports may be paid, in advance, to the Meteorological Office.

TERMS: For Daily Weather Report, forwarded by Book Post, £1 0 0 per annum.
Weekly " " " " " "

£1 10 0 Single Copies, 6d.

Single Copies of the Daily Weather Report (price 1d.) may be obtained after 3 p.m. on the day of issue at the Meteorological Office, and at Messrs. W. H. SMITH & Sons' Bookstalls at the following terminus Railway Stations—Victoria, Charing Cross, King's Cross, St. Pancras, Euston.

FORECASTS OF WEATHER for one day in advance are drawn up at the Meteorological Office at 11 a.m., and between 7 and 8 p.m. The latest forecast can be had by Reply Telegram, on paying at any Post Office in the United Kingdom **Sixpence** in addition to the cost of the inquiry and **reply Telegram**. Information as to the Terms on which Forecasts can be sent, daily, for a long or short period, may be obtained on application to the Meteorological Office, 63, Victoria Street, S.W., either personally or by post.

* At Oxford the observations are taken at 8 p.m.

DAILY WEATHER REPORT

for 8 a.m. on Monday, 6th November, 1905.

Issued by the METEOROLOGICAL OFFICE, 63, Victoria Street, London. W. N. SHAW, Director.

NOTE: The Sunshine for London given in this Table is recorded on the Tower of the Wesleyan Training College, Westminster; the Sunshine entered to Dungeness is recorded at Littlestone-on-Sea.

* Observations for this column not generally received.

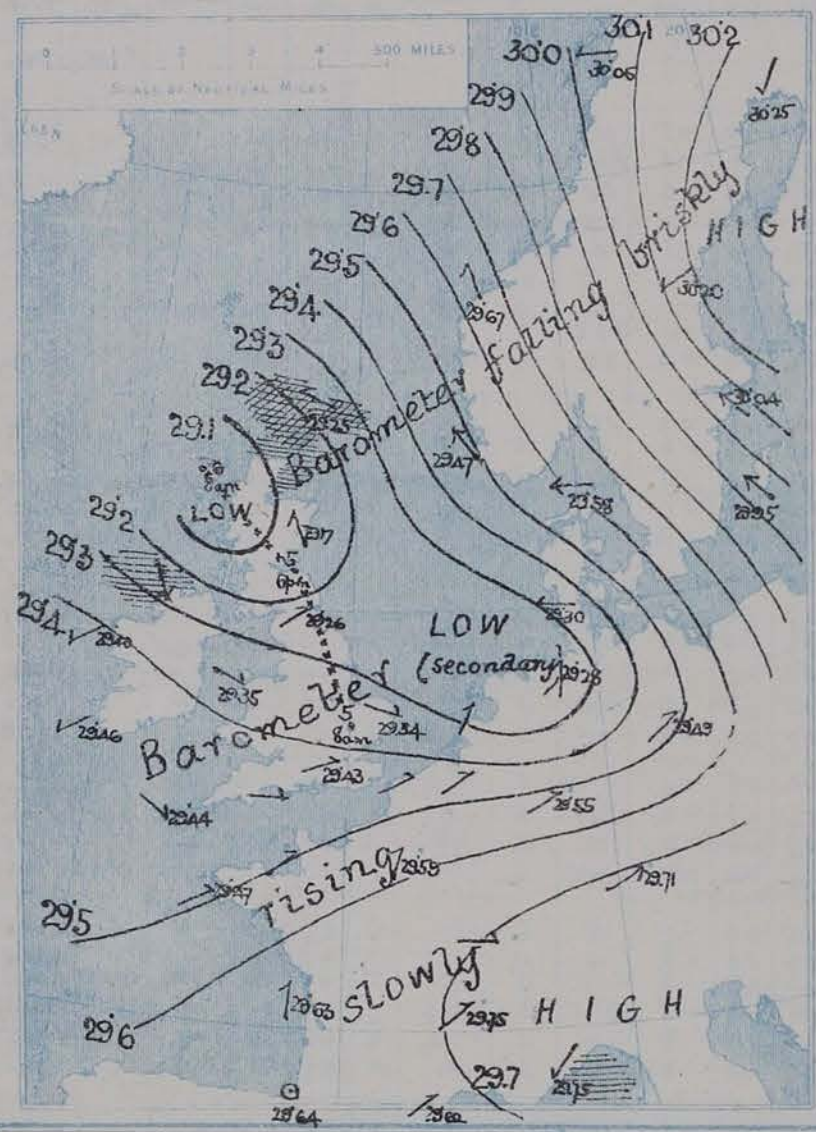

+ Observations received too late for insertion in Charts on next page.

WEATHER CHARTS

FOR *Monday, 6th November, 1905.*

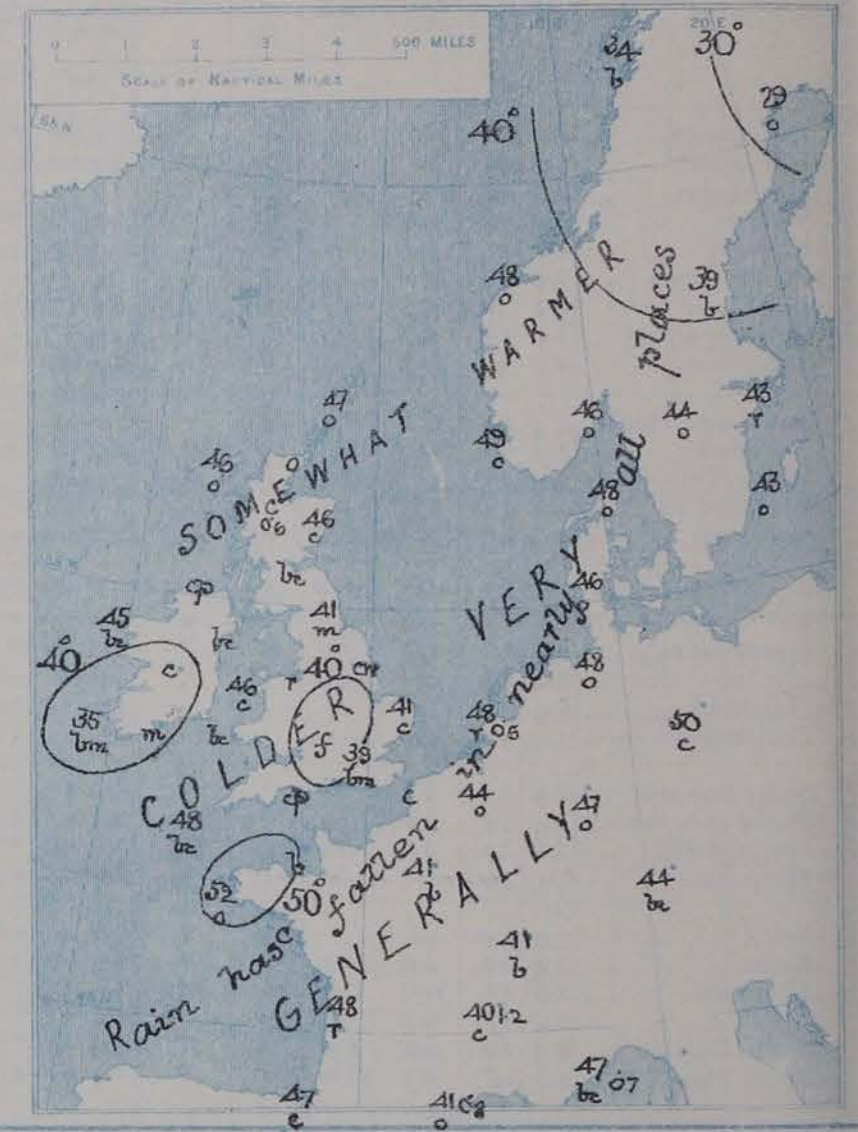

I. BAROMETER, WIND AND SEA. *This Morning.*

BAROMETER—Isobars are drawn for each tenth of an inch.
WIND—Arrows show Directions and Force, flying with the wind.
 Force above 10 → Force 5 to 7 → } Calm ☉
 Force 8 to 10 → Force 1 to 4 →
SEA—Rough High

II. TEMPERATURE AND WEATHER. *This Morning.*

TEMPERATURE—Isotherms are drawn for each 10°.
WEATHER—Shown by Letters of the Beaufort Scale. (See P. 4.)
 A dotted line separates areas where rain has fallen from those without rain. The fall in past 24 hours when exceeding half an inch is shown thus - 0.6

III. BAROMETER AND WIND

Yesterday morning.

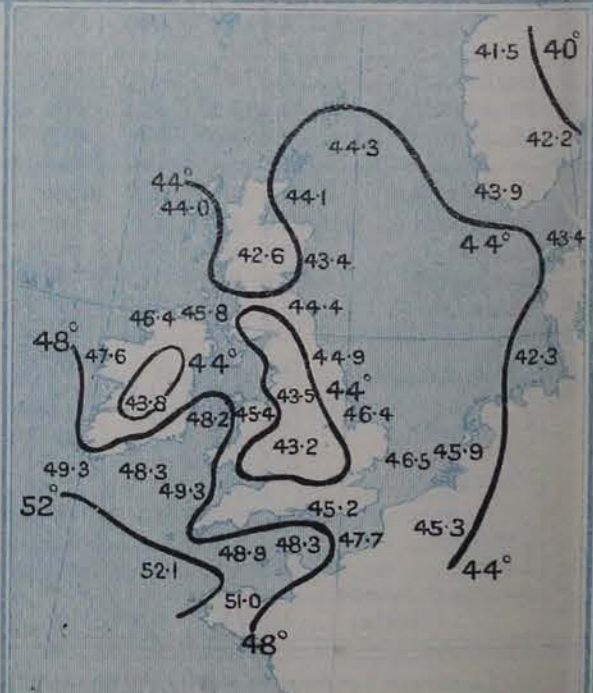

IV. ACCUMULATED TEMPERATURE ABOVE 42°.

Amount recorded in various districts of the United Kingdom during the week ended Saturday, 28th Oct., with the percentage of the average for the corresponding week.
 Accumulated values are expressed in Day-Degrees—a "Day Degree" signifying 1° continued for 24 hours, or any other number of degrees for an inversely proportional number of hours.

V. Means of DAILY TEMPERATURE

at 8 A.M. for the Two monthly period OCTOBER-NOVEMBER. (1871-1900)

GENERAL SITUATION AT 8 A.M.

PRESSURE

A trough of low pressure extending from Stornoway (29.01 ins) to Berlin (29.49 ins) divides our area into two portions. Over the Scandinavian countries, on the northeastern side of this line, the gradient is very steep, the highest reading reported being 30.25 ins. at Haparanda. In the west the gradient is generally slight; over the northwest of the British Isles the pressure distribution has become exceedingly uniform.

WIND

TEMPERATURE

WEATHER

AND

SEA

Strong S.E.^s to E.^s winds prevail over the Scandinavian countries and the northeastern portion of the North Sea. To the west of the trough of low pressure mentioned above, the wind is moderate or light in force and the direction varies between N.W. and S.W., but on the west coast of Ireland it has become E.^s. Within the region of W.^s winds the weather has become fair at the majority of stations but showers are still reported locally. The sky is uniformly overcast in the south of Scandinavia with rain at Stockholm. Further to the north the weather is fine. Temperature remains rather mild generally, but this morning's readings are rather lower than those reported yesterday over the British Isles and France, the changes being most marked inland and at stations where the wind is off shore. The British readings range from 32° to 50°. In the S.E.^s current over Scandinavia the majority of readings are again over 40°. The sea is moderate to slight on most of our coasts, but it is high off the northeast of Scotland.

During the previous 24 hours rain fell throughout the greater part of the British Isles, but a few stations on the east coast of England escaped; the largest total reported is 0.59 inch at Nain. Very little bright sunshine was experienced over the country as a whole, but over 6 hours were experienced at Scilly and Jersey.

PROBABLE CHANGES IN SYSTEM NOW PREVALENT

The deep disturbance off the northwest of Scotland is likely to continue to fill up or to move away to the N.W.^{ws}. A shallow "secondary" over the North Sea will cause the weather to remain rather unsettled, and in addition to this the E.^s winds in the west of Ireland suggest the advance of further disturbing influences from the west.

FORECASTS*

For the 24 hours ending at NOON on 7th November, 1905.

DISTRICTS.

FORECASTS.

0A	SCOTLAND NORTH	Variable winds, strong in places; unsettled, some rain.
4	SCOTLAND EAST	
2	ENGLAND N.E.	Moderate or light winds, mainly W. ^s ; some fair intervals, but not settled.
3	ENGLAND EAST	
4	MIDLAND COUNTIES	
5	ENGLAND SOUTH	

DISTRICTS.

FORECASTS.

6	SCOTLAND WEST	Same as Nos. 0 & 1.
7	ENGLAND N.W.	
8	ENGLAND S.W.	Wind mainly W. ^s ; fair at first, unsettled, with rain later.
9	IRELAND NORTH	
10	IRELAND SOUTH	Variable winds; changeable, rain at times.
	WARNINGS	
		At 7.10 pm yesterday to District 0 and part of 1, "Hoist North Cone."

* The South Cone, point downwards (⏏), means that gales, or strong winds, are probable, at first from the Southward (from S.E. round by S. to N.W.). Should it appear likely that a gale beginning from between W. and N.W. is likely to veer towards N. or N.E., the North Cone is hoisted in preference to the South Cone.
The North Cone, point upwards (⏏), means that gales, or strong winds, are probable, at first from the Northward (from N.W. round by N. to S.E.). Should it appear likely that a gale beginning from between E. and S.E. is likely to veer towards S. or S.W., the South Cone is hoisted in preference to the North Cone.

* For terms for transmission of Forecasts by Telegraph, see next page.

SUBSCRIPTIONS both for the Daily and Weekly Weather Reports may be paid, in advance, to the Meteorological Office.

TERMS: For Daily Weather Report, forwarded by Book Post, £1 0 0 per annum.
" Weekly " " " £1 10 0 " " Single Copies, 6d.

Single Copies of the Daily Weather Report (price 1d.) may be obtained after 3 p.m. on the day of issue at the Meteorological Office, and at Messrs. W. H. SMITH & SONS' Bookstalls at the following terminus Railway Stations:—Victoria, Charing Cross, King's Cross, St. Pancras, Euston.

FORECASTS OF WEATHER for one day in advance are drawn up at the Meteorological Office at 11 a.m., and between 7 and 8 p.m. The latest forecast can be had by Reply Telegram, on paying at any Post Office in the United Kingdom Sixpence in addition to the cost of the inquiry and reply Telegram. Information as to the Terms on which Forecast can be sent, daily, for a long or short period, may be obtained on application to the Meteorological Office, 63, Victoria Street, S.W., either personally or by post.

* At Oxford the observations are taken at 8 p.m.

DAILY WEATHER REPORT

for 8 a.m. on Tuesday, 7th November, 1905.

Issued by the METEOROLOGICAL OFFICE, 63, Victoria Street, London. W. N. SHAW, Director.

NOTE: The Sunshine for London given in this Table is recorded on the Tower of the Wesleyan Training College, Westminster: the Sunshine entered in Dungeness is recorded at Littlestone-on-Sea.

* Observations for this column not generally received.

* Observations received too late for insertion in Charts on next page.

FOR Tuesday, 7th November, 1905.

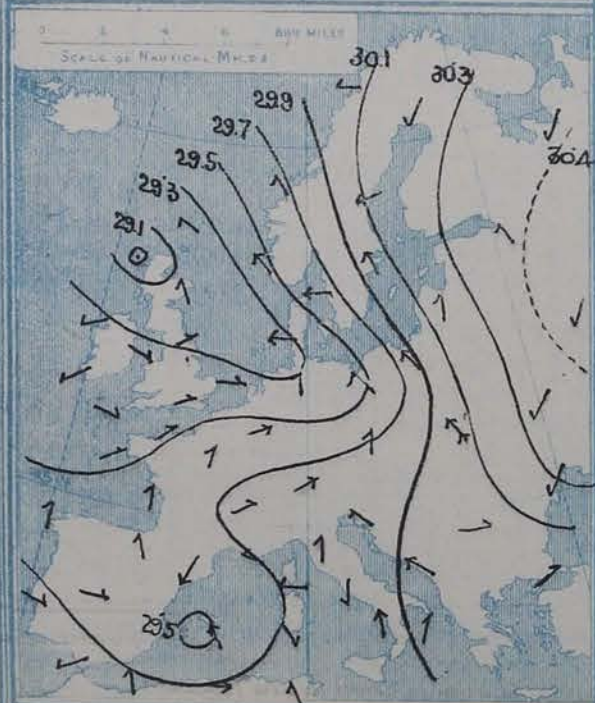

S.F.A.—*Rough* *High*

RAINFALL.—A dotted line separates areas where rain has fallen from those without rain. The fall in past 24 hours when exceeding half an inch is shown thus — 0·6

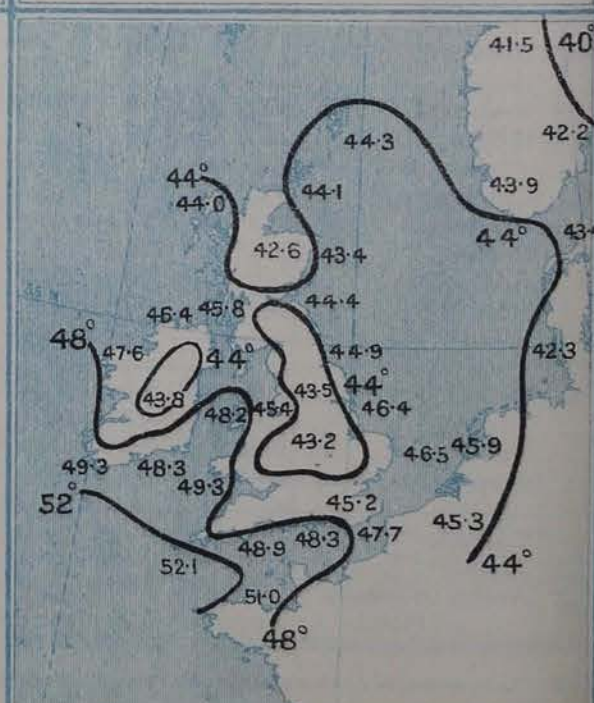

Yesterday morning.

in various districts of the United Kingdom
during the week ended Saturday, 4th Nov.

V. Means of DAILY TEMPERATURE
at 8 A.M. for the Two monthly period
OCTOBER-NOVEMBER. (1871-1900)

GENERAL SITUATION AT 8 A.M.

PRESSURE

The deep low pressure system which has been causing very unsettled weather throughout Northwestern Europe during the last week is passing away slowly in a N. or N.W. direction. It is now situated off the north of Scotland, the lowest reading being 29.08 ins. at Sumburgh Head. The gradient is still rather steep over the Scandinavian countries, but over the British Isles, France and Germany it has become slight. Over the south of England in particular the distribution of pressure has become very uniform.

WIND

TEMPERATURE

WEATHER

AND

SEA

We accordingly find moderate or light breezes over the northern portion of the British Isles, N.W. in the western districts and S.W. to S. in the east. Over Southern England there is a region of calms or light W. airs; still further to the south, over France, a region of light S. to W. breezes is met with. Fresh to strong S. to E. winds are still reported from the west of Scandinavia. The weather has become fair or fine over the greater part of the British Isles, though occasional showers are still reported from a few stations. In the region of calms in the south of England fog is very prevalent; a very cold night was experienced in this area, the shade temperature falling as low as 28° at Bath and 29° at Oxford, while in both London and Oxford the minimum reading on the grass was as low as 24°. On the Continent conditions are still rather variable, rain is reported from Rochefort, Lyons and Nice, and from Wisby, Stockholm, Hernösand and Bodö. With the exception of the local fall of temperature over the south of England mentioned above, and a decided fall which has taken place over Germany the changes of temperature have been slight; readings are generally between 40° and 50° throughout our area. The sea is slight or smooth generally but still rather rough off Wick and Malin Head.

The previous 24 hours witnessed a considerable improvement in the weather over the country as a whole. In the matter of bright sunshine totals of 5 hours were reached at many stations. Showers occurred at many stations, particularly in the north and west. Half an inch of rain is reported from Dungeness and 1.5 inch from the French side of the Straits of Dover.

PROBABLE CHANGES IN SYSTEM NOW PREVALENT

The low pressure system in the north will gradually cease to affect the weather over our Islands, and there are no indications of the approach of further disturbances from the west. Fair weather may thus be expected generally, but mist or fog will prevail locally.

FORECASTS*

For the 24 hours ending at NOON on 8TH November, 1905.

DISTRICTS.

FORECASTS.

DISTRICTS.

FORECASTS.

- 0 SCOTLAND NORTH
- 1 SCOTLAND EAST
- 2 ENGLAND N.E.
- 3 ENGLAND EAST
- 4 MIDLAND COUNTIES
- 5 ENGLAND SOUTH

Moderate or light N.W. or W. breezes; fair generally, some showers.

Light breezes, mainly W.;

fair generally, mist or fog locally; cool.

- 6 SCOTLAND WEST
- 7 ENGLAND N.W.
- 8 ENGLAND S.W.
- 9 IRELAND NORTH
- 10 IRELAND SOUTH

Same as Nos. 0 & 1.

Light W. breezes; fair generally, occasional local showers still probable.

Light breezes, mainly W.;

fair generally, some fog inland.

Same as Nos. 0 & 1.

WARNINGS

At 9.50 a.m. today to District 0 and part of 1, "Lower Cone."

* The South Cone, point downwards (⌵), means that gales, or strong winds, are probable at first from the Southward (from S.E. round by S. to N.W.). Should it appear likely that a gale beginning from between W. and N.W. is likely to veer towards N. or N.E., the North Cone is hoisted in preference to the South Cone.

The North Cone, point upwards (⌴), means that gales, or strong winds, are probable at first from the Northward (from N.W. round by N. to S.E.). Should it appear likely that a gale beginning from between E. and S.E. is likely to veer towards S. or S.W., the South Cone is hoisted in preference to the North Cone.

* For terms for transmission of Forecasts by Telegraph, see next page.

SUBSCRIPTIONS both for the Daily and Weekly Weather Reports may be paid, in advance, to the Meteorological Office.

TERMS: For Daily Weather Report, forwarded by Book Post, £1 0 0 per annum.
" Weekly " " " £1 10 0 " Single Copies, 6d.

Single Copies of the Daily Weather Report (price 1d.) may be obtained after 3 p.m. on the day of issue at the Meteorological Office, and at Messrs. W. H. SMITH & SONS' Bookstalls at the following terminus Railway Stations:—Victoria, Charing Cross, King's Cross, St. Pancras, Euston.

FORECASTS OF WEATHER for one day in advance are drawn up at the Meteorological Office at 11 a.m., and between 7 and 8 p.m. The latest forecast can be had by Reply Telegram, on paying at any Post Office in the United Kingdom Sixpence in addition to the cost of the inquiry and reply Telegram. Information as to the Terms on which Forecasts can be sent, daily, for a long or short period, may be obtained on application to the Meteorological Office, 63, Victoria Street, S.W., either personally or by post.

* At Oxford the observations are taken at 8 p.m.

DAILY WEATHER REPORT

for 8 a.m. on Wednesday 8th November 1905.

Issued by the METEOROLOGICAL OFFICE, 63, Victoria Street, London. W. N. SHAW, Director.

NOTE: The Sunshine for London given in this Table is recorded on the Tower of the Wesleyan Training College, Westminster; the Sunshine entered to Dungeness is recorded at Littlestone-on-Sea.

* Observations for this column not generally received.

+ Observations received too late for insertion in Charts on next page.

WEATHER CHARTS

FOR Wednesday, 8th November.

1905.

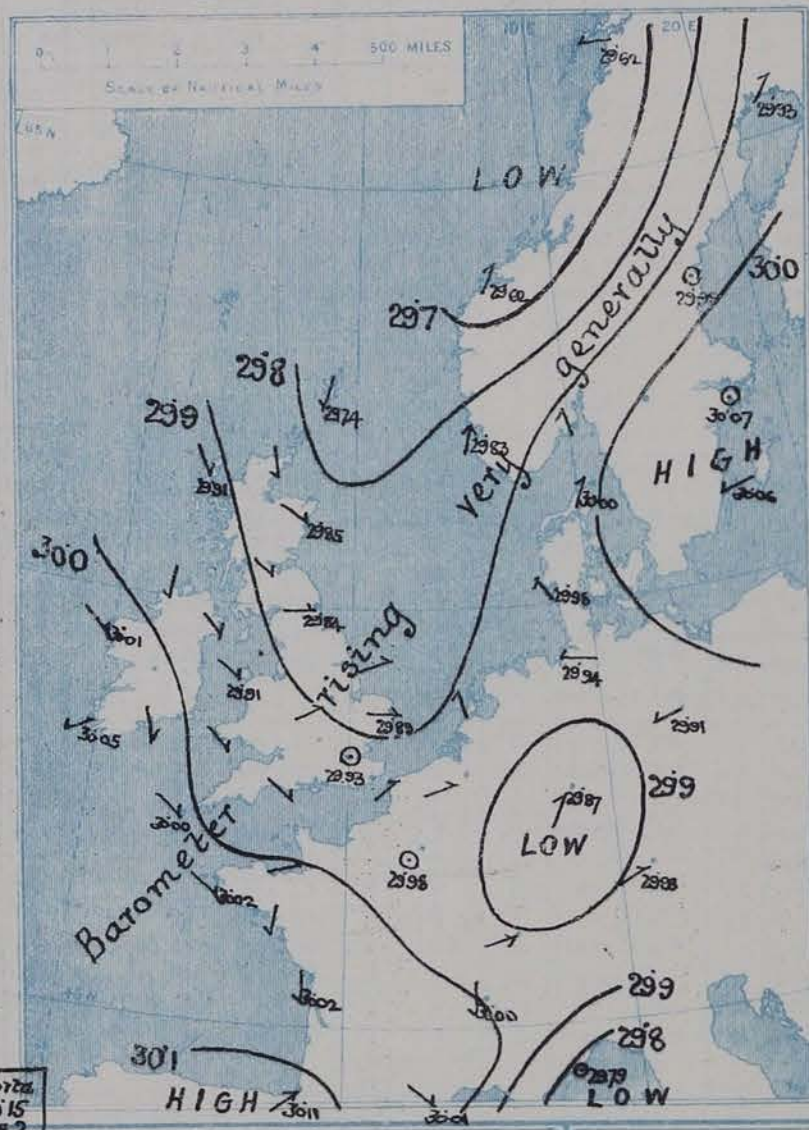

I. BAROMETER, WIND AND SEA: This Morning.

BAROMETER—Isobars are drawn for each tenth of an inch.

WIND—Arrows show Directions and Force, flying with the wind.

Force above 10 → Force 5 to 7 → } Calm ⊙
Force 8 to 10 → Force 1 to 4 →

SEA—Rough High

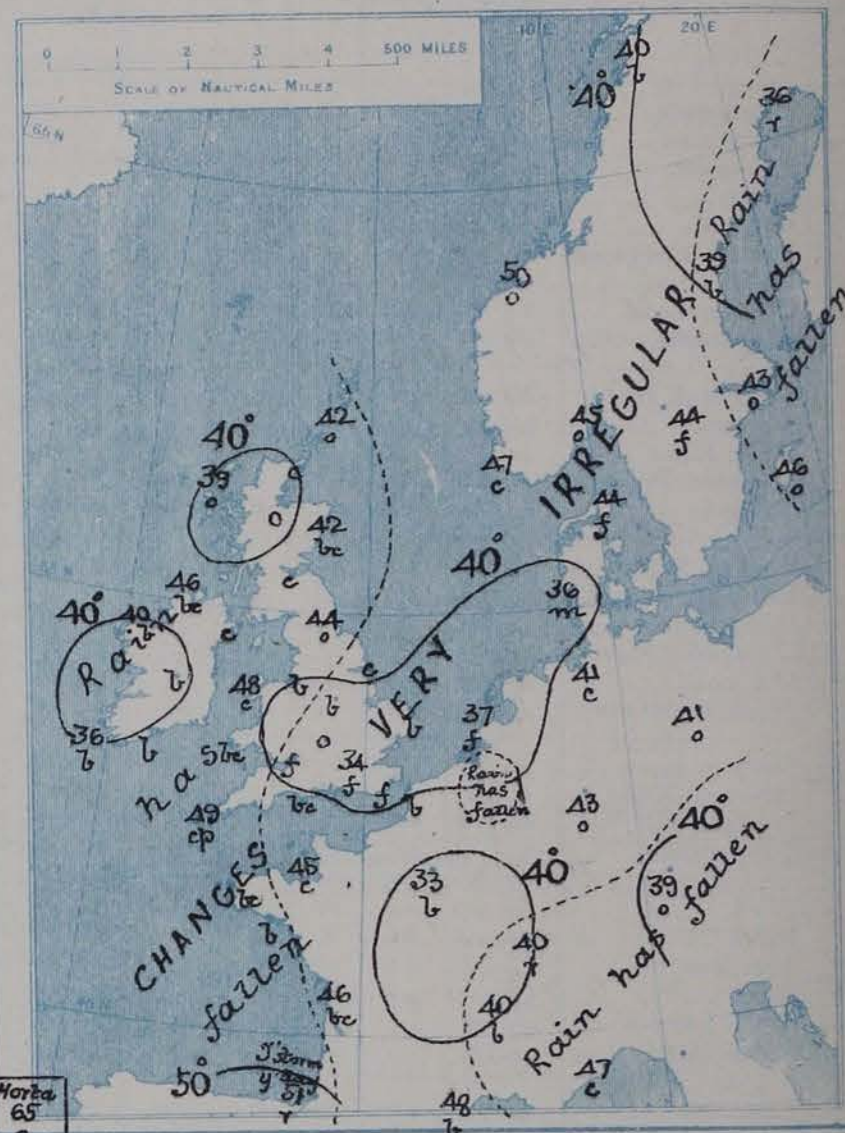

II. TEMPERATURE AND WEATHER. This Morning.

TEMPERATURE—Isotherms are drawn for each 10°.

WEATHER—Shown by Letters of the Beaufort Scale. (See P. 4.)

RAINFALL—A dotted line separates areas where rain has fallen from those without rain. The fall in past 24 hours when exceeding half an inch is shown thus - 0.6

III. BAROMETER AND WIND

Yesterday morning.

IV. LAST WEEK'S RAINFALL.

Amount recorded in various districts of the United Kingdom during the week ended Sat. 4th Nov. with the percentage of the average amount for the corresponding week.

V. Means of DAILY TEMPERATURE

at 8 A.M. for the monthly period NOVEMBER. (1871-1900.)

GENERAL SITUATION AT 8 A.M.

PRESSURE

A brisk rise of the barometer has taken place during the night throughout the greater part of our area, and the low pressure system shown yesterday morning off the north of Scotland has to a great extent dispersed. The lowest readings reported this morning are above 29.6 ins. in the north of Norway. Readings are above 30.0 ins. over the southeast of Sweden and over the west of France and Ireland, while at Biarritz the barometer stands at 30.11 ins. A very shallow low pressure system is shown over western Germany.

WIND

TEMPERATURE

WEATHER

AND

SEA

Wind is everywhere moderate or light in force; it is N.^s to W.^s in direction over our Islands and France and over the eastern portion of our area it is S.^s to S.E.^s. The weather has become more settled and it is now fine at the majority of stations both at home and abroad. Rain is falling at Biarritz, the station which reports the highest pressure received this morning, at Belfort, which is on the southern side of the German low pressure system, and at Haparanda. Fog prevails at all stations in the southeast of England and also at Brussels, the Helder and a few Scandinavian stations. The differences between today's temperature readings and those of yesterday are due mainly to radiation effects, and thus the changes have been very irregular. The British readings range from 49° at Scilly to 32° at Bladon-on-Sea. Mild weather still prevails over Scandinavia, France and Germany. The sea is slight or smooth generally.

During the previous 24 hours rather heavy rain was experienced in the north of Ireland and Scotland; over the greater part of the country the weather was fair and rainfall was confined to a few showers. The amounts of bright sunshine vary up to 8 hours at Scilly. Temperature rose as high as 57° during the course of the day at Jersey; the lowest minimum reading is 26° at Bath.

PROBABLE CHANGES IN SYSTEM NOW PREVALENT

There are no indications of the approach of disturbing influences and no important modifications are therefore to be expected in the present conditions. Light N.^s to W.^s breezes and fair, cool weather are likely to continue. Fog is probable locally.

FORECASTS*

For the 24 hours ending at NOON on 9th November, 1905.

DISTRICTS.

FORECASTS.

0	SCOTLAND NORTH	} Light N.E. ^s to N.W. ^s winds; fair generally; rather cool.
1	SCOTLAND EAST	
2	ENGLAND N.E.	} Light W. ^s to N.W. ^s breezes; fair or fine generally, rather cool, mist or fog locally.
3	ENGLAND EAST	
4	MIDLAND COUNTIES	
5	ENGLAND SOUTH	

DISTRICTS.

FORECASTS.

6	SCOTLAND WEST	} Same as nos. 0 & 1.
7	ENGLAND N.W.	
8	ENGLAND S.W.	} Moderate or light N. ^s to N.W. ^s winds; fair or fine generally, rather cool, mist or fog locally.
9	IRELAND NORTH	
10	IRELAND SOUTH	
	WARNINGS	
		NONE ISSUED.

Note. The South Cone, point downwards (⌋), means that gales, or strong winds, are probable at first from the Southward (from S.E. round by S. to N.W.). Should it appear likely that a gale beginning from between W. and N.W. is likely to veer towards N. or N.E., the North Cone is hoisted in preference to the South Cone.
The North Cone, point upwards (⌋), means that gales, or strong winds, are probable, at first from the Northward (from N.W. round by N. to S.E.). Should it appear likely that a gale beginning from between E. and S.E. is likely to veer towards S. or S.W., the South Cone is hoisted in preference to the North Cone.

SUBSCRIPTIONS both for the Daily and Weekly Weather Reports may be paid, in advance, to the Meteorological Office.

TERMS: For Daily Weather Report, forwarded by Book Post, £1 0 0 per annum.
" Weekly " " " " " £1 10 0 " Single Copies, 6d.

Single Copies of the Daily Weather Report (price 1d.) may be obtained after 3 p.m. on the day of issue at the Meteorological Office, and at Messrs. W. H. SMITH & Sons' Bookstalls at the following terminus Railway Stations:—Victoria, Charing Cross, King's Cross, St. Pancras, Euston.

FORECASTS OF WEATHER for one day in advance are drawn up at the Meteorological Office at 11 a.m., and between 7 and 8 p.m. The latest forecast can be had by Reply Telegram, on paying at any Post Office in the United Kingdom Sixpence in addition to the cost of the inquiry and reply Telegram. Information as to the Terms on which Forecasts can be sent, daily, for a long or short period, may be obtained on application to the Meteorological Office, 63, Victoria Street, S.W., either personally or by post.

* At Oxford the observations are taken at 8 p.m.

DAILY WEATHER REPORT

for 8 a.m. on *Thursday 9th November 1905.*

Issued by the METEOROLOGICAL OFFICE, 63, Victoria Street, London. W. H. SHAW, Director.

NOTE: The Sunshine for London given in this Table is recorded on the Tower of the Wesleyan Training College, Westminster; the Sunshine entered to Dungeness is recorded at Littlestone-on-Sea.

* Observations for this column not generally received.

+ Observations received too late for insertion in Charts on next page.

WEATHER CHARTS

FOR

Thursday, 9th November,

1905.

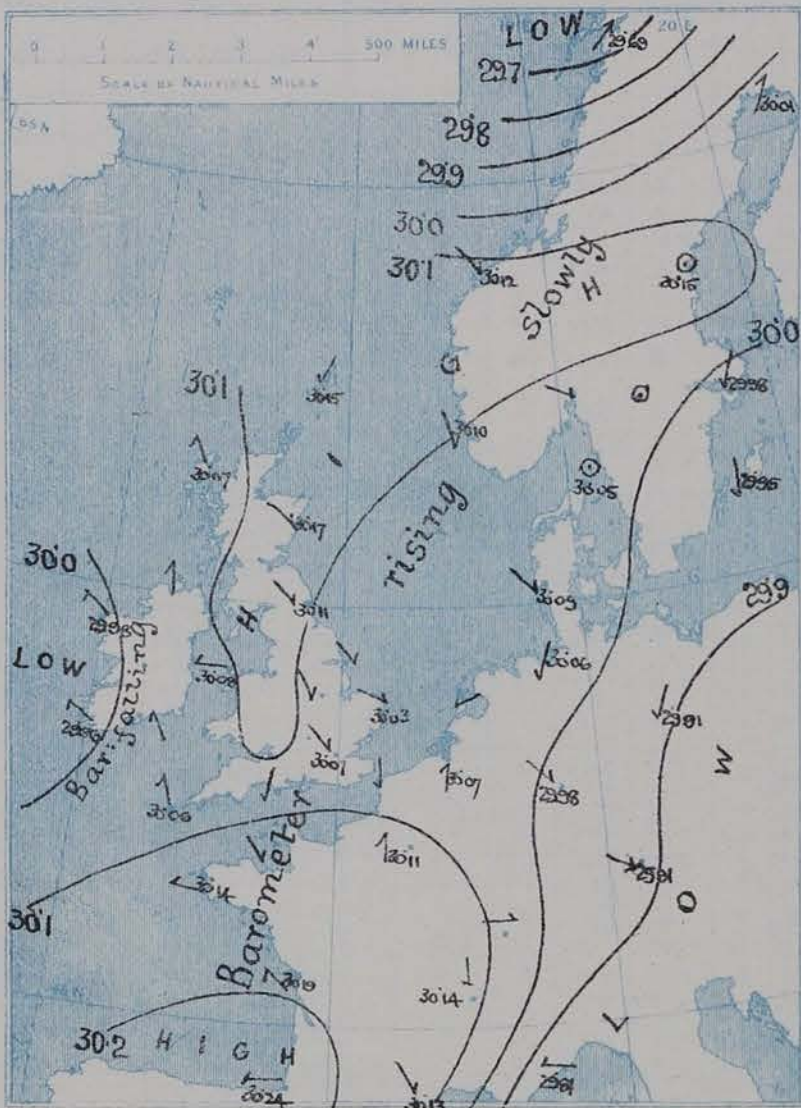

I. BAROMETER, WIND AND SEA. This Morning.

BAROMETER—Isobars are drawn for each tenth of an inch.

WIND—Arrows show Directions and Force, flying with the wind.

Force above 10 → : Force 5 to 7 → : } Calm ⊙
Force 8 to 10 → : Force 1 to 4 → :

SEA—Rough High

II. TEMPERATURE AND WEATHER. This Morning.

TEMPERATURE—Isotherms are drawn for each 10°

WEATHER—Shown by Letters of the Beaufort Scale. (See P. 4.)

RAINFALL—without rain. The fall in past 24 hours when exceeding half an inch is shown thus -0.6

III. BAROMETER AND WIND

Yesterday morning.

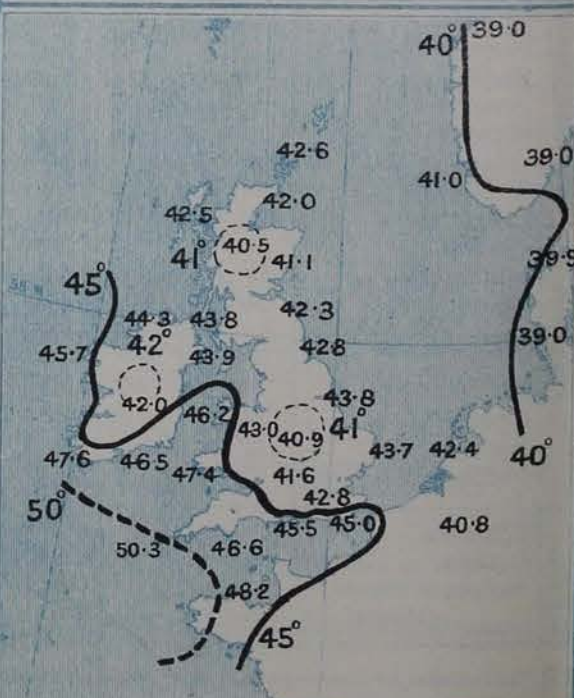

IV. LAST WEEK'S SUNSHINE.

Amount recorded in various districts of the United Kingdom during the week ended Sat^y 4th NOV: with the percentage of the average duration for the corresponding week.

V. Means of DAILY TEMPERATURE

at 8 A.M. for the monthly period NOVEMBER. (1871-1900)

GENERAL SITUATION AT 8 A.M.

PRESSURE

A rather irregular anticyclonic ridge extends across our Islands and joins an area covering Scotland and Central Scandinavia in which readings are above 30.1 ins. to a high pressure system shown over the west of France and the Iberian Peninsula. The barometer is again falling in the west of Ireland. The shallow low pressure system shown yesterday over Germany has passed to the extreme east of our area and pressure is now very uniform over Germany and Southern Scandinavia. A rather steep gradient is still shown over the north of the latter country.

WIND

TEMPERATURE

WEATHER

AND

SEA

Balms or light breezes prevail over the greater part of our area. The preponderating direction is N.W.^s in the east of our Islands and over Germany, and S.^s to S.E.^s over our western districts and in France. At Valencia and Blacksod Point the wind has freshened somewhat. The weather continues fair throughout the greater part of our area. In the north of our Islands the sky is cloudless at many stations and a considerable fall of temperature has consequently taken place there during the night, but there is little fog. In the south, much cloud prevails, and the nocturnal fall of temperature has in consequence been checked and there is also but little fog; Bath, Yarmouth and Leith are the only British stations which report this phenomenon this morning. The fall of the barometer in the west has caused rain to set in at Valencia. Rain is also falling at Munich and Bodö. The fall of temperature in the north and the relatively warm night minima over England have already been referred to; the freshening S.^s breeze in the west of Ireland has caused a decided rise of temperature in those parts. The British readings today range from 28° to 49° at Valencia and Roche's Point. On the Continent changes have been rather irregular; over Central Scandinavia a rather decided fall has occurred. The sea is smooth generally, moderate off the west of Ireland.

During yesterday showers were experienced at several of our stations; the largest rainfall reported is 0.29 inch. at Spurn Head. Over 7 hours of bright sunshine were recorded at Eastbourne and Hastings and also at Scilly, but at many stations the sky remained overcast throughout.

PROBABLE CHANGES IN SYSTEM NOW PREVALENT

The fall of the barometer which is taking place in the extreme west is likely to spread slowly eastward and to cause freshening winds and less settled weather throughout our western districts, but it is as yet doubtful whether it will affect the eastern portion of the British Isles.

FORECASTS*

For the 24 hours ending at NOON on 10th November, 1905.

DISTRICTS.

FORECASTS.

0	SCOTLAND NORTH	Light variable to freshening S. ^s winds; fair, less settled tomorrow
1	SCOTLAND EAST	
2	ENGLAND N.E.	Light Variable or N.W. ^s breezes;
3	ENGLAND EAST	
4	MIDLAND COUNTIES	fair generally, but cloudy or misty in places.
5	ENGLAND SOUTH	

DISTRICTS.

FORECASTS.

6	SCOTLAND WEST	Light variable breezes, freshening later from S. or S.E.; fair or fine
7	ENGLAND N.W.	
8	ENGLAND S.W.	To-day, but less settled later.
9	IRELAND NORTH	
10	IRELAND SOUTH	Moderate or fresh S. ^s to S.E. ^s winds; becoming cloudy or dull with some rain.

WARNINGS

NONE ISSUED.

Note. The South Cone, point downwards (⌣), means that gales, or strong winds, are probable, at first from the Southward (from S.E. round by S. to N.W.). Should it appear likely that a gale beginning from between W. and N.W. is likely to veer towards N. or N.E. the North Cone is hoisted in preference to the South Cone.

The North Cone, point upwards (⌢), means that gales, or strong winds, are probable, at first from the Northward (from N.W. round by N. to S.E.). Should it appear likely that a gale beginning from between E. and S.E. is likely to veer towards S. or S.W., the South Cone is hoisted in preference to the North Cone.

* For terms for transmission of Forecasts by Telegraph, see next page.

SUBSCRIPTIONS both for the Daily and Weekly Weather Reports may be paid, in advance, to the Meteorological Office.

TERMS: For Daily Weather Report, forwarded by Book Post, £1 0 0 per annum.
" Weekly " " " £1 10 0 " Single Copies, 6d.

Single Copies of the Daily Weather Report (price 1d.) may be obtained after 3 p.m. on the day of issue at the Meteorological Office, and at Messrs. W. H. SMITH & SONS' Bookstalls at the following terminus Railway Stations:—Victoria, Charing Cross, King's Cross, St. Pancras, Euston.

FORECASTS OF WEATHER for one day in advance are drawn up at the Meteorological Office at 11 a.m., and between 7 and 8 p.m. The latest forecast can be had by Reply Telegram, on paying at any Post Office in the United Kingdom Sixpence in addition to the cost of the inquiry and reply Telegram. Information as to the Terms on which Forecasts can be sent; daily, for a long or short period, may be obtained on application to the Meteorological Office, 63, Victoria Street, S.W., either personally or by post.

* At Oxford the observations are taken at 8 p.m.

DAILY WEATHER REPORT

for 8 a.m. on

Friday 10th November

1905.

NOTE: The Sunshine for London given in this Table is recorded on the Tower of the Wesleyan Training College, Westminster. The Sunshine entered in Dungeness is recorded at Littlestone-on-Sea.

* Observations for this column not generally received.

+ Observations received too late for insertion in Charts on next page.

WEATHER CHARTS

FOR *Friday, 10th November, 1905.*

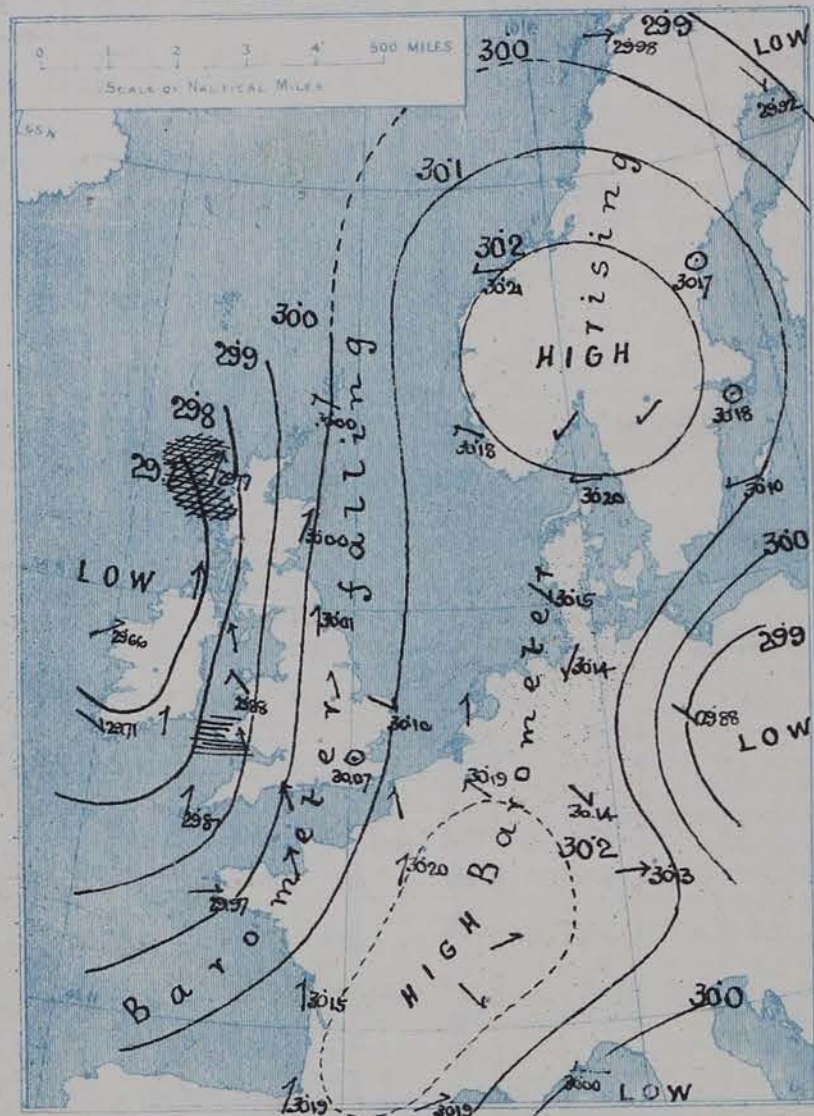

I. BAROMETER, WIND AND SEA. *This Morning.*

BAROMETER.—Isobars are drawn for each tenth of an inch.

WIND.—Arrows show Directions and Force, flying with the wind.

Force above 10 → Force 5 to 7 → } Calm ☉
Force 8 to 10 → Force 1 to 4 →

SEA.—Rough High

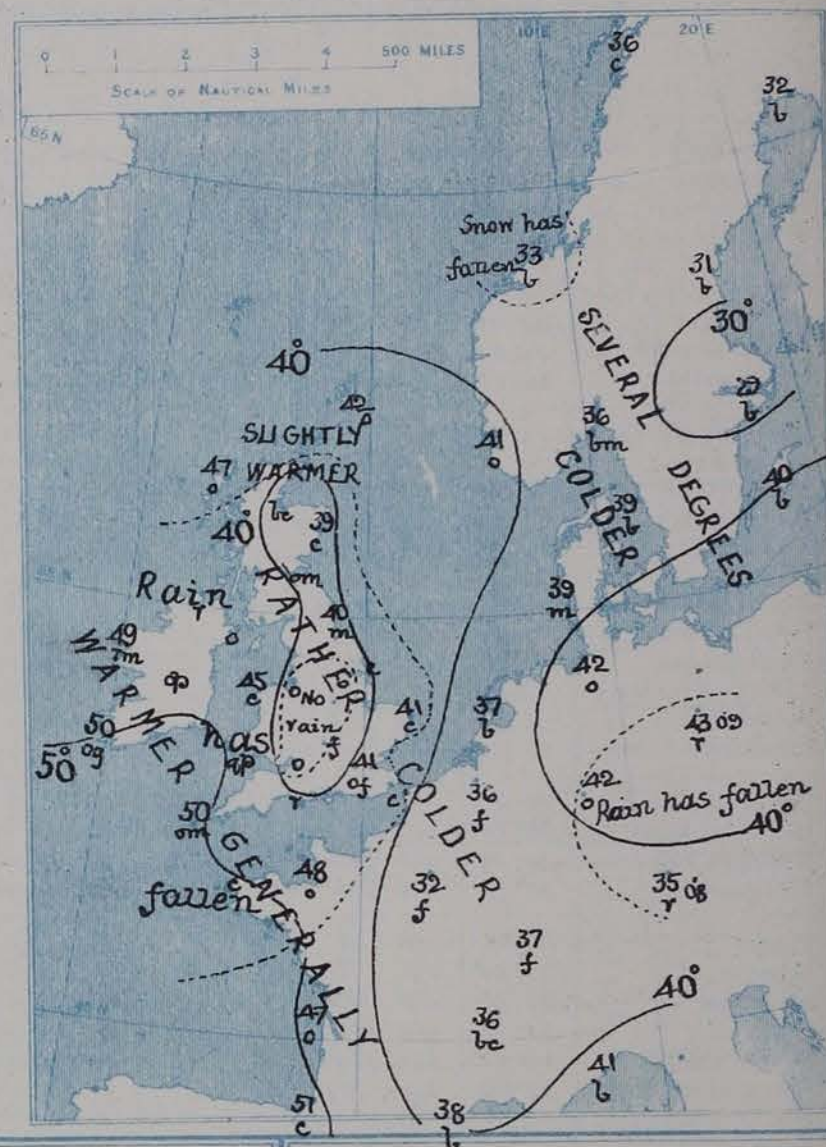

II. TEMPERATURE AND WEATHER. *This Morning.*

TEMPERATURE.—Isotherms are drawn for each 10°.

WEATHER.—Shown by Letters of the Beaufort Scale (See P. 4.)

RAINFALL.—A dotted line separates areas where rain has fallen from those without rain. The fall in past 24 hours when exceeding half an inch is shown thus - 0.6

III. BAROMETER AND WIND

Yesterday morning.

IV. RAINFALL IN 1905.

Total Amount recorded
in various districts of the United Kingdom
in the 44 weeks ended Saturday 4th NOV.
with the percentage of the average amount
for the corresponding period.

V. Means of DAILY TEMPERATURE at 8 A.M. for the monthly period NOVEMBER. (1871-1900.)

GENERAL SITUATION AT 8 A.M.

PRESSURE

The anticyclonic ridge which yesterday covered the British Isles now lies over Denmark, and forms the connecting link between two regions of high pressure situated over Central Scandinavia and France respectively. The British Isles have come entirely under the influence of the low pressure system in the west which appears to be V-shaped in character. The low pressure over Eastern Germany has increased slightly in intensity and there is still a rather steep gradient for W. winds over the north of Scandinavia.

WIND

The wind has become S. over the British Isles; in the east it is still moderate or light in force, but at our western stations it is blowing strongly. In the extreme west of Ireland it has veered to the W. and become very light in force. Light variable breezes prevail in the region covered by the anticyclonic ridge mentioned above, and still further to the eastward we find light NE. to N.W. breezes. The weather over the British Isles and the west of France is generally cloudy or dull and fog is reported from several of our eastern stations. Rain is falling at Portland Bill and in the northwest of Ireland. The advance of the warm wind from the sea has given rise to very mild conditions in the southwest; readings there are above 50° at several stations. Further east the temperature continues rather low; fog is reported from several of the French stations. Over Germany conditions are very unsettled and rain is falling at Berlin and Munich. The sea is moderate to rough on our western coasts, slight or smooth in the North Sea and the eastern part of the English Channel.

TEMPERATURE

WEATHER

AND

SEA

During the previous 24 hours rain fell at all Irish stations, but in Great Britain the falls were more local in character. The largest total reported is 0.25 inch. at Blacksod Point. Heavy rain fell in Germany. Very little bright sunshine was experienced in the east and south of England, but totals of about 7 hours are reported from Wales and the northwest of England.

PROBABLE CHANGES IN SYSTEM NOW PREVALENT

The low pressure system in the west is likely to spread Eastward and cause freshening S. winds and unsettled weather throughout the east of our Islands. In the west it is probable that the wind will veer toward W. and decrease in force.

FORECASTS*

For the 24 hours ending at NOON on 11th November, 1905.

DISTRICTS.

FORECASTS.

0	SCOTLAND NORTH	{ Fresh or strong S. winds; dull, some rain; mild.
1	SCOTLAND EAST	
2	ENGLAND N.E.	{ Freshening S. winds; dull, some rain; becoming milder.
3	ENGLAND EAST	
4	MIDLAND COUNTIES	
5	ENGLAND SOUTH	

DISTRICTS.

FORECASTS.

6	SCOTLAND WEST	{ Fresh or strong S. winds; veering later; dull, mild, some rain, then improving.
7	ENGLAND N.W.	
8	ENGLAND S.W.	{ Strong S. winds, veering towards W.; dull, some rain, then changeable.
9	IRELAND NORTH	
10	IRELAND SOUTH	
WARNINGS		NONE ISSUED.

* The South Cone, point downwards (⌋), means that gales, or strong winds, are probable at first from the Southward (from S.E. round by S. to N.W.). Should it appear likely that a gale beginning from between W. and N.W. is likely to veer towards N. or N.E., the North Cone is hoisted in preference to the South Cone.
The North Cone, point upwards (⌋), means that gales, or strong winds, are probable at first from the Northward (from N.W. round by N. to S.E.). Should it appear likely that a gale beginning from between E. and S.E. is likely to veer towards S. or S.W., the South Cone is hoisted in preference to the North Cone.

SUBSCRIPTIONS both for the Daily and Weekly Weather Reports may be paid, in advance, to the Meteorological Office.

TERMS: For Daily Weather Report, forwarded by Book Post, £1 0 0 per annum.

" Weekly " " " " £1 10 0 " Single Copies, 6d.

Single Copies of the Daily Weather Report (price 1d.) may be obtained after 3 p.m. on the day of issue at the Meteorological Office, and at Messrs. W. H. SMITH & SONS' Bookstalls at the following terminus Railway Stations:—Victoria, Charing Cross, King's Cross, St. Pancras, Euston.

FORECASTS OF WEATHER for one day in advance are drawn up at the Meteorological Office at 11 a.m., and between 7 and 8 p.m. The latest forecast can be had by Reply Telegram, on paying at any Post Office in the United Kingdom Sixpence in addition to the cost of the inquiry and reply Telegram. Information as to the Terms on which Forecasts can be sent, daily, for a long or short period, may be obtained on application to the Meteorological Office, 63, Victoria Street, S.W., either personally or by post.

* At Oxford the observations are taken at 8 p.m.

DAILY WEATHER REPORT

for 8 a.m. on Saturday, 11th November 1905.

Issued by the METEOROLOGICAL OFFICE, 63, Victoria Street, London. W. N. SHAW, Director.

NOTE: The Sunshine for London given in this Table is recorded on the Tower of the Wesleyan Training College, Westminster; the Sunshine entered to Dungeness is recorded at Littlestone-on-Sea.

* Observations for this column not generally received.

+ Observations received too late for insertion in Charts on next page.

WEATHER CHARTS

FOR SATURDAY, 11th NOVEMBER, 1905.

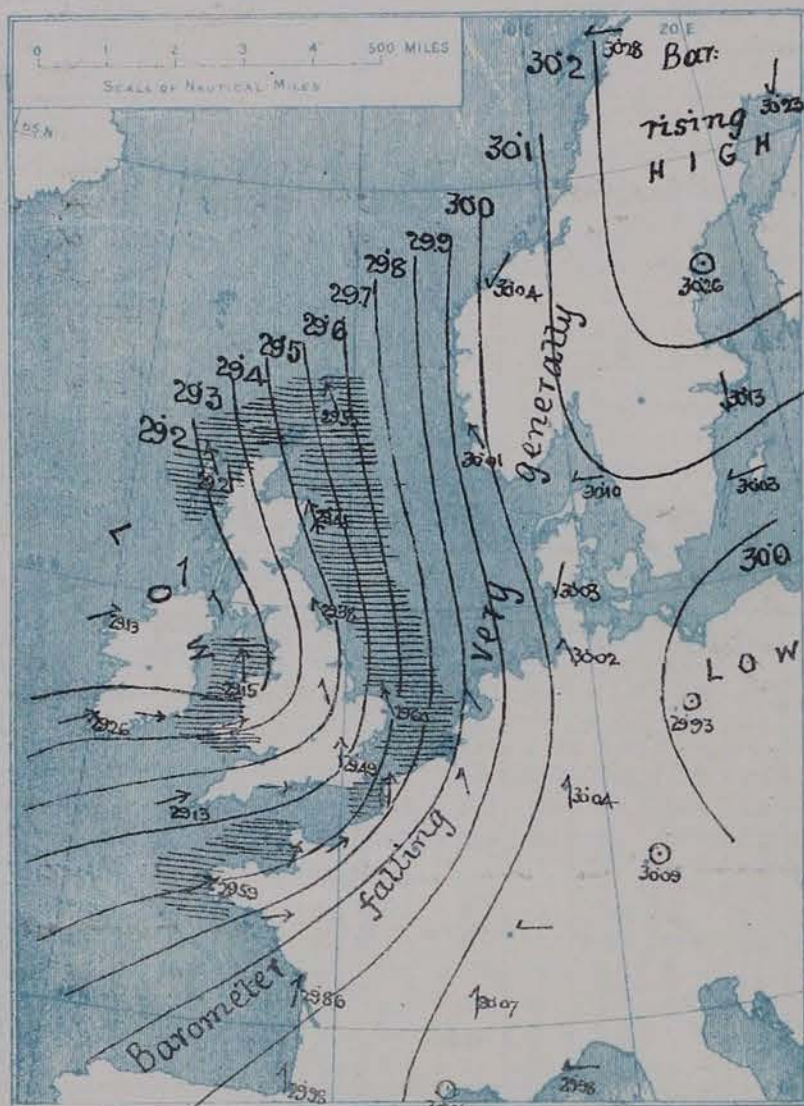

I. BAROMETER, WIND AND SEA. This Morning.

BAROMETER.—Isobars are drawn for each tenth of an inch.

WIND.—Arrows show Directions and Force. Flying with the wind.

Force above 10 → : Force 5 to 7 → : } Calm ☉
Force 8 to 10 → : Force 1 to 4 → :

SEA.—Rough High

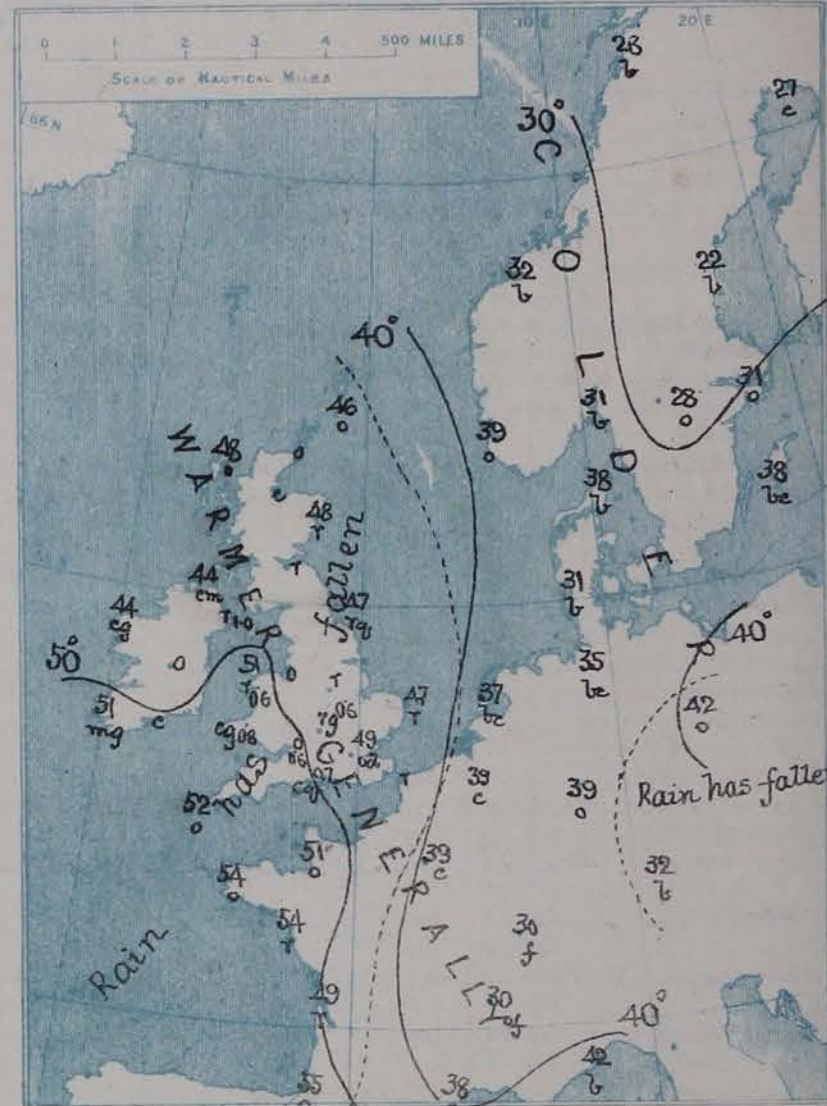

II. TEMPERATURE AND WEATHER. This Morning.

TEMPERATURE.—Isotherms are drawn for each 10°

WEATHER.—Shown by Letters of the Beaufort Scale. (See P. 4.)

RAINFALL.—A dotted line separates areas where rain has fallen from those without rain. The fall in past 24 hours when exceeding half an inch is shown thus: 0.6

III. BAROMETER AND WIND

Yesterday morning.

IV. BRIGHT SUNSHINE IN 1905.

Total Duration recorded in various districts of the United Kingdom in the 44 weeks ended Saturday, Nov. 4th with the percentage of the average duration for the corresponding period.

V. Means of DAILY TEMPERATURE

at 8 A.M. for the monthly period

NOVEMBER. (1871-1900)

GENERAL SITUATION AT 8 A.M.

PRESSURE

The British Isles and the adjoining parts of the Continent are covered by a large V-shaped disturbance of which the trough lies diagonally across the country along a line extending from the northwest of Ireland to the Straits of Dover. The barometer has risen briskly in the northeast of Scandinavia where a high pressure system is apparently developing. An anticyclonic ridge extending southward from this region of high barometric readings separates the low pressure system over the British Isles from a region of low pressure shown over Germany.

WIND

TEMPERATURE

WEATHER

AND

SEA

The gradient is steep in both arms of the "V" and the wind is accordingly strong; it is blowing a gale at Aberdeen. In direction it is SE.^s on the northeastern side of the line of trough, and W.^s on its southwestern side. Light variable breezes are reported from the eastern portion of our area. The distribution of weather about the trough of the "V" is also very marked. Steady rain is falling at almost all stations in the region of SE.^s winds northeast of the trough, but on the southwestern side of the line steady rainfall has given place to an overcast sky and occasional showers. Temperature is very mild in both the SE.^s and S.W.^s wind currents, the latter being slightly the warmer of the two. Readings range from 47° or 48° on the east coast of Great Britain to 52° at Sully and 54° at Brest and Lorient. The weather is fine in the region covered by the high pressure system in the northeast and by the anticyclonic ridge which extends from it, though fog prevails at several stations in central France. Temperature in this region has fallen considerably; many Scandinavian readings are but slightly above 20° and several of the readings in the east of France are below the freezing point. The sea is rough very generally.

During the previous 24 hours the advance of the depression caused rain throughout the British Isles and at most stations in the southwest of England the total fall exceeded half an inch. The totals of bright sunshine reported are small; in no case was 3 hours exceeded.

PROBABLE CHANGES IN SYSTEM NOW PREVALENT

The W.^s wind which at present prevails in our western districts will probably spread further E.^{wt} and as it does so the steady rain over our eastern districts will cease. Conditions are, however, likely to remain very unsettled. The present unusually mild weather will probably continue.

FORECASTS*

For the 24 hours ending at NOON on 12th November, 1905.

DISTRICTS.

FORECASTS.

- 0 { SCOTLAND NORTH
- 1 { SCOTLAND EAST
- 2 { ENGLAND N.E.
- 3 { ENGLAND EAST
- 4 { MIDLAND COUNTIES
- 5 { ENGLAND SOUTH

Strong S.E.^s winds, becoming W.^s and moderating very gradually; rainy at first, then dull and showery; very mild.

DISTRICTS.

FORECASTS.

- 6 { SCOTLAND WEST
- 7 { ENGLAND N.W.
- 8 { ENGLAND SW
- 9 { IRELAND NORTH
- 10 { IRELAND SOUTH

Wind becoming W.^s, strong to fresh; dull and showery; very mild. Strong or fresh W.^s winds; dull and showery, clearing gradually; mild.

WARNINGS

NONE ISSUED.

* The South Cone, point downwards (⌵), means that gales, or strong winds, are probable, at first from the Southward (from S.E. round by S to N.W.). Should it appear likely that a gale beginning from between W. and N.W. is likely to veer towards N. or N.E., the North Cone is hoisted in preference to the South Cone.

The North Cone, point upwards (⌴), means that gales, or strong winds, are probable, at first from the Northward (from N.W. round by N to S.E.). Should it appear likely that a gale beginning from between E. and S.E. is likely to veer towards S. or S.W., the South Cone is hoisted in preference to the North Cone.

* For terms for transmission of Forecasts by Telegraph, see next page.

SUBSCRIPTIONS both for the Daily and Weekly Weather Reports may be paid, in advance, to the Meteorological Office.

TERMS: For Daily Weather Report, forwarded by Book Post, £1 0 0 per annum.
" Weekly " " " " £1 10 0 " Single Copies, 6d.

Single Copies of the Daily Weather Report (price 1d.) may be obtained after 3 p.m. on the day of issue at the Meteorological Office, and at Messrs. W. H. SMITH & SONS' Bookstalls at the following terminus Railway Stations:—Victoria, Charing Cross, King's Cross, St. Pancras, Euston.

FORECASTS OF WEATHER for one day in advance are drawn up at the Meteorological Office at 11 a.m., and between 7 and 8 p.m. The latest forecast can be had by Reply Telegram, on paying at any Post Office in the United Kingdom Sixpence in addition to the cost of the inquiry and reply Telegram. Information as to the Terms on which Forecasts can be sent, daily, for a long or short period, may be obtained on application to the Meteorological Office, 63, Victoria Street, S.W., either personally or by post.

* At Oxford the observations are taken at 8 p.m.

DAILY WEATHER REPORT

for 8 a.m. on Sunday, 12TH NOVEMBER, 1905.

Issued by the METEOROLOGICAL OFFICE, 63, Victoria Street, London. W. N. SHAW, Director.

NOTE: The Sunshine for London given in this Table is recorded on the Tower of the Wesleyan Training College, Westminster; the Sunshine entered to Dungeness is recorded at Littlestone-on-Sea.

* Observations for this column not generally received.

+ Observations received too late for insertion in *Chronicle* on next page.

WEATHER CHARTS

FOR Sunday, 12th November, 1905.

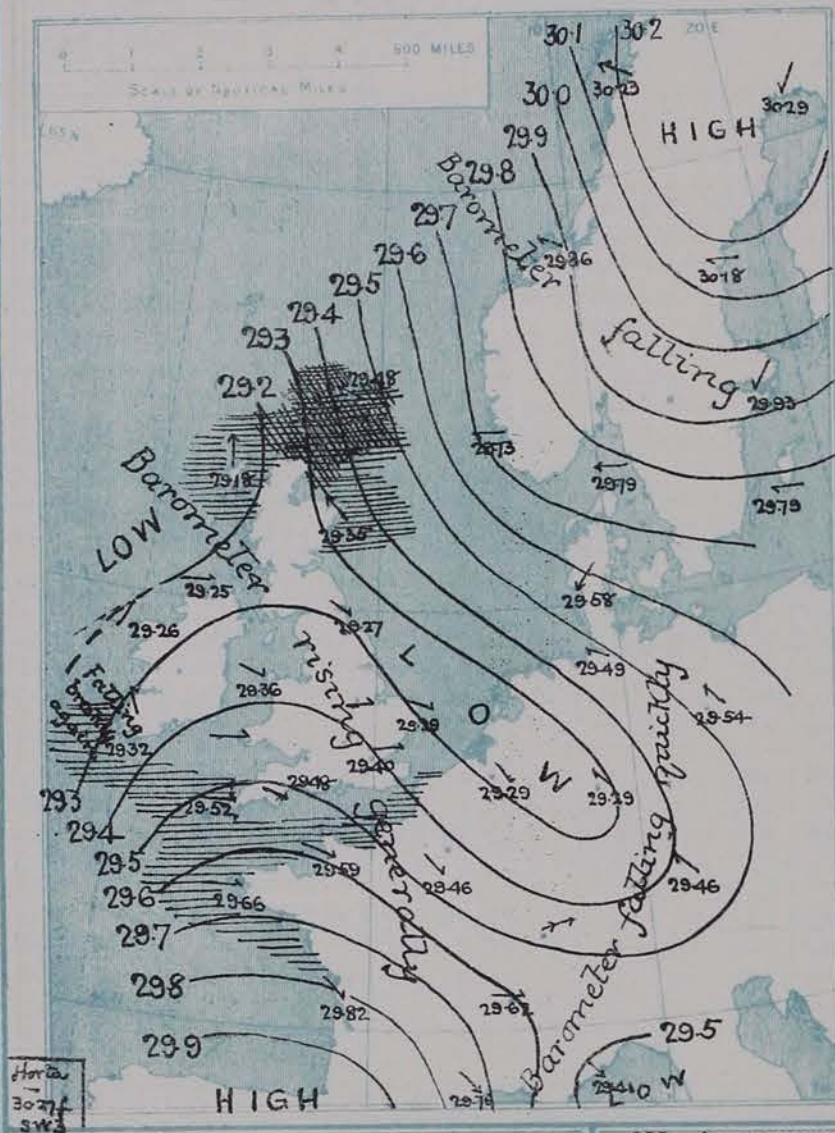

I. BAROMETER, WIND AND SEA. This Morning.

BAROMETER.—Isobars are drawn for each tenth of an inch.

WIND.—Arrows show Direction and Force, flying with the wind.

Force above 10 ——— Force 5 to 7 ——— } Calm ☉
Force 8 to 10 ——— Force 1 to 4 ———

SEA.—Rough High

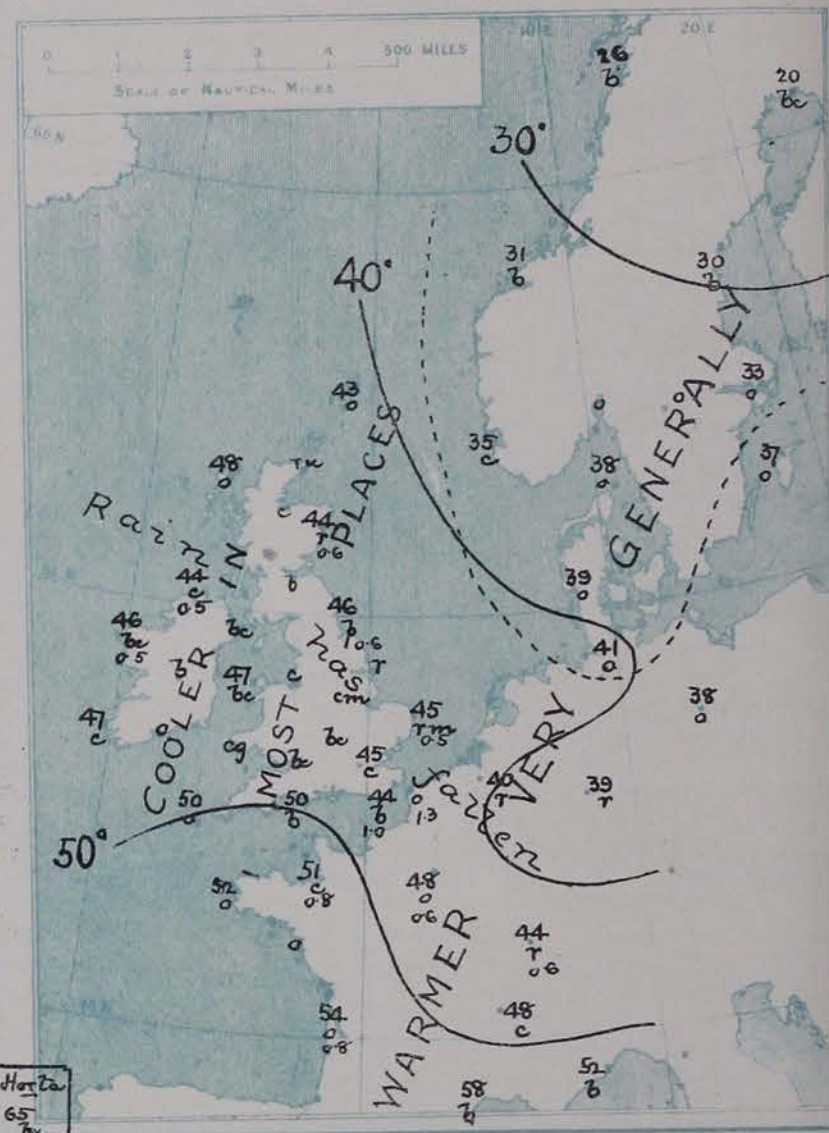

II. TEMPERATURE AND WEATHER. This Morning

TEMPERATURE.—Isotherms are drawn for each 10°.

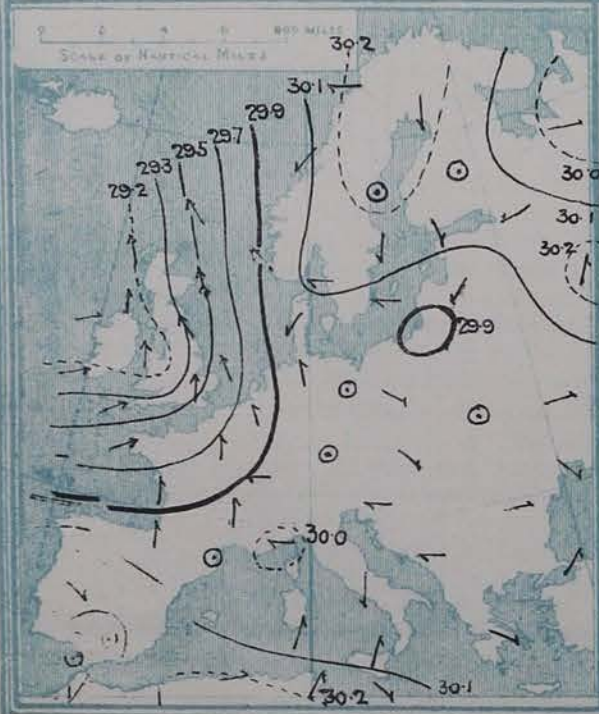

WEATHER.—Shown by Letters of the Beaufort Scale. (See P. 4.)

RAINFALL.—A dotted line separates areas where rain has fallen from those without rain. The fall in past 24 hours when exceeding half an inch is shown thus - 0.6

III. BAROMETER AND WIND

Yesterday morning.

IV. ACCUMULATED TEMPERATURE ABOVE 42°.

Amount recorded in various districts of the United Kingdom during the 44 weeks ended November 4th, with the percentage of the average for the corresponding period.

Accumulated values are expressed in Day-Degrees—a "Day Degree" signifying 1° continued for 24 hours, or any other number of degrees for an inversely proportional number of hours.

V. Means of DAILY TEMPERATURE at 8 A.M. for the monthly period

NOVEMBER. (1871-1900)

GENERAL SITUATION AT 8 A.M.

PRESSURE

An area of high pressure, in which the barometer is above 30.2 ins., covers Northern Scandinavia, and another, of equal intensity, lies over the Spanish Peninsula. The two systems are separated by a long and very narrow tongue of low pressure, barometer slightly below 29.3 ins., extending from Scotland down the east of England and on to Bavaria. The recent disturbance is passing away beyond the Hebrides, but a new and very rapid decline of the mercury has set in at Valencia. The gradients are moderately steep over nearly the whole region under observation.

WIND

TEMPERATURE

WEATHER

AND

SEA

Balms and light variable breezes prevail in Ireland; NW. to W. winds over England and France; S. to E. in Scotland, Norway, Denmark and Germany; and NE. in Sweden. The force is mostly light or moderate but a moderate gale is blowing in the northeast of Scotland, and a fresh gale in the south of France. Temperature has fallen over the British Isles, changed irregularly over Scandinavia, and risen over the western portion of the Continent. The present readings range from 38° at Birr Castle and 43° at Sumburgh Head, Roches Point, Nottingham and Oxford to 50° at Scilly and Portland Bill and 51° at Jersey; from 20° at Haparanda and 26° at Bodö to 54° at Rochefort and 58° at Perpignan. The weather is very variable, fine in some localities, but generally it is dull and unsettled, with rain at some of the northeastern and Continental stations. A tremendously high sea is running off Wick, a very high sea off the Shetlands, rough or rather rough on some other sections of our own and the French coasts.

Temperature rose yesterday to 50° and upwards at the majority of stations, to 55° at Jersey and 56° at Bath. Rain has fallen generally, heavily in many places, 0.8 in. at Jersey and Rochefort, 1 inch at Dungeness and 1.3 inch at Cape Gris Nez. Bright sunshine was almost entirely absent, Llandudno reports 1.1 hour, Blackpool, Southport, Manchester, and Valencia about half an hour, all other stations none at all.

PROBABLE CHANGES IN SYSTEM NOW PREVALENT

- 8 ENGLAND S.W.
- 9 IRELAND NORTH
- 10 IRELAND SOUTH

WARNINGS

NONE ISSUED

At 9.40 am to Districts 7 to 10, "Hoist South Cone."

* The South Cone, point downwards (T), means that gales, or strong winds, are probable at first from the Southward (from S.E. round by S. to N.W.). Should it appear likely that a gale beginning from between W and N.W. is likely to veer towards N or N.E., the North Cone is hoisted in preference to the South Cone.
The North Cone, point upwards (T), means that gales, or strong winds, are probable, at first from the Northward (from N.W. round by N. to S.E.). Should it appear likely that a gale beginning from between E and S.E. is likely to veer towards S. or S.W., the South Cone is hoisted in preference to the North Cone.

* For terms for transmission of Forecasts by Telegraph, see next page

SUBSCRIPTIONS both for the Daily and Weekly Weather Reports may be paid, in advance, to the Meteorological Office.

TERMS: For Daily Weather Report, forwarded by Book Post, £1 0 0 per annum.
" Weekly " " " £1 10 0 " Single Copies, 6d.

Single Copies of the Daily Weather Report (price 1d.) may be obtained after 3 p.m. on the day of issue at the Meteorological Office, and at Messrs. W. H. SMITH & SONS' Bookstalls at the following terminus Railway Stations:—Victoria, Charing Cross, King's Cross, St. Pancras, Euston.

FORECASTS OF WEATHER for one day in advance are drawn up at the Meteorological Office at 11 a.m., and between 7 and 8 p.m. The latest forecast can be had by Reply Telegram, on paying at any Post Office in the United Kingdom Sixpence in addition to the cost of the inquiry and reply Telegram. Information as to the Terms on which Forecasts can be sent, daily, for a long or short period, may be obtained on application to the Meteorological Office, 63, Victoria Street, S.W., either personally or by post.

* At Oxford the observations are taken at 8 p.m.

DAILY WEATHER REPORT

for 8 a.m. on Monday, 13th November 1905.

Issued by the METEOROLOGICAL OFFICE, 63, Victoria Street, London. W. N. SHAW, Director.

NOTE: The Sunshine for London given in this Table is recorded on the Tower of the Wesleyan Training College, Westminster; the Sunshine entered to Dungeness is recorded at Littlestone-on-Sea.

* Observations for this column not generally received.

+ Observations received too late for insertion in *Changes* on next page.

WEATHER CHARTS

FOR Monday, 13th November, 1905.

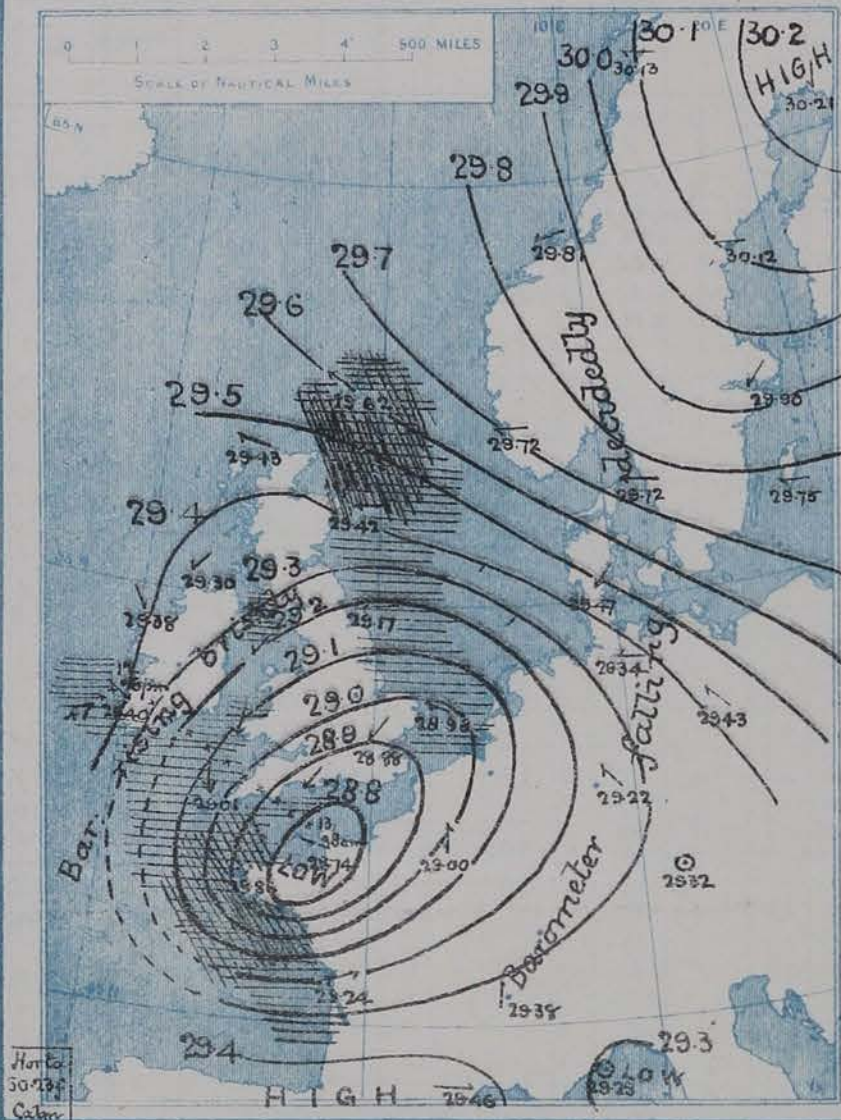

I. BAROMETER, WIND AND SEA. This Morning.

BAROMETER—Isobars are drawn for each tenth of an inch.

WIND—Arrows show Directions and Force, flying with the wind.

Force above 10 → Force 5 to 7 → } Calm ☉
Force 8 to 10 → Force 1 to 4 → }

SEA—Rough High

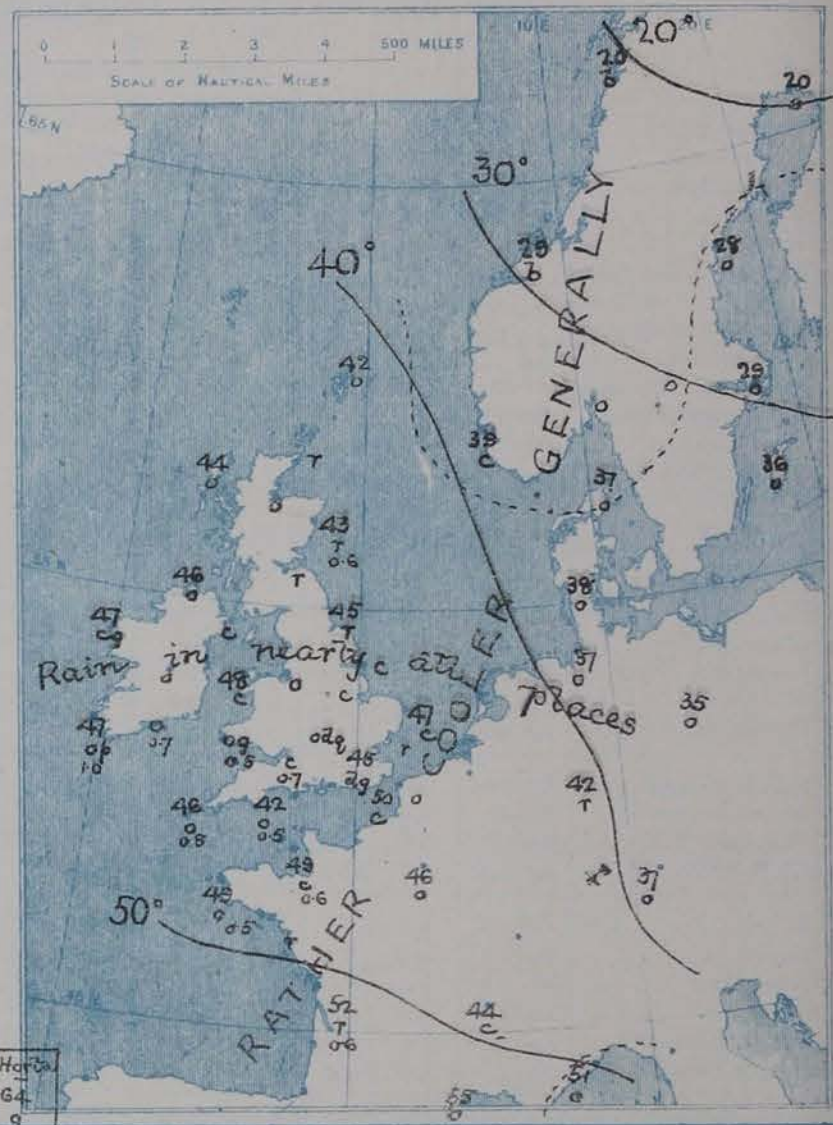

II. TEMPERATURE AND WEATHER. This Morning.

TEMPERATURE—Isotherms are drawn for each 10°.

WEATHER—Shown by Letters of the Beaufort Scale. (See P. 4.)

RAINFALL—A dotted line separates areas where rain has fallen from those without rain. The fall in past 24 hours when exceeding half an inch is shown thus - 0.6

III. BAROMETER AND WIND

Yesterday morning.

IV. ACCUMULATED TEMPERATURE ABOVE 42°.

Amount recorded in various districts of the United Kingdom during the week ended Saturday, Nov. 4th with the percentage of the average for the corresponding week.

Accumulated values are expressed in Day-Degrees—a "Day Degree" signifying 1° continued for 24 hours, or any other number of degrees for an inversely proportional number of hours.

V. Means of DAILY TEMPERATURE

at 8 A.M. for the monthly period

NOVEMBER. (1871-1900)

GENERAL SITUATION AT 8 A.M.

PRESSURE

The deep cyclonic disturbance, the centre of which had reached the southwest of Ireland last evening from the southwestward, has since moved in an east-southeasterly direction, its centre now lying near Cherbourg, where the barometer stands at about 28.7 ins. Pressure is highest over Scandinavia and Finland, the reading at Haparanda being 30.21 ins. A separate minimum, with readings below 29.3 ins., is found over the Gulf of Genoa. The baric gradient is rather steep over the United Kingdom and the North Sea and unusually steep over the Bay of Biscay and the west of France.

WIND

The cyclonic circulation of the wind is very distinctly marked. The Easterly current on the east coast of Great Britain and the Northwesterly current over Ireland and Wales both blow with the force of a moderate gale in several localities, while the Westerly wind on the west coast of France has attained the force of a strong gale. The Southeasterly winds reported from Germany have little force.

TEMPERATURE

Temperature has fallen a little in most regions, but has remained stationary or risen slightly at the Irish stations. Over the United Kingdom it differs very little from the normal for the time of year, ranging from 50° at Dungeness, 48° at Spurn Head, and 47° or 46° on the extreme west and southwest coasts to 43° at Bath and to 40° at Nairn. The Continental values range from a little above 50° in the south and southwest of France to below 40° in Denmark and most parts of Germany to less than 30° over the greater part of Scandinavia and to 20° at Bodö and Haparanda.

WEATHER

The sky is clear along the northwest coast of Norway, but in all other parts of our area it is very cloudy or entirely overcast with steady rain or passing showers in most British and Irish districts and in the west of France as well as at Frankfurt. The sea is exceedingly high off the northeast of Scotland and over the Bay of Biscay, rough or rather so round our coasts generally.

AND

SEA

During yesterday the temperature rose to 50° or a little higher in most English and Irish localities, to nearly 60° on the west coast of France, and to 66° at Perpignan. In the north of Scandinavia sharp frost continued throughout the day. Rain has again fallen over the United Kingdom, the largest amounts measured at 8 a.m. being 0.8 in. at Scilly and 0.95 in. at Valencia Island; at several other stations the fall amounted to about half an inch.

PROBABLE CHANGES IN SYSTEM NOW PREVALENT

The depression in the south is likely to move slowly across France, while the winds over our Islands decrease gradually in force. Rather cold and unsettled weather appears probable over the United Kingdom during the ensuing 24 hours.

FORECASTS*

For the 24 hours ending at NOON on 14TH NOVEMBER, 1905.

DISTRICTS.

FORECASTS.

- 0 SCOTLAND NORTH
- 1 SCOTLAND EAST
- 2 ENGLAND N.E.
- 3 ENGLAND EAST
- 4 MIDLAND COUNTIES
- 5 ENGLAND SOUTH

E^{ly} winds, very strong to moderate; dull generally, rain at times; rather cold.

NE^{ly} to N^{ly} winds, fresh or strong to moderate; squally, rain at times; cold.

DISTRICTS.

FORECASTS.

- 6 SCOTLAND WEST
- 7 ENGLAND N.W.
- 8 ENGLAND S.W.
- 9 IRELAND NORTH
- 10 IRELAND SOUTH

Same as No. 0.

N^w winds, moderating gradually; cold, squally, showery, some fair intervals.

WARNINGS

At 7.15 pm. yesterday to Districts 0, 1, 2, 3, 5 and 6, "HOIST SOUTH CONE". The signals are now flying on all coasts.

Note.—The South Cone, point downwards (☐), means that gales, or strong winds, are probable, at first from the Southward (from S.E. round by S. to N.W.). Should it appear likely that a gale beginning from between W. and N.W. is likely to veer towards N. or N.E., the North Cone is hoisted in preference to the South Cone.
The North Cone, point upwards (☐), means that gales, or strong winds, are probable, at first from the Northward (from N.W. round by N. to S.E.). Should it appear likely that a gale beginning from between E. and S.E. is likely to veer towards S. or S.W., the South Cone is hoisted in preference to the North Cone.

SUBSCRIPTIONS both for the Daily and Weekly Weather Reports may be paid, in advance, to the Meteorological Office.

TERMS: For Daily Weather Report, forwarded by Book Post, £1 0 0 per annum.
" Weekly " " " £1 10 0 " Single Copies, 6d.

Single Copies of the Daily Weather Report (price 1d.) may be obtained after 3 p.m. on the day of issue at the Meteorological Office, and at Messrs. W. H. SMITH & SONS' Bookstalls at the following terminus Railway Stations:—Victoria, Charing Cross, King's Cross, St. Pancras, Euston.

FORECASTS OF WEATHER for one day in advance are drawn up at the Meteorological Office at 11 a.m., and between 7 and 8 p.m. The latest forecast can be had by Reply Telegram, on paying at any Post Office in the United Kingdom Sixpence in addition to the cost of the inquiry and reply Telegram. Information as to the Terms on which Forecasts can be sent, daily, for a long or short period, may be obtained on application to the Meteorological Office, 63, Victoria Street, S.W., either personally or by post.

* At Oxford the observations are taken at 8 p.m.

DAILY WEATHER REPORT

for 8 a.m. on Tuesday, 14th November 1905.

Issued by the METEOROLOGICAL OFFICE, 63, Victoria Street, London. W. N. SHAW, Director.

NOTE: The Sunshine for London given in this Table is recorded on the Tower of the Wesleyan Training College, Westminster; the Sunshine entered to Dungeness is recorded at Littlestone-on-Sea.

* Observations for this column not generally received.

+ Observations received too late for insertion in Charts on next page.

WEATHER CHARTS

FOR TUESDAY, 14TH NOVEMBER, 1905.

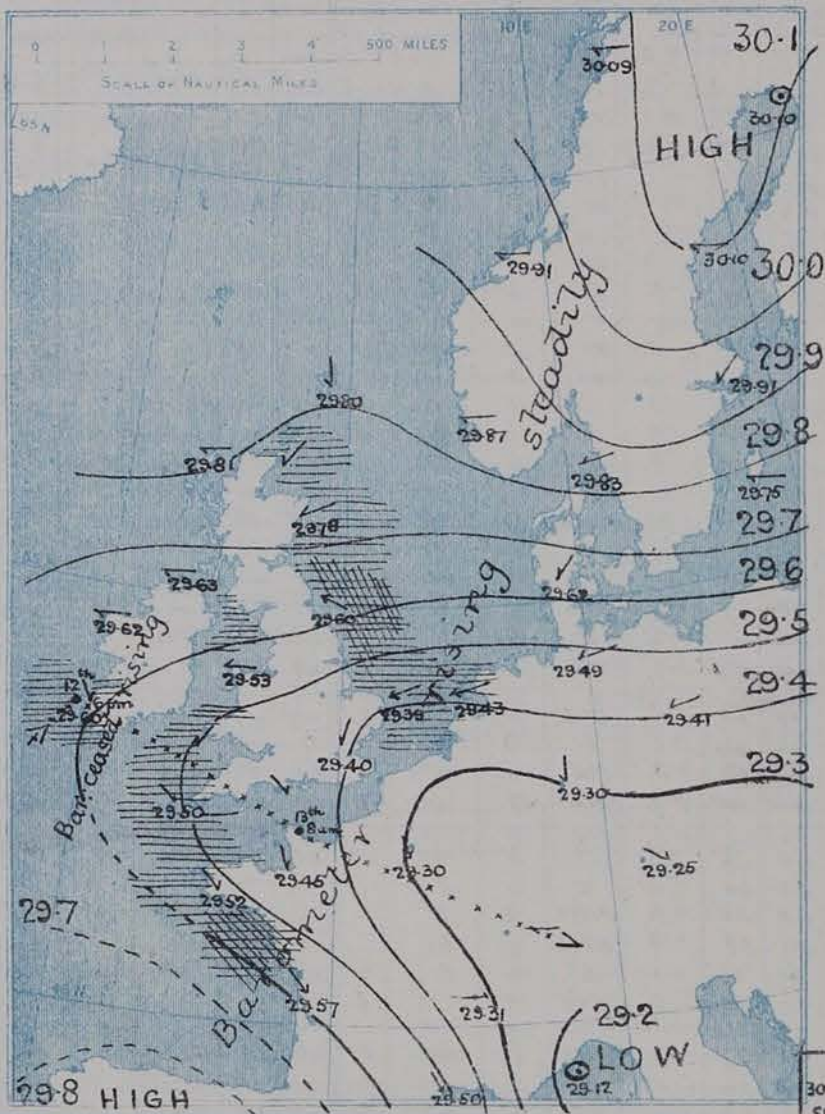

I. BAROMETER, WIND AND SEA. This Morning.

BAROMETER.—Isobars are drawn for each tenth of an inch.

WIND.—Arrows show Directions and Force, flying with the wind.

Force above 10 → Force 5 to 7 → } Calm ☉
Force 8 to 10 → Force 1 to 4 →

SEA.—Rough High

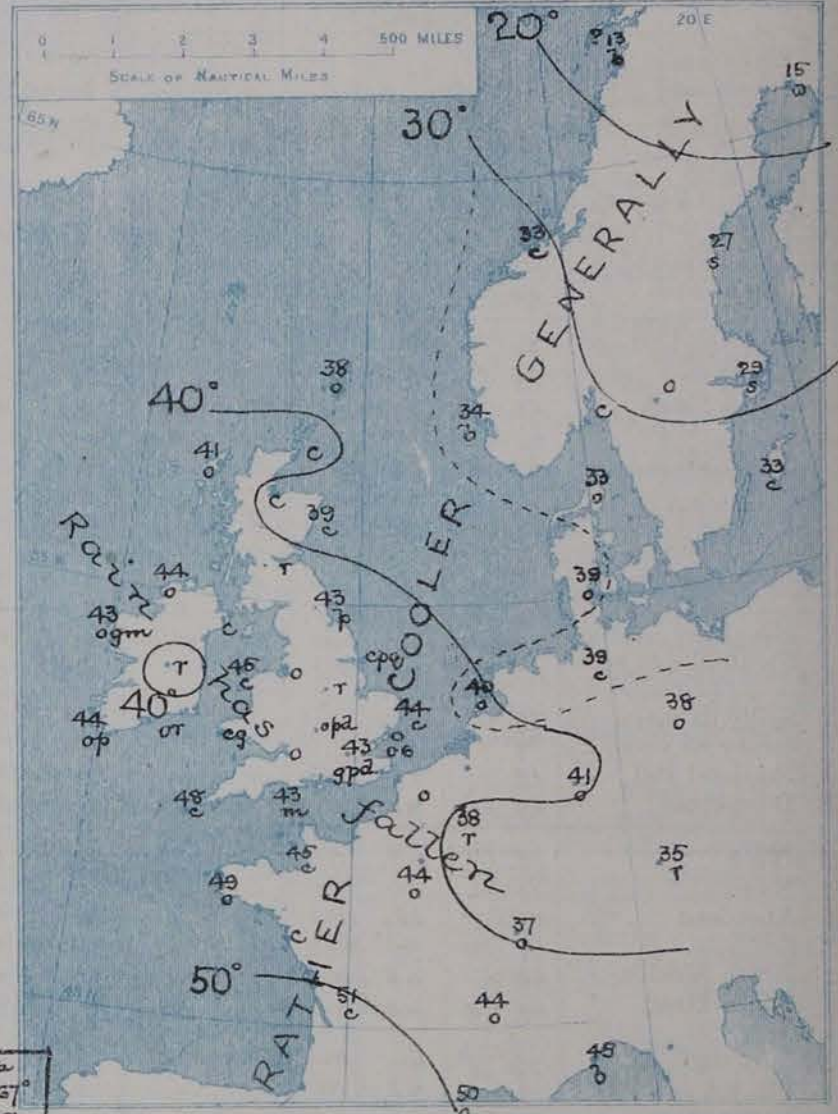

II. TEMPERATURE AND WEATHER. This Morning.

TEMPERATURE.—Isotherms are drawn for each 10°.

WEATHER.—Shown by Letters of the Beaufort Scale. (See P. 4.)

RAINFALL.—A dotted line separates areas where rain has fallen from those without rain. The fall in past 24 hours when exceeding half an inch is shown thus - 0.6

III. BAROMETER AND WIND

Yesterday morning.

IV. EXTREMES OF TEMPERATURE

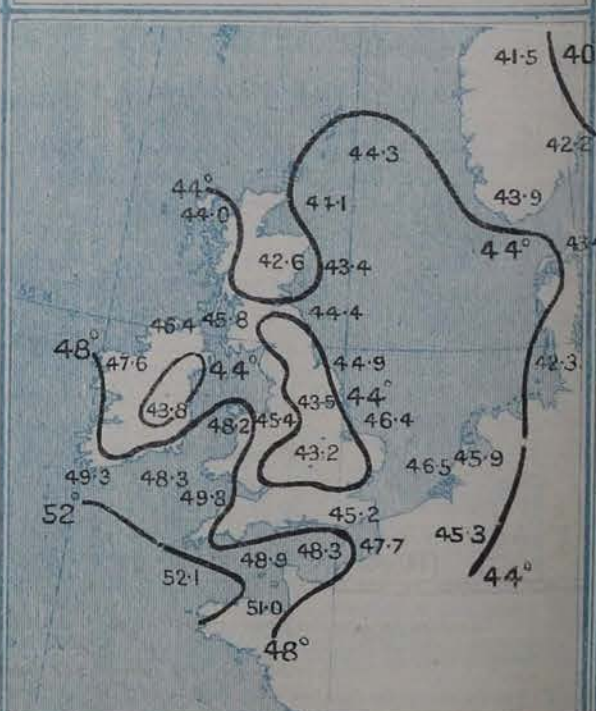

recorded

in various districts of the United Kingdom during the week ended Saturday, 11th Nov.

V. Means of DAILY TEMPERATURE

at 8 A.M. for the Two monthly period OCTOBER-NOVEMBER. (1871-1900)

GENERAL SITUATION AT 8 A.M.

PRESSURE

The deep depression which lay over the north of France yesterday morning has travelled to Central Europe and at the same time decreased in intensity. The barometer now ranges from about 29.12 ins. in a depression over the Gulf of Genoa, and 29.3 ins. or less over South Germany and the east of France to 29.81 ins. at Stornoway and to 30.1 ins. in the north of Sweden and Norway. Pressure is increasing in most parts of our area, but the changes in progress over this country are slight and rather irregular.

WIND

TEMPERATURE

WEATHER

AND

SEA

The gales of yesterday have subsided, but the Easterly and Northeasterly current still blows freshly or strongly over the south of Norway, Denmark, the Netherlands, and on the east coasts of England and Ireland, while that from the Northwestward continues strong along the west coasts of France. In the south of Corsica a strong Westerly gale is reported.

Temperature has fallen a few degrees in almost all regions. Over the United Kingdom it ranges from 48° at Scilly and 44° or 45° at a few stations on the coast to 38° at Birr Castle and to 31° at Raim. Severe frost prevails over the north of Scandinavia, the thermometer standing at 15° or a little below it. The highest readings are 56° at Perpignan and 51° at Rochefort.

Overcast or very cloudy skies are reported very generally; snow is falling at Hernösand and Stockholm, and steady rain or passing showers in most parts of the United Kingdom, as well as at Brussels and Munich. The sea is high at Shields and Lorient, rough along the east coast of Great Britain generally, and also on some parts of our west and southwest coasts.

The maximum temperatures recorded over our Islands yesterday were below 50° in most places, and no higher than 45° at some Scotch stations. Rain has fallen over the United Kingdom, France and Germany, the largest measurements being 0.55 in. at Blackton-on-sea and 0.4 in. at Aberdeen and Pembroke. Lunar halos were observed during the night on our extreme northwest coasts. Scarcely any bright sunshine was recorded yesterday, but at Abergwyth there were 5 hrs. and at Pembroke 2 hrs.

PROBABLE CHANGES IN SYSTEM NOW PREVALENT

The depression of yesterday will soon cease to exercise any direct influence on the weather over these Islands, but the changes in pressure appear to indicate the formation of local irregularities in different parts of the Kingdom, and these are likely to cause a continuance of unsettled weather, with occasional showers.

FORECASTS*

For the 24 hours ending at NOON on 15TH NOVEMBER, 1905.

DISTRICTS.

FORECASTS.

- 0 { SCOTLAND NORTH
- 1 { SCOTLAND EAST
- 2 { ENGLAND N.E.
- 3 { ENGLAND EAST
- 4 { MIDLAND COUNTIES
- 5 { ENGLAND SOUTH

Wind mainly E^{ly}, moderate; cloudy or dull generally, some showers, local frosts inland at night.

E^{ly} and NE^{ly} winds, moderating; cloudy or dull, some showers; rather cold.

Light or moderate winds, chiefly N^{ly}; dull generally, some showers; rather cold; frost locally at night.

DISTRICTS.

FORECASTS.

- 6 { SCOTLAND WEST
- 7 { ENGLAND N.W.
- 8 { ENGLAND S.W.
- 9 { IRELAND NORTH
- 10 { IRELAND SOUTH

Same as Nos. 0 to 2.

Light or moderate winds, chiefly N^{ly}; cloudy or overcast, some showers; rather cold.

NE^{ly} and N^{ly} winds, moderate or light; dull, showery; rather cold.

WARNINGS

At 9.30 am. today to Districts 0, 1, 2, 3, 5 and 6, "LOWER CONE". The signals are now down on all coasts.

* The South Cone, point downwards (⌣), means that gales, or strong winds, are probable at first from the Southward (from S.E. round by S. to N.W.). Should it appear likely that a gale beginning from between W. and N.W. is likely to veer towards N. or N.E., the North Cone is hoisted in preference to the South Cone.
The North Cone, point upwards (⌢), means that gales, or strong winds, are probable at first from the Northward (from N.W. round by N. to S.E.). Should it appear likely that a gale beginning from between E. and S.E. is likely to veer towards S. or S.W., the South Cone is hoisted in preference to the North Cone.

* For terms for transmission of Forecasts by Telegraph, see next page.

SUBSCRIPTIONS both for the Daily and Weekly Weather Reports may be paid, in advance, to the Meteorological Office.

TERMS: For Daily Weather Report, forwarded by Book Post, £1 0 0 per annum.
" Weekly " " " £1 10 0 " Single Copies, 6d.

Single Copies of the Daily Weather Report (price 1d.) may be obtained after 3 p.m. on the day of issue at the Meteorological Office, and at Messrs. W. H. SMITH & SONS' Bookstalls at the following terminus Railway Stations:—Victoria, Charing Cross, King's Cross, St. Pancras, Euston.

FORECASTS OF WEATHER for one day in advance are drawn up at the Meteorological Office at 11 a.m., and between 7 and 8 p.m. The latest forecast can be had by Reply Telegram, on paying at any Post Office in the United Kingdom Sixpence in addition to the cost of the inquiry and reply Telegram. Information as to the Terms on which Forecasts can be sent, daily, for a long or short period, may be obtained on application to the Meteorological Office, 63, Victoria Street, S.W., either personally or by post.

DAILY WEATHER REPORT

for 8 a.m. on Wednesday, 15th November 1905.

Issued by the METEOROLOGICAL OFFICE, 63, Victoria Street, London. W. N. SHAW, Director.

NO- Sunshine for London given in this Table is recorded on the Tower of the Wesleyan Training College, Westminster; the Sunshine entered to Dungeness is recorded at Littlestone-on-Sea.

* Observations for this column not generally received.

+ Observations received too late for insertion in Charts on next page.

WEATHER CHARTS

FOR WEDNESDAY, 15TH NOVEMBER, 1905.

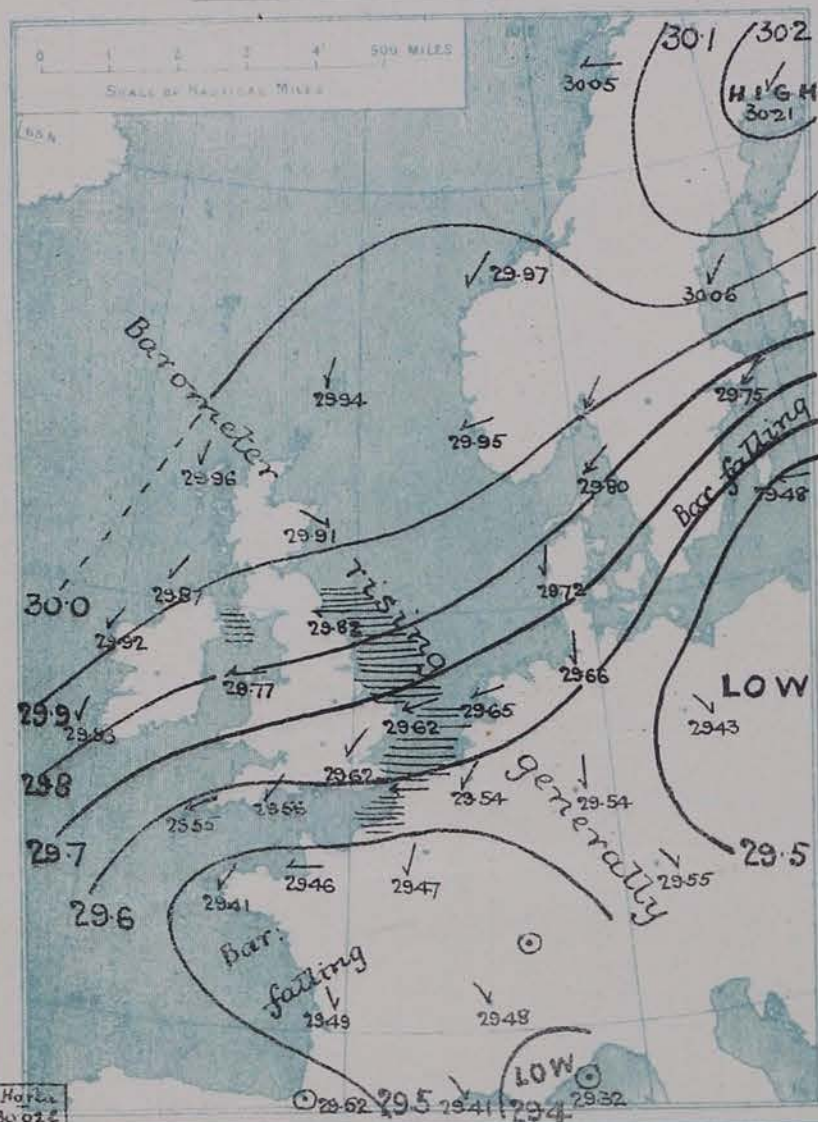

I. BAROMETER, WIND AND SEA, *This Morning.*

BAROMETER—Isobars are drawn for each tenth of an inch.

WIND—Arrows show Directions and Force, flying with the wind.

Force above 10 → Force 5 to 7 → } Calm ☉
Force 8 to 10 → Force 1 to 4 →

SEA—Rough High

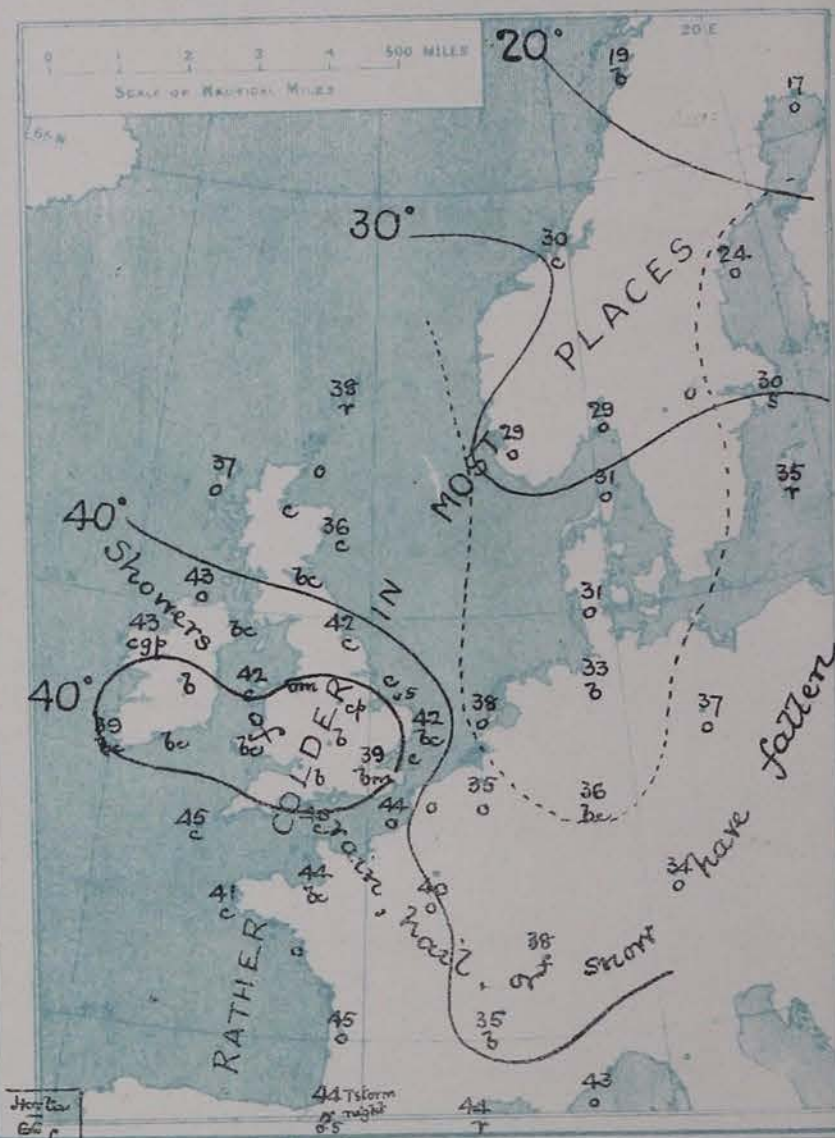

II. TEMPERATURE AND WEATHER, *This Morning.*

TEMPERATURE—Isotherms are drawn for each 10°

WEATHER—Shown by Letters of the Beaufort Scale. (See P. 4.)

RAINFALL—A dotted line separates areas where rain has fallen from those without rain. The fall in past 24 hours when exceeding half an inch is shown thus: 0.6

III. BAROMETER AND WIND

Yesterday morning.

IV. LAST WEEK'S RAINFALL.

Amount recorded in various districts of the United Kingdom during the week ended Saturday, 12TH Nov., with the percentage of the average amount for the corresponding week.

V. Means of DAILY TEMPERATURE at 8 A.M. for the monthly period NOVEMBER. (1871-1900)

GENERAL SITUATION AT 8 A.M.

PRESSURE

Since yesterday morning the barometer has risen in nearly all parts of our area but fallen over the Spanish Peninsula and the west of France and also over the Baltic and the greater part of Sweden. It now ranges from 30.2 ins. and upwards over Lapland to 29.9 ins. and less in a small shallow depression over Caithness and its vicinity, and to below 29.5 ins. over the Baltic and Eastern Germany as well as over France and the Bay of Biscay. The lowest reading is 29.32 ins. at Nice. Gradients are rather steep over the south of Sweden, moderate or slight generally.

WIND

TEMPERATURE

WEATHER

AND

SEA

Northeasterly or Easterly winds prevail throughout Northwestern Europe; in most places they have little force, but blow freshly or strongly on our east and southeast coasts and with the force of a gale at Stockholm. Over Germany the wind draws into North or Northwest, while over the south of France it is light and variable. Temperature has fallen very generally and is now rather low for the time of year. Over the United Kingdom most of the readings are below 40°, the lowest being 33° at Ayr and Larne and 36° at Oxford. The Continental values range from 45° at Rochefort to 34° at Munich, and to below 32° at nearly all the Scandinavian stations. At Bodø and Kaperanda the thermometer is below 20°. A considerable improvement has taken place in the weather over our Islands, but showers are still reported from the northwest of Ireland and the centre of England and steady rain from the Shetlands. In most Continental localities the sky is still overcast, with rain in the south of France and at Wisby, and snow at Stockholm. The sea is rough or rather rough on our east and southeast coasts, moderate to smooth elsewhere.

The highest temperature reported over this country yesterday was 51° at Jersey, at many stations the maxima were below 45°. Slight frost occurred at some places inland. Further falls of rain were experienced, the largest amount being 0.5 in. at Spurn Head and Biarritz. At the latter station a thunderstorm was reported. Over these Islands as a whole there was no bright sunshine, but Pembroke recorded 3.5 hrs., and Lelly 5.2 hrs.

PROBABLE CHANGES IN SYSTEM NOW PREVALENT

The changes in progress point to a steady increase of pressure over Northwestern Europe, but do not indicate any material modification in the general distribution. Northeasterly and Easterly winds, with a low temperature, and mainly fair weather are anticipated.

FORECASTS*

For the 24 hours ending at NOON on 16th NOVEMBER, 1905.

DISTRICTS.

FORECASTS.

0	SCOTLAND NORTH	Moderate or light winds between N. and E.; some local showers, then fair; frost at night.
1	SCOTLAND EAST	
2	ENGLAND N.E.	Same as No. 5.
3	ENGLAND EAST	
4	MIDLAND COUNTIES	NE ² winds, light or moderate; fair generally; cold, frost at night.
5	ENGLAND SOUTH	NE ² or E ² winds, fresh or strong in places, fair as a whole; cold, frost locally at night.

DISTRICTS.

FORECASTS.

6	SCOTLAND WEST	Same as No. 4.
7	ENGLAND N.W.	
8	ENGLAND S.W.	Same as No. 5.
9	IRELAND NORTH	
10	IRELAND SOUTH	Same as No. 4.

WARNINGS

NONE ISSUED.

* The South Cone, point downwards (⌣), means that gales, or strong winds, are probable, at first from the Southward (from S.E. round by S. to N.W.). Should it appear likely that a gale beginning from between W. and N.W. is likely to veer towards N. or N.E., the North Cone is hoisted in preference to the South Cone.
The North Cone, point upwards (⌢), means that gales, or strong winds, are probable, at first from the Northward (from N.W. round by N. to S.E.). Should it appear likely that a gale beginning from between E. and S.E. is likely to veer towards S. or S.W., the South Cone is hoisted in preference to the North Cone.

* For terms for transmission of Forecasts by Telegraph, see next page.

Valencia ...	8.3	12.26	4.49

SUBSCRIPTIONS both for the Daily and Weekly Weather Reports may be paid, in advance, to the Meteorological Office.

TERMS: For Daily Weather Report, forwarded by Book Post, £1 0 0 per annum.
" Weekly " " " £1 10 0 " Single Copies, 6d.

Single Copies of the Daily Weather Report (price 1d.) may be obtained after 3 p.m. on the day of issue at the Meteorological Office and at Messrs. W. H. SMITH & SONS' Bookstalls at the following terminus Railway Stations:—Victoria, Charing Cross, King's Cross, St. Pancras, Euston.

FORECASTS OF WEATHER for one day in advance are drawn up at the Meteorological Office at 11 a.m., and between 7 and 8 p.m. The latest forecast can be had by Reply Telegram, on paying at any Post Office in the United Kingdom Sixpence in addition to the cost of the inquiry and reply Telegram. Information as to the Terms on which Forecasts can be sent, daily, for a long or short period, may be obtained on application to the Meteorological Office, 63, Victoria Street, S.W., either personally or by post.

* At Oxford the observations are taken at 8 p.m.

DAILY WEATHER REPORT

for 8 a.m. on Thursday, 16th November 1905.

Issued by the METEOROLOGICAL OFFICE, 63, Victoria Street, London. W. N. SHAW, Director.

NOTE: The Sunshine for London given in this Table is recorded on the Tower of the Wesleyan Training College, Westminster; the Sunshine entered to Dungeness is recorded at Littlestone-on-Sea.

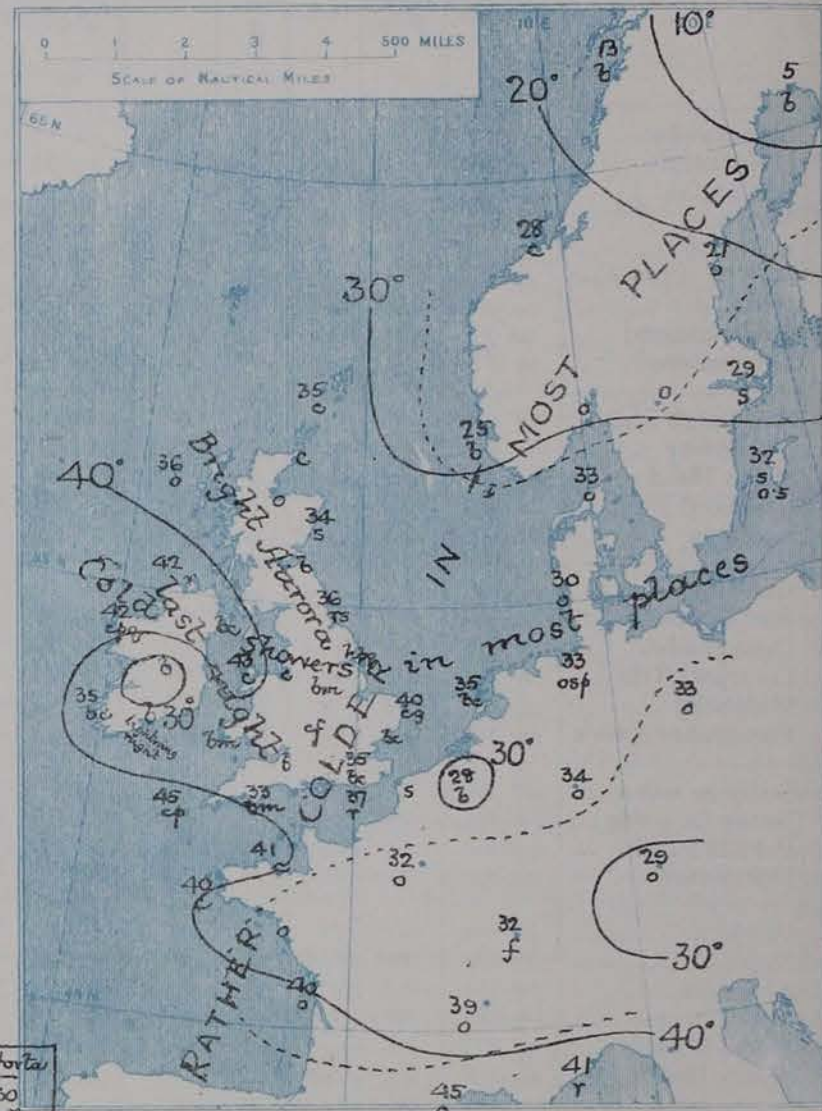

* Observations for this column not generally received.

* Observations received too late for insertion in Charts on next page.

FOR THURSDAY, 16TH NOVEMBER, 1905.

SEA.—Rough High 

RAINFALL. — { A dotted line separates areas where rain has fallen from those
without rain. The fall in past 24 hours when exceeding half
an inch is shown thus - 06

Yesterday morning.

Amount recorded
in various districts of the United Kingdom
during the week ended Saturday, 12th Nov^r,
with the percentage of the average duration
for the corresponding week.

V. Means of DAILY TEMPERATURE
at 8 A.M. for the monthly period
NOVEMBER. (1871-1900)

GENERAL SITUATION AT 8 A.M.

PRESSURE

Since yesterday morning the barometer has risen steadily over the Bay of Biscay and the southern and western districts of the United Kingdom and fallen steadily over Scandinavia. As a result of these changes the barometer has become highest 30.1 in. and upwards, over the west of Ireland and the adjacent portion of the Atlantic, whilst it is below 29.4 ins. over the eastern part of the Baltic, and below 29.3 ins. over the Gulf of Genoa. Gradients are less steep than of late in most regions, but some local irregularities in pressure cause them to vary considerably in places.

WIND

TEMPERATURE

WEATHER

AND

SEA

The displacement of the area of highest pressure noted above has caused the wind to become rather more northerly both over our Islands and the Continent. It still blows strongly over the greater part of Scandinavia and freshly on the coast of Norfolk and at Malin Head; over our area generally, however, it is light or moderate. Temperature has again fallen in nearly all places, and is low for the time of year. Over the United Kingdom it ranges from 45° in the Scilly Isles to less than 35° over the country generally, to 31° at Oxford, and to 26° at Birt Castle. The Continental readings range from 53° at Lisbon and 45° at Perpignan to 28° at Brussels and to 5° at Haparanda. The sky is cloudy in several parts of our Islands, but considered as a whole the weather is in a rather changeable condition; showers of rain are falling at Scilly and in the north of Ireland and of sleet, snow or hail over the east of England and Scotland. In most Continental regions the weather is dull, with snow in the south of Sweden, at Cuxhaven, and Cape St. Vitz, and rain at Nice. The sea is rather rough off the north of Ireland, moderate off the east and southeast of England, slight or smooth elsewhere. The maximum temperatures reported yesterday were below 45° over these Islands generally and no higher than 40° in places. Sharp frost was experienced during the night in many inland places; at Birt Castle the thermometer fell to 24°. Showers of hail, sleet, or snow were general yesterday, the measurements being rather large at Dungeness and Shields. Very bright aurora was observed last evening in nearly all parts of the United Kingdom. Bright sunshine was more prevalent in the west and southwest than elsewhere; at Plymouth there were 6.9 hours.

PROBABLE CHANGES IN SYSTEM NOW PREVALENT

There are no indications of any material change in the general distribution of pressure, but the small local irregularities shown over different parts of these Islands are likely to be accompanied by further showers of sleet or snow, especially along the eastern coasts of Great Britain.

FORECASTS*

WARNINGS

NONE ISSUED.

Note.—The South Cone, point downwards (⌵), means that gales, or strong winds, are probable, at first from the Southward (from S.E. round by S. to N.W.). Should it appear likely that a gale beginning from between W. and N.W. is likely to veer towards N. or N.E., the North Cone is hoisted in preference to the South Cone.

The North Cone, point upwards (⌴), means that gales, or strong winds, are probable, at first from the Northward (from N.W. round by N. to S.E.). Should it appear likely that a gale beginning from between E. and S.E. is likely to veer towards S. or S.W., the South Cone is hoisted in preference to the North Cone.

WEATHER CHARTS

FOR FRIDAY, 17th NOVEMBER, 1905.

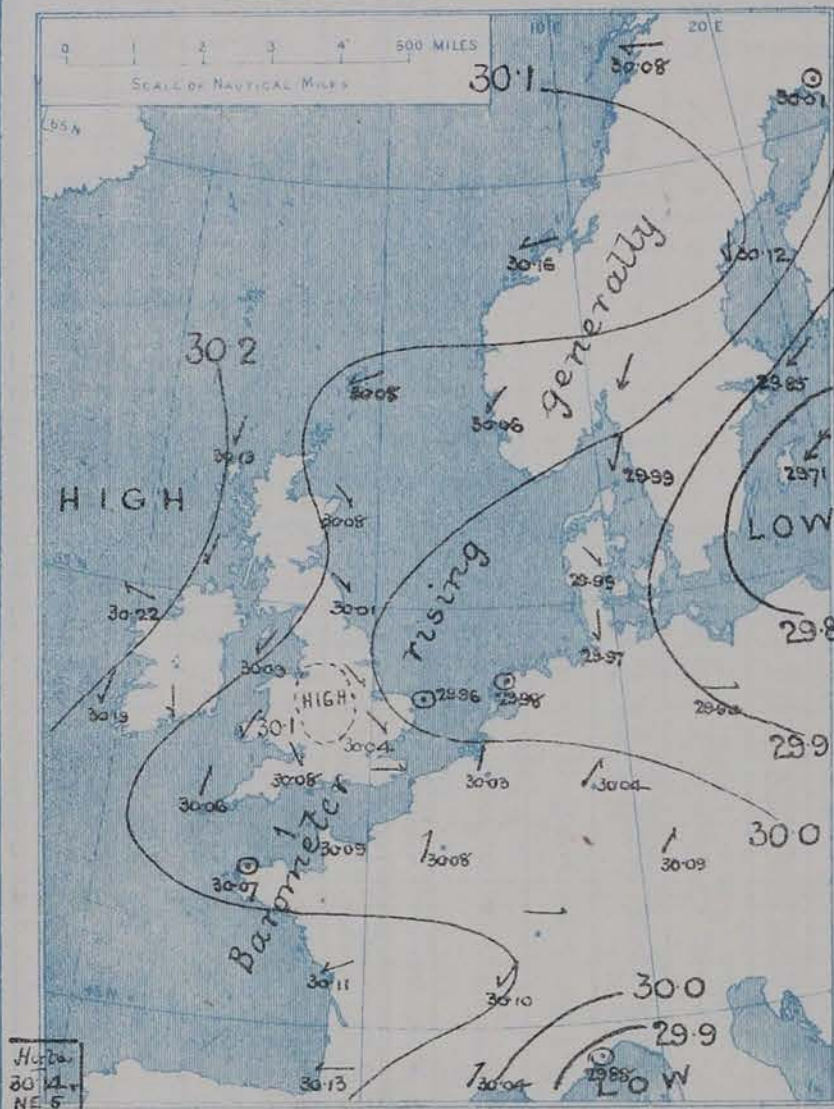

I. BAROMETER, WIND AND SEA. This Morning.

BAROMETER.—Isobars are drawn for each tenth of an inch.

WIND.—Arrows show Directions and Force, flying with the wind.

Force above 10 → : Force 5 to 7 → : } Calm ⊙
Force 8 to 10 → : Force 1 to 4 → :

SEA.—Rough  High 

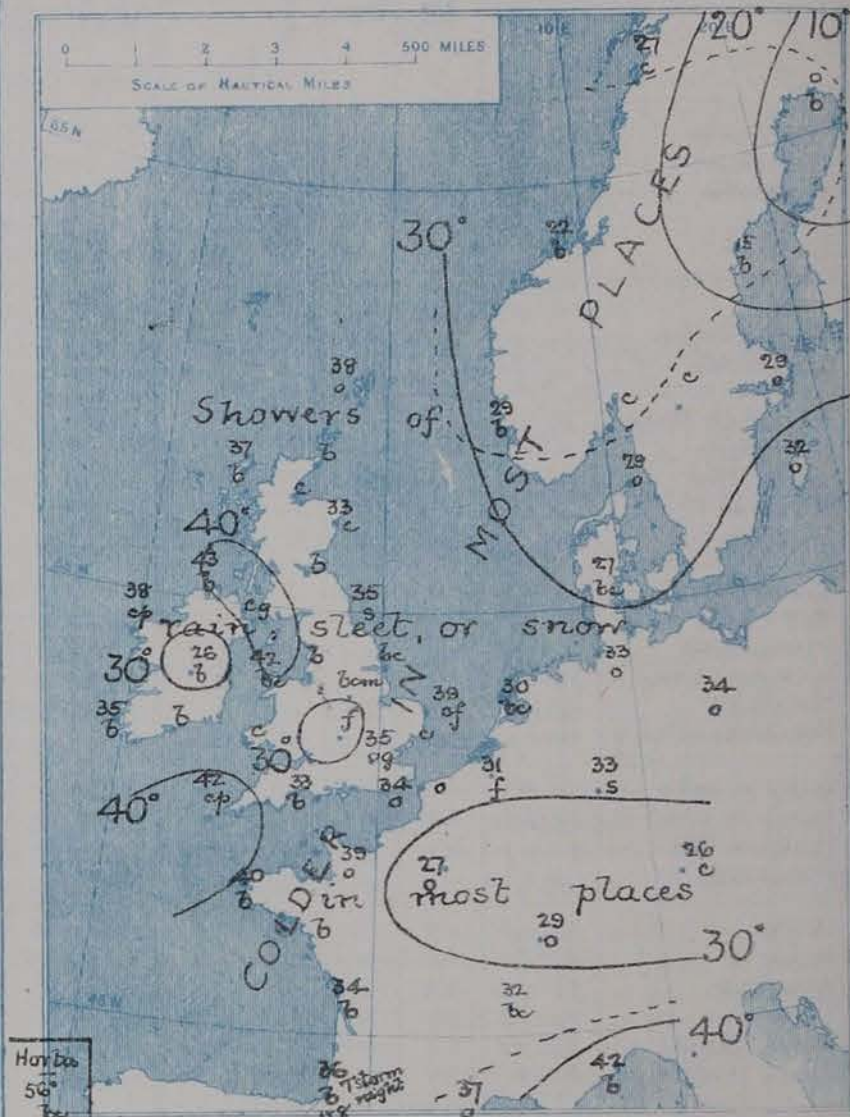

II. TEMPERATURE AND WEATHER. This Morning.

TEMPERATURE.—Isotherms are drawn for each 10°.

WEATHER.—Shown by Letters of the Beaufort Scale. (See P. 4.)

RAINFALL.—A dotted line separates areas where rain has fallen from those without rain. The fall in past 24 hours when exceeding half an inch is shown thus - 0.6

III. BAROMETER AND WIND

Yesterday morning.

IV. RAINFALL IN 1905.

Total Amount recorded in various districts of the United Kingdom in the 46 weeks ended Saturday, NOV. 11th, with the percentage of the average amount for the corresponding period.

V. Means of DAILY TEMPERATURE at 8 A.M. for the monthly period NOVEMBER. (1871-1900)

GENERAL SITUATION AT 8 A.M.

PRESSURE

A brisk rise of the barometer has taken place since yesterday over France, Germany, Denmark, and the south of Scandinavia, and a steady rise in other parts of our area. The gradients have, consequently, been much reduced, especially over Denmark and the Baltic. Pressure now ranges from 30.2 ins. on the Atlantic to the westward of our Islands to 29.88 ins. at Nice and to 29.71 ins. at Wiborg.

WIND

TEMPERATURE

WEATHER

AND

SEA

The wind is light or moderate from the Northwestward over the eastern part of Great Britain and light or moderate from North or Northeast over our western districts. Over the south of Scandinavia the wind is Northeasterly, strong to a gale in Gothland while over Germany it is light from West or Southwest, and over France light and variable. Temperature has fallen over our area generally, but risen in a few places. Over this country it ranges from 42° at Scilly and Holyhead to 26° at Birr Castle and to 25° at Bath. On the Continent the thermometer marks zero at Naparanda, 21° at Karlstad, 27° at Paris, and 42° at Nice. The weather is fine and bright in the west of France, most parts of the United Kingdom and Scandinavia, but much cloud is reported on our southeast coasts, over Germany, and the east of France, fog from Oxford, Yarmouth and Brussels, and snow showers from the northeast coast of England. Snow is also falling at Frankfurt. The sea is slight or smooth generally.

The maximum temperatures recorded over the United Kingdom yesterday were very low for the time of year; at several stations in the east and north they were below 40°. Showers of hail, sleet or snow were again experienced in most parts of the Kingdom, and showers of rain in the west of Ireland. At Biarritz a thunderstorm, accompanied by 0.8 in. of rain, occurred during the night. Bright sunshine was very abundant in the west and south of England.

PROBABLE CHANGES IN SYSTEM NOW PREVALENT

The increase of pressure now in progress over our Islands and the western half of the Continent will probably continue, but no material modification in the general distribution is expected during the ensuing 24 hours. The weather is likely to remain fair as a whole, but with showers of sleet or snow locally and some fog or mist over England.

FORECASTS*

For the 24 hours ending at NOON on 18TH NOVEMBER, 1905.

DISTRICTS.

FORECASTS.

0	{ SCOTLAND NORTH	N ^W and N.W ^W winds, light; mostly fair, but snow showers locally, frost at night.
1	{ SCOTLAND EAST	
2	{ ENGLAND N.E.	Light winds, rather variable, but chiefly N.W ^W ; fair as a whole, but local snow or sleet showers, mist or fog in places; frost at night.
3	{ ENGLAND EAST	
4	{ MIDLAND COUNTIES	
5	{ ENGLAND SOUTH	

DISTRICTS.

FORECASTS.

6	{ SCOTLAND WEST	Same as Nos. 0 to 2.
7	{ ENGLAND N.W.	
8	{ ENGLAND S.W.	Light variable or N ^W winds; fair generally, some mist or fog; cold, frost inland at night.
9	{ IRELAND NORTH	
10	{ IRELAND SOUTH	Light winds, mainly N ^W ; fine generally; frost inland at night.
	WARNINGS	
		NONE ISSUED.

Note.—The South Cone, point downwards (⌋), means that gales, or strong winds, are probable at first from the Southward (from S.E. round by S. to N.W.). Should it appear likely that a gale beginning from between W. and N.W. is likely to veer towards N. or N.E., the North Cone is hoisted in preference to the South Cone.
The North Cone, point upwards (⌋), means that gales, or strong winds, are probable at first from the Northward (from N.W. round by N. to S.E.). Should it appear likely that a gale beginning from between E. and S.E. is likely to veer towards S. or S.W., the South Cone is hoisted in preference to the North Cone.

* For terms for transmission of Forecasts by Telegraph, see next page.

WEATHER CHARTS

FOR SATURDAY, 18TH NOVEMBER, 1905.

I. BAROMETER, WIND AND SEA. This Morning.

BAROMETER.—Isobars are drawn for each tenth of an inch.

WIND.—Arrows show Directions and Force, flying with the wind.

Force above 10

Force 5 to 7

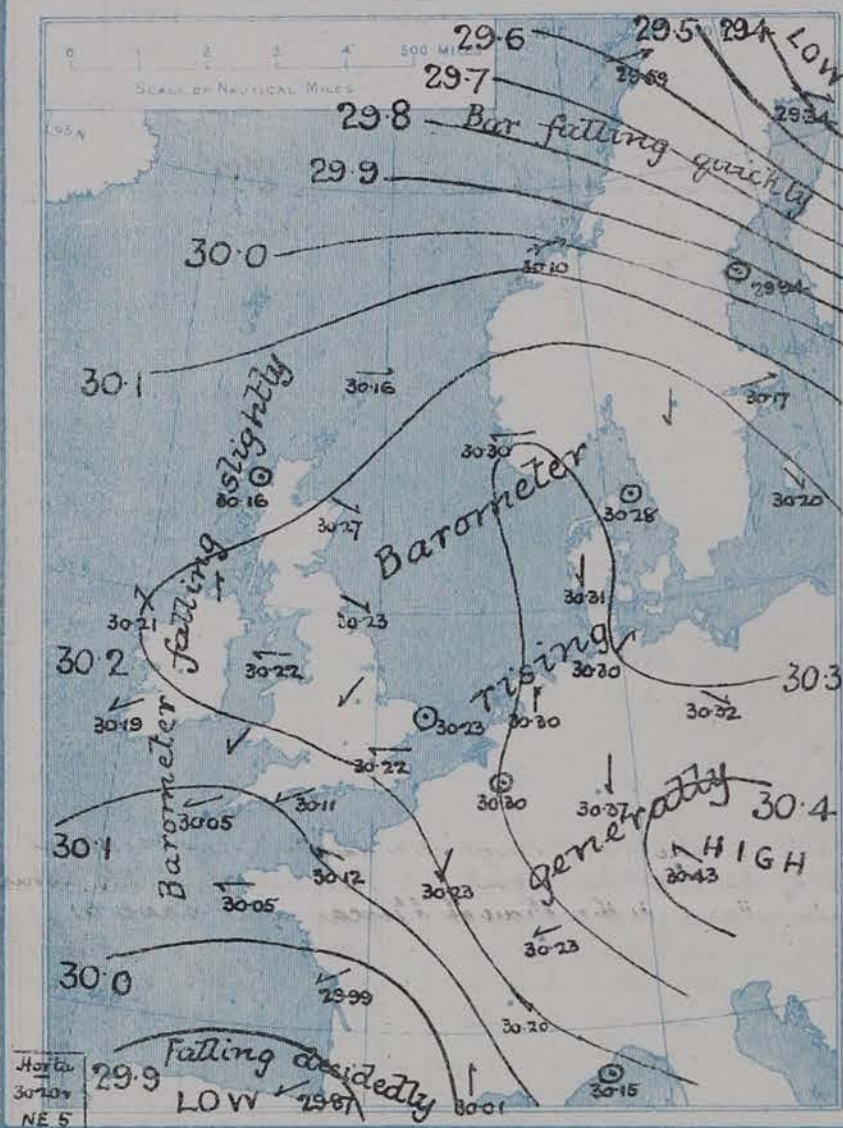

Calm

Force 8 to 10

Force 1 to 4

SEA.—Rough

High

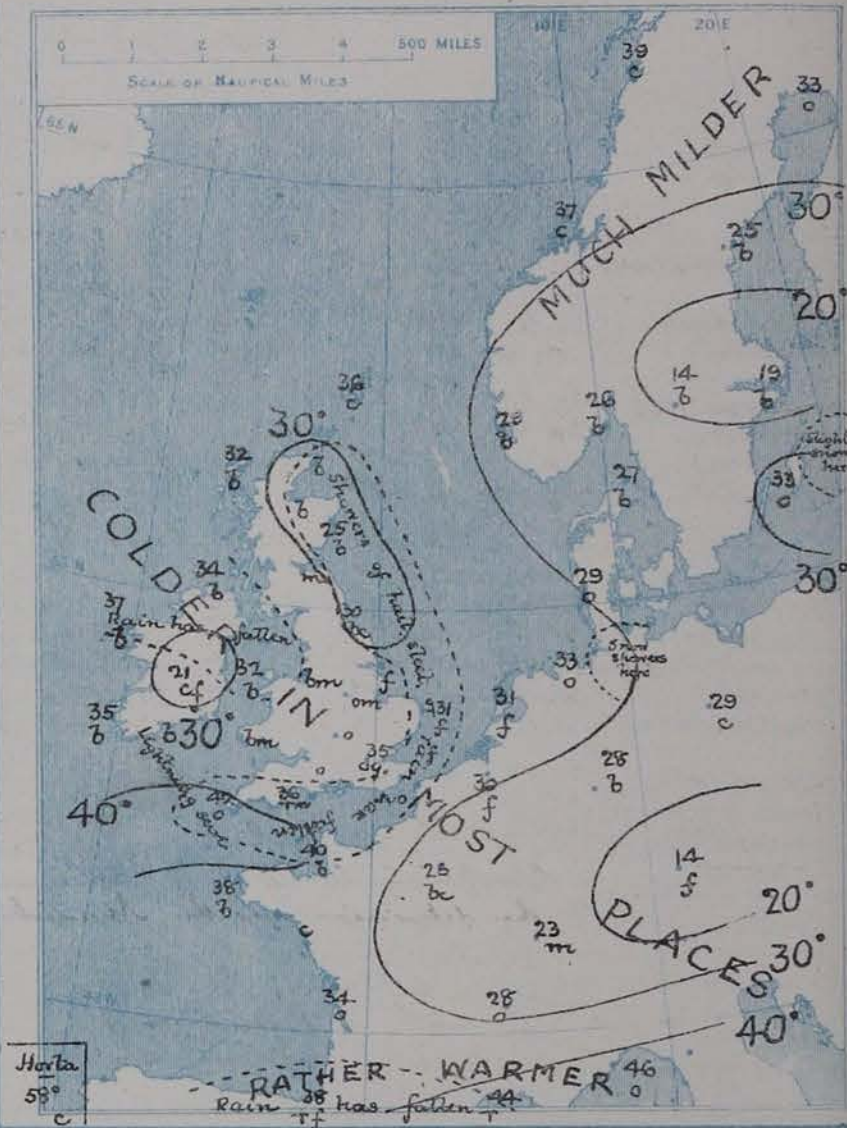

II. TEMPERATURE AND WEATHER. This Morning.

TEMPERATURE.—Isotherms are drawn for each 10°.

WEATHER.—Shown by Letters of the Beaufort Scale. (See P. 4.)

RAINFALL.—A dotted line separates areas where rain has fallen from those without rain. The fall in past 24 hours when exceeding half an inch is shown thus - 0.6

III. BAROMETER AND WIND

Yesterday morning.

IV. BRIGHT SUNSHINE IN 1905.

Total Duration recorded in various districts of the United Kingdom in the 46 weeks ended Saturday, Nov. 11th, with the percentage of the average duration for the corresponding period.

V. Means of DAILY TEMPERATURE at 8 A.M. for the monthly period NOVEMBER. (1871-1900)

GENERAL SITUATION AT 8 A.M.

PRESSURE

Since yesterday morning a considerable modification has taken place in the general distribution of pressure. The barometer has continued to rise over Germany, Denmark, the south of Scandinavia and the greater part of the United Kingdom, while it has fallen slowly over the Spanish peninsula and the Bay of Biscay region, and very briskly in the extreme north of Europe. The readings now range from above 30.4 ins. in Bavaria, and above 30.3 ins. in a "wedge" of high pressure extending thence to the southwest of Norway, to below 29.9 ins. over Spain, and to less than 29.4 ins. over Lapland. Gradients are slight except in the neighbourhood of the northern depression.

WIND

TEMPERATURE

WEATHER

AND

SEA

The wind is very light from the Westward in Scotland and strong to a gale from West or Southwest along the west coast of Norway. Over the southern parts of our Islands and in France the general direction of the wind is Easterly and its force light or moderate. Temperature shows a further fall over our area as a whole, but a very quick rise in the north of Scandinavia under the influence of the strong current of air from the Atlantic; at Copenhagen the rise is 33°. Over our Islands the readings range from 21° at Birr Castle and 23° at Naism to about 32° in most other places, and to 42° at Scilly. The lowest reading on the Continent is 14° at Munich and Karlstad, and the highest 46° at Nice. The sky is almost cloudless in Ireland, Wales, and Scotland, as well as at several stations in Scandinavia. In most other localities it is either overcast or very cloudy, with fog in the east of England and the Low Countries and also at Munich and Birr Castle. At Biarritz and Portland Hill rain is falling. The sea is slight or smooth except off the northwest coast of Norway.

The maximum temperatures recorded over our Islands yesterday were again very low; in London and on the south coast of Kent the thermometer only touched 37°, at Manchester and Birmingham 36°, and at Brighton 35°. The frost during the night was very severe in Ireland and Scotland; at Birr Castle and Naism the respective minima were 19° and 22°. Showers of hail, sleet or snow were again experienced in many parts of the United Kingdom, and lightning was observed at Roche's Point and Scilly. Very little bright sunshine was recorded except in the extreme west and southwest and at some eastern stations.

PROBABLE CHANGES IN SYSTEM NOW PREVALENT

Secondary disturbances to the very large depression over Northern Europe are likely to produce a fall of the barometer over our northern districts, while the depression over the Spanish Peninsula and the Bay of Biscay will have a similar effect over our southwestern and southern districts. Westerly breezes, with rather milder and less settled weather are, therefore, anticipated in Scotland and the north of Ireland, and increasing Northeasterly winds, with cold weather and some rain or sleet in the south and southwest.

FORECASTS*

For the 24 hours ending at NOON on 19th NOVEMBER, 1905.

DISTRICTS.

FORECASTS.

- 0 SCOTLAND NORTH
- 1 SCOTLAND EAST
- 2 ENGLAND N.E.
- 3 ENGLAND EAST
- 4 MIDLAND COUNTIES
- 5 ENGLAND SOUTH

Light to moderate or fresh W^{ly} breezes; temperature rising somewhat and weather becoming less fine.

Light variable airs; very cold, some fog or mist, sharp frost at night.

Same as No. 5.

Same as No. 2.

Light to moderate winds, mainly E^{ly}; very cold, dull, with mist or fog locally; some sleet or snow showers later.

DISTRICTS.

FORECASTS.

- 6 SCOTLAND WEST
- 7 ENGLAND N.W.
- 8 ENGLAND S.W.
- 9 IRELAND NORTH
- 10 IRELAND SOUTH

Same as Nos. 0 and 1.

Same as No. 2.

N.E.^{ly} winds, freshening; very cold, some rain or sleet.

Light or moderate winds between N.E. and S.E.; fair as a whole, but showers locally; very cold, especially inland.

WARNINGS

NONE ISSUED.

Note.—The South Cone, point downwards (⌒), means that gales, or strong winds, are probable at first from the Southward (from S.E. round by S. to N.W.). Should it appear likely that a gale beginning from between W. and N.W. is likely to veer towards N. or N.E., the North Cone is hoisted in preference to the South Cone.
The North Cone, point upwards (⌒), means that gales, or strong winds, are probable, at first from the Northward (from N.W. round by N. to S.E.). Should it appear likely that a gale beginning from between E. and S.E. is likely to veer towards S. or S.W., the South Cone is hoisted in preference to the North Cone.

* For terms for transmission of Forecasts by Telegraph, see next page.

SUBSCRIPTIONS both for the Daily and Weekly Weather Reports may be paid, in advance, to the Meteorological Office.

TERMS: For Daily Weather Report, forwarded by Book Post, £1 0 0 per annum.
" Weekly " " " " £1 10 0 " Single Copies, 6d.

Single Copies of the Daily Weather Report (price 1d.) may be obtained after 3 p.m. on the day of issue at the Meteorological Office, and at Messrs. W. H. SMITH & SONS' Bookstalls at the following terminus Railway Stations:—Victoria, Charing Cross, King's Cross, St. Pancras, Euston.

FORECASTS OF WEATHER for one day in advance are drawn up at the Meteorological Office at 11 a.m., and between 7 and 8 p.m. The latest forecast can be had by Reply Telegram, on paying at any Post Office in the United Kingdom Sixpence in addition to the cost of the inquiry and reply Telegram. Information as to the Terms on which Forecasts can be sent, daily, for a long or short period, may be obtained on application to the Meteorological Office, 63, Victoria Street, S.W., either personally or by post.

* At Oxford the observations are taken at 8 p.m.

DAILY WEATHER REPORT

for 8 a.m. on

Sunday, 19TH NOVEMBER, 1905.

Issued by the METEOROLOGICAL OFFICE, 63, Victoria Street, London. W. N. SHAW, Director.

NOTE: The Sunshine for London given in this Table is recorded on the Tower of the Wesleyan Training College, Westminster; the Sunshine entered in Dungeness is recorded at Littlestone-on-Sea.

* Observations for this column not generally received.

+ Observations received too late for insertion in Charts on next page.

WEATHER CHARTS

FOR SUNDAY, 19TH NOVEMBER, 1905.

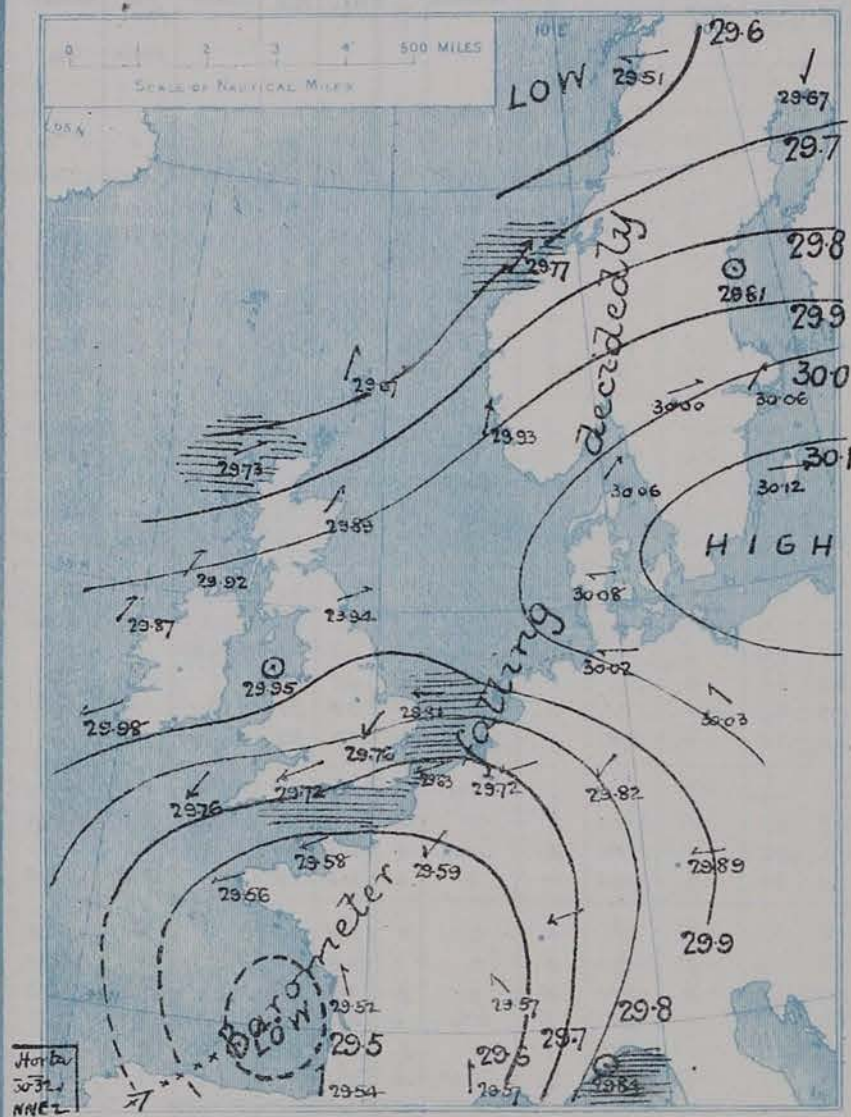

I. BAROMETER, WIND AND SEA. This Morning.

BAROMETER—Isobars are drawn for each tenth of an inch.

WIND—Arrows show Directions and Force, flying with the wind.

Force above 10 → Force 5 to 7 → } Calm ⊙
Force 8 to 10 → Force 1 to 4 →

SEA—Rough High

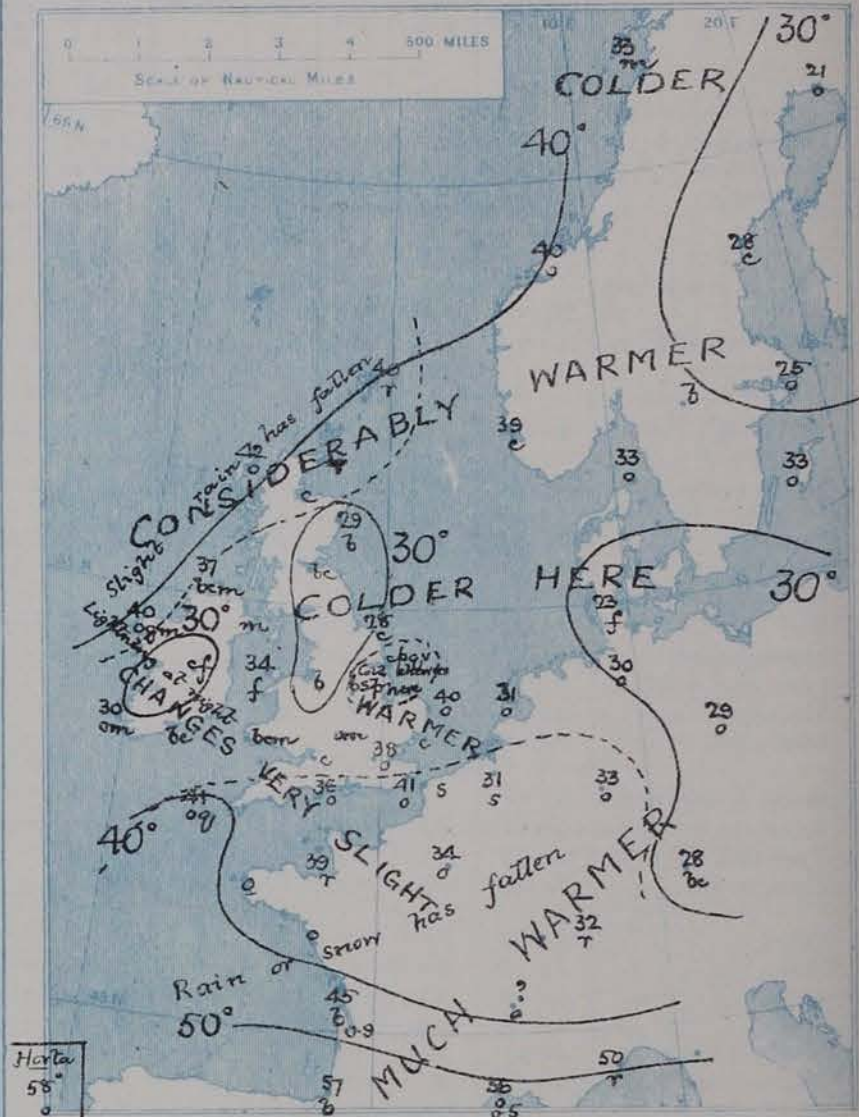

II. TEMPERATURE AND WEATHER. This Morning.

TEMPERATURE—Isotherms are drawn for each 10°

WEATHER—Shown by Letters of the Beaufort Scale. (See P. 4.)

RAINFALL—A dotted line separates areas where rain has fallen from those without rain. The fall in past 24 hours when exceeding half an inch is shown thus - 0.6

III. BAROMETER AND WIND

Yesterday morning.

IV. ACCUMULATED TEMPERATURE ABOVE 42°

Amount recorded in various districts of the United Kingdom during the 46 weeks ended Saturday 11th Nov with the percentage of the average for the corresponding period.

Accumulated values are expressed in Day-Degrees—a "Day Degree" signifying 1° continued for 24 hours, or any other number of degrees for an inversely proportional number of hours.

V. Means of DAILY TEMPERATURE at 8 A.M. for the monthly period NOVEMBER. (1871-1900)

GENERAL SITUATION AT 8 A.M.

PRESSURE

Spain, France, Germany and the southern portion of the British Isles are under the influence of a deep disturbance of which the centre lies over the Bay of Biscay. On the northern side of this we find an anticyclonic ridge covering Ireland, the north of England and Southern Scandinavia, while over Scotland and Northern Scandinavia there is a moderately steep gradient for W. winds.

WIND

TEMPERATURE

WEATHER

AND

SEA

The wind shows a cyclonic circulation round the centre of low pressure mentioned above. It is S. over Southern France, E. to N.E. over the north of France, Germany and the south of England, while on the coast of Spain we find it N.W. It is blowing strongly in the English Channel and the south of England. Calms or light variable breezes prevail on the anticyclonic ridge to the north of the French depression and in Scotland and Norway we find moderate S.W. winds. Within the region covered by the depression cloud is very prevalent but the sky is clear at both, Rochefort and Biarritz. A well-marked area of precipitation, which in most cases takes the form of snow, is shown stretching from Jersey to Brussels. Rain is also falling at Belfort and Nice. On the anticyclonic ridge the weather is fair but foggy in many places. Further north conditions are rather unsettled. A rise of temperature has occurred over the continent and the south of England but readings continue rather low. Sharp frost still prevails over the north of England and Central Ireland and Scotland. In the northwest the W. wind has caused an increase of temperature very generally. The sea is moderate to rather rough on the part of our coast lying between Yarmouth and Pembroke and also in the extreme North, elsewhere it is slight or smooth.

During the past 24 hours showers of sleet, rain or snow occurred in many places. 0.38 inch of rain fell at Jersey and heavy falls are also reported from many French stations. Very fair amounts of bright sunshine were experienced in the north and west, but in the south the sky was generally cloudy. The lowest minimum temperature reported is 22° at Leith.

PROBABLE CHANGES IN SYSTEM NOW PREVALENT

FORECASTS*

For the 24 hours ending at NOON on 20th November, 1905.

- 8 ENGLAND S.W.
- 9 IRELAND NORTH
- 10 IRELAND SOUTH

NONE ISSUED

WARNINGS

At 7.15 pm yesterday to District 5 and part of 8, "Hoist North Cone."

Note.—The South Cone, point downwards (⌴), means that gales, or strong winds, are probable, at first from the Southward (from S.E. round by S. to N.W.). Should it appear likely that a gale beginning from between W. and N.W. is likely to veer towards N. or N.E., the North Cone is hoisted in preference to the South Cone.
The North Cone, point upwards (⌴), means that gales, or strong winds, are probable, at first from the Northward (from N.W. round by N. to S.E.). Should it appear likely that a gale beginning from between E. and S.E. is likely to veer towards S. or S.W., the South Cone is hoisted in preference to the North Cone.

* For terms for transmission of Forecasts by Telegraph, see next page.

SUBSCRIPTIONS both for the Daily and Weekly Weather Reports may be paid, in advance, to the Meteorological Office.

TERMS: For Daily Weather Report, forwarded by Book Post, £1 0 0 per annum.
" Weekly " " " £1 10 0 " " " Single Copies, 6d.

Single Copies of the Daily Weather Report (price 1d.) may be obtained after 3 p.m. on the day of issue at the Meteorological Office, and at Messrs. W. H. SMITH & SONS' Bookstalls at the following terminus Railway Stations:—Victoria, Charing Cross, King's Cross, St. Pancras, Euston.

FORECASTS OF WEATHER for one day in advance are drawn up at the Meteorological Office at 11 a.m., and between 7 and 8 p.m. The latest forecast can be had by Reply Telegram, on paying at any Post Office in the United Kingdom Sixpence in addition to the cost of the inquiry and reply Telegram. Information as to the Terms on which Forecasts can be sent, daily, for a long or short period, may be obtained on application to the Meteorological Office, 63, Victoria Street, S.W., either personally or by post.

* At Oxford the observations are taken at 8 p.m.

DAILY WEATHER REPORT

for 8 a.m. on

Monday, 20th November, 1905.

Issued by the METEOROLOGICAL OFFICE, 63, Victoria Street, London. W. N. SHAW, Director.

NOTE: The Sunshine for London given in this Table is recorded on the Tower of the Wesleyan Training College, Westminster: the Sunshine entered to Dungeness is recorded at Littlestone-on-Sea.

* Observations for this column not generally received.

* Observations received too late for insertion in Charts on next page.

WEATHER CHARTS

FOR MONDAY, 20th NOVEMBER 1905.

I. BAROMETER, WIND AND SEA. This Morning.

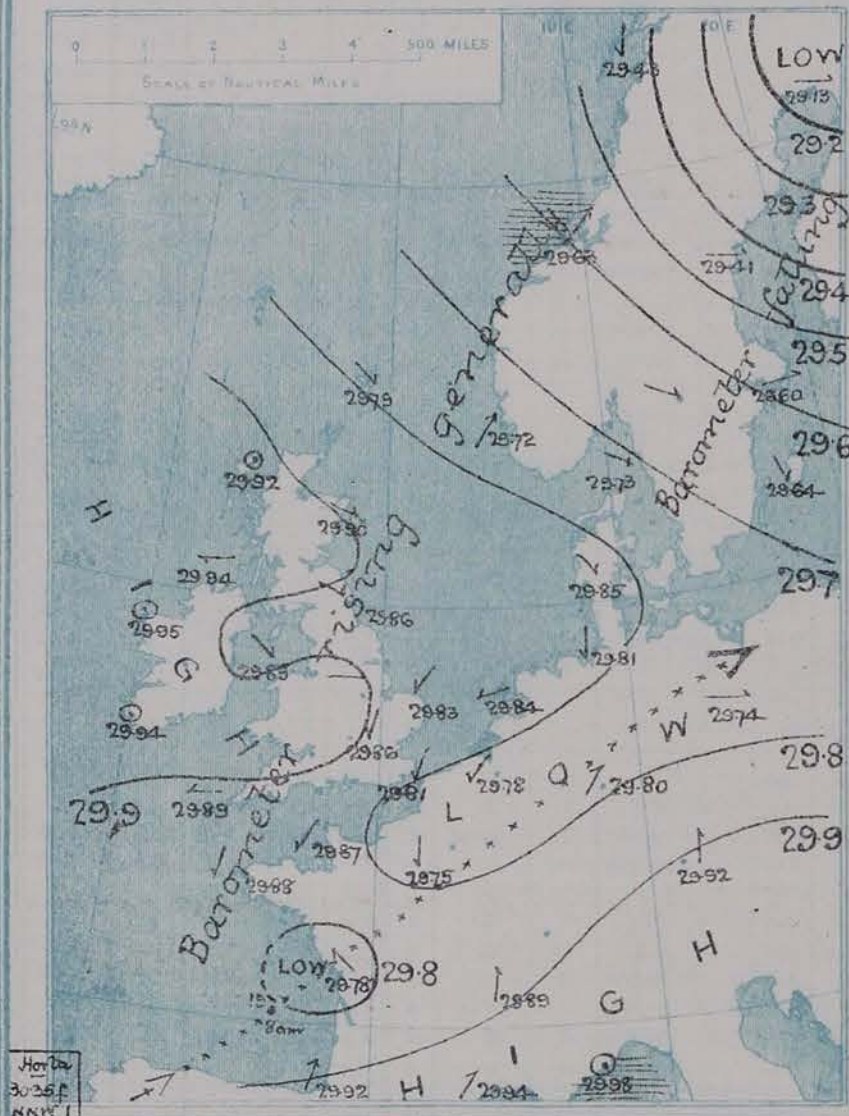

BAROMETER—Isobars are drawn for each tenth of an inch.

WIND—Arrows show Directions and Force, flying with the wind.

Force above 10 → Force 5 to 7 → } Calm ☉

Force 8 to 10 → Force 1 to 4 → }

SEA—Rough High

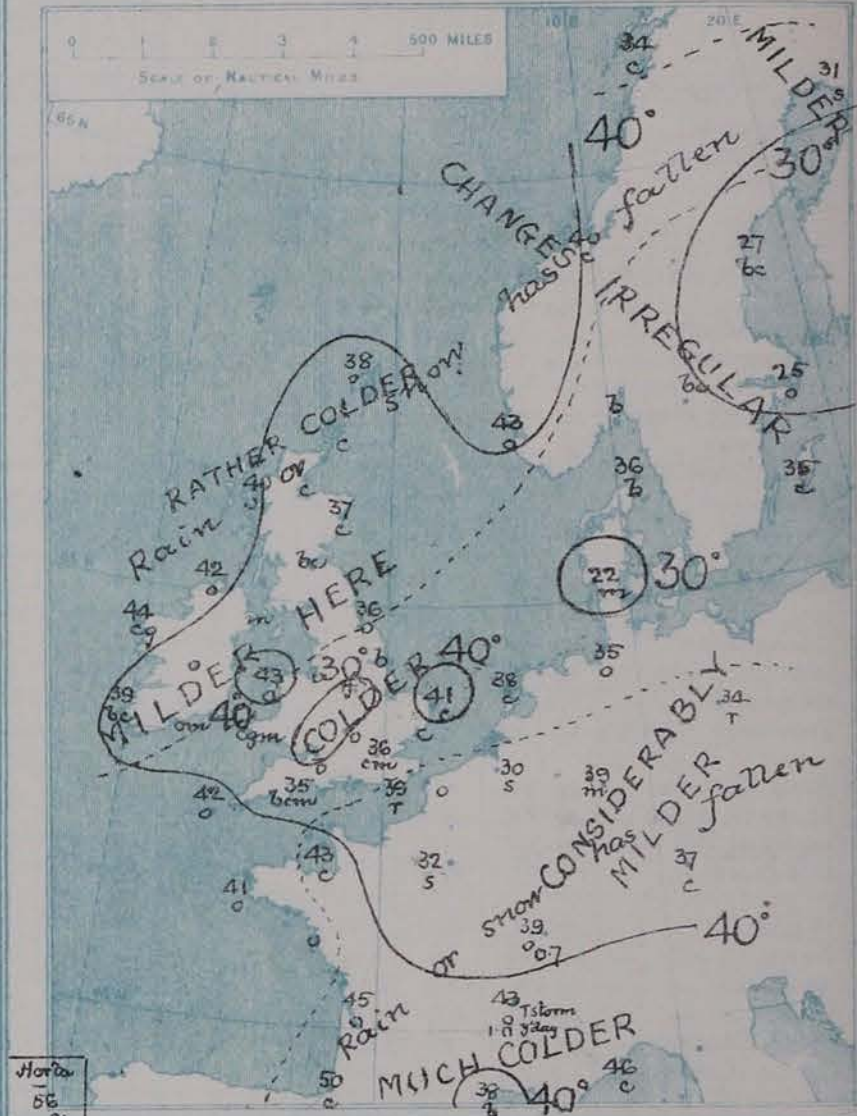

II. TEMPERATURE AND WEATHER. This Morning

TEMPERATURE—Isotherms are drawn for each 10°

WEATHER—Shown by Letters of the Beaufort Scale (See P. 4.)

RAINFALL—A dotted line separates areas where rain has fallen from those without rain. The fall in past 24 hours when exceeding half an inch is shown thus - 0.8

III. BAROMETER AND WIND

Yesterday morning.

IV. ACCUMULATED TEMPERATURE ABOVE 42°.

Amount recorded in various districts of the United Kingdom during the week ended Saturday, 18th Nov. with the percentage of the average for the corresponding week.

Accumulated values are expressed in Day-Degrees—a "Day Degree" signifying 1° continued for 24 hours, or any other number of degrees for an inversely proportional number of hours

V. Means of DAILY TEMPERATURE

at 8 A.M. for the monthly period

NOVEMBER. (1871-1900)

GENERAL SITUATION AT 8 A.M.

PRESSURE

The depression which lay over the Bay of Biscay yesterday morning and also that off the north of Scotland have both travelled away northeasterwards, and the barometer is now rising again over the whole of our Islands, France, and Germany. The readings range from 29.9 in. and upwards over Ireland and the major portion of Great Britain to below 29.2 in. in the north of Finland and over Lapland. Pressure is relatively low in a shallow disturbance off the west coast of France and also in a narrow band extending from the northeast of France to the Baltic. Gradients are very slight.

WIND

TEMPERATURE

WEATHER

AND

SEA

The wind varies a good deal locally, but it is generally light from the Westward in Scotland, the north of England, and over Denmark and strong from the Southwestward in Norway. Over the Low Countries and the south and southeast of England it is mainly Northeasterly, while over France and Germany it tends to circulate round the shallow disturbance mentioned above. Temperature has risen at several of our southwestern and northern stations, as well as over Germany, fallen or changed irregularly elsewhere. Over these Islands it ranges from 44° at Blackhead Point and 40° or a little higher at a few other coast stations to 30° at Birr Castle and to one or two degrees lower in various parts of the English Midlands. The Continental values range from 50° at Biarritz to 32° at Paris, 25° at Stockholm, and to 22° at Fano. The sky is very cloudy or quite overcast in most places, with snow at Paris, Brussels and Haparanda and rain at Dungeness and Berlin. The sea is moderate to smooth.

The maximum temperatures reported over our Islands yesterday were again very low; in many places they were below 40°, while at Birr Castle, Harrogate and Darwen they were no higher than 36° or 35°. Showers of rain, sleet, or snow were experienced in the north and west of our Islands and heavy falls of snow in many Continental localities. At Lyons a thunderstorm was accompanied by nearly an inch of rain. Scarcely any bright sunshine was recorded at our southern stations, but in the west there were several hours.

PROBABLE CHANGES IN SYSTEM NOW PREVALENT

The rise of the barometer which is in progress over our Islands appears likely to continue for the present, so that Northwesterly to Northeasterly winds of little strength are probable, with generally fair, but cold weather.

FORECASTS*

For the 24 hours ending at NOON on 21st NOVEMBER, 1905.

DISTRICTS.

FORECASTS.

- 0 SCOTLAND NORTH
- 1 SCOTLAND EAST
- 2 ENGLAND N.E.
- 3 ENGLAND EAST
- 4 MIDLAND COUNTIES
- 5 ENGLAND SOUTH

W^{ly} and N.W^{ly} winds, light or moderate; mostly fair and cold, frost at night.

N^{ly} and N.E^{ly} winds, light or moderate; fair generally, local mists; temperature low, frost at night.

DISTRICTS.

FORECASTS.

- 6 SCOTLAND WEST
- 7 ENGLAND N.W.
- 8 ENGLAND S.W.
- 9 IRELAND NORTH
- 10 IRELAND SOUTH

Same as Nos. 0 to 2.

Light to moderate N^{ly} and N.E^{ly} winds; fair generally; cold, frost at night.

Variable or light N^{ly} winds; mainly fair and cold; frosty inland.

WARNINGS

At 9.30 am. today to District 5 and part of 8, "LOWER CONE".

* The South Cone, point downwards (⌋), means that gales, or strong winds, are probable, at first from the Southward (from S.E. round by S. to N.W.). Should it appear likely that a gale beginning from between W. and N.W. is likely to veer towards N. or N.E., the North Cone is hoisted in preference to the South Cone.
The North Cone, point upwards (⌋), means that gales, or strong winds, are probable, at first from the Northward (from N.W. round by N. to S.E.). Should it appear likely that a gale beginning from between E. and S.E. is likely to veer towards S. or S.W., the South Cone is hoisted in preference to the North Cone.

* For terms for transmission of Forecasts by Telegraph, see next page.

SUBSCRIPTIONS both for the Daily and Weekly Weather Reports may be paid, in advance, to the Meteorological Office.

TERMS: For Daily Weather Report, forwarded by Book Post, £1 0 0 per annum.

" Weekly " " " £1 10 0 " Single Copies, 6d.

Single Copies of the Daily Weather Report (price 1d.) may be obtained after 3 p.m. on the day of issue at the Meteorological Office, and at Messrs. W. H. SMITH & SONS' Bookstalls at the following terminus Railway Stations:—Victoria, Charing Cross, King's Cross, St. Pancras, Euston.

FORECASTS OF WEATHER for one day in advance are drawn up at the Meteorological Office at 11 a.m., and between 7 and 8 p.m. The latest forecast can be had by Reply Telegram, on paying at any Post Office in the United Kingdom Sixpence in addition to the cost of the inquiry and reply Telegram. Information as to the Terms on which Forecasts can be sent, daily, for a long or short period, may be obtained on application to the Meteorological Office, 63, Victoria Street, S.W., either personally or by post.

* At Oxford the observations are taken at 8 a.m.

DAILY WEATHER REPORT

for 8 a.m. on Tuesday, 21st November

1905.

TEMPERATURE.—Isotherms are drawn for each 10°
WEATHER.—Shown by Letters of the Beaufort Scale. (See P. 4.)

A hand-drawn map of Europe showing temperature isotherms and weather patterns. The map includes latitude lines at 40°N and 30°N, and longitude lines at 0°, 10°E, and 20°E. Handwritten labels include "Rain or snow has fallen" along the coastlines, "MILDER" in the Atlantic, "COOLER" in the North Sea, and "PLACES MOST" near the British Isles. Numerous numerical values are scattered across the map, representing temperature readings.

Yesterday morning.

recorded

A map of the British Isles showing temperature isotherms. The 19°C isotherm is represented by a dashed line, and the 20°C isotherm is represented by a solid line. Various temperature values are marked at different locations:

- North of Scotland: 50° 21'
- Central Scotland: 53° 5'
- West of Scotland: 51° 20'
- West of Ireland: 51° 20'
- South of Ireland: 50° 19'
- Central England: 51° 19'
- East of England: 51° 21'
- South of England: 54° 23'
- Far East: 52° 26'
- South of England (lower): 53° 24'
- Bottom of map: 54°-34°

NOVEMBER. (1871-1900.)

GENERAL SITUATION AT 8 A.M.

PRESSURE

Since yesterday morning pressure has increased rather decidedly over the greater part of our area and very briskly over France and Germany. During the night, however, a decrease has commenced over the north of Scandinavia and on our western and northern coasts. The readings now range from 30.20 ins. and upwards over Germany, the Low Countries and the northeast of France and also in a smaller maximum over the south Midlands of England to less than 29.1 ins. in a large depression having its centre over Lapland. Gradients are slight except over Scandinavia.

WIND

TEMPERATURE

WEATHER

AND

SEA

The wind is light to moderate from the Southward in Ireland, light from the Westward in Scotland, and strong from the Westward or Southward over Scandinavia and Denmark; along the west coast of Norway the Southwesterly wind blows a fresh gale. Over England, France and Germany the wind is light and rather variable, but mainly between North and East.

Temperature has risen in Scandinavia and the greater part of the United Kingdom, but fallen in the east of Scotland, the southeast of England, Holland, and at most French and German stations. Over this country it ranges from 26° in London and 28° at Aberdeen to above 40° on most of the western coasts, and to 49° at Blacksod Point. The Continental values range from 26° at Cuxhaven and 27° at the Helde to 46° at Christiansund and to 48° at Nice.

The weather is fine and bright in a few localities, but cloudy or dull generally; fog prevails over the greater part of England, the south of Sweden, and at the mouth of the Elbe, and rain is falling at Fano, Lumburgh Head and Bodö. Passing showers are reported from Blacksod Point. The sea is rough along the west coast of Norway, slight or smooth generally.

The highest temperatures recorded yesterday over our Islands were a little above 40° in most places, but below it at several stations in central and northwestern England. Very sharp frost occurred during the night in London and the south Midlands. Slight showers of rain have fallen at many of our western stations, and a considerable amount of snow and sleet at Paris. The duration of bright sunshine was very slight as a whole, but several hours were recorded at some eastern and southwestern stations; at Torquay there were 7.5 hours.

PROBABLE CHANGES IN SYSTEM NOW PREVALENT

It appears probable that the large cyclonic disturbances which are travelling eastwards over the northern part of the Atlantic will gradually extend their influence over the northern and western districts of these Islands. The greater part of England, however, is not likely to be materially affected at present. Less settled weather and a moderate temperature may, therefore, be expected in Ireland and Scotland, and cold, dry, foggy weather in most parts of England.

FORECASTS*

For the 24 hours ending at NOON on 22ND NOVEMBER, 1905

DISTRICTS.

FORECASTS.

0	SCOTLAND NORTH	W ^{ly} and S.W ^{ly} winds, increasing in force; becoming milder and less fine, some rain locally.
1	SCOTLAND EAST	
2	ENGLAND N.E.	Light variable or W ^{ly} winds; fair, but some fog or mist; cold.
3	ENGLAND EAST	Light variable airs or calms; cold, frost at night. Much fog or mist, otherwise fair.
4	MIDLAND COUNTIES	
5	ENGLAND SOUTH	

DISTRICTS.

FORECASTS.

6	SCOTLAND WEST	Same as Nos. 0 and 1.
7	ENGLAND N.W.	
8	ENGLAND S.W.	S ^{ly} and S.W ^{ly} winds, light or moderate; fair, then less settled and milder.
9	IRELAND NORTH	Light N.E. ^{ly} to moderate S.W ^{ly} winds; fair generally, but becoming less settled and milder.
10	IRELAND SOUTH	S ^{ly} and S.W ^{ly} winds, freshening; becoming milder and less settled, some rain probable in west and north.

WARNINGS

NONE ISSUED.

Note.—The South Cone, point downwards (⌞), means that gales, or strong winds, are probable, at first from the Southward (from S.E. round by S to N.W.). Should it appear likely that a gale beginning from between W and N.W. is likely to veer towards N or N.E., the North Cone is hoisted in preference to the South Cone.
The North Cone, point upwards (⌞), means that gales, or strong winds, are probable, at first from the Northward (from N.W. round by N to S.E.). Should it appear likely that a gale beginning from between E and S.E. is likely to veer towards S or S.W., the South Cone is hoisted in preference to the North Cone.

NOTE: The Sunshine for London given in this Table is recorded on the Tower of the Wesleyan Training College, Westminster; the Sunshine entered to Dungeness is recorded at Littlestone-on-Sea.

* Observations for this column not generally received.

Erratum. The 8 a.m. bar. reading at Haparanda in yesterday's report should be 29.43.

WEATHER CHARTS

FOR WEDNESDAY, 22nd NOVEMBER, 1905.

I. BAROMETER, WIND AND SEA. *This Morning.*

BAROMETER.—Isobars are drawn for each tenth of an inch.

WIND.—Arrows show Directions and Force, flying with the wind.

Force above 10

Force 5 to 7

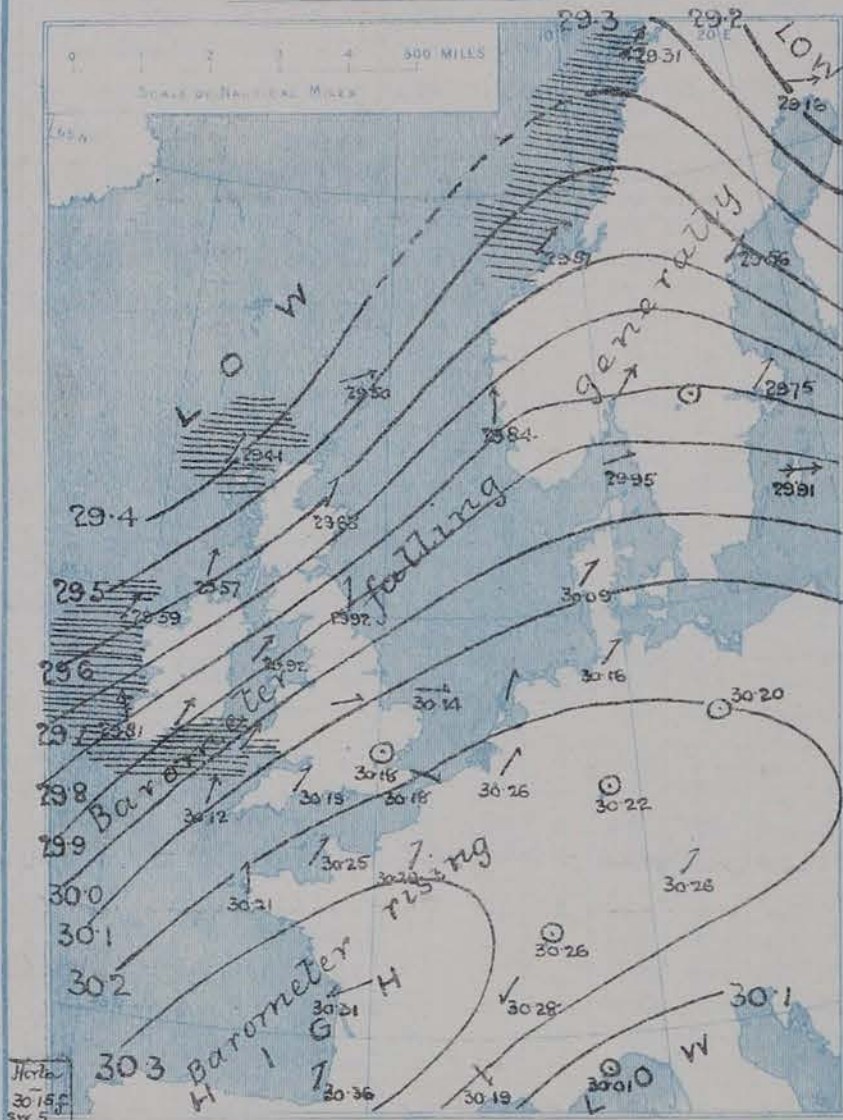

Calm

Force 8 to 10

Force 1 to 4

SEA—Rough

High

II. TEMPERATURE AND WEATHER. *This Morning.*

TEMPERATURE.—Isotherms are drawn for each 10°

WEATHER.—Shown by Letters of the Beaufort Scale. (See P. 4.)

RAINFALL.—A dotted line separates areas where rain has fallen from those without rain. The fall in past 24 hours when exceeding half an inch is shown thus - 0.6

III. BAROMETER AND WIND

Yesterday morning.

IV. LAST WEEK'S RAINFALL.

Amount recorded

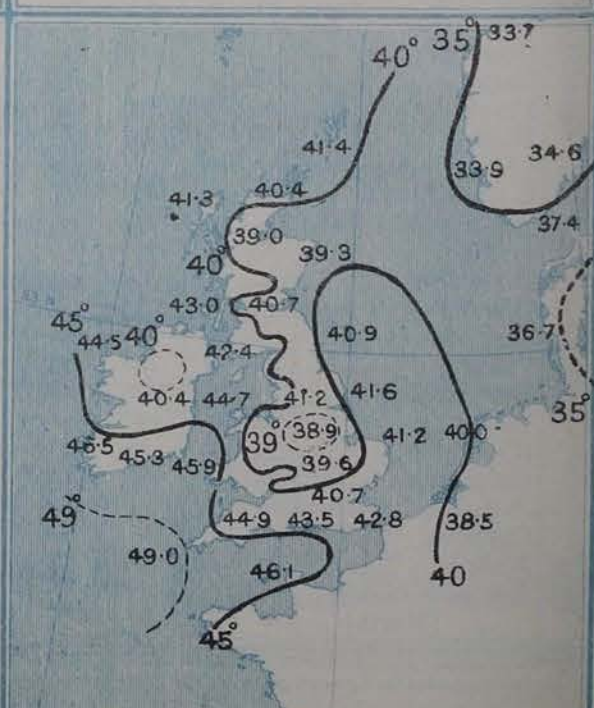

in various districts of the United Kingdom during the week ended Saturday, Nov. 18th, with the percentage of the average amount for the corresponding week.

V. Means of DAILY TEMPERATURE

at 8 A.M. for the Two monthly period

NOVEMBER-DECEMBER (1871-1900)

GENERAL SITUATION AT 8 A.M.

PRESSURE

Since yesterday morning the barometer has fallen very generally over the United Kingdom and Scandinavia, while it has risen over France. In the Hebrides the decrease of pressure amounts to 0.43 inch, while at Biarritz the increase is 0.23 inch. The readings now range from above 30.3 ins. over the Spanish Peninsula and a considerable part of France to 29.4 ins. and less off the north-west coast of Scotland, and to 29.16 ins. at Haparanda.

WIND

TEMPERATURE

WEATHER

AND

SEA

The wind has become south-westerly over Ireland and the west and north of Great Britain. It blows a fresh or strong breeze at several stations and a moderate gale both at Blackhead Point and Stormway, while it is still strong to a gale along the west coast of Norway. Over the central and eastern parts of England, in France and in Germany the wind is light and more variable.

Temperature has risen over the greater part of this country and also at most of the Continental stations, but fallen in various parts of central and south-eastern England. It is now about 50° along the west and south coasts of Ireland, but not much below it in the west and north of Great Britain, but frost still prevails in many parts of the English midlands and south-eastern counties, the lowest readings being 28° at Bath and in London. The continental values range from 43° at Biarritz and 47° at Christiansund to 32° at Berlin and to 27° at Belfort.

The sky is cloudy or overcast in Ireland, Wales and Scotland, with rain in several places, but over the greater part of England the weather continues fine, with however fog at most locally. In most Continental regions the weather is fine or fair; rain is falling in the extreme north of Norway, and at Cape Is. Hg., and fog prevails at Brest, Belfort and at some of the German stations.

The sea is rough or rather so on several parts of our western and north-western coasts, slight or smooth elsewhere.

The maximum temperatures over our islands yesterday were about 50° at several stations in the west and north-west, but below 40° in many English localities; in London the thermometer only rose to 37° and at Nottingham only touched 33°.

Rain has fallen at Dungannon, in Ireland and in Norway, the amounts being heavy in the latter country.

PROBABLE CHANGES IN SYSTEM NOW PREVALENT

The large low pressure system on the Atlantic appears likely to continue to extend over our Islands and to cause gales on several parts of our western and northern coasts, and a south-westerly current of wind over the country generally. Rain, with a high temperature, is probable in the west and north, and a considerable increase of temperature elsewhere.

FORECASTS*

For the 24 hours ending at NOON on Thursday, 23rd Nov. 1905.

DISTRICTS.

FORECASTS.

DISTRICTS.

FORECASTS.

- 0 SCOTLAND NORTH
- 1 SCOTLAND EAST
- 2 ENGLAND N.E.
- 3 ENGLAND EAST
- 4 MIDLAND COUNTIES
- 5 ENGLAND SOUTH

South-westerly to Westerly winds, strong generally; a gale in places; mild, squally, some rain.
South-westerly to Westerly winds, moderate or fresh, mild, changeable, some showers.
South-westerly winds becoming general; mild, fine today, less settled to-morrow.

- 6 SCOTLAND WEST
- 7 ENGLAND N.W.
- 8 ENGLAND S.W.
- 9 IRELAND NORTH
- 10 IRELAND SOUTH

Same as Nos. 0 and 1.

South-westerly winds, strong to a gale in many places; mild, changeable, some rain, squally.

WARNINGS

At 9.30 a.m. to-day to districts 0, 1, 6, 7, 9, 10 and part of 8: "HOIST SOUTH CONE."

* The South Cone, point downwards (⌵), means that gales, or strong winds, are probable at first from the Southward (from S.E. round by S to N.W.). Should it appear likely that a gale beginning from between W and N.W. is likely to veer towards N. or N.E., the North Cone is hoisted in preference to the South Cone.
The North Cone, point upwards (⌴), means that gales, or strong winds, are probable at first from the Northward (from N.W. round by N to S.E.). Should it appear likely that a gale beginning from between E. and S.E. is likely to veer towards S. or S.W., the South Cone is hoisted in preference to the North Cone.

* For terms for transmission of Forecasts by Telegraph, see next page.

NOTE: The Sunshine for London given in this Table is recorded on the Tower of the Wesleyan Training College, Westminster: the Sunshine entered to Dungeness is recorded at Littlestone-on-Sea.

* Observations for this column not generally received.

+ Observations received too late for insertion in Charts on next page.

WEATHER CHARTS

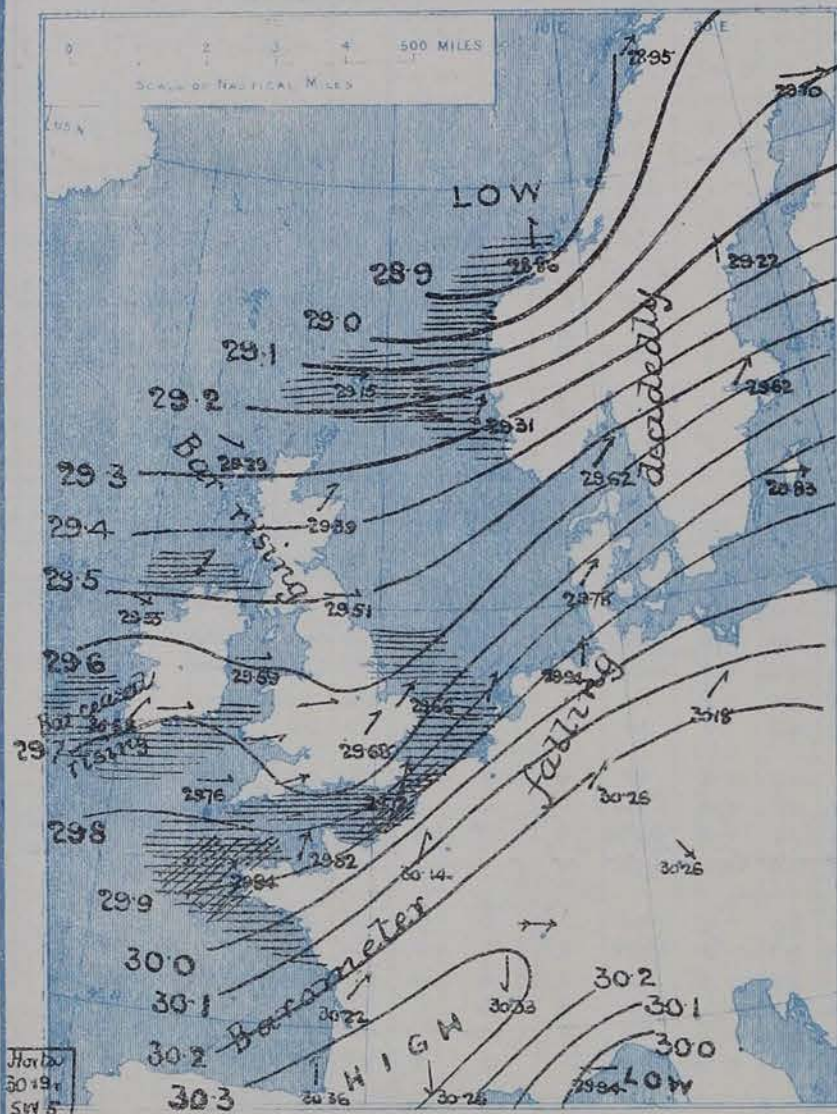

FOR THURSDAY, 23RD NOVEMBER, 1905.

I. BAROMETER, WIND AND SEA. *This Morning.*

BAROMETER—Isobars are drawn for each tenth of an inch.

WIND—Arrows show Directions and Force, flying with the wind.

Force above 10 → Force 5 to 7 → } Calm ☉
Force 8 to 10 → Force 1 to 4 → }
SEA—Rough High

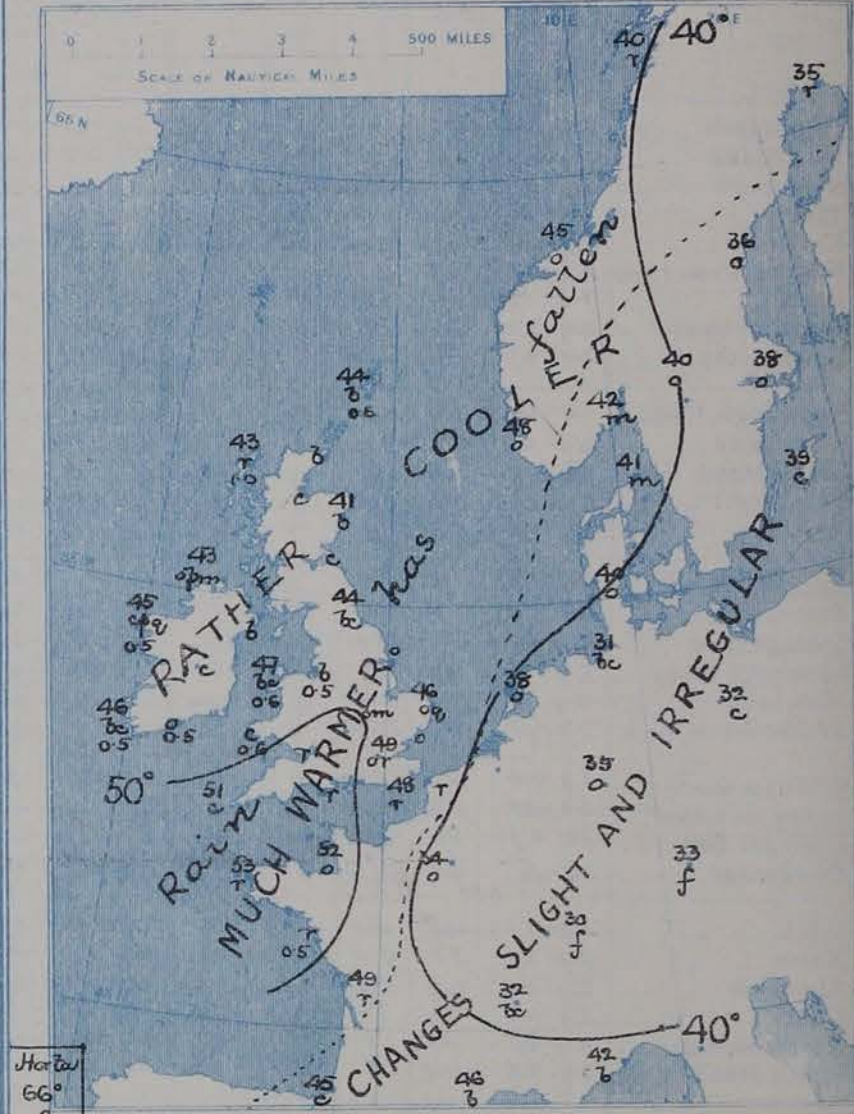

II. TEMPERATURE AND WEATHER. *This Morning.*

TEMPERATURE—Isotherms are drawn for each 10°

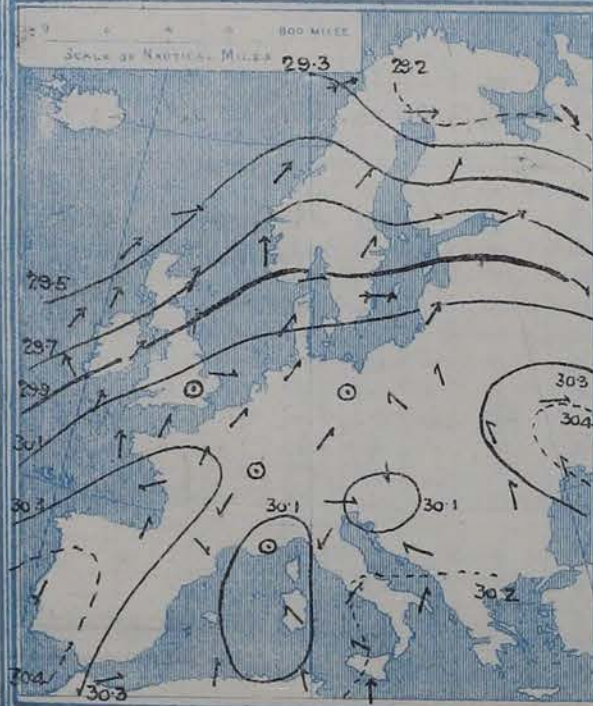

WEATHER—Shown by Letters of the Beaufort Scale (See P. 4.)

RAINFALL—A dotted line separates areas where rain has fallen from those without rain. The fall in past 24 hours when exceeding half an inch is shown thus: 0.6

III. BAROMETER AND WIND

Yesterday morning.

IV. LAST WEEK'S SUNSHINE.

Amount recorded in various districts of the United Kingdom during the week ended Saturday, Nov. 18th, with the percentage of the average duration for the corresponding week.

V. Means of DAILY TEMPERATURE at 8 A.M. for the Two monthly period NOVEMBER-DECEMBER (1871-1900)

GENERAL SITUATION AT 8 A.M.

PRESSURE

Since yesterday morning the centre of a large and deep cyclonic disturbance has travelled north-eastward to a position off the north-west coast of Norway, while some small secondaries have appeared over the United Kingdom. The barometer remains highest 30.3 ins. and upwards, over the Spanish Peninsula and the adjacent portion of France, but has become lowest along the west coast of Norway, where the readings are below 29.0 ins., the lowest value reported being 28.86 ins. at Christiansund. The gradient has become moderate over our islands during the night, but is steep in most continental regions. At Valencia the increase of pressure has ceased since 7 a.m. and the wind at that station has backed slightly.

WIND

The general direction of the wind over the United Kingdom is westerly, and its force moderate or light; on the south and south-east coasts of England, however, it is south-westerly and strong to a moderate gale in force. On the eastern shores of the North Sea and over the South of Scandinavia very strong winds or gales from between South and South-west prevail.

TEMPERATURE

Temperature has risen very quickly over England, and the nearest parts of the continent, fallen a little in Ireland, Scotland, and at several stations in Norway and Sweden. Over these islands it ranges from about 50° over the southern half of England to 41° in the north-east of Scotland and to 40° at Donaghadee. On the continent the highest readings are 53° in Brittany and 49° at Rockfort, and the lowest 32° at Lyons and Berlin and 30° at Belfort.

WEATHER

The sky is temporarily clear in a few localities, but its general condition is very cloudy or entirely overcast; rain is falling in the extreme north of Scandinavia, in the west and north of France, and in various parts of the United Kingdom, while fog prevails at Belfort and Munich.

AND

SEA

The sea is rough or rather rough on nearly all our coasts.

The maximum temperatures recorded over this country yesterday were nearly all above 50°; at Valencia and Hain the thermometer touched 55°. Rain has fallen very generally; at several western and north-western stations the amounts measured were large - 0.86 inch at Pembroke and Holyhead, and 1 inch at Stromoway.

Several hours of bright sunshine were registered on the south and south-east coasts of England, but little elsewhere.

PROBABLE CHANGES IN SYSTEM NOW PREVALENT

The south-westerly to westerly type of pressure distribution appears likely to continue for the present. The cessation of the baric rise and the slightly backing wind at Valencia probably indicate the near approach of another centre of disturbance to these Islands.

FORECASTS*

For the 24 hours ending at NOON on 24th November, 1905.

DISTRICTS.

FORECASTS.

- 0 ∇ SCOTLAND NORTH
- 1 ∇ SCOTLAND EAST
- 2 ∇ ENGLAND N.E.
- 3 ∇ ENGLAND EAST
- 4 MIDLAND COUNTIES
- 5 ∇ ENGLAND SOUTH

Winds varying in direction between West and South, very strong at times on west and south coasts, more moderate in north and east; changeable, mild, rain occasionally.

DISTRICTS.

FORECASTS.

- 6 ∇ SCOTLAND WEST
- 7 ∇ ENGLAND N.W.
- 8 ∇ ENGLAND SW
- 9 ∇ IRELAND NORTH
- 10 ∇ IRELAND SOUTH

Winds varying in direction between West and South, very strong at times on west and south coasts, more moderate in north and east; changeable, mild, rain occasionally.

WARNINGS

At 6.50 p.m. to districts 2, 3, 5, and part of 8, "Hoist South Cone" The signals are still up on all coasts.

* The South Cone, point downwards (∇), means that gales, or strong winds, are probable at first from the Southward (from S.E. round by S. to N.W.). Should it appear likely that a gale beginning from between W. and N.W. is likely to veer towards N. or N.E., the North Cone is hoisted in preference to the South Cone.
The North Cone, point upwards (\Uparrow), means that gales, or strong winds, are probable at first from the Northward (from N.W. round by N. to S.E.). Should it appear likely that a gale beginning from between E. and S.E. is likely to veer towards S. or S.W., the South Cone is hoisted in preference to the North Cone.

SUBSCRIPTIONS both for the Daily and Weekly Weather Reports may be paid, in advance, to the Meteorological Office.

TERMS: For Daily Weather Report, forwarded by Book Post, £1 0 0 per annum.
" Weekly " " " £1 10 0 " " Single Copies, 6d.

Single Copies of the Daily Weather Report (price 1d.) may be obtained after 3 p.m. on the day of issue at the Meteorological Office, and at Messrs. W. H. SMITH & SONS' Bookstalls at the following terminus Railway Stations:—Victoria, Charing Cross, King's Cross, St. Pancras, Euston.

FORECASTS OF WEATHER for one day in advance are drawn up at the Meteorological Office at 11 a.m., and between 7 and 8 p.m. The latest forecast can be had by Reply Telegram, on paying at any Post Office in the United Kingdom Sixpence in addition to the cost of the inquiry and Reply Telegram. Information as to the Terms on which Forecasts can be sent, daily, for a long or short period, may be obtained on application to the Meteorological Office, 63, Victoria Street, S.W., either personally or by post.

* At Oxford the observations are taken at 8 p.m.

DAILY WEATHER REPORT

for 8 a.m. on *Friday, 24th November* 1905.

Issued by the METEOROLOGICAL OFFICE, 68, Victoria Street, London. W. N. SHAW, Director.

NOTE: The Sunshine for London given in this Table is recorded on the Tower of the Wesleyan Training College, Westminster; the Sunshine entered to Dungeness is recorded at Littlestone-on-Sea.

* Observations for this column not generally received.

† Observations received too late for insertion in Charts on next page.

WEATHER CHARTS

FOR FRIDAY, 24TH NOVEMBER, 1905.

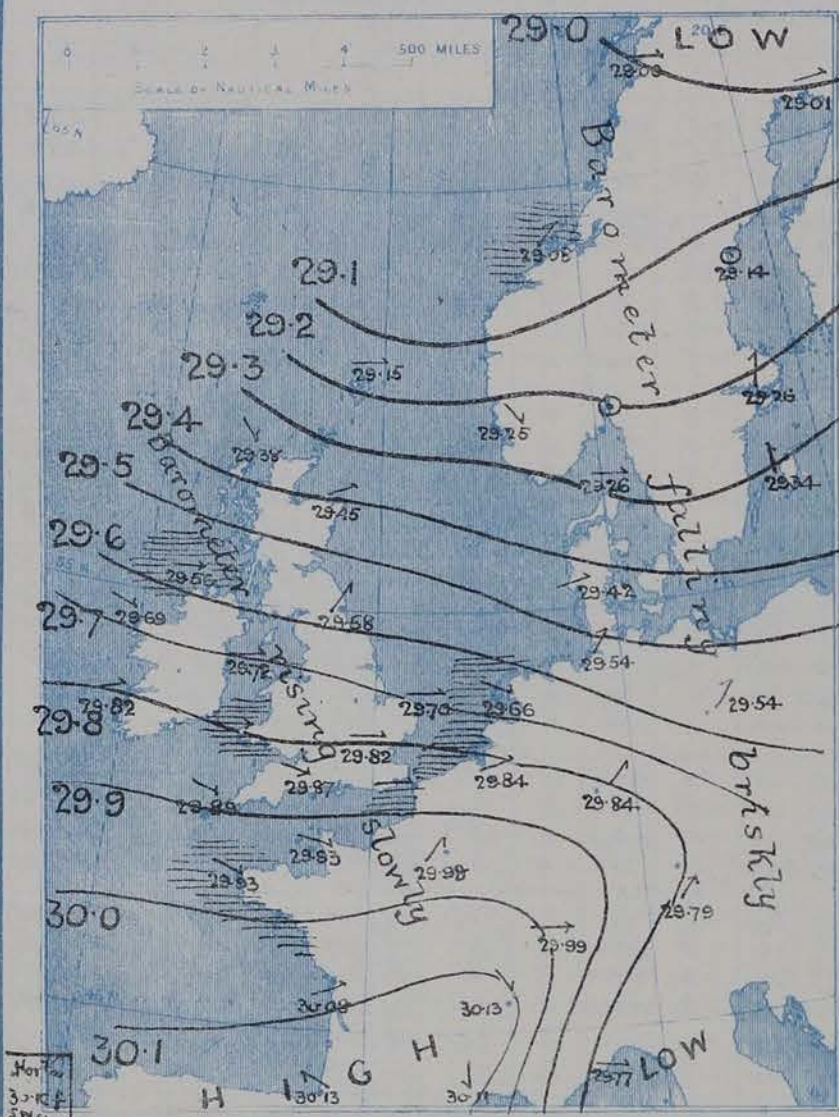

I. BAROMETER, WIND AND SEA. *This Morning.*

BAROMETER—Isobars are drawn for each tenth of an inch.

WIND—Arrows show Directions and Force, flying with the wind.

Force above 10 → : Force 5 to 7 → : } Calm ☉
Force 8 to 10 → : Force 1 to 4 → :

SEA—Rough → High →

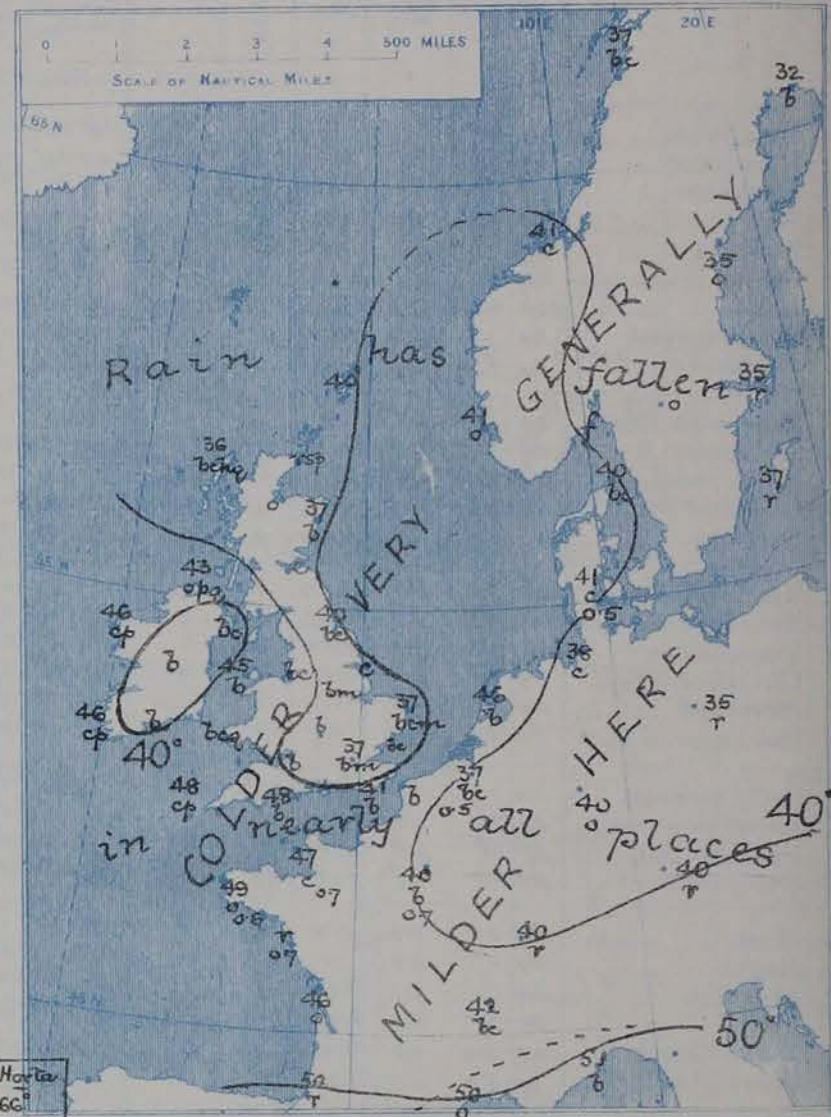

II. TEMPERATURE AND WEATHER. *This Morning.*

TEMPERATURE—Isotherms are drawn for each 10°.

WEATHER—Shown by Letters of the Beaufort Scale. (See P. 4.)

RAINFALL—A dotted line separates areas where rain has fallen from those without rain. The fall in past 24 hours when exceeding half an inch is shown thus -0.6

III. BAROMETER AND WIND

Yesterday morning.

IV. RAINFALL IN 1905.

Total Amount recorded in various districts of the United Kingdom in the 46 weeks ended Saturday, Nov 18th, with the percentage of the average amount for the corresponding period.

V. Means of DAILY TEMPERATURE at 8 A.M. for the Two monthly period NOVEMBER-DECEMBER (1871-1900)

GENERAL SITUATION AT 8 A.M.

PRESSURE

The barometer is now rising over this country and the adjacent parts of the continent, but is falling over Germany and the Baltic. The readings now range from 30.1 ins. and upwards over the Spanish Peninsula and the southwest of France to 29.15 ins. at Lumburg Head, and to 29.00 ins. in Lapland. The gradient has become moderate or slight throughout the western half of Europe.

WIND

TEMPERATURE

WEATHER

AND

SEA

The Westerly winds which prevail over the United Kingdom and its neighbourhood blow freshly in a few exposed places but are generally moderate to light in force. Over Scandinavia and Germany the direction is more Southerly, but except at Munich, where a moderate gale is reported, the wind has little strength. Temperature has fallen in most regions, but risen over Germany, the Low Countries, and over the greater part of France. Over Central England the change has been very brisk, and the thermometer now stands at the freezing point at Bath. On the northeast coast of England the reading is about 40°; on the west coast of Ireland 46°, and on the west and south coasts of England 48°. On the Continent the values range from 32° at Haparanda and 35° at Stockholm and Berlin to about 50° in the south of France. Showers of rain are falling in the north and west of Ireland and at Feilly, and of hail or sleet in the north and northwest of Scotland, while steady rain is falling over the Baltic, at Berlin, Munich, and in various parts of France. Over our area generally, however, the weather is fair or fine. The sea is rather rough off the north of Ireland, Pembroke, the Skelder, Cape Gris Nez and the west coast of Brittany, moderate to smooth elsewhere.

The maximum temperatures recorded over our Islands yesterday were above 50° in many places. Rain was experienced in nearly all parts of this country and the western and northern regions of the Continent, the heaviest falls being 0.5 in. at Fano, and 0.7 in. at Jersey, Lorient and Paris. At the majority of stations there was no bright sunshine, but a few hours were recorded at some places in the north and northeast and at Birt Castle.

PROBABLE CHANGES IN SYSTEM NOW PREVALENT

The depression over Northern Europe appears to be travelling away eastwards and the Spanish anticyclone to be expanding northwards. As there are no indications of the immediate approach of any further disturbances from the Atlantic it is likely that the general character of the weather over these Islands will be fair during the ensuing 24 hours.

FORECASTS*

For the 24 hours ending at NOON on 25TH NOVEMBER, 1905.

DISTRICTS.

FORECASTS.

0	SCOTLAND NORTH	Moderate or fresh winds between N.W. and S.W.; fair as a whole, but some showers; rather cold.
	SCOTLAND EAST	
2	ENGLAND N.E.	W ^{ly} and SW ^{ly} winds, light or moderate; mostly fair or fine; temperature not far from normal.
3	ENGLAND EAST	
4	MIDLAND COUNTIES	
5	ENGLAND SOUTH	

DISTRICTS.

FORECASTS.

6	SCOTLAND WEST	Same as Nos. 0 and 1.
7	ENGLAND N.W.	Same as Nos. 2 to 5.
8	ENGLAND SW	Moderate or fresh winds, mainly W ^{ly} ; fair as a whole, but some showers; moderate temperature.
9	IRELAND NORTH	Moderate or fresh winds between S.W. and N.W.; some showers, otherwise fair; moderate temperature.
10	IRELAND SOUTH	

WARNINGS

At 9.30 am today to Districts 2, 3, 5 and part of 8, "LOWER CONE."

Note. The South Cone, point downwards (⌵), means that gales, or strong winds, are probable at first from the Southward (from S.E. round by S. to N.W.). Should it appear likely that a gale beginning from between W and N.W. is likely to veer towards N or N.E. the North Cone is hoisted in preference to the South Cone.
The North Cone, point upwards (⌴), means that gales, or strong winds, are probable at first from the Northward (from N.W. round by N. to S.E.). Should it appear likely that a gale beginning from between E and S.E. is likely to veer towards S. or S.W., the South Cone is hoisted in preference to the North Cone.

* For terms for transmission of Forecasts by Telegraph, see next page.

SUBSCRIPTIONS both for the Daily and Weekly Weather Reports may be paid, in advance, to the Meteorological Office.

TERMS: For Daily Weather Report, forwarded by Book Post, £1 0 0 per annum.
" Weekly " " " £1 10 0 " " Single Copies, 6d.

Single Copies of the Daily Weather Report (price 1d.) may be obtained after 3 p.m. on the day of issue at the Meteorological Office, and at Messrs. W. H. SMITH & SONS' Bookstalls at the following terminus Railway Stations:—Victoria, Charing Cross, King's Cross, St. Pancras, Euston.

FORECASTS OF WEATHER for one day in advance are drawn up at the Meteorological Office at 11 a.m., and between 7 and 8 p.m. The latest forecast can be had by Reply Telegram, on paying at any Post Office in the United Kingdom Sixpence in addition to the cost of the inquiry and reply Telegram. Information as to the Terms on which Forecasts can be sent, daily, for a long or short period, may be obtained on application to the Meteorological Office, 63, Victoria Street, S.W., either personally or by post.

* At Oxford the observations are taken at 8 p.m.

DAILY WEATHER REPORT

for 8 a.m. on *Saturday, 25th November* 1905.

Issued by the METEOROLOGICAL OFFICE, 63, Victoria Street, London. W. N. SHAW, Director.

NOTE: The Sunshine for London given in this Table is recorded on the Tower of the Wesleyan Training College, Westminster; the Sunshine entered to Dungeness is recorded at Littlestone-on-Sea.

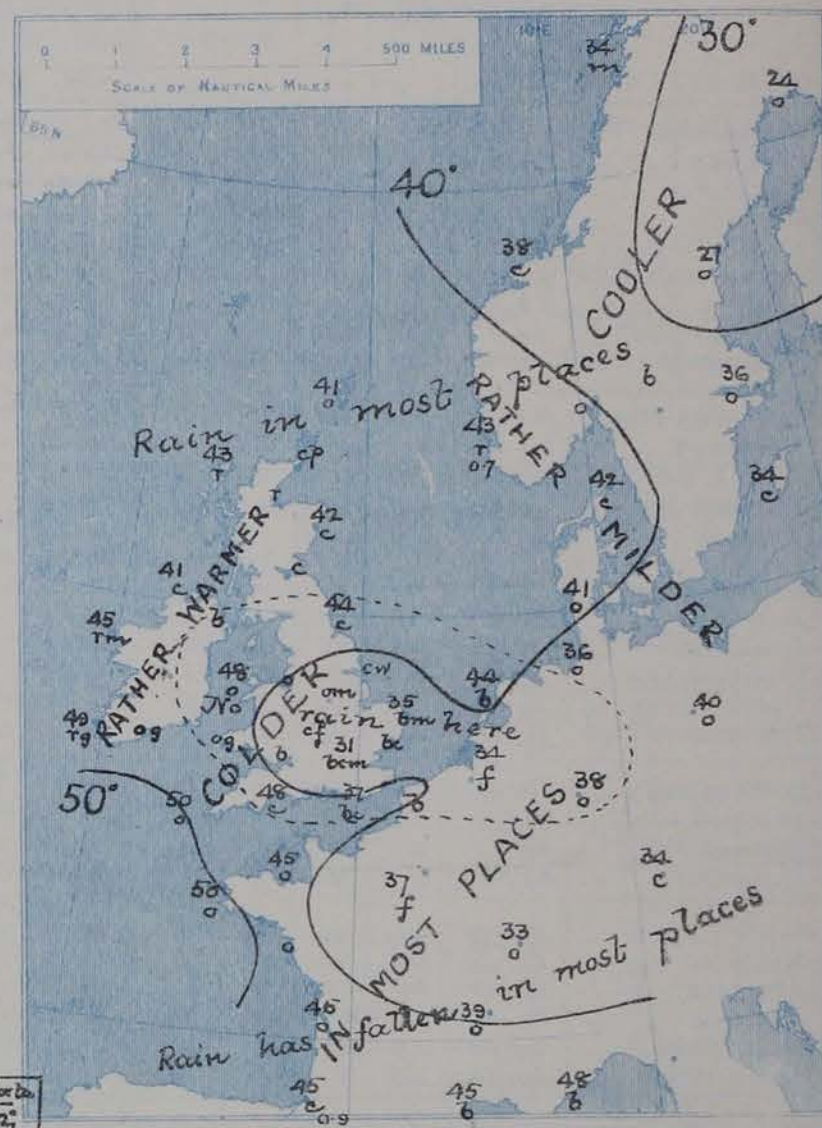

* Observations for this column not generally received.

+ Observations received too late for insertion in Charts on next page.

FOR SATURDAY, 25TH NOVEMBER, 1905.

SEA—Rough High 

RAINFALL — { A dotted line separates areas where rain has fallen from those without rain. The fall in past 24 hours when exceeding half an inch is shown thus - 0.6

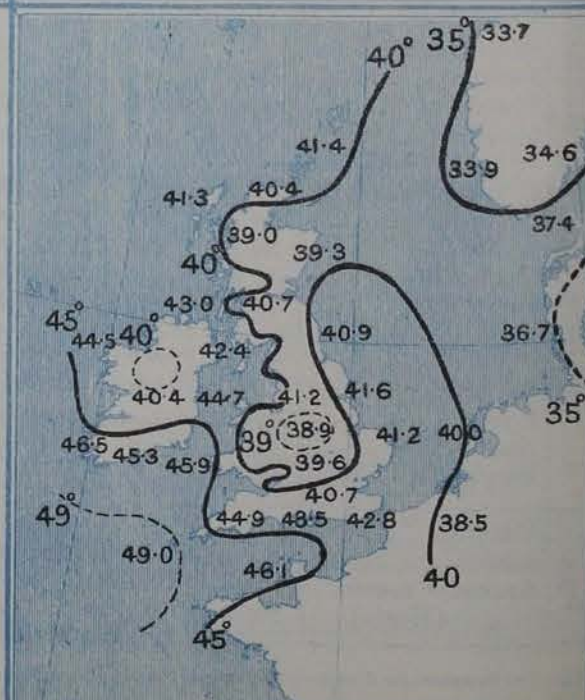

Yesterday morning.

Total Duration recorded
in various districts of the United Kingdom
in the **46** weeks ended Saturday **18th Nov^r**
with the percentage of the average duration
for the corresponding period.

V. Means of DAILY TEMPERATURE
at 8 A.M. for the Two monthly period
NOVEMBER-DECEMBER (1871-1900)

GENERAL SITUATION AT 8 A.M.

PRESSURE

The barometer is still lowest, less than 29.1 ins., over Lapland and the north of Scandinavia, but it is now falling quickly on our own west and southwest coasts, and is already as low as 29.42 ins. at Blackhead Point. The highest pressure, 30.0 ins. and upwards, is found in a band extending from the Spanish Peninsula to South Germany.

WIND

TEMPERATURE

WEATHER

AND

SEA

The wind has backed to the Southward at nearly all the western stations and is increasing quickly in force. Over the western half of Great Britain it is at present Southwesterly and light or moderate in force, while over the North Sea, Denmark, and Scandinavia it is Westerly; at Skudesnaes it blows a moderate gale. Temperature has risen in Scotland and most parts of Ireland and Wales, fallen or changed little and irregularly elsewhere. Over this country it ranges from 50° or 49° on the southwest coasts to 42° at Wick, 35° at Great Yarmouth and to 31° and 30° respectively in London and at Bath. The highest Continental reading is 48° at Perpignan, and the lowest 24° at Haparanda. Dull, rainy weather has set in in Ireland and at some Scotch stations and the sky is very cloudy or quite overcast in most other parts of the United Kingdom; over our southeastern counties, however, the weather is fair or fine. Much cloud prevails over the western countries of the Continent, fog is reported at Paris and Brussels, and rain in the southwest of Norway. The sea is rather rough on most of our southwestern coasts, slight or smooth generally.

The maximum temperatures recorded over our Islands yesterday were again 50° or a little above at many southern and western stations. Frost occurred during the night over the inland districts of England. Rain has fallen in various parts of this country and in many Continental localities, the largest amounts being 0.4 in. at Stromway, 0.7 in. at Skudesnaes, and 0.9 in. at Biarritz. Bright sunshine was very abundant generally, several stations on our south and southeast coasts having recorded 7 hours or more.

PROBABLE CHANGES IN SYSTEM NOW PREVALENT

The depression which is approaching Ireland appears to be of considerable importance, and is likely to cause strong winds or gales from between South and West on our west and southwest coasts and freshening winds over the country generally. Mild, rainy weather is probable in all districts.

FORECASTS*

For the 24 hours ending at NOON on 26TH NOVEMBER, 1905.

DISTRICTS.

FORECASTS.

- 0 { SCOTLAND NORTH
- 1 { SCOTLAND EAST
- 2 { ENGLAND N.E.
- 3 { ENGLAND EAST
- 4 { MIDLAND COUNTIES
- 5 { ENGLAND SOUTH

S^W and S.W.^W to W^W winds, becoming fresh or strong in exposed places. Fair, then dull, with occasional rain; temperature rising.

DISTRICTS.

FORECASTS.

- 6 { SCOTLAND WEST
- 7 { ENGLAND N.W.
- 8 { ENGLAND S.W.
- 9 { IRELAND NORTH
- 10 { IRELAND SOUTH

Same as Nos. 0 to 5.

Strong winds or gales from between S. and W.; squally, rainy; mild.

WARNINGS

At 9.30 a.m. today to Districts 7, 8, 9 and 10, "HOIST SOUTH CONE".

Y.C. - The South Cone, point downwards (⌵), means that gales, or strong winds, are probable at first from the Southward (from S.E. round by S. to N.W.). Should it appear likely that a gale beginning from between W. and N.W. is likely to veer towards N. or N.E., the North Cone is hoisted in preference to the South Cone.
The North Cone, point upwards (⌴), means that gales, or strong winds, are probable at first from the Northward (from N.W. round by N. to S.E.). Should it appear likely that a gale beginning from between E. and S.E. is likely to veer towards S. or S.W., the South Cone is hoisted in preference to the North Cone.

* For terms for transmission of Forecasts by Telegraph, see next page.

WEATHER CHARTS

FOR Sunday, 26th November, 1905.

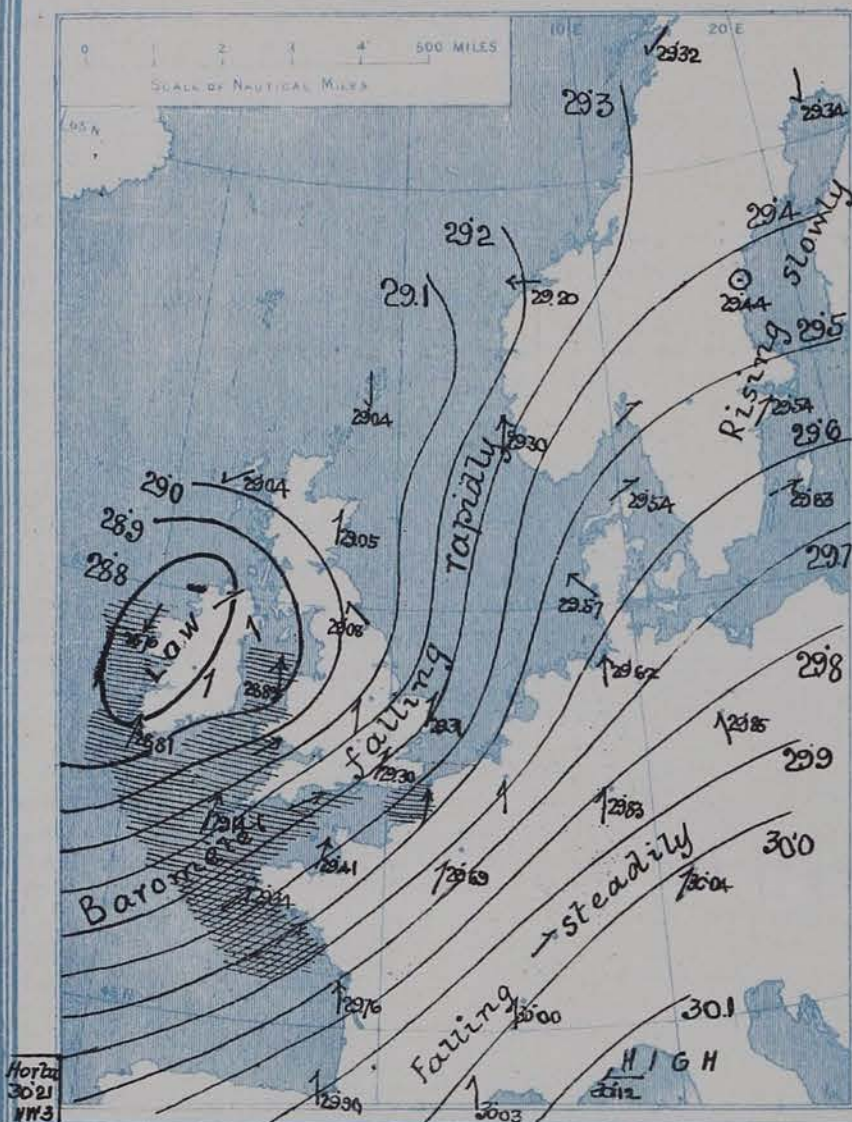

I. BAROMETER, WIND AND SEA. This Morning.

BAROMETER.—Isobars are drawn for each tenth of an inch.

WIND.—Arrows show Directions and Force, flying with the wind.

Force above 10 → Force 5 to 7 → } Calm ○
Force 8 to 10 → Force 1 to 4 →

SEA.—Rough High

II. TEMPERATURE AND WEATHER. This Morning.

TEMPERATURE.—Isotherms are drawn for each 10°

WEATHER.—Shown by Letters of the Beaufort Scale. (See P. 4.)

RAINFALL.—A dotted line separates areas where rain has fallen from those without rain. The fall in past 24 hours when exceeding half an inch is shown thus - 0.6

III. BAROMETER AND WIND

Yesterday morning.

IV. ACCUMULATED TEMPERATURE ABOVE 42°.

Amount recorded in various districts of the United Kingdom during the 46 weeks ended Nov 18th with the percentage of the average for the corresponding period.

Accumulated values are expressed in Day-Degrees—a "Day Degree" signifying 1° continued for 24 hours, or any other number of degrees for an inversely proportional number of hours.

V. Means of DAILY TEMPERATURE

at 8 A.M. for the Two monthly period

NOVEMBER-DECEMBER (1871-1900.)

GENERAL SITUATION AT 8 A.M.

PRESSURE

A deep cyclonic disturbance which has appeared off the northwest of Ireland is causing a steep gradient over England, France, and the North Sea. Pressure ranges from 28.81 ins. at Valencia and 28.84 ins. at Donaghadee to 29.62 ins. at Buchhaven, 29.90 ins. at Biarritz and 30.12 ins. at Nice. Over Scotland and Scandinavia the gradient is as yet slight.

WIND

TEMPERATURE

WEATHER

AND

SEA

Strong S.W.² or S.² winds prevail in the region of steep gradient mentioned above; from Holyhead a gale is reported. At Blackrod Point the wind has shifted to N.E., indicating that the centre of low pressure lies to the eastward of this station. Over Scotland the wind is light and variable; at Stromoway it has backed to N.N.E. The weather is generally dull and unsettled and it is only in the extreme east and south of our area that we find it fair. Rain and squalls are reported from many stations both at home and abroad. Temperature is exceedingly mild over England and France, the readings being frequently above 50°. Over Ireland and Scotland a slight fall of temperature has occurred. The sea is rough or rather rough in the Irish sea, the English Channel and on our western coasts; on our eastern and northern coasts it is moderate or slight.

During the previous 24 hours rain fell in almost all parts of the British Isles, in Ireland the totals were large, exceeding 1 in. at Valencia and Blackrod Point. Practically no bright sunshine was experienced. Temperature rose rapidly and became very mild; the minima in the south of England were the readings taken at 8 am yesterday morning; 55° was reached during the day at both Bath and Jersey.

PROBABLE CHANGES IN SYSTEM NOW PREVALENT

- 10  IRELAND SOUTH

None issued.

WARNINGS

At 3.15 pm yesterday to District 5, and at 9.40 am today to Districts 0, 1, 2, 3 and 6, "HOIST SOUTH CONE". The Signals are now up on all coasts.

*Note—The South Cone, point downwards () , means that gales, or strong winds, are probable, at first from the Southward (from S.E. round by S to N.W.). Should it appear likely that a gale beginning from between W and N.W. is likely to veer towards N. or N.E., the North Cone is hoisted in preference to the South Cone. The North Cone, point upwards () , means that gales, or strong winds, are probable, at first from the Northward (from N.W. round by N to S.E.). Should it appear likely that a gale beginning from between E and S.E. is likely to veer towards S. or S.W., the South Cone is hoisted in preference to the North Cone.

WEATHER CHARTS

FOR Monday, 27th November, 1905.

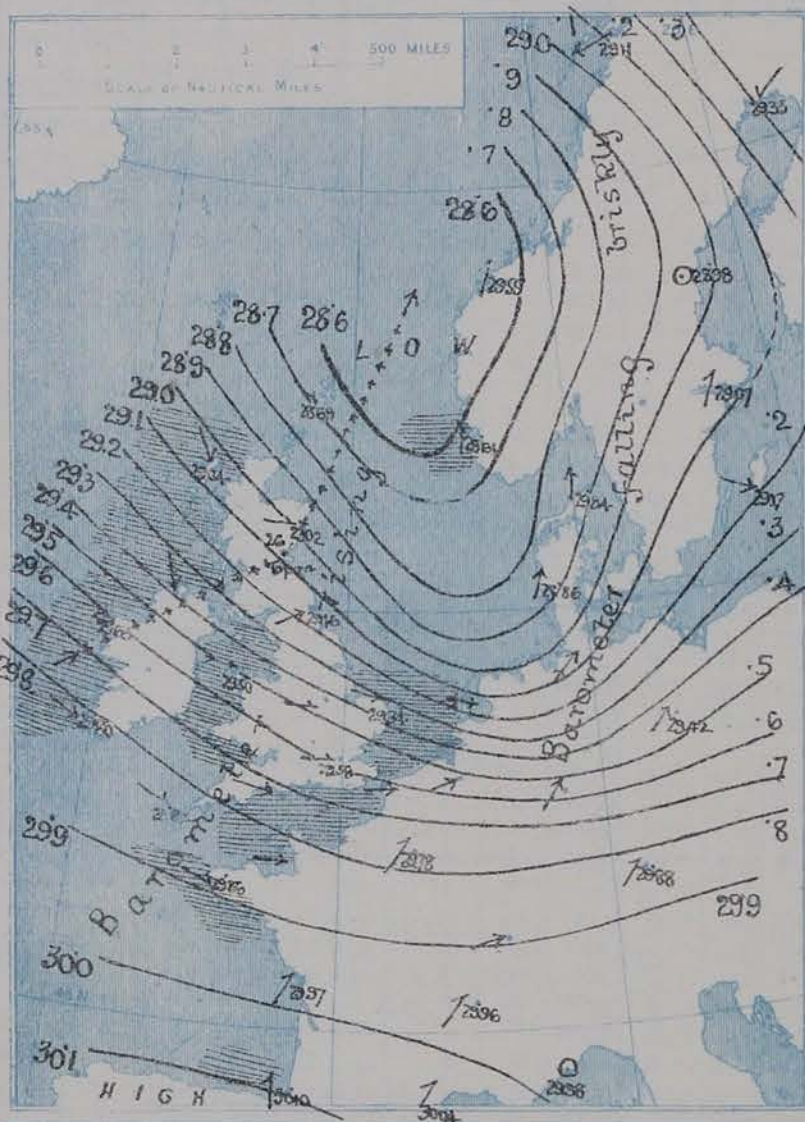

I. BAROMETER, WIND AND SEA. This Morning.

BAROMETER—Isobars are drawn for each tenth of an inch.

WIND—Arrows show Directions and Force, flying with the wind.

Force above 10 — Force 5 to 7 — } Calm ☉
Force 8 to 10 — Force 1 to 4 — }

SEA—Rough High

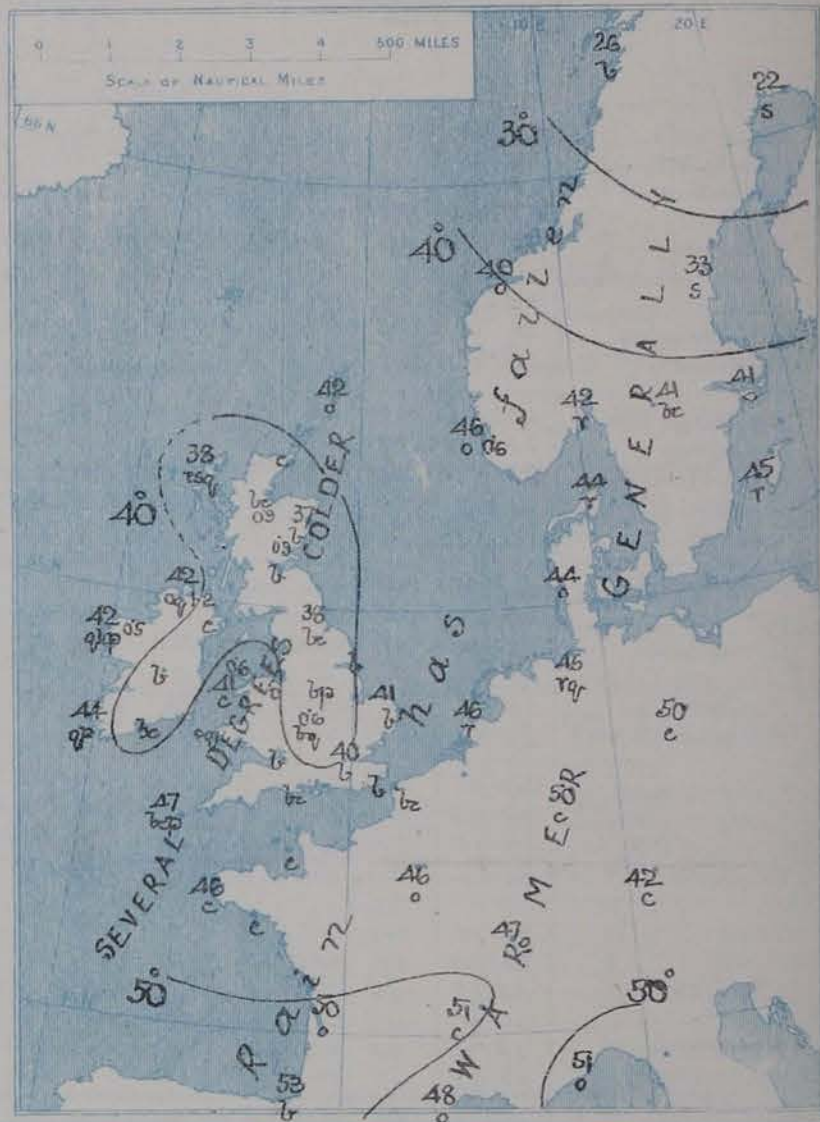

II. TEMPERATURE AND WEATHER. This Morning.

TEMPERATURE—Isotherms are drawn for each 10°.

WEATHER—Shown by Letters of the Beaufort Scale. (See P. 4.)

RAINFALL—A dotted line separates areas where rain has fallen from those without rain. The fall in past 24 hours when exceeding half an inch is shown thus - 0.6

III. BAROMETER AND WIND

Yesterday morning.

IV. ACCUMULATED TEMPERATURE ABOVE 42°.

Amount recorded in various districts of the United Kingdom during the week ended SAT. 18th NOV. with the percentage of the average for the corresponding week.

Accumulated values are expressed in Day-Degrees—a "Day Degree" signifying 1° continued for 24 hours, or any other number of degrees for an inversely proportional number of hours.

V. Means of DAILY TEMPERATURE

at 8 A.M. for the Two monthly period

NOVEMBER-DECEMBER (1871-1900)

GENERAL SITUATION AT 8 A.M.

PRESSURE

The large depression of yesterday has travelled northeastwards, its central area, in which readings are below 28.6 ins., being at present situated off the west of Norway. In these Islands and France the barometer is at present rising, and over the North Sea, the Netherlands and North Germany the gradient is very steep; to the eastward of the North Sea the mercury continues to fall briskly. The highest pressures, 30.1 ins. and upwards, are found over the Spanish Peninsula.

WIND

TEMPERATURE

WEATHER

AND

SEA

A cyclonic circulation of wind is reported over Western Europe generally. In these Islands there is a strong current from West or Northwest (with a gale in the Irish Sea), but in France, Germany and Denmark, the wind draws into Southwest, while in the north of Scandinavia it is Easterly. At the mouth of the Elbe the South-westerly wind blows with the force of a strong gale. The shift of wind in these Islands to West and Northwest has been accompanied by a general fall of temperature to a point slightly below the average. Over a considerable portion of the country the readings are now below 40°, the lowest reported being 35° at Nairn. At many of the French and German stations the thermometer stands at or slightly above 50°, but with the Easterly wind in the north of Scandinavia sharp frost is reported. The weather is fine over the greater part of the United Kingdom, but showery at a few places in the west and northwest, with sleet at Stornoway. At the Continental stations the sky is mostly cloudy or overcast, with rain in Denmark and Holland, and snow over the Gulf of Bothnia. The sea is rough or rather rough on all but our east coasts.

In the course of yesterday the thermometer rose to between 50° and 55° over nearly the whole of England and the south of Ireland, and to 56° in London and at Margate; in the extreme north of Scotland it did not reach 45°. Very little bright sunshine was recorded in any district; at many places in the east and south there was none. Rain has fallen over Western Europe generally, - heavily in the northern parts of Ireland and Scotland.

PROBABLE CHANGES IN SYSTEM NOW PREVALENT

The large depression now lying off the Norwegian coasts will continue to travel away in a northeasterly direction, and the winds in these Islands are likely to moderate in force. The barometer continues to rise in the west, but with the present distribution of pressure it is probable that within the ensuing 24 hours a new disturbance will begin to show itself off the Irish coasts.

FORECASTS*

For the 24 hours ending at NOON on 28TH November, 1905.

| 7 | ENGLAND N.W. | |
| 8 | ENGLAND S.W. | |
| 9 | IRELAND NORTH | |
| 10 | IRELAND SOUTH | |
| WARNINGS | | The Warning Signals are still flying in Districts 0, 3, 5 and 6. |

* The South Cone, point downwards (☐), means that gales, or strong winds, are probable, at first from the Southward (from S.E. round by S. to N.W.). Should it appear likely that a gale beginning from between W. and N.W. is likely to veer towards N. or N.E., the North Cone is hoisted in preference to the South Cone.
The North Cone, point upwards (☐), means that gales, or strong winds, are probable, at first from the Northward (from N.W. round by N. to S.E.). Should it appear likely that a gale beginning from between E. and S.E. is likely to veer towards S. or S.W., the South Cone is hoisted in preference to the North Cone.

* For terms for transmission of Forecasts by Telegraph, see next page.

SUBSCRIPTIONS both for the Daily and Weekly Weather Reports may be paid, in advance, to the Meteorological Office.

TERMS: For Daily Weather Report, forwarded by Book Post, £1 0 0 per annum.
" Weekly " " " £1 10 0 " Single Copies, 6d.

Single Copies of the Daily Weather Report (price 1d.) may be obtained after 3 p.m. on the day of issue at the Meteorological Office, and at Messrs. W. H. SMITH & SONS' Bookstalls at the following terminus Railway Stations:—Victoria, Charing Cross, King's Cross, St. Pancras, Euston.

FORECASTS OF WEATHER for one day in advance are drawn up at the Meteorological Office at 11 a.m., and between 7 and 8 p.m. The latest forecast can be had by Reply Telegram, on paying at any Post Office in the United Kingdom Sixpence in addition to the cost of the inquiry and reply Telegram. Information as to the Terms on which Forecasts can be sent, daily, for a long or short period, may be obtained on application to the Meteorological Office, 63, Victoria Street, S.W., either personally or by post.

* At Oxford the observations are taken at 8 p.m.

DAILY WEATHER REPORT

for 8 a.m. on Tuesday, 28th November 1905.

Issued by the METEOROLOGICAL OFFICE, 63, Victoria Street, London. W. N. SHAW, Director.

WEATHER CHARTS

FOR *Tuesday, 28th November,*

1905.

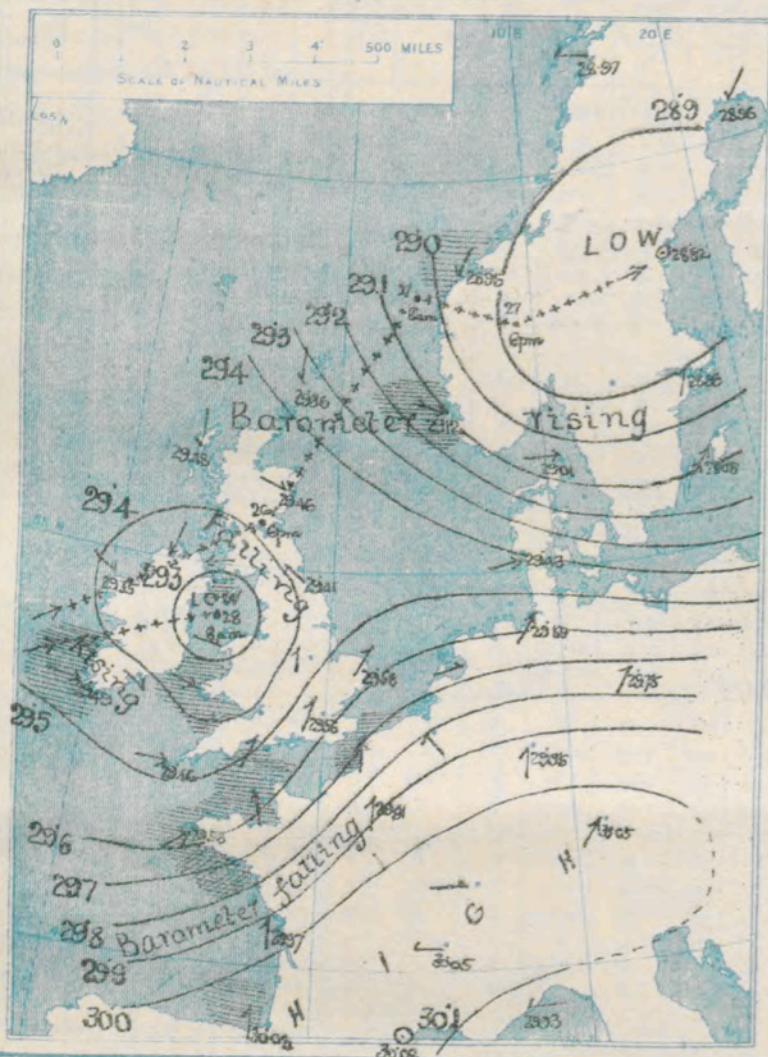

I. BAROMETER, WIND AND SEA. *This Morning.*

BAROMETER.—Isobars are drawn for each tenth of an inch.

WIND.—Arrows show Directions and Force, flying with the wind.

Force above 10 → : Force 5 to 7 → : Calm ☉
Force 8 to 10 → : Force 1 to 4 →

SEA.—Rough High

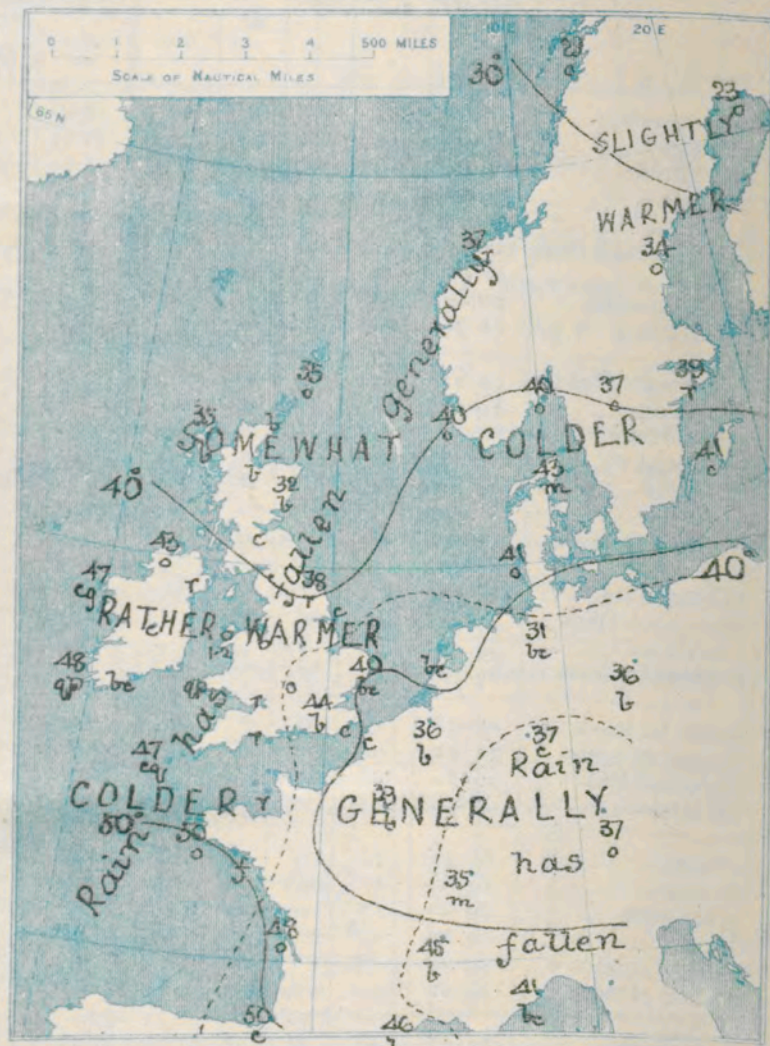

II. TEMPERATURE AND WEATHER. *This Morning.*

TEMPERATURE.—Isotherms are drawn for each 10°.

WEATHER.—Shown by Letters of the Beaufort Scale. (See P. 4.)

RAINFALL.—A dotted line separates areas where rain has fallen from those without rain. The fall in past 24 hours when exceeding half an inch is shown thus - 0.6

III. BAROMETER AND WIND

Yesterday morning.

IV. EXTREMES OF TEMPERATURE

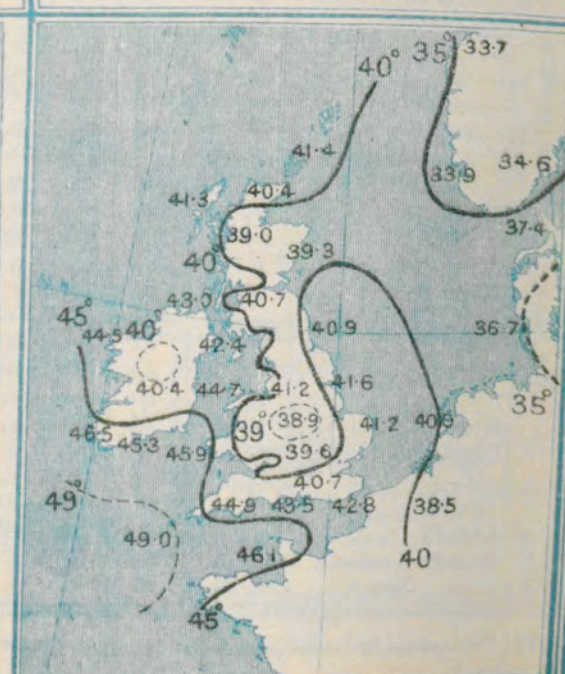

recorded

in various districts of the United Kingdom during the week ended Sat^y 25th Nov.

V. Means of DAILY TEMPERATURE

at 8 A.M. for the Two monthly period NOVEMBER-DECEMBER (1871-1900)

GENERAL SITUATION AT 8 A.M.

PRESSURE

The large cyclonic disturbance of the past two days is travelling E.^{wd} across Northern Europe, the lowest pressures (apparently below 28.8 ins.) being at present found over Central Sweden. In the course of the night a small secondary depression of moderate intensity has advanced over the Irish Sea from the W.^{wd}, the minimum readings of the barometer in this system being below 29.3 ins. A steep gradient for W.^{wd} to N.W.^{wd} winds prevail over Norway, Denmark and the Baltic, and a rather steep gradient for S.W.^{wd} winds over the Channel and the north of France.

WIND

Two distinct circulations of air are shown round the low pressure systems noticed above, and in the regions embraced by the steep barometric gradients the wind is strong to a gale in force, - from points between S.W. and N.W. In the north of Scotland there is a light breeze from the N.^{wd}, while in the south of France calms or light E.^{wd} airs are reported. Temperature has risen over England and Ireland, and is now above 45° at most of our southern stations.

TEMPERATURE

In all other parts of our area the thermometer has fallen, slight frost being now reported in Scotland, and sharp frost in the north of Scandinavia. At Paris the thermometer stands at 33°, and at Brussels and Berlin at 36°. Cloudy, unsettled weather prevails in the neighbourhood of each low pressure system, rain being reported at several of our own western stations, as well as in various parts of Scandinavia. Outside those regions the weather is at present fair. The sea is rough on our own western and southern coasts, and rather rough on the shores of the Continent.

WEATHER

AND

SEA

The maximum temperatures recorded over these Islands yesterday were lower than those of the previous day, 50° being reached only at coast stations in the south and southwest; in many other parts of the Kingdom the thermometer failed to touch 45°. More than 6 hours of bright sunshine were recorded at many of the English stations, and as many as 7.7 hours at Folkestone. Heavy rain has again fallen in the west, the largest amount reported being 1.2 ins. at Holyhead. Thunder occurred at Jersey yesterday.

PROBABLE CHANGES IN SYSTEM NOW PREVALENT

The depression now lying over the Irish Sea will travel E.^{wd} across the north of England and the North Sea. Some rain is probable today in most parts of the country, but in the rear of the disturbance a cool N.W.^{wd} wind will set in, with a temporary improvement in the weather and a lower temperature. The general conditions are likely to continue very unsettled.

FORECASTS*

For the 24 hours ending at NOON on 29TH November, 1905.

DISTRICTS.

FORECASTS.

0	{ SCOTLAND NORTH	{ N. ^{wd} winds, light or moderate; fair; cold.
	{ SCOTLAND EAST	{ Variable breezes, finally N.W. ^{wd} ; some rain at first, then fair. Becoming colder.
2	{ ENGLAND N.E.	{ S.W. ^{wd} to N.W. ^{wd} winds, moderate or fresh; some rain at first, then fair.
3	{ ENGLAND EAST	{ Rather cooler.
4	{ MIDLAND COUNTIES	{ S.W. ^{wd} to W. ^{wd} or N.W. ^{wd} winds, strong on coast; some rain at first, then fair.
5	{ ENGLAND SOUTH	{ Becoming cooler.

DISTRICTS.

FORECASTS.

6	{ SCOTLAND WEST	Same as Nos. 0 & 1.
7	{ ENGLAND N.W.	{ N.W. ^{wd} winds, strong in places;
8	{ ENGLAND SW	{ squally and showery at first,
9	{ IRELAND NORTH	{ Then fair. Becoming cooler.
10	{ IRELAND SOUTH	

WARNINGS

{ At 7 p.m. yesterday to Districts 5 and
7 to 10, "Hoist South Cone".

Note.—The South Cone, point downwards (⌴), means that gales, or strong winds, are probable, at first from the Southward (from S.E. round by S. to N.W.) to the South Cone. Should it appear likely that a gale beginning from between W. and N.W. is likely to veer towards N. or N.E., the North Cone is hoisted in preference. The North Cone, point upwards (⌴), means that gales, or strong winds, are probable, at first from the Northward (from N.W. round by N. to S.E.) to the North Cone. Should it appear likely that a gale beginning from between E. and S.E. is likely to veer towards S. or S.W., the South Cone is hoisted in preference.

SUBSCRIPTIONS both for the Daily and Weekly Weather Reports may be paid, in advance, to the Meteorological Office.

TERMS: For Daily Weather Report, forwarded by Book Post, £1 0 0 per annum.
" Weekly " " " £1 10 0 " " Single Copies, 6d.

Single Copies of the Daily Weather Report (price 1d.) may be obtained after 3 p.m. on the day of issue at the Meteorological Office, and at Messrs. W. H. SMITH & SONS' Bookstalls at the following terminus Railway Stations:—Victoria, Charing Cross, King's Cross, St. Pancras, Euston.

FORECASTS OF WEATHER for one day in advance are drawn up at the Meteorological Office at 11 a.m., and between 7 and 8 p.m. The latest forecast can be had by Reply Telegram, on paying at any Post Office in the United Kingdom Sixpence in addition to the cost of the inquiry and reply Telegram. Information as to the Terms on which Forecasts can be sent, daily, for a long or short period, may be obtained on application to the Meteorological Office, 63, Victoria Street, S.W., either personally or by post.

* At Oxford the observations are taken at 8 p.m.

DAILY WEATHER REPORT

for 8 a.m. on Wednesday, 29th November 1905.

Issued by the METEOROLOGICAL OFFICE, 63, Victoria Street, London. W. N. SHAW, Director.

NOTE: The Sunshine for London given in this Table is recorded on the Tower of the Wesleyan Training College, Westminster; the Sunshine entered to Dungeness is recorded at Littlestone-on-Sea.

* Observations for this column not generally recorded.

+ Observations received too late for insertion in Charts on next page.

WEATHER CHARTS

FOR Wednesday, 29th November, 1905.

I. BAROMETER, WIND AND SEA. This Morning.

BAROMETER—Isobars are drawn for each tenth of an inch.

WIND—Arrows show Directions and Force, flying with the wind.

Force above 10 ——— Force 5 to 7 ——— } Calm ☉
Force 8 to 10 ——— Force 1 to 4 ———

SEA—Rough ——— High ———

II. TEMPERATURE AND WEATHER. This Morning.

TEMPERATURE—Isotherms are drawn for each 10°.

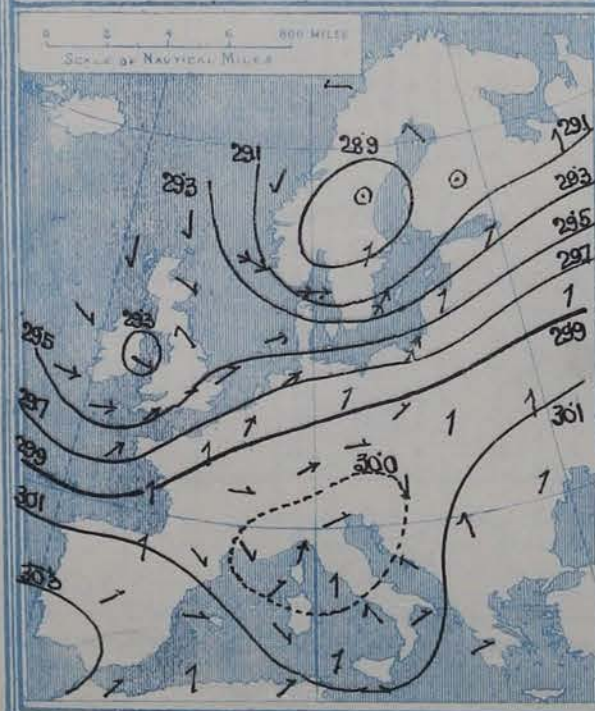

WEATHER—Shown by Letters of the Beaufort Scale. (See P. 4.)

RAINFALL—A dotted line separates areas where rain has fallen from those without rain. The fall in past 24 hours when exceeding half an inch is shown thus: 0.6

III. BAROMETER AND WIND

Yesterday morning.

IV. LAST WEEK'S RAINFALL.

Amount recorded in various districts of the United Kingdom during the week ended Sat. 25th Nov. with the percentage of the average amount for the corresponding week.

V. Means of DAILY TEMPERATURE

at 8 A.M. for the Two monthly period

NOVEMBER-DECEMBER (1871-1900)

GENERAL SITUATION AT 8 A.M.

PRESSURE

A considerable change has occurred since yesterday. The large depression over northern Europe has continued to travel eastwards, while the small secondary disturbance over the Irish Sea has moved southeastwards to the northeast of France, where it is now dispersing. In the rear of these systems the barometer has risen decidedly, and a large anticyclone of slight intensity being now in existence over Ireland and the northern parts of Great Britain and the North Sea. The lowest pressures, 29.3 ins and less, are reported over Lapland.

WIND

TEMPERATURE

WEATHER

AND

SEA

Over England, France and the Netherlands a cyclonic circulation of air prevails round the French depression, but, owing to the decrease in the barometric gradient, the winds blow with little strength. In Scotland, light variable airs are reported, while in Scandinavia and Denmark the wind is moderate from between W. and N. In the north of Ireland a moderate breeze from the S.E.^W has set in. Temperature has again fallen in Ireland and Scotland, and at the central stations a very keen frost prevails, the morning temperatures being as low as 24° at Naism and 25° at Birr Castle. Over England the readings are mostly above 40°, and in the Scilly and Channel Islands they are above 45°. At the Continental stations the thermometer ranges from 50° at Biarritz to 26° at Munich and 23° at Haparanda. Dull weather prevails over England and France, and rain is falling at Rochefort and Tice. In most other parts of our area the weather is fair, but in Sweden the sky is still overcast; snow is falling at Christiansund. The sea is moderate or slight generally, but rough at Christiansund, and rather rough on the French coasts.

During yesterday the thermometer rose to 45° and upwards at most of the English stations, to 50° at Jersey and to 52° at Scilly and Torquay; in the north of Scotland it did not reach 40°. Over the greater part of England there was an entire absence of bright sunshine. Rain has again fallen over a considerable portion of Northwestern Europe, the largest amounts reported being 0.8 inch at Rochefort and 0.5 inch at Biarritz, where a thunderstorm occurred last evening.

PROBABLE CHANGES IN SYSTEM NOW PREVALENT

The high pressure system which has formed over these Islands and the North Sea is likely to move E.^W or S.E.^W. A temporary improvement in the weather is probable over England, but in Ireland the conditions will be affected shortly by fresh disturbances advancing from the Atlantic.

FORECASTS*

For the 24 hours ending at NOON on 30th November, 1905.

DISTRICTS.

FORECASTS.

0	SCOTLAND NORTH	Variable breezes, finally S. ^W or S.E. ^W ; fair at first, becoming unsettled later in west.
1	SCOTLAND EAST	Light variable breezes; fair, cold.
2	ENGLAND N.E.	N.E. ^S to variable breezes; fair generally, but with some mist or fog. Frost at night.
3	ENGLAND EAST	Same as No. 5.
4	MIDLAND COUNTIES	Same as No. 2.
5	ENGLAND SOUTH	N.E. ^S to E. ^S winds, light; fair at first, misty or foggy later. Frost at night.

DISTRICTS.

FORECASTS.

6	SCOTLAND WEST	S.E. ^S winds, light or moderate; fair at first, some rain later.
7	ENGLAND N.W.	N.E. ^S winds, shifting later to E. or S.E.; fair today, becoming unsettled again tomorrow.
8	ENGLAND S.W.	
9	IRELAND NORTH	S.E. ^S and S. ^S winds, freshening; fair at first, some rain later.
10	IRELAND SOUTH	

WARNINGS

At 10.0 am today to Districts 5 and 7 to 10, "Lower Cone".

* The South Cone, point downwards (⏚), means that gales, or strong winds, are probable, at first from the Southward (from S.E. round by S. to N.W.). Should it appear likely that a gale beginning from between W. and N.W. is likely to veer towards N. or N.E., the North Cone is hoisted in preference to the South Cone.

The North Cone, point upwards (⏚), means that gales, or strong winds, are probable, at first from the Northward (from N.W. round by N. to S.E.). Should it appear likely that a gale beginning from between E. and S.E. is likely to veer towards S. or S.W., the South Cone is hoisted in preference to the North Cone.

* For terms for transmission of Forecasts by Telegraph, see next page.

SUBSCRIPTIONS both for the Daily and Weekly Weather Reports may be paid, in advance, to the Meteorological Office.

TERMS: For Daily Weather Report, forwarded by Book Post, £1 0 0 per annum.
" Weekly " " " £1 10 0 " Single Copies, 6d.

Single Copies of the Daily Weather Report (price 1d.) may be obtained after 3 p.m. on the day of issue at the Meteorological Office, and at Messrs. W. H. SMITH & SONS' Bookstalls at the following terminus Railway Stations:—Victoria, Charing Cross, King's Cross, St. Pancras, Euston.

FORECASTS OF WEATHER for one day in advance are drawn up at the Meteorological Office at 11 a.m., and between 7 and 8 p.m. The latest forecast can be had by Reply Telegram, on paying at any Post Office in the United Kingdom Sixpence in addition to the cost of the inquiry and reply Telegram. Information as to the Terms on which Forecasts can be sent, daily, for a long or short period, may be obtained on application to the Meteorological Office, 63, Victoria Street, S.W., either personally or by post.

* At Oxford the observations are taken at 8 p.m.

DAILY WEATHER REPORT

for 8 a.m. on Thursday, 30th November 1905.

Issued by the METEOROLOGICAL OFFICE, 63, Victoria Street, London. W. N. SHAW, Director.

NOTE: The Sunshine for London given in this Table is recorded on the Tower of the Wesleyan Training College, Westminster; the Sunshine entered to Dungeness is recorded at Littlestone-on-Sea.

* Observations for this column not generally received.

* Observations received too late for insertion in Charts on next page.

WEATHER CHARTS

FOR Thursday, 30th November, 1905.

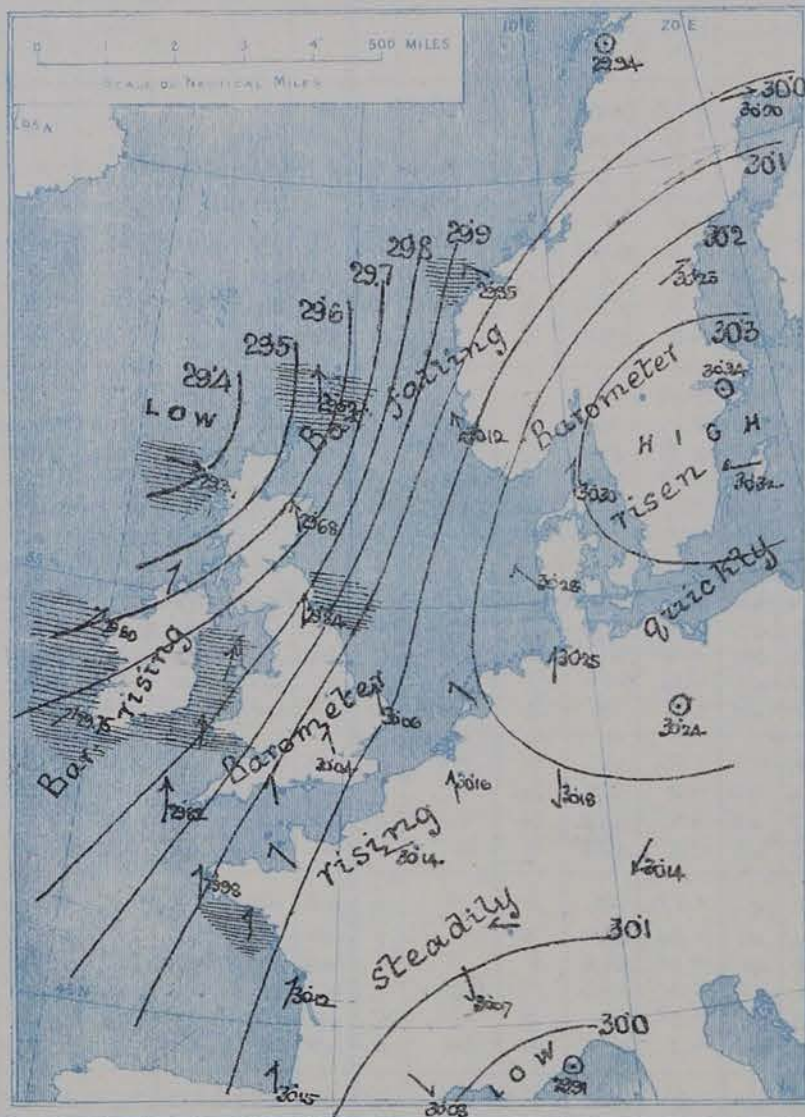

I. BAROMETER, WIND AND SEA. This Morning.

BAROMETER—Isobars are drawn for each tenth of an inch.

WIND—Arrows show Directions and Force, flying with the wind.

Force above 10 → Force 5 to 7 → } Calm ⊙
Force 8 to 10 → Force 1 to 4 →

SEA—Rough High

II. TEMPERATURE AND WEATHER. This Morning

TEMPERATURE—Isotherms are drawn for each 10°.

WEATHER—Shown by Letters of the Beaufort Scale. (See P. 4.)

RAINFALL—A dotted line separates areas where rain has fallen from those without rain. The fall in past 24 hours when exceeding half an inch is shown thus .06

III. BAROMETER AND WIND

Yesterday morning.

IV. LAST WEEK'S SUNSHINE.

Amount recorded in various districts of the United Kingdom during the week ended Sat. 25th NOV. with the percentage of the average duration for the corresponding week.

V. Means of DAILY TEMPERATURE

at 8 A.M. for the Two monthly period NOVEMBER-DECEMBER (1871-1900)

GENERAL SITUATION AT 8 A.M.

PRESSURE

A considerable change has again occurred in the distribution of pressure over Western Europe. At all the Continental stations the barometer has continued to rise steadily, and the conditions have become anticyclonic, the highest pressures, 30.3 ins. and upwards, being situated over the south of Sweden. Over the greater part of the United Kingdom, however, the weather is affected to a greater or less extent by depressions moving over the Atlantic. One of these disturbances has travelled rapidly along our extreme western coasts during the night and is passing away to the N.W., the lowest pressures, 29.4 ins. and less, being now found in the neighbourhood of the Hebrides.

WIND

TEMPERATURE

WEATHER

AND

SEA

A strong gale from the S.W. has blown in Ireland and the west and north of Scotland, but in the former country the wind has veered to S.W. and subsided. In the western and northern parts of Great Britain a strong S.W. wind is still blowing but in the southeast of England there is a light breeze from the S.E. N. (N.E. to N.W.) winds are reported over Germany and central and southern France, and calms or variable airs in the south of Sweden. Temperature has risen rapidly in Ireland and Scotland, and is now above the average in the west and north of our Islands generally. In other parts of the Kingdom the readings are rather low, - below 40° over Central England. Slight frost prevails in many parts of the Continent, and hard frost in Sweden, the thermometer at Haparanda being as low as 6° Fahr. Rain is falling at several places in the west and north of Great Britain, but in most other parts of our area the weather is at present fair. Fog is, however, reported locally in the south of England, and more generally in Belgium, Germany and Central France. The sea is rough or rather rough on our western and northern coasts.

The maximum temperatures recorded over these Islands yesterday were below 45° in most of the northern and central districts, the thermometer reaching 50° only on our extreme west and southwest coasts. The amount of bright sunshine varied considerably in different places, the longest duration (6 hours) being reported at Scarborough and Harrogate. Considerable quantities of rain have fallen in Ireland and the west of Scotland, and smaller amounts in many other parts of the Kingdom.

PROBABLE CHANGES IN SYSTEM NOW PREVALENT

The depression which is now passing away to the northward of Scotland will in all probability be followed by other disturbances advancing from the Atlantic and moving in a N.W. direction along our western coasts. The weather is therefore likely to remain in a very changeable condition generally, with increasing winds from the S.W. and a continuance of high temperatures in the west and north.

FORECASTS*

For the 24 hours ending at NOON on 1ST December, 1905.

DISTRICTS.

FORECASTS.

DISTRICTS.

FORECASTS.

1	SCOTLAND NORTH	S.W. winds, moderate, to S. strong; mild and changeable, with occasional rain.
2	SCOTLAND EAST	
3	ENGLAND N.E.	S. winds, fresh or strong; cold, changeable, some showers.
4	ENGLAND EAST	Same as No. 5.
5	MIDLAND COUNTIES	S. and S.E. winds, moderate; cloudy, local showers. Becoming milder.
6	ENGLAND SOUTH	S. and S.E. winds, freshening; fair and cold today, some rain tomorrow. Becoming milder.

7	SCOTLAND WEST	S.W. to S. winds, increasing in force; fair at first, some rain later.
8	ENGLAND N.W.	
9	ENGLAND S.W.	Continuing mild.
10	IRELAND NORTH	S. winds, increasing in force; mild and changeable, with occasional rain.
11	IRELAND SOUTH	Same as Nos. 6 & 7.
WARNINGS		At 3 p.m. yesterday to District 10 and part of 9, and at 7 p.m. to Districts 0, 1, 6, 7, 8, 10 and remainder of 9, "Hoist South Cone."

Note - The South Cone, point downwards (⌋), means that gales or strong winds, are probable at first from the Southward (from S.E. round by S. to N.W.). Should it appear likely that a gale beginning from between W. and N.W. is likely to veer towards N. or N.E. the North Cone is hoisted in preference to the South Cone.
The North Cone, point upwards (⌋), means that gales or strong winds, are probable at first from the Northward (from N.W. round by N. to S.E.). Should it appear likely that a gale beginning from between E. and S.E. is likely to veer towards S. or S.W. the South Cone is hoisted in preference to the North Cone.

* For terms for transmission of Forecasts by Telegraph, see next page.
