Summary of UK weather for Saturday 1st June 1996

Outbreaks of rain affected northwestern parts of Scotland and Northern Ireland overnight. The rain extended into southwest Scotland later in the night. Elsewhere, it was a dry night with largely clear skies, although shortly after daybreak there were some showers across southwesternmost parts of England and Wales. It was windy across northern Scotland.

During the morning, the rain in the northwest became more showery in nature. The rest of the country had a largely dry start to the day with plenty of sunshine. The cloud quickly built up during the morning with a scattering of showers breaking out. The afternoon was generally a mixture of sunshine and showers. Some of the showers were heavy with localised thunder. Some places missed the showers altogether, chiefly along the south coast of England.

It remained windy across northern Scotland.

During the evening, the showers tended to die away, although they kept going across northern Scotland, and around some western coasts.

The temperatures were generally close to average across eastern parts of England and Scotland, but were a little below elsewhere.

EXTREMES

SATURDAY 1st JUNE 1996

Highest Maximum
: 18.7 C Heathrow Airport

Lowest Maximum
: 10.0 C Cape Wrath [Northern Scotland]

Lowest Minimum
: 3.3 C Whitby [North Yorkshire]

Lowest Grass Minimum
: 0.7 C Coltishall [Norfolk]

Most Rain (24 hrs from 0900 GMT)
: 12.8mm Cape Wrath [North Scotland]

Most Sunshine
: 14.6 hrs Waddington [Lincolnshire]

SIGNIFICANT WEATHER CHARTS

Published by London Weather Centre. All times are GMT.

Summary of UK weather for Sunday 2nd June 1996

Overnight, rain affected northernmost parts of mainland Scotland and the Northern Isles, although it did become drier towards daybreak. Northwestern coasts of Northern Ireland and Scotland had occasional showers, as did the west coasts of Wales and southwest England later in the night. The rest of the country had a dry night with only small amounts of cloud.

During the day, there was a mixture of sunshine and showers across much of the country. The showers were chiefly confined to the north and west in the morning, but developed elsewhere in the afternoon. Some of the showers were heavy (15mm reported at Leeming between 1200 and 1300 BST). There were also a number of places that missed the showers altogether, especially in the east and along the south coast.

During the evening, the showers slowly died away.

The temperatures were generally a little below normal in the west, but close to average further east.

EXTREMES

SUNDAY 2nd JUNE 1996

Highest Maximum
: 19.8 C Gravesend [Kent]

Lowest Maximum
: 10.5 C Cape Wrath [Northern Scotland]

Lowest Minimum
: 1.6 C Eskdalemuir [Dumfries & Gal'way]

Lowest Grass Minimum
: -3.4 C Hillsborough [Co. Down]

Most Rain (24 hrs from 0900 GMT)
: 19.8mm Leeming [North Yorkshire]

Most Sunshine
: 14.3 hrs Aspatria [Cumbria]

SIGNIFICANT WEATHER CHARTS

Published by London Weather Centre. All times are GMT.

Summary of UK weather for Monday 3rd June 1996

Much of the country had a fine start to the night with good clear periods. However, cloud pushed into the west overnight extending as far as western Scotland and westernmost parts of England and Wales by morning, bringing outbreaks of rain to Northern Ireland. In the east, though, it remained relatively clear.

During the morning the cloud spread eastwards reaching much of Scotland, Wales and western England with outbreaks of rain steadily following. Meanwhile eastern parts of England remained bright with sunny spells. This cloud and rain continued to push eastwards through the afternoon, while more broken cloud and a few showers followed over Northern Ireland and westernmost Scotland. The heaviest rainfall was in the north with amounts in the south very small.

The rain cleared all but southeasternmost parts during the evening. It remained cloudy, though, over much of the southeastern half of England with further patchy drizzle near the coast. Further north and west there was more broken cloud with a few showers in the far northwest.

Temperatures ranged from near normal in the north to rather warm in parts of the southeast.

EXTREMES

Summary of UK weather for Tuesday 4th June 1996

East Anglia and the rest of southern England were mostly cloudy overnight. There were mist and fog patches in places, especially along southwestern coasts, together with a few outbreaks of drizzle. Elsewhere, it was largely dry overnight with clear periods, just a few scattered showers in the far northwest.

The cloud in south readily broke up to leave much of the country with a fine day and long sunny periods in many places. Along the south coast, though, the cloud was more reluctant to clear, only starting to break during the afternoon. In the far northwest there was more cloud with further showers at times.

During the evening the bulk of England and Wales, together with eastern Scotland, was dry with clear periods. Northern Ireland and western Scotland, though, were more cloudy with showery outbreaks of rain.

Temperatures ranged from near normal in the far northwest to very warm in much of the southeast.

Summary of UK weather for Wednesday 5th June 1996

Northern Ireland and the west of Scotland had a cloudy night with outbreaks of rain which were heavy at times. Elsewhere there were long clear periods and it stayed dry.
By the morning, the rain had edged east into the Isle of Man and west Wales as well as most of Scotland. The sun was shining elsewhere, albeit hazily under a veil of high cloud. By noon the rain in the north and northwest had turned patchy. The afternoon saw light sea breezes setting in in the south and blusterry showers becoming increasingly confined to the far northwest.

Early evening saw another pulse of cloud and rain heading up the western side of England and Wales but elsewhere it was clear and warm. Later though, the rain moved north and west into Lancashire and Cumbria but turned quite light and patchy.
Temperatures over central and eastern parts were generally very warm or hot , the warmest of the year so far, and warm even in the cloudier west.

Summary of UK weather for Thursday 6th June 1996

A band of cloud and rain pushed up through the Irish Sea during the first part of the night, clipping northwest Wales, the Isle of Man and southern areas of Northern Ireland before spreading across northern England, southern Scotland and then eastern Scotland during the early hours of the morning. Elsewhere it was a fine and dry night with clear spells. By mid-morning the band of rain had cleared eastern parts of Scotland leaving broken cloud in its wake.

Most areas of the country had a bright day with sunny spells, albeit rather hazy in places. Fog patches lingered over some coastal areas of west Wales until the afternoon. Showers broke out in the far northwest of Scotland during the morning but these were generally light and well scattered. The best of the sunshine was in the south.

Towards evening cloudier conditions spread across northwest Wales and the Isle of Man, elsewhere it remained largely sunny though until sunset.

Temperatures were in the near normal category in the far north and west of Scotland, otherwise values were warm or very warm. The southeast was however, very hot.

Summary of UK weather for Friday 7th June 1996

England and Wales had a mostly clear night, although there were some thunderstorms at first in Northumbria and an isolated one developed over the Isle of Man. Scotland and Northern Ireland had a more cloudy night with some patchy rain in eastern Scotland and an occasional shower in the Hebrides. Later some patchy rain arrived in western Cornwall and through the morning this became more extensive as the rain spread to most western parts of England and all of Wales.

By later in the morning the first thunderstorm had developed in the southwest Midlands and this was soon joined by thunderstorms in Yorkshire and Cornwall.

This first pulse of thundery rain was decaying by mid afternoon but another trough brought another band of thundery showers across the west country by the same time. These became particularly heavy towards evening with some heavy hail reported from Dorset, a separate cell of heavy thunderstorms developed over East Anglia around this time with reports of damaging hail from the Cambridge area.

Temperatures were very hot in central and southern areas whilst near normal or even below in northern and western areas.

Summary of UK weather for Saturday 8th June 1996

An area of Thunderstorms over The Midlands, East Anglia and southern England gave some heavy rain in places overnight before moving away north-eastwards. Over Scotland the were a few outbreaks of rain during the night, but clear skies spread from the west soon after dawn.

During the day further outbreaks of rain affected the southeast of England and the Channel Islands, and this pushed into East Anglia and the south Midlands at times during the afternoon. Apart from a few showers in the Hebrides and Shetland, the rest of the country had a dry day. The best of the sunshine being over eastern Scotland in the morning and southwest England and Wales during the afternoon.

Through the evening the rain over East Sussex and Kent became more persistent and worked its way into parts of Essex and Suffolk. Outbreaks of rain also started to appear over Northern Ireland and western parts of Scotland. Elsewhere it was dry with clearing skies.

Temperatures generally were in the range of normal to warm, but one or two sunnier spots over eastern Scotland became very warm.

SIGNIFICANT WEATHER CHARTS

Published by London Weather Centre. All times are GMT.

Summary of UK weather for Sunday 9th June 1996

The night was dry over most of the country with long clear periods. A ground frost occurred locally in central England. However, the extreme southeast of England was cloudy, and the odd spot of rain fell at first. Northwestern parts of the country had large amounts of cloud and light rain was quite persistent in western Scotland. Northern Ireland also had a little rain.

During the day, most of England was dry and sunny, although thin high cloud made the sunshine hazy at times, especially in the north and west. These northern and western parts also had patchy rain. East Wales was bright and dry but the rest of Wales was cloudy with rain or drizzle with the heaviest rain in the west. Scotland had occasional rain with more persistent rain in much of the west. Eastern areas stayed generally dry with occasional watery sunshine. Northern Ireland had outbreaks of rain, although there were a few bright intervals.

The evening saw little change with rain pecking away at western coastal regions.

Temperatures ranged from warm in much of the south and east to rather cool in parts of the north and west.

EXTREMES

SUNDAY 9th JUNE 1996

Summary of UK weather for Monday 10th June 1996

Outbreaks of rain already across Northern Ireland and western parts of the mainland, edged further east over the Pennines through to the Grampians, the Highlands and the Northern Isles. The rain was mostly light with the just occasional heavier downpour in the far north. Much of eastern and southern England and eastern Scotland had a dry night.

During the morning the rain retreated northeastwards over the Midlands and northeastern England leaving broken cloud behind. Coastal areas of western England and Wales were foggy for a time but generally most places became bright during the morning with some hazy sunshine.
The afternoon continued bright with many parts having sunny intervals. A few light showers broke out in central areas of England and then in the southeast late afternoon and into the evening. Fog patches formed along the south coast and it turned misty in the Irish Sea during the evening. Most places had a dry end to the day.

Temperatures were in the near normal category, although the eastern side of the country was warm or very warm.

EXTREMES

MONDAY 10th JUNE 1996

Highest Maximum
: 25.9 C Shoeburyness [Essex]
Herstmonceux [East Sussex]

SIGNIFICANT WEATHER CHARTS

Published by London Weather Centre. All times are GMT.

Summary of UK weather for Tuesday 11 June 1996

The eastern side of the country started the night dry with clear periods, especially over southeastern England. In the west, though, it was more cloudy with outbreaks of rain and strenghtening winds pushing up from the southwest.

During the morning the wet and windy weather pushed north and eastwards across much of the country, with the heaviest outbreaks of rain in the north. In the southeast, though, it was dry with more broken cloud allowing some sunshine through. The rain continued to edge slowly eastwards in the afternoon, although in the extreme southeast it remained dry and bright. Meanwhile, more broken cloud but still with showers edged across Northern Ireland.

The rain continued to clear eastwards through the evening, although amounts in the southeast were small. The more broken cloud followed from the west with the showers mostly dying out.

Temperatures ranged from near normal in the far north to warm in the southeast.

EXTREMES

Summary of UK weather for Wednesday 12 June 1996

Cloud and patchy light rain and drizzle soon cleared southeastern parts overnight to leave the bulk of the country with clear periods. Most places were then dry apart from a few scattered showers over Northern Ireland and western Scotland.

It was a fine, dry day for much of the country. The well-broken cloud allowed plenty of sunshine for most parts. However, there were a few showers developing, chiefly over northern and western Scotland and northernmost parts of Northern Ireland. These tended to die out during the afternoon.

The evening was dry with clear periods for virtually the whole of the country.

Temperatures ranged from near normal in most places to warm, or even very warm, in parts of the southeast.

EXTREMES

Summary of UK weather for Thursday 13 June 1996

Much of the country had a dry and clear night with a few fog patches forming in the West Midlands around dawn. The extreme north of Scotland was cloudier with spots of rain, but the more persistent rain was left for Shetland.

During the morning the rain moved away from Shetland but a few showers occurred in the afternoon. One or two showers also occurred over the Scottish Borders during the morning, but apart from that, the rest of the country had a dry day. Cloud developed over northern England and Scotland during the morning, leaving the best of the sunshine for central and southern areas.

The evening was dry with clear skies in the south, but a veil of thin high cloud drifted across Scotland and Northern Ireland.

Temperatures generally were around normal, but across southern counties of England, a few places had a warm day.

Summary of UK weather for Friday 14 June 1996

It was a cool but dry night over the whole country and there were a few mist patches around towards the end of the night.

These quickly cleared once the sun rose and almost all of the United Kingdom had a dry day with a good deal of sunshine. That sunshine did turn rather hazy at times though as patchy high cloud drifted across the country. The exception to this general picture was the Northern and Western Isles where it turned cloudy and there was drizzle in places during the afternoon and evening.

Temperatures ranged from near normal in the north and along coastal fringes to warm or very warm in most inland areas.

Summary of UK weather for Saturday 15 June 1996

It was a cool night in many places with a touch of ground frost, especially in central and southern England. The majority of the UK remained dry with clear skies and small amounts of thin, high cloud. Northern Scotland was more cloudy, particularly the northwest, and there were patches of drizzle in the Western and Northern Isles.

The far north of Scotland continued cloudy through the morning with outbreaks of drizzle, especially near coasts and hills. The drizzle slowly petered out late in the morning and during the afternoon with clouds becoming more broken . Most places had some sunshine before the end of the day. The rest of the country had a dry, sunny day.

After a cool start, it became warm or very warm in most places by the afternoon. A few spots in central England and central Scotland made it into the hot category. The cloudier parts of northern Scotland were near normal.

Summary of UK weather for Sunday 16 June 1996

Apart from patchy mist, a little low cloud around northern coasts and fog patches in the northeast, it was a dry and clear night if a little cool in parts of Scotland.

Soon after dawn, under clear skies, temperatures rose quite quickly away from the cool east coast. Throughout the remainder of the morning and early afternoon, the clear skies persisted but the north of Scotland became cloudy, especially in Orkney and Shetland. In spite of the cloud, it remained dry everywhere. Patchy high cloud increased during the afternoon making the sunshine rather hazy at times . By late afternoon there were a few spots of rain in the Western Isles but these had died out by early evening. By late evening though, the cloud had thickened again with patchy drizzle.

In the south it was very warm as was the northeast of Scotland around the Moray Firth. Eastern coasts, with onshore breezes, were rather cool.

Summary of UK weather for Monday 17 June 1996

England and Wales had a largely clear night, although patchy mist and fog formed over southeast England and East Anglia. Scotland and Northern Ireland were rather cloudy, the cloud thick enough to produce spots of rain or drizzle, or light showers, in the north of Scotland. Even so, there were some clear intervals.

During the day, England and Wales were dry with long sunny periods after the rapid clearance of fog from southeast England. However, extensive high cloud often made the sunshine appear hazy. Scotland and Northern Ireland had rather thicker cloud at times, and over northern and western Scotland there were some light showers or patchy drizzle.

Temperatures ranged from hot in many parts of central and southern England, warm over Wales and the rest of England, and near average over Scotland and Northern Ireland.

Summary of UK weather for Tuesday 18 June 1996

Northern Scotland and northernmost parts of Northern Ireland were rather cloudy with a few showers overnight. Elsewhere, it was dry with good clear periods away from eastern coasts.

There was little change during the day. Northern Scotland remained rather cloudy with further showery outbreaks of light rain and drizzle. Near eastern coasts of Scotland, and England as far as the Wash, it was also rather cloudy at times. Otherwise, there were variable amounts of cloud giving a bright day with sunny spells.

During the evening there were further isolated light showers over northern Scotland. Elsewhere, it was dry with mostly well broken cloud, although eastern coasts were more cloudy.

Temperatures were generally near normal, although in parts of the south it was warm.

Summary of UK weather for Wednesday 19 June 1996

It was a fine night for much of the country with clear periods in many areas. However Northern Scotland and North Sea coastal areas were more cloudy with a few showers, especially in the far north.

During the day many areas were dry with spells of sunshine. Again North Sea coastal districts and northern Scotland were more cloudy with occasional light showery rain. In the afternoon, thicker medium and high level cloud pushed into the Southwest bringing a few thundery showers later in the day.

These thundery showers continued to push slowly eastwards during the evening across parts of Cornwall, Devon and into Dorset and Hampshire. Elsewhere, away from the cloudier north and east, it was dry with clear periods.

Temperatures ranged from near or a little below normal over the northern half of the country to warm in the south, with parts of the Southwest hot.

Summary of UK weather for Thursday 20th June 1996

A cloudy night in the south, with outbreaks of rain, heavy at times, and isolated thunderstorms at first. The rain reached as far north as the Thames by dawn. Otherwise a mainly dry night, with the odd shower in northern Scotland and down the east Coast.

The rain progressed no further north than the Thames valley, and started to die out in the west country by the end of the morning. By the end of the afternoon the rain was generally along the English Channel.

Over the rest of the UK there were sunny spells at first. The west saw the best of the sunshine, whilst the east became cloudy. There were also showers through the day, down the east coast as far south as Norfolk, as well as into northern and western Scotland. The west stayed dry with sunny spells.

There was little change through the evening and into the night, just the rain finally dying out in the south, where it remained cloudy, and still the odd shower in the north and east. Otherwise dry with clear spells developing.

Temperatures were below average, generally cool to very cool, only west Wales and the Channel Isles were near normal.

Summary of UK weather for Friday 21st June 1996

Most of the country had a dry night but there were a few showers scattered across northern and eastern Scotland and a few in southern England. There were also some mist and fog patches in southern and southwestern areas of England.

There was a good deal of dry weather throughout the day too with bright or sunny spells in most places. It was more cloudy in eastern areas though where there were some showers and showers also continued to affect northern parts of Scotland. There were a few light ones scattered across southern areas too.

During the evening the showers turned more drizzly over northern-most parts of Scotland and eastern England and East Anglia continued to see the odd one or two but the rest of the country stayed dry.

After a cold start with a touch of ground frost in parts of southern Scotland and northern England, it was a rather cool day in most places but very cool in some of the more cloudy northern and eastern parts.

Summary of UK weather for Saturday 22nd June 1996

Much of the country had a dry night with rather cloudy skies. There was some drizzle in the Northern Isles and a little patchy rain by morning in the Hebrides. A few light showers were reported down the eastern side of the country, mainly near the North Sea coast and over the Pennines, but these were the exception.

During the day many places stayed dry but it was a rather cloudy day generally. Southern Scotland, south Wales, southwest England, parts of the south coast and the Channel Islands had the best of the sunshine. Although southeast England started sunny, cloud soon spread from the north.

There were a few light showers here and there over eastern England, although by early evening these were confined to Norfolk, Suffolk and east Kent, with very isolated showers further west. The north and northwest of Scotland had patchy rain and drizzle at times. Northern Ireland was also mainly cloudy and there were a few showers chiefly along the north coast.

It was a rather cool day generally but it was cool or very cool down much of the North Sea coast.

Summary of UK weather for Sunday 23rd June 1996

Northern Ireland, along with northern and western Scotland, had a fairly cloudy night with the odd light shower or spot of drizzle. The rest of the country had variable amounts of cloud and clear periods. Noctilucent cloud was reported from various parts of the country in the early hours.

During the day, occasional light showers or spots of drizzle continued to affect the north coast of Northern Ireland and western and northern Scotland, especially Orkney. Elsewhere, there were variable amounts of cloud and sunny spells. Winds were light, and coastal onshore breezes occurred during the afternoon.

The evening stayed generally fine although extensive high cloud spread across many parts from the north.

After a chilly night with quite a widespread ground frost, temperatures rose to near, or rather above normal in most inland areas. Parts of Scotland, in particular, became warm, but many coasts around the UK were rather cool.

Summary of UK weather for Monday 24th June 1996

Most parts had a dry night with variable amounts of cloud. The cloud was more in evidence across northern and western Scotland, and Northern Ireland with occasional light drizzle.

During the day, it remained mostly cloudy across Northern Ireland, northernmost parts of Scotland, and the Northern Isles with occasional light rain or drizzle. East Anglia, southeast England, together with northern and western parts of Wales also had a good deal of cloud at times with some light rain reported across Norfolk, and northeast Kent around the middle of the day. Elsewhere, it was a dry day with plenty of sunshine. The best of the sunshine was over southwestern parts of Britain.

The temperatures were generally close to or a little below average over the Northern Isles, Northern Ireland and around the coasts. Remaining parts were warm, but locally very warm across some central and southeastern parts of Scotland.

Summary of UK weather for Tuesday 25th June 1996

Most parts started off dry with clear spells. Fog formed during the night across eastern and central areas of Scotland and central and western parts of England and Wales.

Towards dawn a band of thick cloud spread into western areas of Scotland and Northern Ireland. This brought outbreaks of rain during the first part of the morning. Elsewhere fog patches cleared generally quickly to leave much of the day bright with sunny intervals. Eastern coasts of England remained cloudy during the morning although by the afternoon brighter skies did emerge.
Outbreaks of rain affected western Scotland and Northern Ireland into the afternoon and thicker cloud spread into western coastal parts of England and Wales.

By late afternoon and into the evening rain, preceded by fog and low cloud, extended across Scotland. Southeastern Scotland remained bright as did most of England and Wales.
Towards the end of the day rain affected most of Scotland, Northern Ireland and the Isle of Man. Elsewhere it stayed dry.

Temperatures were in the warm or very warm category across much of the country. Western areas and many coastal parts were however near normal.

Summary of UK weather for Wednesday 26th June 1996

A dry night with clear spells across southern and eastern parts of England, as well as northwest Scotland. There were outbreaks of light rain from eastern Scotland, across northern England and Wales, down to Cornwall, as well as Northern Ireland. In the clearer parts, patchy fog formed around dawn.

Brighter conditions spread into Scotland, Ireland and northern England first thing in the morning, whilst the rain became patchy in the west country, and spread into the Midlands. It was a dry and bright morning in East Anglia and the southeast. There was still some drizzle in northeast England around midday, with fog and low cloud around the coast of Wales and the southwest.
The rain spread across central parts into East Anglia during the afternoon, not reaching the southeast until evening, with brighter conditions across much of the UK, cloudier in the east and the southwest.

During the evening and first aprt of the night, there was patchy light rain across eastern parts and the southeast. Elsewhere it was dry with broken cloud.

Temperatures were near normal across much of the UK, but warm to very warm across much of the southeast and East Anglia.

Summary of UK weather for Thursday 27th June 1996

Much of the country had a dry night but there was some rain and drizzle in the southeast of England and a few showers in the Northern and Western Isles. Most places were fairly cloudy but there were clear spells in western areas and in central parts of Scotland. It turned misty in parts of England too.

The drizzle in the southeast corner continued in places through the morning and into the early afternoon. It was a dull day generally in this corner. There were a few showers scattered around other areas but many places were dry with some bright spells. The best of the sunshine though was in southwest Britain. By the end of the afternoon, rain had moved into Northern Ireland.

This rain continued in the province through the evening and spread into western Scotland too. It became quite heavy in places. Apart from the odd light shower in southern England the rest of the country had a fine dry evening.

Temperatures wre generally not far from normal, warm in places in the south.

Summary of UK weather for Friday 28th June 1996

Overnight much of the country was cloudy. There were some outbreaks of rain and drizzle across Northern Ireland, much of Scotland and western parts of England and Wales. Patchy mist formed over eastern England.
Much of the country had a cloudy day, although there were some bright or sunny spells more especially across southeastern parts of England. There were outbreaks of rain in many places which became organised into bands.
Western coasts of England and Wales had misty low cloud and the rain turned lighter and more drizzly in these areas through the afternoon.
Over eastern and southeastern parts of England there were some heavy bursts of rain, and in the Midlands and the London area some thunder was reported in the early afternoon.
Western and northern parts of England became dry in the evening with clear spells, while a short-lived band of heavy rain and gusty winds crossed parts of southeast England just before midnight.

Most of the rain over Scotland was light, although there were some heavier bursts in the west in the morning and the east in the afternoon and evening. It became windy over northwest Scotland in the evening. Over Northern Ireland the rain turned more showery in the afternoon with clearer and mainly dry weather in the evening.

Temperatures were close to normal in the north but it was generally rather cool over England and Wales.

Summary of UK weather for Saturday 29th June 1996

The north and west of Scotland bore the brunt of the overnight showers as much of England and Wales became dry with clear periods. There were exceptions. In particular the northwest of England, Northern Ireland and the Isle of Man had a few showers around dawn.

Mid to late morning saw the cloud thickening over much of the country. The wind was becoming quite strong in the west too and there were blustery showers in many western areas. The worst of the thick cloud was in eastern counties though, where it turned out to be a cold day but mainly dry. From time to time, some western areas temporarily brightened up but only the southwest had a fair amount of sunshine.The cloud and rain in Scotland continued but to the lee of high ground, a few places such as the Moray Firth saw temperatures exceeding average values. Cloud in the west continued to thin during the evening and most of the mainland was dry but the first evidence of another weather front was already reaching the west coaast of Ireland.

Temperatures in many places were several degrees below average.

Summary of UK weather for Sunday 30th June 1996

Much of the United Kingdom had a dry night but there were some outbreaks of light rain and drizzle in Northern Ireland and western areas of Britain, especially the southwest.

During the morning, the rain and drizzle spread east across most of Scotland and northern England and across Wales and parts of central England. Then, in the afternoon, it became more showery in many areas. With a brisk, mainly westerly, breeze blowing across most of the country, the showers were quite blustery. They were heaviest in northern Scotland and here they merged at times to give some longer spells of rain. Southeastern England had fewest showers; indeed many places in the southeast stayed dry all day.

During the evening, there were some further heavy showers or longer spells of rain in northern Scotland and the Northern Isles but, gradually through the evening, the showers become more scattered and generally confined to northern and western areas.

With the breeze, it felt cool in most areas with temperatures either a little below normal or in the rather cool category.
