With present weather is combined, whenever possible, the general character of the weather.

A "solidus" divides actual existing weather from preceding conditions, thus: -bc/r = fair weather after rain; i = intermittent; - = "decreasing"; + = "increasing"; h(r) = "hail" or "rain and hail"; Capital letters indicate intensity, suffix o indicates slight; and repetition of letters continuity, thus: -rr = heavy rain.
 rr = continuous moderate rain.
 rrr = continuous light rain.

METEOROLOGICAL OFFICE, LONDON.

NOTES ON THE INFORMATION CONTAINED IN THE VARIOUS SECTIONS OF THE DAILY WEATHER REPORT.

Heights of Stations.—The heights of British Stations above M.S.L. published in the British Section of the Daily Weather Report refer to the plot of ground on which the rain gauge is situated.

Pressure.—The distribution of barometric pressure at Mean Sea Level is shown by means of isobars which are drawn for intervals of 2 millibars on the British Section of the Report and for intervals of 4 millibars on the International Section.

The wind at a height of 1,500–2,000 feet above ground usually blows along the isobars and, for the same temperature, pressure and latitude, the speed of the wind is inversely proportional to the distance between the isobars, e.g., for isobars 1 inch apart in the Daily Weather Report the speed of the upper wind is about 12 m.p.h. in latitude 55°, with a temperature of 50° F. and a pressure of 1,015 mb; if, however, the isobars are ½ inch apart the corresponding speed is 24 m.p.h.

The scale below can be used with both the International and the British Sections. If the distance between consecutive isobars is measured along the rule from the left-hand extremity the geostrophic wind is shown by the scale in miles per hour.

GEOSTROPHIC WIND SCALE FOR

4 mb isobars on 1 : 2 × 10⁷ Charts.
or 2 mb " " 1 : 10⁷ "
or 1 mb " " 1 : 5 × 10⁶ "

This scale applies under the following conditions:—

Pressure, 1,015 mb. Temperature, 50° F. Latitude, 55°.

Corrections.—For an increase of 10 mb pressure, subtract 1% from velocity; for an increase of 10° F. add 2%. From Latitude 55° to Latitude 65° subtract 1% for each degree above 55°. From Latitude 55° to Latitude 45° add 1½% for each degree below 55°.

Temperature.—Temperature is specified in degrees Fahrenheit, and is shown on the charts by means of figures written alongside the circles which indicate the positions of the stations.

Relative Humidity.—From January 1st 1926, relative humidity at British stations has been calculated from the following hygrometric formulæ:

$$x = f - .444(t - t') \text{ for wet bulb readings above } 32^\circ \text{ F.}$$

$$x = f - .400(t - t') \text{ for wet bulb readings below } 32^\circ \text{ F.}$$

where x is the vapour pressure in mb.;

f the saturation vapour pressure at the temperature of the wet bulb;

t the dry bulb temperature; and

t' " wet "

The use of Glaisher's tables has been discontinued.

The tables used for calculating humidities from the readings of the dry and wet bulb thermometers on aeroplanes, are based on a formula similar to the above, but allowance is made for the variation of barometric pressure with height and for the increased ventilation of the thermometers.

Upper Air Temperature.—The British observations are made normally, one at 1,000 feet above the level of the aerodrome, and the remainder at pressures of 950, 900, 850, 800, etc., millibars. Heights are then computed and, apart from instrumental error, are correct heights: they do not require modification for differences of temperature from normal as these are allowed for in the computation. The values are shown graphically and in tabular form in the Upper Air Supplement. On the diagram, temperatures are given in degrees Fahrenheit and Absolute. The oblique line marked "Dry Adiabatic" shows the lapse rate of temperature for dry air ascending or descending under adiabatic conditions, i.e., without communication of heat from external sources. The lapse rate under these circumstances is very approximately 5.5° F. per 1,000 feet, or 10°a per kilometre. A lapse rate greater than this value indicates instability in a dry atmosphere.

The broken lines marked Saturated Adiabatic show lapse rates for saturated air. These are for air masses which contain just sufficient moisture at 1,015 mb. pressure to become saturated after rising 1 km. in an environment having the dry adiabatic lapse rate. The condensed moisture is assumed to be retained thereafter in the air as it rises.

Wind.—All wind directions specified in the reports are "true," as distinguished from "magnetic." The arrows indicating wind direction are drawn to fly with the wind. Wind velocities are shown on the charts of the British Section and Upper Air Supplement in m.p.h. by the

numbers placed within the small circles. In the International Section velocities are not shown. In both Sections the number of feathers on the arrows denotes wind force by Beaufort number.

Upper Winds.—The direction and velocity of the wind are given in the charts of the Upper Air Supplement for heights of 2,000 feet and 6,000 feet. The data are also given in tabular form for various heights. The reports are usually based on Pilot Balloon ascents.

Wind reports deduced from British Pilot Balloon Ascents refer to the 1,000 feet layers centering at the heights given in the table up to 16,000 feet. When winds are reported at greater heights, they refer to the 5,000 feet layers centering at 20,000 feet, 25,000 feet, 30,000 feet and 35,000 feet.

In the tabular statement direction is specified in degrees from true north measured through East 90°, South 180°, West 270° to North 360°. (See diagram below.)

Rainfall.—At Stations marked † in the International Section of the Report, the rainfall is received in an abbreviated code and the measurement entered is therefore not necessarily correct to the nearest millimetre. For example any fall between 11 and 15 mm. would be reported by the same code figure and entered as 13 mm. in the Report.

Sea Disturbance.—The code for sea disturbance used at coastal stations is given on p. 1 of the British Section of the Report. Ships at sea use the following code:—

| | | | |
|-----------------------|--|-----------------------|--------------------------------------|
| 0. No or slight swell | } and { Sea smooth to moderate. | 5. No or slight swell | } and { Sea rough or above. |
| 1. Moderate swell | | 6. Moderate swell | |
| 2. Heavy " " | | 7. Heavy " " | |
| 3. Long low " " | | 8. Long low " " | |
| 4. Confused " " | | 9. Confused " " | |

Adjusted Readings.—Where an instrumental reading is found to be in error and some adjustment is necessary, such adjusted reading is published in brackets thus (59).

The entries in the British Section of the Report for the stations in the main tables on pages 1, 2, and 4 are compared with those in the returns received from the stations at the end of the month and errors in the Report so found are noted in the monthly correction sheets.

The reports from the London Stations on page 1 and from the Health Resorts on page 4 are not subjected to the same close scrutiny but if any errors are found these are also noted in the correction sheets.

Times of Sunrise, Noon and Sunset.—From January 1st, 1926, the times of Sunrise, Noon and Sunset published in the British Section of the Report for certain stations have been recalculated from (1) the figures for the duration of sunshine contained in the International Meteorological Tables and (2) the value of the sun's declination and the equation of time published in the Nautical Almanac. The change of declination of the sun on the same day from year to year over a cycle of four years is now taken into account. This change was formerly neglected.

Valentia.—The observations at 1 a.m. are taken at the Post Office Wireless Station on Valentia Island. Those at all other hours at the Observatory near Cahirciveen on the mainland.

Guernsey.—The observations at 7h., 13h., and 18h. are taken at Fort George, the station being situated at 295 feet above M.S.L. on the high ground to the south of St. Peter Port and outside the town. The observations at 1h. together with the sunshine readings are taken at the station of the States Meteorological Service which is situated in St. Peter Port at 173 feet above M.S.L.

SUPPLEMENT TO THE DAILY WEATHER REPORT OF THE METEOROLOGICAL OFFICE, LONDON.
SUMMARY OF METEOROLOGICAL OBSERVATIONS AT SELECTED STATIONS ISSUED ON THE 1st DAY OF EACH MONTH.

Notes on the Weather of **APRIL**, 1928

Unsettled weather prevailed generally during the first week of April with rain at times but considerable bright periods and temperature on the whole rather above the normal. By the 8th. high pressure became established over Germany, while pressure was low on the Atlantic westward of the British Isles and shallow secondaries formed over Spain and the Bay of Biscay. Warm southerly winds from the Western Mediterranean caused a rising temperature in the British Isles and warm, mainly fair weather was enjoyed for the most part over the Easter Holidays. On the 9th. (Easter Monday) the maximum temperature at Kew Observatory touched 66°F. and 65°F. was reached at several places, including Sealand (near Chester), Cheltenham and Leamington Spa. The night of the 9th.-10th. was exceptionally warm, temperature not falling below 50°F. in many cases while the minimum 55°F. , at Kew Observatory constituted a record for April there. Thunderstorms occurred locally on the 10th. and in many parts on the 11th. Heavy rain fell in the Southwest on the 14th; 52 mm. in the Scilly Isles and 64 mm. at Roches Point.

Subsequently high pressure became established over Iceland and a spell of cold weather was experienced with showers of snow, hail and sleet. Temperature fell decidedly, failing to reach 40°F. in some cases. The maximum at Eskdalemuir and Harrogate was only 38°F. on the 14th., 39°F. at Leafield on the 15th. and 37°F. at Lympne and 38°F. at South Farnborough and Croydon on 16th. During the period 17th. to 22nd. some very severe ground frosts occurred, grass minima below 20°F. being registered at several stations. Some of the lowest ground temperatures included 14°F. at Leafield on 17th., 15°F. at Birr on 21st.

During the last week a spell of warm weather was again enjoyed. With high pressure over the Baltic and low to the West and South of the British Isles, the air over the Eastern part of the country was drawn from the South of France. On the 26th. temperatures of 70°F. and above were registered locally in England, while 75°F. was touched at Cranwell and Southport.

Rainfall was well below the normal in many districts, but above in Southeast England, locally on the northeast coast of Scotland and extreme Southwest Ireland. Sunshine was also below the normal in many places.

† The average sunshine for Liverpool and the average rainfall for the other stations marked † have been computed from the records available for these several stations by reference to the nearest stations with long records.

‡ Based in part on reports made by telegraph in which the day & night measurements are rounded off to the nearest whole millimetre. Small discrepancies may arise between these totals and those given in the Monthly Weather Report which are based on readings taken to 0.1 mm.

G. C. SIMPSON, F.R.S., Director.

ISOPLETHS* BASED ON SIX-HOURLY OBSERVATIONS.

NOTE: The diagram is obtained by drawing a line from Akureyri in Iceland to the South of France, near Marseilles. The points at which the isobars drawn for 4 mb. pressure intervals intersect this line at 1h, 7h, 13h, and 19h are plotted consecutively and joined to show the variation of pressure from day to day at any point in the line. The line terminates at Lat. 55° N., Long. 18° W. in the north, at Lat. 44° N., Long. 4° E. in the south.

s sphere of dry weather.

h(r) = "hail" or "rain and hail."

Capital letters indicate intense; suffix a indicates slight; repetition of letters indicates continuity.

X = heavy rain. r = slight rain.

rr = continuous rain.

SYMBOLS.

< = (less than (for cloud height),

= before (for precipitation).

☉ = solar halo. ☾ = lunar halo.

With present weather is combined, whenever possible, the general character of the weather.

Δ = "foggy" divides into: existing weather from preceding conditions, thus: -bcrr = fair weather after rain.

- = has decreased; + = has increased.

THE BEAUFORT SCALE OF WIND is used only for surface observations. In the accompanying table the speed of the wind corresponding with the speed at about 30 feet above the ground.

GENERAL INFERENCE.

A depression over Iceland continues to fill up and pressure is at present rising slowly but generally over the British Isles. Weather will be mainly fair to-day apart from scattered showers; but a trough of low pressure westward of Ireland will subsequently spread eastwards, and maintain generally unsettled conditions.

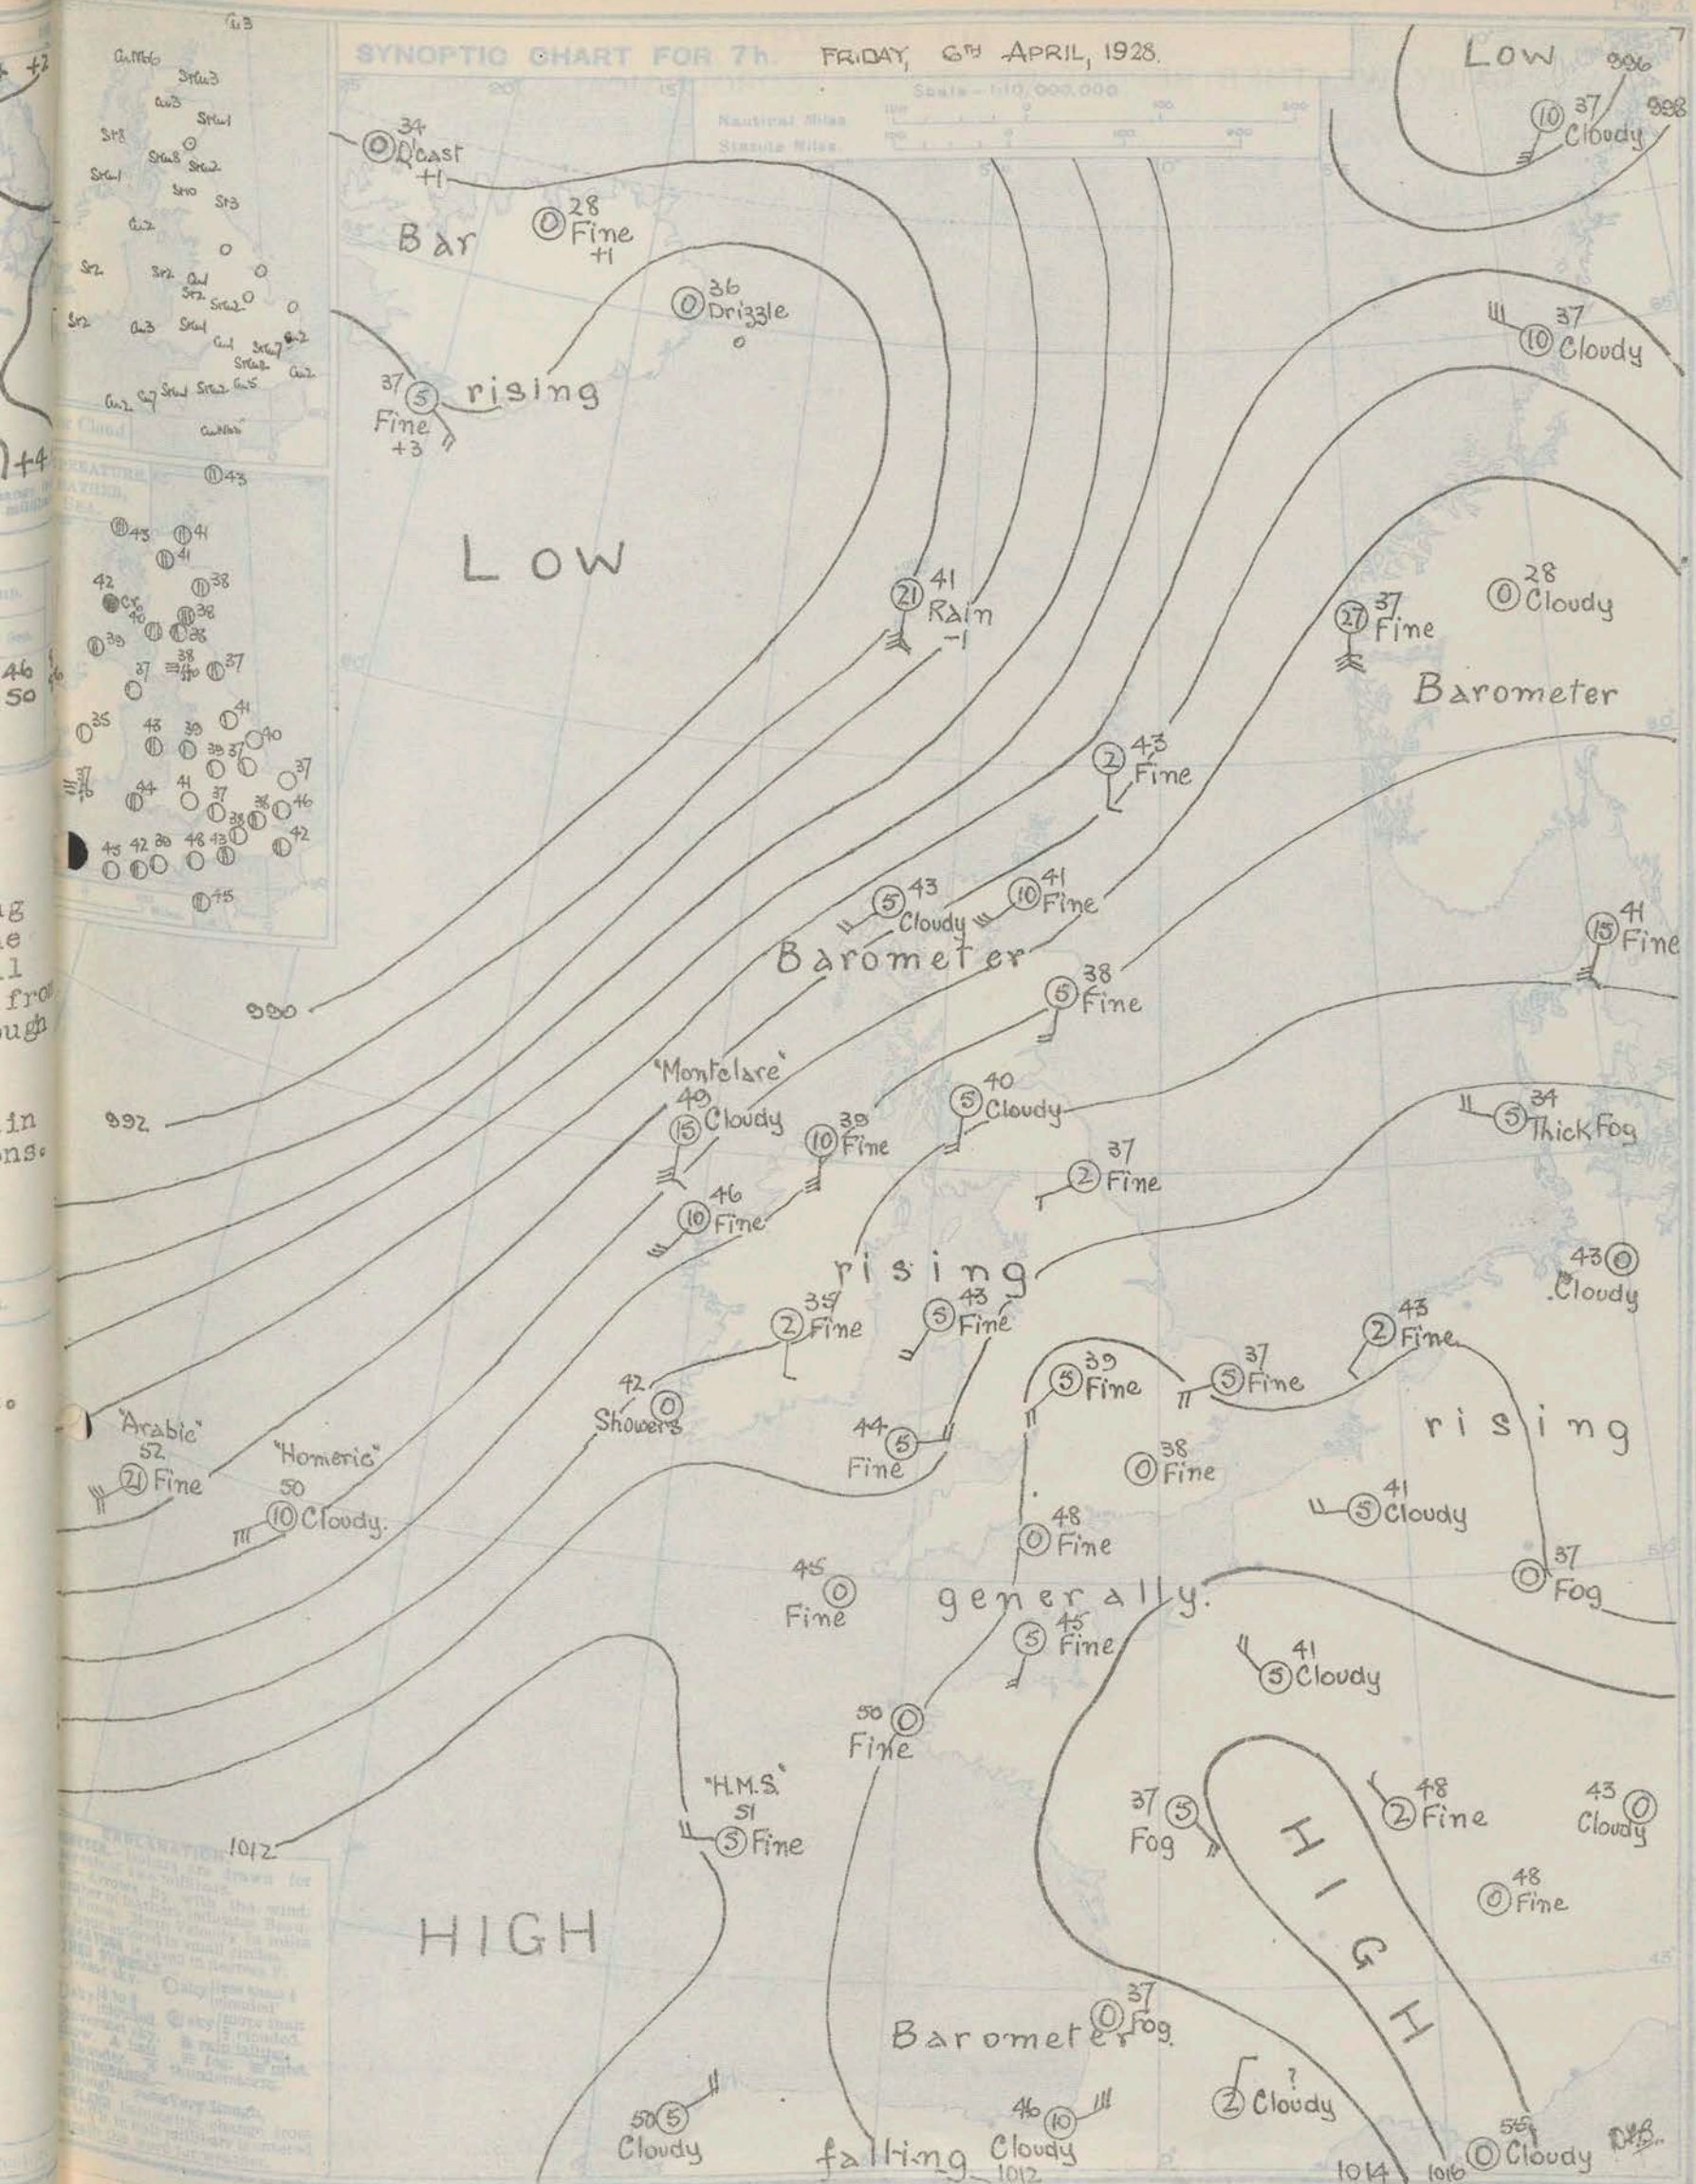

Districts.

Forecasts for the 24 hours commencing 15h. G.M.T.

‡ The barometric change is expressed in half millibars.

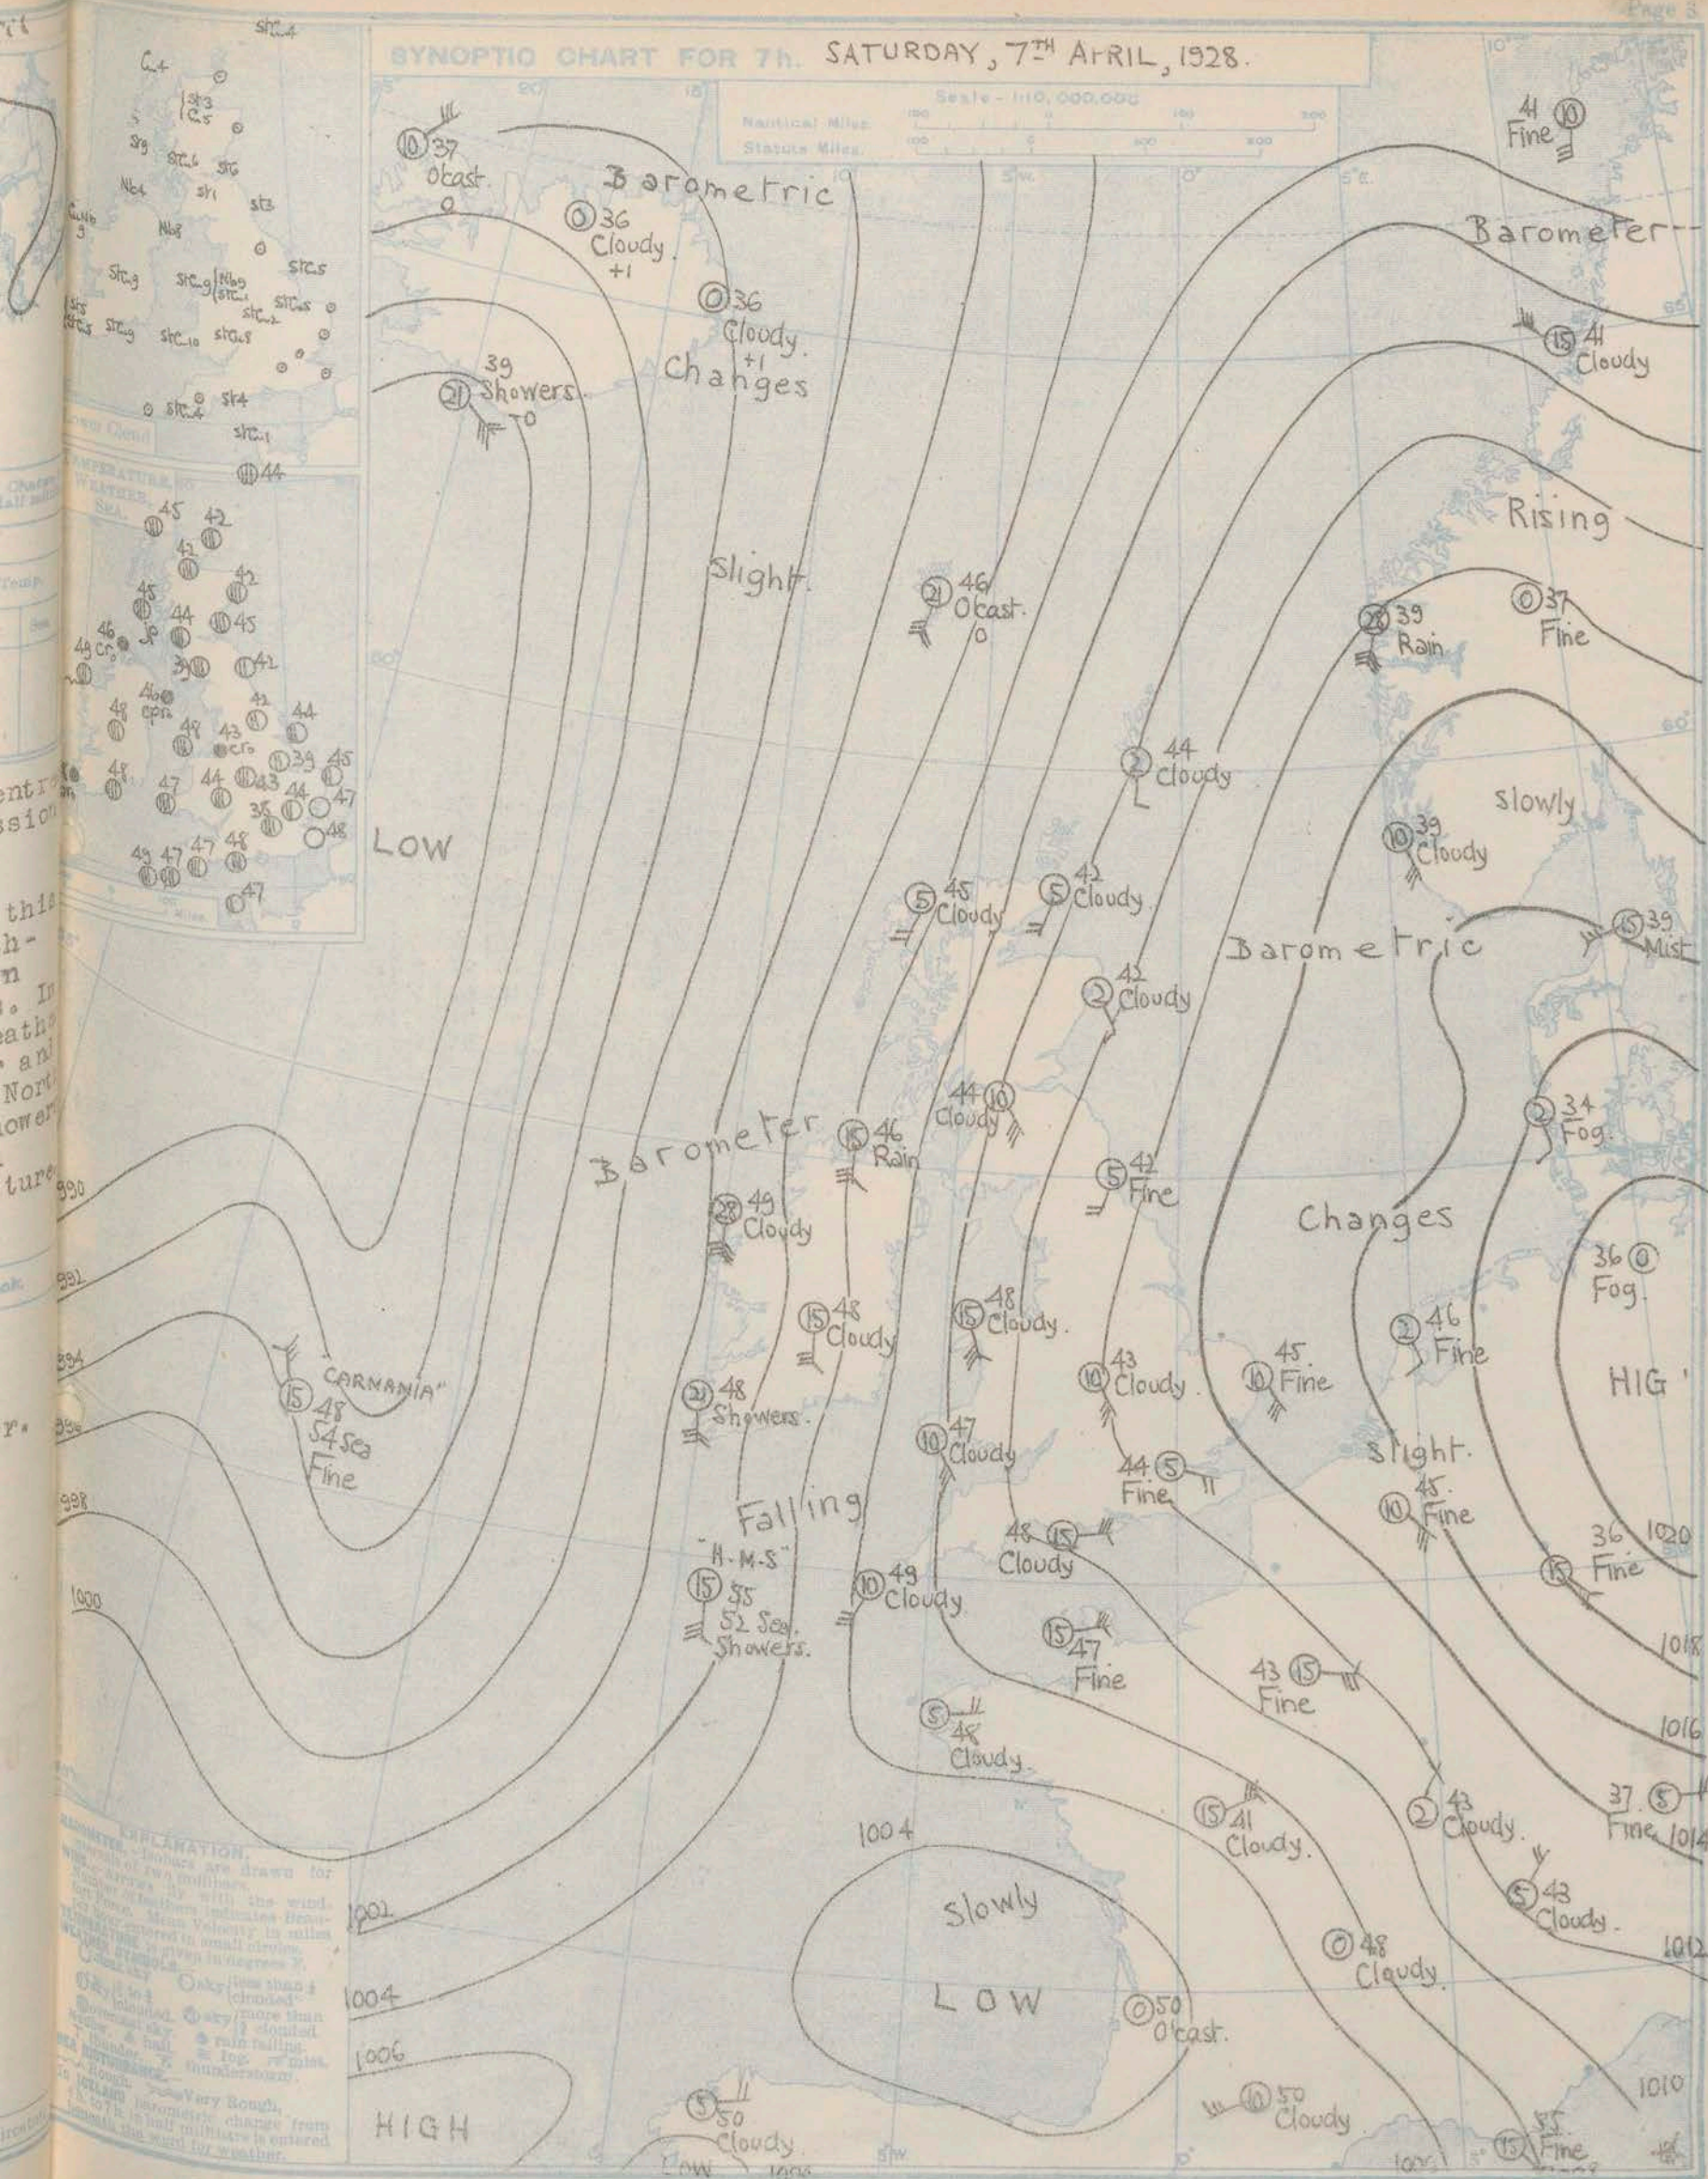

GENERAL INFERENCES

An anticyclone is centred over Germany and a depression to the south of Iceland. Secondary troughs of low pressure associated with this depression will move north-eastwards over the western half of the British Isles. In the East and Southeast weather will continue mainly fair and warm but in the West and North there will be thundery showers and bright intervals with rather changeable temperatures.

SYNOPTIC CHART FOR 7th. SATURDAY, 7th APRIL, 1928.

Nautical Miles
Statute Miles

Scale - 1:10,000,000

EXPLANATION.
Isobars are drawn for intervals of two millibars.
Wind direction is shown by the arrow, and force by the number of flags.
Mean velocity in miles per hour is shown in small circles.
Weather is given in degrees of visibility.
Clouds are given in degrees of visibility.
Only those clouds are shown which are more than 1000 feet thick.
Rain falling is shown by a line with a downward arrow.
Thunder is shown by a line with a downward arrow and a small circle.
Very Rough, is shown by a line with a downward arrow and a small circle.
Barometric change from 10 to 10.5 is shown by a line with a downward arrow and a small circle.
The wind for weather is shown by a line with a downward arrow and a small circle.

GENERAL INFERENCE.

A deep depression off Southwest Ireland is spreading east, and a secondary is moving northeast across the British Isles. Pressure is relatively high over Denmark. Winds will be mainly between south and east, becoming strong to gale in western districts, and unsettled weather will extend eastwards during the day, but is unlikely to affect extreme eastern districts before to-night.

Districts.

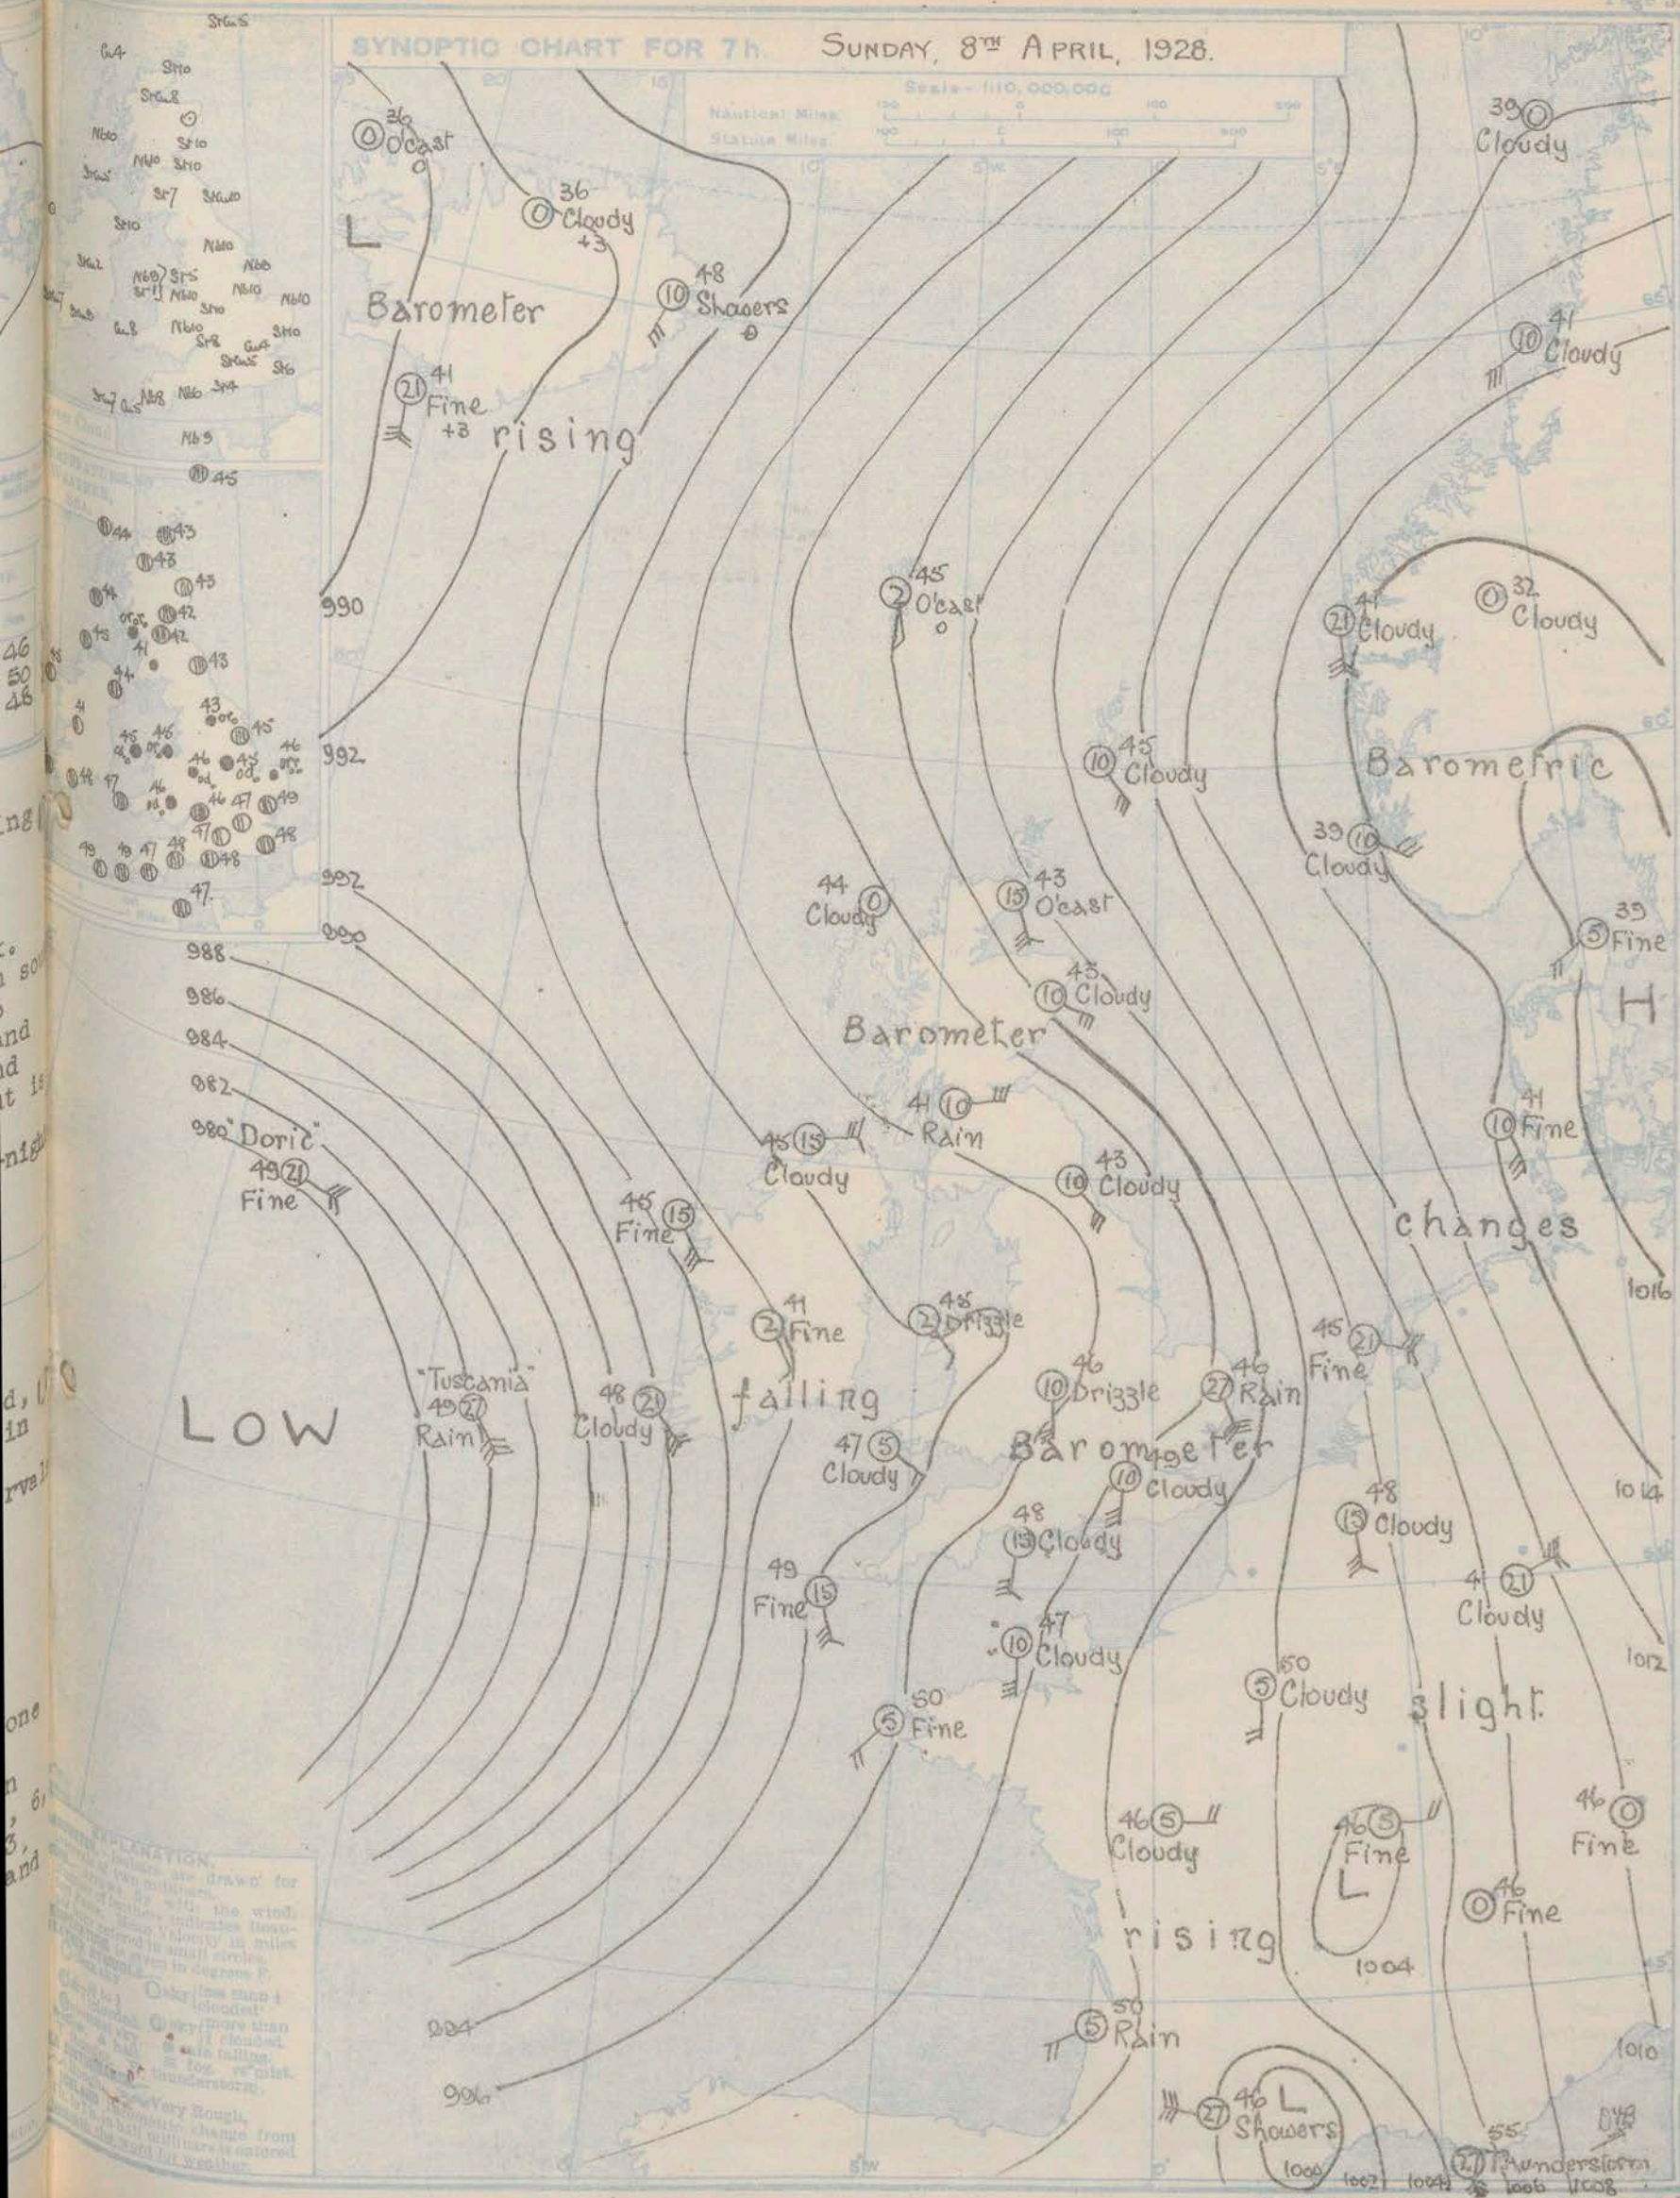

Forecasts for the 24 hours commencing 15h G.M.T. Sunday, 8th April, 1928.

GENERAL INFERENCE

A complex depression, with centres to the south of Iceland and over Southern Ireland, will gradually fill up as it moves slowly north-eastwards and secondaries to it will move northwards over the British Isles and the North Sea. Showers or occasional rain will occur locally but there will be long fair periods in most places.

Observations from Great Channel Steamers

| Date and Time | Steamship | Wind | Weather | Temp |
|---------------|-----------|-------|---------|-------|
| 2 11th 10h | SCOTIA | S'E 5 | C | 50 46 |

GENERAL INFERENCE.

Anticyclones are centred over Scandinavia and to the southwest of the British Isles and an extensive belt of low pressure stretches from Greenland across the British Isles to the Balkans. Quiet weather will continue with further local thunderstorms and some local mist or fog, night and morning. Day temperatures inland will be high for the time of year but ground frost will occur locally at night.

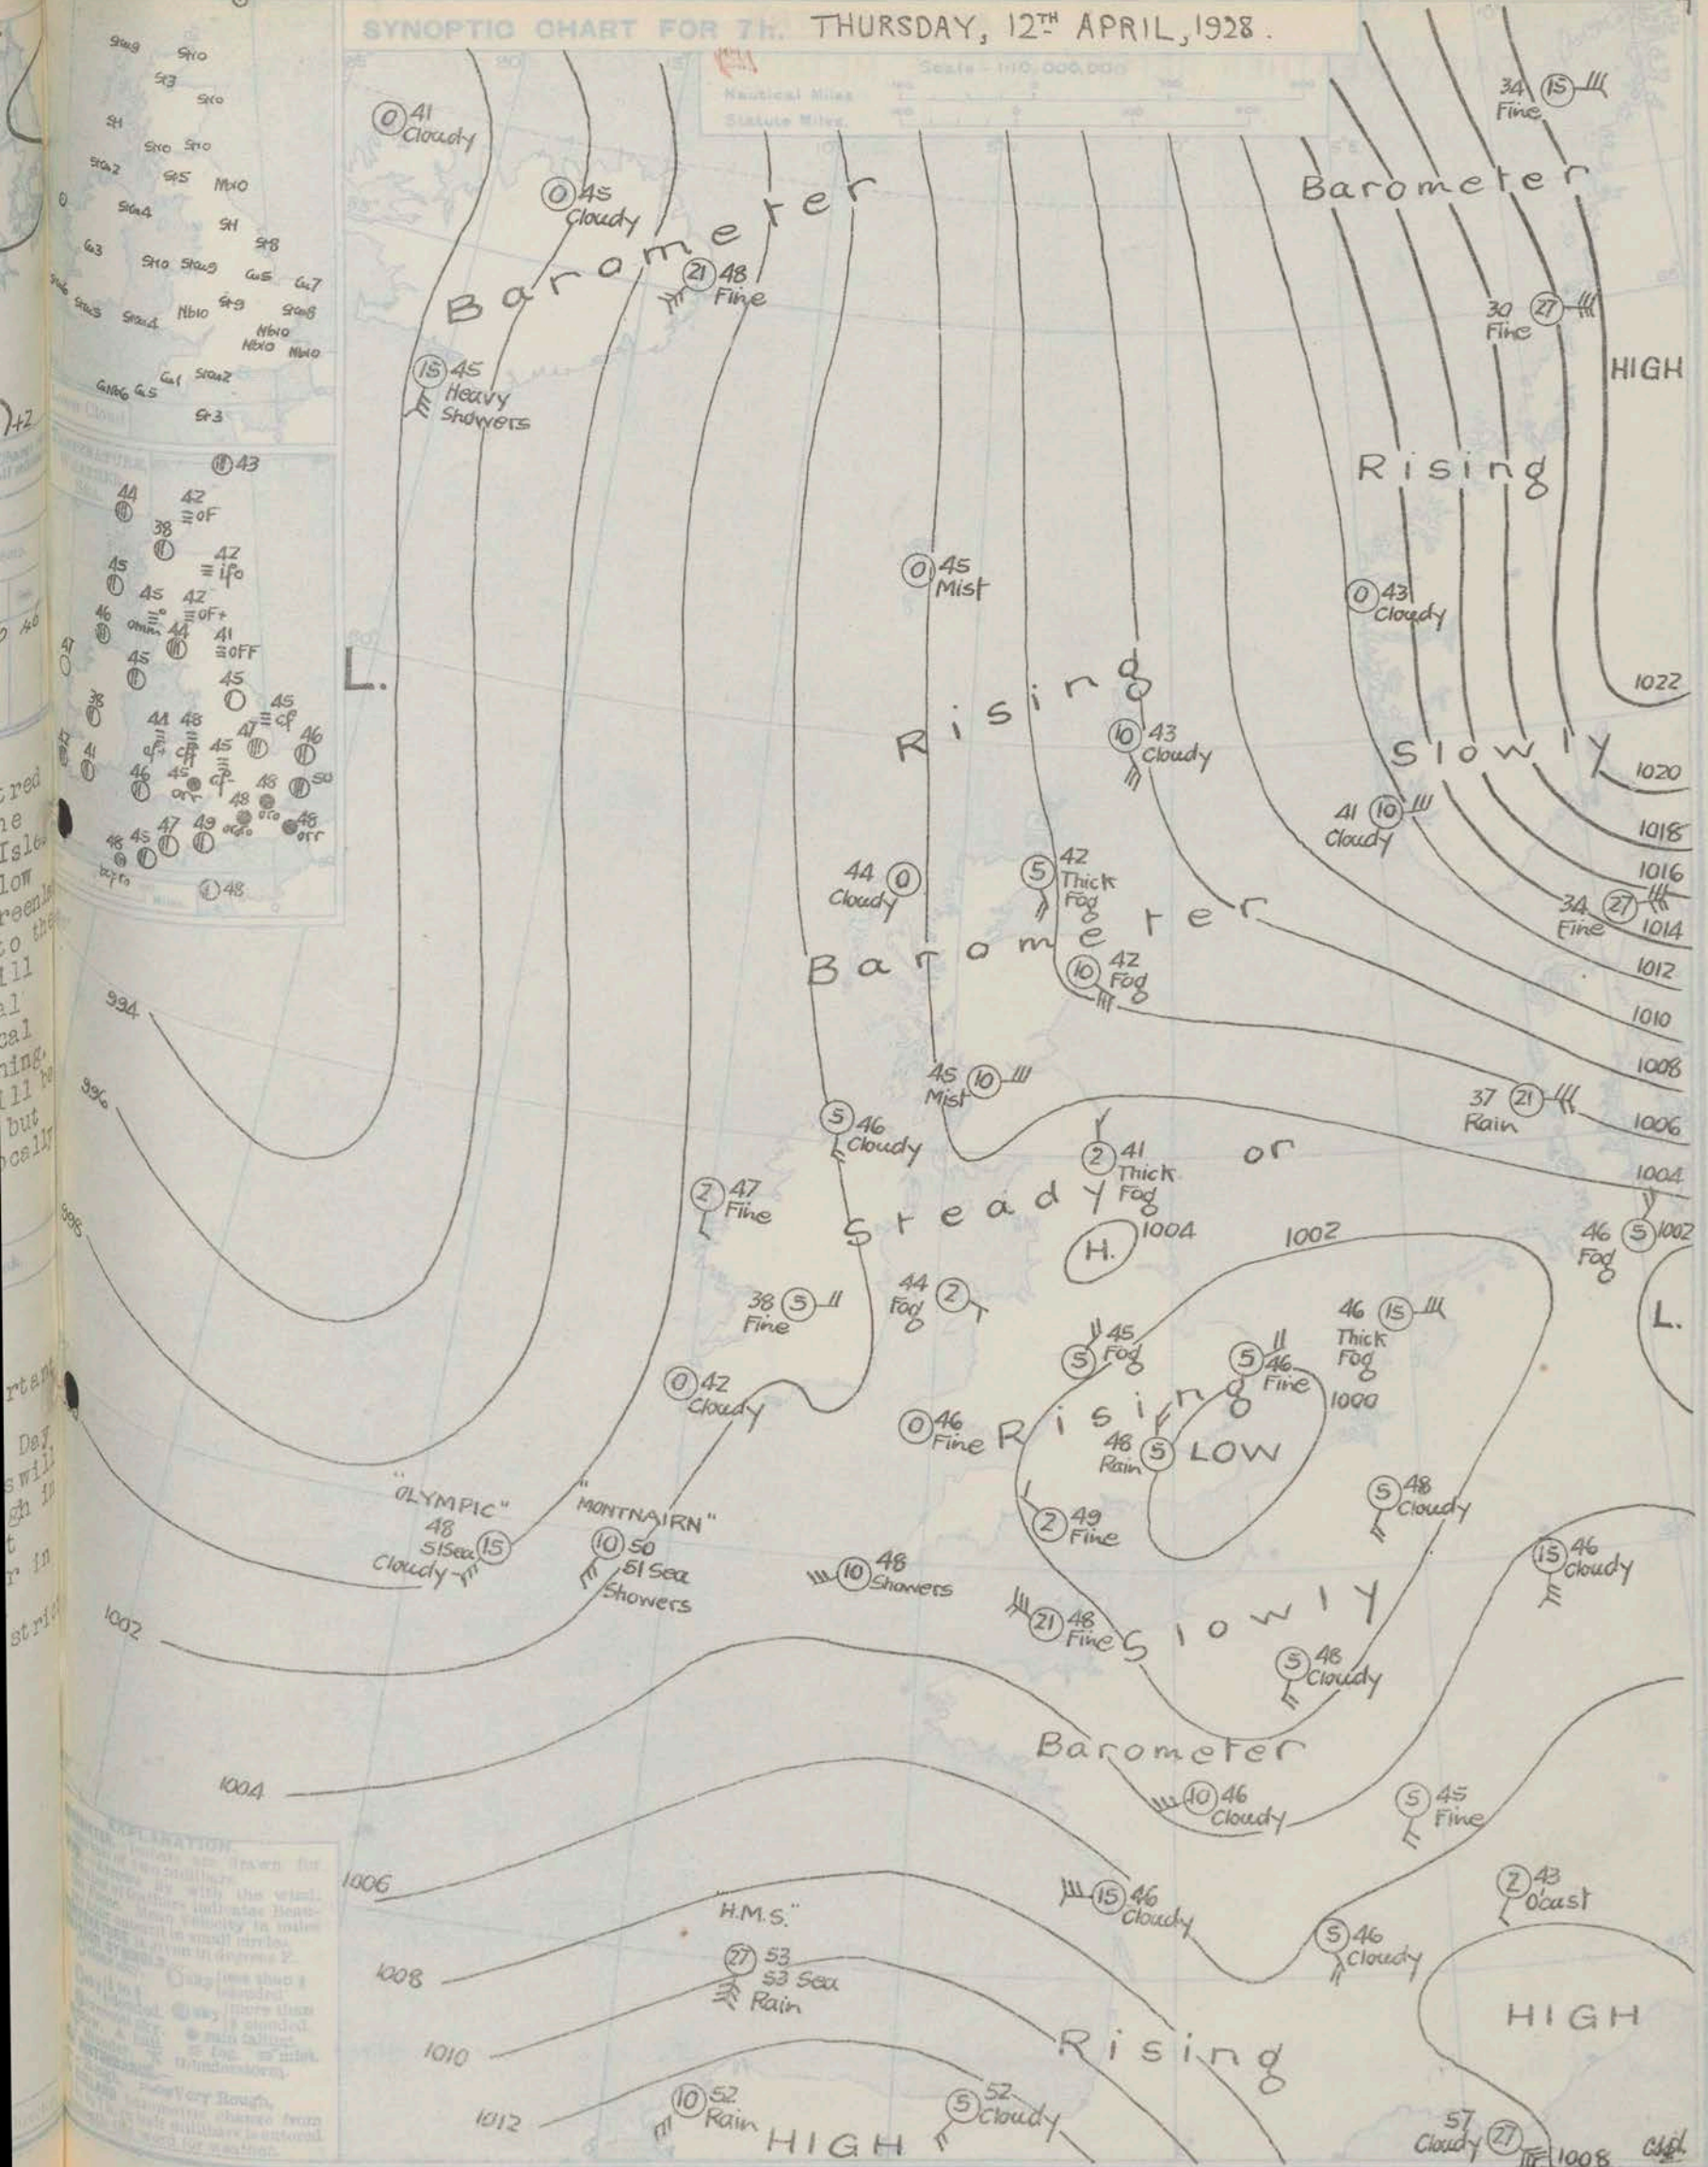

Further Outlook.

No important change is indicated. Day temperatures will continue high in the West but become lower in eastern and northern districts.

GENERAL INFERENCE.

A depression is approaching Ireland from the Atlantic and an anticyclone remains centred over Eastern Scandinavia. Weather will be cooler than of late and some rain will occur locally but principally along the eastern and southwestern seaboard. On the high ground in Northeastern England and on the eastern slopes of the Grampians there may be some sleet or snow.

Statute Miles

EXPLANATION.
Isobars - Isobars are drawn for intervals of two millibars.
Arrows - Arrows show the wind direction and force. The number of arrows indicates the force of the wind. The number of arrows in the wind direction indicates the force of the wind. The number of arrows in the wind direction indicates the force of the wind.
Weather Symbols - Symbols for various weather conditions: Cloudy, Rain, Snow, Thunderstorm, etc.
In Island barometric changes from 4h. to 7h. in half millibars is entered beneath the word for weather.

GENERAL INFERENCE.

The anticyclone between Scotland and Iceland persists. A shallow depression over Northern Germany is moving very slowly south, and another depression off our southwest coasts is moving E.S.E. and filling up. Occasional showers will occur over most of Great Britain but weather will be mainly fine in Ireland.

Districts.

Forecasts for the 24 hours commencing 15h G.M.T. Saturday, 21st April, 1928.

GENERAL INFERENCE.

An anticyclone covering the British Isles is moving east, a depression west of Ireland is moving northeast and spreading east. Weather will be mainly fair, today, apart from local showers in the eastern half of Great Britain. On our western seaboard freshening southerly winds with deteriorating conditions will spread in this evening or tomorrow.

| rr = continuous rain. | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| SYMBOLS. | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| < = (less than (for cloud height). | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| > = (more than (for precipitation). | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| Θ = solar halo, W = lunar halo. | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| With present weather is combined, whenever possible, the general character of the weather. | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| A solidus divides actual existing weather from preceding conditions, thus: -bc/r = fair weather after rain; - = has decreased; + = has increased. | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| The BEAUFORT SCALE OF WIND is used only for surface observations. In the accompanying table the speed of the wind corresponding with the different numbers, is the speed at about 50 feet above the ground. | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |

GENERAL INFERENCE.

The anticyclone near the Gulf of Riga is retreating, and a complex system of low pressure on the Atlantic will slowly extend its influence over the British Isles, with a gradual change to less settled thundery weather. Temperature will continue high.

GENERAL INFERENCE

Pressure remains high over the Baltic and is becoming high off our northwest coasts. A depression centred over Brittany will move very slowly northwest or west. Winds will be mainly fresh or strong, easterly in eastern districts and northeast to north in western districts. Some rain is probable in southern districts but elsewhere weather will probably be mainly fair.

Further Outlook

Fair in the North apart from local drizzle and fog near the east coast. Somewhat unsettled in the South, with a tendency for thunder.

Districts. Forecasts for the 24 hours commencing 15h G.M.T. Friday, 27th April, 1928.

Pressure continues to rise slowly over most of the British Isles whilst low pressure continues over France. Cloudy conditions with occasional showers will occur in Eastern Scotland and Northeastern and Southwestern England but elsewhere there will be considerable bright periods. Local fog will occur at night. Temperature over Southeast England will be rather high.

GENERAL INFERENCE.

A ridge of relatively high pressure over northern and western districts is slowly giving way in front of a depression on the Atlantic, while a depression over Eastern France is deepening as it moves east. After a further period of fine weather over most of the country at first, more cloud conditions will develop generally with local mist or fog at first. Drizzle will occur locally in eastern coastal districts.

| Districts. | Forecasts for the 24 hours commencing 15h G.M.T. Sunday, 29th April, 1928. | Further Outlook. |
|---------------------------------|---|---------------------------------|
| 1. S.E. England | Northerly winds, moderate to fresh at first; mainly cloudy, with local coastal drizzle; local fog, particularly in the early morning; moderate temperature. | Probably becoming less settled. |
| 2. E. England | | |
| 3. E. Midlands | | |
| 4. W. Midlands | | |
| 5. S.W. England | Light northerly to variable winds; fine at first, more cloud later; local mist or fog particularly in the early morning; rather high to moderate temperature. | |
| 6. South Wales | | |
| 7. North Wales | | |
| 8. N.W. England | | |
| 9. N. Midlands | Light variable winds; cloudy, local coastal drizzle; some fog and mist; moderate temperature. | |
| 10. N.E. England | | |
| 11. S.E. Scotland | | |
| 12. S.W. Scotland & Isle of Man | | |
| 13. A.W. Scotland | As 4 - 7. | |
| 14. B.W. Scotland | | |
| 15. S.W. Scotland | | |
| 16. N.E. Scotland | | |
| 17. Orkneys and Shetlands | As 10 - 11. | |
| 18. N.W. Ireland | | |
| 19. N.E. Ireland | | |
| 20. S.E. Ireland | | |
| 21. S.W. Ireland | Light variable winds, becoming southwesterly; fine apart from local mist or fog at first, then becoming cloudy; some rain or drizzle later; moderate temperature. | |
