

# THE DAILY WEATHER REPORT

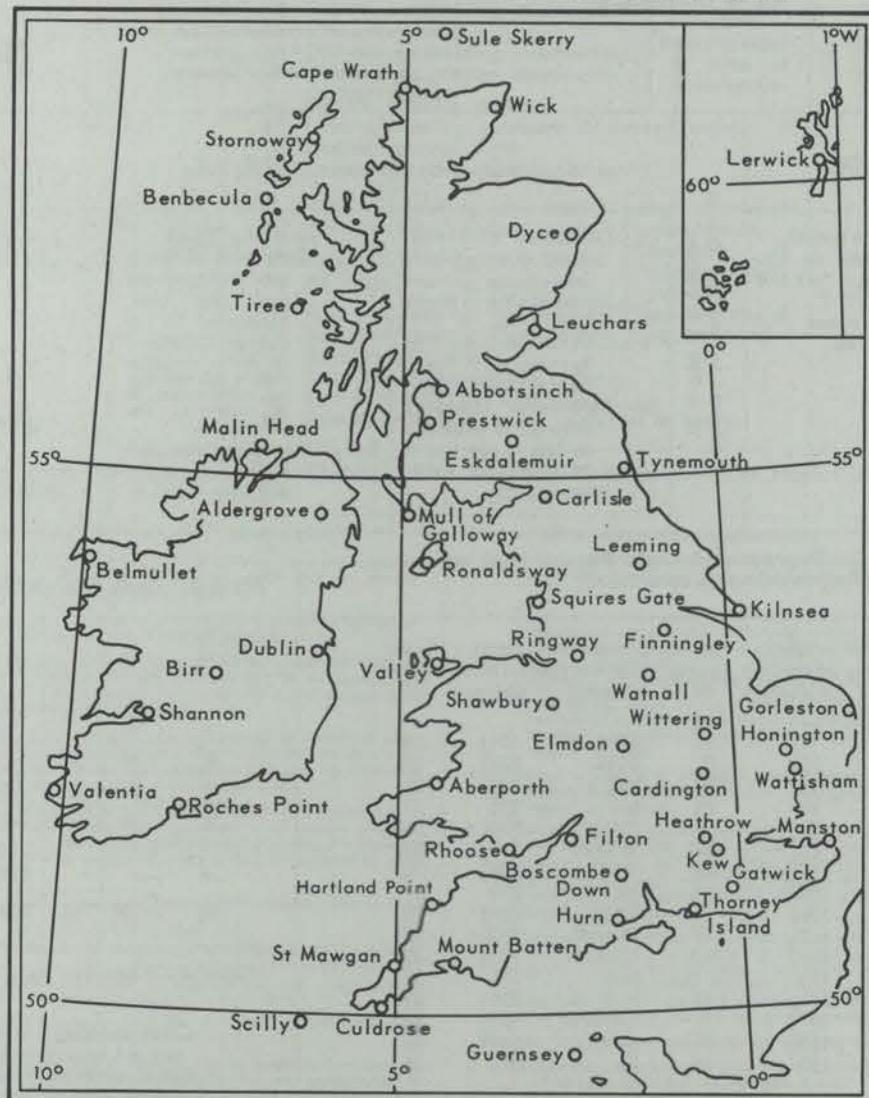

(INTRODUCTION)

74

1st January to 31st March, 1976

Stations published in the Daily Weather Report

METEOROLOGICAL OFFICE  
Bracknell, Berkshire

## I. HISTORY

A brief history of changes in contents and format between 1st April, 1919, and December, 1949, will be found in the introduction to the British Section for 1st October to 31st December, 1949. On 1st January, 1950, the British and International Sections of the former Report, which had been issued in three sections since 1919, were combined in a single publication, the present Daily Weather Report. At the same time, the third section was published separately with the title of Daily Aerological Record. A number of changes in meteorological codes and specifications were introduced on 1st January, 1955, and incorporated in the Report. Changes in format introduced on 1st July, 1955, provided for the elements of station and ships' observations to be given in the order of the appropriate meteorological code and for some modification of the scales and projections of charts. On 1st January, 1961, the Celsius scale was adopted for reporting surface temperatures. On 1st January, 1967, the metric system was adopted for all references to heights and distances. Certain changes relating to position and wave groups in the Ship-Code (FM 2IE) were introduced on 1st January, 1968.

## 2. FORM OF PRESENTATION

(i) **Observations.**—Pages 1 and 4 of the Daily Weather Report contain reports for the four main hours of observation from a representative number of stations in Great Britain and Ireland which provide full reports together with a selection of reports from ocean weather stations for the same hours. In addition, Beaufort letters (Table 20), mainly describing precipitation, are given for each of the four six-hourly periods, together with reports of maximum and minimum temperature, sunshine, rainfall and state of ground (Table 13), in respect of the land stations listed. Explanations of the codes and specifications used are given below.

(ii) **Charts.**—Page 2 contains a chart of the weather in a large part of the northern hemisphere for mid-day of the previous day. Incorporated in this chart is a line joining the approximate locations of civil twilight (i.e., Sun 6° below horizon) at 1200 h for the mid point of the month indicated. Page 3 contains charts of slightly larger scale, for the British Isles and Western Europe, for 1800 h. of the previous day and for 0000 h and 0600 h on the day of issue.

## 4. EXPLANATION OF CODES AND SPECIFICATIONS

CODE FM 11 E—Land Stations	VV ww W	PPP TT	Nh CL h CM CH	Td Td a pp	8Ns C hshs	RRT <sub>x</sub> T <sub>x</sub> E RRT <sub>n</sub> T <sub>n</sub> E T <sub>g</sub> T <sub>g</sub>	
N = Total amount of cloud in eighths (Table 1). dd = Wind direction on scale 01-36 (see also Table 2). ff = Wind speed in knots.	VV = Visibility (Table 3). ww = Present weather (Table 5). W = Past weather (Table 4).	PPP = Last three figures of pressure (reduced to M.S.L.) in millibars and tenths. TT = Temperature in whole degrees Celsius.  Note.—In reports from ocean weather stations (FM 21D) only the tens and units figure of air temperature are reported. The tenths figure is reported by t <sub>T</sub> .	Nh = Fraction of celestial dome covered by CL (or CM if no CL). CL = Form of low cloud (Table 6). h = Height above ground of base of lowest cloud (Table 9). CM = Form of Medium Cloud (Table 7). CH = Form of high cloud (Table 8).	Td = Dew point temperature in whole degrees Celsius. a = Characteristic of barometric tendency (Table 10). pp = Barometric tendency (change of pressure in last three hours in tenths of millibars).	8 = Indicator figure. Ns = Amount in eighths of individual cloud layer or mass (Table I). C = Type of cloud (Table II). hshs = Height of base of cloud (Table 12).  Stations situated in tropical latitudes use the form Td Td 9 p <sub>24</sub> p <sub>24</sub> , where p <sub>24</sub> p <sub>24</sub> gives the 24-hour pressure changes (Table 21).	RR = Rainfall (Table 19) (Code 3577) (09h-21h) (21h-09h). T <sub>x</sub> T <sub>x</sub> = Maximum temperature in whole degrees Celsius (09h-21h). T <sub>n</sub> T <sub>n</sub> = Minimum temperature in whole degrees Celsius (21h-09h). E = State of ground (Table 13) (Code 0900) (at 21h and 09h).	T <sub>g</sub> T <sub>g</sub> = Minimum temperature on grass in whole degrees Celsius (21h-09h). sss = Duration of sunshine (in hours and tenths). E = State of ground (Table 13) (Code 0900) (at 21h and 09h).
CODE FM 21 E—Ships	Q <sub>a</sub> L <sub>a</sub> L <sub>a</sub>	YYGGI <sub>w</sub>	D <sub>s</sub> v <sub>s</sub> a pp	O T <sub>s</sub> T <sub>s</sub> T <sub>d</sub> T <sub>d</sub>	IT <sub>w</sub> T <sub>w</sub> T <sub>w</sub> t <sub>T</sub>	3P <sub>w</sub> P <sub>w</sub> H <sub>w</sub> H <sub>w</sub>	d <sub>w</sub> d <sub>w</sub> P <sub>w</sub> H <sub>w</sub> H <sub>w</sub>
99 = Indicator group. L <sub>a</sub> L <sub>a</sub> L <sub>a</sub> = Latitude in tenths of a degree.	Q <sub>c</sub> = Quadrant of the globe (Table 17). L <sub>a</sub> L <sub>a</sub> L <sub>a</sub> = Longitude in tenths of a degree.	YY = Day of the month. GG = Actual time to the nearest whole hour G.M.T. i <sub>w</sub> = Wind indicator (Table 18).	D <sub>s</sub> = Direction of movement of ship (Table 14). v <sub>s</sub> = Speed of ship in knots (Table 15). a = Characteristic of barometric tendency (Table 10). pp = Barometric tendency (change of pressure in last three hours in tenths of millibars).	O = Indicator figure. T <sub>s</sub> T <sub>s</sub> = Difference between air temperature and sea temperature in $\frac{1}{2}$ degree Celsius. a = Characteristic of barometric tendency (Table 10). pp = Barometric tendency (change of pressure in last three hours in tenths of millibars).	I = Indicator figure. T <sub>w</sub> T <sub>w</sub> T <sub>w</sub> = Sea surface temperature in tenths of a degree Celsius. For negative temperatures 500 is added. t <sub>T</sub> = The tenths figure of the air temperature.	3 = Indicator figure. P <sub>w</sub> P <sub>w</sub> = Period of waves in seconds. H <sub>w</sub> H <sub>w</sub> = Height of the waves in units of 0.5 metre. This group refers to wind waves. If there is a swell with no wind waves this group is reported as 3/00.	d <sub>w</sub> d <sub>w</sub> = Direction (in tens of degrees) from which waves come. P <sub>w</sub> = Period of waves (Table 16). H <sub>w</sub> H <sub>w</sub> = Height of the waves in units of 0.5 metre. This group is used to report swell when it is possible to make a clear distinction between swell and wind waves.

Table 1.—Code for Cloud Amount (N, Nh, Ns)

0 = None.  
1 = 1 eighth of sky covered or less, but not zero.  
2 = 2 eightths of sky covered.  
3 = 3 eightths of sky covered.  
4 = 4 eightths of sky covered.  
5 = 5 eightths of sky covered.  
6 = 6 eightths of sky covered.  
7 = 7 eightths of sky covered or more, but not 8 eightths.  
8 = 8 eightths (sky completely covered).  
9 = Sky obscured or cloud amount cannot be estimated.

Note.—"Trace" would be included under Figure 1, which should be used for amounts up to 1/8th (i.e., not up to 3/16ths). "Overcast but with openings" would be included under Figure 7, which should be used for amounts down to 7/8ths (i.e., not down to 13/16ths).

Note.—The direction to be observed is "true" not "magnetic"

## 2. FORM OF PRESENTATION (continued)

(iii) **General Synoptic Development.**—Below the weather charts on page 3 will be found a statement which describes the main features in the evolution of the synoptic situation over the United Kingdom during the preceding 24 hours together with an indication of the manner in which it is expected to develop.

## 3. NOTES

(i) **Standard of Time.**—Greenwich Mean Time is exclusively used throughout the Report.

(ii) **Temperature.**—On pages 1 and 4 temperature is specified in whole degrees Celsius, negative temperatures being coded by removing the minus sign and adding 50. Equivalent values in degrees Fahrenheit can be obtained by reference to the table printed between these pages. See also note under PPP TT in para. 4 below.

(iii) **Adjusted Readings.**—Where an instrumental reading is found to be in error and some adjustment is necessary, the adjusted reading is published in brackets thus (59).

(iv) **Rainfall Readings in Eire.**—The rainfall totals for stations in Eire are for the periods

18h—06h, reported at 0900h.  
06h—18h, reported at 2100h.

(v) **Readers of the Report who are unacquainted with the method of construction and the use of weather charts** are recommended to read "The Practice of Weather Forecasting" which may be purchased from H.M. Stationery Office, 49 High Holborn. (Price £1·05 net).

(vi) **Correction sheets** will be issued weekly. These will contain corrected observations, where appropriate, for all stations with the exception of the following:—stations in Eire, Cape Wrath, Sule Skerry, Mull of Galloway, Kilnsea, Guernsey, Scilly, Hartland Point.

Table 3.—Code for Visibility—(VV) (Code 4377)

Table 4.—Code for Past Weather (W) (Code 4500)

0 = Cloud covering $\frac{1}{2}$ or less of the sky throughout the appropriate period.	3 = Sandstorm, duststorm or blowing snow.
1 = Cloud covering more than $\frac{1}{2}$ of the sky during part of the appropriate period and covering half or less during part of the period.	4 = Fog, ice fog or thick haze (visibility less than 1000 m.).
2 = Cloud covering more than $\frac{1}{2}$ of the sky throughout the appropriate period.	5 = Drizzle.
	6 = Rain.
	7 = Snow, or rain and snow mixed.
	8 = Shower(s).
	9 = Thunderstorm(s) with or without precipitation.

The code for W covers the weather occurring during the last six hours.

In the range 01-50 the figures give actual visibility in tenths of kilometres. This table gives the meanings of higher code figures.

\* Values not given may be obtained by interpolation.

† Code figures not used.

‡ Decade 90-99 is used when visibility cannot be determined with sufficient accuracy to justify lower code figures.

**Table 10.—Code for Characteristic of Barometric Tendency (a) (Code 0200)**

0 = Increasing, then decreasing; atmospheric pressure the same as or higher than 3 hrs ago.	atmospheric pressure now higher than 3 hrs ago.
1 = Increasing, then steady; or increasing, then increasing more slowly.	
2 = Increasing (steadily or unsteadily).	
3 = Decreasing or steady, then increasing; or increasing, then increasing more rapidly.	
4 = Steady, atmospheric pressure the same as 3 hrs ago.	
5 = Decreasing, then increasing; atmospheric pressure the same as or lower than 3 hrs ago.	
6 = Decreasing, then steady; or decreasing, then decreasing more slowly.	
7 = Decreasing (steadily or unsteadily).	
8 = Steady or increasing, then decreasing; or decreasing, then decreasing more rapidly.	

**Table 11.—Code for Type of Cloud (C) (Code 0500)**

0 = Cirrus (Ci).
1 = Cirrocumulus (Cc).
2 = Cirrostratus (Cs).
3 = Altocumulus (Ac).
4 = Altostratus (As).
5 = Nimbostratus (Ns).
6 = Stratocumulus (Sc).
7 = Stratus (St).
8 = Cumulus (Cu).
9 = Cumulonimbus (Cb).
/ = Cloud not visible owing to darkness, fog, duststorm, sandstorm or other analogous phenomena.

**Table 12.—Code for Height of Cloud (h<sub>sh</sub>) (Code 1677)**

Code figures 01–50: × 30 = height in metres.	Code figures 56–80: — 50 × 3 = height in hundreds of metres.
CODE FIGURES 81–89	CODE FIGURES 90–99*
Code figures Metres	Code figures Metres
81 = 10,500	90 = <50
82 = 12,000	91 = 50–100
83 = 13,500	92 = 100–200
84 = 15,000	93 = 200–300
85 = 16,500	94 = 300–600
86 = 18,000	95 = 600–1,000
87 = 19,500	96 = 1,000–1,500
88 = 21,000	97 = 1,500–2,000
89 = >21,000	98 = 2,000–2,500
	99 = 2,500 or more, or no clouds.

\*Only used when cloud height cannot be determined with greater accuracy.

**Table 13.—Code for State of Ground (E) (Code 0900)**

0 ... Ground dry.	6 ... Snow or melting snow (with or without ice) covering more than one-half of ground (but not completely).
1 ... " moist.	7 ... Snow or melting snow (with or without ice) covering ground completely.
2 ... " wet.	8 ... Loose dry snow, dust or sand covering more than one half of ground (but not completely).
3 ... " frozen.	9 ... Loose dry snow, dust or sand covering ground completely.
4 ... Glaze or ice on ground but no snow or melting snow.	
5 ... Snow or melting snow (with or without ice) covering less than one half of ground.	

**Table 14.—Code for Direction in which Ship has moved (D<sub>s</sub>) (Code 0700)**

0 = Stationary.	kt
1 = North-east.	
2 = East.	0 = 0
3 = South-east.	1 = 1–5
4 = South.	2 = 6–10
5 = South-west.	3 = 11–15
6 = West.	4 = 16–20
7 = North-west.	5 = 21–25
8 = North.	6 = 26–30
9 = No definite direction or unknown.	7 = 31–35
	8 = 36–40
	9 = >40

**Table 15.—Code for Speed of Ship (v<sub>s</sub>) (Code 4451)**

0 = 0	0 = 10
1 = 1–5	1 = 11
2 = 6–10	2 = 12
3 = 11–15	3 = 13
4 = 16–20	4 = 14 or more
5 = 21–25	5 = 5 or less
6 = 26–30	6 = 6
7 = 31–35	7 = 7
8 = 36–40	8 = 8
9 = >40	9 = 9

**Table 16.—Code for Period of Waves (P<sub>w</sub>) (Code 3155)**

sec
0 = 10
1 = 11
2 = 12
3 = 13
4 = 14 or more
5 = 5 or less
6 = 6
7 = 7
8 = 8
9 = 9

**Table 17.—Quadrant of the globe (Q<sub>c</sub>) (Code 3333)**

Latitude	Longitude
1 North	East
3 South	East
5 South	West
7 North	West

**Table 18.—Wind Indicator (i<sub>w</sub>) (Code 1855)**

0 = wind speed estimated	wind speed in metres per second
1 = wind speed obtained by anemometer	
3 = wind speed estimated	wind speed in knots
4 = wind speed obtained by anemometer	

**Table 19.—Code for Amount of Precipitation (RR) (Code 3577)**

mm
01–55 Amount to the nearest whole millimetre.
56 60
57–90 Add 10 mm for each unit above 56 e.g., 73 = 230 mm
91 0.1
92 0.2
93 0.3
94 0.4
95 0.5
96 0.6
97 Trace (There has been precipitation but amount less than 0.05 mm).
98 >400
99 Measurement impossible or inaccurate.

**Table 20.—Explanation of Beaufort Letters (pages 1 and 4)**

d = drizzle.	l = lightning
f = fog, visibility 200 metres, or more but less than 1 kilometre.	p = shower(s).
F = thick fog, visibility less than 200 metres.	r = rain.
h = hail, ice prisms or ice pellets types (a) and (b).	s = snow.
ks = storm of drifting snow.	rs = rain and snow.
Intensity is shown by capital letters ("heavy" or "thick") or suffix "o" ("slight"). Continuous precipitation is shown by repeating the letter and intermittent precipitation by the prefix "i". The prefix "j" indicates weather near but not at the station.	t = thunder.

**Table 21.—Change of pressure at station level in last 24 hours (P<sub>24</sub>P<sub>24</sub>) (Code 265)**

00 No change	50 Pressure has risen or fallen more than 4.9 mb.
01 Pressure has risen 0.1 mb.	51 Pressure has fallen 0.1 mb. etc. etc.
02 Pressure has risen 0.2 mb.	52 Pressure has fallen 0.2 mb. etc. etc.
48 Pressure has risen 4.8 mb.	98 Pressure has fallen 4.8 mb.
49 Pressure has risen 4.9 mb.	99 Pressure has fallen 4.9 mb.

## 5. EXPLANATION OF CHARTS

**BAROMETER.** Isobars are drawn for intervals of four millibars.

**WIND.** Arrows fly with wind. A full length feather represents 10 Kt and a short feather 5 Kt.

A solid pennant represents 50 Kt. Calm is indicated by circle outside weather symbol.

**TEMPERATURE** is given in degrees C., and is shown on the charts by means of figures alongside the Station circle.

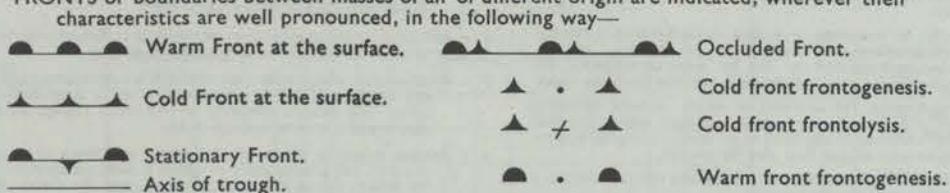

**CLOUD SYMBOLS**

- Clear sky.
- Sky ½ covered.
- Sky ¾ covered.
- Sky ½ covered.
- Sky ¾ covered.
- Sky ½ covered.
- Sky obscured.
- ⊗ Missing or doubtful data.

**WEATHER SYMBOLS**

● Rain.	● Drizzle.	● Snow.	● Rain and snow.	△ Hail.
▽ Shower.	▽ Thunderstorm.		≡ Fog.	≡ Mist.

FRONTS or boundaries between masses of air of different origin are indicated, wherever their characteristics are well pronounced, in the following way—

Note.—The symbols are placed on the side of the line towards which the front is moving. Identification letters are inserted in systems.

**ALTITUDES OF STATIONS:**—The altitudes, in metres, of British and Irish stations are given below. These refer in each case to the datum level of the ground beneath or nearly beneath the thermometer screen. Where the official name of the station differs, this is given in brackets.

Boscombe Down	126	Hartland Point	90	Tynemouth	29	Sule Skerry	13
Hurn (Bournemouth/Hurn Airport)	10	Mount Batten (Plymouth/Mount Batten)	27	Carlisle			

# DAILY WEATHER REPORT OF THE BRITISH METEOROLOGICAL OFFICE

241  
No. 229

## MONTHLY SUMMARY

For JANUARY 1975

MILD AT FIRST, VERY COLD LATER. SEVERE GALES 2/3 JANUARY

A westerly airstream covered all areas at first. On the 2nd a wave depression which had formed in mid-Atlantic deepened rapidly as it approached the British Isles. The centre crossed central Scotland during the day and by 2100GMT had reached the northern North Sea, central pressure approximately 962 MB. After the passage of this depression a generally westerly airstream returned to cover the British Isles with weak fronts affecting all areas at times. Pressure was often high during the first part of the month, especially in southern areas as the Azores anticyclone maintained the more northerly position as in December, with a ridge or separate centre often extending into central Europe. During the 22nd and early hours of the 23rd a cold front moved southeastwards across all areas, followed by a northerly airstream which was maintained until the 26th. On the 27th a small depression moved from the Atlantic into western Scotland bringing a southerly flow over the United Kingdom. This flow then backed to southeast or east as an anticyclone built over Scandinavia and the depression moved southeast into France.

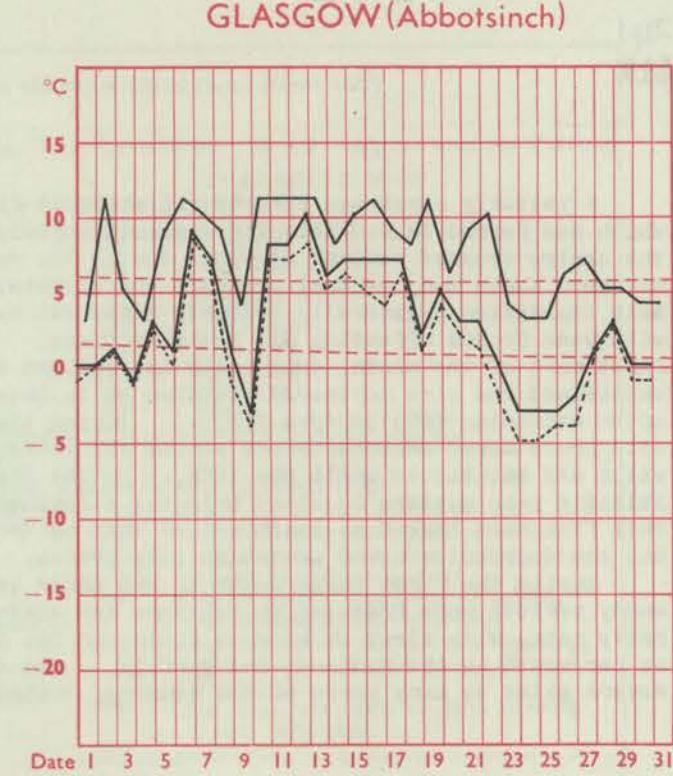

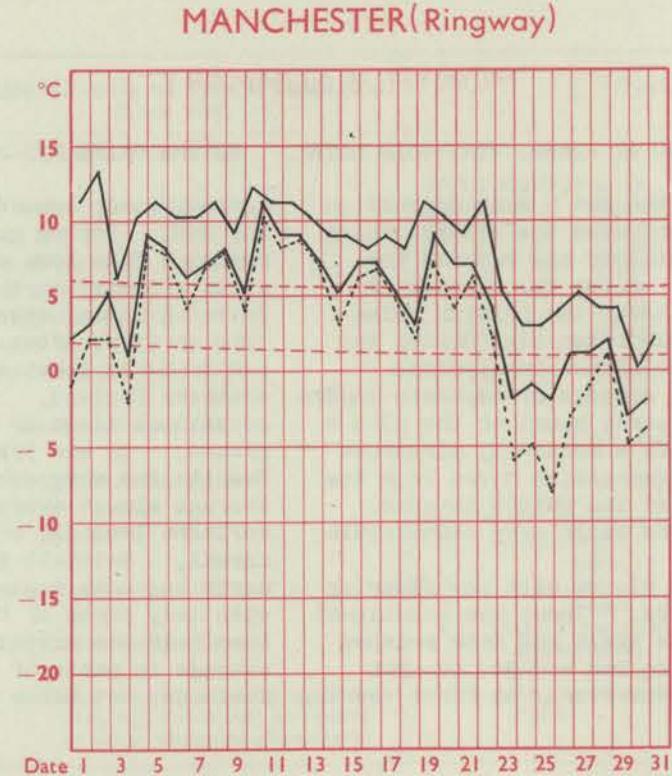

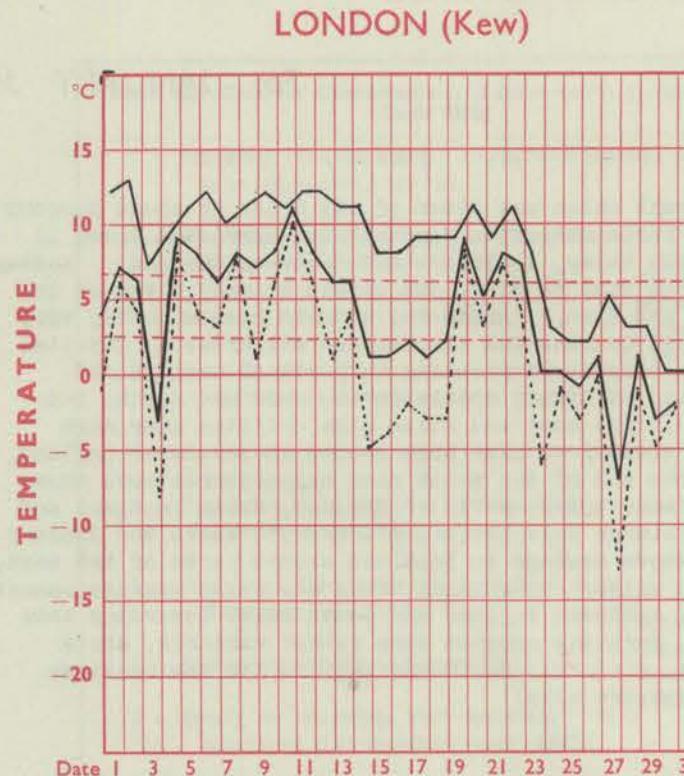

During the first three weeks of the month it was often cloudy with any clear or sunny periods more frequent in southern and eastern districts. There was occasional heavy rain, with sleet or snow at times, in the north. The sleet and snow reached as far south as the Midlands and Norfolk. The depression on 2nd and 3rd brought severe gales to many parts of the country. Winds were southwesterly at first veering

northwesterly behind the cold front which was clear of all areas by about 2200GMT on the 2nd. Strong gale or storm force was often reached with hurricane force 12 reported from some places in South Wales, southwest and northern England. Westerly gales affected northern areas from time to time, and spread to many parts of the United Kingdom between the 19th and 23rd. After the 24th it became mostly very cold as first Arctic and then cold Continental air reached all areas. Day-time temperatures sometimes failed to rise above freezing in parts of eastern and southern England. There was rain at times, mostly in the west and north, and occasional sleet or snow mostly in the east and south with drifting over high ground. On the 30th, snow was widespread over high ground in southwest England. Despite the very cold spell at the end of the month mean temperatures were above average almost everywhere. In some inland parts of England, south Scotland and Northern Ireland, average temperatures were between 2°C and 3°C above the January normal. Rainfall totals were above average in Scotland except parts of the east, north and east England and North Wales. Remaining areas had below average amounts with many parts of the Midlands, southern England and South Wales recording less than half the monthly average. Sunshine amounts were rather variable, above average in parts of the Midlands, north and southeast England and the Scottish lowlands, but below average everywhere else.

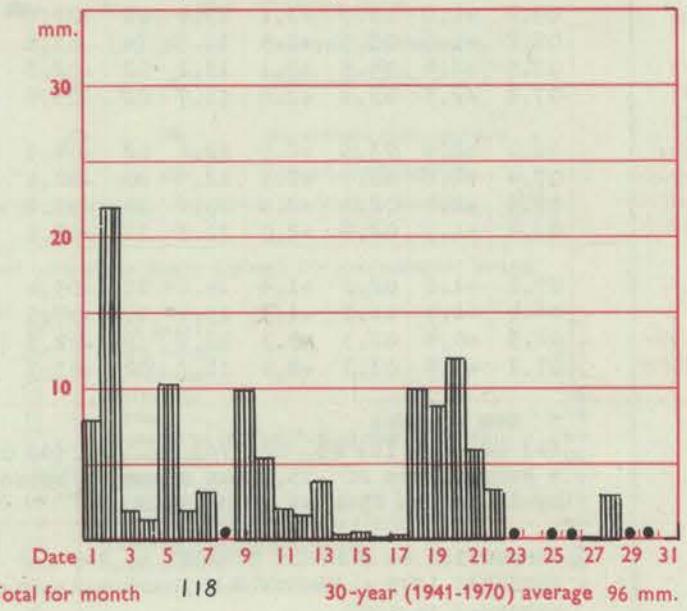

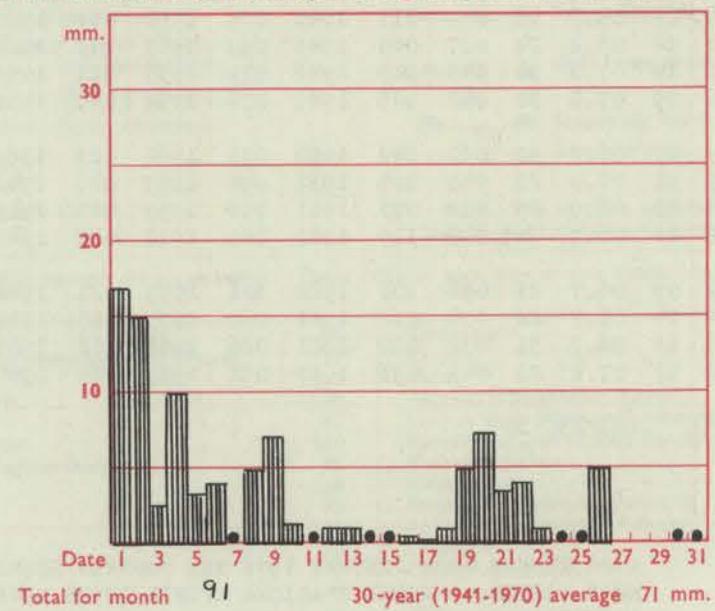

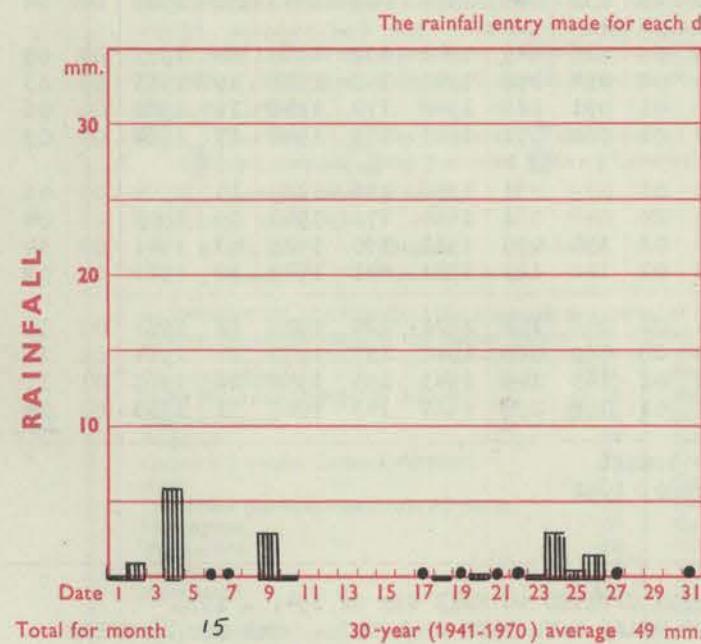

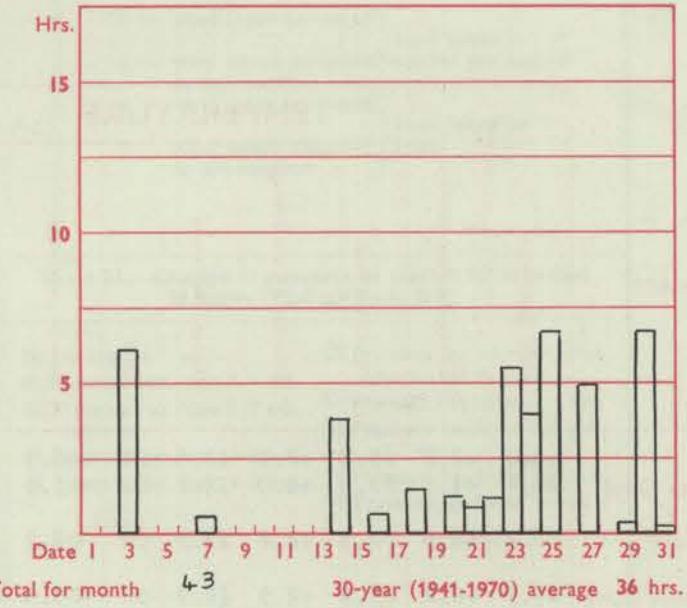

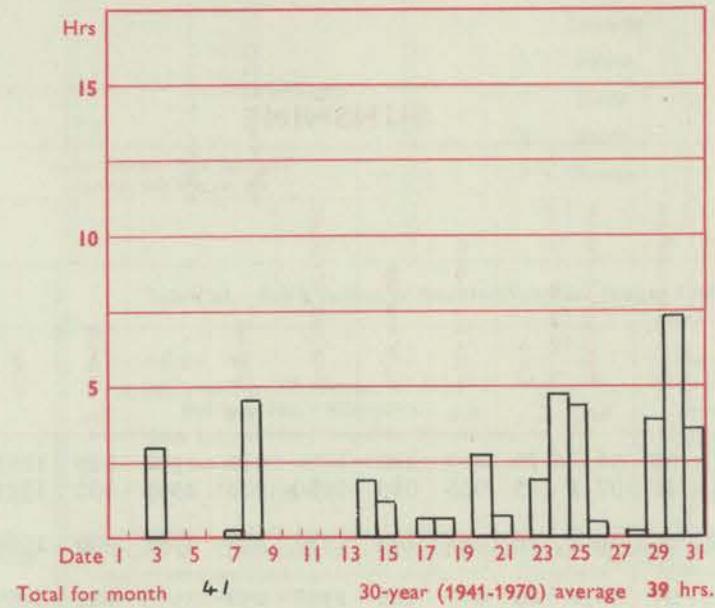

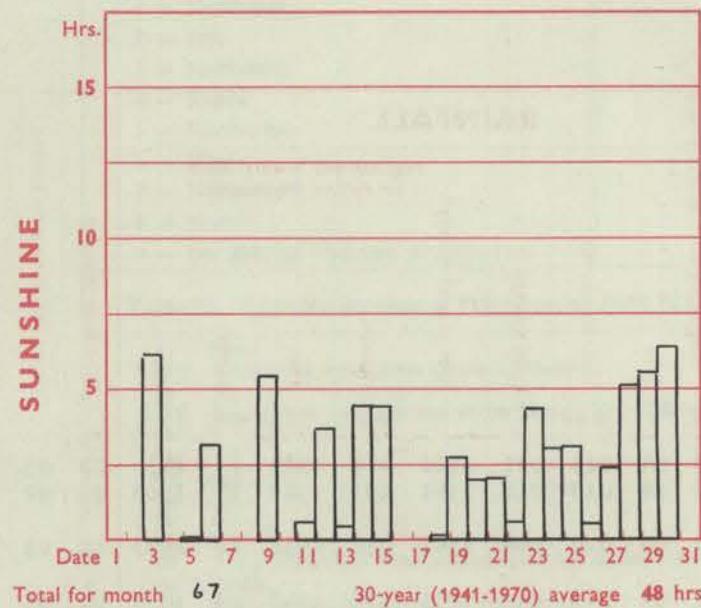

PLACE	TEMPERATURE								SUNSHINE								RAINFALL																
	Mean maximum °C	Difference from average °C	Mean minimum °C	Difference from average °C	Highest maximum °C	Date	Lowest minimum °C	Date	No. of days with grass minimum below 0°C	No. of air frosts	Days of no sunshine	Maximum duration hrs. Correction to MONTHLY SUMMARY No.240 for DECEMBER 1975 - ELMDON'S highest sunshine occurred in 1974

WITH EFFECT FROM JANUARY 1976 THE MONTHLY SUMMARY HAS BEEN UPDATED TO MAKE USE OF 1941 - 1970 MEAN VALUES. WHERE STATIONS OPENED AFTER 1941 WEIGHTED MEANS HAVE BEEN COMPUTED. THE USE OF THESE FIGURES HAS LEAD TO SOME ALTERATIONS TO FIRST YEAR OF RECORD FOR SOME STATIONS.

Maximum temperatures read at 21 h. G.M.T. daily, and minimum temperatures, read at 09 h. G.M.T. daily, are shown in full lines.  
Grass minimum temperatures, read at 09 h. G.M.T. daily, are shown by a pecked line. Pecked lines in red show normal values. (1941-1970)  
Normals for Kew are based on North Wall readings and may not be absolutely comparable with the daily values plotted above which are obtained from psychrometer measurements.

# CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

# CHARTS OF WEATHER IN WESTERN EUROPE

## GENERAL SYNOPTIC DEVELOPMENT

Pressure continued low from Greenland to Scandinavia and high over Iberia and central Europe. A frontal trough moved slowly south over England and Wales to give strong southwest gradients ahead of it and more moderate showery north-

westerlies behind. During the next 24 hours the frontal trough, now over Germany and France into mid-Atlantic, will return northeastwards. Thus, most of the country will again have a mild southwesterly airstream with rain at times.

Issued at midday THURSDAY 1 JANUARY 1976

## CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

# CHARTS OF WEATHER IN WESTERN EUROPE

## GENERAL SYNOPTIC DEVELOPMENT

During the past 24 hours a fast moving depression moved east from the Atlantic across Northern Ireland into the Southern North Sea. An anticyclone persisted

over northern Spain. During the next 24 hours another rapidly moving depression is expected to take a similar course with pressure remaining high in southern Europe.

Issued at midday FRIDAY 2 JANUARY 1976

## CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

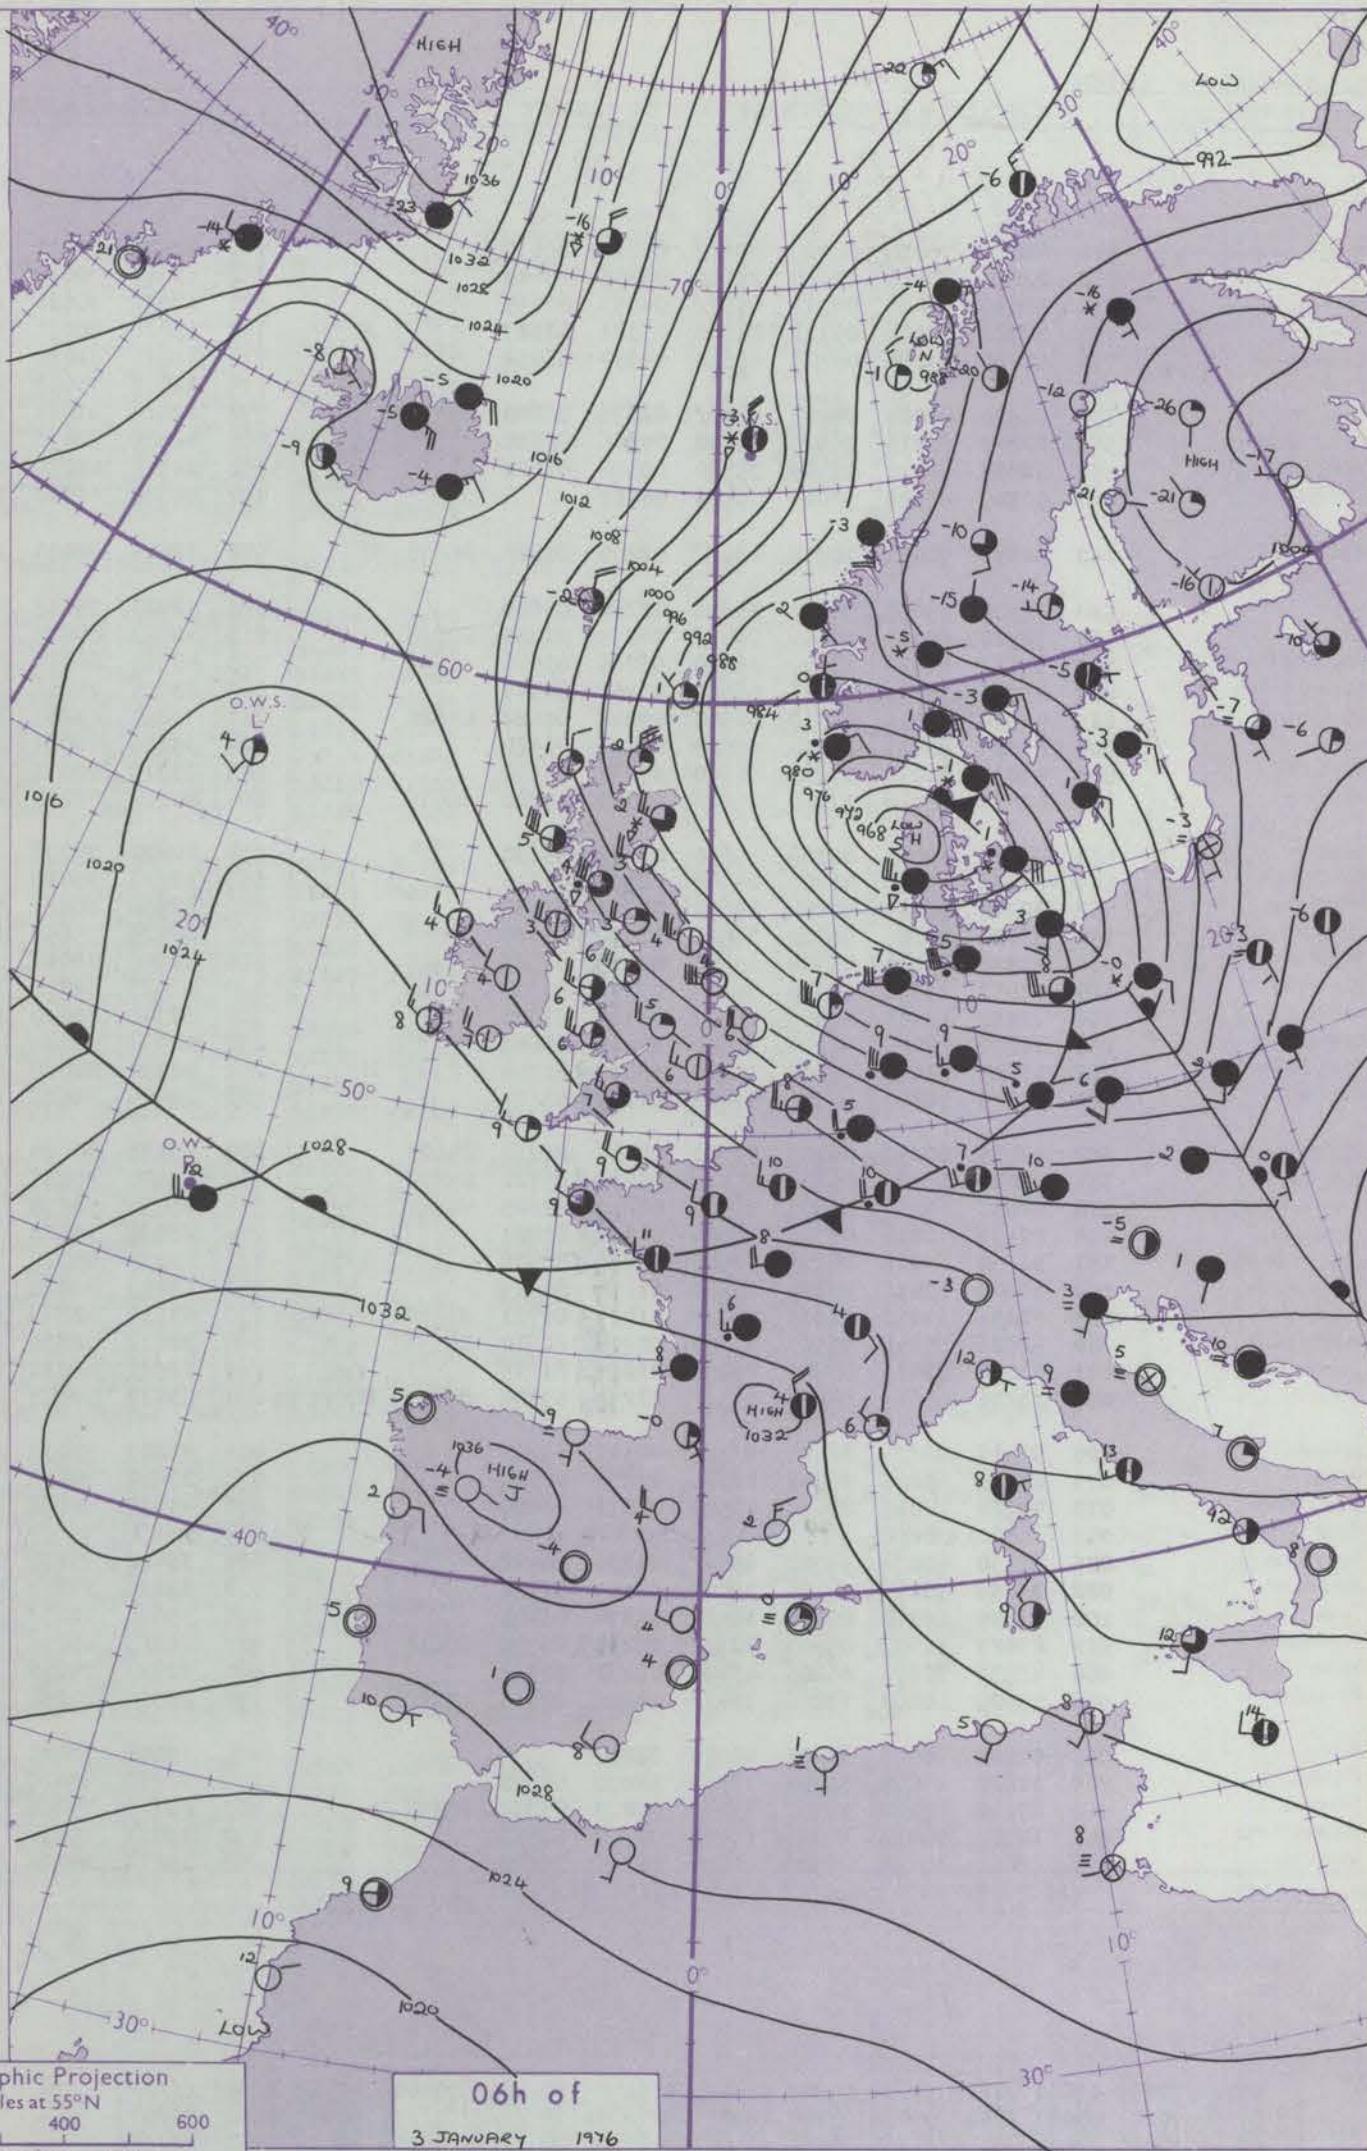

CHARTS OF WEATHER IN WESTERN EUROPE

18h of  
2 JANUARY 1976

00h of  
3 JANUARY 1976

06h of  
3 JANUARY 1976

GENERAL SYNOPTIC DEVELOPMENT

During the past 24 hours a depression over the southern North Sea moved rapidly eastwards over central Europe, while a further fast moving depression moved across northern districts of the British Isles to the central North Sea, with exceptionally rapid deepening. An anticyclone persisted over northern Spain. During the next

24 hours the deep depression over the North Sea is expected to move away south-eastwards. The anticyclone over the Iberia Peninsular will remain slow moving and an associated ridge of high pressure will move eastwards across the British Isles.

Issued at midday SATURDAY 3 JANUARY 1976

Polar Stereographic Projection  
Statute miles at 55°N  
Scale is 1:20,000,000 at 60°N.

## CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

# CHARTS OF WEATHER IN WESTERN EUROPE

## GENERAL SYNOPTIC DEVELOPMENT

An intense depression over Denmark moved away eastwards slowly, a ridge of high pressure in the eastern Atlantic moving into the British Isles later on Saturday. Pressure remained generally high over Iberia, Biscay and France. A depression developed to the south of Iceland, and deepened considerably by this morning as it

moved slowly east. Pressure is expected to remain high over western and central Europe, the depression near Iceland tracking eastwards towards Norway and deepening further. A return to a mild southwesterly flow is expected to occur over almost all the British Isles by tonight.

Issued at midday SUNDAY 4 JANUARY 1976

Scale is 1:20,000,000 at 60°N.

## GENERAL SYNOPTIC DEVELOPMENT

An anticyclone over France and northern Spain remained almost stationary but an associated ridge of high pressure over the North Sea moved quickly eastwards. It was followed by a warm frontal trough, over western Ireland yesterday morning, which crossed England and Wales during the day, followed by a mild westerly airstream. A depression over southeastern Iceland deepened and moved east to

southern Norway. Its cold front has brought a cold unstable northerly airstream into Scotland and the northern North Sea. During the next 24 hours the depression over Norway will move away east but a further trough of low pressure now about 400 miles west of Ireland will move east into the British Isles. A separate depression is likely to form in the trough over Scotland by tomorrow morning.

## GENERAL SYNOPTIC DEVELOPMENT

A vigorous depression over southern Scandinavia moved steadily southeast to Poland. A depression in the western Atlantic moved steadily northeast towards Cape Farewell with associated frontal troughs moving towards and across the British Isles. The anticyclone over Iberia was maintained. Although the northeast of Britain experienced cold weather with snow for much of the past 24 hours the rest of the

British Isles lay in a mild southwesterly airstream. The mild southwesterly conditions will soon affect all districts of the British Isles and will continue for the next 24 hours. During this period, frontal troughs will move east giving outbreaks of rain.

## CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

# CHARTS OF WEATHER IN WESTERN EUROPE

## GENERAL SYNOPTIC DEVELOPMENT

The depression south of Cape Farewell moved rather quickly towards Iceland whilst a secondary depression formed east of Iceland. An associated warm frontal trough crossed the British Isles leaving Britain in a mild Southwesterly airstream. The anticyclone over Biscay persisted and another formed over Sweden and moved eastwards.

During the next 24 hours a developing frontal wave will move northeastwards towards Scotland but the general pressure distribution over most of Britain will remain unchanged.

Issued at midday WEDNESDAY 7 JANUARY 1976

Polar Stereographic Projection  
Statute miles at 55°N  
Scale is 1:20,000,000 at 60°N.

## OCEAN WEATHER STATION REPORTS at 12h

## OCEAN WEATHER STATION REPORTS at 18h.

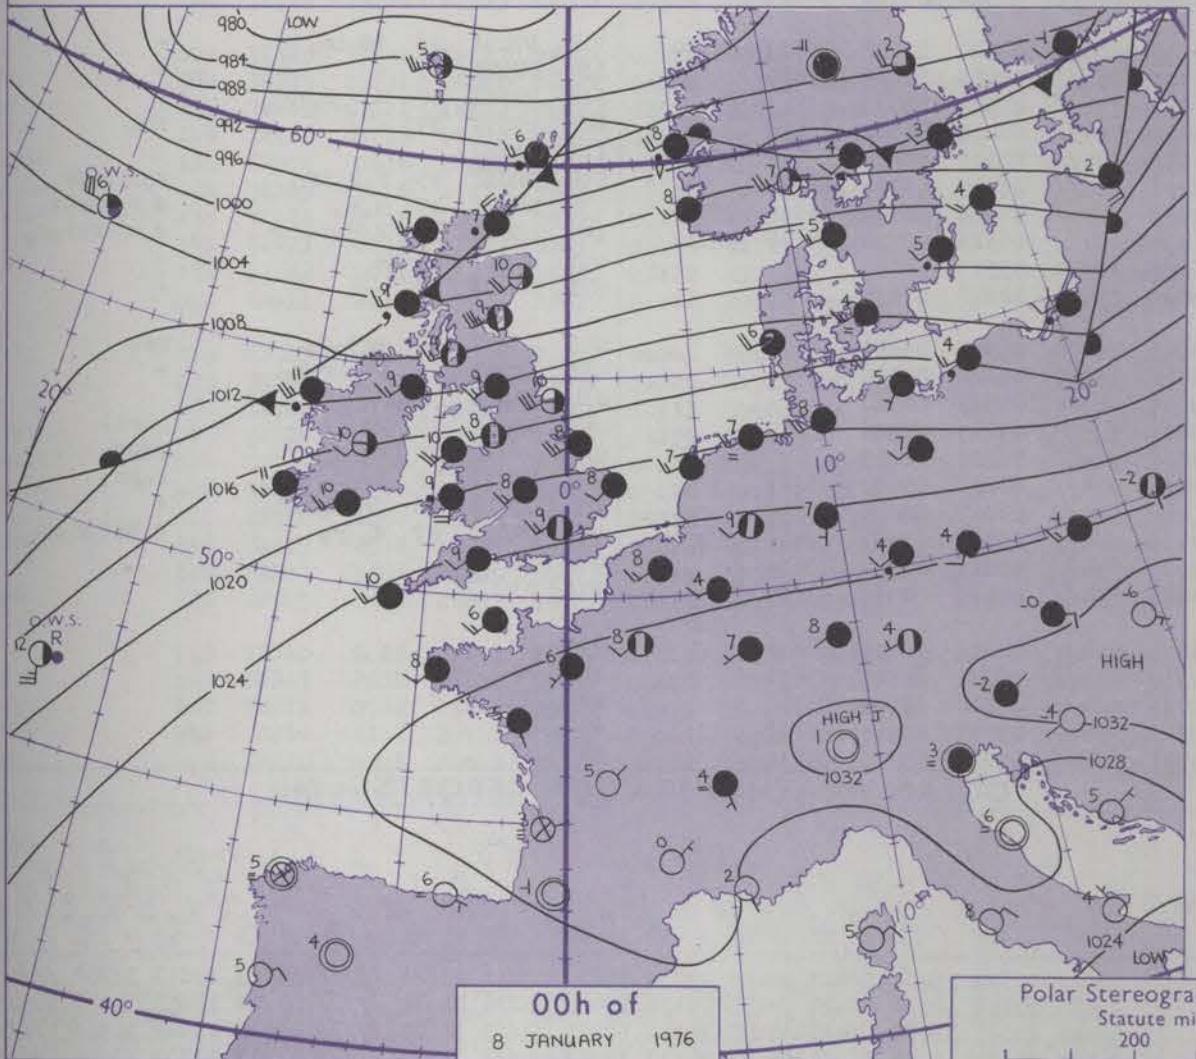

CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

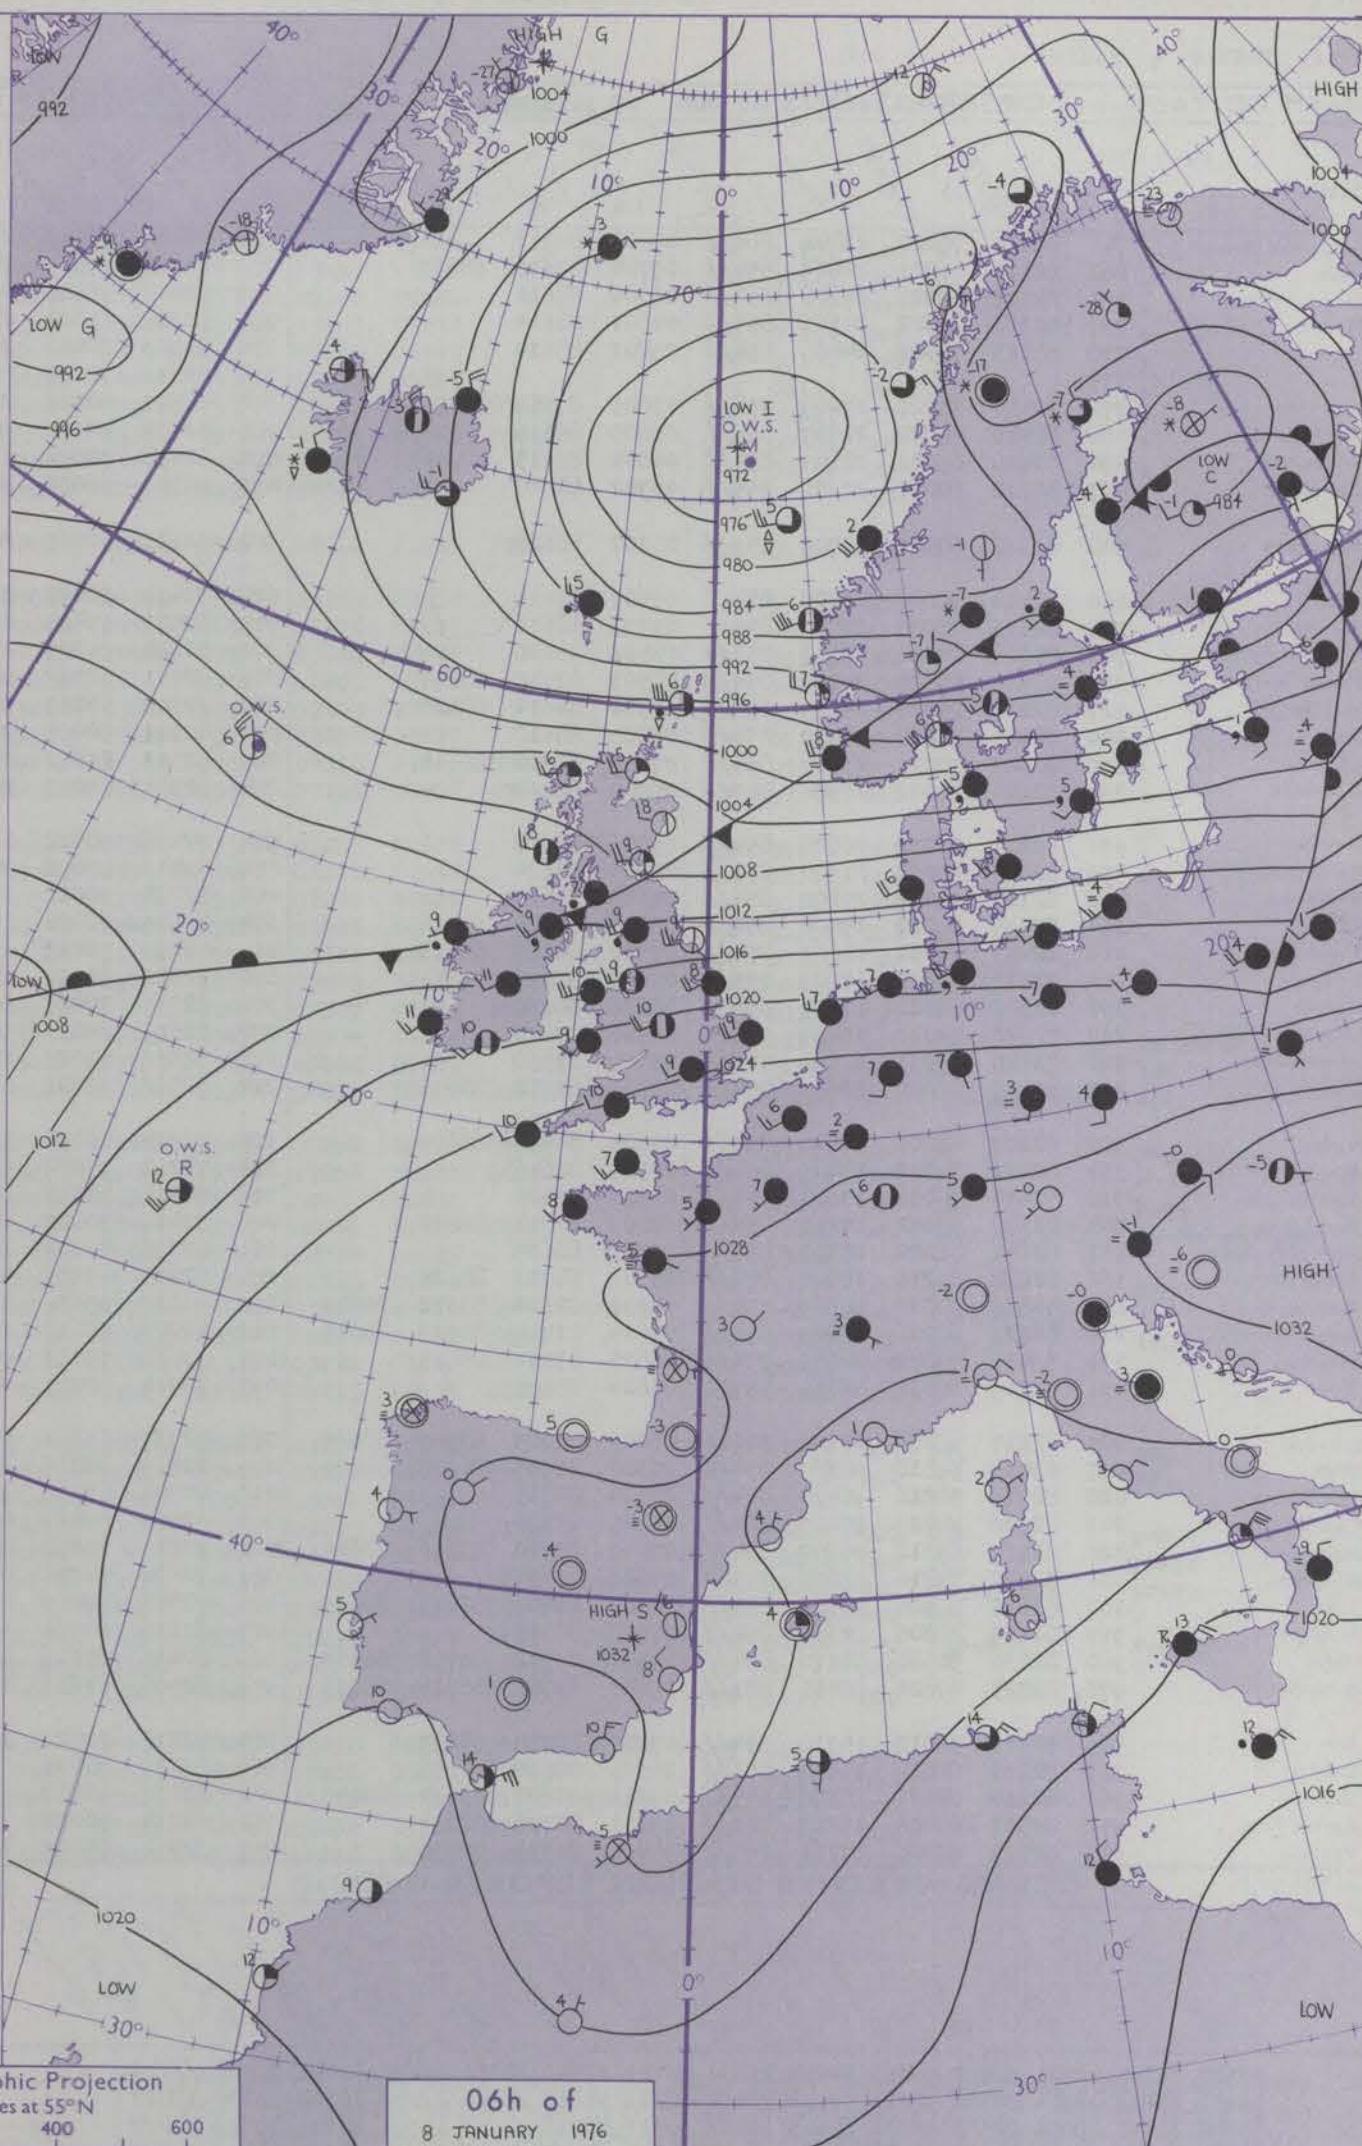

# CHARTS OF WEATHER IN WESTERN EUROPE

18h of  
7 JANUARY 1976

00h of  
8 JANUARY 1976

06h of  
8 JANUARY 1976

## GENERAL SYNOPTIC DEVELOPMENT

A belt of high pressure has remained almost static from Iberia to central Europe, while a complex depression near Iceland and over the Norwegian Sea transferred eastwards towards the Norwegian coast. Minor disturbances travelled quickly northeast across Scotland and into Scandinavia along the main cold front, the colder air subsequently penetrating into most northern districts of the British Isles.

During the next 24 hours the main cyclonic vortex will continue eastwards into northern Scandinavia, while a small depression on the main cold front is expected to move northeast from the Atlantic into Ireland. A ridge of high pressure is expected to reach Iceland from the west, while the European high pressure belt is unlikely to change significantly.

Issued at midday THURSDAY 8 JANUARY 1976

Polar Stereographic Projection  
Statute miles at 55°N  
200 400 600  
Scale is 1:20,000,000 at 60°N.

# CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

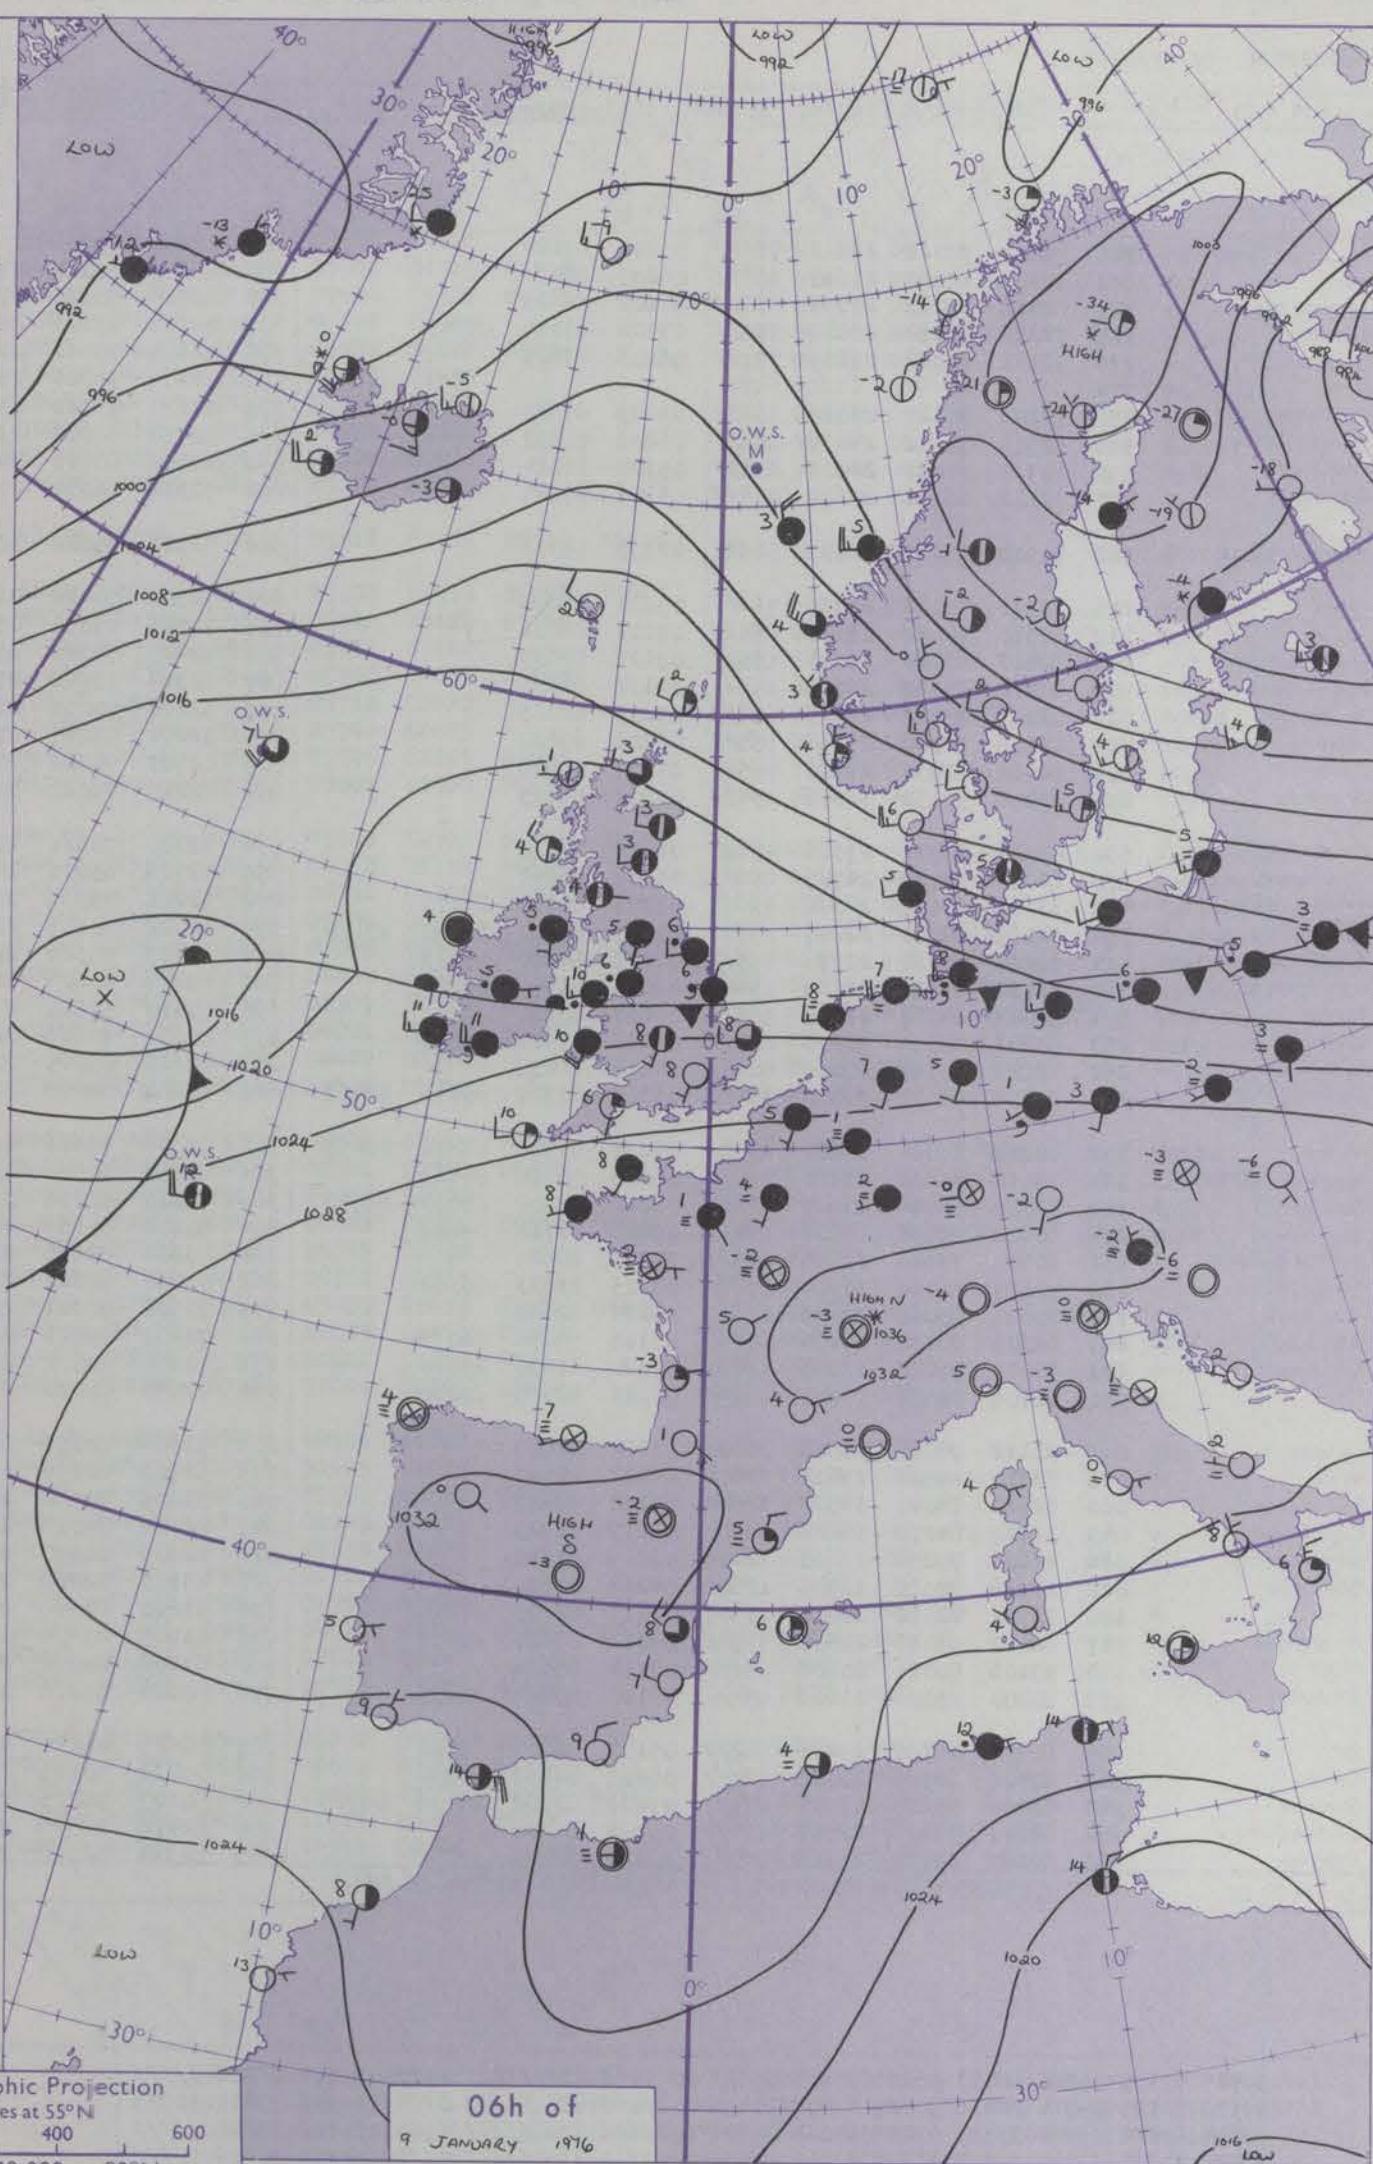

# CHARTS OF WEATHER IN WESTERN EUROPE

18h of  
8 JANUARY 1976

00h of  
9 JANUARY 1976

06h of  
9 JANUARY 1976

## GENERAL SYNOPTIC DEVELOPMENT

A depression north of the Azores has moved slowly northeast and is filling. A further depression between Iceland and Norway moved east into Norway, but has now filled ahead of a developing ridge of high pressure which moved east across Iceland. The ridge now extends from a small anticyclone just off Northern Ireland, northwards across the Faeroes. Pressure has remained high across central Europe to Spain. A cold front located across Northern Ireland and northern England

yesterday morning has moved very slowly south, followed by an unstable westerly airstream. During the next 24 hours the cold front will continue its slow southwards progress into southern England. A frontal trough over the central North Atlantic is expected to have moved into northwestern districts of the British Isles by this time tomorrow.

Issued at midday - FRIDAY 9 JANUARY 1976

Polar Stereographic Projection  
Statute miles at 55°N  
200 400 600  
Scale is 1:20,000,000 at 60°N.

# CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

# CHARTS OF WEATHER IN WESTERN EUROPE

Polar Stereographic Projection

Statute miles at 55°N

200      400      600

Scale is 1:20,000,000 at 60°N.

## GENERAL SYNOPTIC DEVELOPMENT

High pressure continued to be maintained across central and southern Europe. A deepening depression moved from south of Greenland to Iceland bringing strong gradients to western areas of Scotland and Northern Ireland. The formerly slow-moving front over England and Wales was pushed into northern Europe with the approach of further frontal troughs from the west. The fronts now affecting

06h of  
10 JANUARY 1976

Issued at midday SATURDAY 10 JANUARY 1976

Scotland and Northern Ireland will continue to move rapidly eastwards bringing a strong unstable airstream to much of the British Isles. Over southern England, however, the front is expected to become slow-moving so that southern districts are likely to remain mild.

## GENERAL SYNOPTIC DEVELOPMENT

During the past 24 hours an intense anticyclone over the eastern Atlantic moved slowly eastwards towards Biscay. A complex deepening depression over Iceland moved steadily northeastwards to the Norwegian Sea, while its associated frontal troughs moved rather quickly southeastwards across much of the British Isles and

North Sea. During the next 24 hours, a wave depression on the returning warm front south of Iceland is expected to move rapidly to the eastern North Sea. The Atlantic anticyclone will persist northwest of the Iberian Peninsula with a ridge of high pressure over the western Mediterranean.

CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

# CHARTS OF WEATHER IN WESTERN EUROPE

## GENERAL SYNOPTIC DEVELOPMENT

An anticyclone over the eastern Atlantic has continued to move slowly towards Biscay. A wave south of Iceland moved rapidly to south Sweden leaving Britain in a mild westerly airstream. During the next 24 hours wave depressions in the

central Atlantic are expected to move rapidly northeastwards towards Scotland leaving the pressure distribution over most of Britain unchanged. The Atlantic anticyclone will move slowly eastwards towards northern Spain.

Issued at midday MONDAY 12 JANUARY 1976

## GENERAL SYNOPTIC DEVELOPMENT

The anticyclone over the Southwest Approaches yesterday moved very slowly east into Biscay during the past 24 hours, maintaining a mild westerly airstream over most of the British Isles. However, a frontal trough lying eastwest across northern Scotland to southern Norway, although slow-moving at first, later moved south over the North Sea, bringing colder air to the northeast half of Scotland.

During the next 24 hours the anticyclone is expected to continue moving slowly eastwards into France, whilst a mid-Atlantic depression deepens and moves slowly north. A mild westerly airstream will return to northeast Scotland and will persist over remaining parts of the British Isles.

# CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

# CHARTS OF WEATHER IN WESTERN EUROPE

## GENERAL SYNOPTIC DEVELOPMENT

A frontal trough across northern Scotland and the North Sea gave some snow in the Shetlands and rain in the north before moving to the east of the British Isles. The anticyclone over western France continued to maintain a generally mild southwest airflow over the rest of the British Isles. During the night a weak cold front reached western parts of the United Kingdom. The cold front, now over England

and Wales, will continue into eastwards movement bringing cooler weather for a time. An anticyclone, which has moved rapidly across the Atlantic, is expected to maintain and develop the high pressure area over France, thus re-establishing a southwesterly airstream over much of the country on Thursday. The depression in mid-Atlantic will move northeast to a position west of the Faeroe Islands.

Issued at midday WEDNESDAY 14 JANUARY 1976

# CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

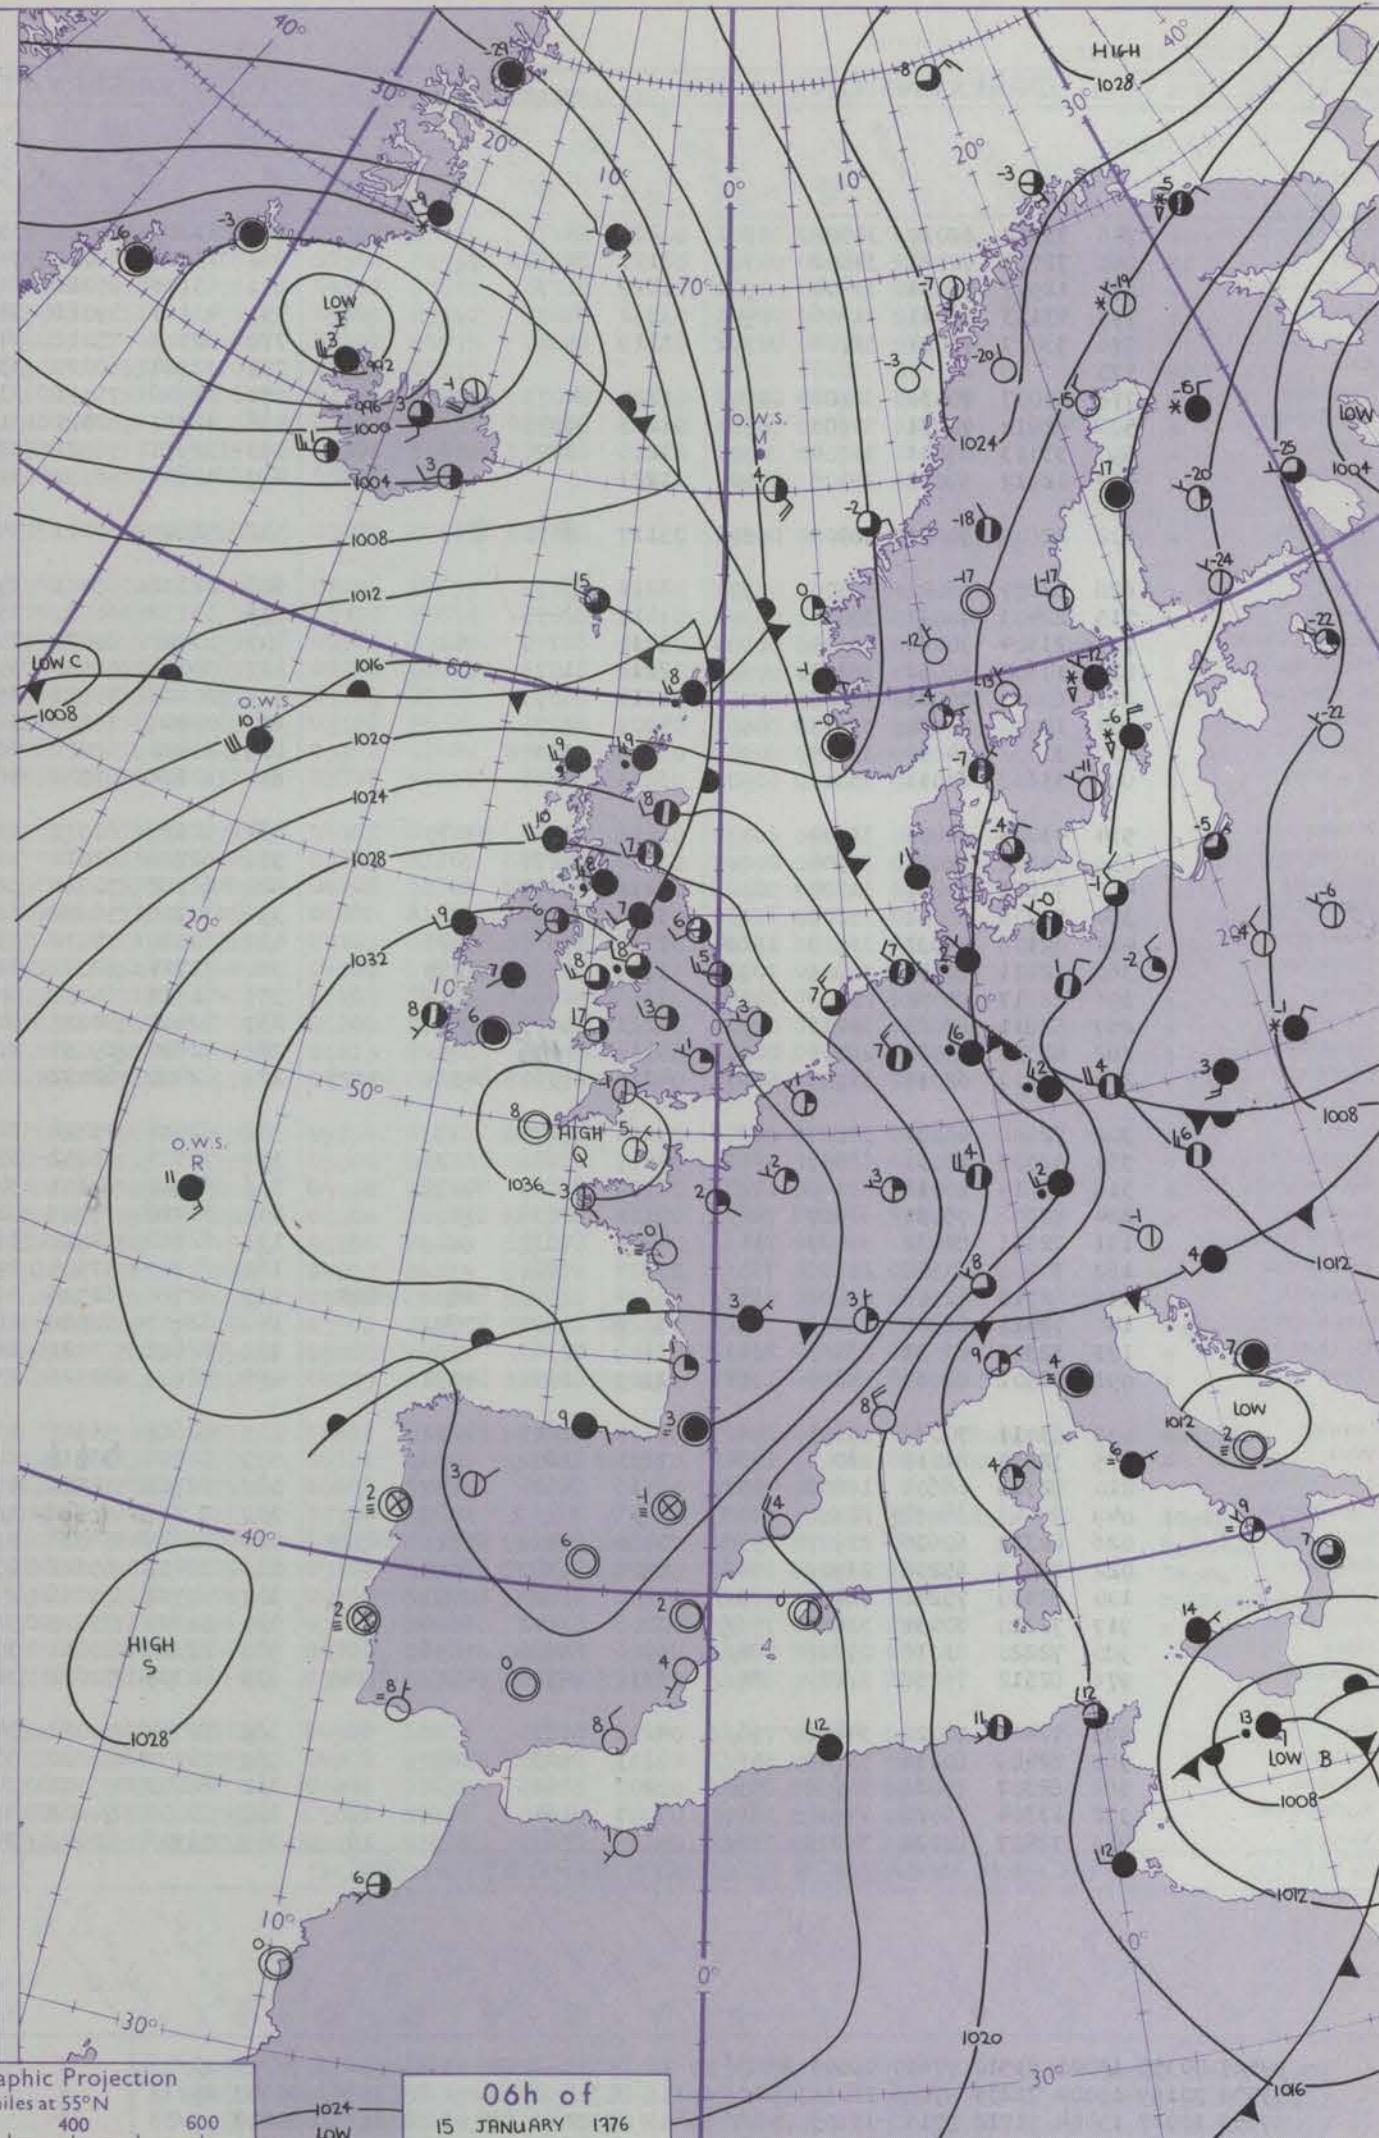

CHARTS OF WEATHER IN WESTERN EUROPE

18h of  
14 JANUARY 1976

00h of  
15 JANUARY 1976

06h of  
15 JANUARY 1976

GENERAL SYNOPTIC DEVELOPMENT

During the past 24 hours a mobile anticyclone moved northeastwards towards southwest England, maintaining the ridge of high pressure over western France. A depression moved slowly northeastwards towards Denmark Strait, while its associated frontal troughs moved eastwards over northern districts of the British Isles and the

North Sea. Pressure remained low over eastern Europe and high over the western Mediterranean. During the next 24 hours further troughs are expected to move eastwards across northern Britain into the North Sea, while pressure remains high over northwest France and low north of Iceland.

Issued at midday THURSDAY 15 JANUARY 1976

Polar Stereographic Projection  
Statute miles at 55°N  
Scale is 1:20,000,000 at 60°N.

16 JANUARY 1976

## GENERAL SYNOPTIC DEVELOPMENT

The anticyclone over Southwest England remained stationary during Thursday, frontal troughs moving east between Scotland and Iceland and into Scandinavia. A depression in the Denmark Strait moved steadily east into the Norwegian Sea, followed by a shallow ridge of high pressure. During today and tonight the

anticyclone is expected to maintain settled weather over much of western Europe and the British Isles, a trough over Scandinavia moving away eastwards. A ridge of high pressure will move eastwards across the northern flank of the anticyclone, while troughs will approach Iceland from the Denmark Strait later.

Issued at midday FRIDAY 16 JANUARY 1976

Polar Stereographic Projection  
Statute miles at 55°N  
Scale is 1:20,000,000 at 60°N

# CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

## CHARTS OF WEATHER IN WESTERN EUROPE

## GENERAL SYNOPTIC DEVELOPMENT

An anticyclone has remained slow-moving near the Isles of Scilly during the past 24 hours. A depression which formed over southern Norway yesterday moved south-eastwards to Poland, bringing the cold front over northern Scotland southwards over the North Sea and into eastern Britain by this morning. A new low which formed in the Denmark Strait overnight, however, brought the front northeastwards again across

Scotland, and a mild southwesterly airstream returned to these parts. During the next 24 hours the depression over the Denmark Strait is expected to deepen and move to the north of Iceland whilst the anticyclone remains slow moving over the western English Channel, maintaining a mild west to southwest airflow over all parts of the British Isles.

Issued at midday SATURDAY 17 JANUARY 1976

Statute miles at 55°N  
Scale is 1:20,000,000 at 60°N.

## GENERAL SYNOPTIC DEVELOPMENT

The anticyclone centred over St. George's Channel has continued to dominate the pattern of weather, but during the past 24 hours, the anticyclone has declined a little and moved southwards to Brittany. A weak front crossed Scotland and northeast England early in the day, giving some rain in these districts, elsewhere being mainly dry. In the evening and during the night an approaching cold front

brought rain to western districts. The cold front now over western districts will move steadily eastwards and is expected to clear all parts of the British Isles by midnight. Behind the cold front, a showery airstream will spread to all districts. By Monday morning a frontal system approaching rapidly from the west will have reached the eastern Atlantic heralding a return to mild southwesterlies.

Issued at midday SUNDAY 17 JANUARY 1976

## CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

# CHARTS OF WEATHER IN WESTERN EUROPE

## GENERAL SYNOPTIC DEVELOPMENT

During the past 24 hours an anticyclone moved eastwards north of the Azores, with a ridge of high pressure extending eastwards into western Europe. A complex low pressure area persisted west and north of Iceland, while an associated frontal trough moved southeastwards across all districts of the British Isles. During the

next 24 hours a deep depression near Southern Greenland is expected to move slowly eastwards, while the anticyclone north of the Azores moves slowly south. Frontal troughs will move rapidly across the British Isles in the strong westerly airstream.

Issued at midday MONDAY 19 JANUARY 1976

## OCEAN WEATHER STATION REPORTS at 12h.

## OCEAN WEATHER STATION REPORTS at 18h.

# CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

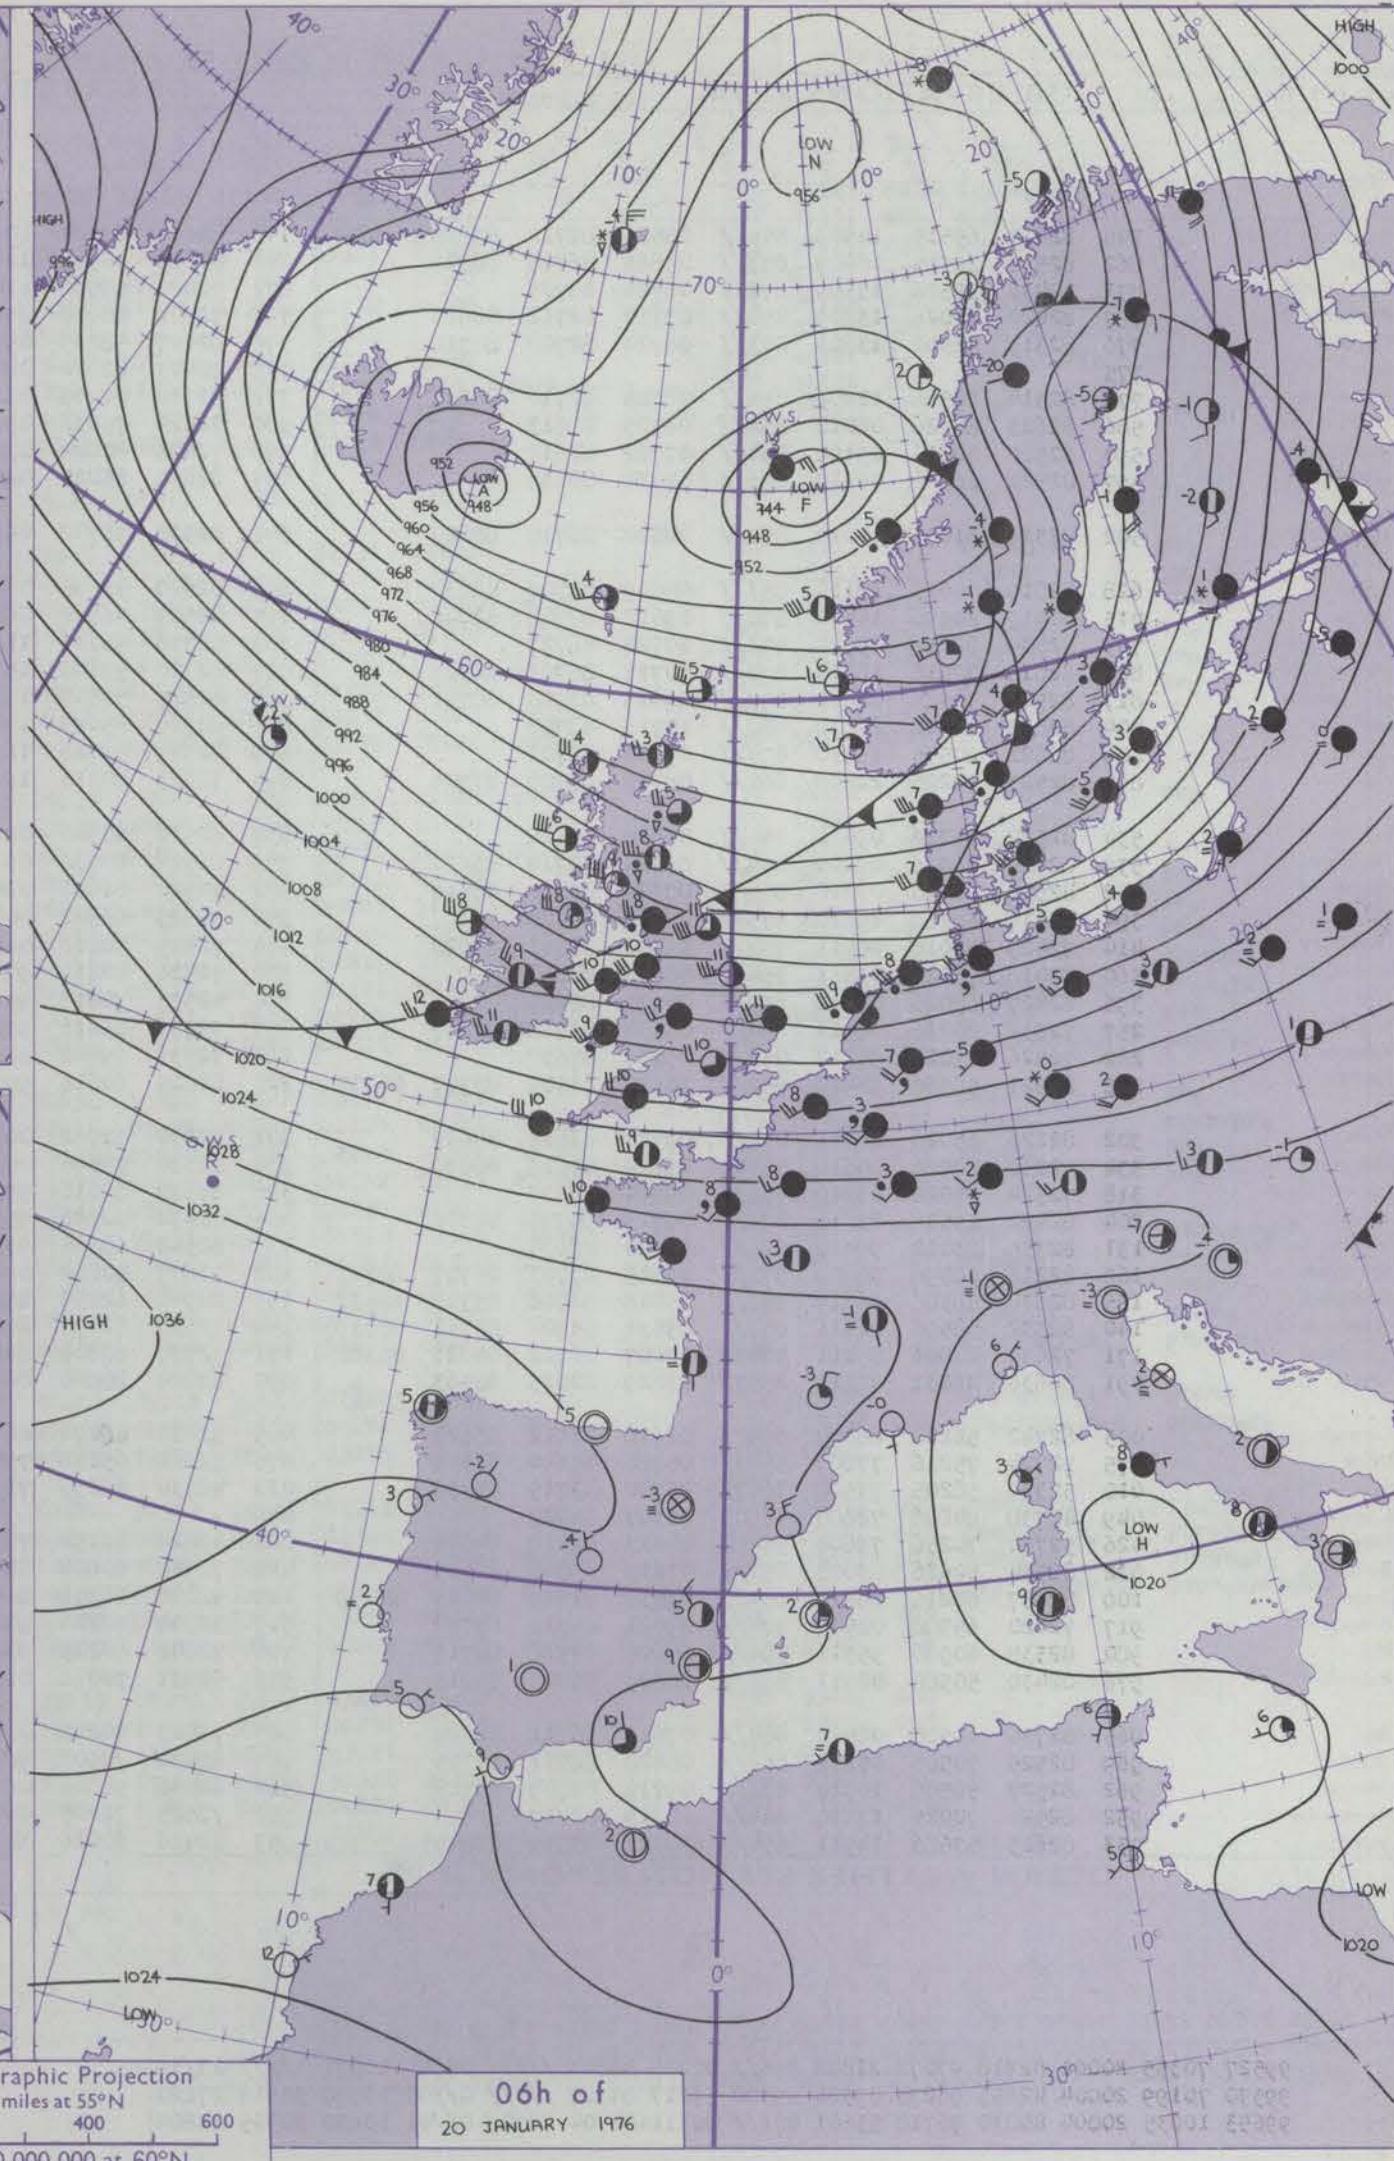

# CHARTS OF WEATHER IN WESTERN EUROPE

## GENERAL SYNOPTIC DEVELOPMENT

Pressure remained high to the west of Biscay, with a ridge of high pressure into France and central Europe. An intensifying depression moved quickly east towards Iceland, a new centre forming east of Iceland overnight which moved quickly east towards Norway. The fronts associated with these centres swept rapidly east to the south of Iceland, the colder air penetrating into northern Ireland and Scotland

Polar Stereographic Projection  
Statute miles at 55°N  
Scale is 1:20,000,000 at 60°N.

06h of  
20 JANUARY 1976

Issued at midday TUESDAY 20 JANUARY 1976

by this morning. A colder westerly airstream will become established over the British Isles and southern Scandinavia during the next 24 hours, the main depression becoming stationary off the Norwegian coast. The anticyclone will drift slowly south, while further disturbances are expected to move east across the Atlantic towards the British Isles.

# CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

# CHARTS OF WEATHER IN WESTERN EUROPE

## GENERAL SYNOPTIC DEVELOPMENT

A deep depression moved northeastwards along the Norwegian coast. The cold front of this low passed to the southeast of England during the morning bringing a showery northwesterly airstream to all areas. The front was preceded and followed by storms or severe gales in all parts of the United Kingdom. During the next 24

hours the showery airstream will continue in all areas, although the winds will moderate a little. By early tomorrow a depression will be approaching western districts of the British Isles from the Atlantic.

Issued at midday WEDNESDAY 21 JANUARY 1976

# CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

# CHARTS OF WEATHER IN WESTERN EUROPE

## GENERAL SYNOPTIC DEVELOPMENT

During the past 24 hours an anticyclone remained slow-moving to the west of Iberia and pressure remained low in the Norwegian Sea, leaving the British Isles in a strong northwesterly airstream. During the next 24 hours the high to the south will

persist and a depression will move rapidly east to near Fair Isle and then southeast to near Denmark by midnight, keeping all areas in the strong west to northwest airflow.

Issued at midday THURSDAY 22 JANUARY 1976

## OCEAN WEATHER STATION REPORTS at 12h.

## OCEAN WEATHER STATION REPORTS at 18h.

# CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

# CHARTS OF WEATHER IN WESTERN EUROPE

## GENERAL SYNOPTIC DEVELOPMENT

The low complex over Scandinavia has persisted. A depression northwest of Scotland moved east then southeast and is now centred off southern Sweden. Its cold front moved southwards across the British Isles and now extends across northern France, followed by a colder unstable northerly airstream. An anticyclone northeast of the Azores has remained almost stationary, but during the last 24 hours

a marked ridge of high pressure has developed northwestwards from it to Greenland in which separate high centres have formed over the central North Atlantic and over Greenland. During the next 24 hours the high pressure region will persist over the eastern North Atlantic and pressure will remain low over Scandinavia and eastern Europe, maintaining the cold unstable northerlies over the British Isles.

Issued at midday FRIDAY 23 JANUARY 1976

# CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

# CHARTS OF WEATHER IN WESTERN EUROPE

## GENERAL SYNOPTIC DEVELOPMENT

During the past 24 hours the anticyclone over the central North Atlantic intensified and extended northwards to western Iceland. The complex low pressure area over Scandinavia persisted and a cold northerly airstream extended southwards across the British Isles and into northwest Europe. Pressure remained high over the western

Mediterranean. During the next 24 hours pressure is expected to remain high to the west of the British Isles and low to the east, with the cold northerly airstream continuing from the Arctic to the western Mediterranean.

Issued at midday SATURDAY 24 JANUARY 1976

## GENERAL SYNOPTIC DEVELOPMENT

During the past 24 hours the anticyclone over central North Atlantic gradually intensified and moved slowly northwards. The complex low pressure area west of Norway persisted, but slowly filled, leaving the British Isles in a strong

northerly airstream. During the next 24 hours the anticyclone is expected to weaken and move steadily southwards, but most of the British Isles will remain in the northerly airstream.

Issued at midday SUNDAY 25 JANUARY 1976

Polar Stereographic Projection  
Statute miles at 55°N  
Scale is 1:20,000,000 at 60°N.

## CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

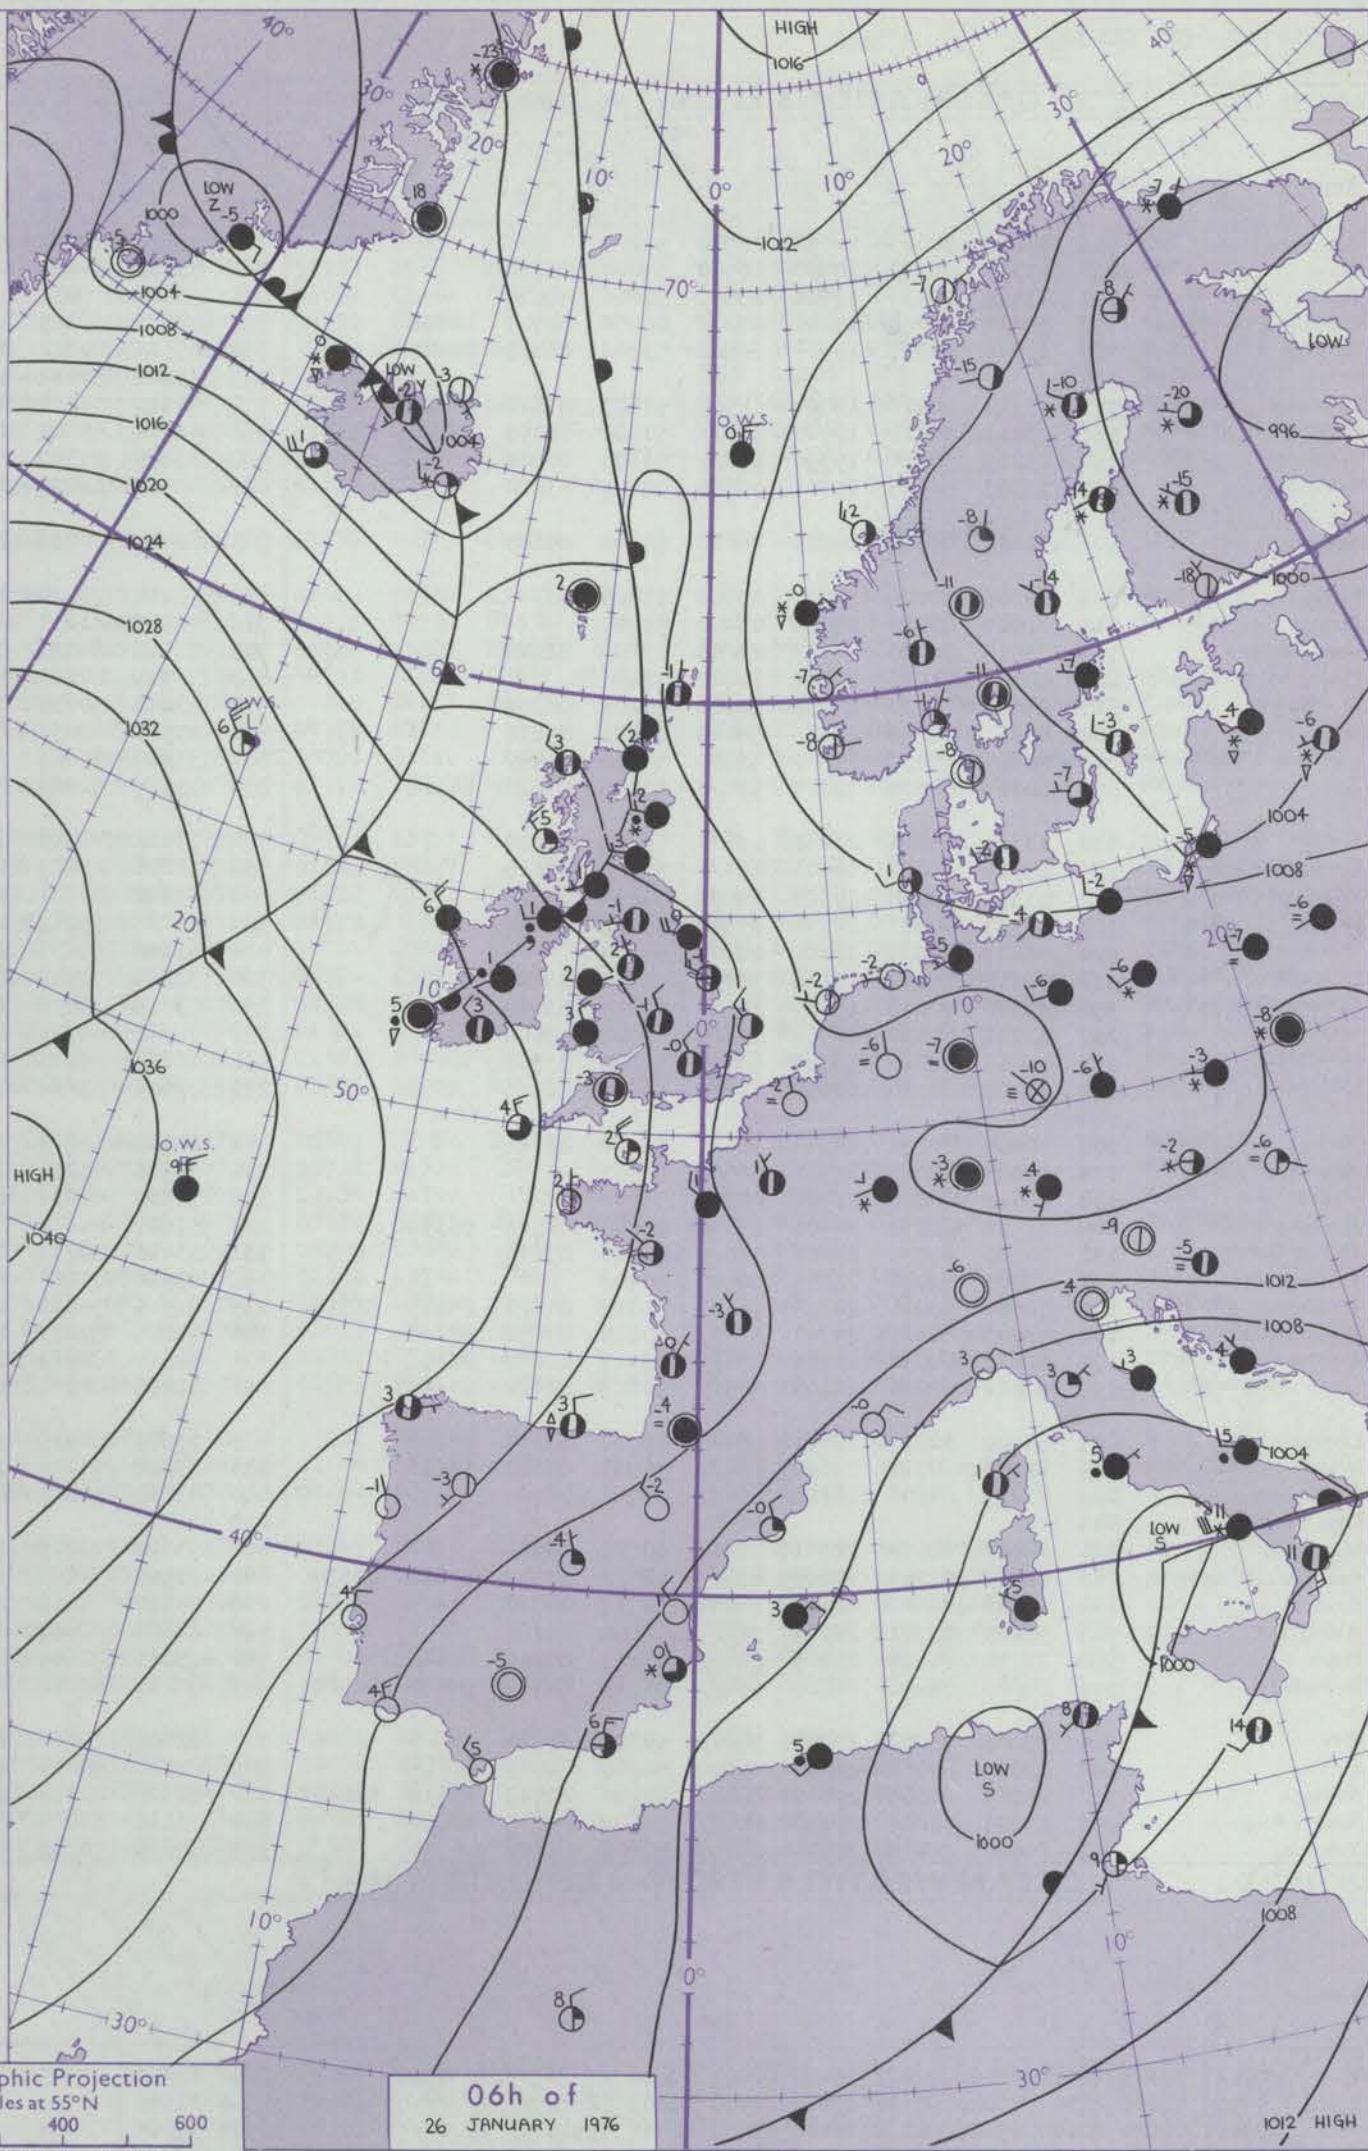

# CHARTS OF WEATHER IN WESTERN EUROPE

18h of  
25 JANUARY 1976

00h of  
26 JANUARY 1976

06h of  
26 JANUARY 1976

Polar Stereographic Projection  
Statute miles at 55°N  
Scale is 1:20,000,000 at 60°N.

## GENERAL SYNOPTIC DEVELOPMENT

During the past 24 hours the anticyclone to the west of the British Isles moved steadily south and declined slightly. The complex low pressure area over central Europe slowly filled, leaving the British Isles in a strong, cold northerly

airstream. During the next 24 hours the Atlantic high will continue to move south and decline as troughs of low pressure move steadily south from the northwest across most districts.

Issued at midday MONDAY 26 JANUARY 1976

# CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

# CHARTS OF WEATHER IN WESTERN EUROPE

## GENERAL SYNOPTIC DEVELOPMENT

A complex but shallow low over Iceland and Denmark Strait has gradually filled. A shallow low which formed over west Norway moved south across the eastern North Sea and deepened a little. A depression about 400 miles south of Greenland yesterday morning has deepened steadily and moved northeast to southern Iceland and, as this system deepened, the anticyclone centred north of Azores yesterday morning

has steadily declined, now forming a ridge of high pressure from Azores to southern Spain. During the next 24 hours the Icelandic low is expected to move slowly east but its associated frontal troughs will move more quickly into central areas of the British Isles by this time tomorrow, followed by an unstable northwesterly airstream.

Issued at midday TUESDAY 27 JANUARY 1976

Polar Stereographic Projection  
Statute miles at 55°N  
200 400 600

Scale is 1:20,000,000 at 60°N.

## CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

# CHARTS OF WEATHER IN WESTERN EUROPE

## GENERAL SYNOPTIC DEVELOPMENT

A shallow depression moved southwards over Europe while a weak ridge of high pressure was maintained over the British Isles. As the deep depression over Iceland filled a new low centre formed on the frontal trough to the southwest of Ireland. By morning this low was centred off northwest Ireland with strong southerlies over western districts. Some anticyclonic development was beginning

to show over Scandinavia. During the next 24 hours the progress eastwards of the troughs over Ireland will be slow thus eastern districts are likely to continue cold, whereas mild southerlies will affect western districts. A depression in mid-Atlantic will move northeast but its frontal system will become slow moving as it approaches Ireland.

Issued at midday WEDNESDAY 28 JANUARY 1976

# CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

# CHARTS OF WEATHER IN WESTERN EUROPE

## GENERAL SYNOPTIC DEVELOPMENT

A low over west Iceland slowly filled whilst another low east of Iceland formed, which moved slowly north and filled. The depression west of Ireland filled leaving a trough of low pressure from Fair Isle to Portugal. Another depression 400 miles south of Greenland deepened and moved rather quickly east whilst an

anticyclone began to develop over the Baltic Sea. This increased the southerly winds over the British Isles. During the next 24 hours the depression in the eastern Atlantic will slow down and begin to fill. The high pressure will persist over the Baltic Sea leaving the British Isles in the strong southerly flow.

Issued at midday THURSDAY 29 JANUARY 1976

# CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

# CHARTS OF WEATHER IN WESTERN EUROPE

## GENERAL SYNOPTIC DEVELOPMENT

The primary synoptic feature has been a deep depression which was centred between 200 and 300 miles west of Northern Ireland. By this morning it had moved southeast towards Biscay. Pressure was relatively high over Scandinavia, and a small pressure build has occurred during the last 24 hours. The troughs associated with the deep low moved into Iberia from the Atlantic, but made only slow eastward

progress into the British Isles. The main depression is expected to continue southeast into Biscay and become less intense, while pressure will build slowly over Scandinavia. These changes will bring about a further backing of the surface winds over the British Isles to east or southeast, allowing further penetration of very cold continental air.

Issued at midday FRIDAY 30 JANUARY 1976

# CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

# CHARTS OF WEATHER IN WESTERN EUROPE

## GENERAL SYNOPTIC DEVELOPMENT

A deep depression about 200 miles southwest of Ireland has moved steadily southeast, is filling and is now centred off northwest Spain. An anticyclone over southern Scandinavia has remained almost stationary but during the past 24 hours an associated ridge of high pressure has developed westwards across Scotland thence southwest to the rear of the depression off Spain. The cold dry easterly airstream

between these two systems covers the British Isles. During the next 24 hours the depression will move east across northern Spain and the ridge of high pressure will continue to develop southwards behind it. The cold easterly airstream over the British Isles will back northeast as a result.

Issued at midday SATURDAY 31 JANUARY 1976

Polar Stereographic Projection  
Statute miles at 55°N

Scale is 1:20,000,000 at 60°N.
