0600 GMT 01 JULY 2014	SIG WEATHER	1200 GMT 01 JULY 2014	SIG WEATHER	<p><b>Summary of UK Weather for Tuesday 01 July 2014.</b></p> <p>The far south-west remained rather cloudy overnight with further patchy, and mainly light, rain at times, which drifted a little further east along the south coast and reached the Portsmouth area by dawn.</p> <p>Elsewhere it was a mostly dry night with variable amounts of cloud, and some long clear spells in places. However, there were isolated light showers over eastern Scotland, and shortly after dawn some showers developed across northern East Anglia.</p> <p>The clear spells allowed for some localised shallow mist patches to form, and temperatures to dip into low single figures Celsius across many areas away from the far south-west.</p> <p>The patchy rain across south-western coastal counties cleared through the morning.</p> <p>Elsewhere, it was another predominantly dry, fine and warm day for most.</p> <p>Cloud bubbled up across many parts during the morning, and lead to a few sharp showers developing over the Scottish Highlands and across northern and eastern England.</p> <p>Into the evening, the showers slowly drifted south-westwards into the Midlands, easing as they did so.</p> <p>By the end of the day, high level cloud started to increase in north-west Scotland.</p>
1800 GMT 01 JULY 2014	SIG WEATHER	0000 GMT 02 JULY 2014	SIG WEATHER	<p><b>EXTREMES</b></p> <p><b>Highest Maximum:</b> 23.5 Keswick, Cumbria</p> <p><b>Lowest Maximum:</b> 14.1 Fair Isle, Shetland</p> <p><b>Lowest Minimum:</b> 2.0 Tulloch Bridge, Inverness-Shire</p> <p><b>Lowest Grass Minimum:</b> 0.1 Tulloch Bridge, Inverness-Shire</p> <p><b>Most Rain:</b> 2.2 Wittering, Cambridgeshire</p> <p><b>Most Sun:</b> 15.5 Tiree, Argyll</p>

# SIGNIFICANT WEATHER

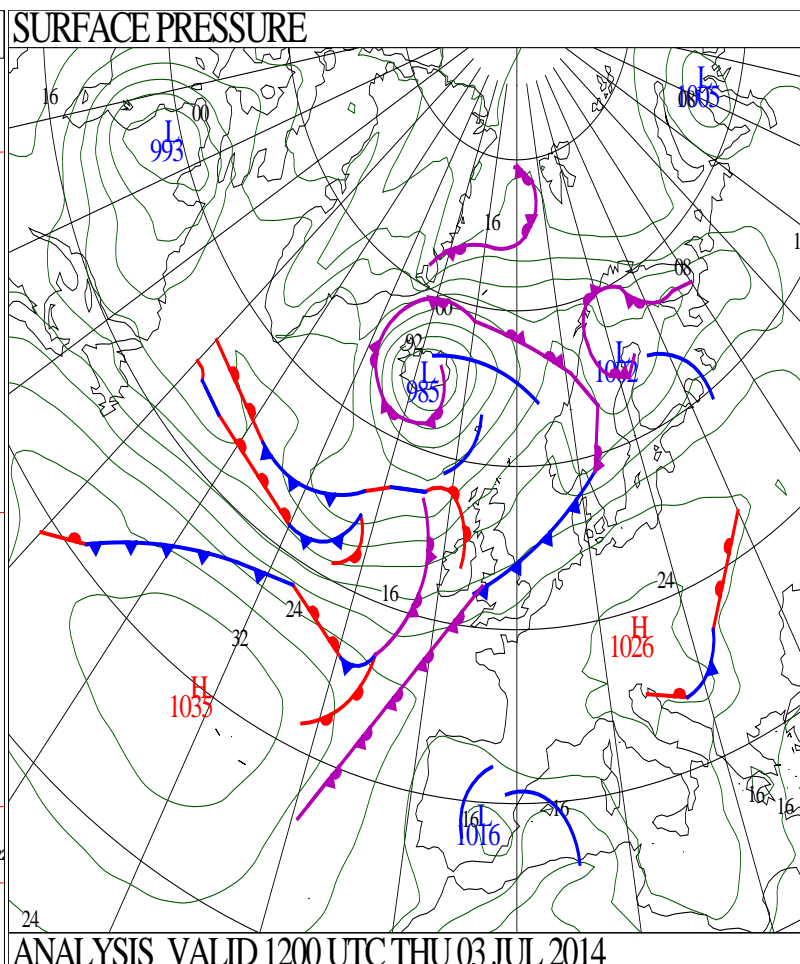

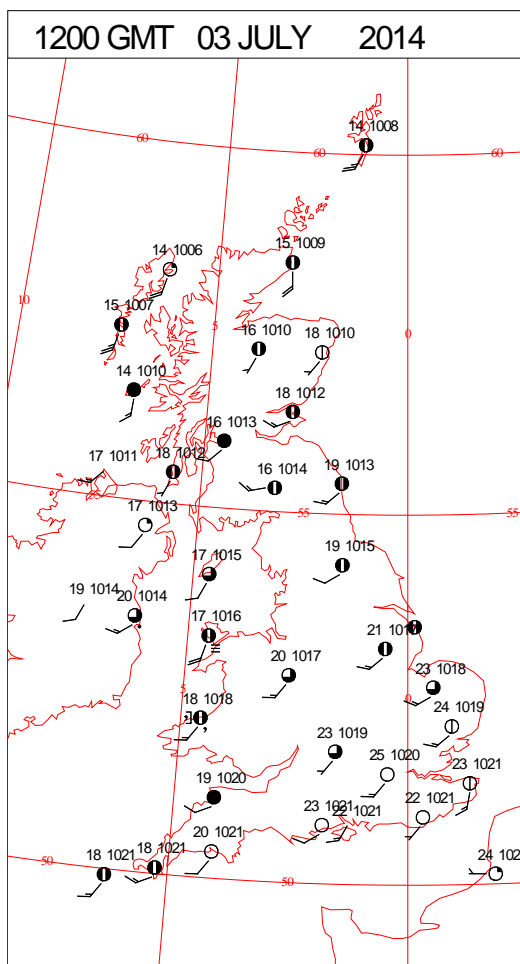

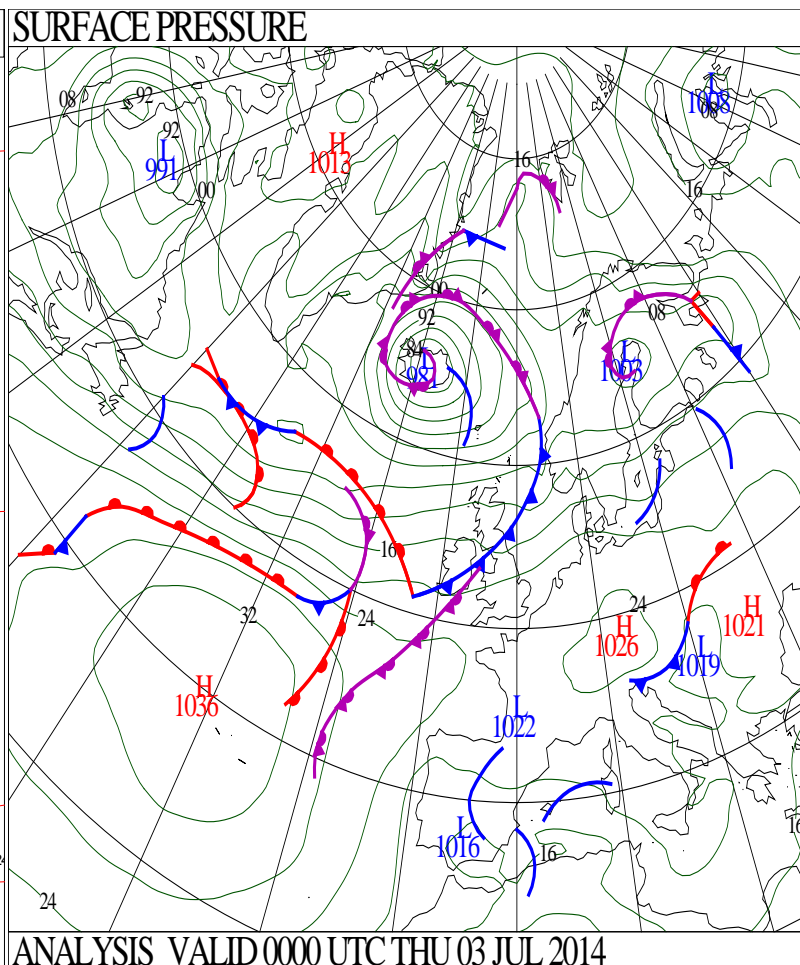

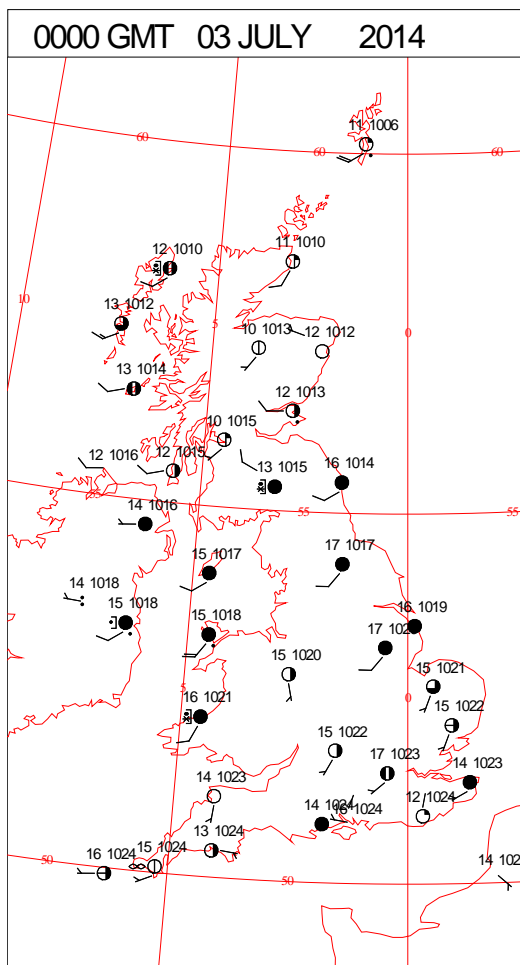

0600 GMT 02 JULY 2014	SIG WEATHER	1200 GMT 02 JULY 2014	SIG WEATHER	<p><b>Summary of UK Weather for Wednesday 02 July 2014.</b></p> <p>During the early hours of Wednesday, north-western parts became increasingly cloudy, and the south-westerly winds also increased.</p> <p>Otherwise, for many parts it stayed dry and fine overnight with long clear periods, which allowed some localised mist and shallow fog patches to form in a few central and eastern parts. This is also where temperatures fell quite widely into single figures Celsius.</p> <p>Outbreaks of rain spread very gradually south-eastwards across north-western areas, with the main area of rain just reaching northern England in the evening. The rain was generally fairly light and patchy, but did give some moderate bursts across some north-western parts of Scotland. It also became increasingly breezy in the north, with gale force gusts reported in some exposed locations of western Scotland.</p> <p>Elsewhere, it was another dry and fine day, but high cloud gradually spilled south-eastwards across much of the U.K. through the day, turning the sunshine rather hazy for many.</p> <p>Temperatures were around average under the cloud and breeze in the north, elsewhere it was another very warm day for most.</p>
				<p><b>EXTREMES</b></p> <p><b>Highest Maximum:</b> 24.8 Northolt, Greater London</p> <p><b>Lowest Maximum:</b> 14.6 Fair Isle, Shetland</p> <p><b>Lowest Minimum:</b> 5.6 Eskdalemuir, Dumfries-Shire</p> <p><b>Lowest Grass Minimum:</b> 2.5 Leconfield, Humberside</p> <p><b>Most Rain:</b> 6.2 Loch Glascarnoch, Ross-Shire</p> <p><b>Most Sun:</b> 14.9 Jersey Airport, Jersey</p>

# SIGNIFICANT WEATHER

0600 GMT 03 JULY 2014	SIG WEATHER	1200 GMT 03 JULY 2014	SIG WEATHER	<p><b>Summary of UK Weather for Thursday 03 July 2014.</b></p> <p>A band of patchy rain, hill fog and generally cloudy conditions across southern Scotland and Northern Ireland, gradually sank southwards through the night, reaching as far south as northern Wales and northern England by dawn.</p> <p>To the south of this band it remained dry with clear periods overnight, which allowed a few shallow mist and fog patches to form.</p> <p>Whilst to the north, across much of Scotland and Northern Ireland, it became locally chilly in a few spots and there was variable cloud with some clear spells. It was also generally windy across northern areas.</p> <p>The band of cloud became slow moving across central parts of the U.K. through the day, with some breaks developing at times within it. However, there was some patchy rain across the hills of Wales and northern England at times too.</p> <p>To the north of the cloud, there were some bright or sunny spells, and a few showers. To the south of the cloud, mainly across far southern coastal counties, south-east England and parts of East Anglia, it remained sunny and very warm.</p>
1800 GMT 03 JULY 2014	SIG WEATHER	0000 GMT 04 JULY 2014	SIG WEATHER	<p><b>EXTREMES</b></p> <p><b>Highest Maximum:</b> 27.1 Heathrow, Greater London</p> <p><b>Lowest Maximum:</b> 14.1 Fair Isle, Shetland</p> <p><b>Lowest Minimum:</b> 6.4 Aboyne No2, Aberdeenshire</p> <p><b>Lowest Grass Minimum:</b> 3.0 Aboyne No2, Aberdeenshire</p> <p><b>Most Rain:</b> 21.0 South Uist Range, Western Isles</p> <p><b>Most Sun:</b> 15.6 Jersey: Airport, Jersey</p>

# SURFACE PRESSURE

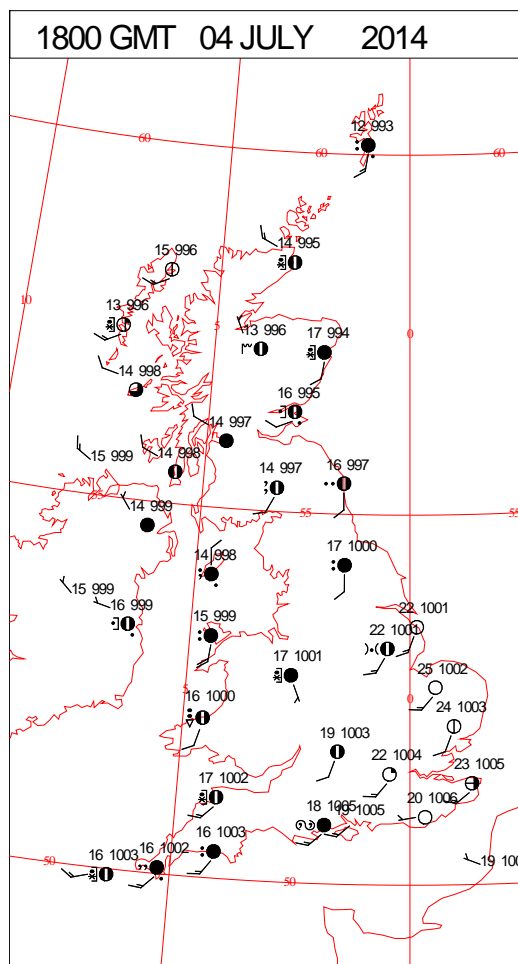

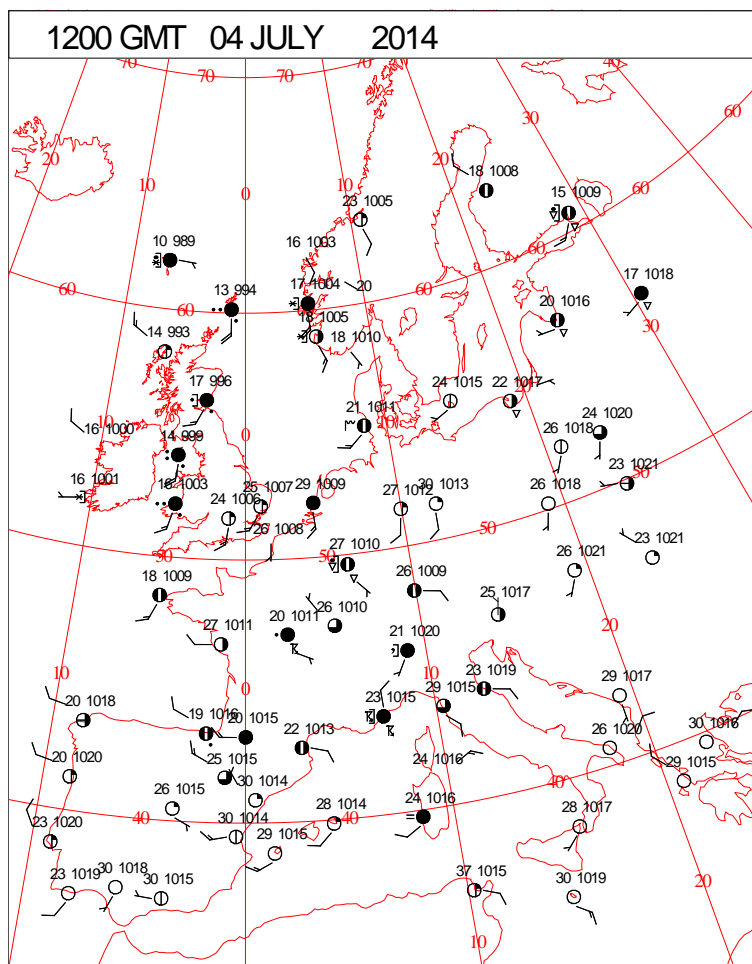

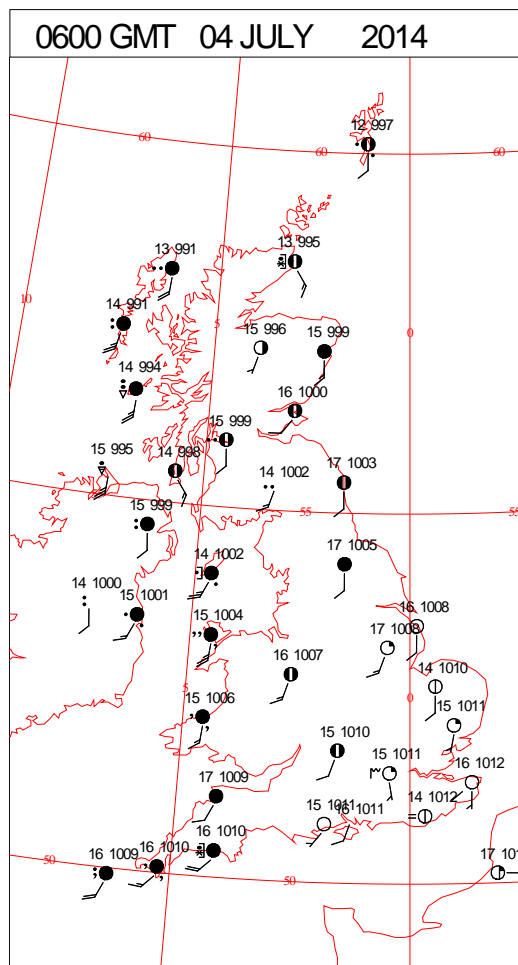

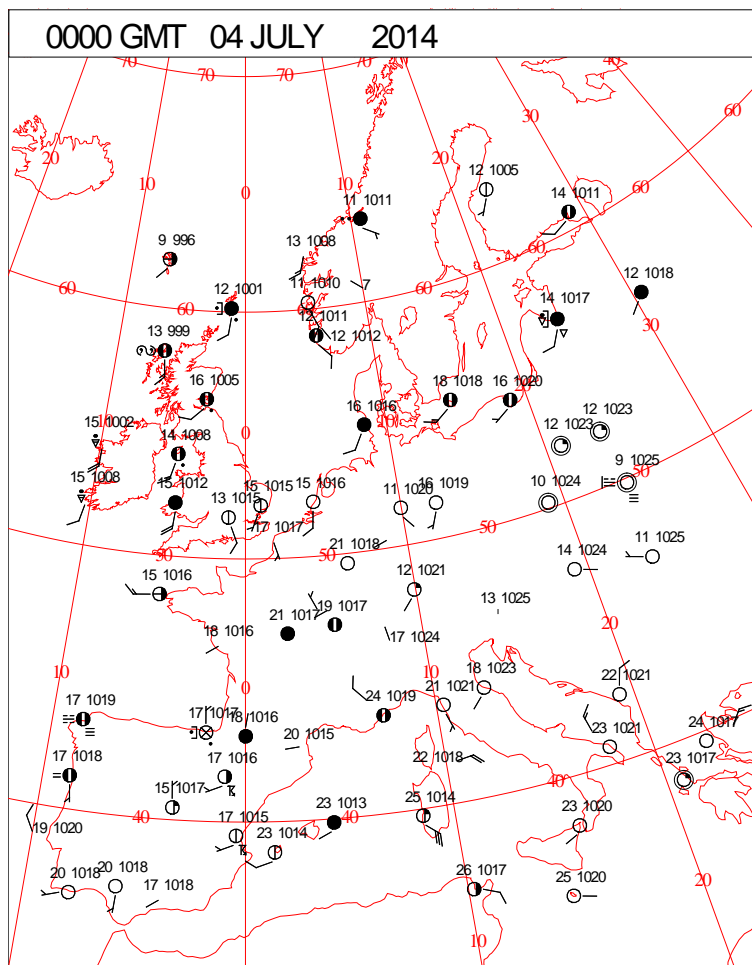

The map displays the surface pressure field over Europe and the North Atlantic. Key features include:

- High Pressure Systems (H):** Located in the North Atlantic (1032, 1022), over Scandinavia (1021, 1018), and over the Mediterranean (1019).
- Low Pressure Systems (L):** Located in the North Atlantic (1012, 1011), over the British Isles (1007, 1010), and over central Europe (988, 989).
- Fronts:** Red lines with arrows indicate cold fronts, and blue lines with arrows indicate warm fronts. These are associated with the low pressure systems.
- Isobars:** Green lines showing pressure contours, with values ranging from 98 to 104.
- Geographic Labels:** Latitude (24, 32, 40, 48, 56) and longitude (16, 24, 32, 40, 48, 56) markings are present.

## SURFACE REPORTS

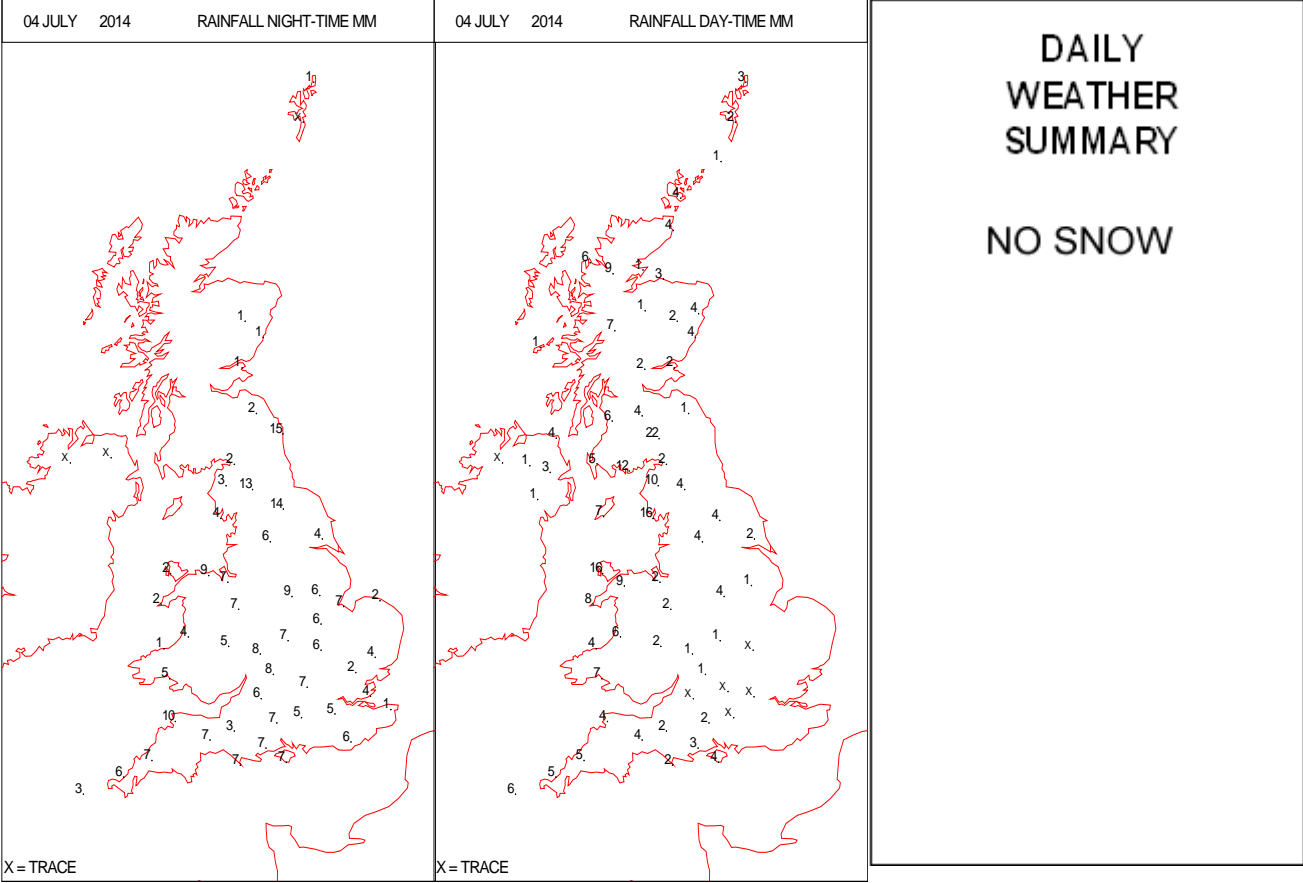

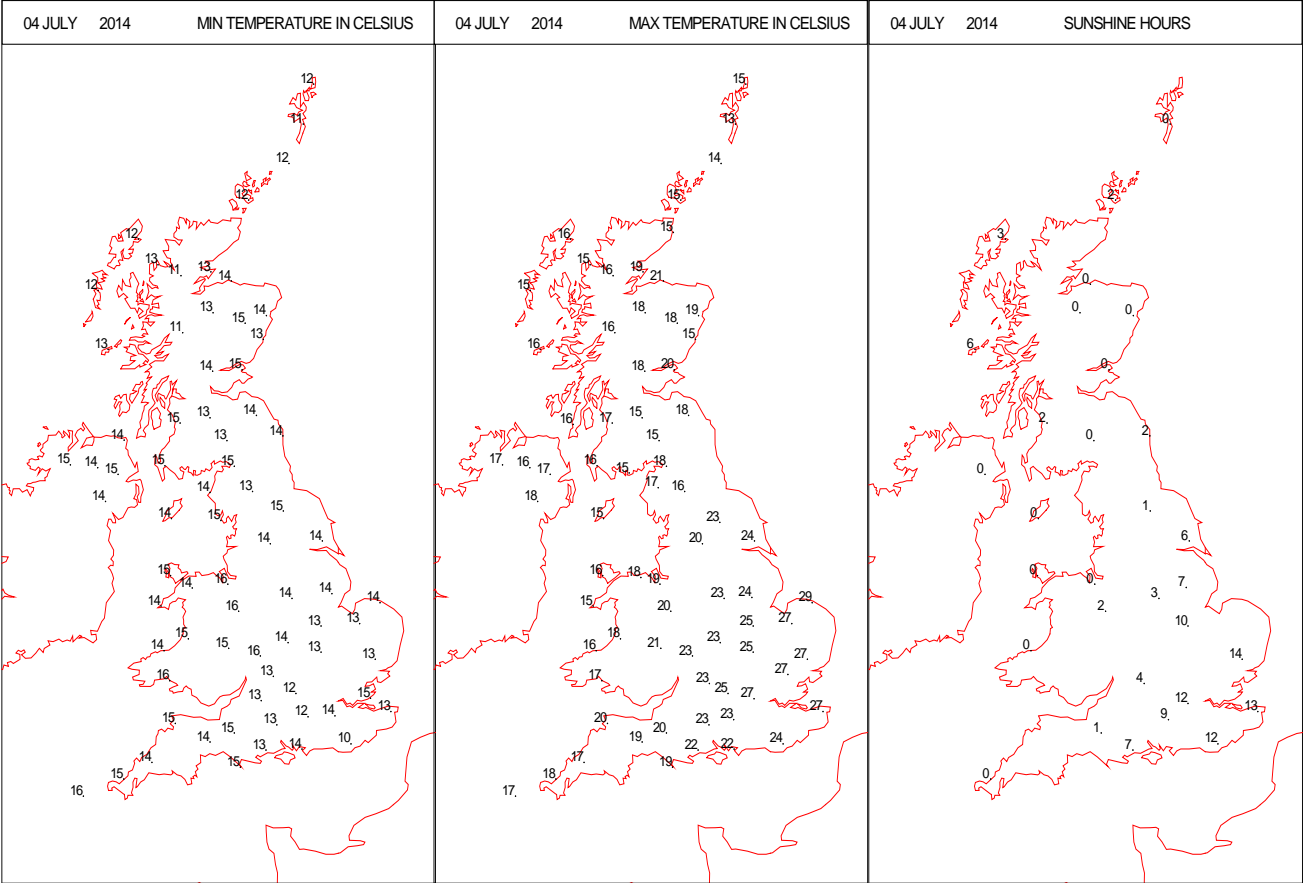

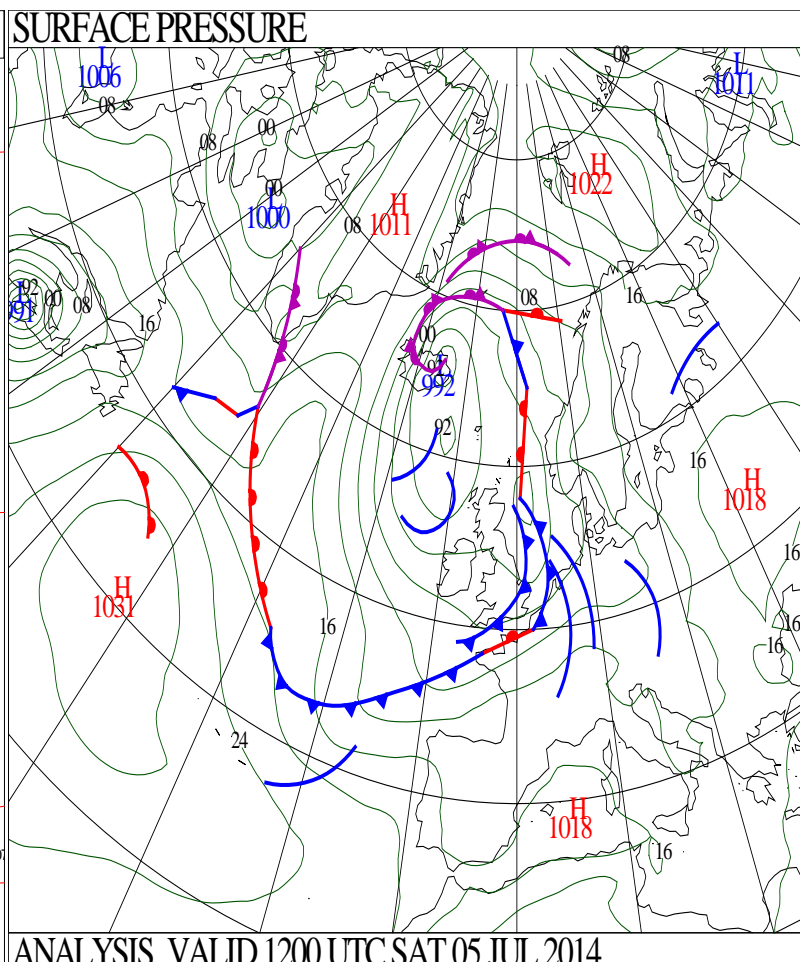

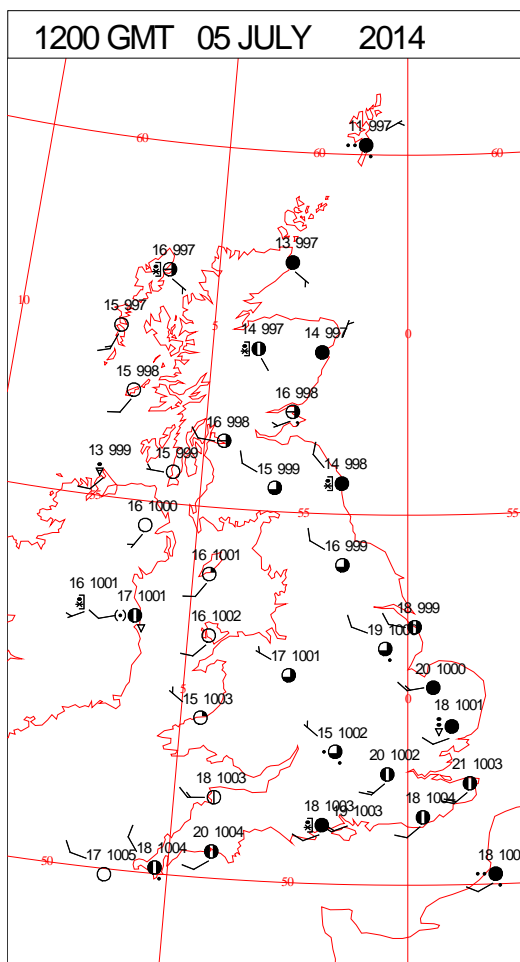

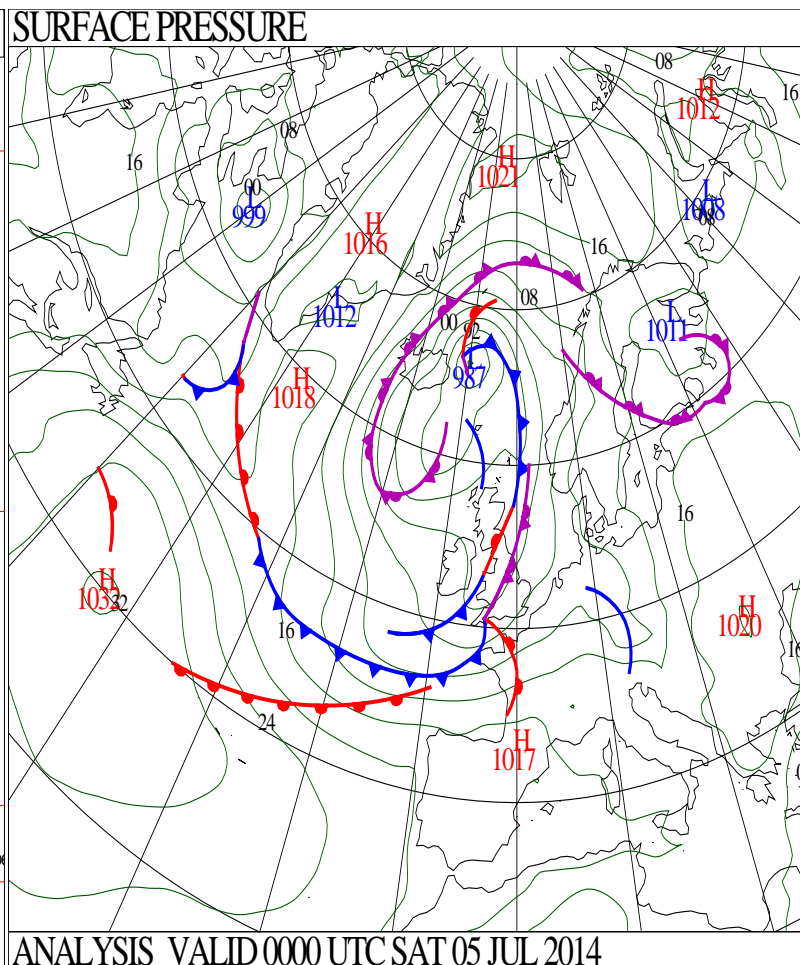

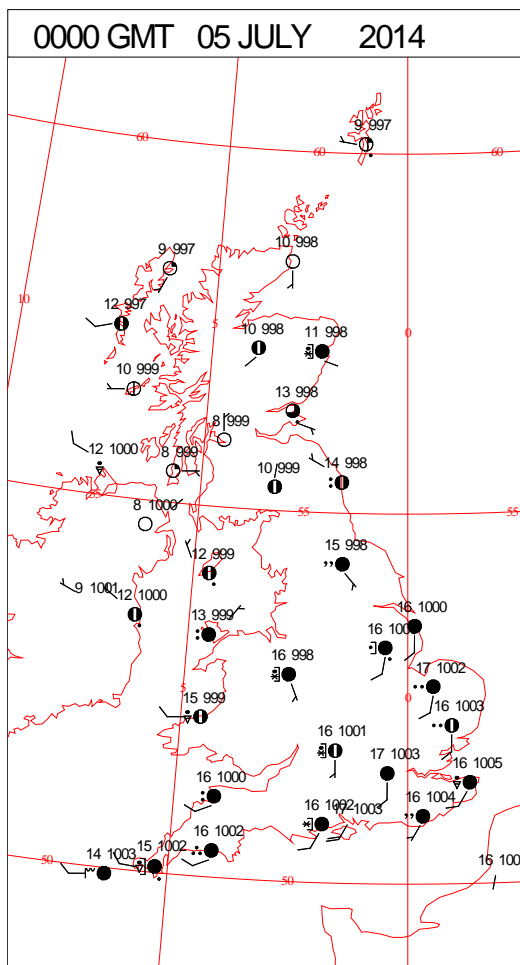

# SIGNIFICANT WEATHER

0600 GMT 04 JULY 2014	SIG WEATHER	1200 GMT 04 JULY 2014	SIG WEATHER	<p><b>Summary of UK Weather for Friday 04 July 2014.</b></p> <p>It was a dry night initially across much of the U.K. with clear spells. However the cloud began to thicken across parts of Northern Ireland and western Scotland, with outbreaks of rain slowly spreading east, reaching western parts of Wales and north-west England by dawn.</p> <p>A few low cloud and mist patches also developed across southern England. The wind also increased across north-west areas as the night progressed.</p> <p>It was a mild night for all with most places remaining in double figures Celsius.</p> <p>Rain across western Scotland and north-west England continued to gradually drift south-east throughout the day. This also brought low cloud and poor visibilities to some western areas. It was windy too with strong gusts recorded over the Pennines throughout the day.</p> <p>The south-east of England remained dry throughout the day, with plenty of sunny spells. The rain, however, finally made it to the far south-east through the latter part of the evening.</p> <p>Temperatures were around average under the cloud and rain, but well above in the south-east of England, in the best of the sunshine.</p>
1800 GMT 04 JULY 2014	SIG WEATHER	0000 GMT 05 JULY 2014	SIG WEATHER	<p><b>EXTREMES</b></p> <p><b>Highest Maximum:</b> 28.7 Weybourne, Norfolk</p> <p><b>Lowest Maximum:</b> 13.4 Lerwick, Shetland</p> <p><b>Lowest Minimum:</b> 10.1 Herstmonceux, East Sussex</p> <p><b>Lowest Grass Minimum:</b> 8.3 Herstmonceux, East Sussex</p> <p><b>Most Rain:</b> 36.8 Levens Hall, Cumbria</p> <p><b>Most Sun:</b> 14.0 Faversham, Kent</p>

# SIGNIFICANT WEATHER

0600 GMT 06 JULY 2014	SIG WEATHER	1200 GMT 06 JULY 2014	SIG WEATHER	<p><b>Summary of UK Weather for Sunday 06 July 2014.</b></p> <p>Overnight, showers continued to effect north-western parts of the U.K., although mainly confined to coastal areas. These showers were heavy and thundery at times.</p> <p>Elsewhere, scattered showers continued in south-western coastal areas, and across parts of eastern England. The south-east of England remained cloudy overnight, with outbreaks of rain spreading up from the south.</p> <p>Elsewhere, it was a mostly dry and clear night. It was a mild night in the south, but much cooler in the north, with the lowest temperature recorded at Braemar, Aberdeenshire.</p> <p>The showery rain in the east continued, and was heavy at times with thunder in places.</p> <p>This gradually cleared eastwards through the morning, but produced some large hourly totals in the Scarborough area. It took until early afternoon to clear East Anglia. Meanwhile, showers developed in the west, and spread gradually eastwards through the day, with hail reported at Hawarden, and lightning for quite a few locations across the country. However, there were lengthy sunny spells between the showers and many places remained dry throughout.</p> <p>The highest temperatures were recorded in south-east England.</p>
1800 GMT 06 JULY 2014	SIG WEATHER	0000 GMT 07 JULY 2014	SIG WEATHER	<p><b>EXTREMES</b></p> <p><b>Highest Maximum:</b> 21.7 Marham, Norfolk</p> <p><b>Lowest Maximum:</b> 13.4 Fair Isle, Shetland</p> <p><b>Lowest Minimum:</b> 1.2 Braemar No2, Aberdeenshire</p> <p><b>Lowest Grass Minimum:</b> -1.3 Braemar No2, Aberdeenshire</p> <p><b>Most Rain:</b> 21.0 Scarborough, North Yorkshire</p> <p><b>Most Sun:</b> 14.5 Aberport, Dyfed</p>

DAILY CLIMATE DATA

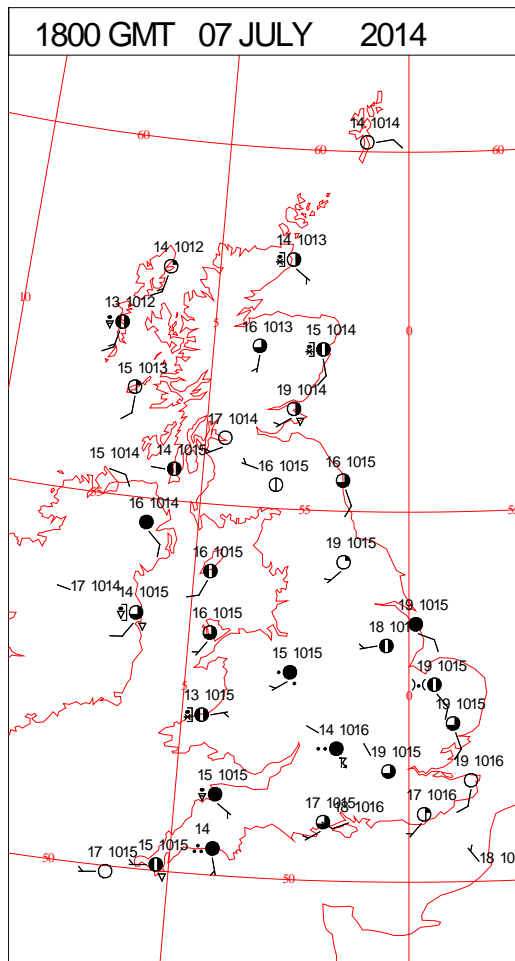

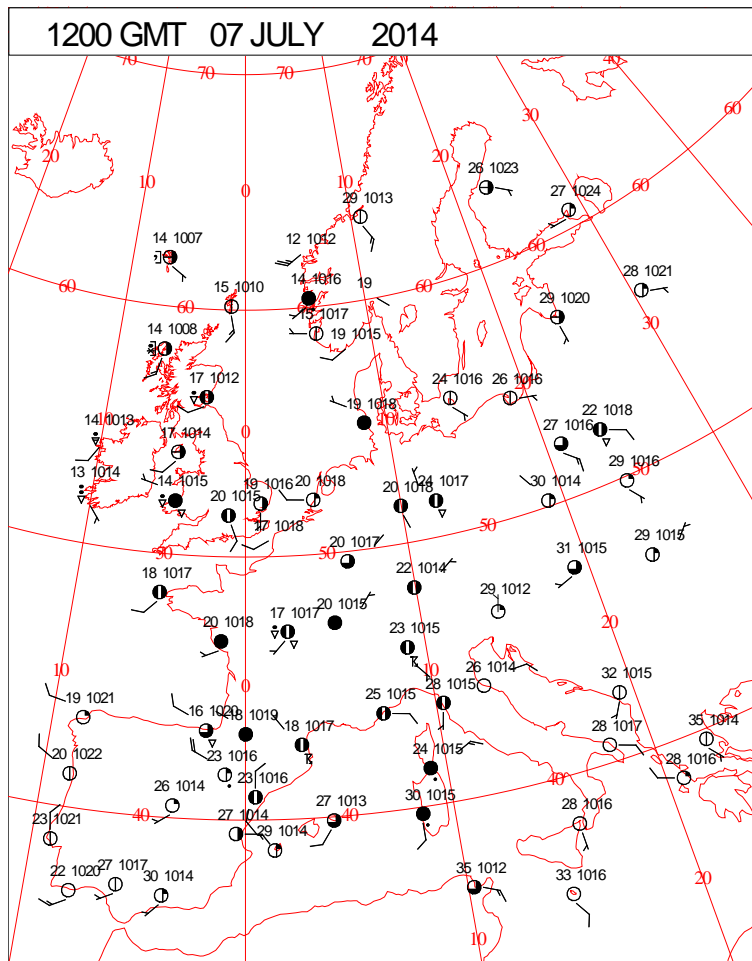

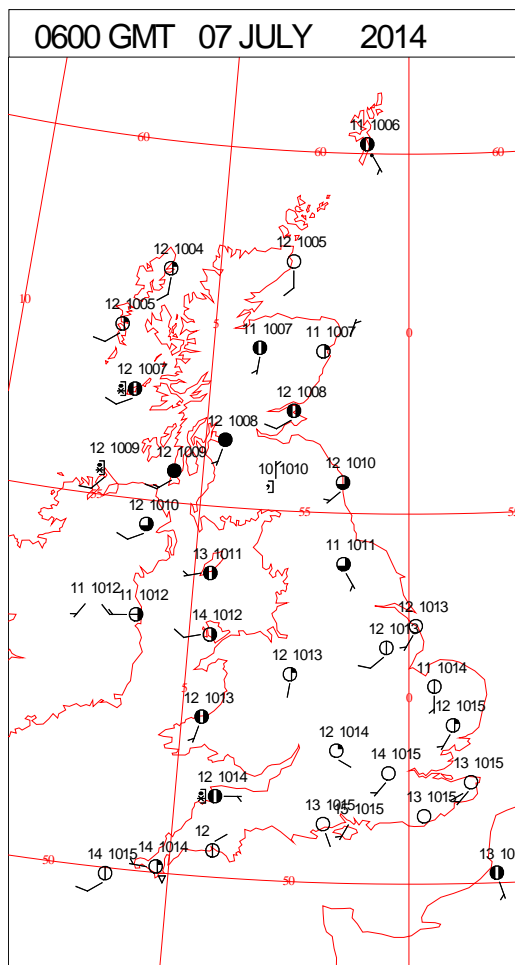

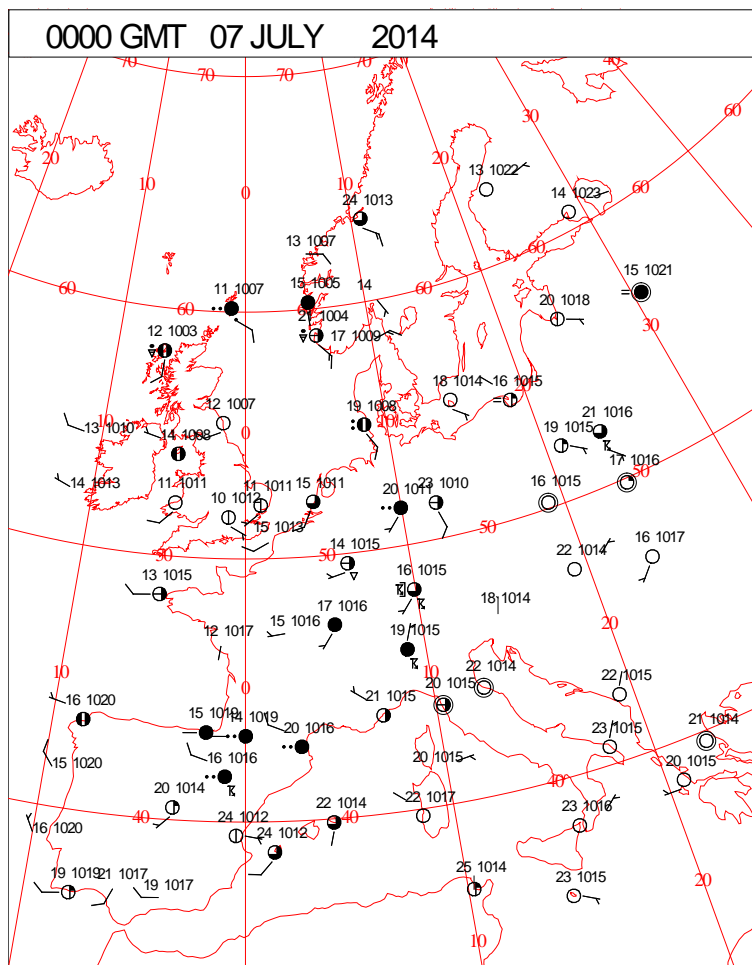

The map displays the British Isles with a grid of latitude and longitude lines. Latitude lines are marked at 50, 55, and 60 degrees North. Longitude lines are marked at 0, 10, 20, and 30 degrees West. The coastlines are outlined in red. Twenty-five meteorological stations are indicated by symbols and numbers:

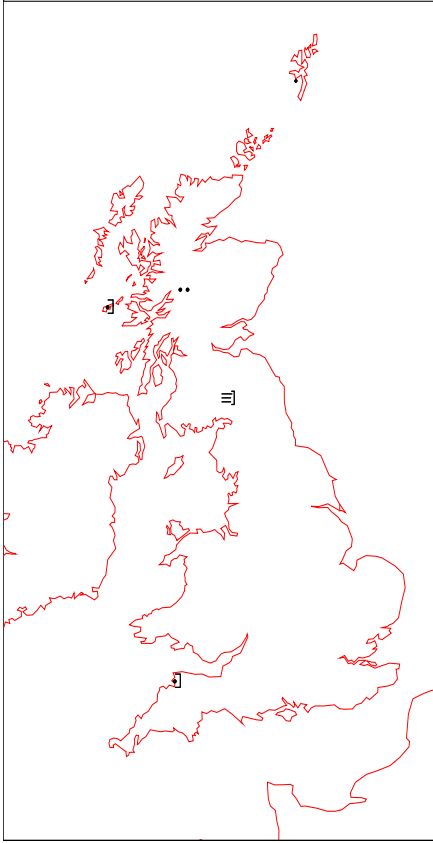

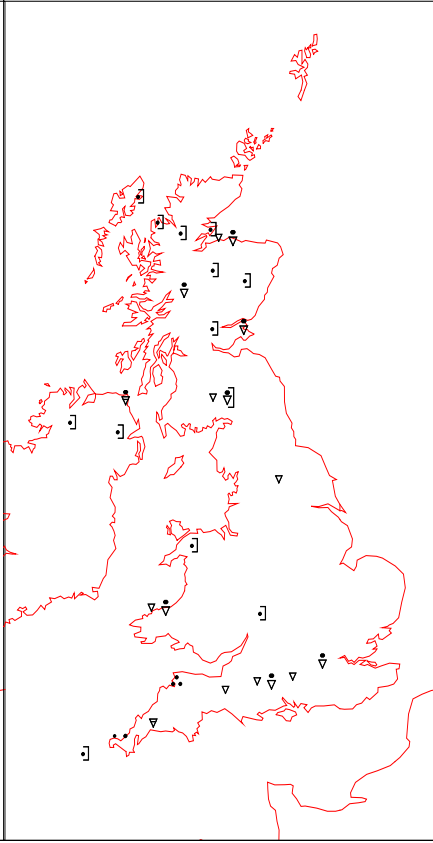

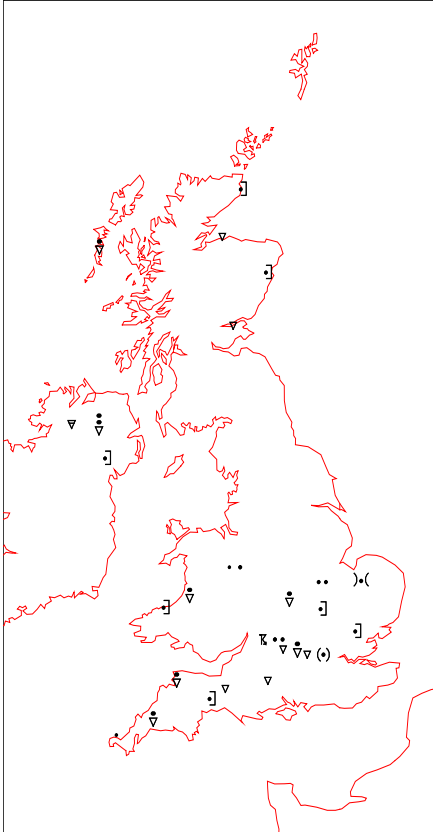

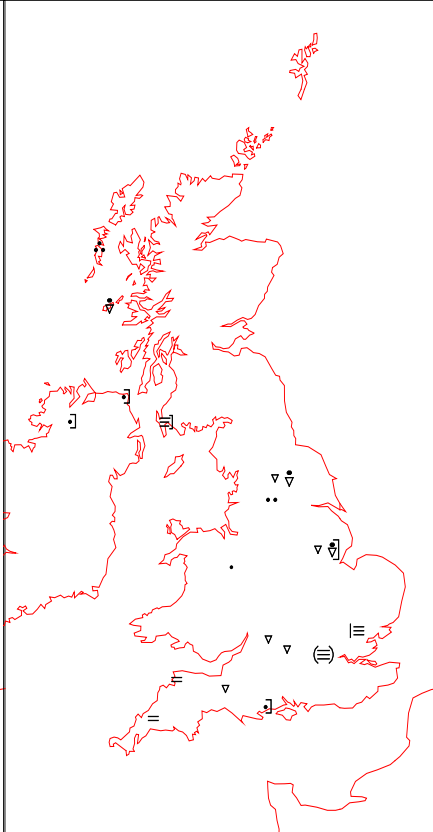

- 11 1007**: Solid black circle, located in the Shetland Islands.
- 12 1003**: Solid black circle, located in the Orkney Islands.
- 12 1004**: Solid black circle, located in the Orkney Islands.

## SIGNIFICANT WEATHER

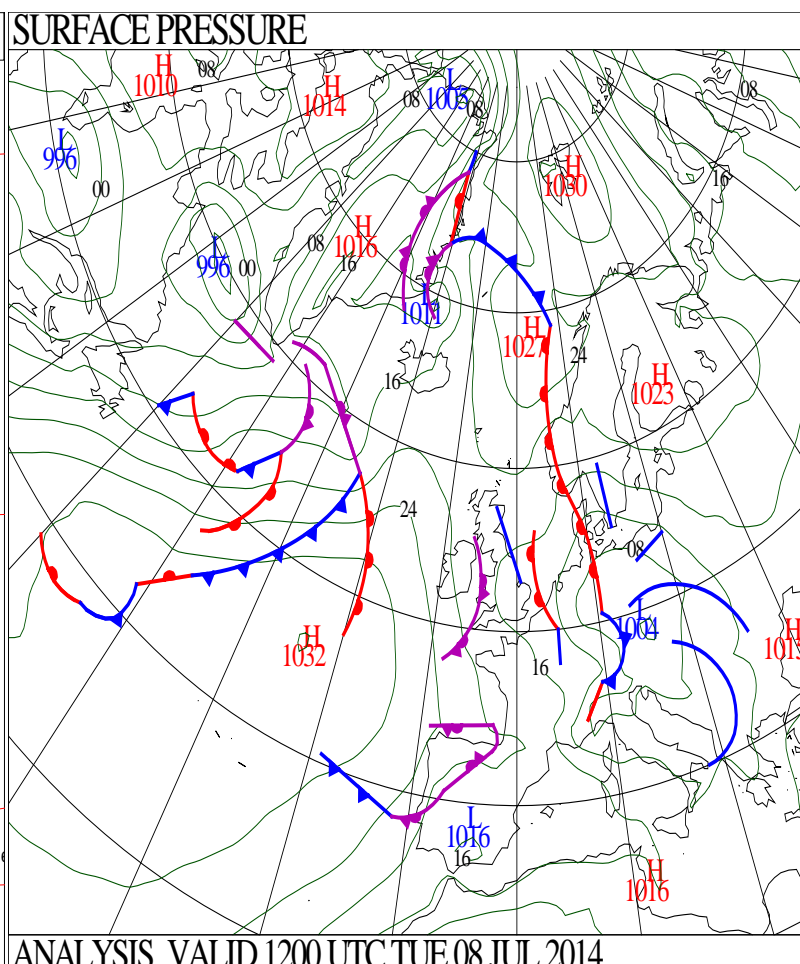

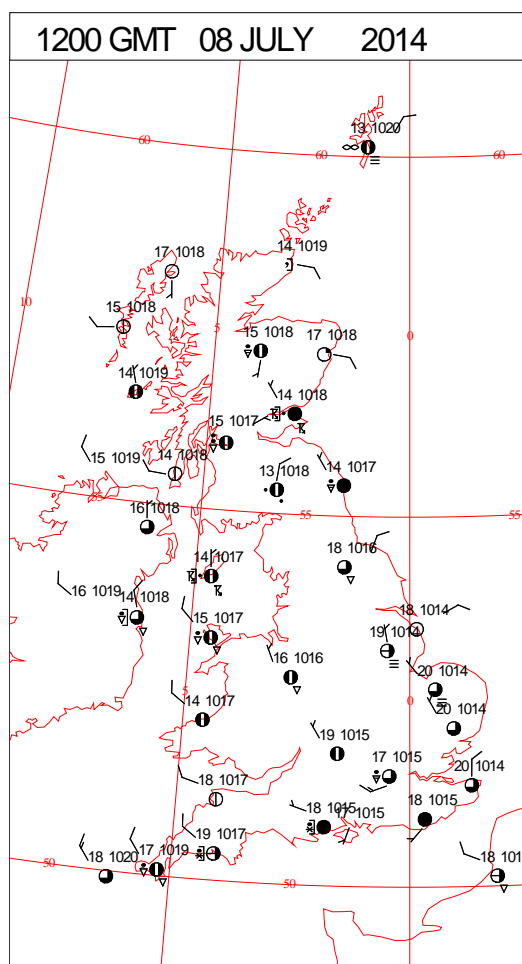

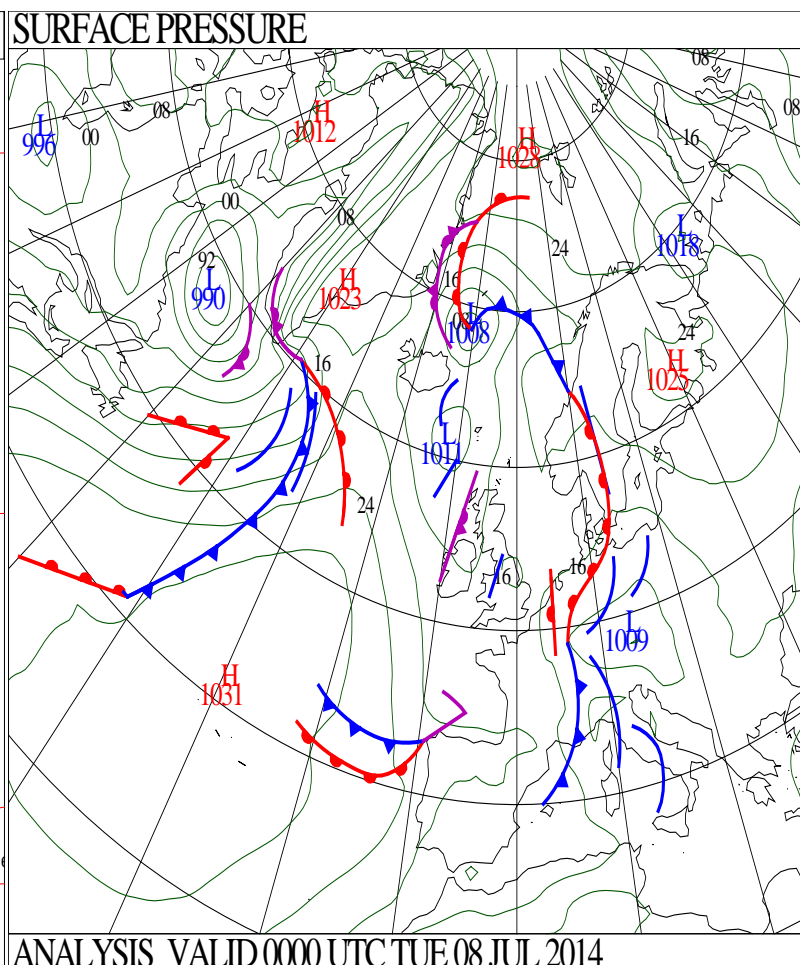

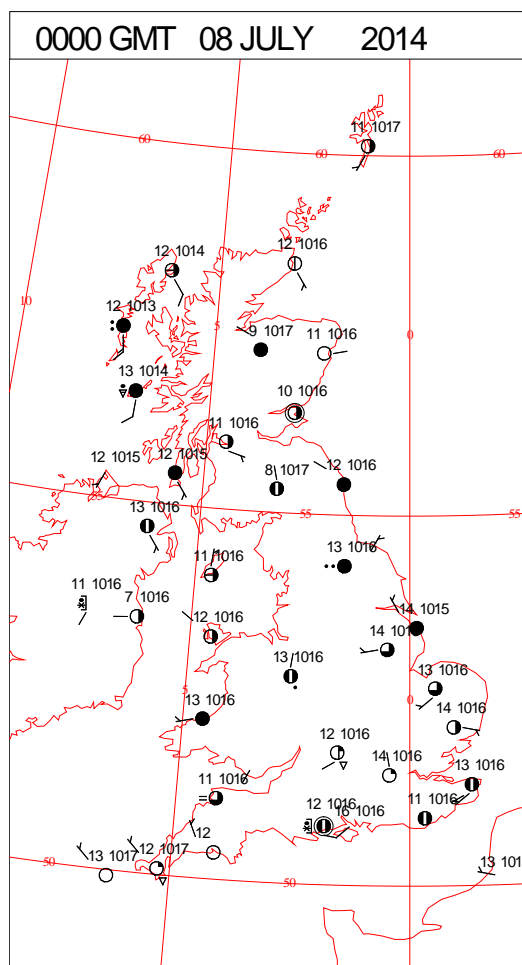

0600 GMT 07 JULY 2014	SIG WEATHER	1200 GMT 07 JULY 2014	SIG WEATHER	<p><b>Summary of UK Weather for Monday 07 July 2014.</b>  Showers continued throughout the night, mainly affecting western areas. The west of Scotland and Northern Ireland saw the most frequent and heaviest showers, although there were scattered showers for south-west England and southern Wales too. Elsewhere it was generally dry with light winds and clear spells.</p> <p>The light winds and clear skies allowed some isolated mist and fog patches to form, and also resulted in temperatures falling into low single figures Celsius for many parts.</p> <p>It was a fine start to the day for many, but showers soon developed in the west, and gradually migrated eastwards, though much of East Anglia had a largely dry day.</p> <p>The showers were heavy in places, especially in the west, with some hail and lightning, and the showers merged into longer spells of rain across south-west England through the afternoon, locally heavy.</p> <p>The showers gradually eased throughout the evening, and the rain in the south-west became lighter and more fragmented with drier, clearer conditions encroaching from the west.</p> <p>Temperatures in the south-east were widely into the low 20's Celsius and high teens elsewhere.</p>

0600 GMT 08 JULY 2014	SIG WEATHER	1200 GMT 08 JULY 2014	SIG WEATHER	<p><b>Summary of UK Weather for Tuesday 08 July 2014.</b>            Showers, some with thunder, eased for most areas to leave a mainly dry night with clear spells. Some localised mist and fog formed around dawn, particularly in the south of England.</p> <p>Showers continued across Northern Ireland and western Scotland, merging into a more organised band of showery rain through the early hours. Another band of showery rain developed across northern England and southern Scotland at the same time.</p> <p>It was a generally mild night across most parts.</p> <p>It was a showery day across the country with some slow moving, heavy thundery downpours developing. Showery rain over Northumberland and south-east Scotland also produced some prolonged, heavy rain with localised flooding reported in places.</p> <p>Many places saw showers banding together to give longer spells of rain. There were many reports of hail, with a funnel cloud reported in Sussex. Northeast Scotland and the Northern Isles were rather dull, with low cloud and fog throughout.</p> <p>Where skies stayed sunniest for longest, it was a warm day with temperatures above the seasonal average.</p> <p>Through the evening, the showers gradually faded across the country, with skies becoming increasingly clear.</p>

0600 GMT 19 JULY 2014	SIG WEATHER	1200 GMT 19 JULY 2014	SIG WEATHER	<p><b>Summary of UK Weather for Saturday 19 July 2014.</b></p> <p>Thunderstorms gradually spread northwards from the English Channel coast. Initially affecting the south-east, these later spread west as far as Exeter. Thunderstorms reached southern Scotland by dawn.</p> <p>The far west of England and Wales, as well as Northern Ireland and Scotland, remained mainly dry throughout the night. Some areas of north-east England had patchy mist and fog through the latter part of the night. The thundery downpours also brought strong gusts of wind.</p> <p>It was a warm and humid night, with temperatures in the south-east remaining above 20 Celsius in many locations.</p> <p>Heavy and persistent rain across Wales and the West Midlands gradually moved northwards during the day.</p> <p>A narrow band of heavy thunderstorms formed between Gloucestershire and Dorset early on in the morning. This band became very slow moving, giving torrential downpours and flooding in parts of Dorset, Avon, Gloucestershire and Worcestershire.</p> <p>South-east England stayed mainly dry with plenty of sunshine through the afternoon, becoming very warm.</p> <p>Further thunderstorms moved into the south-east during the evening.</p>

0600 GMT 20 JULY 2014	SIG WEATHER	1200 GMT 20 JULY 2014	SIG WEATHER	<p><b>Summary of UK Weather for Sunday 20 July 2014.</b></p> <p>Many areas stayed dry through the night time hours with clear periods. However, thundery showers across the north and east of East Anglia moved steadily north to affect Lincolnshire and Yorkshire during the early hours. These thunderstorms were locally torrential, with 44.8mm of rain recorded at Tealby, Lincolnshire in two hours.</p> <p>It was rather more cloudy across Scotland, with a few light showers in places.</p> <p>Elsewhere, the clear skies and light winds resulted in mist and fog patches forming by dawn, particularly over northern and central England.</p> <p>It was another very mild night in most places, with temperatures remaining in double figures Celsius nationwide.</p> <p>Sunday dawned generally dry in most places with any low cloud, mist and fog readily clearing. However, rain occasionally heavy and thundery, soon arrived across north-east Scotland giving a wet morning, especially across Aberdeenshire.</p> <p>Elsewhere it remained generally dry throughout the morning, with sunny spells and variable cloud amounts, although a few isolated showers developed by noon.</p> <p>During the afternoon, slow-moving locally intense and thundery showers developed across north-east England and eastern England, and some of these gradually edged slightly west. There were reports of localised flooding in parts of Norfolk, Suffolk, Essex and Kent, with 45.8mm of rainfall falling in the hour between 1500 and 1600 at Norwich Airport with a gust of wind of 38 knots recorded. Other locations affected by the showers reported hourly rainfall accumulations of 20-40mm.</p> <p>Elsewhere, isolated showers developed in some other parts, but for most it remained mostly dry and fine with plenty of sunny spells.</p> <p>It was another warm or locally very warm day, with maximum temperatures reaching the mid 20s Celsius fairly widely.</p>

0600 GMT 21 JULY 2014	SIG WEATHER	1200 GMT 21 JULY 2014	SIG WEATHER	<p><b>Summary of UK Weather for Monday 21 July 2014.</b>  Many places remained dry overnight and, increasingly clearer periods developed. This allowed some localised mist patches and low cloud to form during the early hours, especially across prone inland areas.  Isolated and mainly light showers affected some south-eastern parts at first, and heavier showers continued over Aberdeenshire and Angus for much of the night.  It was another muggy night in the east, but fresher and cooler in the west.  Patches of low cloud were quite slow to clear parts of eastern Scotland and south-east England during the morning.  Otherwise, many places had a dry day, and there were plenty of sunny spells by the afternoon.  However cloudier conditions over Shetland gave some outbreaks of rain in the morning, and a few isolated sharp showers developed across Essex and Kent from mid-afternoon. It also became a little more cloudy across Northern Ireland through the day, giving some patchy rain.  For most of the country it became warm or very warm, although temperatures were a little bit more suppressed in parts exposed to the onshore breeze along the east coast.</p>

<p>0600 GMT 28 JULY 2014 SIG WEATHER</p> 	<p>1200 GMT 28 JULY 2014 SIG WEATHER</p> 	<p><b>Summary of UK Weather for Monday 28 July 2014.</b></p> <p>It was a largely fine and dry night for most parts of the U.K. with lengthy clear spells. However, towards the end of the night, heavy showers developed across south-east England. They were slow moving and also turned locally torrential, along with some hail. These torrential showers lead to some flooding issues across some south-eastern areas of England.</p> <p>Heavy showers in the south-east slowly faded as the morning progressed. A few showers also affected parts of Cornwall and Devon during the morning, however these were generally much lighter in nature.</p> <p>Elsewhere, it was a mainly dry morning with plenty of sunny spells and generally light winds.</p> <p>Showers faded away during the afternoon across the south of the country, and it also turned increasingly cloudy in the far north and west. Outbreaks of rain and drizzle reached parts of Northern Ireland and western Scotland by the end of the evening.</p> <p>Further showers then returned across the far south-east of England for a time during the evening but were generally light in nature.</p> <p>Temperatures were around average for the time of year.</p>

0600 GMT 29 JULY 2014	SIG WEATHER	1200 GMT 29 JULY 2014	SIG WEATHER	<p><b>Summary of UK Weather for Tuesday 29 July 2014.</b></p> <p>Aside from a few brief mist and fog patches, it was a fine and dry night with clear spells. Showers continued across the far south-east of England, still heavy at times and leading to some very localised flooding issues in Kent, before easing towards dawn.</p> <p>A front moved into the north-west later in the night, bringing low cloud and a few outbreaks of light rain and drizzle.</p> <p>This front lay from north-east England through Wales for much of the day, moving slowly south-eastwards, but fragmenting as it did so. This gave a few light showery outbreaks, but the cloud tended to break up through the day, except for the far north-west.</p> <p>Further south and east, it was largely dry and bright with very warm sunny spells, whilst to the north-west a few mainly light showers developed, and it was cooler and fresher.</p> <p>The evening was mostly dry with clear periods, and just a few very light showers across western Scotland.</p> <p>Temperatures were close to the average for the time of year, but quite a few degrees above average in the south.</p>

0600 GMT 30 JULY 2014	SIG WEATHER	1200 GMT 30 JULY 2014	SIG WEATHER	<p><b>Summary of UK Weather for Wednesday 30 July 2014.</b></p> <p>It was dry across England and Wales overnight, with light winds and clear spells for many. There was more cloud across the north and west though, with showery rain affecting parts of Northern Ireland and western Scotland throughout the early hours.</p> <p>It was a fresher night than of late, with temperatures dipping into single figures Celsius under clear skies in a few places.</p> <p>There remained a clear north-south split throughout the day. North of a line Liverpool to Hull, there were variable amounts of cloud, a moderate to fresh westerly wind and scattered showers. The showers became increasingly isolated the further east they progressed.</p> <p>Across the southern half of the country, it was mainly dry with sunny spells and patchy fair weather cloud. The exception was the far south-west, where it became increasingly cloudy through the afternoon.</p> <p>During the evening, some cloud and just very isolated light showers remained over western areas, but it stayed dry and mostly clear to end the day elsewhere.</p> <p>Temperatures reflected the split in the weather, with mid to high teens Celsius being reached in the north, and low to mid twenties Celsius in the south.</p>
1800 GMT 30 JULY 2014	SIG WEATHER	0000 GMT 31 JULY 2014	SIG WEATHER	<p><b>EXTREMES</b></p> <p><b>Highest Maximum:</b> 27.8 East Bergholt, Suffolk</p> <p><b>Lowest Maximum:</b> 13.4 Resallach, Sutherland</p> <p><b>Lowest Minimum:</b> 4.8 Drummond Castle, Fife</p> <p><b>Lowest Grass Minimum:</b> 2.8 Whitechurch, Dyfed</p> <p><b>Most Rain:</b> 15.2 Resallach, Sutherland</p> <p><b>Most Sun:</b> 13.9 Shanklin, Isle of Wight</p>
