PLOTTED SURFACE OBSERVATIONS

MONDAY
1 JUNE 1987

SUMMARY OF BRITISH WEATHER

Many places in England, Wales and Northern Ireland stayed dry overnight, just a little rain and drizzle here and there. In Scotland there were quite a few showers.

There was some sunshine over Scotland, but there were showers nearly everywhere, although after midday southern Scotland was dry and bright.

The more northern and eastern parts of Northern Ireland had some morning sunshine, but it clouded over everywhere and there was a little rain and drizzle later.

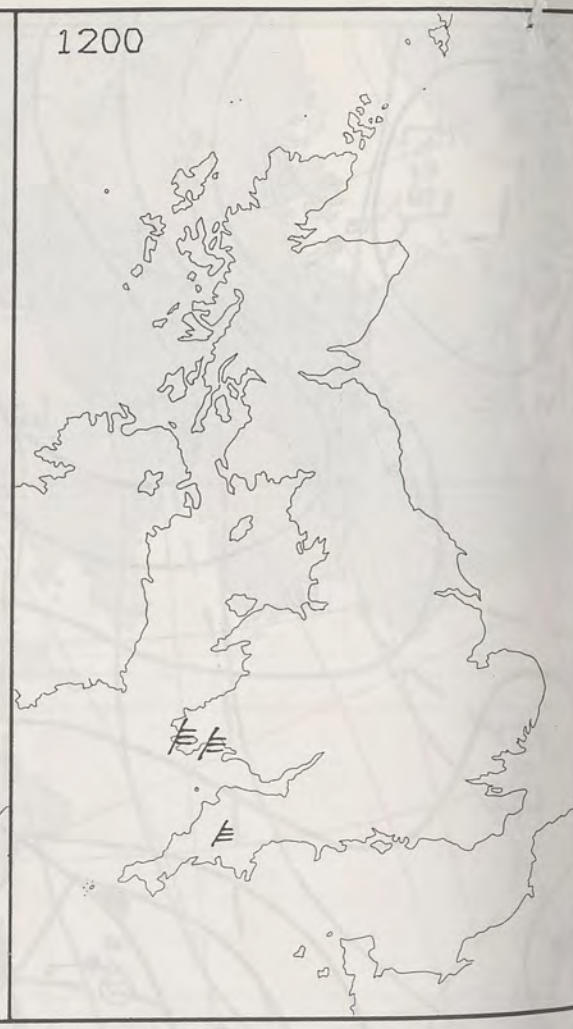

Parts of South Wales had some sunshine too, but much of Wales was cloudy and in the north and west there was a little rain.

Many places in England were dry and bright with some sunshine and parts of the south coast had a sunny day, but there were showers, mainly in the north and east and a few afternoon thunderstorms in Norfolk.

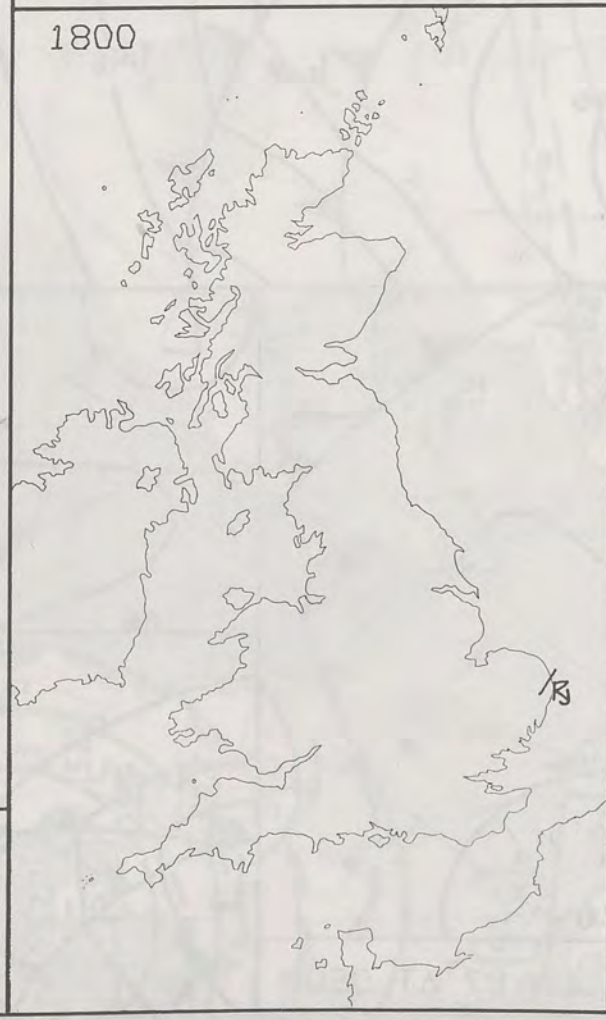

Temperatures were close to or a little above normal in most places.

TUESDAY
2 JUNE 1987

SUMMARY
OF
BRITISH WEATHER

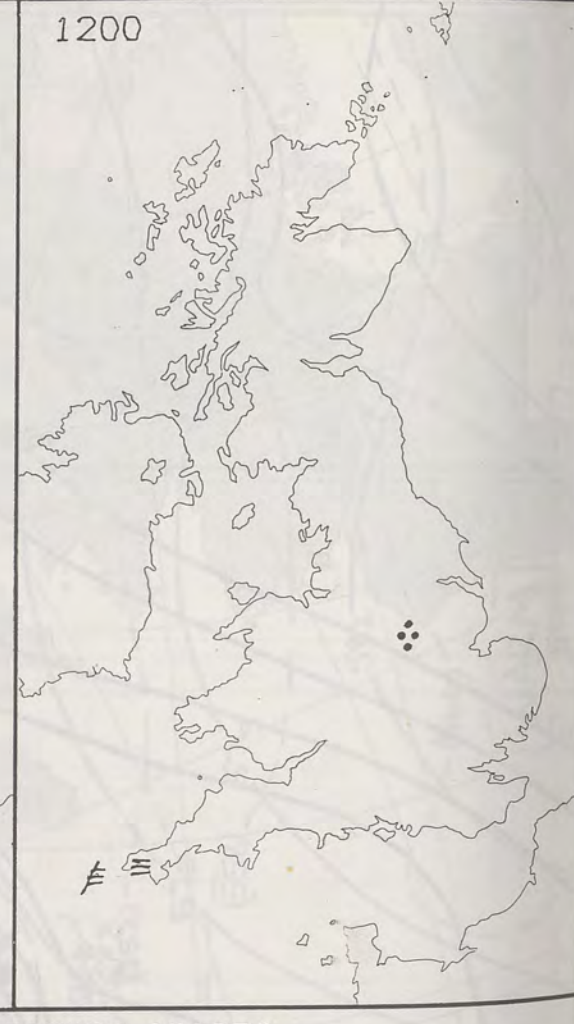

Most places had a cloudy night with a little rain here and there. There was also some more persistent rain in parts of the North Midlands and northwest England, as well as many other western areas around dawn.

Northern Scotland was the exception during the day, with some sunshine and just a few showers. Elsewhere it was mostly cloudy with rain, the rain heaviest and most persistent in the north and west of England and Wales, although tending to ease off and turn drizzly in the evening.

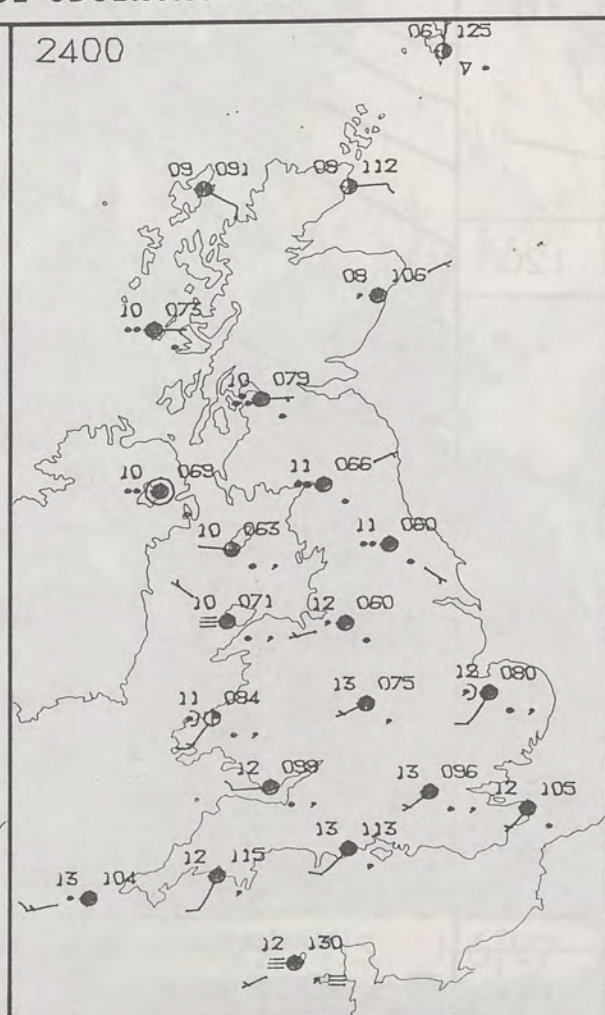

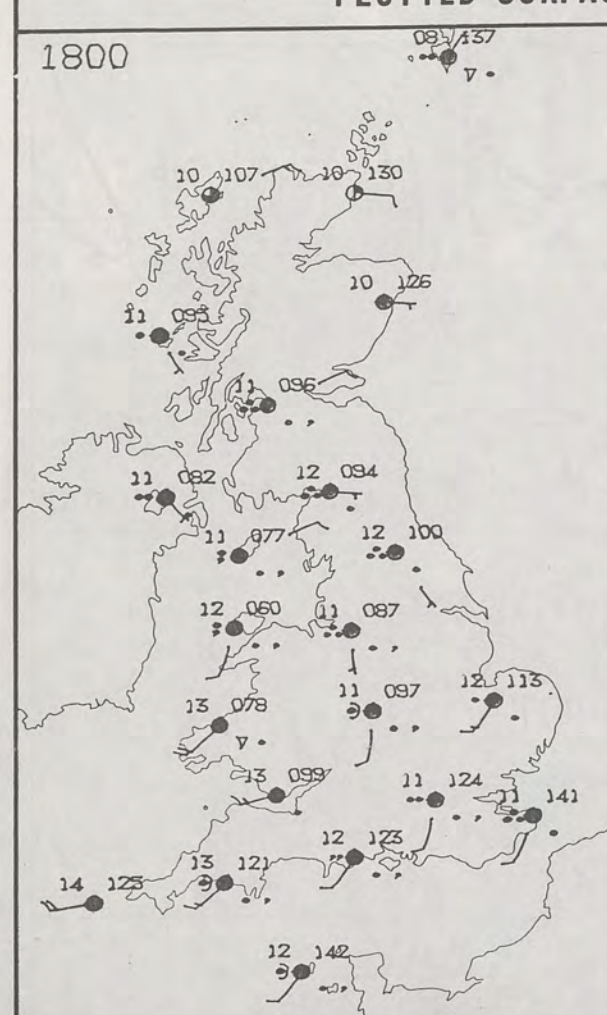

It was a rather cool day almost everywhere, except in western Scotland where temperatures were around normal.

WEDNESDAY
3 JUNE 1987

SUMMARY OF BRITISH WEATHER

Northernmost parts of Scotland were mostly dry with clear periods overnight and sunny spells by day.

Central and southern parts of Scotland, Northern Ireland, North Wales and northern parts of England were cloudy throughout with outbreaks of rain.

The southern half of England and Wales had a cloudy night with mist and drizzle on some coasts and hills. There were sunny spells during the day but showers developed in inland areas by the afternoon with thunder later in parts of the North Midlands and Lincolnshire. Showers died away from central and southern areas during the evening but over northern Britain patches of rain persisted.

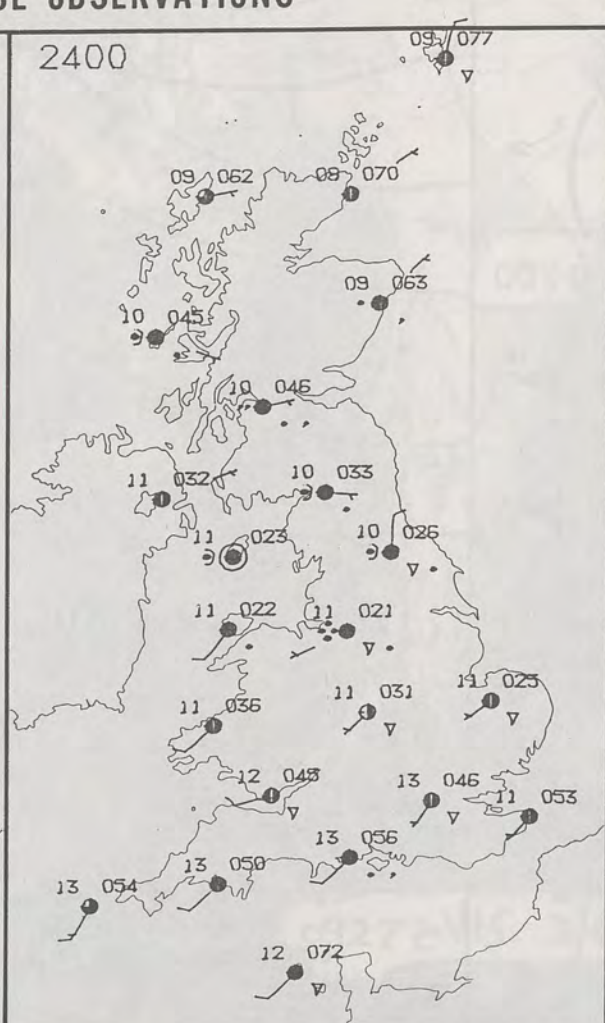

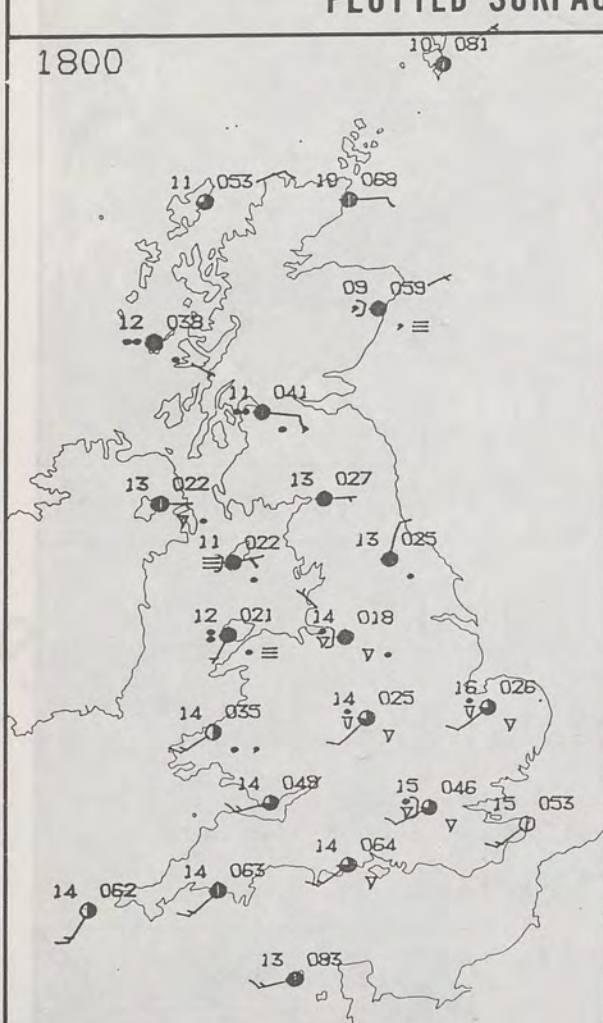

It was a cool day in the southern half of Scotland and some northeastern parts of England, elsewhere temperatures were near the early June average, although Northern Ireland and western regions of the UK were generally rather cool.

THURSDAY
4 JUNE 1987

SUMMARY OF BRITISH WEATHER

The night was mostly cloudy, with rain here and there, and there was further heavy rain over the southern counties of northern England.

During the day, mostly cloudy weather with some rain or drizzle moved slowly south across England and Wales, though amounts of rain were much less than overnight, and northern areas brightened up later. There were sunny spells in the south, but showers developed during the morning. Over southeast England, London and Essex, heavy showers were quite widespread in the afternoon, with thunderstorms and some hail. Local flooding was reported.

Much of Scotland had a dry day with sunny spells but there were a few showers. Northern Ireland had a mostly cloudy day with a little rain in places.

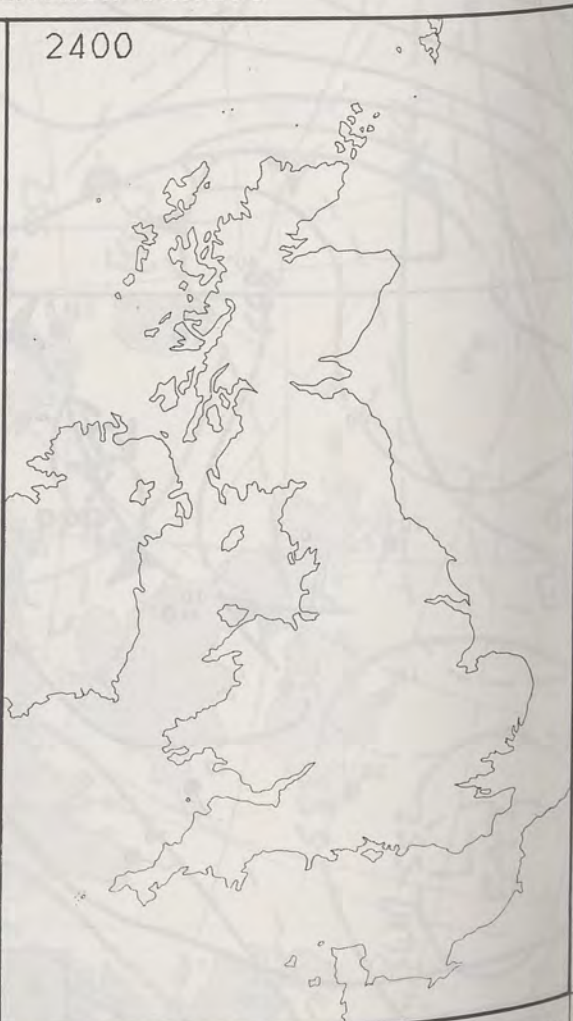

Central and southern areas of England had temperatures near or rather above normal, however most other regions were below normal making it rather cool or cool.

FRIDAY
5 JUNE 1987SUMMARY
OF
BRITISH WEATHER

It was a cold night over the Midlands, east and northeast England and eastern Scotland with some ground frost and patchy fog. The west and southwest was more cloudy with rain here and there.

The east and northeast of Britain was bright for a time, but cloudy weather in the south and west moved northeast during the day. There were a few showery outbreaks of rain at first, but more persistent rain reached the southwest and Northern Ireland during the morning. This rain moving across to reach the east coast of England and most of southern and western Scotland by nightfall, and all but the far north of Scotland by midnight. Rainfall was heaviest in the west, whilst there was very little in parts of the southeast. Some southwestern districts became drier in the late evening.

It became mostly quite windy, and was a generally rather cool day.

SATURDAY
6 JUNE 1987

SUMMARY
OF
BRITISH WEATHER

Scotland, Northern Ireland and northwestern parts of England were mainly cloudy with outbreaks of rain, the rain heaviest and most persistent in the Isle of Man, Cumbria and southern Scotland.

Overnight the rain cleared the east coast of England by dawn and then the bulk of England and Wales had a day of sunshine and blustery showers. Showers were isolated along the south coast and in southeast England, but in the Midlands and eastern England there were some heavy showers by the afternoon with hail and thunder reported in Lincolnshire and East Anglia.

Scattered showers continued into the evening and a band of more continuous rain crossed much of Wales and northern parts of England.

It was a rather cool day over Scotland and Northern Ireland but temperatures were close to or a little below average in England and Wales.

It was a windy day generally, at Berry Head in Devon a gust of 85 knots was reported during the afternoon.

SUNDAY
7 JUNE 1987SUMMARY
OF
BRITISH WEATHER

North Wales, northern England, Scotland and Northern Ireland were mainly cloudy through the period with outbreaks of rain. Western parts of Northern Ireland and the central Lowlands of Scotland turned brighter in the afternoon but with heavy showers and at Edinburgh there was a thunderstorm. Northeastern parts of Scotland stayed very dull with coastal and hill fog and some heavy rain at times.

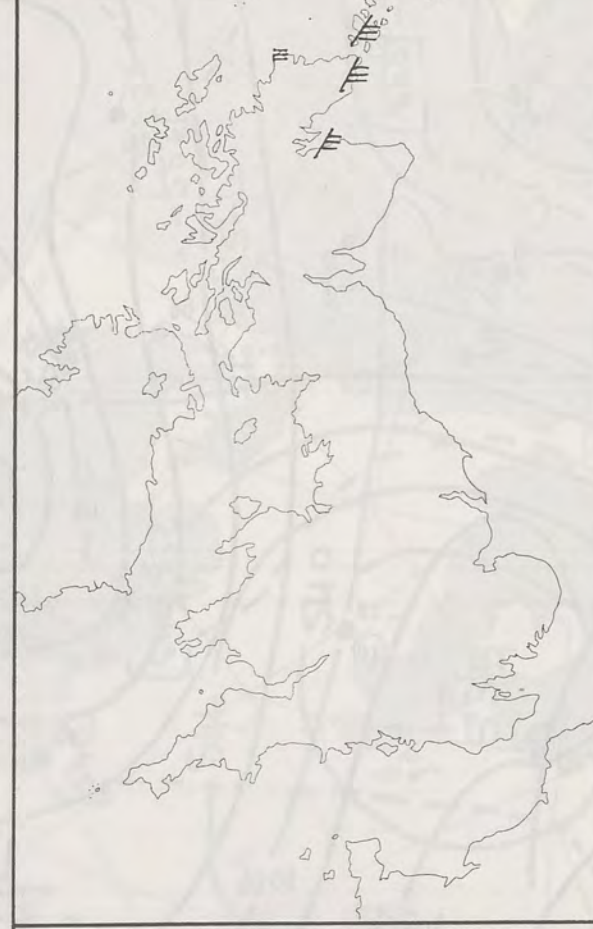

Southern parts of England and Wales had some overnight showers and the day was mostly dry with some sunshine, the best of the sunshine in the southwest. It became mostly cloudy in the afternoon with a wet afternoon in the Channel Islands, this rain spread to east Sussex and Kent in the evening.

It was a rather cool or cool day generally and very cool around Scottish coasts, Northern Ireland and northwest England.

MONDAY
8 JUNE 1987

SUMMARY
OF
BRITISH WEATHER

It remained very unsettled across the whole of the United Kingdom, with showers and longer spells of rain.

Western areas had the best of the weather, with generally showery conditions and sunny periods, especially in the more sheltered parts, even here, though, there were some more prolonged periods of rain and drizzle on the exposed hills and coasts overnight and during the morning.

Rain was more persistent down the eastern half of the UK with heavy bursts in places and some thunderstorms were reported in the Midlands and southeast England during the day.

Temperatures generally stayed well below normal making it cool in most places and only recovering in a few places in the extreme southeast for a short time during the afternoon.

TUESDAY
9 JUNE 1987SUMMARY
OF
BRITISH WEATHER

Most of Britain had a showery night and some sheltered areas stayed dry. However, central and eastern counties of England had quite persistent rain, with some heavy bursts, and even thunder in a few places.

The rain continued through the day, but gradually turned more showery from the south and west, though some of these showers were heavy and thundery. The showers persisted over the rest of the country, but there were some sunny periods as well, especially in sheltered western parts where most of the showers were light.

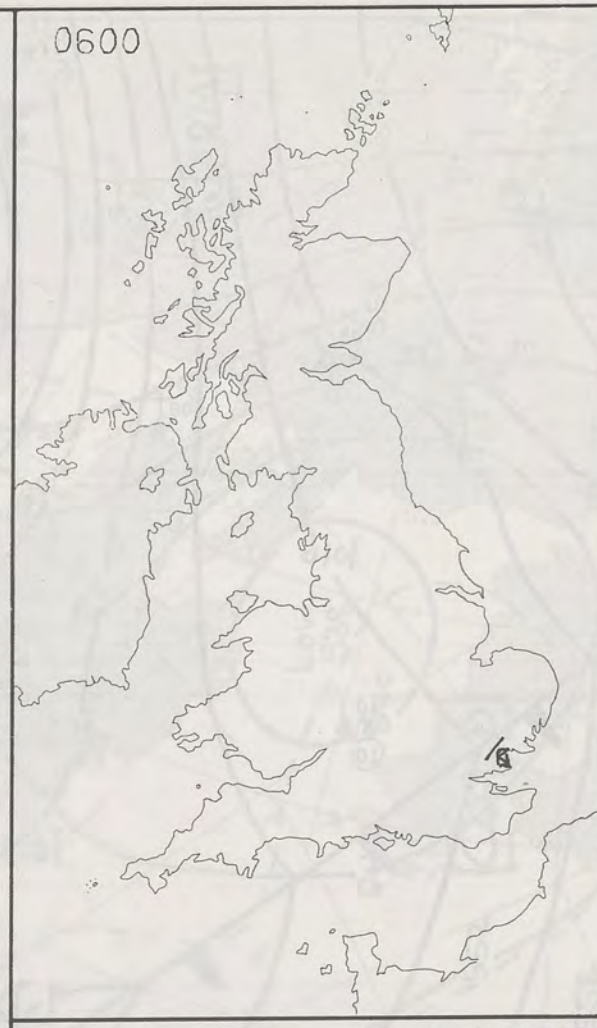

It was a cool or very cool day everywhere, and the coldest June day since 1964 in central London.

Winds were moderate to fresh northerly in the extreme north, but in the south they stayed light, and variable in direction.

WEDNESDAY
10 JUNE 1987SUMMARY
OF
BRITISH WEATHER

Skies were largely clear over southern Britain in the early hours and it became cold with patchy fog and some ground frost. Outbreaks of rain affected northeast England with a few showers further north.

Southern Britain had quite a bright day, with just a few showers. It was rather cloudy further north with some showers, a few of which were heavy. The Western Isles of Scotland were fairly sunny.

Longer spells of rain reached the Channel Islands around the middle of the day, and spread to southeastern Britain in the evening.

It was again generally cool.

[illegible]

A map of the British Isles, including Great Britain and Ireland, with various locations marked by numbers in circles. Each location is associated with a larger number, likely a grid reference or coordinate. The locations are numbered 09 through 16. The associated numbers are: 09 (188), 10 (179), 11 (167), 12 (163, 165, 168), 13 (161, 162, 159), 14 (156, 170), 15 (176), 16 (161, 173), 176, 177, 178, 179, 180, 181, 182, 183, 184, 185, 186, 187, 188. The map also shows the English Channel, the North Sea, and the Atlantic Ocean. The numbers 176, 177, 178, 179, 180, 181, 182, 183, 184, 185, 186, 187, 188 are located in the top right corner of the map.

A detailed map of the British Isles, including Great Britain, Ireland, and the surrounding waters. The map is overlaid with numerous radio station locations, each marked with a call sign and a frequency. The call signs are typically three-digit numbers (e.g., 05, 07, 09, 11, 12) followed by a letter (e.g., A, B, C, D, E, F, G, H, I, J, K, L, M, N, O, P, Q, R, S, T, U, V, W, X, Y, Z). The frequencies are three-digit numbers (e.g., 1203, 189, 185, 195, 178, 193, 174, 183, 179, 176, 185, 184, 186, 183, 175, 182, 194, 192). The map shows the distribution of these stations across the country, with a higher density in the south and east of England. The map is titled '2400' in the top left corner.

SUMMARY OF BRITISH WEATHER

The night was wet in the southeast; the most persistent rain cleared away into the North Sea by mid-morning. There were a few patches of rain elsewhere, especially in Northern Ireland and southwest Scotland.

Much of central southern and southwest England, together with South Wales and the Western Isles of Scotland had a sunny day with just one or two showers.

Elsewhere, there was a lot of cloud, with various regions having showery outbreaks. The most notable of these stretched from North Wales through the northern half of the Midlands to London, Essex and north Kent. Thunderstorms occurred in many of these areas in the afternoon, with hail in places. A funnel cloud was observed from Wittering and Stamford (Lincolnshire) around midday.

It was generally cool, though temperatures approached normal in central southern England.

1200

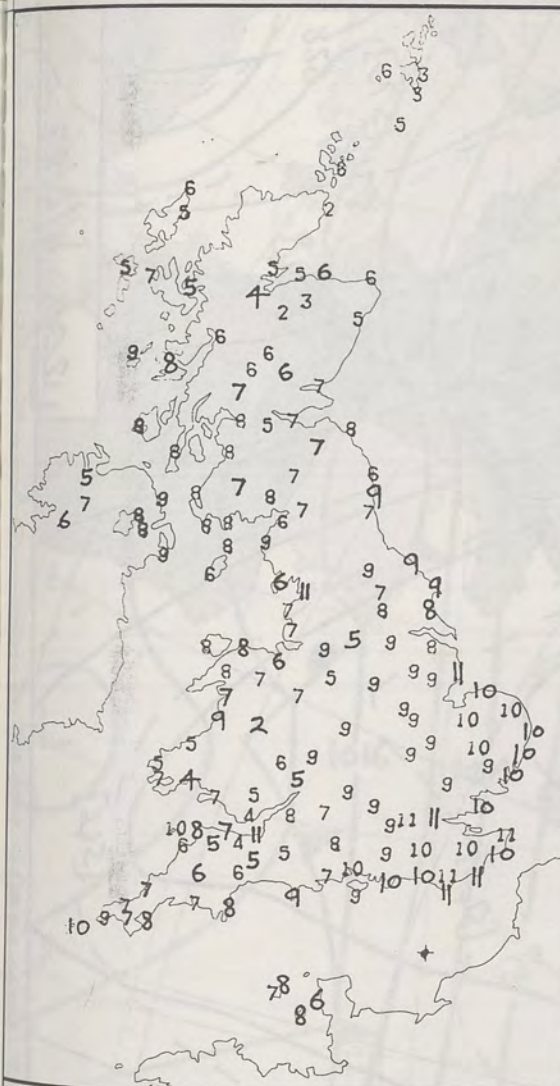

An outline map of the British Isles, showing the coastlines of Great Britain and Ireland. The map is oriented with North at the top. The outline is simple, with no internal features or labels. The map is positioned in the center of the page, with a vertical line on the left side and a horizontal line at the bottom. The number '1200' is printed in the top left corner of the page.

1800

A map of the British Isles (Great Britain and Ireland) showing the locations of three regiments of the British Army in 1800. The regiments are represented by numbers in boxes: 1500, 1000, and 500. The 1500th regiment is located in the north, the 1000th in the center, and the 500th in the south.

PLOTTED SURFACE OBSERVATIONS

FRIDAY
12 JUNE 1987

SUMMARY OF BRITISH WEATHER

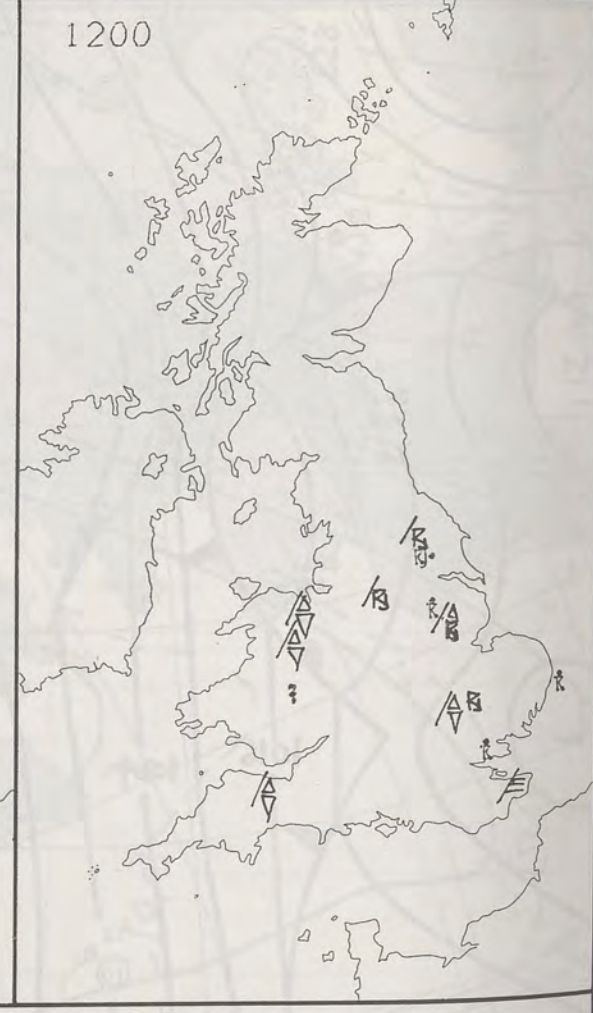

Eastern Scotland and northern England had a cloudy night with outbreaks of rain. These areas brightened up during the day with some showers, though near the Yorkshire coast it stayed mostly cloudy.

Remaining areas had a largely clear night, though fog patches and a slight ground frost occurred in a few low lying places. There were sunny spells through the day, the best of the sunshine around western and southern coasts. Showers developed widely by the afternoon, with some thunderstorms from East Kent, across East Anglia and the East Midlands to Yorkshire. Showers continued over Scotland into the evening but died out elsewhere.

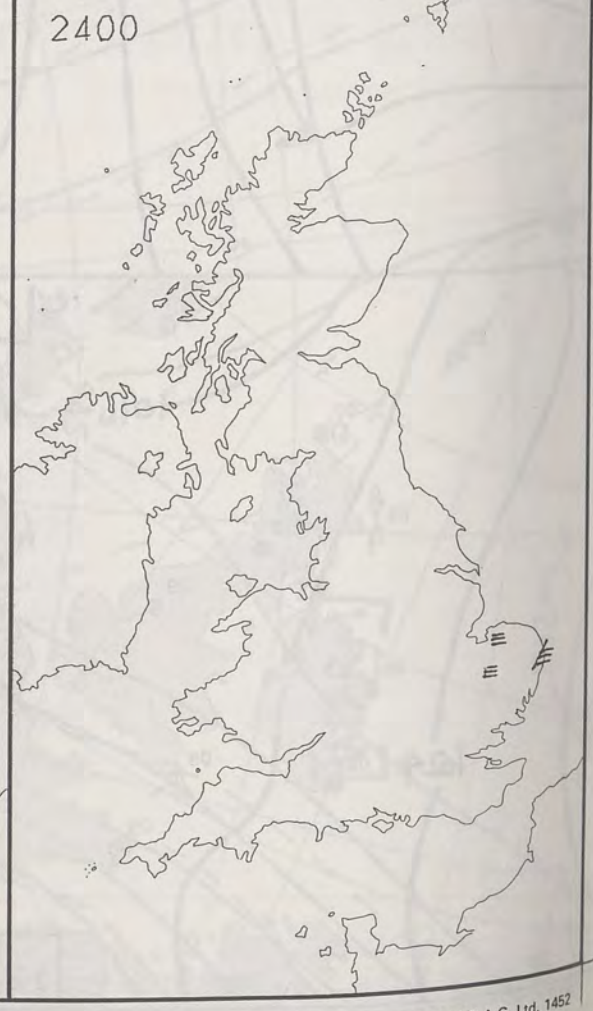

It was a cool day generally, although a few places near the south coast had near normal temperatures.

PLOTTED SURFACE OBSERVATIONS

SATURDAY
13 JUNE 1987

**SUMMARY
OF
BRITISH WEATHER**

Apart from some showers in northern and eastern parts of Scotland most of the United Kingdom had a dry night with clear periods and some ground frost in some western regions.

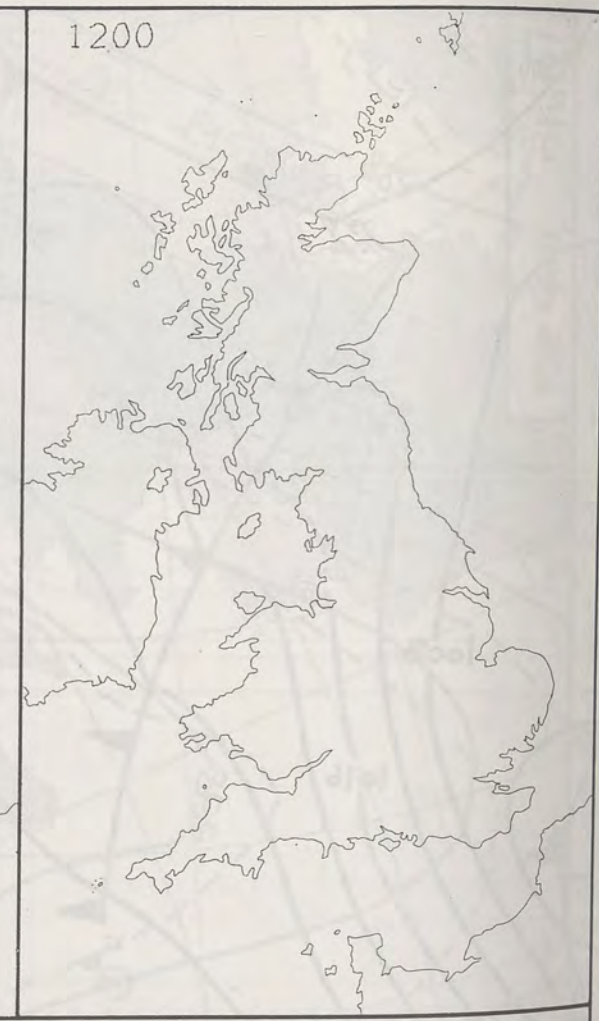

Over Scotland and Northern Ireland it was a day of sunshine and scattered showers, the heaviest showers in the north and east of Scotland.

Over England and Wales the day started dry and bright and many central and western districts stayed dry with sunny spells through the day. Showers developed in some inland areas by the afternoon and in the southeast and east the showers became heavy and prolonged with thunder in places.

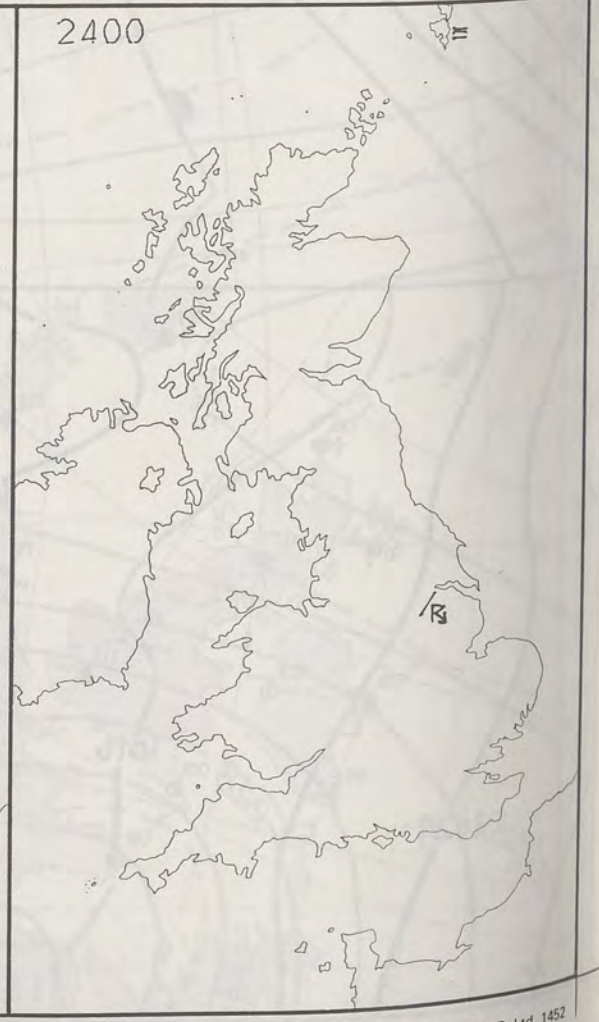

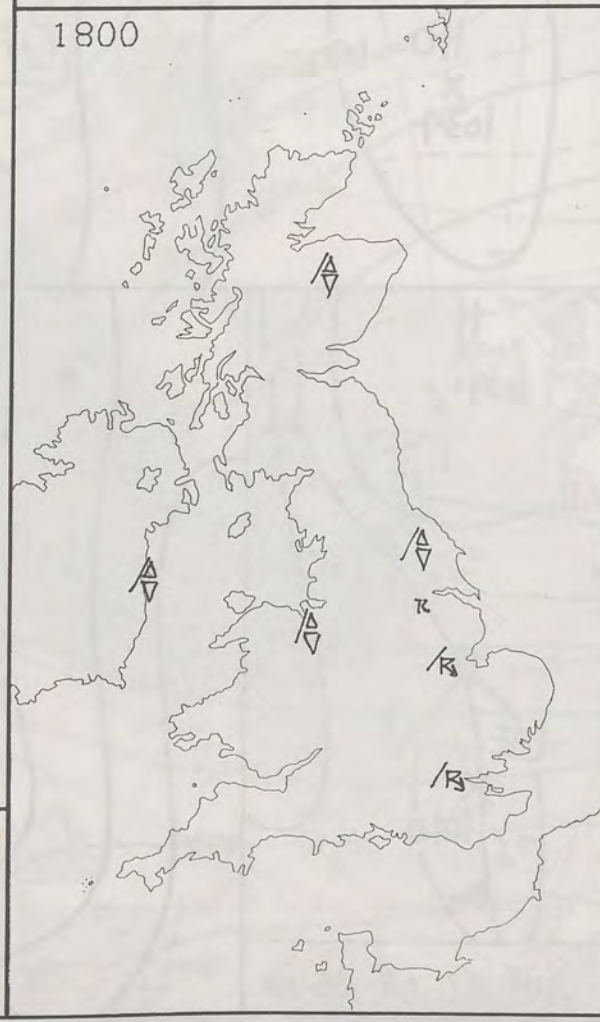

It was a cool day generally though in central southern England and along the south coast temperatures were close to or a little below normal.

PLOTTED SURFACE OBSERVATIONS

1800

2400

MONDAY
15 JUNE 1987

Some inland parts of Scotland had a cold night, with a frost, but over southern Scotland, the night was cloudy, with scattered showers. During the day, showers developed elsewhere across Scotland, but many of them were light, with some dry weather in the north.

Northern Ireland had a largely sunny day, with only well isolated showers, after a cold night.

Much of northern England, including the North Midlands, had overnight rain, some of it quite heavy. The rain fragmented into showers through the day, with some bright or sunny weather developing, especially east of the Pennines and down into northern Midland counties,

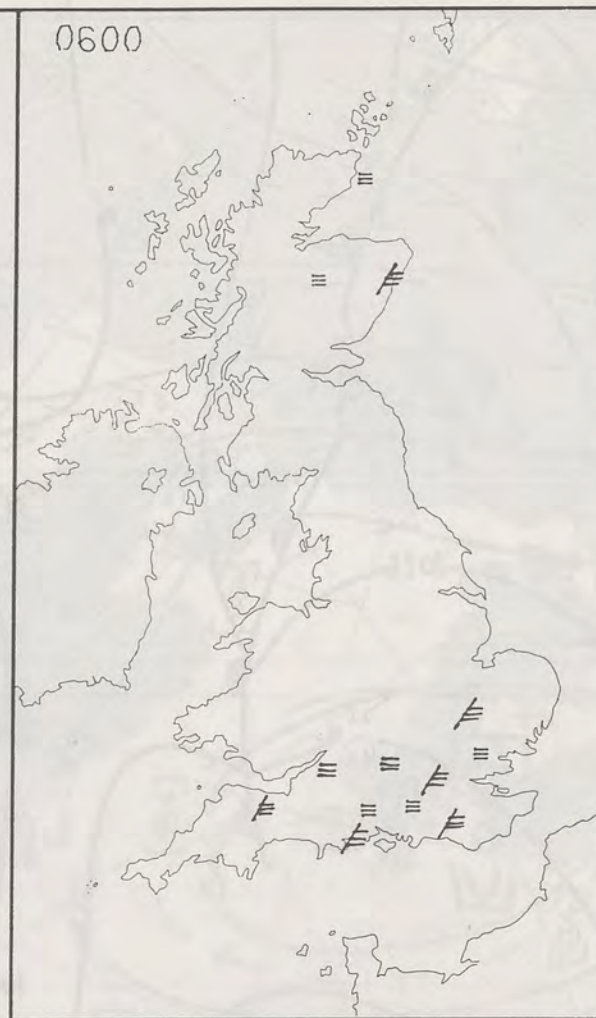

Remaining areas of southern Britain had a largely dry night, with some fog and ground frost forming for a while around dawn inland. However, showers again developed, becoming heavy, with hail and thunder, but the distribution as on previous days was uneven. Some of the heaviest downpours fell in Suffolk and northeast Essex, the East Midlands and the far southwest of England, with scattered, though still heavy showers elsewhere. Some unofficial reports were received of heavy storms in the north Essex and south Suffolk area giving 2-3 inches of rain in places.

Temperatures were generally below normal, except areas in the south that escaped showers and had warm sunshine, where normal values were achieved. Eastern and central areas of England were decidedly cool.

TUESDAY
16 JUNE 1987SUMMARY
OF
BRITISH WEATHER

Most places had a dry, cold night but in the south and east of Wales and the west of England there was a little rain.

Over Scotland some places had a dry, sunny day but there were showers and a few thunderstorms.

Eastern counties of Northern Ireland had a bright morning, but cloudy weather with a little rain and drizzle in the west spread eastwards during the day.

PLOTTED SURFACE OBSERVATIONS

1800

2400

Much of Wales had a bright morning and afternoon, but there were a few heavy showers and thunderstorms. In the evening the weather clouded over with more persistent rain in the west.

Many places in England were sunny in the morning and a few places stayed dry and sunny all day, but later in the morning some northern and central areas had thunderstorms. In the afternoon and evening there were heavy showers and thunderstorms broke out in most places but East Anglia and the extreme southeast of England escaped many of them.

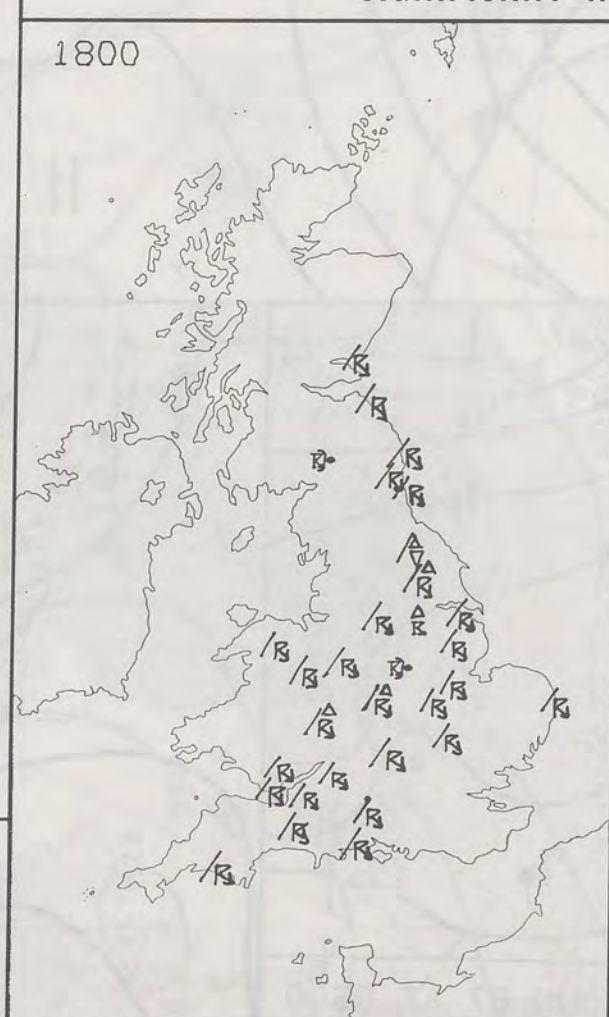

Temperatures were below normal again, making it a cool day generally.

SUMMARY
OF
BRITISH WEATHER

Much of Scotland and parts of northern England had a cold, clear night, there was even a touch of frost in Scotland, but most places in the United Kingdom had a cloudy night with rain and drizzle particularly in the south.

During the day northern Scotland was mainly cloudy and there was some showery rain, but central and southern Scotland had a lot of dry, fairly sunny weather.

In Northern Ireland and Wales the weather brightened up in the afternoon, but there were a few showers.

Northeast England, after a sunny morning, had showers in the afternoon and evening. Over the rest of England the day dawned cloudy and most places were wet, but here too the weather brightened up with some sunshine. However, there were showers in many places, some of them heavy and there were a few thunderstorms, mainly in southeast England.

It was mostly cool in southern Britain and in Scotland temperatures were near or a little below normal.

PLOTTED SURFACE OBSERVATIONS

THURSDAY
18 JUNE 1987

SUMMARY
OF
BRITISH WEATHER

Northern and eastern parts of England together with Northern Ireland and Scotland had a mostly dry night with clear spells. There were some short-lived fog patches and a touch of frost in a few places around dawn.

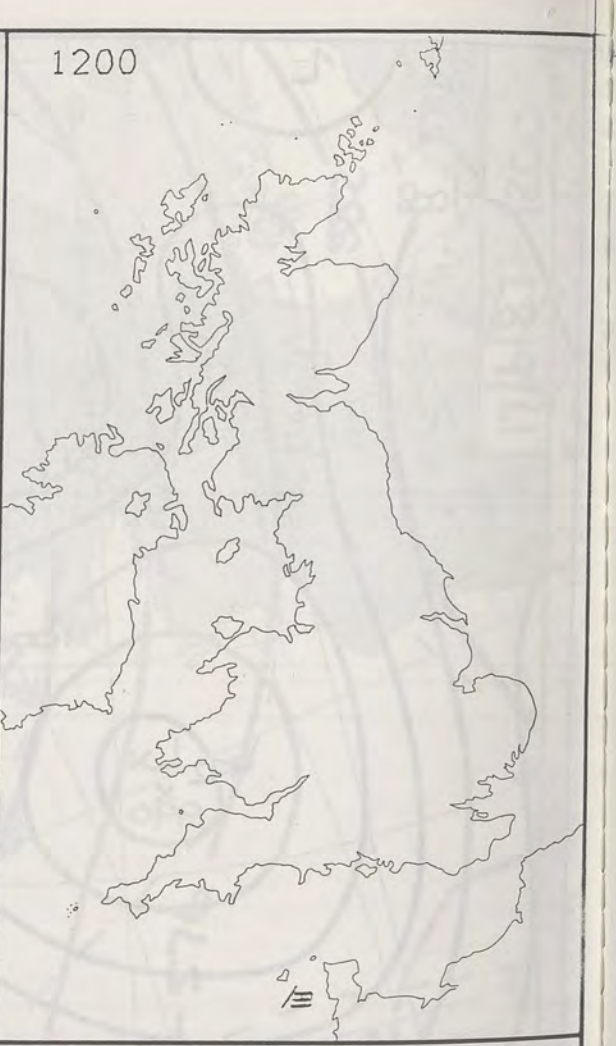

These northern and eastern regions then had a mostly dry day with sunny spells, the best of the sunshine in south and south-west Scotland. The far north and east of Scotland was mostly cloudy with some light showers.

Southwestern parts of England and Wales became cloudy by daybreak with a little drizzle in places and this cloudier weather with a few showers spread eastwards during the day. Persistent rain reached the southwest around midday and moved north and east to affect all of Wales and much of England by the end of the evening.

Temperatures were close to the average in most districts, though mostly rather cool in southwest England.

FRIDAY
19 JUNE 1987

SUMMARY
OF
BRITISH WEATHER

Southern Scotland and Northern Ireland had a dry night with clear spells and a mainly sunny day.

Northern Scotland was rather cloudy with some light showers.

England and Wales had a cloudy night with outbreaks of rain, the rain heavy and persistent over Wales and the Midlands. The rain cleared very slowly from the west but in East Anglia and southeast England continued into the evening.

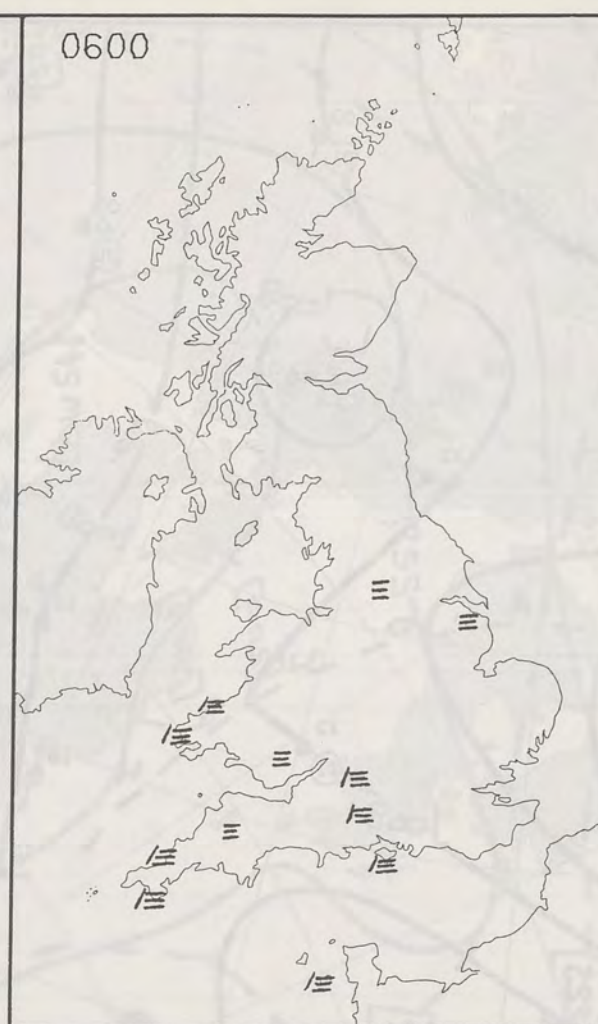

In Wales and western parts of England the cloud broke to bring a mainly sunny afternoon.

Temperatures rose a little above normal in the sunnier north-western regions but it was a very cool day in some eastern parts of England and in the northeast of Scotland.

SATURDAY
20 JUNE 1987

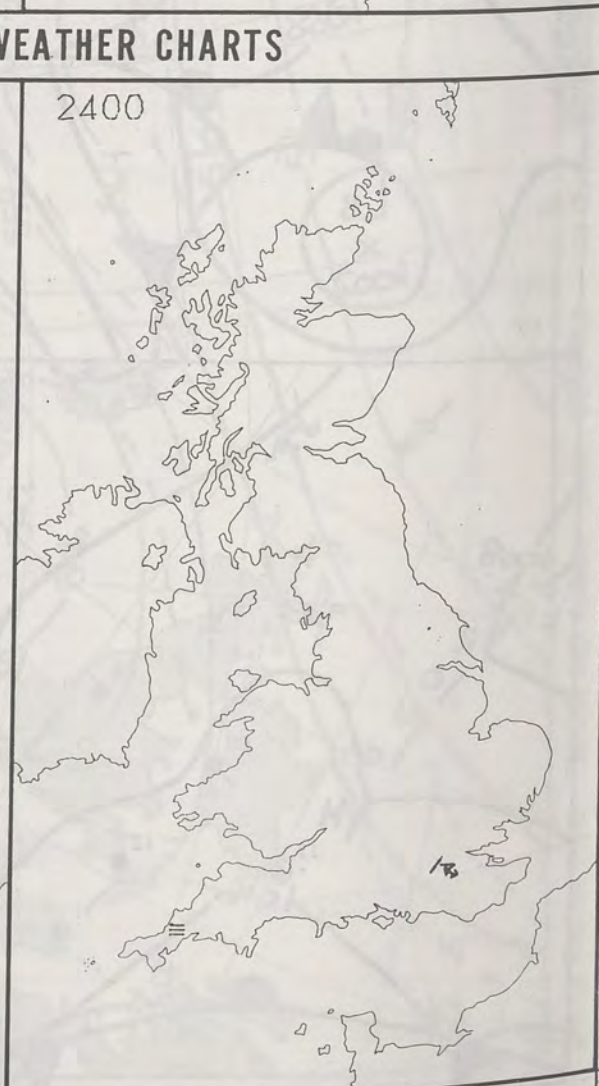

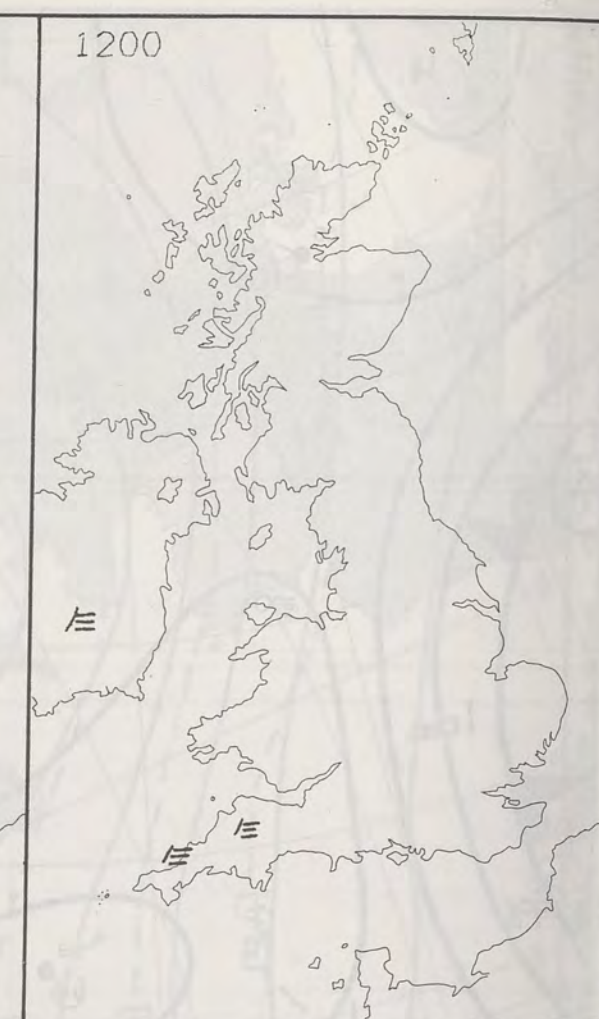

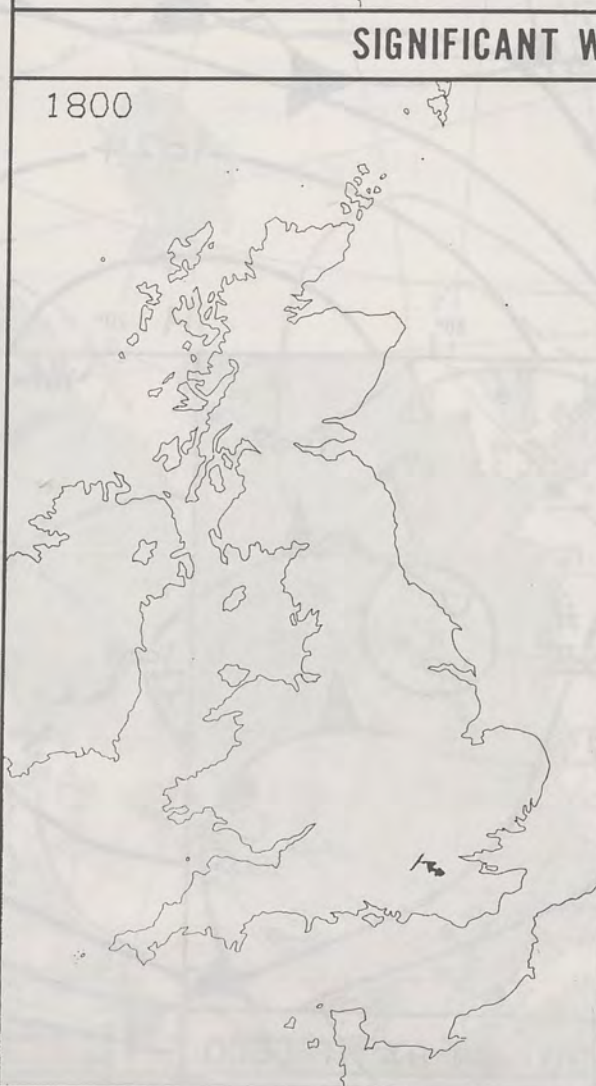

SUMMARY OF BRITISH WEATHER

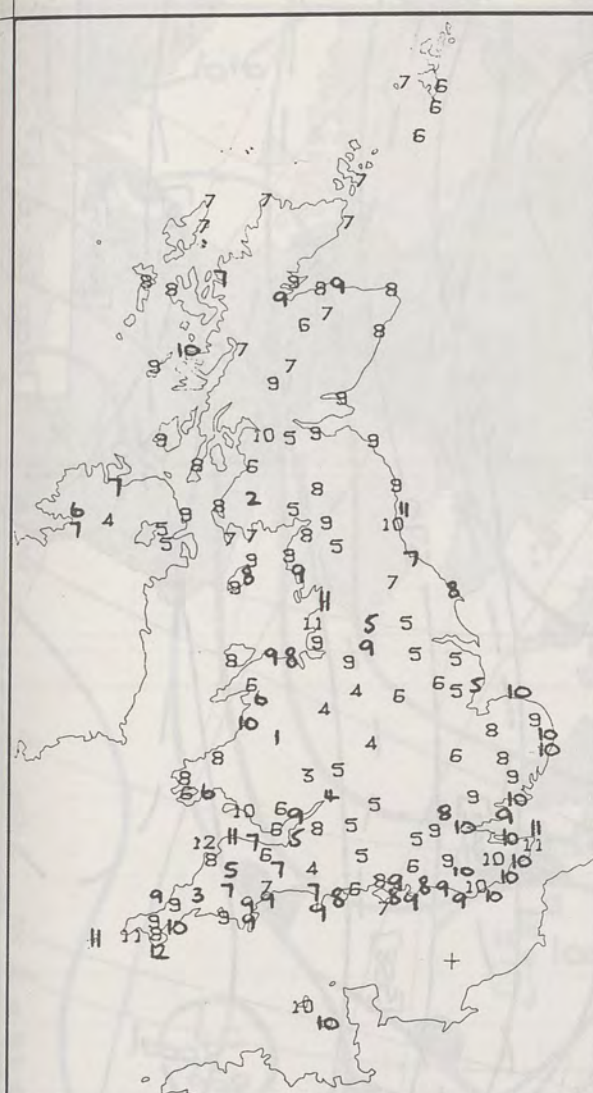

Rain in the extreme east of England in the early hours cleared away quickly, and Saturday dawned dry and bright in many places, with most of the United Kingdom having a dry morning. Scattered showers were reported from northern Scotland however, and Northern Ireland remained cloudy. During the afternoon further showers were reported from northern and western coastal Scotland, and a little drizzle fell in the far southwest, but much of the country continued dry and fine. Later in the afternoon a few showers broke out in southern counties of England, the heaviest of these were reported in the London and southeastern area, and isolated thunderstorms were reported to the south of London.

Temperatures were generally around or only slightly below normal, though some of the cloudier northern and western districts were 2 or 3 degrees below.

SUNDAY
21 JUNE 1987SUMMARY
OF
BRITISH WEATHER

Most of the United Kingdom had dry weather during the early hours, with mist and fog patches in a few country areas, and a ground frost here and there. Isolated, but quite heavy showers were reported from East Anglia, and some scattered showers in the far north of Scotland. During the morning, whilst many areas had fine and sunny weather, western districts experienced showery bands of cloud, producing localised moderate showers. In the afternoon, though skies clouded over from time to time, many areas had sunshine, but also some scattered showery outbreaks of rain, some of them lingering well into the evening, and over Scotland and Northern Ireland, showers became widespread during the latter part of the evening.

Temperatures generally were well up to late June normals, except in some cloudier western areas.

SUMMARY
OF
BRITISH WEATHER

Most places had overnight rain. In southern Scotland and parts of Wales there was heavy rain. East Anglia and southeast England were dry, with patchy fog. Shetland was clear and cold.

Northern Ireland and Shetland had a dry, bright day and the Isle of Man was sunny. East Anglia and southeast England had some bright weather early on, but most places in England and Wales were cloudy and wet, at least for a time with heavy rain here and there. During the morning brighter weather with some sunshine and a few showers reached western Scotland and northwest England and then spread to all of northern England and to the Midlands, East Anglia and much of Wales during the day.

Temperatures were again below normal with some northern coastal areas having a cold day.

SUMMARY
OF
BRITISH WEATHER

Much of the United Kingdom had a cloudy night. In Scotland and Northern Ireland there was rain in many places, heavy at times. Over England and Wales there was a lot of dry weather, but there was rain and drizzle here and there. In eastern England there was patchy fog.

During the day most places stayed cloudy, although the Northern Isles had the best sunshine, but showers as well. Over Scotland most places were wet for a time with more heavy rain and in Northern Ireland there was rain on and off throughout the day.

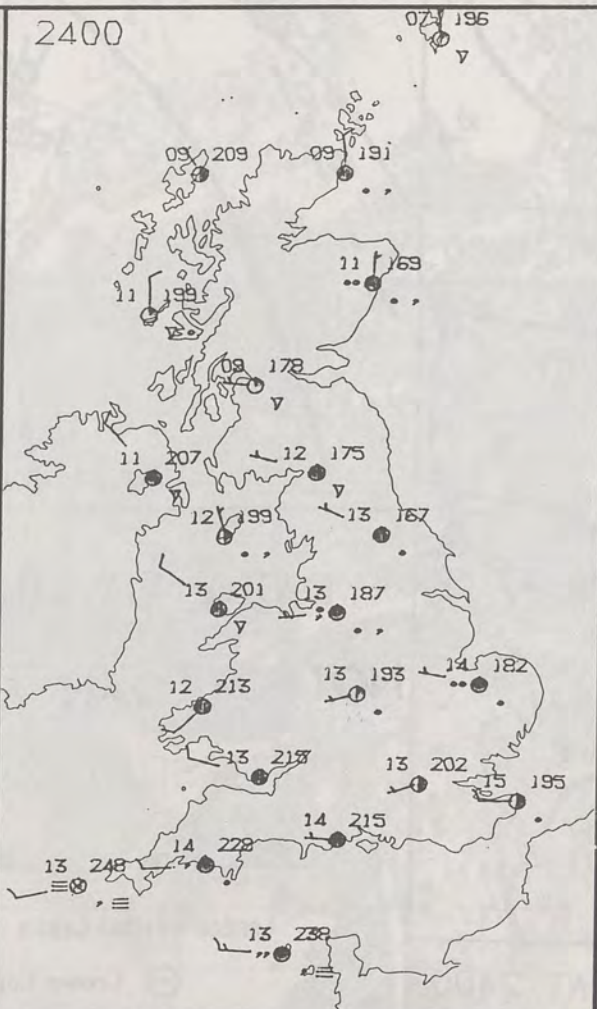

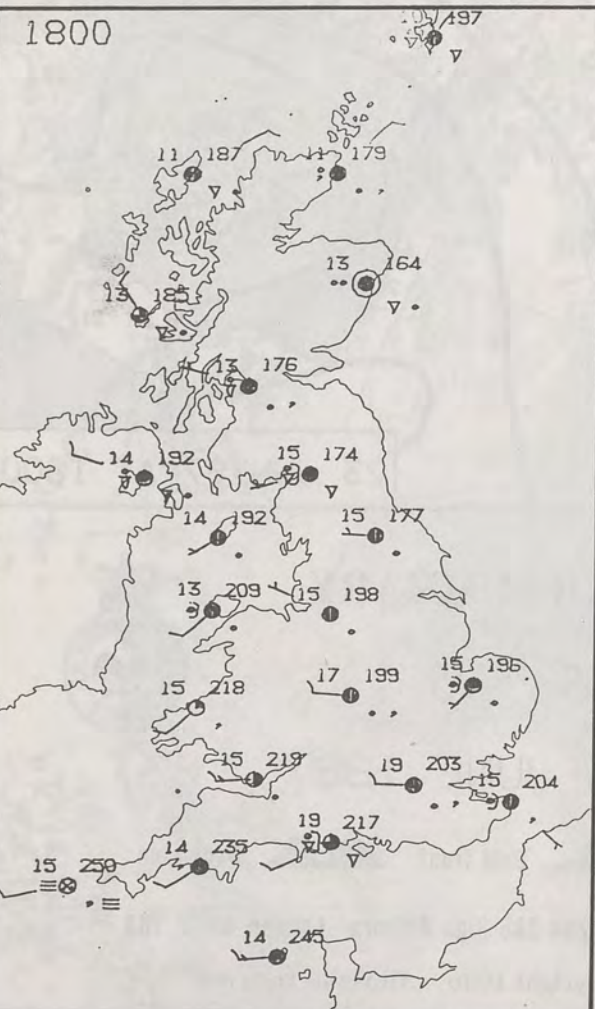

Most places in Wales were dry, just a little rain here and there but in England there were outbreaks of rain in many places. On the south coast of England some places brightened up and turned sunny and fairly warm, but over the rest of the United Kingdom temperatures were well below normal and in the wetter areas it was cold.

WEDNESDAY
24 JUNE 1987

**SUMMARY
OF
BRITISH WEATHER**

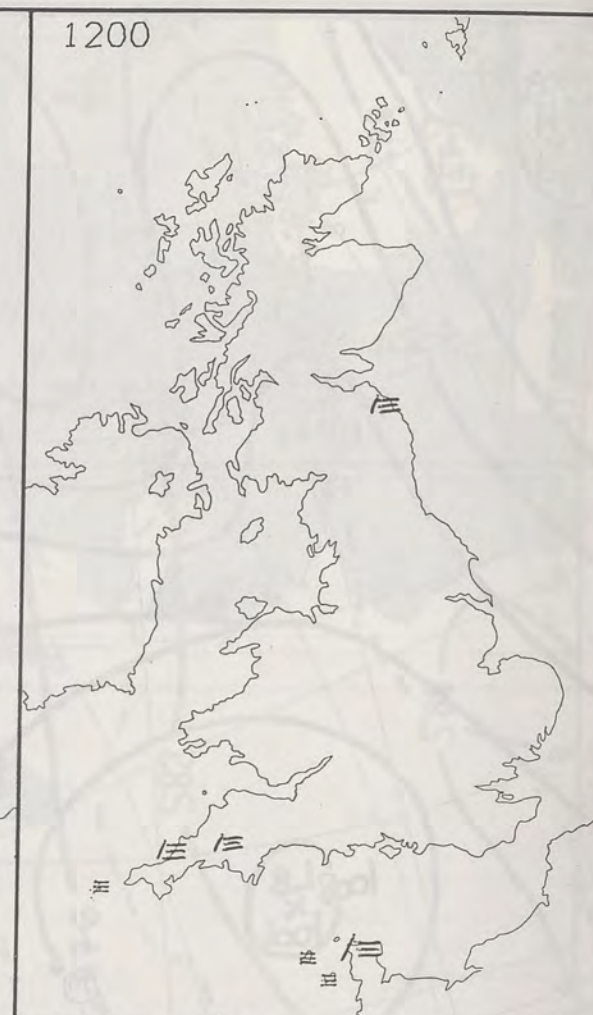

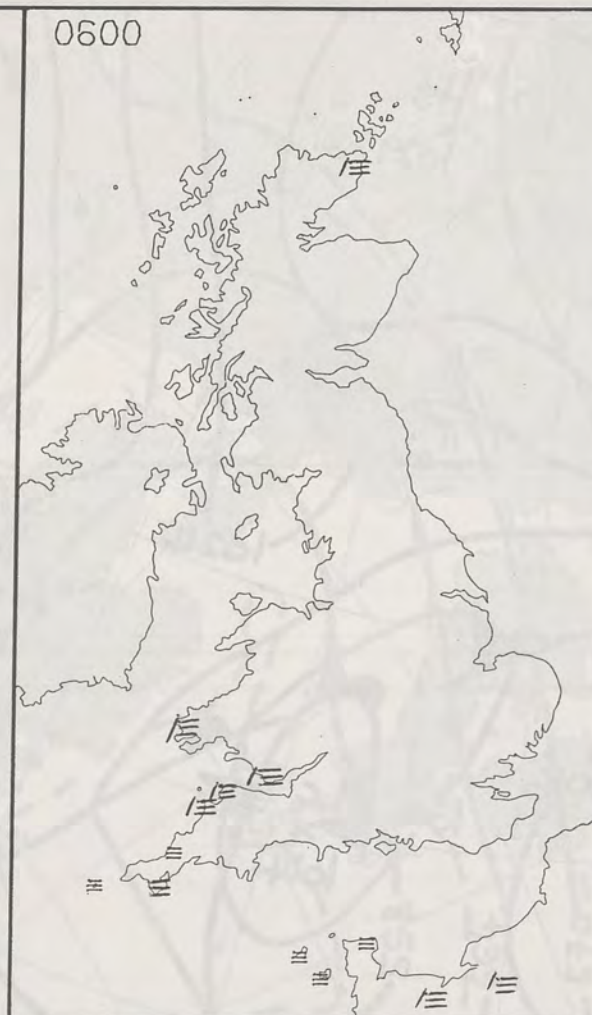

There were some areas of rain overnight, and with generally cloudy skies temperatures stayed well up in most districts. There was hill and coastal fog in the southwest.

Taking the country as a whole, this was just about the driest day of the month so far. There were some showers in the north and east, and a little drizzle and some fog in the extreme southwest. But amounts of rain were small, and most places had none at all. There were some good spells of sunshine too, though the extreme southwest was dull, and some eastern districts of Britain were fairly cloudy.

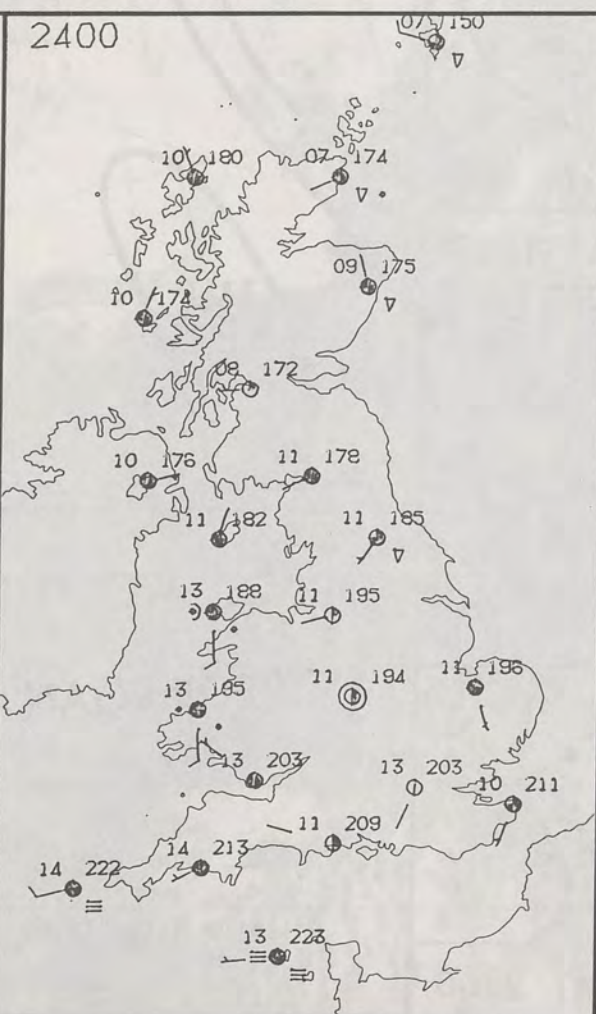

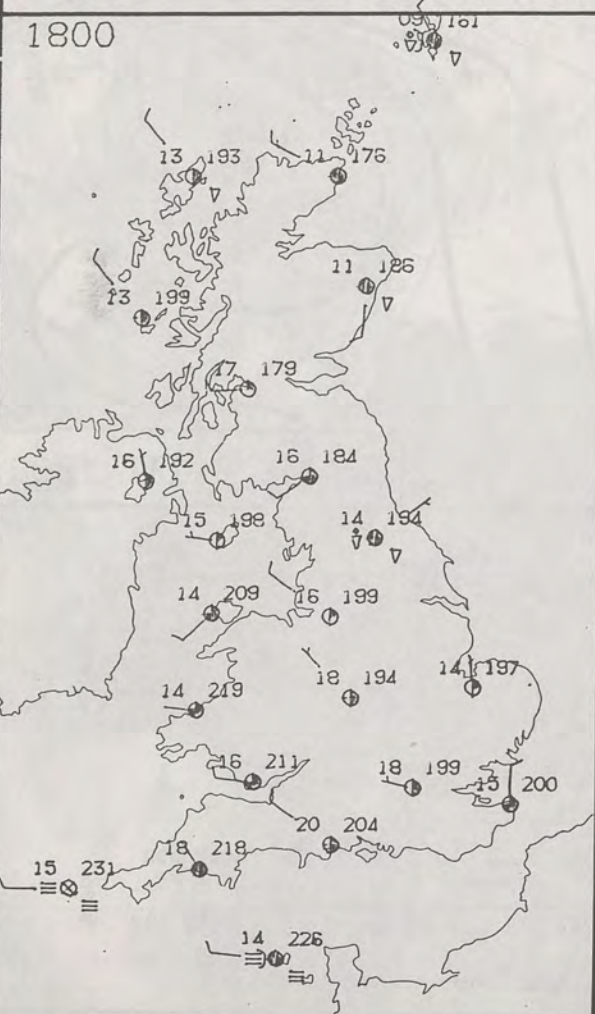

It was mostly quite cool in the east and north, and in the extreme southwest. But in many southern areas, together with Northern Ireland and southwest Scotland, temperatures reached or rather exceeded the seasonal normal. Parts of the south had their warmest day of the month so far, though there were warmer days in the Spring.

FRIDAY
26 JUNE 1987

SUMMARY
OF
BRITISH WEATHER

England and Wales had a cloudy night with some outbreaks of rain in northern and eastern parts of England where it stayed mostly cloudy through the day with some light showers.

Southern parts of England and Wales had some sunny spells but in southwest England, Wales and Northern Ireland it turned cloudy with some outbreaks of rain spreading slowly eastwards in the evening.

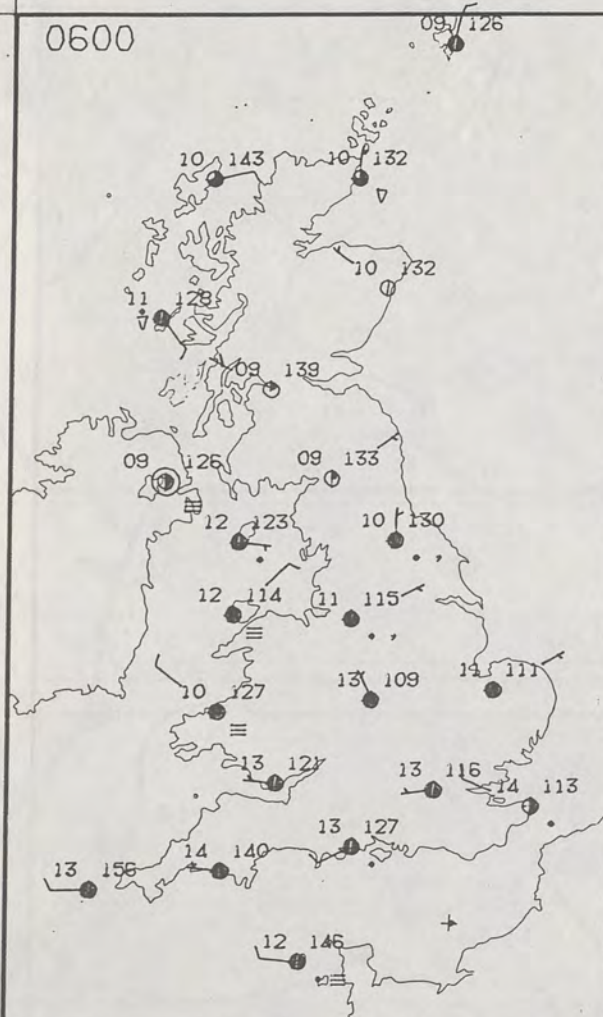

Scotland and northernmost parts of England had clear spells overnight and sunny spells by day but there were some showers in the northern half of Scotland.

Temperatures were near to the average in the south and west but eastern parts of England and Scotland were mostly cool.

SATURDAY
27 JUNE 1987SUMMARY
OF
BRITISH WEATHER

Much of the country had a cloudy night with outbreaks of rain or drizzle, some quite heavy. It also became very humid in many southern and western areas, with hill and coastal fog. Northern Scotland had broken cloud.

During the day much of England and Wales stayed cloudy and muggy and close to western coasts and hills there was some rain or drizzle; well inland it brightened up at times.

Northern Ireland and the Borders had a cloudy day with rain, the rain tending to become heavier and more persistent. Central and northern Scotland was dry with some sunshine until rain arrived in the evening.

Temperatures were mostly near normal, but places inland over England became rather warm.

SUNDAY
28 JUNE 1987

SUMMARY
OF
BRITISH WEATHER

Much of England and Wales had a cloudy, warm and humid night. There was fog and drizzle in many southern and western areas. Scotland, Northern Ireland and the Lake District had outbreaks of rain, some quite heavy.

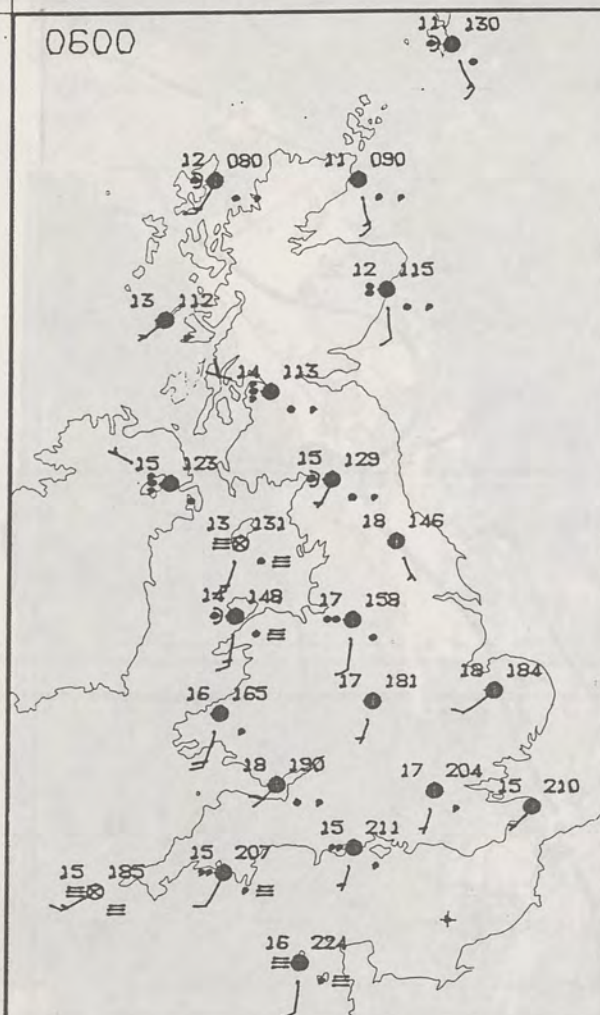

A few spots of rain showed up in some northern parts of England but again, apart from the far north and northwest Wales, most places in England and Wales had a dry day. Near southern and western coasts it remained grey and misty with occasional drizzle and quite cool but inland the cloud broke to give a very warm afternoon.

The Border Counties and Isle of Man kept quite a lot of cloud and had a fair amount of rain. The rest of Scotland, as well as Northern Ireland, had outbreaks of rain at first but this gave way to a warm afternoon with sunny intervals.

MONDAY
29 JUNE 1987

SUMMARY
OF
BRITISH WEATHER

Most places had a dry, cloudy night and there was some fog. There was rain, heavy in places, in southern Scotland, northern England and northwest Wales. Over most of England and Wales it was a warm, humid night.

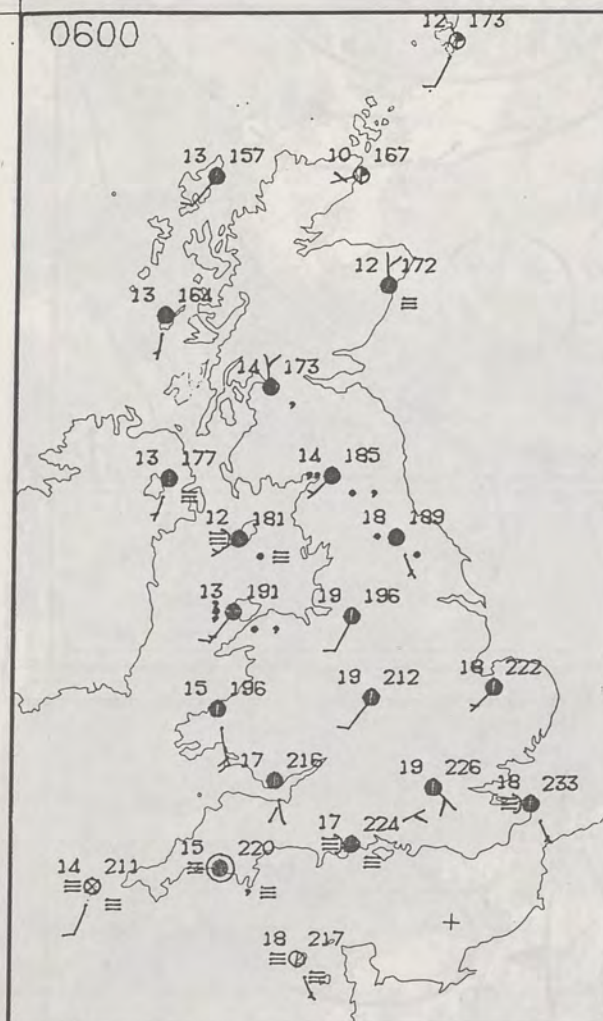

Central, southern and southeast areas of England and parts of northeast England were hot and humid during the day. Most places were dry with some sunshine, but in the evening there were a few heavy showers and thunderstorms in East Anglia and the Midlands, some southern and western coasts stayed foggy. Parts of west and northwest Wales had some heavy rain too.

Over the rest of the United Kingdom it was a mainly cloudy day, though warm; there was some sunshine in Northern Ireland and Scotland. Northern Ireland and northwest Scotland were mostly dry, but some places in southern Scotland had a little rain later.

TUESDAY
30 JUNE 1987SUMMARY
OF
BRITISH WEATHER

Scotland and Northern Ireland, together with northern England had a day of mixed bright or sunny weather and showers and a rather breezy westerly wind. A lot of the showers were scattered and light, especially in sheltered eastern parts of northern England and eastern Scotland, but more frequent and heavier showers were reported from northern and western Scotland and parts of Northern Ireland.

Across central and southern England, and over Wales, a fine and dry morning, with plenty of sunshine. During the afternoon, cloud increased in some places, bringing a little rain here and there, either from medium level cloud, or isolated showers, but many eastern areas remained fine well into the evening.

During the evening, showery bands of rain pushed across southern-most counties, but amounts of rain were generally small.

Temperatures were well up to the end of June normal values, and in the southeast of England and East Anglia it was warm or very warm.
